Department of Psychology, Tsinghua University, Beijing 100084, China

Abstract: Emotion regulation refers to the process in which individuals enhance, maintain or weaken emotional response resorting to conscious or unconscious strategies to achieve their goals. It plays a crucial role during people's life span and could be influenced by multiple factors. Previous research found significant correlations between excessive use of social media and adolescents' emotional dysregulation. Since the prevalence of screen use within preschoolers, it's imperative for us to explore the relationship between preschoolers' screen exposure and their emotion regulation: 1) outward emotion regulation, defined as the ability to suppress inappropriate emotion arousal for the purpose of social adaptation; 2) inward emotion regulation, refers to the ability to perceive, maintain and properly express personal emotions; 3) emotion regulation strategies that preschoolers use, adaptive strategy includes cognitive reconstructing, alternative activities and problem solving, while venting and passive coping constitutes the opposite. Structural equation model (SEM) was employed to estimate this relationship in our study, with data collected from parent report. Study 1 recruited 897 children aged 2 to 6 years to explore how screen exposure influences outward emotion regulation and strategy use, the role of caregiver co-use was also tested. Results show that, 1) there is positive association between outward emotion regulation and active exposure time only under high frequency caregiver co-use conditions; 2) in preschoolers with low frequency of caregiver co-use, active exposure time is associated with relative more maladaptive strategy use. Our results indicate the moderating role of caregiver co-use in associations between screen exposure and emotion regulation. Based on study 1, study 2 included 633 children aged 2 to 6 years to estimate how screen exposure affect inward emotion regulation. Another two aspects of caregivers' mediation, guidance and selection, were further tested. Results show that, 1) better inward emotion regulation is associated with more frequent caregiver co-use, while interaction effect and the main effect of screen exposure fails to reach significance. 2) although the direct effect of exposure time is not significant, it is negatively associated with preschoolers' inward emotion regulation through the mediation of more frequent use of passive coping strategy. 3) both caregivers' guidance and selection are positively associated with preschoolers' inward emotion regulation through the mediation of more frequent use of cognitive reconstructing strategy. Caregivers' selection is also positively associated with children's inward emotion regulation through the mediation of more frequent use of passive coping strategy. In conclusion, this study illustrates the effects and mechanism of screen exposure on preschoolers' emotion regulation and the important role of caregivers' mediation. Our results provide evidence for scientific guidance on children's screen exposure.

婴幼儿动作能力与执行功能的关系：一个有调节的中介模型

张愉珠¹ 康红利¹ 王争艳¹ 梁熙¹（通讯作者）

1 首都师范大学心理学院，儿童发展研究中心，北京市“学习与认知”重点实验室，北京，100048，通讯作者

E-mail: liangxi@cnu.edu.cn

摘要 基于皮亚杰的经典认知发展理论和当代的具身认知的视角，大量实证研究表明婴幼儿期动作能力（粗大和精细）的发展为日后高级认知技能（如：执行功能）的获得奠定了基础。此外，睡眠作为易于在教养实践中调节的活动之一可能在认知发展中承担了独特的作用，但睡眠与执行功能之间的关系在婴幼儿群体中的研究结果并不一致。本研究旨在通过一项追踪研究考察幼儿的睡眠从其婴幼儿期动作能力到幼儿期执行功能的阶段性发展过程中起到的调节作用。以 255 个婴幼儿家庭为参与者，在婴儿 6 个月和 1 岁时，采用《贝利婴幼儿发展量表第三版》（贝利 III）中的动作分量表测量他们粗大动作和精细动作的能力；在幼儿 2 岁时，采用贝利 III 中的认知分量表测量了他们的一般认知能力；在幼儿 3 岁时，采用图片指认任务、白天黑夜任务及卡片分类任务分别测量了他们执行功能中的三个成分，分别是工作记忆、抑制控制和认知灵活性，并由母亲填写了《儿童睡眠习惯问卷（CSHQ）》。通过构建了一个包含潜变量的有调节的中介模型，考察 2 岁一般认知能力在 1 岁前动作能力和 3 岁时执行功能之间的中介作用，以及幼儿 3 岁夜间睡眠时长和睡眠问题的调节作用。通过中介效应检验，结果表明：婴儿 1 岁前的动作能力可以通过 2 岁一般认知能力显著正向预测 3 岁执行功能。有调节的中介效应检验进一步表明：3 岁时工作日的夜间睡眠时长在 2 岁一般认知能力和 3 岁执行功能之间起到了调节作用，具体来说：当工作日夜间睡眠时长较长时，2 岁一般认知能力能显著正向预测 3 岁执行功能，而在工作日夜间睡眠时长较短的情况下，2 岁一般认知能力能负向预测 3 岁执行功能，但这种效应并不显著。但是，3 岁时的睡眠问题没有起到相似的调节作用。

Relationship between motor ability and executive function in infants and toddlers: a moderated mediation model

Zhang Yuzhu¹, Kang Hongli¹, Wang Zhengyan¹, Liang Xi¹

Department of Psychology, Key Laboratory of Learning and Cognition, Capital Normal University, Beijing, 100048

Abstract: Based on Piaget's classical theory of cognitive development and the contemporary perspective of embodied cognition, a large number of empirical studies have shown that the development of motor abilities (gross and fine motor) in infancy lays the foundation for the acquisition of higher cognitive skills (e.g., executive function) in later life. In addition, Sleep, as one of the activities that can be easily regulated in parenting practices, may play a specific role in cognitive development, but the relationship between sleep and executive function in infants and young children has been inconsistent. The purpose of this study was to examine the role of sleep in the gradual development of infant motor ability through early childhood executive function in a follow-up study. The sample for this longitudinal study included 255 infants aged from 6 months to 3 years. At 6 months and 1 year old, motor subscales of The Bayley Scales of Infant and Toddler Development, Third Edition (BSID III) was used to measure gross and fine motor ability, and cognitive subscales was used to measure toddlers' general cognitive abilities at 2 years of age. At 3 years of age, Children's executive functions, including working memory, inhibitory control, and cognitive flexibility, were assessed by Self-Ordered Pointing Task, Day and Night Task, The Dimensional Change Card Sort Task respectively, and mothers completed the "Children's Sleep Habit Questionnaire (CSHQ)". We constructed a moderated mediation model with latent variables to investigate the mediating role of general cognitive ability at 2 years of age, and the moderating role of weekday night sleep duration and sleep problems at 3 years of age. Through mediating effect test, the results showed that motor ability at 6 months and 1 year of age significantly positively predicted executive function at 3 years of age through general cognitive ability at 2 years of age. The moderated mediating effect analysis further showed that the mediating effect of general cognitive ability at 2 years of age was

moderated the weekday night-time sleep duration at 3 years of age. Specifically, general cognitive ability at age 2 significantly positively predicted executive function at age 3 when weeknight sleep duration was longer, while general cognitive ability at age 2 negatively predicted executive function at age 3 when weeknight sleep duration was shorter, but this effect was not significant. However, sleep problems at age 3 did not have a similar moderating effect.

自我扩展与青少年智能手机成瘾的关系 ——归属需求与极端同伴取向的作用

刘慧莉^{1,2} 刘勤学^{1,2}(通讯作者) 周宗奎^{1,2}

1 青少年网络心理与行为教育部重点实验室, 武汉, 430079

2 华中师范大学心理学院, 武汉, 430079, qinxueliu@mails.ccnu.edu.cn

摘 要 智能手机成瘾主要是指个体过度使用和依赖手机, 对其使用失去控制, 进而导致个体出现生理、心理和行为等问题。在中国, 手机成瘾的流行率令人担忧, 而青少年是智能手机成瘾的高发易感群体。有数据显示, 手机成瘾在年轻人群体中具有较高的检出率。因此本研究关注智能手机成瘾的影响因素, 将人-人亲密关系中的自我扩展延伸到人-机关系中的自我扩展, 并探讨高中生手机自我扩展与智能手机成瘾的关系, 探索归属需求与极端同伴取向的作用, 并提出一个有调节的中介模型, 以期为青少年智能手机成瘾的干预提供证据。采用手机自我扩展量表、归属需求量表、智能手机成瘾量表和极端同伴取向量表, 对来自湖北省一所高中的 866 名高中生进行问卷调查, 使用 SPSS 25.0 和 Mplus 8.3 对数据进行分析, 结果显示: (1) 手机自我扩展与智能手机成瘾、归属需求、极端同伴取向显著正相关; 归属需求与极端同伴取向、智能手机成瘾显著正相关; (2) 手机自我扩展对智能手机成瘾具有显著的正向预测作用; (3) 归属需求在手机自我扩展与智能手机成瘾的关系中起部分中介作用; (4) 极端同伴取向在手机自我扩展通过归属需求影响智能手机成瘾的中介模型的前半段和直接效应路径中起调节作用。因此, 手机自我扩展和青少年智能手机成瘾之间存在着有调节的中介效应。

The Relationship between Self-expansion and Adolescent Smartphone Addiction: The Roles of Need To Belong and Extreme Peer Orientation

Huili Liu^{1,2}, Qinxue Liu^{1,2} (corresponding author), Zongkui Zhou^{1,2}

Key Laboratory of Adolescent Cyberpsychology and Behavior (CCNU), Wuhan, China

School of Psychology, Central China Normal University, Wuhan, China

Abstract: Smartphone addiction mainly refers to individuals' excessive use and dependence on smartphone, and loss of control over their use, which in turn leads to physical, psychological, and behavioral problems. In China, the prevalence of smartphone addiction is alarming, and adolescents are a high-risk group of smartphone addiction. In addition, data has showed that smartphone addiction has a higher detection rate among young people. Therefore, the present study elaborated the mechanism of self-expansion from the intimate relationship between individuals to the human-computer relationship, explored the predictors of smartphone addiction, examined whether need to belong mediated the relationship between self-expansion and adolescent smartphone addiction, and whether this mediating process was moderated by extreme peer orientation, in order to provide evidence for the intervention of adolescent smartphone addiction. A total of 866 high school students from a high school in Hubei province were investigated using Mobile Phone Self-Expansion Scale, Need to Belong Scale, Extreme Peer Orientation Scale and Smartphone Addiction Scale. SPSS25.0 and Mplus 8.3 were used in present study. Results revealed that: (1) Self-expansion via smartphone was positively correlated with need to belong, smartphone addiction, and extreme peer orientation. Besides, need to belong was positively associated with smartphone addiction and extreme peer orientation. (2) The

self-expansion positively predicted adolescent smartphone addiction. (3) The positive association between self-expansion via smartphone and high school students' smartphone addiction was mediated by need to belong. (4) The first half of the path of the indirect relationship and the direct pathway were moderated by extreme peer orientation, with these effects being stronger among adolescents high on extreme peer orientation.

初中生班级竞争氛围对抑郁的影响：学习压力的多层中介分析

全晰¹ 江伊茹¹ 朱成伟¹ 张彩¹(通讯作者)

¹ 北京师范大学中国基础教育质量监测协同创新中心, 北京, 100875, caibnu@163.com

摘要 近年来, 抑郁的发生率居高不下, 研究表明, 抑郁会影响青少年认知和行为的发展。处于青春期的初中生大部分活动时间都是在学校尤其是在班级中与老师和同学度过的, 国内的班级结构为固定式, 这使得班级内易形成稳定的班级氛围, 根据班级社会体系理论, 班级氛围可以影响个体的心理和行为, 青少年的抑郁便与消极的班级氛围有关。班级竞争氛围作为班级氛围的重要组成成分之一同样会影响学生的心理健康。此外, 有研究表明, 班级氛围可以影响学生的学习压力, 初中生的学习压力相比于小学有明显的增加, 这些学习压力正是引发青少年抑郁的风险因素。因此, 可推知班级竞争氛围可以影响学生的学习压力, 进而影响抑郁。个体的心理健康会受到多个层次的多个因素的影响, 以往的研究将班级氛围视为个体层次的变量探究对个体心理健康的影响, 忽略了班级氛围作为班级层次的影响。综上, 本研究同时关注班级层变量和个体层变量对初中生抑郁的影响, 班级竞争氛围是数据结构的第二层, 学习压力和抑郁是数据结构的第一层, 研究学习压力在班级竞争氛围和抑郁中的中介作用。为了探讨班级竞争氛围对初中生抑郁的影响机制, 本研究采用问卷法对北京市 3 所学校 50 个班级 1250 名初二学生的竞争氛围, 学习压力和抑郁进行了调查, 将学生个体水平上的竞争氛围合成到班级水平, 通过建立 2-1-1 多层结构方程模型(MSEM)分析班级竞争氛围、学习压力和抑郁之间的关系, 使用 SPSS 和 Mplus 进行数据处理。结果发现: (1) 班级竞争氛围与学习压力、抑郁显著负相关, 学习压力与抑郁显著正相关 (2) 多层中介模型拟合良好, 班级竞争氛围不但可以直接影响学生抑郁, 还可以通过学习压力间接影响抑郁。研究结果表明, 班级层面的竞争氛围可以降低学习压力, 减少抑郁, 这为从班级层面对初中生抑郁的干预提供了实证研究的依据。

The Hierarchical Linear Model Analysis on the Relation between Classroom Competitive Climate and Junior Middle School Students' Depression: the Mediating Role of Academic Stress

Quan Xi, Jiang Yiru, Zhu Chengwei, Zhang Cai

Beijing Normal University 19 xinjiekouwai street, haidian district, Beijing, China

Abstract: In recent years, the prevalence of depression has been high, and studies have shown that depression affect the cognition and behavior development of adolescents. Junior middle school students spend most of their activity time in school, especially in class, with their teachers and classmates. In China, the class structure is fixed, which is easy to form a stable classroom climate. According to the "Classroom as a Social System", classroom climate affected students' psychology and behavior, and the adolescent depression related to the negative classroom climate. Studies have shown that the classroom competitive climate, as one of the important components of the classroom climate, also affects students' mental health. In addition, researches have indicated that classroom climate influence students' academic stress, and the academic stress of junior middle school students is significantly increased compared with that of primary school students, which is a risk factor for adolescent depression. Therefore, it can be inferred that classroom competitive climate affects the academic stress, and then affects the depression. Students' mental health was affected by multiple factors at multiple levels, but previous studies regarded classroom climate as

an individual-level variable to explore the impact of classroom climate on students' mental health and ignored the impact of it as a class-level variable. In summary, this study focused on the influence of class-level variable and individual-level variable on junior middle school students' depression. Classroom competitive climate was the second level of data structure, while academic stress and depression were the first level of data structure, and investigated the mediating role of academic stress between classroom competitive climate and individual depression. In order to explore the influence mechanism of classroom competitive climate on junior school students' depression, a total of 1250 Beijing junior middle school students from 50 classes in 3 schools completed scales that assessed classroom competitive climate, academic stress and depression. The classroom competitive climate perceived by students is synthesized to the class level. The 2-1-1 multilevel structural equation model (MSEM) was built to analyze the mediating effect of individual academic stress on classroom competitive climate and depression. SPSS and Mplus were used for data processing. The results showed that : (1) Classroom competitive climate was significantly negatively correlated with academic stress and depression, besides, academic stress was significantly positively correlated with depression; (2) The hierarchical linear mediating model had good fit indices, and classroom competitive climate not only directly influenced students' depression, but also indirectly through academic stress. The results showed that the competitive climate at the class level reduce depression by alleviating academic stress, which provided a reference of empirical research for intervention of depression in junior middle school students by creating a right classroom climate.

社会排斥与大学生冲动性消费的关系：有调节的中介效应

罗浩诚¹ 杨秋寒¹ 陈佳榕¹ 利振华¹ 聂衍刚¹ (通讯作者)

¹ 广州大学教育学院青少年心理与行为研究中心, 广州, 510006, nie-yangang@gzhu.edu.cn

摘要 购物已经成为了大学生的一种重要生活方式, 新时代的营销手段和消费模式使得消费变得更加容易, 这导致大学生的冲动性消费更有可能发生, 而大学生的冲动性消费也往往导致一系列的消极后果, 如低自尊和债务负担等等, 因此探究大学生冲动性消费的具体作用机制具有相当重要的意义。本研究基于认知—情感理论和自我控制理论, 构建了一个有调节的中介模型, 检验名人崇拜在社会排斥和冲动性消费之间的中介作用, 以及自我控制在其中的调节作用。本研究采用社会排斥量表、名人崇拜量表、冲动性消费量表和自我控制双系统量表对 811 名大学生进行测查, 结果发现: (1) 在控制了性别、年龄、家庭月收入 and 每月生活费后, 社会排斥对大学生的冲动性消费具有显著的正向预测作用 ($\beta = 0.39, SE = 0.03, p < 0.001$)。 (2) 中介效应分析表明, 名人崇拜在社会排斥与冲动性消费的关系之间具有部分中介作用 (indirect effect = 0.08, $SE = 0.02$, 95%CI = [0.06, 0.12])。 (3) 有调节的中介效应检验进一步表明, 自我控制调节了“社会排斥→名人崇拜→冲动性消费”的前半段 ($\beta = 0.07, SE = 0.03, p < 0.05$) 和直接路径 ($\beta = -0.06, SE = 0.03, p < 0.05$), 具体而言, 自我控制能够更好地缓冲弱社会排斥对名人崇拜的影响, 并且随着自我控制资源的提升, 社会排斥对冲动性消费的预测作用减弱。结果表明, 社会排斥是影响大学生冲动性消费的重要因素, 社会排斥通过加剧名人崇拜, 从而增加冲动性消费。此外, 良好的自我控制能力有助于削弱社会排斥对冲动性消费的消极影响。本研究验证了同伴系统和个人系统对大学生冲动性消费的联合作用, 对于大学生冲动性消费的干预具有重要指导意义。

Social Exclusion and Impulsive Buying among Chinese College Students: The Moderated Mediation Effect

Haocheng Luo¹, Qiuhan Yang¹, Jiarong Chen¹, Zhenhua Li¹, Yangang Nie^{1*}

¹ Research Center of Adolescent Psychology and Behavior, School of Education, Guangzhou University, 510006, Guangzhou

Abstract: According to the statistical report of China Internet Network Information Center (2020), as of December 2019, the proportion of Internet shopping of senior high school students in China accounts for 46.9% of all kinds of activities. Many marketing strategies also aims at college students. Buying has become a daily behavior of college students, which has aroused wide attention of the society. With the continuous progress of science and technology, it is more and more convenient for college students to buy, but it has brought serious social problems of impulsive buying to college students. Impulsive buying not only brings immediate satisfaction to college students, but also brings a series of problems such as debt burden and low self-esteem. Therefore, it is necessary to explore the psychological mechanism of impulsive buying of college students. In order to prevent and intervene impulsive buying better and avoid the negative effects of impulsive buying, this paper puts forward a moderated mediation model based on previous studies to explore its internal psychological mechanism.

Therefore, this study aimed at exploring the impact of social exclusion on impulsive buying, as well as the mediating role of celebrity worship and the moderating role of self-control. Based on perspective of cognitive-affective system theory, the social exclusion theory and the self-control theory, we used social exclusion scale, celebrity worship scale, self-control dual system scale and impulsive buying scale to investigate 811 college students in the late adolescence. The macro program process of SPSS 23.0 was used to process and analyze the data. By estimating the three equations, we tested the impact of social exclusion on impulsive buying, the mediating role of celebrity worship and the moderating role of self-control. The results showed that: (1) After all the predictors were standardized and controlling for gender, age, family monthly income and monthly living expenses, social exclusion could significantly positively predict impulsive buying ($\beta = 0.39$, $SE = 0.03$, $p < 0.001$); (2) Social exclusion predicted impulsive buying through the mediating role of celebrity worship (indirect effect = 0.08, $SE = 0.02$, 95%CI = [0.06, 0.12]); (3) The first half of the mediating effect of celebrity worship ($\beta = 0.07$, $SE = 0.03$, $p < 0.05$) and the direct influence of social exclusion on impulsive buying were moderated by self-control ($\beta = -0.06$, $SE = 0.03$, $p < 0.05$). Specifically, in terms of direct effect, compared with high self-control college students, low self-control college students' social exclusion had a greater predictive effect on their impulsive buying. The moderated mediation model was well proven. As a positive factor, self-control could buffer the adverse effect of social exclusion on impulsive buying. On the mediating path, self-control could moderate the influence of social exclusion on celebrity worship, and the protective effect of self-control was more obvious in the situation of weak social exclusion. The results helped to reveal the formation mechanism of college students impulsive buying, and had a certain guiding significance for the prevention and intervention of impulsive buying. In a word, this study constructed a moderated mediating model to reveal the internal psychological mechanism of social exclusion and impulsive buying, and helped us understand how social exclusion affects college students impulsive buying. In addition, the results of the study also provided some enlightenment for the intervention and prevention of impulsive buying. For example, educators could improve college students' self-control ability through certain course training and physical exercise, or guided them to correctly understand their attachment to celebrities, so as to avoid pathological infatuation, or administrators should formulate reasonable management measures to create a good peer environment which could reduce the possibility of social exclusion. There are also some deficiencies in this study. First, there may be other mechanisms behind these associations. Future research can explore other psychological mechanisms besides celebrity worship. Second, as a cross-sectional study, the causal relationship between variables can't be well inferred. Future research can improve this by focusing on longitudinal research or on methods of experiments.

Keywords: social exclusion, impulsive buying, celebrity worship, self-control, college student

父母监管、自我控制对青少年欺骗行为和亲社会行为的影响：来自 ERPs 的证据

罗浩诚¹ 彭小燕¹ 利振华¹ 刘庆奇¹ 聂衍刚¹ (通讯作者) 李瑞菁¹

¹ 广州大学教育学院青少年心理与行为研究中心, 广州, 510006, nie-yangang@gzhu.edu.cn

摘要 父母监管是培养子女社会化行为的重要环境成分。自我控制作为一种重要的心理机能, 对个体抑制冲动、实现长远目标发挥着关键作用。父母监管、自我控制是青少年欺骗行为和亲社会行为的重要影响因素。培养亲社会行为, 减少欺骗行为, 对青少年而言具有重要意义。本研究通过 2 个实验并结合事件相关电位(ERPs)技术, 探究父母监管、自我控制对青少年欺骗行为和亲社会行为的影响及其神经机制。实验一采用情境回忆法并结合父母眼睛图片操纵父母监管, 纳入自我控制双系统变量, 采用点判断任务诱发欺骗行为, 探究父母监管和自我控制双系统对青少年欺骗行为的影响。结果发现: 高控制低冲动组比低控制高冲动组有更少的欺骗行为次数($t(39) = -0.07, p > 0.05$, Cohen's $d = 0.38$)、更长的欺骗决策反应时($t(39) = 2.49, p = 0.09$, Cohen's $d = 0.80$)、诱发更小的 P300、N200 波幅。个体在父亲监管条件下和母亲监管条件下比无意义监管条件做出欺骗行为更少($F(2, 78) = 1.73, p > 0.05, \eta^2 = 0.04$)、欺骗决策反应时更短($F(2, 78) = 4.16, p < 0.05, \eta^2 = 0.10$), 诱发的 P300、N200 波幅均显著大于无意义条件。实验二采用捐献任务考察个体的亲社会行为, 探究父母监管和自我控制双系统对青少年亲社会行为的影响。结果发现: 相比于无意义监管条件下, 母亲监管条件和父亲监管条件下青少年会做出更多的亲社会行为($F(2, 90) = 5.53, p < 0.01, \eta^2 = 0.11$), 诱发的 P300 和 N200 波幅差异无显著差异; 高控制低冲动组较低控制高冲动组做出更少的亲社会行为($F(1, 34) = 0.31, p > 0.05, \eta^2 = 0.007$), 诱发的 P300 和 N200 的波幅显著小于低控制高冲动组。本研究从个体内部和外部的角度探讨了欺骗行为和亲社会行为的产生机制, 揭示了欺骗行为和亲社会行为的心理和神经机制, 为促进青少年亲社会行为、干预及预防欺骗行为提供实证支持, 助力青少年健康成长发展。

The Effects of Parental Supervision and Self-control on Adolescent Deception and Prosocial Behavior: Evidence from an ERP Study

Haocheng Luo¹, Xiaoyan Peng¹, Zhenhua Li¹, Qingqi Liu¹, Yangang Nie^{1*}, Ruijing Li

¹ Research Center of Adolescent Psychology and Behavior, School of Education, Guangzhou University, 510006, Guangzhou

Abstract: Parental supervision is an important environmental component of cultivating children's socialized behavior. As an important psychological function, self-control plays a key role in restraining impulses and achieving long-term goals. Parental supervision and self-control are important influencing factors of adolescents' deception and prosocial behavior. Cultivating prosocial behavior and reducing deception are of great significance to adolescents. Through two experiments and event-related potentials (ERPs) technology, this study explored the effects of parental supervision and self-control on adolescents' deceptive behavior, prosocial behavior and its neural mechanism. Experiment 1 used the situational recall method and combined with parental eye pictures to manipulate parental supervision, included the variable of dual system self-control, used the point judgment task to induce deception, and explored the impact of parental supervision and self-control on adolescents' deception. The results showed that the high control low impulse group had fewer times of deception ($t(39) = -0.07, p > 0.05$, Cohen's $d = 0.38$), longer deception decision-making response time ($t(39) = 2.49, p = 0.09$, Cohen's $d = 0.80$) and smaller P300 and N200 amplitudes than the low control high impulse group. Individuals under father supervision and mother supervision made less deception decision than those under meaningless supervision ($F(2, 78) = 1.73, p > 0.05, \eta^2 = 0.04$), and the reaction time of deception decision-making is shorter ($F(2, 78) = 4.16, p < 0.05, \eta^2 = 0.10$), and the induced P300 and N200 amplitudes were significantly greater than those in meaningless condition.

In Experiment 2, the donation task was used to investigate the prosocial behavior of individuals, and to explore the impact of parental supervision and self-control on adolescents' prosocial behavior. The results showed that

compared with meaningless supervision, adolescents under mother supervision and father supervision will show more prosocial behaviors ($F(2, 90) = 5.53, p < 0.01, \eta^2 = 0.11$), there was no significant difference in the amplitude of P300 and N200 induced; The high control low impulse group show less prosocial behavior than the low control high impulse group ($F(1, 34) = 0.31, p > 0.05, \eta^2 = 0.007$), the amplitudes of P300 and N200 induced were significantly smaller than those in the low control high impulse group. This study discusses the generation mechanism of deception and prosocial behavior from the internal and external perspectives of individuals, reveals the psychological and neural mechanisms of deception and prosocial behavior, provides empirical support for promoting adolescents' prosocial behavior, intervention and prevention of deception, and helps adolescents grow and develop healthily.

快乐表情对婴儿面孔种族知觉窄化的影响

王安琪¹ 张冰冰¹ 陈佳丽¹ 赵斌¹ 刘少英(通讯作者)¹

¹ 浙江理工大学心理系, 杭州, 310018, syliu@zstu.edu.cn

摘要 知觉-社会联结假说认为婴儿面孔种族的知觉加工与社会性加工存在联结, 已有研究发现, 婴儿出生后第一年表现出面孔种族的知觉窄化现象, 3个月婴儿能够识别所有种族面孔, 9个月婴儿只能识别本族面孔, 也有研究已证实婴儿面孔种族知觉窄化会影响其对面孔种族的社会性加工。然而, 尚不清楚面孔种族社会性加工是否能够影响面孔种族知觉窄化。本研究将探究快乐表情能否改变6个月和9个月婴儿对他族面孔的知觉窄化。实验采用完全被试间设计, 设置了两种实验条件, 熟悉快乐面孔或中性面孔。实验范式改进了以往婴儿识别任务使用的视觉配对比较范式(VPC), 在熟悉阶段和测试阶段的基础上增加了前测阶段。婴儿随机参与快乐或中性实验条件, 首先进入前测阶段, 配对呈现两张不同的中性的非洲女性面孔, 包含2个试次, 左右平衡顺序, 每个试次10秒。随后进入熟悉阶段, 配对呈现两张相同的, 前测中出现过的某一个体的快乐或中性面孔, 共6个试次, 每个试次20秒, 最后进入测试阶段, 与前测阶段完全一致。结果发现, 在中性面孔条件下, 6个月和9个月婴儿无论前测阶段还是测试阶段, 均未表现出对非洲新异面孔的偏好, 与以往研究一致, 6个月和9个月婴儿不能区分他族非洲面孔。在快乐面孔条件中, 6个月和9个月婴儿均能够在测试阶段对非洲新异面孔表现出偏好, 且在熟悉快乐面孔后, 测试阶段中的新异面孔偏好得分显著高于前测阶段中的新异偏好得分。这些结果表明快乐表情可以改变婴儿的面孔种族知觉窄化, 支持了知觉-社会联结假说, 证明了婴儿对面孔种族社会性加工也会影响面孔种族的知觉加工。

Happy Expressions Influence Perceptual Narrowing of Racial Faces in Infants

Angie Wang, Bingbing Zhang, Jiali Chen, Bin Zhao, Shaoying Liu

School of Psychology, Zhejiang Sci-Tech University, Hangzhou

Abstract: The perceptual-social linkage hypothesis suggests that there is overlap between perceptual and social processing of face race in infants. It has been found that infants show perceptual narrowing of face race in the first year of life. 3 months infants can recognize faces of all races whatever own race or other race, but 9 months of age can only recognize faces of their own race. Some studies have also demonstrated that the perception narrowing of face race affects infantile social processing of face race. However, it is not clear whether face racial social processing can influence face racial perception narrowing. This study will explore whether happy expressions alter the perception narrowing of other race faces in 6- and 9-month-old infants. A completely between subject design was used in the experiment. Two experimental conditions were set up, familiar happy face or neutral face. The experimental paradigm improved the visual pairing comparison paradigm (VPC) used in the previous infant recognition task, adding the pretest phase before the familiar and the test phase. Infants were distributed to happy or neutral experimental conditions randomly. Beginning with the pretest phase, two different African women neutral

faces paired present for 2, 10-s every test trials, left-right positioning of the stimuli was counterbalanced across infants on the first pretest trial and reversed on the second pretest trial. And then into the familiar phase, each infant from both age groups was familiarized with one African face (neutral or happy) for 6, 20-s every familiarization trials (with two identical copies of the face presented on each side of the display on each trial), and finally enter the test phase, same as pretest phase. The results showed that under the neutral face condition, 6 - and 9-month-old infants did not show preference for African faces in both pretest and test phases, which was consistent with previous studies. 6 - and 9-month-old infants could not distinguish other African faces. In the happy face condition, both 6-month-old and 9-month-old infants were able to show preference for novel African faces during the test phase, and the novel preference score during the test stage was significantly higher than that during the pretest phase after they were familiar with the happy face. These results suggest that happy expressions can alter the perceptual narrowing of face race in infants, which supports the perception-social linkage hypothesis and demonstrates that infants' social processing of face race also affects the perceptual processing of face race.

Keywords: perceptual narrowing, facial expression, face recognize, infant, racial face

流动与城市家庭母亲疑问句输入特征及其与幼儿语言能力的关系

朱煜赫^{1,2} 安淑敏^{1,2} 徐晨晨^{1,2} 纪聪丽^{1,2} 卢珊^{1,2} (通讯作者) 王争艳^{1,2}

1 北京市“学习与认知”重点实验室, 首都师范大学心理学院, 北京, 100048

2 首都师范大学儿童发展研究中心, 北京, 100048, 通讯作者: 卢珊 lushan79@163.com

摘 要 母亲疑问句输入特征, 尤其是以特殊疑问句为提问方式的言语输入对幼儿语言能力的提升有重要的作用。母亲与幼儿进行对话交流的过程中, 问题的提出会加深幼儿对世界的理解以及对当前事物的认识, 进而提高幼儿的语言能力。流动家庭与城市家庭的母亲与幼儿可能在母子互动中有不同的语言表现。本研究招募了 117 名 35-41 个月(37.68 ± 1.00)的幼儿及其家长, 参加项目的家庭包括 41 个流动家庭(男孩 26 名)和 76 个城市家庭(男孩 31 名), 使用皮博迪图片词汇测量(修订版)测量其接受性语言能力, 使用 CHILDES 语料分析系统考察幼儿表达性语言能力以及母亲疑问句输入特征, 使用基本情况调查表收集人口学信息。利用分层回归模型考察母亲疑问句输入特征对不同家庭类别幼儿的语言能力的影响, 结果表明:

(1)母亲疑问句输入特征在流动家庭与城市家庭中无显著差异; 幼儿语言能力中, 接受性语言能力与词汇多样性指标在流动家庭与城市家庭中有显著差异, 城市家庭显著大于流动家庭。

(2)母亲疑问句输入特征与幼儿的词汇类型和词汇数量具有显著正向相关关系, 母亲疑问句输入特征与幼儿的平均语句长度具有显著负向相关关系。

(3)在流动家庭中, 母亲特殊疑问句个数正向预测了幼儿的词汇类型和词汇数量; 在城市家庭中, 母亲其他疑问句个数正向预测了幼儿的词汇数量, 母亲其他疑问句个数显著负向预测了幼儿的平均语句长度。

本研究结果表明, 母亲疑问句输入特征对幼儿语言能力的影响存在差异, 具有挑战性的疑问句输入有助于促进幼儿的语言能力提升, 而频繁的无策略的提问则会导致幼儿话语长度的减少。特殊疑问句的提问方式可能对流动家庭的幼儿语言能力的提升更有作用, 而过于频繁地提问非特殊疑问句可能对幼儿语言能力具有负面影响。

关键词 母亲疑问句输入, 流动家庭, 城市家庭, 幼儿, 语言能力

The relationship between the features of maternal questions input in different families and children's language ability

Yuhe Zhu^{1,2}, Shumin An^{1,2}, Congli Ji^{1,2}, Shan Lu^{1,2} (Corresponding author), Zhengyan Wang^{1,2}

1 Beijing Key Laboratory of Learning and Cognition, Capital Normal University, Beijing 100048

2 Center for Child Development, Capital Normal University, Beijing 100048

Corresponding author: Shan Lu, lushan79@163.com

Abstract: The features of maternal questions input, especially wh-question, play an important role in the

improvement of children's language ability. In the process of dialogue between adults and children, questions raised by adults will deepen children's understanding of the world and the knowledge of current things, thus improving children's language ability. Mother-child interaction may be different between mother and child in migrant families and city families. This study recruited 117 children with 35 to 41 months (37.68 ± 1.00) and their parents, The participating families included 41 migrant family (26 boys) and 76 city family (31 boys). The Peabody Picture Vocabulary Test-Revised was used to measure children's receptive language ability, the Child Language Data Exchange System corpus was used to measure children's expressive language ability and relevant variables of maternal questions input features, and the basic information form was used to collect demographic information. The hierarchical regression model was used to investigate the influence of maternal questions input features on children's language ability in different family types. The results showed that:

(1) There is no significant difference in the features of maternal questions input between migrant families and city families; In children's language ability, receptive language and vocabulary diversity have no significant differences between migrant families and city families, city families are significantly larger than migrant families.

(2) The features of maternal questions input with children's vocabulary type and number of vocabulary has a significant positive correlation, but with children's mean length of utterance has a significant negative correlation.

(3) In migrant families, the number of maternal wh-question positively predicted children's vocabulary type and number of vocabulary; in city families, the number of other questions positively predicted children's number of vocabulary, and significantly negatively predicted children's mean length of utterance.

The results of this study indicate that maternal questions input features have different effects on children's language ability. Challenging questions input is helpful to improve children's language ability, while frequent but non-strategic questions will lead to the reduction of children's speech length. The questioning method of wh-question may be more effective in improving the language ability of children in migrant families, and the questioning method of other questions may have a negative impact on children's language ability if it used too frequently.

学步期父母婚姻质量与严厉管教的关系： 基于纵向主客体互倚模型的研究

师思函 乌斯日格 王争艳 梁熙（通讯作者）

首都师范大学心理学院，首都儿童发展研究中心，北京市“学习与认知”重点实验室，北京，100048，

liangxi@cnu.edu.cn

摘 要 已有的一些研究表明，处于学步期的父母严厉管教行为会对儿童发展产生深远影响，同时作为衡量父母婚姻关系的婚姻质量状况，也和父母的教养行为息息相关。受家庭系统理论的启发，越来越多研究扩大到了对夫妻子系统以及不同子系统之间关系的探讨。自改革开放以来，社会变迁带来的新旧观念更替对传统的家庭权力结构带来了冲击，这种变化不仅会影响家庭中夫妻间和亲子间的关系模式，还可能会改变夫妻婚姻关系与其自身和对方教养方式的关系。已有研究证实婚姻质量和严厉管教行为都会在学步期发展变化，因此很有必要进一步通过对偶、追踪的研究设计了解在当今我国社会文化背景下，父母双方婚姻质量和严厉管教之间的关系，进而理解当前的家庭权力结构模式。本研究样本来自一项从 2015 年开始的纵向追踪队列研究，包括 240 个家庭。在儿童 1 岁、2 岁和 3 岁时，通过问卷收集了 189 个家庭父母各自报告的婚姻质量和严厉管教的信息。通过建构纵向主客体互倚模型(L-APIM)，本研究得到如下结果：1) 在婚姻质量和体罚方面，研究发现了时间平均水平上符合溢出假设的主体效应，即随着时间的推移，父母各自体验到较好的婚姻质量与其各自较少使用体罚策略有关；在婚姻质量和心理攻击方面，研究仅发现了时间特异水平上符合溢出假设的母亲主体效应，即只有母亲报告的特定时间点婚姻质量的升高与其自身下一个时间点更少使用心理攻击有关。2) 父母婚姻质量和对方的体罚/心理攻击行为之间均未发现显著的客体效应。3) 在父母体罚的关系上，研究发现特定某一年父亲体罚与母亲体罚的共变程度较低。也就是说，当父亲在某一年较多采取体罚时，母亲可能并不会倾向于也采取更多的体罚措施，反之亦然；在父母心理攻击的关系上，研究同样发现较低的共变程

度，但后者的共变程度高于前者。本研究采用纵向主客体互倚模型，系统考察了学步期父母婚姻质量和严厉管教的关系，这些结果不仅丰富了相关领域的研究，对现实家庭生活以及临床干预也均带来一定的启发。

关键词 学步期，婚姻质量，严厉管教，纵向主客体互倚模型

The relations between marital quality and harsh parenting in toddlerhood: A research based on L-APIM

Sihan Shi, Wusirige, Zhengyan Wang, Xi Liang*

Department of Psychology, Key Laboratory of Learning and Cognition, Capital Normal University, Beijing, 100048

Abstract: In previous studies, researchers have found that harsh parenting, especially during the toddler years, have profound effects on children's development. The marital quality, as a measure of the marital relationship between parents, is also closely related to the parenting behavior of parents to children. Inspired by family system theory, more and more researches no longer focus only on parent-child subsystem, but also extend to husband-wife subsystem trying to explore the relationship between different subsystems. Since reform and opening-up, China's society has been in a period of development and change. The conflict of old and new concept, brought by social change, has also brought an impact on the traditional family power structure, which not only affects husband-wife and parent-child relationship, but also can change the association between marital relationships and parenting styles. Studies have found that both marital quality and harsh parenting are changing and developing during the toddlerhood. Therefore, it is very necessary to understand the association between the marital quality and harsh parenting behavior of both parents under the current social and cultural background in China, through the study design of dyad and longitudinal, so as to understand the current pattern of family power structure. Participants were from the Beijing Longitudinal Study 2015 (BELONGS 2015), including 240 families. At age of 1, 2, and 3, 189 parents reported marital quality and harsh parenting information respectively. By constructing a longitudinal actor-partner interdependence model (L-APIM), this study obtained the following results: (1) In terms of the association between marital quality and corporal punishment, the study found that the spillover hypothesis was consistent with the actor-effect at the time-average level. That means, parents' better marital relationships over time were associated with their respective lower corporal punishment strategies, but this effect was not reflected at year-to-year levels. In terms of the association between marital quality and psychological aggression, only the maternal actor-effect at the time-specific level is consistent with the spillover hypothesis. That means, only an increase in maternal marital quality was associated with less maternal psychological aggression parenting at the next point in time. (2) No significant partner-effect was found between marital quality and corporal punishment/psychological aggression. (3) In terms of the association between paternal and maternal corporal punishment, the study found that the covariation between paternal corporal punishment and maternal corporal punishment in a particular year is low. That is, when fathers take more corporal punishment in a particular year, mothers may not to take more corporal punishment, and vice versa. In terms of the association between paternal and maternal psychological aggression, the study also found the covariation in a particular year is low, but the degree of covariation of the latter is higher than the former. In current study, the L-APIM was used to systematically examine the association between the marital quality and harsh parenting during toddlerhood. This study not only further enrich the research in related fields, but also have some enlightening implications for real family life and clinical intervention treatment.

Keywords: Toddlerhood, Marital quality, Harsh parenting, L-AIPM

初中生心理健康与主观家庭环境的关系研究：基于交叉滞后分析

蔡雅诗¹ 张敏强¹（通讯作者） 梁正妍¹

¹ 华南师范大学心理学院，广州，510631，2640726401@qq.com

摘要 初中生处在个人身心发展的关键时期，其心理健康问题一直为社会所重视。根据布朗芬布伦纳的生态系统理论和 PPCT 模型，家庭是初中生成长的重要环境，这一环境对于初中生心理健康的纵向影响十分值得关注。目的：本研究采用纵向研究分析方法探讨初中生的主观家庭环境与其心理健康之间的双向关系，其中主观家庭环境包括父母关系、家庭管教和亲子活动等三个维度。通过交叉滞后模型，探究家庭因素与初中生心理健康的因果时序关系，进一步揭示家庭因素对初中生心理健康影响的作用机制。方法：本研究使用中国教育追踪调查(CEPS)两期数据。在 2013-2014 学年的基线数据中，抽取了 8101 名初一年级学生，使用其自评的心理健康测量和主观家庭环境（包含父母关系、家庭管教和亲子活动三个维度）测量数据。在 2014-2015 年的追踪数据中，追踪这些学生的相同变量数据。以两年的追踪数据进行交叉滞后分析。结果表明：（1）第一年的心理健康水平正向预测第二年的父母关系，而第一年的父母关系反向预测初中生的心理健康。（2）第一年的父母关系反向预测第二年的父母关系。（3）第一年的心理健康正向预测第二年的亲子活动，第一年的亲子活动正向预测第二年的初中生心理健康。本研究启示，亲子活动与初中生心理健康呈双向动态关系，亲子活动对初中生心理健康有着正反馈作用，越多的亲子活动，预测未来更良好的心理健康，而更良好的心理健康，也预测着未来更多的亲子活动。此外，父母关系与心理健康的双向关系，有待进一步研究分析。综上，可以尝试鼓励动员家长陪伴孩子参加更多的亲子活动，来优化初中生的心理健康状态。

Mental Health and Subjective Family Environment of Junior Middle School Student: A Cross-Lagged Analysis

Yashi Cai¹, Minqiang Zhang¹ (corresponding author), Zhengyan Liang¹

¹ School of Psychology, South China Normal University, Guangzhou

Abstract: Junior middle school students are in a critical period of personal physical and mental development, and their mental health issues have always been paid attention to by the society. According to Bronfenbrenner's ecosystem theory and PPCT model, the family is an important environment for the growth of junior high school students. The longitudinal impact of this environment on the mental health of junior middle school students is very worthy of attention. Objective: This study explores the two-way relationship between the subjective family environment of junior middle school students and their mental health through cross-lagged analysis, explores the causal relationship between the two, and further reveals the mechanism of family factors affecting the mental health of junior middle school students. Methods: This study uses China Education Panel Survey (CEPS) data. In the baseline data for the 2013-2014 school year, 8101 seventh-grade students were selected and used their self-evaluated mental health measurement and subjective family environment (including three dimensions of parental relationship, family education, and parent-child activities) measurement data. In the tracking data from 2014 to 2015, track the same variable data of these students. The cross-lagged analysis is performed with two-year tracking data. Results: (1) The mental health in the first year positively predicts the parental relationship in the second year, while the parental relationship in the first year negatively predicts the mental health. (2) The parental relationship in the first year reversely predicts the parental relationship in the second year. (3) The mental health of the first year positively predicts the parent-child activities of the second year, and the parent-child activities of the first year positively predict the mental health of the second year. This study reveals that parent-child activities have a two-way dynamic relationship with the mental health of junior high school students. Parent-child activities have a positive feedback effect on the mental health of junior high school students. Predicting more parent-child activities in the future. In addition, the two-way relationship between parental relationship and mental health needs further research and analysis. In summary, we can try to encourage parents to accompany their children to participate in more parent-child

activities to optimize the mental health of junior high school students.

4-5 岁儿童对不同熟悉性信息提供者的选择性信任

郭鑫 祁艳 邓铸 (通讯作者)

南京师范大学心理学系, 中国南京 210046 zdeng_psy@163.com

摘要 儿童的选择性信任受诸多因素影响。对于陌生人提供的信息, 儿童通常能根据信息提供者的准确性做出理性的信任选择。为探究儿童能否根据母亲提供的信息准确性做出理性的信任选择, 以及儿童对母亲和陌生人的选择性信任特点, 本研究从信息提供者熟悉性出发设计了两项实验。研究 1 采用冲突信息源范式, 探究 118 名 4-5 岁儿童在不同相对准确性下对母亲的选择性信任, 并比较其对母亲和陌生人的信任差异。结果发现不同性别的儿童对母亲的选择性信任无显著差异, 儿童对母亲的信任显著高于陌生人; 在两者准确性分别为 50%-50% 条件下, 儿童选择母亲的答案比率显著高于随机水平; 在两者准确性分别为 25%-75% 条件下, 儿童选择母亲的答案比率低于随机水平; 在 25% 准确性条件下, 儿童对母亲和陌生人的信任选择显著低于 75% 条件下, 信任选择随信息提供者相对准确性下降而下降。研究 2 采用单一信息源范式, 比较 62 名 4-5 岁儿童自主探究前后对母亲的选择性信任, 以及对母亲和陌生人的信任差异。结果表明儿童在探索前存在显著的母亲轻信偏差, 但在探索后拒绝了母亲和陌生人的答案, 两者信任选择不存在显著差异; 儿童自主探索后获得的信息提供者的准确性, 在陌生人条件下得到了概括运用, 但在母亲条件下未概括运用。

4-5-year-old Children's Selective Trust in Information Providers with Different Levels of Familiarity

Guo Xin, Qi Yan, Deng Zhu

Nanjing Normal University, Nanjing 210046, China

Abstract: Children's selective trust is affected by many factors. For the information provided by strangers, children can usually make rational trust choices according to the accuracy of information providers. In order to explore whether children can make rational trust choices according to the accuracy of information provided by their mother, and the characteristics of children's selective trust in their mother and strangers, this study designed two experiments based on the familiarity of information providers. Study 1 used the conflict information source paradigm to explore 118 4-5-year-old children's selective trust in their mother under different relative accuracy, and compared their trust in their mother and strangers. The results showed that there was no significant difference in children's selective trust in their mothers. Under the condition of 50% - 50% accuracy, the answer rate of children choosing their mother was significantly higher than that of random level; Under the condition of 25% - 75% accuracy, the answer rate of children choosing their mother is lower than the random level. Children's trust in their mothers was significantly higher than that of strangers; Under the condition of 25% accuracy, children's trust choice for mothers and strangers is significantly lower than that under the condition of 75%, and the trust choice decreases with the decline of the relative accuracy of information providers. Study 2 used the single information source paradigm to compare the selective trust of 62 children aged 4-5 years to their mothers before and after independent inquiry, as well as the differences in trust between mothers and strangers. The results showed that children had significant mother credulity bias before exploration, but rejected the answers of mother and stranger after exploration, and there was no significant difference in trust choice between them; The accuracy of information providers obtained by children's independent exploration has been generalized under the condition of strangers, but not under the condition of mothers.

Keywords: Selective trust, Familiarity comparison, Relative accuracy, Independent exploration

社交网站中的上行社会比较对网络强迫性购买的影响： 物质主义和抑郁的中介作用

徐宇奇¹ 郑月丽¹ 周宗奎^{1,2} (通讯作者)

¹ 青少年网络心理与行为教育部重点实验室, 武汉, 430079

² 华中师范大学心理学院, 武汉, 430079, zhouzk@mail.ccnu.edu.cn

摘要 社交网站中的上行社会比较是现实上行社会比较在网络中的延伸,是个体在社交网站使用过程中通过浏览其他用户的线上积极自我呈现,在能力、成就、外貌特征、受欢迎程度等方面与优秀他人进行比较的过程。上行社会比较会降低自我评价,从而导致广泛的负面后果,包括不良购买行为。网络强迫性购买是个体无法控制的过度网购行为,是一种适应不良的问题行为。沉溺于强迫性购买会导致许多负面结果,如后悔、内疚、或多或少失去自我控制能力、戒断症状、过度支出和家庭债务、人际关系危机、职业生涯的中断、行为或物质成瘾的共病,甚至是法律问题。尽管已有研究表明社交网站中的上行社会比较与网络强迫性购买有关,但很少有研究探讨这种关系背后的作用机制。本研究采用社交网站中的上行社会比较问卷、物质主义量表、抑郁量表和网络强迫性购买问卷对武汉高校的737名在校大学生进行调查,探讨了社交网站中的上行社会比较对大学生网络强迫性购买行为的影响,以及物质主义和抑郁在其中的中介作用。结果发现:(1)社交网站中的上行社会比较、物质主义、抑郁与网络强迫性购买之间呈两两显著相关,且社交网站中的上行社会比较能显著正向预测网络强迫性购买;(2)物质主义和抑郁在社交网站中的上行社会比较与网络强迫性购买之间起显著的中介作用,具体包括三条路径:一是物质主义的单独中介作用;二是抑郁的单独中介作用;三是物质主义与抑郁的链式中介作用。本研究强调了物质主义和抑郁作为社交网站中的上行社会比较和网络强迫性购买之间潜在机制的中介作用,并对预防和干预大学生网络强迫性购买行为具有重要意义。

The Impact of Upward Social Comparison in Online Social Network Sites on Online Compulsive Buying: The Effect of Materialism and Depression

Xu Yuqi, Zheng Yueli, Zhou Zongkui

School of Psychology, Central China Normal University, Wuhan

Abstract: The upward social comparison in social networking sites is an extension of the actual upward social comparison in the network. It is a process in which individuals compare with others in terms of ability, achievement, appearance, characteristics, popularity and other aspects by browsing other users' online positive self-presentation during the use of social networking sites. upward social comparison can decrease self-evaluation, thereby lead to a wide range of negative outcomes, including maladaptive buying behavior. Online compulsive buying, which refers to an individual's failure to control excessive online purchases, is a common maladaptive and problematic behavior. Indulging in compulsive buying can lead to a number of negative outcomes, such as regret, guilt, loss of self-control to a greater or lesser extent, withdrawal symptoms, excessive expenditures and debts of the household, crisis of interpersonal relationships, interrupted professional career, comorbidity of behavioural or substance addiction, or even problems with the law. Although upward social comparison on social network site (SNS) usage has been shown to be related to online compulsive buying, little is known about the mediating mechanisms underlying this association. The present study examined the mediating role of materialism and depression in the association between upward social comparison on SNS and online compulsive buying. A sample of 737 undergraduates completed questionnaire measures of upward social comparison on SNS, materialism, depression, and online compulsive buying. Results indicated that: (1) upward social comparison on SNS, materialism and depression were significantly correlated with online compulsive buying, and upward social comparison on SNS could significantly predict online compulsive buying positively; (2) materialism and depression played significant mediating roles between upward social comparison on SNS and online compulsive buying, including three specific pathways: the separate mediation effect

of materialism and depression, and the serial mediation effect of materialism and depression. This study highlights the mediating role of materialism and depression as a potential mechanism between upward social comparison on SNS and online compulsive buying, and has important significance for preventing and intervening college students' online compulsive buying behavior.

3 深圳市光明区教育科学研究院, 深圳, 518107

通讯作者: wangyun@bnu.edu.cn

摘要 烟酒使用是我国关注的青少年问题行为之一。烟酒使用不仅对青少年当下的身心健康伤害极大, 还增加青少年后期的继续烟酒使用和成年后的物质滥用风险, 持续带来不良影响。鉴于青少年早期往往是烟酒使用早发期, 探讨青少年早期烟酒使用行为的影响因素和影响路径十分有必要。家庭嘈杂近来在公共健康领域备受关注, 被确定为影响青少年烟酒使用行为的重要风险因素, 但背后的作用机制和作用条件尚未可知。生命史理论指出, 为适应环境, 青少年会采取不同的生命史策略, 从而导致发展结果的差异。且青少年的环境反应性如神经质存在差异, 因此家庭嘈杂度对不同神经质水平青少年的影响可能存在异质性。因此本研究从生命史理论及其相关的压力反应性的适应调节模型出发, 探讨家庭嘈杂度在影响青少年烟酒使用过程中, 生命史策略的中介作用和神经质的调节作用。通过采取整群抽样的方式, 对来自 5 所中学的 2550 名初中生 (50.6% 男生; $M = 13.50$ 岁, $SD = 1.05$) 及其主要抚养人进行了问卷调查, 由初中生填写烟酒使用问卷、Mini-K 生命史策略量表和小五人格量表的神经质分量表, 报告近 30 天内烟酒使用情况、生命史策略和神经质, 主要抚养人填写 CHAOS 量表 (Confusion, Hubbub and Order Scale) 报告家庭嘈杂度。在控制了人口统计学变量后, 使用结构方程模型对变量进行拟合, 并采用 Bootstrap 法进行有调节的中介模型检验, 结果表明: 生命史策略在家庭嘈杂和青少年烟酒使用之间起部分中介作用 (间接效应 = .013, 95% 置信区间 [.003, .026]), 在高家庭嘈杂度中的青少年有更快的生命史策略 ($\beta = -.15, p < .001$), 进而引发烟酒使用行为 ($\beta = -.09, p < .05$)。神经质调节家庭嘈杂对生命史策略的影响 ($\beta = .09, p < .001$), 具体而言, 相对于高神经质的青少年而言, 家庭嘈杂对生命史策略的影响在低神经质的青少年群体中更强。研究结果不仅强调了不利家庭环境对青少年烟酒使用适应的影响, 以及青少年对环境敏感性差异在其中的作用, 而且是在心理病理学模型之外理解青少年烟酒使用的原因的一次探索, 这对青少年烟酒使用的干预和预防有重要意义。

Household chaos and substance use:

The role of life history strategies and neuroticism

Zijing Xu¹, Yuhao Luo^{1,2}, Kewen Jian¹, Jiayao Sun¹, Yajun Li³, Zhengqian Yang¹,
Yun Wang¹ (Corresponding author)

1 State Key Laboratory of Cognitive Neuroscience and Learning, Beijing Normal University,
Beijing, China

2 Collaborative Innovation Center of Assessment for Basic Education Quality, Beijing Normal
University, Beijing, China

3 Guangming Institute of Education Sciences, Shenzhen 518107, China

Abstract: Substance use is rising among Chinese adolescents and poses a significant public health concern. Underage substance use often increases the likelihood of SU dependence, and poses a possible long-term severe threat to health and social development. Thus, it is necessary to identify the risk factors and how these factors work in early

adolescence when substance use usually emerges. Household chaos, which has been identified as a risk factor for adolescent health outcomes above and beyond poverty-related variables, has increasingly gained attention for its role in substance use. However, how and why adolescents engage in substance use in high-chaos contexts is not well understood. This study examined the effect of household chaos on substance use, and whether this effect is mediated by life history strategies and moderated by neuroticism. The participants were recruited 2,550 adolescents (50.6% boys; Mage = 13.50 years, SD = 1.05) from 5 junior middle schools in China and their primary caregivers, using the randomized cluster-sampling method. Adolescents completed self-report questionnaires concerning LH strategies, neuroticism, and substance use, and their primary caregivers responded to a questionnaire measuring household chaos. The conceptual moderated-mediation model was examined with bootstrapping. The results indicated that adolescents in more chaotic households reported faster life history strategies ($\beta = -.15, p < .001$), and in turn more substance use ($\beta = -.09, p < .05$). Furthermore, the relation between household chaos and life history strategies was moderated by neuroticism ($\beta = -.09, p < .05$). Specifically, the effect of household chaos on life history strategies was stronger for less neurotic adolescents. These findings indicate that challenging family environments have an effect on adolescent substance use, and that individual differences in sensitivity to the environment are also operative. Findings highlight the importance of understanding adolescent substance use beyond the developmental psychopathology model, and identify important targets in the prevention of adolescent substance use.

新冠疫情期间研究生学术支持对焦虑、抑郁影响： 学术表现的中介作用

曾晴¹ 张敏强¹（通讯作者） 梁正妍¹ 夏园林¹ 梁警丹¹ 蔡雅诗¹

¹ 华南师范大学心理学院，广州，510631，2640726401@qq.com

摘要 2019年新冠疫情爆发并在全球迅速蔓延，成为突发公共卫生事件。由于疫情的影响，学生的生活和学习条件发生了很大改变，而研究生群体由于其特殊的学习方式，受疫情负面影响可能更严重。已有研究表明，学生在疫情期间普遍出现焦虑、抑郁情绪，但这些负面情绪的作用机制是如何形成仍需进一步探讨。社会支持的直接效应机制认为，社会支持对心理健康具有增益效果；班杜拉的三元交互理论提出，环境、行为和主体是相互联结的，环境是决定行为的潜在因素。个体的社会支持受疫情负面影响越大，行为表现也越可能面临风险，进而导致个体出现心理危机。因此，研究生学术表现受影响可能在学术支持受影响与焦虑、抑郁间发挥中介作用。本研究自编研究生受疫情影响问卷，并运用焦虑自评量表（SAS）和抑郁自评量表（SDS），对3137名硕博研究生开展调查。选取研究生与导师、同学、社会院校间的学术交流受影响作为高阶学术支持受影响的测量指标，选取资料收集、论文写作受影响作为高阶学术表现受影响的测量指标，将性别、学位类型、学习方式（全日制/非全日制）作为控制变量，并将焦虑、抑郁作为因变量同时纳入中介模型。结果显示，（1）疫情对82%研究生的学术支持与学术表现的各指标产生不同程度影响，20.9%研究生出现不同程度焦虑，33.9%研究生出现不同程度抑郁；（2）学术支持受影响的各指标与焦虑、抑郁呈正相关（ $p < 0.001$ ），学术表现受影响的各指标与焦虑、抑郁呈正相关（ $p < 0.001$ ）；（3）中介模型拟合良好（CFI=0.96, RMSEA=0.078, SRMR=0.04），研究生学术支持受影响分别对焦虑、抑郁具有显著的正向预测作用，学术表现受影响分别在学术支持受影响与焦虑、抑郁间的中介作用显著。由此说明，疫情对研究生学术支持的影响不仅直接预测其焦虑、抑郁，而且会通过影响学术表现产生作用，即研究生的学术支持受疫情负面影响越大，学术表现受影响也会越大，最后导致焦虑、抑郁。这启示我们，疫情期间需要及时对研究生群体的心理健康状况评估，并注重在不同方面提供学术支持与帮助。

关键词 研究生，学术支持，学术表现，焦虑，抑郁

The impact of academic support on anxiety and depression during the outbreak of COVID—19: the mediating role of academic performance

Qing Zeng¹, Minqiang Zhang¹(corresponding author), Zhengyan Liang¹,
Yuanlin Xia¹, Jingdan Liang¹, Yashi Cai¹

1 School of Psychology, South China Normal University, Guangzhou

Abstract: A COVID-19 epidemic has been spreading in China and other parts of the world since 2019 and become a bursting public health event. Because of the epidemic, great changes have taken place in students' life and learning mode, and the graduate group may be more affected due to its special training program. Studies have shown that the epidemic has brought unbearable psychological problems such as anxiety and depression, but the mechanism of these negative emotions still needs to be further explored. The main-effect model of social support believes that social support has a beneficial effect on mental health; Bandura's reciprocal determinism proposes that environment, behavior, and subject are interconnected, and environment is the potential factor determining behavior. The more negative impact of the epidemic on individuals' social support, the behavior performance is more likely to face risk, which in turn leads to the psychological crisis. Therefore, the academic performance affected of graduates may play a mediating role between academic support affected, anxiety and depression.

A sample of 3137 graduate students was investigated with the questionnaire on the academic impact of the epidemic, Self-rating Anxiety Scale(SAS) and Self-rating Depression Scale(SDS). For the investigation of academic support is affected by the epidemic, the impact of academic exchanges between graduate students and tutors, schoolmates, and other colleges is selected as the measurement index for academic support affected. Take data collection and paper writing as the measurement indicators of the impact of academic performance affected, and consider gender, degree and learning form(full-time/part-time) are used as control variables, and take anxiety and depression as dependent variables into the mediation model at the same time. The results showed that: (1) the epidemic affected 82% of graduates' academic support and academic performance indicators in varying degrees, 20.9% of students had varying degrees of anxiety, and 33.9% of students had varying degrees of depression; (2) academic support affected variables(i.e., academic exchange with tutors, schoolmate, and other colleges) were positively correlated with anxiety and depression($p<0.001$), academic performance affected variables(i.e., paper writing and data search) were significantly associated with anxiety and depression($p<0.001$); (3) The model fits the data well, CFI=0.96, RMSEA=0.078, SRMR=0.04. This direct effects from academic support affected to anxiety and depression were significant. This indirect effects from academic support affected to academic performance affected to anxiety, depression were significant. The results of this study suggest that the impact of the epidemic on the academic support of graduate students not only directly affects their anxiety and depression, but also affects their academic performance. This enlightens us that it is necessary to assess the psychological health of the graduate group during the COVID-19 epidemic, and provide academic support and assistance in different aspects for the students.

青少年和成年群体的盲盒成瘾研究—— 冲动性及强化敏感性对购买盲盒成瘾行为的影响

李劭涵¹ 邹为¹ 陈宥辛^{1,2} (通讯作者)

1 温州肯恩大学心理系, 温州, 325060

2 交互式学习及沉浸式虚拟现实研究院, 温州肯恩大学, 温州, 325060, chenyouxin@wku.edu.cn

摘要 本研究旨在探究冲动性及强化敏感性对购买盲盒成瘾行为的影响在青少年晚期和成年群体间的差异。青少年晚期个体开始踏入社会, 但仍处于身心发展阶段, 尤其支持执行控制、抑制冲动的前额叶脑区尚未成熟, 所以晚期青少年成瘾的神经机制与成年群体有一定差异。前人研究中对晚期青少年成瘾心理机制的分析大多以网络或游戏成瘾等为入手点, 盲盒作为一种新的消费形式已经在许多报导中认为存在成瘾的风险和

迹象，但却鲜有研究从发展或成瘾的视角去探究购买盲盒行为。以往研究表示，冲动性与强化敏感性对网络成瘾行为有一定影响，且青少年向成年发展过程中冲动控制与敏感性也会有所变化。故以下研究将基于冲动二维模型以及强化敏感性理论探究青少年晚期和成年群体购买盲盒成瘾行为。本研究计划采用中文版行为抑制-激活系统量表（BIS-BAS）、中文版 Barratt 冲动量表（BIS-11）、改编版盲盒购买成瘾问卷对青少年晚期到成年群体进行测量。改编版盲盒购买成瘾量表是基于中文版网络成瘾测试（Internet Addiction Test）进行词语用语的修改，从而测量个体对购买盲盒的成瘾程度。以下研究计划采集 300 名 18-24 岁青少年晚期个体、300 名 25-31 岁成年个体共 600 人作为被试，收集上述三个问卷的数据。本研究将使用 SPSS26.0 对实验数据进行差异分析、相关分析以及回归分析。本研究假设冲动性与强化敏感性对晚期青少年及成年群体盲盒成瘾程度存在显著影响，且对晚期青少年的影响更大；即晚期青少年中，年龄越小，影响越大。上述两种群体盲盒成瘾程度与冲动性呈显著正相关；与强化敏感性中的奖励敏感性得分呈显著正相关，与惩罚敏感性得分呈显著负相关。研究结果表示，在晚期青少年和成年群体中，青少年群体可能仍处于身心发展阶段，其冲动性较高、自控能力弱因此购买盲盒成瘾的程度与成年群体存在差异。外加高奖励敏感性、低惩罚敏感性者，专注成就而忽视消极后果，更易购买盲盒成瘾。

关键词 青少年晚期，成瘾，盲盒，冲动性，强化敏感性

An investigation on blind box purchase addiction between late adolescents and young adults: The effect of impulsivity and reinforcement sensitivity on the degree of blind box purchase addiction

Abstract: The purpose of the study is to explore the effects of impulsivity and reinforcement sensitivity on the degree of addiction to buying blind boxes between late adolescents and young adults. Late adolescents begin to enter society but are still in the stage of individual physical and mental development, especially the prefrontal region that supports executive control and impulse suppression has yet to fully develop and mature. Thus, the neural mechanism of adolescent addiction is different from that in adults. Most of the previous studies have analyzed the psychological mechanisms of addiction of adolescents by identifying Internet or game addiction. However, investigations on blind box purchase from an addiction and development perspective are rare despite recent reports of signs of behavioral addiction related to blind box purchase behavior. Previous studies have indicated that impulsivity and reinforcement sensitivity influenced Internet addiction, therefore the following study will investigate the addiction phenomenon in late adolescents and adults' purchase of blind boxes in terms of impulsivity and reinforcement sensitivity based on the two-dimensional model of impulsivity and Reinforcement Sensitivity Theory. The study plans to measure adolescents by using the Chinese version of Behavioral Inhibition-Activation System Scale (BIS-BAS), the Chinese version of Barratt Impulsiveness Scale (BIS-11), and the adapted Blind Box Addiction Test. The adapted Blind Box Addiction Test was modified by words based on the Chinese version of Internet Addiction Test to measure subjects' addiction to the purchase of blind boxes. This study plans to randomly select 600 individuals in total including 300 late adolescents aged 18-24 and 300 adults aged 25-31 as subjects to collect data for the above three scales. The study will use SPSS 26.0 to conduct difference analysis, correlation analysis, and regression analysis on questionnaire data. This study hypothesizes that there is a significant effect of impulsivity and reinforcement sensitivity on the degree of blind box addiction in both late adolescents and adult groups, and the effect is greater in late adolescents; specifically amongst late adolescents, wherein the effect is greater for younger individuals'. The degree of blind box addiction in

both groups is positively correlated with the scores of rash impulsivity; is positively correlated with the scores of BAS, and negatively correlated with the scores of BIS in reinforcement sensitivity. Results indicate that adolescents, due to the fact that they are still undergoing both physical and mental development, display higher impulsiveness and weaker self-control and therefore are more likely to be exhibit blind box purchase addiction behavior in comparison to young adults. Furthermore, individuals with high reward sensitivity and low punishment sensitivity are more likely to be addicted to purchasing blind boxes due to their focus on achievement and ignorance of negative consequences.

Keywords: late adolescence, addiction, blind box, impulsivity, reinforcement sensitivity

母亲抑郁与家庭出生顺序对婴儿期睡眠的影响 -----母亲养育方式的多重中介作用

孙佳慧¹ 赵孟娇¹ 梁熙¹ (通讯作者)

¹ 首都师范大学心理学院, 北京, 100048, liangxi@cnu.edu.cn

摘要 睡眠是儿童期发展的重要基石, 睡眠不仅会影响儿童早期发展, 甚至会对儿童发育产生长远影响。根据进化论的观点, 婴儿的睡眠应该放在更广泛的家庭环境中去讨论。更广泛的家庭环境中的因素包括母亲抑郁、婴儿的出生顺序、家庭养育方式(严厉管教和积极管教)等。在过去的几年中, 西方学者越来越多的关注母亲抑郁和母亲养育方式对婴儿睡眠的重要影响, 但是大多数的研究集中在童年中期, 很少有研究集中在婴幼儿时期。随着全面二胎政策的出现, 越来越多的学者开始关注二胎家庭婴儿的发育, 但是很少有研究进行横向对比, 从而提供更多的养育信息给二胎家庭。基于此, 本文试图探究母亲抑郁、家庭中婴儿的出生顺序与婴儿睡眠之间的关系, 并讨论母亲积极管教和严厉管教在其中所起的作用。本研究被试来自北京市东城区的横向探究, 研究包括 2225 名月龄为 18-32 个月婴儿及其父母。通过问卷收集母亲报告的婴儿期睡眠, 母亲抑郁、婴幼儿出生顺序、母亲的严厉管教与积极管教以及母亲报告的婴幼儿性别、月龄和家庭的社会经济地位。结果发现, 母亲抑郁与出生顺序会影响婴儿睡眠, 且中介效应成立, 母亲抑郁与家庭出生顺序不存在交互作用。具体来说, 母亲抑郁得分越高, 母亲严厉管教越多, 积极管教越少, 婴儿的夜间睡眠时间越短, 夜间醒来时间越长。二胎家庭的母亲严厉管教更多, 孩子的夜间睡眠时长更短, 夜醒时长更长。但是无论是母亲抑郁还是出生顺序都与婴儿的白天睡眠时长有关。因此, 母亲应调整心态, 减少抑郁情绪, 更多的采用积极的养育策略, 从而促进婴儿的良好发展; 随着二胎家庭的数量越来越多, 分析二胎家庭与独生子女家庭的差异有助于帮助二胎家庭调整养育方式, 对儿童福祉具有重要作用。

Effects of maternal depression and family birth order on sleep in infancy-----Multiple mediating effects of mother's parenting

Sun Jiahui, Zhao Mengjiao, Liang Xi

School of psychology, Capital Normal University, Beijing, 100048

Abstract: Sleep is an important cornerstone of childhood development. Sleep will not only affect children's early development, but also have a long-term impact on children's development. According to evolutionary theory, infant sleep should be discussed in a broader family environment. Factors in the broader family environment include mother depression, birth order of infants, parenting (harsh discipline and positive discipline) etc. In the past few years, western scholars have paid more and more attention to the important effects of maternal depression and

maternal parenting on infant sleep. However, most studies focus on the middle childhood, and few studies focus on the infancy. With the emergence of the comprehensive two-child policy, more and more scholars begin to pay attention to the development of infants in two-child families, but few studies make horizontal comparison, so as to

provide more parenting information to two-child families. Based on this, this paper attempts to explore the relationship between mother depression, the birth order of infants in the family and infant sleep, and discuss the role of mother's positive discipline and harsh discipline. The subjects of this study were from a cross-sectional study in

Dongcheng District, Beijing. The study included 2225 infants aged 18-32 months and their parents. The infants' sleep, maternal depression, birth order of infants, harsh discipline and positive discipline of mothers, and the infants' gender, month age and family socio-economic status reported by mothers were collected through questionnaires. The results showed that maternal depression and the number of children in the family would affect infant sleep, and the mediating effect was established. There was no interaction between maternal depression and family birth order. Specifically, the higher the mother's depression score, the more severe the mother's discipline and the less positive discipline, the shorter the baby's sleep time at night and the longer the baby wakes up at night. Mothers in families with two children are more disciplined, and their children sleep less and wake up longer at night. However, both maternal depression and birth order of infants are related to the length of sleep during the day. Therefore, mothers should adjust their mentality, reduce depression and adopt more positive parenting strategies, so as to promote the good development of infants; With the increasing number of second child families, analyzing the differences between second child families and one-child families will help second child families adjust their parenting styles and play an important role in children's well-being.

内蒙古农村地区失依儿童亲子疏离、同伴关系及孤独感的关系研究

邢乃愈（通讯作者） 肖满金

长春光华学院，长春，130051, xingny@163.com

摘 要 为了关爱失依儿童，帮助失依儿童建立良好的心理健康品质，促进儿童亲社会行为的发展，研究失依儿童亲子疏离、同伴关系及孤独感的关系，为其身心健康以及未来的发展奠定基础。针对内蒙古某地区六所农村小学的三至六年级 318 名小学生为研究对象，发放青少年亲子疏离感问卷、同伴关系量表和儿童孤独感量表进行研究，得出以下结论：

内蒙古农村地区失依儿童的亲子疏离总分、母子疏离及父子疏离得分均显著高于非失依儿童，且母子疏离水平显著高于父子疏离水平。

- (1) 是否失依和是否独生子女对农村儿童母子疏离有显著影响，但只有是否失依对农村儿童父子疏离有显著影响。
- (2) 内蒙古农村地区失依儿童总体同伴接纳水平显著高于正常儿童，同时其同伴恐惧自卑水平也显著高于正常儿童。
- (3) 内蒙古农村地区失依儿童的孤独感显著高于正常儿童。
- (4) 内蒙古农村地区失依儿童亲子疏离感和同伴接纳以及同伴恐惧自卑两个维度分别呈现显著正相关。
- (5) 内蒙古农村地区失依儿童孤独感和同伴接纳以及同伴恐惧自卑两个维度分别呈现显著正相关。
- (6) 内蒙古农村地区失依儿童亲子疏离感和孤独感呈显著正相关。
- (7) 失依儿童的同伴接受和同伴恐惧自卑在亲子疏离与孤独感之间均存在部分中介作用。

关键词 农村地区失依儿童，亲子疏离，同伴关系，孤独感

Parent-child Estrangement and Companionship of Childless Children in Rural Areas of Inner Mongolia And loneliness Research

XingNaiyu, XiaoManjin

Changchun Institute of Changchun, 130051

Abstract: In order to care for the dependent children, help the dependent children to establish good mental health quality, promote the development of children's pro-social behaviors, study the relationship between parent-child alienation, peer relationship and loneliness of the dependent children, for their physical and mental health and future

Lay the foundation for development. 318 primary school students from grades 3 to 6 in six rural primary schools in Inner Mongolia were selected as the research objects. The questionnaire on parent-child alienation, the peer relationship scale and the child loneliness scale were distributed to conduct research, and the following conclusions were drawn:

(1) The total score of parent-child alienation, mother-child alienation, and father-child alienation scores of children in rural areas of Inner Mongolia were significantly higher than those of normal children, and the level of mother-child alienation was significantly higher than that of father-child alienation.

(2) Whether or not they are dependent and whether they are the only child has a significant impact on the separation of rural children from mother and child, but only whether or not they are dependent has a significant impact on rural children's parent-child sorting.

(3) In the rural areas of Inner Mongolia, the overall peer acceptance level of dependent children was significantly higher than that of normal children, and their peers' fear and low self-esteem levels were also significantly higher than normal children.

(4) The sense of loneliness of children who have lost their dependency in rural areas of Inner Mongolia is significantly higher than that of normal children.

(5) The two dimensions of parent-child alienation, peer acceptance and peer fear and low self-esteem of children who are dependent in rural areas of Inner Mongolia were significantly positively correlated.

(6) The two dimensions of loneliness and peer acceptance and peer fear and low self-esteem of children in Inner Mongolia rural areas were significantly positively correlated.

(7) The sense of parent-child alienation and loneliness of dependent children in rural areas of Inner Mongolia are significantly positively correlated.

(8) Peer acceptance and peer fear and low self-esteem of dependent children have a partial mediating effect between parent-child alienation and loneliness.

Keywords: rural area dependent children, parent-child alienation, peer relationship, loneliness

留守青少年亲子亲合与友谊质量之间关系的追踪研究： 积极情绪和消极情绪的作用

梁铭 马萌 上官梦麒 赵景欣（通讯作者）

山东师范大学心理学院，济南，250014，jingxinzha@126.com

摘要 与同伴之间建立良好的友谊关系不仅是青少年期个体的发展主题，也构成了青少年成长的重要背景。根据依恋理论和人际关系理论，亲子关系对于青少年的友谊关系具有重要影响。已有研究也表明，拥有亲密、温暖亲子关系的青少年能更好地处理与同伴之间的关系。然而，随着近年来留守青少年数量的增多，有些研究者认为：“父母已经成为留守青少年发展的‘旁观者’”。在长期亲子分离背景下，亲子关系是否还能够影响青少年的友谊关系及其相应的作用机制等成为该领域研究中的一个新的重要问题。基于留守青少年和非留守青少年之间的对比，本研究将聚焦留守青少年的亲子关系和友谊关系，在探讨亲子亲合与留守青少年友谊质量之间关联的同时，检验积极情绪和消极情绪在二者关系中的中介作用。基于追踪研究设计，对 1214 名农村初一学生（364 名双亲外出留守、452 名父亲外出、398 名非留守）进行了间隔 6 个月的 3 次测量，在 T1、T2 和 T3 分别测量青少年的亲子亲合、积极/消极情绪和友谊质量。结果表明：（1）父子亲合和母子亲合均能显著正向预测青少年友谊质量，这在留守与非留守青少年中均是如此；（2）积极情绪能显著正向预测青少年友谊质量，但是消极情绪的预测作用不显著；（3）在双亲外出家庭中，只有母子亲合能够通过提升青少年的积极情绪来作用于友谊质量的提升；但是在父亲外出家庭和非留守家庭中，父子亲合和母子亲合均能够通过积极情绪作用于青少年友谊质量的提升；（4）仅在父亲外出家庭中，父子亲合能够负向预测青少年的消极情绪，但是消极情绪在亲子亲合与青少年的友谊质量之间不存在中介作用。这表明，在长期的亲子分离背景下，良好的亲子关系依然是提高青少年友谊质量的重要资源，它不仅可以直接提高青少年友谊质量，还可以通过增加其积极情绪来帮助青少年发展高质量的友谊。

A Longitudinal Study on the Relationship between Parent-Adolescent Cohesion and Friendship Quality of Left-behind Adolescents: The Effects of Positive Affect and Negative Affect

Ming Liang, Meng Ma, Mengqi Shangguan, Jingxin Zhao

School of Psychology, Shandong Normal University, Jinan 250014, China

Abstract: Establishing good friendship with peers is not only the development theme of adolescents, but also constitutes an important background for teenagers' growth. According to attachment theory and interpersonal relationship theory, parent-adolescent relationship has an important influence on teenagers' friendship. Previous studies have also shown that teenagers with close and warm parent-adolescent relationship can better deal with their peers. In recent years, however, with the increasing number of left-behind teenagers, some researchers believe that "parents have become 'bystanders' in the development of left-behind adolescents". Under the background of long-term parent-adolescent separation, whether the parent-adolescent relationship can still affect the friendship between teenagers and its corresponding mechanism has become a new important issue in this field. Based on the comparison between left-behind adolescents and non-left-behind adolescents, this study will focus on the parent-adolescent relationship and friendship relationship of left-behind adolescents, explore the relationship between parent-adolescent cohesion and friendship quality of left-behind adolescents, and test the mediating role of positive affect and negative affect in their relationship. Based on longitudinal design, 1214 rural junior high school students (364 adolescents from both-parent migrant families, 452 adolescents from father-only migrant families, and 398 adolescents from non-left-behind families) were measured three times at intervals of 6 months. The parent-adolescent cohesion, positive/negative affect and friendship quality of adolescents were measured at T1, T2 and T3 respectively. The results showed that: (1) Both father-adolescent cohesion and mother-adolescent cohesion positively predicted the friendship quality of adolescents, which was true for both left-behind and non-left-behind adolescents; (2) Positive affect positively predicted the friendship quality of adolescents, but negative affect had no significant predictive effect. (3) In both-parent migrant families, only mother-adolescent cohesion improved the friendship quality by promoting the positive affect of teenagers; However, both father-adolescent cohesion and mother-adolescent cohesion improved the friendship quality of teenagers through positive affect in the father-only migrant families and non-left-behind families. (4) Father-adolescent cohesion negatively predicted adolescents' negative affect, but negative affect had no mediating effect between parent-adolescent cohesion and adolescent friendship quality. This study indicated that under the background of long-term parent-adolescent separation, good parent-adolescent relationship was still an important resource to improve the quality of youth friendship. It can not only directly improve the quality of adolescent friendship, but also help adolescents develop high-quality friendship by increasing their positive affect.

Keywords: Left-behind teenagers, parent-adolescent cohesion, positive affect, friendship quality

大学生社交网站自我呈现对自我同一性的影响： 网络社会支持和基本心理需要的链式中介作用

孙海燕¹ 王树青²

¹ 济南大学教育与心理科学学院, 济南, 250022

² 济南大学教育与心理科学学院, 济南, 250022, 421856368@qq.com

摘要 采用社交网站中的自我呈现问卷、网络社会支持问卷、基本心理需要问卷和自我同一性状态问卷对济南、青岛某高校的 1713 名在校大学生进行调查, 探讨了社交网站中的积极自我呈现、真实自我呈现对个体自我同一性状态的影响以及网络社会支持和基本心理需要的链式中介作用, 结果发现: (1) 社交网站中的真实

自我呈现与网络社会支持、基本心理需要、自我同一性的获得状态、延缓状态、早闭状态、扩散状态呈显著正相关，社交网站中的积极自我呈现与网络社会支持、自我同一性的获得状态、延缓状态、早闭状态、扩散状态呈显著正相关；网络社会支持与自我同一性的获得状态、延缓状态、早闭状态和扩散状态呈显著正相关；基本心理需要与自我同一性获得状态呈显著正相关，与自我同一性的延缓状态、早闭状态、扩散状态呈显著负相关；(2)社交网站中的真实自我呈现、积极自我呈现可直接预测自我同一性的获得状态、延缓状态、早闭状态和扩散状态；不同点在于：社交网站中真实自我呈现不仅通过网络社会支持间接预测自我同一性的获得状态、延缓状态和早闭状态，通过基本心理需要间接预测自我同一性的获得状态、延缓状态、早闭状态、扩散状态，还能通过网络社会支持、基本心理需要的链式中介作用影响自我同一性的四种状态；而社交网站中的积极自我呈现只能通过网络社会支持以及网络社会支持与基本心理需要的链式中介作用影响自我同一性的四种状态。

关键词 大学生社交网站自我呈现，网络社会支持，基本心理需要，自我同一性，链式中介

The Effect of Self-presentation in Online Social Networking Sites of College Students on Ego-identity: The Chain Mediating Role of Online Social Support and Basic Psychological Needs

SUN Hai¹, WANG Shuqingyan²

¹School of Education and Psychology, University of Jinan, Jinan 250022, China ²School of Education and Psychology, University of Jinan, Jinan 250022, China, E-mail: 421856368@qq.com

Abstract: In order to investigate the impact of self-presentation in SNS (Social Network Site) on Ego-identity as well as The chine mediating role of online social support and basic psychological needs, a sample of 1713 college students in a university in Jinan and Qingdao completed Questionnaire of Self-presentation in SNS, Ego Identity Questionnaire, Online Social Support Questionnaire and Basic Psychological Needs Questionnaire . Results revealed that:(1) social networking sites true self in the present and the network of social support, basic psychological needs, ego identity status, slow state, early close state, diffusion was significantly positively related to active self-presentation of social networking sites and Internet social support and ego identity status, slow state, early close state, diffusion was significantly positively related; There is a significant positive correlation between network social support and self-identity acquisition state, delayed state, early closure state and diffusion state. There is a significant positive correlation between basic psychological needs and the state of self-identity acquisition, and a significant negative correlation between basic psychological needs and the state of self-identity delay, early closure and diffusion.(2) Real self-presentation and positive self-presentation in social networking sites can directly predict the status of self-identity acquisition, delayed state, early closure state and diffusion state; The differences are: The real self-presentation on social networking sites not only indirectly predicts the acquisition state, delayed state and early closure state of self-identity through network social support, but also indirectly predicts the acquisition state, delayed state, early closure state and diffusion state of self-identity through basic psychological needs. Moreover, the four states of self-identity can be influenced by the chain mediation of network social support and basic psychological needs. However, the positive self-presentation on social networking sites can only affect the four states of self-identity through online social support and the chain mediation between online social support and basic psychological needs.

Keywords: self-presentation on college students' social networking sites; network social support; basic psychological needs; ego-identity; chain mediate

青少年问题性网络使用与睡眠问题的关系：一项交叉滞后研究

柳希希 王帆 储怡佳 鲍振宙¹（通讯作者）

¹ 赣南师范大学教育科学学院，赣州，341000，baozhenzhou0819@163.com

摘要 睡眠是影响青少年健康发展的重要因素，睡眠问题可能导致青少年出现抑郁焦虑、认知功能下降、学业不良、攻击行为等各类内外化问题。根据2019年中国睡眠研究会发布的《中国青少年儿童睡眠白皮书》，我国约有81.2%的青少年存在睡眠不足等问题。鉴于睡眠问题的高发生率及其可能对个体发展造成的消极影响，有必要对青少年睡眠问题的影响机制进行研究。问题性网络使用是指对个体心理健康、社会适应、学业及工作等方面造成负面影响的网络使用行为。以往研究指出，问题性网络使用可能通过诱发个体生理兴奋，抑制褪黑素产生等机制影响个体的睡眠质量，使其出现睡眠问题。此外，存在睡眠问题的个体通常会报告较多的消极情绪，他们可能通过使用网络这一非适应性的应对方式来缓解其负面影响，进而导致问题性网络使用。综上，问题性网络使用与睡眠问题之间可能存在双向关系。目前研究较多采用横断设计对二者间的单向关系进行探究，对其相互关系的研究相对较少。本研究采用交叉滞后设计来探讨青少年问题性网络使用与睡眠问题之间的双向关系，试图阐明二者之间具体的作用机制，为预防青少年睡眠问题，促进其健康发展提供科学参考。采用问题性网络使用诊断工具与匹兹堡睡眠质量指数（PSQI）对广东省南部地区981名青少年（ $M_{age} = 15.00$ ，44%为男生）进行了为期一学年的追踪调查。结果表明：（1）在一学年内，青少年的问题性网络使用和睡眠问题均表现出较强的稳定性（ $r = 0.61, p < 0.01$ ； $r = 0.52, p < 0.01$ ）；（2）学年初的睡眠问题可以正向预测学年末的问题性网络使用（ $b_1 = 0.09, SE = 0.03, p < 0.01$ ），但学年初的问题性网络使用不能预测学年末的睡眠问题（ $b_2 = -0.02, SE = 0.03, p > 0.05$ ）；（3）通过多组比较分析得出，上述交叉滞后效应不存在性别及年级差异。综上所述，睡眠问题可能是增加青少年问题性网络使用的重要风险因素之一。学校及家长应当对青少年的睡眠健康予以关注，以预防睡眠问题给其成长发展带来的负面影响。

Problematic Internet Use and Sleep Problems among Adolescents: A Cross-Lagged Panel Analysis

Liu Xixi, Wang Fan, Chu Yijia, Bao Zhenzhou¹ (Corresponding author)

¹ School of Educational Science, Gannan Normal University, Shiyuan South Road, Rongjiang New District, Ganzhou 341000

Abstract: Sleep plays an important role in the growth of young people. Poor sleep may lead to a variety of internalizing and externalizing problems, such as depression, anxiety, cognitive deficit, academic failure, and aggressive behavior. According to the "White Paper on Sleep for Chinese Adolescents and Children" issued by the China Sleep Research Society (CSRS) in 2019, about 81.2% of adolescents in China have problems such as insufficient sleep. In view of the high incidence of sleep problems and its possible negative impacts on adolescent development, it is essential to understand the influencing mechanism of adolescents' sleep problems. Problematic Internet use (PIU) refers to use of the Internet that creates psychological, social, school, and/or work difficulties in a person's life. Previous studies have pointed out that PIU may affect the individual's sleep quality through mechanisms such as inducing individual physiological excitement and inhibiting the production of melatonin. In addition, individuals who have sleep problems usually reported more negative emotions, and they may use the Internet as a non-adaptive coping to alleviate its negative effects, leading to problematic Internet use. In summary, there may be a bidirectional relationship between PIU and sleep problems. However, most previous studies have explored the unidirectional relationship between them utilizing cross-sectional design, and few studies have examined their bidirectional relationship. This study used a cross-lagged design to explore the bidirectional relationship between PIU and sleep problems among adolescents and provide a scientific reference for preventing sleep problems in adolescents and promoting their positive development. Participants are 981 adolescents ($M_{age} = 15.00$, 44% were boys) who provided self-report data on PIU and sleep problems at the beginning and end of the school year. The

results showed that: (1) PIU and sleep problems showed strong stability across time ($r = 0.61, p < 0.01$; $r = 0.52, p < 0.01$); (2) Sleep problems at the beginning of the school year positively predicted PIU at the end of the school year ($b_1 = 0.09, SE = 0.03, p < 0.01$), however PIU at the beginning of the school year did not predict sleep problems at the end of the school year ($b_2 = -0.02, SE = 0.03, p > 0.05$); (3) There is no gender and grade differences in the above effect by subgroup analyses. In summary, sleep problems serve as a risk factor for increasing PIU in adolescents. More attention should be paid to the sleep health of teenagers to prevent the negative effects of sleep problems on their positive development.

Keywords: problematic Internet use, sleep problems, adolescents, a cross-lagged panel analysis

摘要 学习品质是个体在学习的各个环节中所表现出来的学习方式、学习习惯、学习态度和学习倾向, 涵盖了坚持性、好奇心、注意力、独立性、灵活性和创造力等内容。作为幼儿入学准备的重要领域之一, 学习品质对幼儿未来学业能力的发展至关重要, 探讨幼儿学习品质的发展模式十分必要。根据家庭投资模型, 家庭社会经济地位作为家庭系统中的重要变量, 保障了儿童发展的基本需求和质量, 尽管已有研究考察了家庭社会经济地位与幼儿学习品质之间的关系, 但其对幼儿学习品质发展类型的作用尚不清楚。因此, 本研究旨在探究幼儿从小班到大班的学习品质发展类型及家庭社会经济地位的作用, 从而丰富和完善中国背景下关于幼儿学习品质发展的理论体系, 并为学前儿童家长提供有效的实证依据。本研究通过两阶段分层随机抽样法对 1333 名幼儿(男:52.8%; $M = 42.27$; $SD = 3.56$)进行为期三年的追踪研究, 幼儿主要抚养人在 T1 完成家庭社会经济地位的信息收集, 在 T1 到 T3 完成儿童学习品质量表。通过建立潜变量增长混合模型分析幼儿学习品质的发展类型, 并通过比例差异检验探究家庭社会经济地位对幼儿学习品质发展类型的作用, 结果表明: (1) 幼儿的学习品质存在四种发展类型, 分别为 19.7%的高起点-上升型(截距=3.11, $p < .001$; 斜率=.31, $p < .001$)、2.9%的高起点-下降型(截距=3.55, $p < .001$; 斜率=-.18, $p < .05$)、61.1%的低起点-上升型(截距=2.80, $p < .001$; 斜率=.13, $p < .001$)和 16.4%的低起点-下降型(截距=2.65, $p < .001$; 斜率=-.07, $p < .01$); (2)不同家庭社会经济地位幼儿的学习品质发展类型分布差异显著($\chi^2(6)=42.41, p < .001$), 低家庭社会经济地位的幼儿在低起点-下降型的分布显著多于其他类型($ps < .001$), 高家庭社会经济地位幼儿则更多分布在高起点类型中($ps < .001$)。研究结果不仅说明了幼儿在整个幼儿园期间学习品质发展类型的特点, 同时揭示了低家庭社会经济地位的幼儿更容易面临学习品质发展不利的风险, 提升家庭社会经济地位有助于促进幼儿学习品质的发展, 从而为幼儿学习品质的形成与发展提供重要保障。

Growth Patterns of Approaches to Learning Among Preschool Childhood: The Role of Socioeconomic Status

Mengdi Qi¹ Zijing Xu¹ Zhengqian Yang¹ Yun Wang¹ (Corresponding author)

¹ State Key Laboratory of Cognitive Neuroscience and Learning, Beijing Normal University,
Beijing, China

Abstract: Approaches to Learning (ATL) is the learning style, learning habits, learning attitudes, and learning tendencies exhibited by individuals in all aspects and activities of learning, covering perseverance, curiosity, concentration, independence, flexibility, and creativity. As one of the key domains of children's learning and school readiness, ATL has been shown to contribute to the development of children's later academic achievement. It is necessary to explore the growth patterns of ATL among preschool childhood. As one of the important variables in the family system, socioeconomic status (SES) guarantees the basic needs and quality of children's development according to the family investment model. Although studies have examined the relationships between SES and ATL,

little is known about the role of SES on the growth patterns of ATL. Therefore, the present study aims to examine the growth patterns of ATL of preschool children from junior grade to senior grade in kindergarten, as well as the role of SES, to enrich and improve the theoretical system of the development of children's ATL under the Chinese background, and provide an effective empirical basis for parents of preschool children. 1333 children (male:52.8%; M = 42.27; SD = 3.56) were followed in a 3-year period longitudinal investigation, which began with a two-stage stratified random sampling method. Primary caregivers completed the collection of SES information at T1 and the approaches to learning scale from T1 to T3. The study analyzes the growth patterns of ATL in preschool childhood by establishing the latent class growth model and explores the role of SES on the growth patterns of ATL by the proportion difference test. The results indicated that: (1) There were four growth patterns of ATL among preschool childhood, which were 19.7% high initial point-rising type (intercept = 3.11, $p < .001$; slope = .31, $p < .001$), 2.9% high initial point-falling type (intercept = 3.55, $p < .001$; slope = -.18, $p < .05$), 61.1% low initial point-rising type (intercept = 2.80, $p < .001$; slope = .13, $p < .001$) and 16.4% low initial point-falling type (intercept = 2.65, $p < .001$; slope = -.07, $p < .01$); (2) The distribution of growth patterns of ATL of children from different SES is significantly different ($\chi^2(6)=42.41$, $p < .001$). Compared with other types, low SES children's ATL growth patterns were mainly characterized by the low initial point-down type ($ps < .001$) and children with high SES were more distributed in the high initial point type ($ps < .001$). These results not only show the characteristics of the growth patterns of ATL among preschool childhood throughout kindergarten, but also reveal that children with low SES were more likely to face the risk of adverse development of ATL. Improving SES is conducive to promoting the growth of children's ATL, thus providing an important guarantee for the formation and development of children's ATL.

母亲自主支持和鼓励联结与幼儿社会行为发展的关系研究

范倩倩

郑州工商学院教育系, 郑州, 451400

摘要 母亲自主支持是促进幼儿自主决定和主动解决问题的行为。母亲鼓励联结是增强幼儿与母亲或他人建立相互支持、信任、稳固联系的行为。为了实现母亲的自主支持和鼓励联结的行为目的, 母亲会对幼儿使用不同等级程度的策略, 分为高中低压三种策略。幼儿社会行为是指幼儿在社会交往中对人、事、物的一系列行为态度和行为反应, 分为亲社会性行为和问题行为, 问题行为包含情绪问题、品行问题、多动问题、同伴交往问题。以往研究指出, 母亲自主支持使幼儿更有可能表现出较高的内在学习动机、社会能力和较少的内化和外化行为问题; 母亲鼓励联结和情感亲密可以促进幼儿亲社会 and 移情的发展。本研究以 47 名中班幼儿(男孩 20 名, 女孩 27 名)及其母亲为研究对象, 深入探索母亲自主支持和鼓励联结与幼儿社会行为发展的关系。用《母子互动行为编码方案》, 以 5 秒为原则采取事件取样的方式, 对 15 分钟的母子互动游戏视频中母亲自主支持和鼓励联结两中目标导向下的语言和行为进行编码, 进而分析研究母亲的自主支持和鼓励联结行为, 并采用《长处和困难问卷-教师版》(SDQ-T)由教师评价幼儿社会行为的发展状况, 最终探索母亲自主支持和鼓励联结与幼儿社会行为发展的关系, 并提出教育建议。结论: 1.母亲自主支持得分高于鼓励联结, 且母亲自主支持低中高压策略均存在显著性差异。不同性别幼儿、是否独生及母亲不同受教育程度的母亲, 在自主支持和鼓励联结间不存在显著差异。不同性别幼儿在情绪问题、多动问题、同伴交往问题和困难总分中均存在显著差异。2.自主支持可以显著负向预测幼儿的情绪问题、多动问题、同伴交往问题和困难总分。鼓励联结与幼儿社会行为发展没有显著相关。3.自主支持低压策略能单独负向预测幼儿的情绪问题、多动问题、同伴交往问题、困难总分。鼓励联结中压策略可以单独正向预测幼儿的品行问题, 鼓励联结高压策略可以单独负向预测幼儿的亲社会行为。

关键词 自主支持、鼓励联结、社会行为

Relationship between the maternal autonomy support-encouragement connectedness and the children's social behaviors development

Qianqian Fan

Department of Education, Zhengzhou Technology and Business University, 169 Qiancheng Avenue, Zhengdong New District, Zhengzhou City, Henan Province, China.

Abstract: Maternal autonomy support is the behavior of promoting children making decisions and solving the problem by themselves. Maternal encouragement connectedness is the behavior of strengthening the young children to establish the mutual support, the trust, the firm connection with the mother or the others. In order to achieve the purpose of maternal autonomy support and encouragement connectedness, mothers will use different levels of strategies for children, which are divided into three strategies: high, medium and low pressure. Children's social behavior, which are divided into prosocial behavior and problem behavior, refers to a series of behavior attitudes and behavior reactions to other people and things when children in social communication. Problem behavior includes emotional problems, conduct problems, hyperactivity problems, peer communication problems. Previous studies have pointed out that maternal autonomy support makes children more likely to show higher internal learning motivation, social ability and less internalized and externalized behavior problems; Maternal encouragement connectedness and emotional intimacy can promote children's prosocial and empathic development. In this study, 47 middle-class children (20 boys and 27 girls) and their mothers were studied to explore the relationship between maternal autonomy support-encouragement connectedness and children's social behavior development. Using the coding scheme of mother child interaction behavior, taking 5 seconds as the principle and adopting the method of event sampling, code the language and behavior under the goal orientation of the maternal autonomy support-encouragement connectedness in the 15 minute mother child interaction game video, and then analyze and study the maternal autonomy support-encouragement connectedness behavior. The strengths and difficulties questionnaire for teachers (SDQ-T) was used to evaluate the development of children's social behavior. And then explored the relationship between the maternal autonomy support-encouragement connectedness and the children's social behaviors development, and gave mothers educational suggestions. Conclusion: 1. The score of maternal autonomy support was higher than encouragement connectedness, and there were significant differences in the strategies of low, medium and high pressure maternal autonomy support. There was no significant difference in autonomy support and encouragement connectedness in different genders of children, whether an only child and education level of mother. There were significant differences in emotional problems, hyperactivity problems, peer interaction problems and total score of difficulties. 2. Autonomy support can significantly and negatively predict children's emotional problems, hyperactivity problems, peer communication problems, difficulty total score. There was no significant difference in encouragement connectedness and the social behavior development of children. 3. Autonomy support low-pressure strategy can negatively predict children's emotional problems, hyperactivity problems, peer communication problems, difficulty total score. The strategy of encouragement connectedness medium pressure can predict children's behavior problem positively and encouragement connectedness high pressure strategy can predict children's behavior problem negatively.

疫情期间大学生的感戴与心理复原力：社会价值观的中介作用

四川电影电视学院 赵燕

摘要 目的：探究大学生感戴和社会价值观对疫情期间大学生心理复原力的影响及其路径，为开展相关心理健康教育、心理疏导工作提供依据。方法：采用大学生感戴量表（GRAT）、大学生复原力量表（RSUS）、自编社会价值观量表对四川电影电视学院 8719 名在校大学生实施调查。结果：大学生感戴、社会价值观、心理复原力在性别和年级上有统计学意义。男生的感戴得分显著低于女生，但社会价值观显著低于女生，男生

的心理复原力总分、自我效能、自我接纳、稳定性、问题解决显著高于女生，而朋友支持和家人支持这两项在没有显著的性别差异；心理复原力总分和感戴总分按年级高低分排列为大四>大三>大二>大一，大一年的价值观明显高于大一大二，大二年级的社会价值观明显高于大三，大四年级与其他三个年级没有显著性差异。大学生感戴、社会价值观、心理复原力三者之间相互呈低到中等程度的正相关($r=0.17^{***}$, $p<0.001$; $r=0.61^{***}$, $p<0.001$; $r=0.13^{***}$, $p<0.001$)。大学生感戴对心理复原力的影响上存在社会价值观的部分中介效应，大学生的感戴和社会价值观一共能解释 37.8% 的学生康复力。结论：大学生感戴既直接影响又通过良好的自我概念间接影响学生的心理复原力。

自由通向幸福的心理机制研究

赵蒙 霍涌泉

陕西师范大学，西安，710062

摘要 自由和幸福一直是哲学领域探讨的重要主题，也是人世间每个人渴求并不懈追寻的事物。理论和实证研究表明，自由是预测幸福的一种重要因素，幸福的实现需要以自由为前提。然而，自由意味着幸福吗？是否越自由就越幸福？近代以来，自由成为启蒙的重要概念，彰显了人之为人和人的全面发展的价值和意义。它不仅仅是个体的追求，更是伦理社会存在的基石，具有普遍的价值。然而，不同领域所用自由概念不同，研究焦点各异，如哲学家探讨决定论与自由意志是否存在的问题，神经科学家通过脑成像技术试图发现脑神经活动与意图行为产生的关系，经济学家聚焦经济自由是否提升了国家的总体幸福，法学界关注自由与道德、法律责任的承担问题。本文对于自由的讨论基于人们日常生活中的自由意志体验，即一个人感受到的对行为的自主选择性和对命运的自我控制性。伴随着积极心理学的变革和发展，幸福研究受到了学界的广泛关注，逐渐形成了以享乐主义为主体的主观幸福感，以及基于实现论的心理幸福感和社会幸福感等研究取向。近年来，幸福研究呈现出整合趋势，即一个人可能同时拥有享乐主义和实现论两种幸福观，根据不同情境的具体条件，某种取向的幸福感寻求占据主导地位。本研究采用自由意志问卷、生活满意度量表、积极消极情绪量表、心盛量表和生命意义问卷对 652 名大学生进行测量，探讨个体的自由意志体验与快乐论、实现论两种取向的幸福感之间的关系，并揭示生命意义在其中的作用。结果发现，自由意志体验与两种幸福感之间均存在显著的正相关，并且生命意义体验的中介作用显著。本研究结论在自由、意义和幸福的探讨上更进一步，为持续幸福的观点提供科学依据，也为积极心理干预指明方向，更为缓解个体精神迷茫和痛苦提供启示，具有理论和现实意义。

Mechanisms in the Way from Freedom to Happiness

Zhao Meng, Huo Yongquan

Shaanxi Normal University, Xi'an, 710062

Abstract: For thousand years freedom and happiness are the most precious thing ordinary people cherished and whereby become the hot topics philosophers endeavoring to figure out. Freedom is one of the predictors of happiness and predetermines one's possible happiness to some extent, which have been proved by many theoretical and practical studies. But does more freedom predict more happiness? Freedom, one of the most important concepts, reveals the value of human being and all round development. People pursue it and the society builds on it. The concept of freedom, however, varies in various fields. For instance, philosophers talk about if freedom exists and if freedom is compatible with determinism, neuroscientists dedicate to discover the evidence that intentional behavior relate to the activity of brain nerve cell, economists focus on whether the global happiness improves with the rapid development of social economy, jurists try to figure out the relationship between freedom and consequent responsibility. The study payed attention to people's freedom belief in daily life, which reflects one's subjective

feeling for self choice and self control. With the revolution and development of positive psychology, happiness becomes a hot topic in psychology. Both hedonic happiness and eudainomic happiness attract psychologists' attention, and a new trend is integrating two approaches of happiness. This study tested the relationship between belief in free will and happiness and the mediating effect of meaning in life on the relationship by measuring 652 undergraduates with the Free Will Scale, Satisfaction with Life Scale, PANAS, Flourishing Scale and Meaning in Life Scale. Results show that there is significant positive relationship among belief in free will, subjective well-being and flourishing, meanwhile the mediation of the presence of meaning in life is also significant. The study implies great theoretical and practical values, promoting theoretical discussion and empirical studies on free will, meaning in life and happiness, as well as, providing clues for relieving mental confusion and pain.

Keywords: free will, hedonic happiness, eudainomic happiness, meaning in life, mediation effect

先秦儒学“情”思想的心理学阐释

赵蒙 霍涌泉

陕西师范大学, 西安, 710062

摘要 情是儒学思想体系的基本构成部分,《论语》开篇就用乐、悦、愠来表达君子好学、乐群、宽容的良好品格。发掘先秦儒学关于“情”的思想对于当前情绪心理学理论发展和实践研究具有直接的启发意义。本研究从“情”的概念、情在儒学理论建构中的基础地位以及以礼节情的原则三个层面阐释先秦儒学的“情”思想。先秦儒学思想中的情是一个统合的范畴,其内涵和外延不同于现代心理学的情绪、情感概念。“情”字在先秦儒家典籍中具有至少三层含义:性情,情感,情绪。在儒家看来,情不是单纯的喜怒哀乐,而是人性、情感和情绪的统一体。情发自内心,出于本性,贯通物质生活和精神活动,成为儒家“仁义礼智”思想体系建立的重要基点。“物质不齐,物之情也。惟其不齐,则不得以己之性情,例诸天下之性情”,说明人情与人性之间存在个体差异性。“己所不欲,勿施于人”所表达的推己及人之情又反映了人情与人性之间的共通性。儒学在肯定情的共性与个性的基础上,强调情在形成道德情感,树立人生态度和建立良好社会关系中的重要作用。情虽好但需节制。“喜怒哀乐之未发谓之中,发而皆中节,谓之和”,心动、意兴、情发,无不需中节,需要与作为社会规范的礼和作为宇宙万物规律的理相谐和。以礼节情与以理节情是根据具体情境和社会规范调节情绪发生与表达以达到与社会场景相契合的原则。儒家还提出情绪表达度的问题。“乐而不淫,哀而不伤”,情不过度才是有益。这与当前积极心理学提倡的辩证看待积极和消极情绪的观点不谋而合。先秦儒学“情”的思想对于现代心理学,特别是对于情绪心理学的发展具有重要的理论价值与实践意义。先秦儒学中的“情”融合了个体的知情意行,以整体的、综合的视角解读人的心理活动和行为,对于当前心理科学研究的整合趋势大有裨益,为现世生活中的人们确立本心、化解情绪心理问题、实现自我超越、提升自我境界提供指导。

An Exploration on the Inner Psychological Thoughts of Confucian Qing in the Pre-Qin Days

Zhao Meng, Huo Yongquan

Shaanxi Normal University, Xi'an, 710062

Abstract: It's worth to illuminate the *Qing* concept of Confucianism in the pre-Qin days. *Qing* plays a key role in the Confucian ideological system. The study clarified the inner psychological thoughts of Confucian *Qing* in the pre-Qin days in three levels. Firstly, the conception of Confucian *Qing* in the pre-Qin days is a comprehensive word, containing as least three meanings, such as disposition, emotion and feeling, which is quite different from the concept of emotion and affection in modern scientific psychology. Confucianism considers *Qing* not just as some discrete basic emotions but as an integration of humanity, emotion and feelings. Secondly, *Qing* stemmed from the inner mind closely interacts with one's temperament and reflects the situation of social life. Confucianism proposed the discrepancy in different people's disposition and also inter-community in people's feelings. Hence, the influence of

Qing in the formation of moral emotion, meaning in life and social relationship was greatly commended and stressed. Thirdly, *Qing* needs to be regulated in accordance with specific social norms and also natural laws. One's emotion and behavior should be consist with the specific situation. If it is not, one should adjust to it. Confucianism also stressed pursuing the balance of *Qing*, which is similar to the point that dialectically view positive emotion and negative emotion in modern positive psychology. Confucian *Qing* in the pre-Qin days has great implication in modern psychology and emotion psychology. Instead of isolated cognition, emotion, will and behavior, Confucian *Qing* theory advocated the integral mind. It also provides clues for people in resolving psychological problems and improving positivity in life.

Keywords: the pre-Qin days, Confucianism, emotion, traditional Chinese culture

后物质主义心理学：缘起、理论及评价

周卓钊¹ 谢金¹（通讯作者） 彭旻² 宋灿³

1 湖南师范大学教育科学学院，长沙，410018, 通讯作者 E-mail: xiejin2019@smail.hunnu.edu.cn

摘要 后物质主义心理学是在量子力学逐渐被应用于神经科学、心理学中，加之后现代主义哲学思潮的启发、超心理学研究逐渐受关注的时代背景下，心理学中第二代认知心理学研究范式的巨大冲击下的一种学术思潮。2014年，在图森的峡谷牧场召开的由美国亚利桑那州大学 Gary E. Schwartz 教授发起，Miller 和 Mario Beauregard 两位博士负责组织筹办，亚利桑那和哥伦比亚两所大学共同承办的首届“后物质主义科学、灵性国际学术峰会”，标志着后物质主义心理学的诞生。此次会议创建了“后物质主义心理学”官网，大多数会议参与者著书立作，为后物质主义心理学的形成创造条件。后物质主义心理学以“心脑关系的传递假说”挑战传统认知心理学中意识副现象论，强调意识可以脱离生命体而存在，所以不是大脑生理活动的产物，更可能和大脑同时存在；在认知与环境关系上，主张用宇宙中心论取代以人为中心的观点，即人和环境都不是认知的中心；心理学的研究主题拓宽为灵性与科学的交叉领域。该思潮主要集中于濒死体验、脑死亡后意识现象的临床实验中，或者是灵异现象等超心理学现场试验。该思潮理论主张对健康和治疗、生态学和意识演化等领域会产生影响，但目前学界对此评价不一，与物质主义心理学的地位相比，形成否定、中立、肯定三种定位。当前来看，后物质主义心理学还只是新生物，不能过早下结论。该思潮带有明显后现代主义，因此可能也同样陷入非此即彼的二歧视野中，例如过分强调大脑和意识平行关系而忽略了意识产生于大脑的生理证据的客观性。同时，该思潮部分理论主张带有神秘主义甚至是“有神论”之疑；又由于其研究对象不再聚焦于完整的人的形象，因此其理论主张可能偏离了整个心理学理论成熟之路。将意识抽离于人鲜活身体进行研究，又不免陷入了传统认知心理学中身心平行论窠臼中。未来，学界应对此思潮加以关注，在马克思主义实践观视野下探寻人的完整形象以及与之相适的研究方式，真正意义上寻求心理学和灵性生活相融合的解决途径。

Postmaterialist psychology: Causes, theories, and evaluation

Zhou Zhuozhao¹, Xie Jin¹, Peng Min² (Corresponding author), Song Can³

1 college of education science, hunan normal university, changsha 410018, China

2 King's Health Economics Institute of Psychiatry, Psychology & Neuroscience at King's College London, London, SE5 8AF

3 Hunan Sports Vocational and Technical College, Changsha 410000, China

Abstract: Post-materialist psychology is an academic trend of thought under the great impact of the second generation of cognitive psychology research paradigm in psychology under the background of the era when quantum mechanics is gradually applied in neuroscience and psychology, with the inspiration of postmodern philosophy trend of thought and the increasing attention of parapsychological research. In Tucson canyon ranch 2014, the first

"scientific materialism, spiritual world after academic summit" which launched by Professor Gary E. Schwartz (University of Arizona, USA), organized by Dr. Miller and Dr. Mario Beauregard, and undertaken by two colleges that Arizona and Colombia's, marks the the birth of post-materialist psychology. The conference created the official website of "Post-materialistic Psychology", and most of the participants wrote books to create conditions for the formation of post-materialistic psychology. Postmaterialist psychology challenges the theory of consciousness by phenomena in traditional cognitive psychology with the "transfer hypothesis of mind-brain relationship", emphasizing that consciousness can exist apart from the living body, so it is not the product of brain physiological activities, but more likely to exist at the same time with the brain. In terms of the relationship between cognition and environment, it is advocated to replace the human-centered view with the universal-centered theory, that is, neither man nor environment is the center of cognition. The research topics of psychology are broadened to the intersection of spirituality and science. This trend of thought mainly focuses on clinical trials of near-death experiences, consciousness after brain death, or parapsychological field trials of paranormal phenomena. The theory of ideological trend holds that it will have an impact on health and treatment, ecology and consciousness evolution, etc., but the current academic evaluations are different: compared with the status of materialist psychology, it has formed three positions: negative, neutral and positive. At the moment, post-materialist psychology is still new and cannot be drawn to conclusions. This trend of thought, with its obvious postmodernism, may also fall into the binary field of either/or discrimination, such as overemphasizing the parallel relationship between the brain and consciousness while neglecting the objectivity of the physiological evidence that consciousness originates in the brain. At the same time, some theories of this trend of thought hold the suspicion of mysticism or even "theism". And because the object of the research is no longer focused on the image of a complete person, the theory may deviate from the mature road of the whole psychological theory. The research of consciousness away from the living body inevitably falls into the traditional mind-body parallelism in cognitive psychology. In the future, the academic circle should pay close attention to this trend of thought, and explore the complete image of human and the appropriate research method from the perspective of Marxist practice view, so as to seek the solution that integrates psychology and spirituality in a real sense.

Keywords: post-materialist psychology, spirituality, science, physicalism, theoretical research

生成认知范式的潜在危机及超越

周卓钊¹ 谢金¹ 彭旻² 宋灿^{1,3} (通讯作者)

摘要 认知心理学在当前已经发生了范式革命, 这就是以“4E 认知”为主的第二代认知科学的兴起。本研究对“4E 认知”中的生成认知范式形成和发展以及潜在危机进行阐述, 并探讨超越这种危机的努力方向。受到哲学、自然科学和心理学的共同影响, 生成认知研究范式肇始于 20 世纪 90 年代初, 由瓦雷拉等人将生物学、神经科学当中发现的“创生”现象和东方佛教哲学文化中正念觉知等教义整合产生, 也是在认知心理学当中尝试对人文科学主义、科学主义方法论进行整合。该研究范式注重行为在产生认知中的作用, 主张反表征和反计算主义的研究路线, 并通过引用动力系统理论以及“4E 认知”理论当中外在主义、动态系统等概念, 推广人工智能当中“进化机器人仿真模型”的研究技术。较之传统“GOFAI”认知研究范式, 生成认知更为真实、形象、生动构造对人类认知过程的研究。但是生成认知存在着潜在的危机: 1、现象学、存在主义哲学、宗教哲学指导力问题; 2、未开发出完善的研究技术, 且动力系统理论或者进化机器人仿真模型实用性较小; 3、仍然落入人机类比研究隐喻窠臼当中, 人的形象并未被完整揭示出来。4 与延展认知、嵌入认知、情感认知等关系未充分厘清, 导致理论当中还存有许多背离传统认知科学范式不够彻底之处。这些危机已经在生成认知几个主要的研究方案中体现出来, 例如自创生生成研究方案、激进生成研究方案、交互生成研究方案、感觉运动

生成研究方案等。本研究认为，有效避开这种危机的途径是更好切合人的完整形象，关注理论与科学技术发展的融合。

Abstract: A paradigm revolution has taken place in cognitive psychology, which is the emergence of the second generation of cognitive science, mainly "4E cognition". This research expounds the formation and development of enactive cognition paradigm in "4E cognition" and the potential crisis, probes into the direction of efforts beyond such crisis. Influenced by philosophy, natural science and psychology, enactive cognitive research paradigm started in the early 1990s. It was formed by Valera and others who integrated the "enaction" phenomenon found in biology and neuroscience with the doctrines of mindfulness awareness in Oriental Buddhist philosophy and culture. It was also an attempt to integrate humanistic scientism and scientism methodology in cognitive psychology. This research paradigm focuses on the role of behavior in enactive cognition, advocates the research route of anti-representation and anti-computationism, and promotes the research technology of "evolutionary robot simulation model" in artificial intelligence by referring to the concepts of externalism and dynamic system in the theory of "4E cognition". Compared with the traditional "GOFAI" cognitive research paradigm, the enactive cognition is more real, vivid to construct the research on human cognitive process. However, there are potential crises in enactive cognition: 1. The theory guiding force of Phenomenology, existentialist philosophy and religious philosophy; 2. It has not developed a complete research technology, and the utility of dynamic system theory or evolutionary robot; This study believes that the effective way to avoid this kind of crisis is to better fit the whole image of people and pay attention to the integration of theory and science and technology development.

Keywords: enactive cognitive paradigm, Theoretical psychology, Philosophical way of thinking

“新瓶装旧酒”：人机类比隐喻在认知心理学中的地位和演化

周卓钊

(湖南师范大学教育科学学院，长沙，410018)

摘要 本文从人机类比研究隐喻根源、理论内涵及在第一代认知科学学派、第二代认知科学思潮、认知神经科学进路三个形态中的特征及表现进行探讨，对这种研究隐喻优势、局限性和未来认知心理学理论发展道路进行评价和展望。人机类比研究隐喻简单而言是将人视为机器的一种研究前提，由此决定了研究的方式、方法以及应然的结论。认知心理学发展至今已经呈现出三种形态：以信息加工、联结主义心理学为主的第一代认知科学学派、“4E 认知”为主的第二代认知科学思潮、认知神经科学进路（approach）。三者之间的关系是互相影响、借鉴和共同发展的，更为重要的，认知神经科学进路拓宽了第一代认知科学在当今发展的道路，能够以更为合理、科学和整合的方式对人的大脑思维活动进行仿真模拟，是第一代认知科学学派的人机类比研究隐喻的发展。第二代认知科学思潮反对第一代认知科学学派人机类比研究隐喻，企图将认知心理学研究导向真实生活情境当中并更为合理揭示符合于真实的人的动态变化特征的研究，例如动力系统理论和进化机器人仿真模型技术等，但是同样不可避免陷入了人机类比的研究隐喻困境中。因此，人机类比隐喻仍然主宰着认知心理学的研究。

关键词 人机类比，认知心理学，研究隐喻

‘Old wine in a new bottle’: the status and evolution of man-machine analogy metaphor in cognitive psychology

Zhou Zhuozhao

College of education science, hunan normal university, changsha 410018, China

Abstract: This research on the ‘man-machine analogy’ research root metaphor, theoretical connotation, and in the first generation of cognitive science school, the second generation cognitive science thoughts and cognitive neuroscience approach to discuss the characteristics and performance of the three forms, metaphor advantages, limitations and future research on the cognitive psychology theory, evaluation and prospect development path. The metaphor of ‘man-machine analogy’ is simply a research premise to treat human as a machine, which determines the research methods and conclusions. Up to now, the development of cognitive psychology has taken on three forms: the first-generation cognitive science school, which mainly focuses on information processing and connectionist psychology; the second-generation cognitive science trend, which mainly focuses on "4E cognition"; and the approach of cognitive neuroscience. The relations between and among is influence each other, and common development, more important, a cognitive neuroscience approach to widen the first generation of cognitive science in today's road of development, to be more reasonable, scientific and integrated way of thinking activity carries on the simulation of the brain, is the first generation of cognitive science school of man-machine simulation development of metaphor research. The second generation cognitive science trend against the first generation of human cognitive science school research metaphor, analogy to cognitive psychology research orientation of real life situation is more reasonable and reveal in the research of dynamic characteristics of real people, such as dynamical system theory and evolutionary robot simulation model technology, but also inevitably fall into the predicament of ‘man-machine analogy metaphor’. Therefore, ‘man-machine analogy metaphor’ still dominates the researches of cognitive psychology.

Keywords: man-machine analogy; Cognitive psychology; Research on metaphor

后殖民主义批判心理学的内涵与价值

摘 要 作为批判心理学的一种历史样态, 后殖民主义批判心理学试图澄清、消解西方主流心理学知识中所蕴含的后殖民主义立场, 强调以去“西方中心主义”的后现代主义态度来建设平等、共存的多元文化心理学。它从心理学与话语、心理学与文化、心理学与种族之间的关系等维度, 澄清西方主流心理学知识中所蕴含的西方中心主义偏见和后殖民主义立场, 批判西方主流心理学借“科学”、“客观”之名在世界范畴内推广其带有主观偏见的知识, 如通过操控心理学知识标准界定的话语权来确立西方科学中心; 通过心理学的权威性裁决来确立非西方心理学对西方心理学的“单向依附性关系”与西方文化中心; 通过验证跨文化心理学中的普适性理论、力推本质主义的心理观来鼓吹西方种族中心, 等等。它强调不同文化心理学“共享心理学话语权”以取代西方心理学的话语主导权, 主张以多元文化心理学的“双边平等”关系来代替后殖民主义心理学中所暗含的“单向依附性”关系; 力陈以非本质主义的心理观来实现对“西方中心主义”的消解与超越, 试图为各种非西方的心理学争得平等的话语权, 使心理学知识体系能够解读整个人类的心理与行为。作为一种兼具批判性与建设性的完善心理学建设的努力, 后殖民主义批判心理学在澄清、消解蕴含于西方主流心理学研究中“西方中心主义”、后殖民主义立场, 并以平等、共存的多元文化心理学立场重建心理学方面均取得了一些丰硕的成果。其所秉持的科学批判精神, 有助于心理学回归理性思考, 促进中国心理学家识别西方心理学所蕴含的后殖民主义特征进而推动中国心理学步入更加健康的发展轨道。

² Mental Health Education and Counseling Center of Changsha Normal University, Changsha

¹ Department of Psychology, School of Educational Science of Hunan Normal University, Changsha

Abstract: As a kind of historical state of critical psychology, the post-colonial critical psychology attempts to clarify and disentangle the postcolonial position contained in the western mainstream psychology knowledge, and emphasizes the post-modernist attitude of "de-Western-centralism" to construct the equal and coexistence multi-cultural psychology. From the dimensions such as psychology and discourse, psychology and culture, psychology and race, it clarifies the western-centric prejudices and post-colonial positions contained in the knowledge of mainstream western psychology, and criticizes the fact that the western mainstream psychology promotes its subjectively biased knowledge in the world with the names of "science" and "objectivity". The examples are as follows: establishing the western science center by manipulating the discourse power defined by the psychological knowledge standard; establishing the "unidirectional dependence relationship" of the non-Western psychology to the western psychology and the western culture center through the authoritative judgment of psychology; advocating western ethnocentrism by verifying the universal theory of cross-cultural psychology and pushing the psychological view of essentialism, etc. It emphasizes that different cultural psychology should "share psychological discourse power" to replace the dominant discourse power of western psychology, and advocates that the "bilateral equality" relationship of multicultural psychology should replace the "unidirectional dependence" relationship implied in post-colonial psychology; it strives to achieve the elimination and transcendence of "Western-centrism" with a non-essentialist psychological view, and attempts to win equal discourse rights for various non-Western psychology so that the psychological knowledge system can interpret the entire human psychology and behavior. As a kind of critical and constructive efforts to perfect the construction of psychology, the post-colonial criticism psychology has achieved fruitful results in clarifying and dispelling the "Western-centrism" and the post-colonialist position contained in mainstream western psychology research, and rebuilding psychology with a multicultural position of equality and coexistence. The spirit of scientific criticism is beneficial for psychology to return to rational thinking and promote Chinese psychologists to recognize the post-colonial characteristics of western psychology so as to push Chinese psychology into a more healthy development track.

Keywords: critical psychology, post-colonialism, subjectivity position, critical spirit, multicultural psychology

1 Department of Psychology, School of Educational Science of Hunan Normal University, Changsha

Abstract: From the broad sense, critical psychology is a psychological form or movement which adheres to the critical spirit of science, attempts to clarify and dispel a certain subjective position of psychological research consciously or unconsciously held by researchers, and conducts the psychological reconstruction with a more appropriate subjective position recognized by the researchers. So far, it has present five different historical forms as follows: natural science critical psychology (clarifying and dispelling the non-scientific position in philosophy and human science psychology, and attempting to construct psychology with the position of natural sciences), critical psychology in human science (clarifying and dispelling the natural science position in mainstream psychology, and attempting to build psychology with the position of human science), class criticism psychology (clarifying and dispelling the bourgeois position in mainstream psychology, and attempting to construct psychology with the position of proletarian), feminist criticism psychology (clarifying and dispelling the male-centered position in mainstream psychology, and attempting to construct psychology with a feminist position), and post-colonial critical psychology (clarifying and dispelling the post-colonial position in mainstream psychology, and attempting to build psychology with a diversified position of post-modernism). As a critical and constructive effort to perfect psychology, various forms of critical psychology have achieved fruitful results in clarifying and dispelling the subjective position contained in psychological research and rebuilding psychology with a new subjective position. The spirit of scientific criticism is beneficial for psychology to return to rational thinking and step into the track of healthy development.

摘要 机能主义是美国心理学中第一个独特的心理学体系,它是在与构造心理学的争论中产生和获得发展。作为一个学派,在构造心理学消失以后,慢慢退出了历史舞台,但是作为一种研究取向的机能主义并没有消失,而是融入美国主流心理学之中。机能主义在美国的早期发展见于詹姆斯心理学思想,詹姆斯创造性地把进化论和实用主义的思想相互结合,并且突出意识的实用机能,指引美国主流心理学拒绝以元素分析为特征的心理学研究传统,进而朝向对心理的机能开展研究。机能主义在美国的正式发展分为芝加哥学派和哥伦比亚学派。芝加哥学派始于杜威,发展于安吉尔,成熟于卡尔,该学派强调了与构造心理学的区别。哥伦比亚学派主要代表人物有卡特尔、桑代克和吴伟士等人。哥伦比亚学派没有高举机能主义学派的旗帜,而是追求广泛学术研究自由精神。机能主义最初从封闭的意识分析研究转向有机体适应外部环境关系的研究,这种研究重心的转变为后来的主流心理学所继承。行为主义将研究的焦点放在行为与环境的关系中,强调行为的适应机能;认知心理学侧重对认知过程的机能分析;人本主义心理学强调需要的动力机能研究;进化心理学侧重对机能的进化机制研究。这些研究取向都体现了美国心理学机能主义的研究倾向。美国心理学在不同时期表现出不同的流派,而不同流派在研究对象、方法也存在差异,但是它们却有一个共同点,即这些流派一直贯穿着一条亘古不变的发展路线——机能研究。总之,机能研究一直是美国心理学中的一个特色主题,它沿着机能主义心理学、行为主义心理学、认知心理学、人本主义心理学以及进化心理学不断发展,它们从各自的维度共同揭示了心理发生发展的规律,在不同阶段的流派对机能的研究也不尽相同,但正是由于这些相

异的结果组成了美国心理学富有特色的机能研究，也构成了美国心理学多姿多彩的形态。

Evolution of the Intrinsic Logics of Ideology in Functionalism of American Psychology

Xie Jin¹, Zhou Zhuo zhao¹, Peng Min²

1 School of Educational Sciences, Hunan Normal University, Changsha, 410081

2 Institute of Psychiatry, Psychology & Neuroscience | King's College London, London, SE5 8AF

Abstract: Functionalism is the first unique psychological system in American psychology, which emerged and developed in the debate with constructional psychology. As a school, after the disappearance of structural psychology, functionalism gradually quitted from the historical stage. However, as a research orientation, functionalism did not disappear, but merged into the American Mainstream Psychology. The early development of functionalism in the United States can be found in James' psychology thought, James creatively put evolution theory and pragmatism ideas together, and highlights the practical function of consciousness, guides the American mainstream psychology to refuse the tradition of psychological research characterized by element analysis, and then headed to the function of psychological research. The formal development of functionalism in the United States is divided into Chicago school and Columbia School. The Chicago School, which began with Dewey, developed with Angel, and matured with Carl, emphasizes the distinction with structural psychology. The main representatives of The Columbia School are Cartier, Thorndike and Woodworth. The Columbia School does not hold the banner of the functionalist school, but pursues the free spirit of extensive academic research. Functionalism initially shifted from the closed analysis of consciousness to the adaptation of organisms to the external environment, which was inherited by the later mainstream psychology. Behaviorism focuses on the relationship between behavior and environment and emphasizes the adaptive function of behavior. Cognitive psychology focuses on the functional analysis of cognitive processes. Humanistic psychology emphasizes the need for dynamic function research. Evolutionary psychology focuses on the study of the evolutionary mechanism of function. These research orientations reflect the research tendency of American psychology functionalism. American psychology has shown different schools in different periods, and different schools have different research objects and methods, but they share one thing in common, that is, these schools have been running through a timeless development line - functional research. In short, the study of function has always been a characteristic theme in American psychology, which has been developing along with functionalist psychology, behaviorist psychology, cognitive psychology, humanistic psychology and evolutionary psychology. They have revealed the law of psychological development from their own dimensions, and different schools have different studies on function in different stages. However, it is the different results that constitute the distinctive functional studies of American psychology, as well as the various forms of American psychology.

Keywords: functionalism, American Psychology, Intrinsic thoughts

梅洛-庞蒂知觉现象学对具身认知的影响

谢金 彭运石

(湖南师范大学教育科学学院, 长沙 410081)

摘要 梅洛-庞蒂是现象学的重要代表人物，他在重新理解胡塞尔现象学的基础上提出了独具特色的现象学——“知觉现象学”，其根本目的是克服传统哲学中身心二元对立。其思想要点有：知觉就是对世界上各种事物的体验，甚至包括对人本身的体验，知觉是人类行动的基础。知觉处在首要地位，因为知觉的存在，为我们带来了物本身。在认知、理性、判断实施之前，有自己身体的感知经验存在，因此，知觉“就像是必不可少的根基”，知觉活动的主体是活的身体。具身认知的基本涵义是强调认知对身体的依赖，主要表现在：身体的状态直接影响着认知过程的进行；离线认知是以身体为基础的；认知根植于环境，环境是认知系统的组成部分。

分。目前对具身的理解存在着“弱具身”和“强具身”之分,“弱具身”强调了认知对身体的依赖性,但是却保留了认知的计算和表征功能。“强具身”则极力主张认知是被身体作用于世界的活动塑造出来的,身体的特殊细节造就了认知的特殊性。梅洛-庞蒂知觉现象学对具身认知的影响表现在:(1)他主张知觉的主体是身体,而身体嵌入世界之中,就像心脏嵌入身体之中,知觉、身体和世界是一个统一体。人是通过身体与世界的互动,通过身体对客观世界的作用而产生知觉和认识世界的。(2)梅洛-庞蒂提出了“具身的主体性”的概念,它既不把人视为离身的心智,也不把人看作复杂的机器,而是视人为活生生的、积极的创造物,其主体性是通过身体与世界的物理性互动而实现的。(3)梅洛-庞蒂提出的意向弧和最大把握倾向体现了具身认知的核心思想。(4)梅洛-庞蒂提出的肉身图式认为,我们的“肉身”使身体和心灵紧密地结合在一起,交织成我们生活的存在,并且我们由此才能和真正的事物本身所在的世界相互作用。

The influence of Merleau-Ponty's phenomenology of perception on embodied cognition

Xie Jin, Peng Yun shi

School of Educational Sciences, Hunan Normal University, Changsha, 410081

Abstract: Merleau-Ponty is an important representative of phenomenology. On the basis of re understanding Husserl's phenomenology, he put forward a unique Phenomenology-“perceptual phenomenology”, whose fundamental purpose is to overcome the binary opposition between body and mind in traditional philosophy. The main points of his thought are: perception is the experience of all kinds of things in the world, even the experience of man himself. Perception is the basis of human action. Perception is in the first place, because the existence of perception brings us the object itself. Before the implementation of cognition, rationality and judgment, there is a perceptual experience of one's own body. Therefore, perception “seems to be the essential foundation”, and the subject of perceptual activity is the living body. The basic meaning of embodied cognition is to emphasize the dependence of cognition on the body, which is mainly manifested in the following aspects: the state of the body directly affects the cognitive process; off-line cognition is based on the body; cognition is rooted in the environment, and environment is a part of the cognitive system. The current understanding of embodiment is divided into “weak embodiment” and “strong embodiment”. “Weak embodiment” emphasizes the dependence of cognition on the body, but retains the computational and representational functions of cognition. “Strong embodiment” strongly advocates that cognition is shaped by the activities of the body acting on the world, and the special details of the body create the particularity of cognition. The effects of Merleau-Ponty's phenomenology of perception on embodied cognition are as follows:(1) He claims that the subject of perception is the body, and the body is embedded in the world, just as the heart is embedded in the body. Perception, body and the world are a unity. Man perceives and understands the world through the interaction between the body and the world, and through the body's role in the objective world. (2) Merleau-Ponty put forward the concept of embodied subjectivity. It does not regard human beings as detached minds or complex machines, but as living and positive creations. Its subjectivity is realized through the interaction between the body and the world. (3) The intentional arc and a maximum grip proposed by Merleau Ponty embody the core idea of embodied cognition. (4) According to Merleau-Ponty's physical schema, our "flesh body" makes the body and mind closely linked together and interweave into the existence of our life, and thus we can interact with the world where the real things are.

Keywords: Merleau-Ponty, phenomenology of perception, embodied cognition

当代西方话语心理学评析

曹旻¹ 林桦² 彭运石³ (通讯作者)

3 湖南师范大学教育科学学院心理学系, 湖南长沙, 410081, pengyunshi@163.com

摘要 话语心理学是一种将目光聚集于日常生活中的话语活动, 试图通过话语分析(discourse analysis)来阐明人们的心理(个体心理、社会心理)在话语活动中的建构过程的新兴心理学研究思潮。它强调心理(认知、角色、身份、权力等)的情境性和建构性, 认为心理是在人与外界对话的过程中不断生成、建构的, 心理学研究应该将目光集中在具有建构意义的话语本身, 透过日常生活世界中的话语文本来洞见个体与社会生活实践中的心理过程如何进行。迄今, 它展现出两种研究取向: 谈话分析取向采用的是一种非批判性的相对“静态”的理论视角, 着眼于话语本身并以话语解释心灵, 关注的是人们为实现各种利益与目的而选择的表达方法与策略, 主要集中在蕴含于叙事和隐喻等修辞中的情感、健康、态度等主题; 后结构主义取向采取的是一种批判性的“动态”的理论视角, 关注的是话语的社会实践性并以话语解释社会心理, 主要聚焦于话语与权力的关系, 如不同身份立场的话语比较、政治性文本中的潜在冲突以及社会成员范畴分析等。目前, 话语心理学已呈现出“跨学科, 深融合, 多元化”的发展态势, 作为对主流的科学主义心理学的一种反叛与重塑, 它能给中国心理学的健康发展提供诸多有益的启迪。

Exploration on the Evaluation of Contemporary Western Discursive Psychology

Cao Min¹, Lin Hua², Peng Yunshi³ (corresponding author)

1 Hunan First Normal University, Changsha

2 Mental Health Education and Counseling Center of Changsha Normal University, Changsha

3 Department of Psychology, School of Educational Science of Hunan Normal University, Changsha, pengyunshi@163.com

Abstract: Discursive psychology is a new research trend of psychology, that focuses on discourse activity in daily life and attempts to illustrate the construction process of people's psychology (individual psychology and social psychology) in discourse activities through discourse analysis. It emphasizes the situational and constructive nature of psychology (cognitive, roles, status, power, etc.), and believes that psychology is constantly generated and constructed in the process of human and external dialogue, constructed, so that psychology research should focus on the discourse itself with constructive significance. Through the discourse texts in the daily life world, we can find out how the psychological process of individuals and social life practice goes on. So far, discursive psychology shows two research orientation: The approach of conversation analysis is a kind of relative "static" of critical theory perspective, focusing on discourse itself and to explain the mind, focus on the people select representation methods and strategy to achieve a variety of interests and purpose. The research topic includes emotion, health, attitudes etc. embedded in narration and metaphor; The approach of post-structuralism adopts a critical "dynamic" theoretical perspective. It focuses on the social practicality of discourse and explains social psychology with discourse, mainly focusing on the relationship between discourse and power, such as discourse comparison of different identities and positions, potential conflicts in political texts, and category analysis of social members. At present, discursive psychology has presented a development trend of "interdisciplinary, deep integration and diversification". As a rebellion against and reconstruction of mainstream scientist-oriented psychology, discursive psychology can provide many beneficial inspirations to the development of psychology in China.

Keywords: discursive psychology, discourse analysis, discourse analysis approach, post-structuralist approach

心理学与人工智能的关系及现状

2 内蒙古师范大学，呼和浩特，010022

摘 要 人工智能循着心理学的脚步不断发展，特别是认知心理学，它给予了人工智能理论上的支持。可以说心理学研究的是人类的智能，而人工智能研究的是如何模拟人类的智能。就目前人工智能的发展现状来看，人类智能中直觉思维层面和简单重复动作此类较为基础的部分已经被人工智能很好的模拟；人类智能中逻辑思维层面和复杂连续动作等具备一定复杂性的中等部分被人工智能初步模拟但不够完全，不够成熟；人类智能中辩证思维层面和高难度、高精度动作这类具有社会性的高级部分还不能被人工智能模拟。此外人类心理中的意识与自我意识、情绪情感、人格等人类自己还尚未探究清楚的部分，人工智能更无法得之精髓。整体来看，从人类智能已能够被人工智能模拟的部分，到人类智能未完全被人工智能模拟的部分，再到人类智能尚不能被人工智能模拟的部分，这种层次的不断上升体现了人类智能或人类心理从简单到复杂，从基础到高级，从物质性到社会性的不同层次，人类的心理和智能同时具备着这些不同层次的特性，是其高度综合。

关键词 心理学，人类智能，人工智能，智力，技能

Current Situation and Relationship between Psychology and Artificial Intelligence

Zhang Peng¹, Chen Zhongyong²

1. Baotou Teachers' College, Baotou, 014030, 756266966@qq.com

2. Inner Mongolia Normal University, Hohhot, 010022

Abstract: Artificial intelligence follows the pace of psychology, in particular, cognitive psychology, which gives theoretical support to artificial intelligence. As far as the current development of artificial intelligence is concerned, in human intelligence and skill, such as direct thinking and simple repetitive action have been well simulated by artificial intelligence; The middle level of human intelligence and skill, such as logical thinking and complex continuous action, is initially simulated by artificial intelligence but not completely and maturely; Dialectical thinking, high difficulty and high precision action in human intelligence cannot be simulated by artificial intelligence. In addition, consciousness and self-consciousness, emotion, personality and other parts of human psychology have not yet explored clearly by themselves, artificial intelligence cannot get the essence, too. Overall, from the part that human intelligence can be simulated by artificial intelligence, to the part that human intelligence is not completely simulated by artificial intelligence, further to the part that human intelligence can not be simulated by artificial intelligence, this rising level reflects the different levels of human intelligence or human psychology from simple to complex, from basic to advanced, from material to social. Human psychology and intelligence have these different levels of characteristics at the same time, is its high synthesis.

Keywords: Psychology, Human intelligence, Artificial Intelligence, intelligence, skill

大数据时代下心理学的可重复危机与行为变异性

林靖康¹ 唐睿翼¹ 游旭群¹（通讯作者）

1 陕西师范大学心理学院，西安，710032，linjingkang07@163.com

摘 要 研究结果的可重复性是科学实验的基本特征，而近年来，心理学正经历着一场可重复危机，不少心理学实验结果无法得到验证。面对质疑，国内外学者大多尝试从统计方法上提高研究质量，但这些建议大部分是基于线性投入-产出方法，并将行为变异性视为不受控制的随机变量的结果。与这种主流观点不同，Arocha（2021）为我们提供一个新的视角，即变异性应当作为个体外显行为的重要特征，而不是一些未知变量随机影响个体产出的结果，同时，采用包含个体行为变异性和复杂性的研究模型来解决可重复危机。虽然在传统心理学研究中，有限样本规模限制了复杂模型的构建，但大数据的出现也许可以为这一观点提供有力的支撑。

大数据除了在技术上让行为变异性纳入模型成为可能,更重要的是其可以在研究逻辑和研究方法上对心理学产生深刻影响——其强调“非精确性”与“精确性”辩证统一的思想,极大地丰富了心理学在群体与个体关系、总体数据与具体个体行为关系上的思考;其强调的“概率推理”和“相关性”分析,其关于不确定信息推理的逻辑,为心理学的因果思维机制起到完善和补充的作用。总之,大数据的出现让心理学研究个体行为的变异性 and 复杂性、解决可重复危机提供了新的思路,而这也将更加强调心理学为一门研究复杂现象的学科。

关键词 大数据,心理学,可重复危机,行为变异性

Replication crisis and behavioral variability of psychology in the era of big data

Tang Ruiyi¹, Lin Jingkang¹, You xuqun¹

Shaanxi Normal University, Xi'an

Abstract: The repeatability of research results is the basic feature of scientific experiments. In recent years, psychology is experiencing a replication crisis, and many psychological experimental results can not be verified. In the face of doubt, most scholars at home and abroad try to improve the research quality from statistical methods, but most of these suggestions are based on linear input-output methods, and regard behavior variability as the result of uncontrolled random variables. Different from this mainstream view, Arocha (2021) provides us with a new perspective, that is, variability should be an important feature of individual explicit behavior, rather than the result that some unknown variables randomly affect individual output. At the same time, a research model including individual behavior variability and complexity is used to solve the repeatable crisis. Although in traditional psychological research, the limited sample size limits the construction of complex models, the emergence of big data may provide strong support for this view. In addition to making it possible to incorporate behavioral variability into the model technically, big data can have a profound impact on psychology in research logic and research methods - its idea of emphasizing the dialectical unity of "imprecision" and "accuracy" has greatly enriched psychological thinking on the relationship between groups and individuals, and the relationship between overall data and specific individual behavior; Its emphasis on "probability reasoning" and "correlation" analysis, and its logic on uncertain information reasoning play a perfect and supplementary role in the causal thinking mechanism of psychology. In short, the emergence of big data provides new ideas for psychology to study the variability and complexity of individual behavior and solve repeatable crises, which will also put more emphasis on psychology as a discipline to study complex phenomena.

Keywords: big data, psychology, replication crisis, behavioral variability

心理健康观的演进趋势及启示

秦瑶¹ 彭运石² (通讯作者)

1 湖南师范大学教育科学学院, 长沙, 410081

2 湖南师范大学教育科学学院, 长沙, 410081, pengyunshi@163.com

摘要 从单维到多维(从某个维度界定心理健康,到多维度的整合心理健康体系),从事实到价值(从关注人的心理事实到注重人的价值、生命意义等),从个体到社会(从关注个体心理健康到关注社会心理健康),从二歧到整合(从静态、孤立、片面地看待心理健康到以整合地视野看待心理健康),是西方心理学百余年来心理健康观演进的基本轨迹。“完全心理健康模型”、“幸福的正向/反向辩证法”代表着当代心理学心理健康观建构的最新进展。西方心理健康观演进趋势的重要启示在于:任何心理机能的特征(品质),其对于心理健康的意义都是双面的,心理健康的问题不仅是一个“实然”(事实)问题,而且也是一个“应然”(价值)问题。中国特色心理健康学术体系、学科体系、话语体系的构建,需以辩证唯物主义的立场去看待心理健康与心理疾病的关系;以马克思主义关于人的自由全面发展学说作为自己的理论基石;以习近平新时代中国特色社会主义思想,特别是社会主义核心价值观作为自己的精神内核。在这样的情况下,心理健康的评估指标体系,

将是一种多维度、多层次且内在有机统一的完整系统；各项心理机能的特征（品质）对于心理健康的意义，都是双重且有主次之分的。以社会主义的核心价值培育个体的健全人格与良好的社会心态，则是中国心理健康学科发展的根本目标与努力方向。

关键词 心理健康观，完全心理健康模型，幸福的正向/反向辩证法，中国特色

The evolution trend and Enlightenment of mental health view

Qin yao¹, Peng Yunshi²

1 Institute of Educational Science, Hunan Normal University, Changsha, 410081

2 Institute of Educational Science, Hunan Normal University, Changsha, 410081,

pengyunshi@163.com

Abstract: From single dimension to multi-dimension (defining mental health from a certain dimension to multi-dimensional and integrated mental health system), from fact to value (from paying attention to people's psychological facts to focusing on people's value and meaning of life, etc.), from individual to society (from paying attention to individual mental health to paying attention to social mental health), from dichotomy to integration (from a static, isolated and unilaterally view of mental health to an integrated view of mental health), which is the basic track of the evolution of the concept of mental health in western psychology for more than 100 years. "Complete mental health model" and "positive / negative dialectics of happiness" represent the latest progress in the construction of mental health view in contemporary psychology. The important enlightenment of the evolution trend of Western mental health view is that the characteristics (qualities) of any psychological function have two-sided significance for mental health, and the problem of mental health is not only a matter of fact, but also a matter of value. The construction of academic system, discipline system and discourse system of mental health with Chinese characteristics needs to treat the relationship between mental health and mental illness with the standpoint of dialectical materialism; Take the Marxist theory of human's free and all-round development as its theoretical cornerstone; Xi Jinping's Thought on Socialism with Chinese characteristics for a New Era, especially using the socialist core values as the spiritual core. In this case, the evaluation index system of mental health will be a multi-dimensional, multi-level and integrated system; The significance of the characteristics (qualities) of various psychological functions for mental health is dual and has primary and secondary points. It is the fundamental goal and direction of the development of China's mental health discipline to adopt the core value of socialism to cultivate individual sound personality and good social mentality.

Keywords: mental health view, complete mental health model, positive / negative dialectics of happiness, Chinese characteristics

积极心理学的新动向——“幸福辩证法”评析

摘要 “幸福辩证法”是 Paul Wong 等人为克服积极心理学 1.0 之弊而提出的一种幸福研究的方法论主张。针对积极心理学 1.0 以非此即彼的思维方式区分“积极”与“消极”、片面强调“积极”心理品质对幸福（或心理健康）的价值所导致的“积极和消极的再失衡”、“积极暴政”等诸多问题，“幸福辩证法”主张，心理学应以辩证法来看待幸福的本质与各种心理品质对于幸福的价值。即：幸福的本质是辩证的，各种心理品质对于幸福的价值也是相对的、变化着的。心理品质“积极”与“消极”性质的判定，遵循着一个“正题（“积极心理—积极效应”）—反题（“积极—消极悖反”）—合题（“超越并保留两个原始对立的真理，创造一种更高的统一性”）”的发展过程。幸福的辩证本质则由三个不同的原则展现出来：①评估原则，即难以确定特定现象是积极的还是消极的，因为这种判断不可避免地取决于背景环境。②共价原则，很难将特定的现象描述为正面的还是负面的，因为许多情绪状态都是“共价的”。③互补原则，幸福本身可以被看作是“生活的积极方面和消极方面之间必然的辩证关系”。显然，作为积极心理学 2.0 的重要成就，幸福辩证法一定程度上消除了传统消极心理学与积极心理

学 1.0 之弊，对于我们更为全面准确的评定心理品质的“积极”与“消极”性质，更为合理深入的理解幸福的本质与增进途径，亦能提供有益的启迪、借鉴。

An Analysis of Dialectics of Wellbeing —A New Trend of Positive Psychology

Liu Siyuan, Peng Yunshi

Institute of Education Science, Hunan Normal University, Changsha, 410081

Abstract: "Dialectics of wellbeing" is a methodology of wellbeing research proposed by Paul Wong and others to overcome the disadvantages of Positive Psychology 1.0. In view of the many problems in positive psychology 1.0, which distinguish "positive" from "negative" in either-or way of thinking, and "positive and negative rebalancing" and "positive tyranny" caused by one-sided emphasis on the value of "positive" psychological quality to wellbeing (or mental health), the "dialectics of wellbeing" advocates that, Psychology should treat the essence of wellbeing and the value of various psychological qualities to wellbeing by dialectics. That is: the essence of wellbeing is dialectical, and the value of various psychological qualities to wellbeing is also relative and changing. The determination of the "positive" and "negative" qualities of psychological quality follows a development process of "thesis (" positive psychology -- positive effect") -- antithesis (" positive -- negative contradiction ") -- synthesis (" to transcend and retain the two original opposite truths and create a higher unity "). The dialectical nature of wellbeing is revealed by three different principles:①principle of appraisal:it can be difficult to categorize particular phenomena as positive or negative, as such appraisals are fundamentally contextually-dependent. In principle of appraisal, Eastern and Western cultures show distinct differences. ② principle of co-valence: not only is it difficult to characterize particular phenomena as either positive or negative, many emotional states are co-valenced. ③ principle of complementarity: wellbeing itself can be seen as involving an “inevitable dialectics between positive and negative aspects of living”. Obviously, as an important achievement of positive psychology to 2.0, which eliminated traditional dialectics of happiness a certain degree of negative psychology and positive psychology 1.0 disadvantage, for our more comprehensive and accurate evaluation of the psychological quality of "positive" and "negative" character, more reasonable thorough understanding of the nature of happiness and way to improve, also can provide beneficial enlightenment and reference.

道德概念洁净隐喻的干预

孙逸舒 丁凤琴（通讯作者） 吴静 宋秀萍

宁夏大学教育学院，银川，750021，dingfqin@nxu.edu.cn

摘 要 道德概念洁净隐喻强调，洁净的始源域概念与道德抽象的目标域概念相联结，数千年前便存在“洁净近乎美德”的思想。研究表明，道德概念洁净隐喻具有心理现实性，且对被试的道德行为具有一致性或补偿性效应；道德概念隐喻联结强度影响个体随后的道德行为，且个体认知程度越高其隐喻联结强度越强；洁净指向环境或是自身其影响效果存在差异；评价性条件反射可加强或减弱刺激间的联结。因此，本研究尝试采用评价性条件反射法对洁净与道德的联结进行干预，探究道德概念洁净隐喻干预的有效性以及对随后的道德行为是否存在迁移效应，以及环境与自身洁净的影响差异。研究结果表明：(1) 评价性条件反射法可有效干预道德概念环境洁净隐喻，即实验组后测中环境洁净句子与道德词汇联结时的反应显著快于前测，控制组前后测差异不显著，干预后两组被试亲社会倾向得分差异不显著；(2) 评价性条件反射法可有效干预道德概念自身洁净

隐喻,即实验组后测中自身洁净句子与道德词汇联结时的反应显著快于前测,控制组前后测差异不显著,且干预后实验组被试亲社会倾向得分显著高于控制组。以上研究表明,评价性条件反射可以有效干预道德概念洁净隐喻,且自身洁净干预对被试的亲社会行为有迁移作用。该研究丰富了道德概念隐喻及其干预研究,使得道德教育更具可操作性,也为道德教育干预提供了实证基础。

The Intervention of the Clean Metaphor of the Moral Concepts

SUN Yishu, DING Fengqin, WU Jing, SONG Xiuping

School of Education, Ningxia University, Yinchuan 750021, dingfqin@nxu.edu.cn

Abstract: The clean metaphor of the moral concepts emphasizes the connection between the concept of source domain and objective domain, such as cleanliness and morality. The idea that cleanliness is close to virtue has existed for thousands of years. Studies have shown that the clean metaphor of the moral concepts has psychological reality, and has a consistent or compensatory effect on the moral behavior of the subjects. The strength of metaphorical association of moral concepts influences individuals' moral behavior, and the strength of metaphorical association is stronger when individuals cognitive level were higher. There are differences in the effect of cleanliness on the environment or individual. What's more, evaluative conditioning can strengthen or weaken the bond between stimuli. Therefore, This study attempts to use evaluative conditioning to intervene the association between cleanliness and morality. To explore the effectiveness of moral concept cleansing metaphor intervention and whether there is a transfer effect on subsequent moral behavior, and the differences in the impact of environmental and self-cleanliness. The results show that: (1) The evaluative conditioning method can effectively interfere with the moral concept of environmental cleansing metaphor. In the experimental group, the response to the association between environmental clean sentences and moral words was significantly faster than that in the pretest, while the control group was no significant difference. The scores of prosocial tendency were not significantly different; (2) The evaluative conditioning method can effectively intervene the self-cleansing metaphor of moral concepts. In the experimental group, the response to self-cleansing sentences associated with moral words was significantly faster than in the pretest, while the control group was no significant difference. The scores of prosocial tendency in the experimental group were significantly higher than the control group. The above studies show that evaluative conditioning can effectively interfere with the clean metaphor of the moral concepts, and self-cleansing intervention had a migratory effect on prosocial behavior of the subjects. and provides an empirical basis for educational intervention. This study enriches the conceptual metaphor theory and its intervention research, which makes moral education more operable, and provides an empirical basis for educational intervention.

Keywords: conceptual metaphor, morality, cleanliness, evaluative conditioning, intervention

听觉工作记忆内容对视觉持续性注意影响

陈芷妍¹ 马嘉悦¹ 李杰^{2,1} (通讯作者) 张禹¹

¹ 北京体育大学心理学院, 北京, 100084

² 杭州师范大学心理科学研究院, 杭州, 311121, lijie.psy@hznu.edu.cn

摘要 以往研究表明,当听觉工作记忆内容与视觉搜索任务中的刺激匹配时会产生注意捕获效应。听觉工作记忆内容能否促进动态情景中的视觉持续性注意,目前尚不清楚。本研究将听觉言语工作记忆任务与多身份追踪任务相结合,通过两个实验考察视听两任务的信息匹配程度对视觉持续性注意的影响。实验一考察两者整体匹配条件下的影响,采用2(声音出现阶段:线索阶段、追踪阶段)×3(声音类型:目标字母、干扰字母、无关字母)的被试内设计。多身份追踪任务中呈现8个带字母的随机运动客体,其中4个为目标,同时在线索或追踪阶段以听觉方式呈现4个目标字母、4个干扰字母或4个无关字母,被试执行视觉追踪和听觉记忆的双任务。结果发现,对于视觉追踪任务,当声音为目标字母时,多身份追踪的位置正确率($F(2,44) = 6.483, p = .003, \eta_p^2 = .228$)和身份记忆正确率($F(2,44) = 10.339, p < .001, \eta_p^2 = .320$)显著高于声音为干扰字母的条

件, 但身份-位置绑定正确率无显著差异; 对于听觉工作记忆任务, 声音为目标字母的正确率显著高于干扰和无关字母($F(2,44) = 108.843, p < .001, \eta_p^2 = .832$)。实验二将听觉工作记忆内容由整体匹配改为部分匹配, 采用 2 (声音出现阶段: 线索阶段、追踪阶段) $\times$ 3 (声音类型: 目标+干扰、目标+无关、干扰+无关) 的被试内设计, 听觉方式呈现的 4 个字母包括两种不同类型的字母各 2 个。结果发现视觉追踪任务不同条件无显著差异, 听觉工作记忆任务中声音出现在线索阶段的正确率显著低于追踪阶段($F(1,21) = 9.945, p = .005, \eta_p^2 = .321$), 声音为目标+干扰字母时正确率显著低于其他条件($F(2,42) = 3.808, p = .03, \eta_p^2 = .153$)。研究结果表明, 视觉与听觉任务身份信息匹配程度对多身份追踪的影响不同, 在视觉与听觉任务身份信息整体匹配的条件下, 能促进听觉任务表现以及视觉位置和身份信息的加工, 而视觉身份-位置的绑定可能是额外的独立加工过程; 视觉与听觉任务身份信息部分匹配的情况下不存在促进效应, 而且损害了听觉任务的表现, 说明部分信息匹配不能有效促进任务表现, 反而需消耗更多认知资源。

The effect of auditory working memory content on visual sustained attention

Zhiyan Chen¹, Jiayue Ma¹, Jie Li^{2,1}, Yu Zhang¹

1 School of Psychology, Beijing Sport University, Beijing, 100084

2 Institutes of Psychological Sciences, Hangzhou Normal University, Hangzhou, 311121

Abstract: Previous research has shown that the attention capture effect occurs when auditory working memory content is matched to stimuli in the visual search task. Whether the content of auditory working memory can promote visual sustained attention in dynamic situations is currently unclear. The present study combined the auditory verbal working memory task with the multiple identity tracking task in two experiments to examine the effects of the degree of information matching between the two tasks on visual sustained attention. Experiment 1 examined the influence of the overall matching conditions between the two tasks, using the 2 (sound appearance stage: cueing stage, tracking stage) $\times$ 3 (sound type: target letter, interference letter, irrelevant letter) design within the subject. In the multiple identity tracking task, 8 random motion objects with letters were presented, 4 of which were targets. At the same time, 4 target letters, 4 interfering letters, or 4 extraneous letters were presented in an auditory manner during the cueing or tracking stage. Participants performed dual tasks of visual tracking and auditory memory. It was found that, for visual tracking tasks, when the sound was the target letters, the position accuracy rate of multiple identity tracking ($F(2,44) = 6.483, p = .003, \eta_p^2 = .228$) and the accuracy rate of identity memory ($F(2,44) = 10.339, p < .001, \eta_p^2 = .320$) were significantly higher than in the condition that the sound was the interference letters, but there was no significant difference in the accuracy of the identity-position binding; for the auditory working memory task, when the sound was the target letters, the accuracy was significantly higher than that of the interference and irrelevant letters ($F(2,44) = 108.843, p < .001, \eta_p^2 = .832$). In Experiment 2, we changed the content of auditory working memory from overall matching to partial matching, using the 2 (sound appearance stage: cueing stage, tracking stage) $\times$ 3 (sound type: target + interference, target + irrelevant, interference + irrelevant) design, and the 4 letters presented aurally included 2 each of two different types of letters. It was found that there were no significant differences in the different conditions of the visual tracking task. The accuracy of the sound in the cueing stage of the auditory working memory task was significantly lower than that of the tracking stage ($F(1,21) = 9.945, p = .005, \eta_p^2 = .321$). When the sound was the target and interference letters, the accuracy was significantly lower than that of the other conditions ($F(2,42) = 3.808, p = .03, \eta_p^2 = .153$). The results showed that the degree of matching of visual and auditory task identity information had different effects on multiple identity tracking. In the condition of overall matching of visual and auditory task identity information, it promoted auditory task performance and processing of visual location and identity information, while visual identity-location binding might be an additional independent process; in the condition of partial matching of visual and auditory task identity information, there was no promotion effect, and the performance of the auditory task was impaired, indicating that partial information matching was not effective in

promoting task performance, but required more cognitive resources.

摘要 工作记忆是一种对信息进行暂时加工和贮存的记忆系统。对威胁刺激的注意或回避都有利于个体的生存。因此, 在有威胁刺激的情境中, 个体的工作记忆表征模式以何种加工策略进行运作, 还有待进一步探讨。以往的研究显示, 个体会优先加工威胁刺激相关信息, 增强工作记忆表征; 相反, 一些研究发现威胁刺激会使个体分心, 损害工作记忆表现。本研究在前人研究的基础上, 用两个实验来探讨不同记忆负荷下, 威胁刺激影响工作记忆目标信息保持的认知神经机制。实验一: 招募 44 名被试, 采用电刺激联结训练, 使被试将特定刺激色块与电刺激联结, 然后进行颜色延迟估计任务, 并用状态焦虑量表(SAI)、正负性情绪量表(PANAS)测试被试的情绪反应, 探讨不同记忆负荷条件下, 威胁刺激对个体工作记忆表征精度与容量的影响。采用 3 (记忆负荷: 2, 4, 6) × 3 (刺激呈现条件: 无威胁刺激, 两个威胁刺激(目标, 非目标), 一个威胁刺激(目标)) 的实验设计。结果发现: (1) 状态焦虑量表、负性情绪量表得分的时间点主效应显著; (2) 工作记忆负荷在工作记忆表征容量上主效应显著; (3) 刺激呈现条件类型在工作记忆表征精度上主效应不显著。实验二: 招募 43 名被试, 在实验一的基础上, 采用生理多导仪采集被试生理信号, 观察被试在不同威胁刺激条件下皮肤电与心电的生理反应, 进一步探讨个体对不同条件下威胁刺激的工作记忆表征精度和容量的不同策略。采用 3 (记忆负荷: 2, 4, 6) × 3 (刺激呈现条件: 无威胁刺激, 一个威胁刺激(非目标), 两个威胁刺激(非目标)) 的实验设计。结果发现: (4) 心电和皮肤电反应在时间点和刺激呈现类型上均无显著差异; (5) 刺激呈现条件类型在工作记忆表征精度上主效应显著; (6) 工作记忆负荷在工作记忆表征容量上主效应显著。本研究结果表明, 个体对威胁刺激采用全或无的加工方式, 且当威胁刺激作为非目标时, 个体会采用抑制策略以提升目标刺激的工作记忆表征精度。

Strategies for working memory representation of individuals under threat stimuli: A Study of working memory representation accuracy and capacity

Xie Jiao^{1,2}, Yang Run^{1,2}, Bao Wei^{1,2}, Zhang Yu^{1,2}, Luo Yu^{1,2}

1 Department of Psychology, Guizhou Normal University, Guizhou, Guiyang

2 Laboratory of Stress and Attention, Department of Psychology, Guizhou Normal University, Guizhou, Guiyang

Abstract: Working memory is a memory system that processes and stores information temporarily. Attention to or avoidance of threatening stimuli is beneficial to the survival of individuals. Therefore, it remains to be further explored what processing strategies the individual's working memory representation mode USES in the context of threatening stimuli. Previous studies have shown that individuals preferentially process information related to threat stimuli and enhance working memory representation. Instead, some studies have found that threatening stimuli can distract individuals and impair working memory performance. In this study, based on previous studies, two experiments were conducted to explore the cognitive neural mechanism of threatening stimuli affecting the retention of target information in working memory under different memory loads. Experiment one: recruiting 44 subjects, connected by electrical stimulation training, the participants will be specific to stimulate piece connected to electrical stimulation, then color delay estimation tasks, and state anxiety scale (SAI), the positive and negative emotion scale

(PANAS) test subjects of emotional response, to explore different memory load conditions, threat stimulus for individuals to characterize the effect of the precision and capacity of working memory.³ (memory load: 2,4,6) ×3 (stimulus presentation condition: no threat stimulus, two threat stimuli (target, non-target), and one threat stimulus (target)) were used in the experimental design. The results showed that : (1) the time point main effect of the scores of state anxiety scale and negative emotion scale was significant; (2) Working memory load has a significant main effect on the capacity of working memory representation; (3) The main effect of stimulus presentation condition type on working memory representation accuracy is not significant. Experiment 2: 43 subjects were recruited. On the basis of experiment 1, physiological signals of the subjects were collected by using a physiological multiconductometer to observe the physiological responses of the subjects to skin and ecg under different threat stimuli conditions, so as to further explore the different strategies of individual's working memory representation accuracy and capacity under different threat stimuli conditions.³ (memory load: 2,4,6) ×3 (stimulus presentation condition: no threat stimulus, one threat stimulus (non-target), two threat stimuli (non-target)) was used in the experimental design. The results showed that : (4) there was no significant difference between electrocardiogram and electrodermal response in time point and type of stimulation; (5) The stimulus presentation condition type has a significant main effect on the working memory representation accuracy; (6) Working memory load has a significant main effect on the capacity of working memory representation. The results of this study showed that individuals processed the threat stimulus in an all-or-nothing way, and when the threat stimulus was not a target, individuals adopted inhibition strategies to improve the working memory representation accuracy of the target stimulus.

受害者对冒犯者共情还是反共情？宽恕的中介作用

于美琪¹ 卢家楣¹（通讯作者）王淑茵¹

1 上海师范大学教育学院，上海，200234，通讯作者 E-mail: lujiamei@vip.163.com

摘要 共情是指个体能感知和理解他人的处境，能对他人的处境产生相似的情绪反应。而反共情是指个体对他人的负性情绪产生正性体验，而对他人的正性情绪产生负性体验，即个体产生与共情对象不一致的情绪反应。共情可以促进个体的亲社会行为，而反共情不仅会阻碍亲社会行为的发生，甚至会诱发个体的攻击行为。以往研究表明了共情与宽恕之间存在正相关，而较少考虑到人际冒犯发生后宽恕对受害者的共情，尤其是反共情的影响。本研究探讨了不同强度的人际冒犯会怎样影响受害者对冒犯者的共情，是导致受害者对冒犯者共情的减少还是反共情的增加，并同时考察了宽恕在其中的中介作用。本研究以 40 名大学生为被试（ $M_{age} = 24.05$ 岁， $SD = 2.03$ ；女性 23 名），采用 3（冒犯强度：无，低，高）×2（事件效价：积极，消极）的被试内实验设计。被试首先在没有受到共情对象冒犯时，自我报告对共情对象经历积极和消极事件时产生的情绪体验。然后被试需要将自己代入到不同强度的冒犯情景中，在这些情景中被试作为受害者受到了来自共情对象的冒犯，随后被试报告感知到冒犯的强度和对共情对象的宽恕意愿，并再次报告对共情对象经历积极和消极事件时产生的情绪体验。结果显示：（1）在无冒犯时，被试对共情对象产生了共情，一旦受到共情对象的冒犯，被试原本对共情对象的共情变为反共情，并且反共情程度随着冒犯强度的增加而增大；（2）宽恕在个体感知到的冒犯强度和反共情之间起到中介作用。本研究结果为普遍的人际交往中反共情的存在提供了证据，表明人际冒犯会增加受害者对冒犯者的反共情，并进一步强调了人际冒犯后提高受害者对冒犯者宽恕的重要性。

关键词 反共情；共情，宽恕，冒犯

Is the Victim Empathic or Counter-Empathic Towards the Offender?

The Mediating Role of Forgiveness

Meiqi Yu¹, Jiamei Lu^{1*}, and Shuyin Wang¹.

¹ School of Education, Shanghai Normal University, Shanghai, 200234, *Email:

lujiamei@vip.163.com

Abstract: Empathy is defined as the ability of people to perceive and understand the situation of others, and to produce similar emotional responses to the others' situation. Counter-empathy refers to people have positive experience for others' negative emotions and negative experience for others' positive emotions, that is, people have inconsistent emotional responses with the empathic objects. Empathy can promote people's prosocial behavior, while counter-empathy can not only inhibit prosocial behavior, but also have the possibility to engage in aggressive behaviors. Previous studies have shown that there is a positive correlation between empathy and forgiveness, but have rarely considered that after interpersonal transgression, the effect of forgiveness on empathy, especially counter-empathy. In our study, we investigated how different levels of interpersonal transgression affect the victim's empathy for the offender, whether it leads to a decrease in the victim's empathy for the offender or an increase in counter-empathy for the offender, and also examined the mediating role of forgiveness. Forty college students ($M_{age} = 24.05$, $SD = 2.03$; 23 female) were selected as the subject to participate in this study. The design of the study is 3 (transgression intensity: no, low, high) $\times$ 2 (event valence: positive, negative) within-subject design. At first, participants reported their emotional experience about the empathic object when they experienced positive and negative events without transgression. Then the participants need to plug themselves into different offensive scenarios where the participants were the victim who was offended by the empathic object. After that, the participants reported the extent to which they were offended and their willingness to forgive the offender. Finally, they reported again their emotional experience about the empathic object when they experienced positive and negative events after transgression. The results showed (1) that the participants showed empathy towards the empathic object without transgression. Once the participants were offender by the empathic object, their original empathy towards the empathic object changed to counter-empathy. The degree of counter-empathy increased with the intensity of the transgression; (2) that forgiveness played a mediating role between the intensity of perceived transgression and counter-empathy. The findings of our study provide evidence for the existence of counter-empathy in general interpersonal interaction, suggesting that interpersonal transgression can increase the victim's counter-empathy. In addition, this study further emphasizes the importance of improving the victim's forgiveness for the offender after transgression.

拥挤效应导致视觉特征合成的空间各向异性

蒋瑞杰¹ 宋萌¹ 崔雨薇¹ 陈霓虹^{1,2}

¹ 清华大学社会科学学院心理学系, 北京, 100084

² 清华大学-IDG/麦戈文脑科学联合研究院, 北京 100084, nihongch@mail.tsinghua.edu.cn

摘要 当某一物体邻近位置存在其他物体时, 我们往往难以将其分辨出来, 这种发生在外周视野的妨害视觉辨认能力的现象, 被称为视觉拥挤效应 (visual crowding)。拥挤情境下, 多客体刺激的朝向辨别任务的结果能够反映拥挤效应对多个客体朝向信息整合所造成的影响, 但整合的具体机制尚不清楚。有研究者认为信息整合采用“平均化(averaging)”策略, 也有研究者提出整合采用“带符号的最大化(signed-max)”策略。同时, 拥挤效应的显著特征之一是空间上存在径切向各向异性。为了探究拥挤效应的信息整合机制及其空间各向异性特征对视知觉的影响, 我们使用朝向匹配任务范式测量被试对目标朝向的辨别阈限和对倾斜角的知觉分布, 并比较其在径向和切向布局方式下的差异。结果显示, 切向布局的辨别阈限小于径向布局; 在阈下试次中, 径向布局的知觉分布曲线呈双峰分布, 但切向布局的呈单峰分布。我们认为拥挤效应的各向异性影响了朝向

辨别任务中不同相对方向的客体之间的特征混合方法，并表现在辨别阈限和知觉分布在不同布局方式下的差异。刺激材料中径向相对位置的客体之间会发生“平均化”效应，而切向相对的客体之间更多通过“带符号的最大化”整合，这与拥挤效应关键距离的径切向各向异性相一致。本研究的发现支持拥挤情境下视觉信息加工可能采用“平均化”和“带符号的最大化”的混合策略。

Spatial anisotropy of feature integration in visual crowding

Ruijie Jiang¹, Meng Song¹, Yuwei Cui¹, Nihong Chen^{1,2}

1 Department of Psychology, Tsinghua University, Beijing, People's Republic of China

2 IDG/McGovern Institute for Brain Research, Tsinghua University, Beijing, People's Republic of China

Abstract: When there are other objects in the vicinity of an object, it is often difficult to identify the target. This phenomenon, which hinders the parafoveal visual acuity, is called “visual crowding”. In the context of crowding, subjects’ discrimination performance of multi-item stimulus can reflect the integration strategy of visual signals. However, the integration mechanism is still unclear. Some researchers believe that signal integration adopts the “averaging” strategy, and some others propose the “signed-max” integration strategy. Meanwhile, one of the important characteristics of crowding is the radial-tangential anisotropy. To investigate the information integration mechanism of crowding and the influence of its spatial anisotropy, we measured subjects’ internal response distributions with the signal presented in the radial or the tangential direction. Subjects reported both the direction and the magnitude of the tilt with surrounding flankers in a crowded display. We found that their discrimination threshold is lower for tangential configuration than the radial one. In subthreshold conditions, the perceptual distribution was bimodal for the radial configuration, while unimodal for the tangential configuration. We propose that the anisotropy of crowding influences the integration strategy and consequently leads to differences in the discrimination thresholds and perceptual distributions in different configurations. Radially arranged signals are more susceptible to the “averaging” integration rule, and tangentially arranged signals are more susceptible to the “signed-max” integration rule. Our findings support a hybrid strategy of the “averaging” and the “signed-max” model in visual crowding.

听觉刺激对持续性视觉追踪任务的影响

陈芷妍¹ 李晓琴¹ 康冠兰¹ 张禹¹ 李杰^{2,1}（通讯作者）

1 北京体育大学心理学院，北京，100084

2 杭州师范大学心理科学研究院，杭州，311121, lijie.psy@hznu.edu.cn

摘要 目的：以往研究显示，当听觉刺激与目标视觉刺激同时呈现时，能增强被试对目标刺激的识别，影响被试在视觉空间搜索任务和目标识别任务中的表现。上述对视听同步性作用的探讨仅局限于静态情境，罕有研究动态情景下听觉刺激对持续性视觉任务的影响，本研究采用多目标追踪任务结合消失范式对此问题进行探究。**方法：**本研究选取 19 名研究参与者，其中男生 3 名，女生 16 名，平均年龄 22±1.8 岁。视觉追踪任务流程如下：12 个客体中的 4 个以闪烁的方式被标记为目标；所有客体独立随机运动 5s，600ms 的消失事件随机发生在运动的第 2-4s 内，消失事件结束后，客体出现在预测点（按照原有状态运动时出现的位置）并继续运动；运动停止后，被试点选目标客体。在追踪过程中可能响起一个 100ms 的声音刺激，其呈现时刻可能为：客体消失前、客体消失时、客体消失阶段、客体出现时、客体出现后；另外，将无声音的条件作为基线条件。所有 6 种条件在实验中随机混合呈现。被试在完成视觉追踪目标点选后，报告声音刺激与视觉刺激的消失和出现的同步性。**结果：**以声音刺激在视觉追踪中的呈现时刻为自变量，以视觉追踪正确率为因变量，通过单因素 6 水平重复测量方差分析显示：1）当声音呈现在客体消失前以及出现后，追踪正确率显著低于无声音时；2）当声音呈现在消失阶段，追踪正确率与无声音时无显著差异，但显著高于消失前、出现时和出现

后; 3) 其他条件间均无显著差异。**结论:** 听觉刺激对视觉任务不同阶段的影响不同: 1) 在视觉刺激持续呈现的阶段, 听觉刺激的出现损害了视觉追踪任务的表现, 说明听觉刺激可能影响了视觉注意或感知觉成分; 2) 在视觉刺激消失的阶段, 听觉刺激并不损害视觉追踪任务表现, 说明听觉刺激并不影响工作记忆中的视觉信息保持; 3) 听觉刺激与视觉刺激消失或出现时同步呈现并不影响视觉追踪表现。

The effect of auditory stimuli on continuous visual tracking task

Zhiyan Chen¹, Xiaoqin Li¹, Guanlan Kang¹, Yu Zhang¹, Jie Li^{2,1}

¹ School of Psychology, Beijing Sport University, Beijing, 100084

² Institutes of Psychological Sciences, Hangzhou Normal University, Hangzhou, 311121

Abstract: Objective: Previous studies has shown that when auditory stimuli were presented simultaneously with target visual stimuli, the identification of target stimuli and the task performance could be enhanced in visual space search task and target identification task. The above studies on the role of audiovisual synchronization were limited to static situations. The effect was rarely studied when auditory stimuli presented with continuous visual stimuli in dynamic situations. This study explored the question by combining multiple object tracking paradigm and vanishing paradigm. **Methods:** Nineteen students (3 male, $M \pm SD = 22 \pm 1.8$ years) were recruited as participants in this study. The process of the visual tracking task was as follows: 4 of the 12 objects were marked as targets with several flickers; all objects randomly moved for 5s, and the disappearing event of 600ms occurred randomly within the 2-4s of the movement, after the disappearance event, the object appears at the prediction point (the position that objects appeared when moving according to the original state) and continued to move; after the movement stopped, participants selected the target objects. During the tracking process, a 100ms sound stimulus might appear. The presentation time was as follows: before the objects disappeared, at the objects disappearing point, in the disappearing phase, at the objects appearing point, and after the objects appeared; in addition, the condition without sound was taken as the baseline condition. All six conditions were randomly mixed in the experiment. After completing the visual tracking targets selection, the participants reported the synchronization of the sound stimulus and the appearance and disappearance of the visual stimulus. **Results:** The presentation time of the sound stimulus in the visual tracking was the independent variable, and the visual tracking accuracy rate was the dependent variable. The one-factor 6-level repeat measurement variance analysis showed : 1) When the sound was presented before the disappearance and after the appearance of the objects, the correct rates were significantly lower than it when there was no sound; 2) When the sound was in the disappearing phase, the correct rate was not significantly different from it when there was no sound, but significantly higher than it when the sound was before the disappearance, after the appearance and at appearing point; 3) There were no significant difference between the correct rates of other conditions. **Conclusion:** There were different effects of auditory stimuli on different stages of visual tasks: 1) At the stage of continuous presentation of visual stimuli, the appearance of auditory stimuli impaired the performance of visual tracking tasks, indicating that auditory stimuli might affect visual attention or perceptual components; 2) At the stage of visual stimuli disappearing, auditory stimulation did not impair the performance of visual tracking tasks, indicating that auditory stimuli did not affect the retention of visual information in working memory; 3) Visual tracking performance was not affected when auditory stimuli simultaneous presented at the appearing and disappearing points of visual stimuli.

听觉注意负荷对视听整合的影响

李君缘 毕浚皓 侯亚伟 任艳娜*(通讯作者)

贵州中医药大学人文与管理学院应用心理学专业, 贵州贵阳 550025, yanna052267213@163.com

摘 要 注意可以在视听整合(Audio-visual integration, AVI)的多个阶段调节发挥作用, 但在不同听觉注意负荷条件下, AVI 的变化趋势尚不清楚。本研究采用双任务(Dual tasks)范式, 通过快速系列听觉呈现(Rapid Serial

Auditory Presentation, RSAP)任务控制听觉注意负荷,通过呈现在外周视野的视/听觉辨别任务评价无注意负荷、低注意负荷、中注意负荷以及高注意负荷条件下的 AVI。本研究采用 4(注意负荷:无负荷、低负荷、中负荷、高负荷)×3(刺激类型:听觉刺激、视觉刺激、视听觉刺激)的实验设计。重复测量方差分析结果显示,注意负荷主效应显著 $[F(3, 57) = 28.939, p < 0.0001, \eta_p^2 = 0.604]$,无注意负荷条件下的反应速度(401 ms)显著高于低注意负荷(431 ms)、中注意负荷(565 ms)、高注意负荷(662 ms)条件下的反应速度;刺激类型主效应显著 $[F(2, 38) = 91.017, p < 0.001, \eta_p^2 = 0.827]$,被试对视听觉刺激的反应速度(456 ms)显著高于对视觉刺激(518 ms)和听觉刺激(570 ms)的反应速度。竞争模型(Race model)分析结果显示,低注意负荷条件下的 AVI(18.8%)显著高于无注意负荷(12.4%)、中注意负荷(13.4%)、高注意负荷(7%)条件下的 AVI;在无注意负荷条件下视听觉整合的峰值潜伏期(290 ms)小于低注意负荷(340 ms)、中注意负荷(360 ms)、高注意负荷(380 ms)条件下 AVI 的峰值潜伏期。该结果表明,随着听觉注意负荷的增加,被试的反应速度显著变慢且 AVI 推迟;在适宜注意负荷条件下 AVI 高于无注意负荷下的 AVI,当注意负荷过高时 AVI 反而减弱。

Abstract: Previous studies confirmed that attention influences audio-visual integration (AVI) in multiple stages, however, how the AVI effect changes with the alteration auditory attentional load is still unclear. To address this question, a dual-task paradigm was performed in the current study, including an AV discrimination task for evaluating the AVI effect and a rapid serial auditory presentation task (RSAP) for manipulating attentional load. The results showed a significant main effect of attentional load $[F(3, 57) = 28.939, p < 0.0001, \eta_p^2 = 0.604]$, showing a faster response in no attentional-load condition (401 ms) than that in low (431 ms), medium (565 ms), and high (662 ms) attentional-load conditions. Besides, there was a main effect of stimulus type $[F(2, 38) = 91.017, p < 0.001, \eta_p^2 = 0.827]$, showing that the response was faster to audio-visual stimulus (456 ms) than that to visual stimulus (518 ms) and auditory stimulus (570 ms). The race model analysis showed that the AVI effect was higher in low attentional-load condition (18.8%) than that in no (12.4%), medium (13.4%), high (7%) attentional-load conditions. Besides, the peak latency was shorter in no attentional-load condition (290 ms) than that in low (340 ms), medium (360 ms), and high attentional-load (380 ms) conditions. These results suggested that the response was slowed down and the AVI was delayed with the addition of attentional load. The AVI effect was higher in adaptive attentional-load condition than no attentional-load condition and exorbitant attentional-load condition.

视觉纹理识别中的外周-中央反馈机制

崔雨薇¹ 陈霓虹¹ (通讯作者)

¹ 清华大学心理学系, 北京, 100084, 通讯作者 E-mail: nihongch@mail.tsinghua.edu.cn

摘要 人类视觉系统包含复杂的前馈和反馈过程。脑成像研究发现,来自外周视野的输入信息可在表征中央视野的初级视皮层被解码,该结果提示存在自上而下的外周-中央反馈机制。一系列行为和经颅磁刺激研究显示,该反馈机制存在于形状、颜色以及客体类别判断等视觉辨别任务中。自然纹理图像作为外周视野的常见刺激,其加工过程中是否涉及外周-中央反馈,这一机制尚不清晰。本研究采用后掩蔽范式,考察自然纹理加工是否存在外周-中央反馈机制及其时间特性。实验中给被试先后呈现位于外周视野 7° 的目标纹理图像和位于中央视野的噪声图像,通过系统操纵目标刺激与后掩蔽刺激的出现时距 (50/100/150/200/250/300/350 ms),测量被试对目标刺激的辨别能力。结果显示,当后掩蔽刺激呈现在目标刺激的 150 ms 后,被试的辨别敏感性显著下降。实验结果表明外周视野的纹理识别任务中存在中央凹反馈,且反馈到达初级视皮层的时间约为目标出现后 150 ms。

The peripheral-foveal feedback mechanism in visual texture recognition

Yuwei Cui, Nihong Chen

Department of Psychology, Tsinghua University, Beijing, People's Republic of China

IDG/McGovern Institute for Brain Research, Tsinghua University, Beijing, People's Republic of China

Abstract: The human visual system contains complex feedforward and feedback processes. Brain imaging studies have found that input from the peripheral visual field can be decoded in the foveal retinotopic primary visual cortex, suggesting a top-down peripheral-foveal feedback mechanism. A series of behavioral and transcranial magnetic stimulation studies have shown that this feedback mechanism is present in visual tasks such as shape/color discrimination and object categorization. However, as a common stimulus in peripheral vision, whether the processing of naturalistic texture involves peripheral-foveal feedback is unclear. The present study used a backward masking paradigm to examine whether there is a peripheral-foveal feedback mechanism for naturalistic texture processing and its temporal properties. Subjects were presented with a target texture at 7° in the periphery, followed by a central noise mask. We measured subjects' ability to discriminate the target stimulus by systematically manipulating the temporal distance between the onsets of the target stimulus and the backward masking (50/100/150/200/250/300/350 ms). The results showed that the subjects' discrimination sensitivity significantly decreased when the backward masking stimulus was presented 150 ms after the target stimulus. These results suggest that the processing of naturalistic texture involves peripheral-foveal feedback and that the feedback reaches the primary visual cortex approximately 150 ms after the target presentation.

摘要 睡眠质量是衡量个体生活质量高低的重要指标, 良好的睡眠质量是个体生理功能和心理功能正确发挥作用的必要条件之一, 而长期的睡眠质量低下则会导致严重的身心健康问题。为探究睡前情绪对夜间睡眠质量的影响以及生理指标 (包括心率、运动加速度) 对情绪及睡眠质量的预测作用, 本研究采用问卷法、经验取样法对 22 名佩戴了汇心联公司可穿戴腕表的被试进行了为期一周的数据收集。结果发现: (1) 将情绪根据效价维度和唤醒维度划分为四种: 正效价、负效价、高唤醒、低唤醒, 其中睡前的高唤醒情绪与当晚的睡眠质量存在显著的负相关; (2) 在测量睡前情绪前 5 分钟内的运动强度能够正向预测高唤醒情绪, 同时低唤醒情绪能够负向预测其后 2 分钟内的运动强度; (3) 不同的情绪维持时间不同, 但都维持在两分钟左右, 正效价、高唤醒情绪的维持时间要短于负效价、低唤醒情绪; (4) 睡前 90 分钟内心率能够负向预测当晚睡眠质量。综上, 本研究的发现有利于揭示睡前情绪对睡眠质量的影响, 以及从客观的角度探究了生理指标与情绪、睡眠质量的关系, 这些发现不仅丰富了可穿戴设备的相关研究, 而且对如今快节奏的社会环境下改善和提高大学生的睡眠质量提出了启示: 在入睡前保持平稳、较低唤醒的情绪有助于提高睡眠质量。

3 Department of Psychology, College of Education and sports science Yangtze University, No. 01 Nanhuan Road, JingZhou

Abstract: Sleep quality is an important index to measure the quality of individual life. Good sleep quality is one of the necessary conditions for the correct functioning of individual physiological and psychological functions. Having low sleep quality for long term may lead to serious physical and mental health problems. In order to explore the influence of emotion (including daily emotion and pre sleep emotion) on night sleep quality and the predictive effect of physiological indicators (including heart rate and motion) on emotion and sleep quality, we call up 22 participants wearing huixinlian's wearable wristwatches and use questionnaires and empirical sampling measures, the whole research last for one week. It found that: (1) According to the valence dimension and arousal dimension, emotions are divided into four categories: positive valence, negative valence, high arousal and low arousal. And there was a significant negative correlation between high wake-up emotion before bed and sleep quality; (2) The motion within 5 minutes before tested can positively predict the high arousal pre sleep emotion, while the low arousal emotion can negatively predict the motion within 2 minutes; (3) The maintenance time of different emotions is different, but they are all maintained at about two minutes. The maintenance time of positive titer and high arousal emotion is shorter than that of negative titer and low arousal emotion; (4) The 90 minutes' average heart rate before going to bed can negatively predict the sleep quality that night. In conclusion, the findings of this study help to reveal the impact of pre sleep emotion on sleep quality, and explore the relationship between physiological indicators, emotion and sleep quality from an objective perspective. These findings not only enrich the relevant research about wearable equipment, but also provide enlightenment for improving and improving college students' sleep quality in today's fast-paced social environment: keep stable before going to sleep Lower arousal helps improve sleep quality.

注意降低视觉拥挤：内外源注意线索的不同效应

刘亭玉¹ 龚明亮¹

1 江西师范大学心理学院，南昌，330022

通讯作者 E-mail: 龚明亮 gongml@jxnu.edu.cn

摘要 视觉拥挤效应是指在外周视野共同呈现目标和干扰刺激时，个体对目标刺激的识别率会显著低于单独呈现条件下的识别率。外周空间的低注意分辨率被认为是导致拥挤效应产生的内在机制之一（He, Cavanaugh, & Intriligator, 1996; Intriligator & Cavanaugh, 2001）。研究表明，在刺激出现前呈现一个有效线索将被试的注意引向目标所在的位置时可以显著地降低拥挤效应（Freeman & Pelli, 2007; Scolari et al., 2007; Yeshurun & Rashal, 2010），这可能是由于线索的呈现增强了对目标的注意分辨率（Scolari et al., 2007）。然而，以往研究均采用外源性注意线索作为提示线索，而缺少对内源性注意线索的研究。研究者们通常认为这两种注意存在不同的加工机制（Klein, 2000）。内源性注意是一种缓慢并持续时间长的过程，而外源性注意是一种发生迅速并且持续时间短暂的过程。本研究考察了两种注意线索对于视觉拥挤的影响的异同。研究综合了 Posner 线索范式和视觉拥挤范式，以正立或倒立的英文字母 T 作为目标，以字母 H 和 I 作为旁侧干扰，被试需要判断字母 T 是正立的还是倒置的。结果发现：（1）两种注意线索均可以显著地降低视觉拥挤的影响，与内源性注意

线索相比, 外源性注意线索能更大程度地降低视觉拥挤的影响; (2) 外源性注意线索在最短 SOA 时已经起到缓解视觉拥挤的作用, 并且其效应随着 SOA 的增加而增大, 并在 400ms 时趋于平缓; 而内源性注意线索在短 SOA 时具有阻碍作用, 直到 SOA 为 275ms 时正确率超过无线索条件, 并且随着 SOA 的变长正确率持续升高。本研究表明两种注意线索都能够有效降低视觉拥挤的影响, 但外源注意的效果更好并且所需要 SOA 更短。

Attention relieves crowding: Different effects of endogenous and exogenous attention cueing

Tingyu Liu, Mingliang Gong

Jiangxi Normal University

Abstract: Visual crowding effect refers to the phenomenon that the recognition rate of target identification is significantly lower than individually presented when the target and interference stimuli are presented both in the peripheral visual field. The low attentional resolution in the peripheral visual field is considered to be one of the underlying mechanisms of crowding (He, Cavanaugh, & Intriligator, 1996; Intriligator & Cavanaugh, 2001). Studies have shown that the crowding effect can be reduced when attention is directed to the target by an effective cue before the presentation of stimulus (Freeman & Pelli, 2007; Scolari et al. 2007; Yeshurun & Rashal, 2010). This could be a result of the enhancement of attentional resolution to the target due to the presence of the effective cue (Scolari et al., 2007). However, most previous studies only used exogenous attention as a cue, and no research till now have explored the role of endogenous attentional cues in visual crowding. Research has shown that these two kinds of attention involve different processing mechanisms (Klein, 2000). Endogenous attention is a slow and long lasting process, while exogenous attention is a rapid and short lasting process. This study examined the role of endogenous and exogenous cues on visual crowding. We combined Posner cueing task and visual crowding task and employed letter “T” as target and “H” “I” as flankers. Participants were asked to determine whether the target letter was upright or inverted. The results showed: (1) Two kinds of attention cues significantly reduced the effect of visual crowding, and compared with endogenous attentional cues, exogenous attention cues can reduced the effect of visual crowding to a greater extent; (2) Exogenous attentional cues started to relieve visual crowding at the shortest SOA, and the relieving effect increased with SOA and reached a plateau at 400ms. However, endogenous attentional cues harmed participants’ performance at short SOAs. Until the presented SOA is 275ms that the accuracy of endogenous attentional cues was higher than the no cue condition, and the accuracy continued to increased follow with longer SOAs. Taken together, this study confirmed that both attention cues can significantly relieve visual crowding but that exogenous attention is more effective and requires a shorter SOA in relieving visual crowding relative to endogenous attention.

汉语的听觉阈下启动效应研究

姜路遥¹ 李兵兵² (通讯作者)

¹ 江苏师范大学教育科学学院, 徐州, 221116

² 江苏师范大学教育科学学院, 徐州, 221116, lbb@jsnu.edu.cn

摘要 阈下启动效应是指阈下呈现的启动刺激对随后出现的与之相同或有语义关系的目标刺激在认知加工上的促进作用。听觉阈下启动是研究听觉通道下语言自动加工的重要工具。虽然已经有一些研究考察了印欧语系词语的听觉阈下启动, 但还没有研究考察属于汉藏语系的汉语词语是否存在听觉阈下启动效应。因此, 本研究以汉语双字词为刺激材料, 使用听觉掩蔽启动范式, 考察汉语词语的听觉阈下启动效应。本研究共包括两个实验。实验一采用 3 (启动刺激时间压缩率: 40%, 50%, 60%) × 2 (启动-目标相关性: 启动、非启动) × 6 (启动类型: 真词: 重复启动、词素启动、语音启动、语义启动; 假词: 重复启动、首字启动) × 2

（目标词词频：高频、低频）的混合实验设计，考察汉语听觉阈下启动效应的加工水平。考察汉语词语是否存在听觉阈下启动效应。结果显示，当压缩率为 40% 时启动刺激处于阈下水平只有真词的阈下重复启动和词素启动效应显著，并且假词不存在显著的阈下启动效应。实验二采用 2（启动-目标刺激发音者性别一致性：一致、不一致）× 2（启动-目标相关性：启动、非启动）× 2（真假词：真词、假词）的三因素被试内实验设计进一步考察汉语词语的阈下重复启动效应是否是基于启动词和目标词声音的表面知觉特征的相似性。结果发现，无论启动与目标的发音者性别是否一致，均可以观察到同样显著的听觉阈下重复启动效应。本研究结果说明汉语词语存在显著的听觉阈下重复启动效应，且该效应是基于对听觉词语的抽象言语信息的无意识加工。

Subliminal Speech Priming Effect of Mandarin Chinese

Luyao Jiang¹, Bingbing Li¹

1 School of Education Science, Jiangsu Normal University, Xuzhou, Jiangsu

Abstract: The subliminal priming effect refers to the prime stimuli which was presented subliminally could promote the cognitive processing of the subsequent target stimuli which shared the same or related semantic information with the prime. Subliminal speech priming has become an important tool for studying the automatic stages of language processing. Although a few studies have tried to explore the subliminal speech priming effect of words from Indo-European languages, it is still unclear whether subliminal priming effects exist in words from mandarin Chinese which belongs to Sino-Tibetan languages. The present study used auditory masked priming paradigm and Chinese two-character words to examine the subliminal speech priming of mandarin Chinese. The Experiment 1 was conducted with a 3 (time compression of the prime: 40%, 50% or 60%) × 2 (relation: related vs. unrelated) × 6 (prime condition: word: repetition, morpheme, phonological and semantic; nonword: repetition and first-character) × 2 (word frequency: high vs. low) mixed design to examine subliminal speech priming of mandarin Chinese. The results show that subliminal repetition priming and morpheme priming are significant when the compression rate is 40%, at which compression rate the prime is subliminal. There was no significant subliminal speech priming for nonword. The Experiment 2 was conducted with a 2 (voice change: same vs. different) × 2 (relation: related vs. unrelated) × 2 (word type: word vs. nonword) within-subject design to examine whether subliminal speech priming involved unconscious lexical activation of abstract word form. The subliminal repetition priming effect was significant regardless of whether the speakers' gender of the prime and the target is different. The present study indicates that there is a significant subliminal repetition priming effect in mandarin Chinese, and this effect is based on the unconscious processing of abstract lexical information of subliminal primes.

运动学习中情境线索的作用如何随时间变化

严晨毓¹ 王海敏² 周建文² 李峙³（通讯作者）

摘 要 想改变长期养成的行为习惯是很困难的，虽然人能通过学习临时地调整行为，一旦失去了反馈的监督，行为模式又会逐渐恢复到原来的状态。我们之前的研究发现，这种行为的“反弹”可能和情境的变化有关。在抛球任务中，当测试阶段的情境（和任务本身不直接相关的环境信息）与学习阶段的情境差得很大时，行为的“反弹”明显；而当这两个情境接近时，即使没有反馈被试的行为也能很好保持。这种情境的作用（后称情境效应）只是暂时的，还是长时间存在的呢？在本研究中，我们使用虚拟现实（Virtual Reality, VR）设备，训练被试向目标线抛小球的动作。在测得被试的动作基线后，我们向 VR 环境中加入一个虚拟的力场，使得被试要用比基线动作更大的力气，才能把小球扔到目标线上。被试会通过反馈逐渐适应这个虚拟的力场，而

当反馈消失，他们的动作又逐渐回到基线水平。反馈消失引起了抛球情境的变化——球扔出去就消失了，不像学习时一样能看到它飞行落地的过程。于是我们增加了一个假反馈测试阶段，即在被试把小球扔出去之后，显示一个“假球”飞行落地的过程，它的飞行速度、方向都是在固定范围内随机的，和被试的实际动作无关，它的落点也一直在目标线上。假反馈使测试阶段和学习阶段的情境非常接近，但没有有效的反馈可以继续学习。在这个阶段，被试已经回到基线的行为又逐渐恢复到学习阶段的水平，重复了我们之前发现的情境效应。被试在休息一天后继续同样的抛球任务，被试需要先依次完成一组无反馈测试（小球扔出去后消失），和一组假反馈测试（模拟第一天学习阶段的情境）。结果发现被试的行为在无反馈阶段仍保持在基线水平，但在假反馈阶段又向第一天学习阶段的水平恢复，但没有完全恢复。接下来被试重复了第一天的学习和测试流程，结果发现经过再学习后，情境效应比之前更为明显了。本实验结果表明，运动学习中的情境效应至少可以持续到第二天，并可能长时间对新形成的运动记忆的提取起到积极作用。

Abstract: It can be difficult to change a long-established behavior, but while one can learn to adjust behavior temporarily, without the supervision of feedback, the pattern gradually returns to its original state. Our previous research found that this "rebound" of behavior might be related to a change in context. In the task of throwing the ball, when the context (environmental information that is not directly related to the task itself) of the test phase and that of the learning phase were distinct, the "rebound" of the behavior was obvious. However, when the two contexts were close to each other, the participants' behaviors could be well maintained without feedback. How will the context effect change after long retention period? In this study, we used Virtual Reality (VR) equipment to train the participants to throw a ball towards a target line. After measuring the participants' baseline movement, we introduced a virtual force field into the VR environment, so that the participants had to use more strength than the baseline movement to throw the ball on the target line. The participants gradually adapted to the virtual force field through feedback, but when the feedback was removed, their throwing behaviors gradually returned to baseline. The removal of feedback induced a change in the task context -- the ball vanished as it was thrown, unlike that in the learning phase, the flying trajectory and landing point of the ball could not be seen. Therefore, we created a test stage of fake feedback, that was, after the participants threw the ball, a "fake ball" would be displayed to simulate the flying and landing process. However, the flying speed and direction of the "fake ball" were all randomly generated from within a fixed range, independent of the actual actions of the participants, and its landing point was always on the target line. Fake feedback made the context in the test phase and the learning phase considerably close, as long as no effective feedback could facilitate learning. At this stage, the behavior of the participants, which had dropped to baseline gradually returned to the level in the learning phase, which repeated the context effect we had previously found. After a 24-hours rest, the participants continued to perform the same task. They would complete one block of non-feedback tests (the ball disappeared after being thrown) and one block of fake feedback tests (context simulating the first day of learning). The results showed that the participants' behavior remained at the baseline level in the no-feedback stage, but in the fake feedback phase, they recovered from the baseline level towards that of the learning stage in the first day. The participants then repeated the learning and testing process in the first day and found that the context effect was even more pronounced after the relearning. The results of this experiment indicated that the context effect in motor adaptation learning could last at least a day and might play an active role in the retrieval of newly formed motor memory in the long run.

返回抑制中的抑制性代偿机制

祖光耀¹, 王爱君¹, 张明¹

¹苏州大学心理学系, 心理与行为科学研究中心, 苏州, 215123, psyzm@suda.edu.cn

摘要 返回抑制(inhibition of return, IOR)是指个体对于线索化位置出现的目标的反应, 慢于非线索化位置出现的目标的一种现象。基于空间的返回抑制与大脑的定向网络有关, 而基于特征的返回抑制则与大脑的执行网络有关。以往单一感觉通道的研究表明, 定向网络和执行网络在返回抑制中存在抑制性的代偿机制, 即当定向网络不能对目标进行抑制时, 执行网络发挥作用; 执行网络不能对目标进行抑制时, 定向网络发挥作用。本研究整合基于空间和非空间跨通道返回抑制的研究范式, 使用具有语义特征的色字作为刺激材料, 同时操纵线索和目标的通道对应关系, 探究在跨听-视和跨视-听两种任务下, 定向网络和执行网络是否仍表现出代偿机制。实验结果发现: (1) 在跨听-视任务下, 当目标出现在非线索化位置时, 出现了基于特征的返回抑制, 即执行网络代偿了定向网络的抑制功能; 当目标的特征与线索特征不同时, 出现了基于空间的返回抑制, 即定向网络代偿了执行网络的抑制功能。(2) 在跨视-听任务下, 当目标出现在非线索化位置时, 原有基于特征的易化作用消失, 但基于特征的返回抑制并未达到统计上的显著水平; 当目标的特征与线索特征不同时, 出现了基于空间的返回抑制。研究表明, 定向网络和执行网络之间的抑制性代偿机制存在于跨通道领域, 可能是一种超通道的机制, 但同时这种代偿机制也存在跨听-视和跨视-听下的通道不对称性。

Inhibitory compensatory mechanism in inhibition of return

Guangyao Zu¹, Aijun Wang¹, Ming Zhang¹

¹Department of Psychology, Soochow University, Research Center for Psychology and Behavioral Sciences, Suzhou, 215123, psyzm@suda.edu.cn

Abstract: Inhibition of return (IOR) refers to the phenomenon that the response time of an individual to a target presented at a cued location is slower than that presented at a non-cued location. Spatial-based IOR is associated with the orienting network, while feature-based IOR is associated with the executive network. Previous studies on unimodal have shown that there is a compensatory mechanism between the orienting network and the executive network in IOR, that is, when the orienting network fails to inhibit the target, the executive network operates; when the executive network fails to inhibit the target, the orienting network operates. In current study, we integrated spatial and non-spatial crossmodal IOR paradigms, and used semantic(color-based) words as stimulus materials to simultaneously control the model correspondence between cues and targets, and explored whether the compensatory mechanisms of the orienting network and the executive network still operated in crossmodal audio-visual and visual-audio tasks. The results showed that: (1) in crossmodal audio-visual task, when the target appeared in non-cued location, feature-based IOR appeared, that is, the execution network compensated for the inhibition function of the orienting network; when the target and cue did not share common feature, spatial-based IOR appeared, that is, the orienting network compensated for the inhibition function of the execution network. (2) in crossmodal visual-audio task, when the target appeared in non-cued location, feature-based facilitation effect of cue disappeared, but feature-based IOR did not reach significant level; when the target and cue did not share common feature, spatial-based IOR appeared. These findings demonstrated that the compensation mechanism between the orienting network and the executive network existed in the crossmodal domain, which may be a supramodal mechanism, and such mechanism between crossmodal audio-visual and visual-audio had asymmetry.

摘要 美感和愉悦感受的关系是近些年审美研究者们十分关注的话题。虽然行为和核磁实验都提示美感和愉悦感受有非常紧密的关系, 但由于刺激材料选择的局限性, 二者是否可以等同还有较大争议。本研究招募了 30 名无长期美术培训经验的被试, 通过预实验建立了四种不同美感-愉悦度组合的图片库 (美-愉悦、美-不愉悦、不美-愉悦和不美-不愉悦), 旨在从时间特性的角度探索了审美和愉悦感受的关系。实验过程中, 每张图片的呈现时间有 8 种条件, 分别为 17ms、34ms、50ms、100ms、200ms、400ms 和自由呈现时间, 被试对所有图片进行美感、愉悦感受和唤醒度的打分。结果发现, 被试欣赏所有图片时美感和愉悦感受的评分结果同前期进行分类图片时其他被试评分的结果相近。对于美-愉悦和不美-不愉悦两种类型的图片而言, 美感和愉悦感受评分在所有呈现时间条件下都呈现显著的正相关; 而对于不美-愉悦和美-不愉悦两种类型的图片, 图片带给被试的美感和愉悦感受则呈现显著的负相关。将美感和愉悦感受在控制呈现时间条件和自由呈现时间条件下的相关系数作为此感受趋于稳定的程度, 我们探究了形成稳定的美感和愉悦感受所需要的最短时间。结果表明美感和愉悦感受评价一般在图片呈现 50~100ms 后逐渐趋于稳定。对于美-愉悦和不美-不愉悦类型的图片而言, 愉悦感受 and 美感在所有控制呈现时间条件下和不控制呈现时间条件下的相关系数的差异均不显著; 对于美-不愉悦和不美-愉悦两种类型的图片, 当呈现时间为 200ms 时, 相关系数表现出显著差异。我们的结果表明美感和愉悦感受的极性并不总是一致的, 在时间特性上可以出现分离, 提示二者虽然可美感和愉悦感受具有部分独立的神经基础, 一定程度上挑战了前人对美感来源于欣赏作品时产生的愉悦体验的解释。

Abstract: The relationship between beauty and pleasure evaluation has raised interest among aesthetics researches in recent years. Although most behavioral and fMRI experiments implied highly positive correlation between beauty and pleasure experience, controversy about the equivalence of them still exists because of the limitations of stimulus materials in previous studies. The current study recruited thirty naïve subjects, constructed a set of image battery that covers four different combinations of beauty and pleasure level (i.e., beautiful-pleasant, beautiful-unpleasant, unbeautiful-pleasant, and unbeautiful-unpleasant), and explored the relationship between aesthetics and pleasure evaluation from the perspective of time course. Eight presentation durations, i.e., 17 ms, 34 ms, 50 ms, 100 ms, 200 ms, 400 ms, and unlimited time, were adopted. All participants were asked to rate their feeling of beauty, pleasure, and arousal for each image in all presentation conditions. Our results about the aesthetic and pleasure evaluation of these images were similar to the previous scoring experiments that done with other group of subjects. For the beautiful-pleasant and unbeautiful-unpleasant images, the beauty evaluation showed a positive correlation with the pleasure score; on the contrary, for unbeautiful-pleasant and beautiful-unpleasant images, the beauty evaluation was negatively correlated with the pleasure feeling. We calculated the correlation coefficient of beauty and pleasure between limited and unlimited presentation time condition to determine the time course of forming stable beauty and pleasure experience. We found that the evaluation of beauty and pleasure generally stabilized after the image was presented for 50-100ms. For beautiful-pleasant and unbeautiful-unpleasant images, there is no significant difference in the correlation coefficients among all limited presentation conditions and unlimited presentation condition; However, significant difference of correlation coefficients between beauty and pleasure was found for beautiful-unpleasant and unbeautiful -pleasant images when limited presentation time is 200ms. Our results suggest

that the polarity of aesthetic and pleasant evaluation is not always the same, and they can separate in time course, indicating a partly independent neural basis of beauty and pleasure evaluation. Our result also, to some extent, challenges the explanation of aesthetic experience purely based on pleasant feelings.

Keywords: Visual aesthetics, beauty, pleasure, time course

SNARC 效应和序列位置效应：并存还是互斥？

韩欣¹ 李富洪¹ 曹碧华²

江西师范大学心理学院，南昌，330000,86457222@qq.com

摘 要 空间数字联合反应编码（Spatial-Numerical Association of Response Codes effect,即 SNARC 效应）是指在完成奇偶判断任务或大小比较任务时，被试左手对小数反应较快，右手对大数反应较快的倾向。关于 SNARC 效应来自于长时记忆的心理数字线还是工作记忆存在一定的争议。Van Dijck 等（2011）发现工作记忆中数字位置和空间的暂时联结，被试左手对于记忆序列前面位置的项目反应较快，右手对于记忆序列后面位置的项目反应较快，命名为序列位置效应（the Ordinal Position effect）。然而以往的研究没有考虑到位置信息对于 SNARC 和序列位置效应的影响。因此本研究采用 GO/No-go 的实验范式，设置了记忆序列中每个数字的位置信息，使数字的大小信息前后一致（如：31689，前两个位置的数量大小信息一致，后两个位置也是），结合反应手规则，让被试完成大小比较任务，从而考察在数字位置的冲突对序列位置效应和 SNARC 效应的影响。方差分析结果：（1）存在数字和位置的交互作用，被试左手对于记忆序列前面位置的数字反应快，右手对于记忆序列后面的位置反应快，即存在序列位置效应；（2）存在数字、反应手和位置的三者交互作用，进一步简单效应分析发现存在序列位置效应和 SNARC 效应。回归分析结果：（1）对每个数字的反应时差作回归发现，t 检验显著，说明存在序列位置效应；（2）对每个位置的反应时差的回归分析发现，t 检验显著，说明存在序列位置效应。这些结果说明 SNARC 效应是来自于长时记忆中的数字与空间的联结，受到数字位置信息的影响，支持心理数字线的假设；序列位置效应是数字的序列位置和空间在工作记忆中建立起来的暂时联结，所以 SNARC 效应和序列位置效应并存。

关键词 SNARC 效应，序列位置效应，长时记忆，工作记忆

SNARC effect and Ordinal Position effect: Coexistence or mutual exclusion?

Han Xin¹ Li Fuhong¹ Cao Bihua²

School of Psychology, Jiangxi Normal University, Nanchang

Abstract: The Spatial Numerical Association of Response Codes effect, refers to the tendency of participants respond faster to small numbers with the left hand side and to large numbers with the right hand side when completing the parity judgment task or magnitude comparison task. A longstanding debate is whether the SNARC effect comes from long-term memory or working memory. Van Dijck et al. (2011) found a temporary association of the ordinal position of number and space to be formed in working memory, participants responded faster with the left hand than the right hand to numbers, which were presented early in the to-be-memorized sequence, whereas numbers presented toward the end of the sequence were responded to faster with the right hand. But previous study did not specifically investigate the influence of number position information. In this study, we use Go/No-go experimental paradigm as Van Dijck (2011), also setting the position information of each number in the memory sequence to make the size information of the number consistent, e.g.: 31689, the first two locations have the same magnitude information, as do the last two locations, combined with the reaction hand rule, the participant were asked to complete the magnitude comparison task, so as to investigate the impact of the number position conflict on the Ordinal Position effect and the SNARC effect. In the experiment, we found: (1) the repeated measures ANOVA revealed a clear interaction between position and response, indicating items from the beginning of a verbal WM sequence are responded to faster and more accurately with the left than with the right hand during the maintenance interval and the opposite is true for

items towards the end of the sequence, which named the Ordinal Position effect.;(2) there are three interactions of number, reaction hand and position, simple effect analysis found that there are the Ordinal Position effect and SNARC effect. Regression analysis found: (1) Regression of the response time difference of each number found that the T-test was significant, indicating the existence of sequence position effect; (2) Regression analysis of the response time difference of each position found that the T-test was significant, indicating the existence of sequence position effect. The results of this study suggest that the SNARC effect comes from the association between numbers and space in long-term memory, which is influenced by the location information of numbers, supporting the hypothesis of mental number line; the Ordinal Position effect is a temporary association between serial position and space of numbers in working memory, so both SNARC effect and the Ordinal Position effect can exist simultaneously.

Keywords: SNARC effect, the Ordinal Position effect, long-term memory, working memory

注意分配双阶段模型可部分解释视觉搜索的无记忆模式

郑宇洁 忻可云 李峙

浙江大学心理与科学行为系, 杭州, 310028, zli1@zju.edu.cn

摘要 视觉搜索是我们在日常生活中十分常见的行为。直觉告诉我们, 搜索过程中对于搜寻过的物体, 我们会保留记忆痕迹以免重复搜索。然而早期研究显示 (Horowitz & Wolfe, 1998), 视觉系统可能会采取无记忆的搜索模式, 即重复搜索已拒绝过的干扰项。近期研究 (Li, Xin, Lou, & Li, 2019) 进一步对无记忆的视觉搜索模式进行拓展, 发现即使是视觉搜索的目标也未必需要存入工作记忆。Li 等人 (2019) 的研究中设计了“目标记忆”和“目标呈现”两种视觉搜索条件。“目标记忆”条件下, 视觉搜索的目标提前呈现并在搜索阵列出现前移除; 而在“目标呈现”条件下, 视觉搜索目标与搜索阵列同时呈现且始终可见。实验结果显示, “目标呈现”条件下的视觉搜索效率 (即刺激最短呈现时间与搜索集大小的线性函数的斜率) 约为“目标记忆”条件下的一半, 暗示“目标呈现”条件下被试并非一次性记忆目标, 而是在每次识别搜索项时再次识别目标项, 因而耗时翻倍。本研究实验一更换实验刺激 (中文数字和阿拉伯数字) 对“目标记忆”和“目标呈现”两种条件进行重复, 发现阿拉伯数字刺激重复了两倍效率差的结果; 但对于中文数字刺激, 发现“目标记忆”条件的搜索效率出现明显分界, 而当项目数较大时, 两种条件下的搜索速率相同。前人提出的注意分配双阶段模型 (Theeuwes, 2010) 认为注意分配存在两个阶段, 前期 (自刺激出现 150 毫秒左右) 纯粹由自下而上的刺激驱动, 效率较高; 后期由自上而下的方式目标主导, 效率较低。据此我们认为, “目标记忆”条件由于用时较短, 可能包含两个阶段, 且后期才表现出记忆对视觉搜索的引导作用; “目标呈现”条件由于用时较长, 只包含后期阶段。两种条件在项目数量较大时效率相同, 说明“目标呈现”条件下被试仍利用记忆帮助搜索。实验二用不同的视觉刺激 (色块与数字) 验证了搜索效率存在由快变慢的转折点。本研究对搜索目标的无记忆搜索模式提出质疑, 同时, 结合实验一与实验二, 我们发现搜索效率转折点发生时的时间基本相同, 进一步支持了双阶段模型的假设。

The Two-stage Model of Attention Deployment Partially Contribute to the Memory-free Mode of Visual Search

Yujie Zheng, Keyun Xin, Zhi Li

Xiwu Teaching Building, Xixi Campus, Zhejiang University, 148 Tianmushan Road, Hangzhou

Abstract: Visual search is a common behavior in our daily life. Common sense suggests that rejected items should be noted in some fashion so that effort is not expended in re-examining items that have been attended to and rejected. However, earlier studies (eg, Horowitz & Wolfe, 1998) have shown that visual system may adopt a memory-free search mode which leads to repeated searching for rejected distractors. Recent research (Li, Xin, Lou, & Li, 2019) further expanded the memory-free search mode and found that even the search target does not necessarily store in working memory. In the study of Li et al. (2019), two visual search conditions were designed. In ‘Target in Memory’

condition, the search target was presented in advance and removed before the search array appears. In ‘Target on Screen’ condition, search target and search array were presented simultaneously and the target was always accessible. Results showed that the visual search efficiency (the linear slope of search time and search array set-size) in ‘Target on Screen’ condition was about half compared of that in the ‘Memory on Screen’ condition, which suggested that in ‘Target on Screen’ condition, instead of memorizing the target at once, participants identified the search target again each time they identified the search item, thus doubling the time. In our Experiment 1, different stimuli (Chinese digits and Arabic digits) were used to repeat ‘Target in Memory’ and ‘Target on Screen’ procedures. We found that Arabic digits stimuli did repeat the results of twice efficiency difference; but for Chinese digits stimuli, the search efficiency was clearly divided in ‘Target in Memory’ condition, while when set-size was large the search slope was the same under two conditions. Previous studies have pointed out (Theeuwes, 2010) that there may be two stages (‘fast bottom-up and late top-down selection’) in attention deployment: The early stage (about 150 milliseconds from the onset of stimulus) was purely driven by bottom-up mechanism with high search efficiency; the latter stage was dominated by the top-down mechanism with low efficiency. Therefore, we argued that ‘Target in Memory’ condition may contain two stages due to its short processing time and only in the latter stage memory can guide visual search; while ‘Target on Screen’ condition only included the latter stage due to its long time. The result that search efficiency of the two conditions was same when set-size was large indicated participants still used memory to help search in ‘Target on Screen’ condition. In Experiment 2, different visual stimuli (color blocks and digits) were used to verify that there was a turning point of search efficiency in visual search. In our study, the memory-free search mode of search target was questioned. Meanwhile, combining Experiment 1 and Experiment 2, we found that the time at efficiency turning point was basically the same, which further supported the hypothesis of the attention deployment two-stage model.

摘要 推理和思维的双加工理论认为个体存在直觉和分析两种不同的加工模式。以往研究发现，虽然两种加工均受到认知资源的影响，但是直觉加工在认知资源有限的条件下仍然存在优势效应，表现为其对认知资源的依赖程度远低于分析加工。然而，图式熟悉性对直觉和分析加工的影响机制还未得到充分阐明。具体而言，在熟悉图式下，直觉的这一优势效应是否会进一步增强还不得而知，且在不熟悉图式下直觉与分析加工的表现是否受认知资源的影响也还需进一步探讨。因此，本研究通过两个实验操纵了图式熟悉性和认知资源来探究二者对两种加工的影响。实验1通过组块破解任务，探究了图式熟悉性如何影响个体直觉和分析加工的表现。结果发现，个体在熟悉图式下对直觉材料反应的正确率显著高于不熟悉图式下，且熟悉图式下直觉材料的正确率显著高于分析材料；但在不熟悉图式下直觉和分析材料的正确率则没有显著差异。实验2通过加入双任务范式进一步操纵认知资源。结果发现，在熟悉图式下直觉材料在低负荷的正确率显著高于高负荷，且分析材料在低负荷的正确率也显著高于高负荷，但在不熟悉图式下，对认知资源的操纵则没有产生显著差异。本研究表明，熟悉图式会提高个体直觉加工的表现，并且它可以通过认知资源进一步影响个体直觉加工和分析加工的表现；相反，在不熟悉图式下对认知资源的操纵并没有产生显著效应。这体现了随着对图式的内化，个体能够对认知资源进行调节，将更多的认知资源从对材料的初级知觉加工调配到更高级的思维加工中，进而更好地发挥直觉加工的优势。

The disappearance of intuitive advantage? The influence of schema familiarity on intuitive processing

Yunhong Wang¹, Wei Bao¹, Jing Wang², Junlong Luo¹ (Corresponding author)

¹Department of Psychology, Education College, Shanghai Normal University, Shanghai, China. Zip Code: 200234, E-mail: luo831023@163.com

Abstract: BACKGROUND: The dual-processing theory of reasoning and thinking holds that individuals have two instinct processing modes: intuition and analysis. Previous studies have found that although the two kinds of processing are affected by cognitive resources, intuitive processing still has a dominant effect under the condition of limited cognitive resources, which shows that its dependence on cognitive resources is far lower than that of analytical processing. However, the influence of schema familiarity on intuition and analytical processing has not been fully clarified. Specifically, it is still unknown whether this dominant effect of intuition will be further enhanced under familiar schemata, and whether the performance of intuition and analytical processing under unfamiliar schemata is affected by cognitive resources needs to be further fine-grained discussion. **OBJECTIVE:** Therefore, the current study manipulated schema familiarity and cognitive resources through two experiments to explore their effects on the two processes. **METHODS & RESULTS:** Experiment 1 explored how schema familiarity affected the performance of individual intuition and analytical processing. The results showed that the accuracy to intuitive materials under familiar schema was significantly higher than that under unfamiliar schema, and the accuracy of intuitive materials under familiar schema was significantly higher than that of analytical materials. However, there was no significant difference in the accuracy of intuitive and analytical materials when they were unfamiliar with schemas. Experiment 2 further manipulated cognitive resources by adding the dual-task paradigm. The findings indicated that the accuracy of intuitive materials was significantly higher than that of high load under the familiar schema, and the accuracy of analysis materials was significantly higher than that of high load, but there was no significant difference in cognitive resources under the unfamiliar schema. **CONCLUSIONS:** These results elucidate that familiarity with schema can improve the performance of individual intuitive processing, and it further influences the performance of individual intuitive and analytical processing through cognitive resources. On the contrary, the cognitive resources have not produced significant effect under unfamiliar schema. This figures that with the internalization of schema, individuals are able to regulate cognitive resources, and allocate more resources from the inferior perceptual processing to the superior thinking processing, giving full play to the advantages of intuitive processing.

言语的情绪韵律和情绪语义对听觉去信息掩蔽的影响

郑茜¹ 杨志刚²

1.2 河北大学教育学院应用心理学系, 保定, 071000, E-mail: yangzg.psy@gmail.com

摘要 言语的情绪信息(如情绪韵律)具有去听觉掩蔽的作用。但其去听觉掩蔽的具体机制还不清楚。本研究采用主观空间分离范式,分别探究言语的情绪韵律和情绪语义去信息掩蔽的机制。实验1a使用不具有语义可懂度的时间逆转语句作为掩蔽声(仅具有知觉信息掩蔽作用)。结果表明,以情绪韵律发出的目标语句的识别正确率显著高于以中性韵律发出的目标语句的识别正确率。实验1b使用句法正确的无意义语句作为掩蔽声(具有知觉、认知双重信息掩蔽作用)。结果表明,以情绪韵律发出的目标语句的识别正确率显著高于以中性韵律发出的目标语句的识别正确率。将实验1a所求得的情绪韵律的去掩蔽量和实验1b所求得的情绪韵律的去掩蔽量进行对比,结果差异不显著。实验2a使用时间逆转语句作为掩蔽声。结果表明,包含情绪语义的目标语句的识别正确率与包含中性语义的目标语句的识别正确率差异不显著。实验2b使用句法正确的无意义语句作为掩蔽声。结果表明,包含情绪语义的目标语句的识别正确率显著高于包含中性语义的目标语句

的识别正确率。综合两个研究的实验结果表明,言语的情绪韵律和情绪语义去信息掩蔽的机制不同。言语的情绪韵律能够吸引听者更多的注意具有去知觉信息掩蔽的作用,而不具有去认知信息掩蔽的作用。言语的情绪语义能够占据听者更多的认知加工资源具有去认知信息掩蔽的作用,而不具有去知觉信息掩蔽的作用。

The Influence of Emotional Prosody and Emotional Semantics of Speech on Auditory Informational Masking

Zheng Xi

College of Education Hebei University, Number180 Wusidong Road Bao Ding City

Abstract: Emotional information of speech (such as emotional prosody) has the effect of the unmasking of auditory masking. However, the specific mechanism of the unmasking of auditory masking is still unclear. This study uses the perceived spatial separation paradigm to explore the specific mechanisms of emotional prosody and emotional semantics in the unmasking of informational masking. Experiment 1a used time-reversal sentences with no semantic intelligibility as masking sounds (only perceptual informational masking). The results showed that the accuracy of the recognition of the target sentence uttered in emotional prosody was significantly higher than that of the target sentence uttered in neutral prosody. Experiment 1b used syntactically correct nonsense sentences as masking sounds (both perceptual informational masking and cognitive informational masking). The results showed that the accuracy of the recognition of the target sentence uttered in emotional prosody was significantly higher than that of the target sentence uttered in neutral prosody. Comparing the masking release of the emotional prosody obtained in experiment 1a with that obtained in experiment 1b, the difference was not significant. Experiment 2a used time-reversal sentences as masking sounds. The results showed that there was no significant difference in the recognition accuracy between the target sentences with emotional semantics and those with neutral semantics. Experiment 2b used syntactically correct nonsense sentences as masking sounds. The results showed that the accuracy of the recognition of target sentences with emotional semantics was significantly higher than that of target sentences with neutral semantics. Combining the experimental results of the two studies, it find that the mechanisms of emotional prosody and emotional semantics are different in the unmasking of informational masking. Emotional prosody of speech can attract more attention of the listeners and remove perceptual informational masking, but it cannot fulfill the function of unmasking of cognitive informational masking. The emotional semantics of speech can occupy more cognitive processing resources of the listeners and can remove the masking of cognitive information, but it fails to fulfill the role of unmasking of perceptual informational masking.

摘 要 人们在学习与决策过程中存在着好消息与坏消息效应 (Good News and Bad News effect), 即在学习与决策过程中如果有隐含原因能够影响结果, 那么人们会更多地将负效价的结果归因于隐含原因。已有研究大多将这一现象归入强化学习范畴, 运用强化学习模型对其机制进行建模预测。本研究从贝叶斯建模角度出发, 设计了两个递进的实验, 尝试使用贝叶斯推断模型预测在学习过程中存在的有偏学习现象, 并且比较贝叶斯推断模型与强化学习模型对有偏学习的预测率的优劣。实验 1 采用 jsPsych 线上实验, 根据被试在新设计

的 21 点纸牌游戏中的行为数据，建立贝叶斯推断模型；招募 86 名被试，由正确率筛选，62 名被试被纳入分析。研究对每个隐含条件（有利、不利、中性）及效价结果进行配对样本 t 检验。行为数据结果显示，总体而言，被试相信较正效价，隐含原因显著多地导致负效价结果出现（ $t(61)_{\text{总计}} = 2.273, p = 0.027$ ）；不利条件下，被试相信负效价较正效价，显著地被归因于隐含原因的影响（ $t(61)_{\text{不利}} = 24.19, p < 0.0001$ ）；且被试相信中性条件下负效价较正效价，更显著地被归因于隐含原因的影响（ $t(61)_{\text{中性}} = 3.122, p = 0.003$ ）。同时，研究建立贝叶斯经验模型、强化学习基本模型和贝叶斯强化学习模型对行为数据进行拟合，运用 BMS（Bayesian Model Selection）算法求得 PXP（Protected Exceedance Probability）值对三个模型的预测效率进行比较。模型比较结果显示，贝叶斯经验模型能够更好地预测决策过程（PXP = 1.0000）。实验 2 在实验 1 的基础上，移除被试获得隐含原因信息的条件，使生态效度更高；招募 92 名被试，由正确率筛选，80 名被试被纳入分析。行为数据结果趋势与实验 1 一致，同样证实好消息与坏消息效应。同时，在沿用实验 1 的模型建立及模型比较的基础上，加入模型结构与计算过程上更为复杂的自适应贝叶斯强化学习模型，模型比较结果显示，贝叶斯经验模型仍能更好地预测决策过程（PXP = 0.9996）。这表示贝叶斯经验模型很有可能就是量化预测效价学习中决策过程的最优模型。

Abstract: The optimistic cognitive bias effect, known as the 'Good News and Bad News effect', which means that people tend to attribute negative valence outcome to hidden causes if there is one, exists in people's learning and decision-making process. And most of the existing studies have classified this phenomenon as the reinforcement learning process and use reinforcement learning models to interpret its mechanism to predict the outcomes. In this study, two progressive experiments were designed from the perspective of Bayesian modeling to try to apply Bayesian inference models to describe and predict the biased learning phenomenon in the learning process and to compare the prediction efficiency of Bayesian models and reinforcement learning models of the valence-dependent learning asymmetries. Experiment 1 used the jsPsych online experiment to build a Bayesian inference model based on subjects' behavioral data in a newly designed blackjack poker game. 86 subjects were recruited and modified by task correctness, and 62 subjects were included in the data analysis. The study conducted paired-sample t -tests for each hidden cause condition (beneficial, adversarial, neutral) and valence results. The behavioral data results showed that, overall, participants believed that hidden causes significantly led to negative valence results more often than positive valence results ($t(61)_{\text{total}} = 2.273, p = 0.027$), and in the adversarial condition, participants believed that more negative valence outcomes than positive outcomes were significantly more likely to be attributed to the influence of hidden causes ($t(61)_{\text{adversarial}} = 24.19, p < 0.0001$). Participants believed that negative valence outcomes were more significantly resulted by hidden causes than positive outcomes in the neutral condition ($t(61)_{\text{neutral}} = 3.122, p = 0.003$). Meanwhile, the study developed a Bayesian empirical model, a basic reinforcement learning model and a Bayesian reinforcement learning model to fit the behavioral data, and used BMS (Bayesian Model Selection) to figure out PXP (Protected Exceedance Probability) values to compare the prediction efficiency of the three models. The model comparison results showed that the Bayesian empirical model was able to best predict the decision process (PXP = 1.0000). In experiment 2, the information that participates could obtained about hidden causes was ruled out to increase the ecological validity of the task. 92 subjects were recruited and modified by task correctness, and 80 subjects were included in the analysis. The behavioral data results were consistent with Experiment 1, again

confirming the optimistic cognitive bias effect. Meanwhile, the model building and model comparison following Experiment 1, an adaptive Bayesian reinforcement learning model with more complex model structure and computational process was introduced. The model comparison results showed that the Bayesian empirical model still best predicted the decision process ($PXP = 0.9996$). It indicated that the Bayesian empirical model was likely to be the optimal model for the human decision process in quantitative prediction of valence learning.

视觉工作记忆的再激活：视觉脉冲刺激中位置信息的功能

杨灿¹ 黄颖珊¹ 蔡瑛¹

¹ 浙江大学心理与行为科学系, 杭州, 310000, 通讯作者 E-mail: yingcai@zju.edu.cn

摘要 视觉工作记忆是个体暂时性地保持和操纵视觉信息的能力。Cowan 等学者根据记忆项目是否处在注意焦点将工作记忆中的项目分为与当下任务相关的优势项目和只与未来任务相关的非优势项目。近年来, 脑成像研究发现, 优势项目的神经表征通常处于可解码的活跃状态, 而非优势项目则处于无法解码的静默状态。最新一系列研究发现, 非优势项目的神经表征可以在与任务无关的视觉脉冲刺激下恢复到再激活状态。本研究采用双回溯线索的朝向延迟回忆任务对该现象背后的作用机制进行了考察。实验一采用了被试内设计 ($n=25$), 在第一个回溯线索的延迟阶段设置了三种条件: 没有视觉脉冲刺激的基线条件, 水平脉冲条件 (包含了左、中、右三个白色圆形脉冲刺激) 以及竖直脉冲条件 (包含了上、中、下三个白色圆形脉冲刺激)。其中, 水平脉冲条件是工作记忆再激活研究中常用的刺激类型, 左右刺激分别与两个记忆项目的位置重合; 竖直脉冲条件是将水平脉冲旋转 90 度, 唯一的不同在于脉冲刺激均不与记忆项目位置重合。研究重点比较了不同条件下第一次回忆的精确度和正确率。结果发现, 与基线条件相比, 水平脉冲提高了回忆正确率, 对回忆精确度没有影响; 垂直脉冲对两个回忆参数均没有影响。该结果提示了视觉脉冲刺激中包含的记忆项目的位置信息对记忆再激活可能有关键作用。实验二进一步增加了与优势项目位置一致的单测脉冲刺激和与非优势项目位置一致的单测脉冲刺激两种条件 ($n=41$)。实验流程和分析方法与实验一类似。结果显示, 与基线条件相比, 与优势项目位置重合的单测刺激对回忆没有影响, 与非优势项目位置重合的单测脉冲刺激显著降低了回忆正确率。该结果与以往研究中发现的非优势项目再激活干扰优势项目再认的结果一致, 进一步支持了视觉脉冲刺激中位置信息的重要性。通过两个实验, 本研究揭示了位置信息在视觉脉冲刺激引起视觉工作记忆再激活中的关键性作用, 为未来结合脑成像数据深入考察不同注意状态下的视觉工作记忆项目之间的交互机制奠定了基础。

Reactivation of visual working memory: the location of the visual impulse matters

Can Yang¹, Yingshan Huang¹, Ying Cai¹

¹ The Department of Psychology and Behavioral Sciences, Zhejiang University, Hangzhou, 310000, corresponding author's E-mail: yingcai@zju.edu.cn

Abstract: Visual working memory (VWM) is the ability that human temporally maintain and manipulate visual information. According to the items in or out of the focus of attention during VWM, Cowan and his colleagues divided memorized items into the “prioritized memory item” (PMI) and the “unprioritized memory item” (UMI). PMI is kept for completing the current task while UMI is kept for the future task. Recent neural imaging studies found the neural representation of PMI was usually in a decodable active state, while the representation of UMI was in an undecodable activity-silent state. However, some latest studies revealed the representation of UMI could be reactivated through task-irrelevant visual impulse stimuli. The present study aimed to uncover the underlying mechanism of the VWM reactivation. The first experiment adapted a delay estimation task for orientations with a dual retro-cue design (Experiment 1, $n=25$). Our task included three conditions according to the different settings

during the first delay period: the baseline condition only contained a fixation, the horizontal impulses condition consisted of three white circle impulses (left, middle, and right) and the vertical impulses condition consisted of three same white circle impulses but in a vertical way. The horizontal impulses condition was used in most of the previous VWM reactivation studies, and the impulses were organized in the same way as the memorized items. By rotating 90 degree from the horizontal impulses condition, the locations of our vertical impulses were not overlapped with the locations kept in VWM. We compared the correctly response probability and recall precision during the first probe in the horizontal and vertical impulse conditions with the baseline. The results revealed that the horizontal impulses improved the correctly response probability but did not change the recall precision, while the vertical impulses had no effect on neither of them. These results suggested that the locations of visual impulses may play an important role in affecting the VWM recall. Our second experiment further explored the functional role of the location of visual impulses by adding two unilateral impulse conditions. In these two conditions, the location of visual impulse was the same as that of PMI or UMI, respectively (Experiment 2, $n = 41$). The experimental procedure and analyses were similar to the Experiment 1. Our results demonstrated that, the PMI-unilateral impulse had no effect on recall performance, while the UMI-unilateral impulse significantly reduced the correctly response probability, but had no effect on recall precision. These results were consistent with the previous finding that the reactivation of UMI would interfere with the recognition of PMI. Through two experiments, our results suggested the key role of the visual impulses' locations in affecting the reactivation of VWM, which shed a light on further studies investigating the interaction mechanism between VWM items under different attentional states.

摘要 目的: 多目标追踪范式具有动态、并行、基于客体的特征,近年来在大量理论研究基础上已有研究发现,将三维的多目标追踪(Multiple Object Tracking, MOT)范式作为认知能力训练的工具,在经过 4-8 周训练后能够提高儿童、成年人、神经发育障碍患者以及运动员等群体的认知表现。然而目前有关多目标追踪训练的研究多采用自适应的方式进行,而已有研究表明通过在困难的任务中加入简单任务的混合认知训练会提高个体在困难任务中的表现,由此本研究将混合认知训练与三维多目标追踪训练相结合提出一种新的认知训练方式,考察短期单次混合认知训练对动态注意的效果及其对注意网络功能、工作记忆以及认知控制的迁移作用。**方法:** 选取陕西省某职业学院学生 81 名,平均年龄 20.1 岁,视力或矫正视力正常。采用 3(时间:干预前、干预后即刻、干预后一天)×3(组别:自适应训练组、混合训练组、对照组)的混合设计,训练组进行 40min(共四组)3D MOT 训练。混合训练采用简单-困难任务组交替进行,高难度与低难度任务组的小球运动的速度恒定,低速度为参与者基线成绩的 40%,高速度为参与者基线成绩的 110%。自适应训练采用自适应程序控制客体的运动速度,小球的初始速度为 68cm/s,当参与者反应正确时,下一试次中客体的运动速度将上调 30%;反应错误时,客体的运动速度会下调 20%。采用自适应 3D-MOT 范式、n-back($n=2、3$)、注意网络测验以及 go/no go 进行基线以及训练后多目标追踪能力的测试。**结果:** 以时间和组别为自变量,后测成绩为因变量做二因素重复测量协方差分析检验。结果显示:(1)混合训练显著提高了动态注意能力的平均阈值($F(4,148)=2.625$, $p=0.044$ $\eta_p^2=0.065$),干预后混合训练组动态注意能力的平均阈值显著高于对照组($M_{混合-对照}=0.96$, $p=0.019$);(2)训练组工作记忆、注意网络功能和执行抑制功能对照组没有差异。**结论:** 短期单次混合式三维多目标追踪训练能够提高平均动态追踪能力,但效果未能迁移到注意网络功能、工作记忆以及认知控制上。

Abstract: objective: Multiple Object Tracking model has the characteristics of dynamic, parallel, based on the Object, on the basis of a large number of theoretical research in recent years studies have found that the three-dimensional Multiple Object Tracking (MOT) paradigm as the tool of cognitive training, after 4 to 8 weeks after training can improve the children, adults, and neurodevelopmental disorder and athlete group cognitive performance. However, most studies on MOT training are conducted in an adaptive way. Some studies have shown that adding simple tasks to difficult tasks can improve individuals' performance in difficult tasks. Meanwhile. Therefore, this study combined mixed cognitive training with three-dimensional MOT training to propose a new cognitive training mode, and investigated the effect of short-term single mixed cognitive training on dynamic attention and its transfer to attention network function, working memory and cognitive control. **Methods:** 81 students of a vocational college in Shaanxi province, with average age of 20.1 years old, had normal vision or corrected vision. A mixed design of 3(time: before intervention, immediately after intervention, one day after intervention) $\times$ 3(group: adaptive training group, mixed training group, control group) was adopted, the training group received 40 min (four groups) 3D MOT training. The mixed training was carried out alternately in the simple and difficult task groups. The speed of small ball movement in the high and low difficulty task groups was constant. The low speed was 40% of the participants' baseline performance, and the high speed was 110% of the participants' baseline performance. Adaptive training adopts the adaptive program to control the movement speed of the object. The initial speed of the ball is 68cm/s. When the participant reacts correctly, the movement speed of the object in the next trial will be increased by 30%. When the response is wrong, the object's speed of motion will be reduced by 20%. The adaptive 3D-MOT paradigm, N-back ($n=2, 3$), attention network test and GO/No Go were used to test the tracking ability of multiple targets after baseline and training. **Results:** Time and group were used as independent variables, and post - test results were used as dependent variables. The results show that: The average threshold value of dynamic attention ability ($F(4,148) = 2.625, p = 0.044, \eta_p^2 = 0.065$) was significantly higher in the mixed training group than in the control group ($M_{mixed-control} = 0.96, p = 0.019$). (2) There was no difference in working memory, attention network function and executive inhibition function in the training group. **Conclusion:** Short-term mixed 3D MOT training can improve the average dynamic tracking ability; But the effect did not migrate to attention network function, working memory and cognitive control.

Keywords: Multiple Object Tracking; cognitive training; short-term single intervention

注意定向对无意识加工的影响

黄伊琳¹ 张馨雯¹ 向祖强¹ (通讯作者)

¹广州大学教育学院, 广州, 510000, 通讯作者 E-mail: xzq603@126.com

摘要 无意识加工在人类适应环境的过程中发挥着重要作用, 对个体解决高难度创造性问题具有促进作用。阈下语义启动效应是无意识加工的主要研究方法, 指的是使用语义信息作为启动刺激的一种促进作用。目前, 注意对个体无意识加工是否存在影响尚存在争议。本研究采用注意定向的视觉线索化与阈下语义启动的掩蔽启动研究范式, 以大学生为研究对象, 通过两个研究探讨不同注意类型对阈下语义启动的影响以及特点。研究一通过对比有提示线索和无提示线索, 使用汉字词语作为实验材料, 探究视觉注意定向对阈下语义启动的影响。研究二分别使用外周线索和中央线索, 并加入不同 SOA 作为条件, 考查外源性和内源性注意对阈下语义启动造成的不同影响特点。结果发现: (1) 注意定向对阈下语义启动有促进作用, 具体表现为位置提示线

索与启动-目标词语一致性的交互作用显著,在有效提示的条件下,一致的效果比不一致的明显更好。(2)外源性注意对阈下语义启动有促进作用,表现在位置提示线索、SOA 水平与启动-目标词语一致性三者交互作用显著,SOA=160ms 时,外源性注意影响阈下加工,阈下语义启动效果更好,而 SOA>300ms 时,阈下语义启动效果不明显。(3)内源性注意对阈下语义启动有促进作用,SOA=1000ms 时,内源性注意仍能促进阈下语义启动效应,并延长无意识的加工,放大其注意时间窗口。上述研究表明,不同的注意类型对阈下语义启动存在差异,外源性注意的阈下语义启动具有短暂性,内源性注意的阈下语义启动具有持续性效应。

The Effect of Attentional Orienting on Unconscious Processing

Yilin Huang, Xinwen Zhang, Zuqiang Xiang

Guangzhou University, 230 Waihuan West Road, Guangzhou, China

Abstract: Unconscious processing plays an important role in the process of human adaptation to the environment and promotes individuals to solve difficult creative problems. Subliminal semantic priming is the main research method of unconscious processing, which refers to the use of semantic information as a promoter of priming stimulus. At present, the influence of attention on individual unconscious processing is still controversial. In our research, we use the visual cueing of attentional orientation and the masking priming of subliminal semantic priming, to investigate the effects and characteristics of different attentional types on subliminal semantic priming with college students as research objects. Study 1 explored the effects of visual attentional orientation on subliminal semantic priming by comparing the results with and without cue, through using Chinese words as experimental materials. In study 2, exogenous cues and endogenous cues were used respectively, and different stimulus-onset asynchrony (SOA) were added as conditions to explore the different effects of exogenous and endogenous attention on subliminal semantic priming. The results showed that: (1) attentional orienting promoted subliminal semantic priming, and the interaction between the cue of location and the consistency of the target words was significant. Under the condition of effective cue, the consistent accuracy and reaction time results were significantly better than the inconsistent effect. (2) exogenous attention has a promoting effect on subliminal semantic priming, which is shown in the interaction of the cue of location, SOA level and the consistency of the target words was significant. When SOA=160ms, exogenous attention has a positive effect on subliminal processing and the effect of subliminal semantic priming is better. While when SOA > 300ms, the effect of subliminal semantic priming is not obvious. (3) when SOA=1000ms, endogenous attention can still promote the subliminal semantic priming effect, prolong the unconscious processing and enlarge the time window of attention. The above studies indicate that different types of attention have different effects on subliminal semantic priming. Exogenous subliminal semantic priming is transient, while endogenous subliminal semantic priming has persistent effects.

阈下抑郁症对动态愤怒表达的稳定缺陷：纵向研究

钟菡¹ 梅高兴¹(通讯作者)

¹ 贵州师范大学, 贵阳, 通讯作者 E-mail: 2935465615@qq.com

摘 要 许多先前的研究表明,抑郁症患者存在面部情绪感知缺陷。然而,这些研究中的大多数使用静态面部表情而不是动态面部表情。与静态面部表情相比,动态面部表情是社交互动中更自然的媒介。先前的研究发现,重度抑郁症(MDD)患者的动态情绪感知受损。阈下抑郁症(StD)是重度抑郁症的早期阶段,发展为MDD的风险很高。然而,对阈下抑郁者的动态情绪感知知之甚少。因此,本研究的目的是调查阈下抑郁者是否会在动态面部表情的感知方面存在障碍,如果存在,这些障碍是否会随着时间的推移保持稳定。783个人完成了问卷筛选。最后,共有91名参与者参与了研究,其中包括46名阈下抑郁者和45名匹配的健康人。所有参与者完成了动态情绪识别任务和静态情绪识别任务。在动态情绪识别任务的每次试验中,从中性(0%)

表情到极端 (100%) 表情 (快乐、悲伤、愤怒或恐惧) 的刺激序列由 51 个图像组成。为了避免时间和情绪表达强度之间有很强的相关性,我们在呈现下一张图像之前随机重复序列中的一些图像。因此,一个序列有 51 张独特的图像,但总共呈现了 71 张图像。在每次试验开始时,在屏幕中心呈现 2000 毫秒的注视点。然后连续呈现 71 张图像,每张图像持续 500 ms。参与者被要求在识别出表情后立即按下空格键。最后,他们用鼠标选择了相应的情感词。所有参与者都被要求完成 64 项试验,其中反应正确的试验被用于分析。在静态情绪识别任务的每次试验中,在每次试验开始时,在屏幕中心呈现 1500 毫秒的注视点。然后呈现具有不同情绪强度 (20%、40%、60%、80% 和 100%) 的情绪面孔 (高兴、悲伤、愤怒或恐惧) 或中性面孔,持续 100 毫秒。进行与动态情绪识别任务相同的判断任务。所有参与者都被要求完成 480 次试验,其中反应正确的试验被用于分析。所有参与者在大约 4 个月的时间间隔后完成了这些相同的任务。在初步评估中,与健康对照组相比,阈下抑郁组仅对动态愤怒表情表现出更强的敏感性。然而,对于静态情绪表达,这两组之间没有发现显著差异。在 4 个月的随访评估中,我们发现了与初始评估相同的结果。总之,阈下抑郁者对动态愤怒表达的感知有缺陷,但对静态情绪表达的感知没有缺陷。这些结果表明,对动态情绪表达的敏感性可能是区分阈下抑郁个体与健康个体的生物标志物。未来的研究可以使用动态情绪的识别作为阈下抑郁者抑郁症状改善的指标。

Stable deficits to the dynamical angry expression in subthreshold depression: a longitudinal study

Han Zhong¹, Gaoxing Mei^{1,*}

¹ School of Psychology, Guizhou Normal University, Huaxi University Town, Gui'an New District, Guiyang, China, 550025

Abstract: Many previous studies have demonstrated that individuals with depression have deficits of facial emotion perception. However, most of these studies used static facial expressions rather than dynamic facial expressions. Compared to static facial expressions, dynamic facial expressions are more natural media in social interaction. Previous studies have found that individuals with major depression (MDD) suffer from impaired perception of dynamic emotions. Subthreshold depression (StD) is the early stage of severe depression, which is highly risk to develop into MDD. However, little is known about the dynamic emotional perception of StD. Therefore, the purpose of the present study was to investigate whether individuals with StD could have impairments in the perception of dynamic facial expressions, and if it existed, whether the impairments could remain stable over time. Seven hundred and eighty-three individuals completed the questionnaire screening. Finally, a total of 91 participants participated in the study, including 46 individuals with StD and 45 matched healthy individuals. All participants completed a dynamic emotion recognition task and a static emotion recognition task. In each trial of the dynamic emotion recognition task, 51 images ranging from a neutral (0%) expression to an extreme (100%) expression (happy, sad, angry, or fear) consisted of stimulus sequences. To avoid having a strong correlation between time and emotional expression intensity, we randomly repeated some images within sequences before presenting next image. Thus, a sequence had 51 unique images but 71 images were presented in total. At the beginning of each trial a fixation cross was presented 2000 ms at the center of screen. Then 71 images were continuously presented and each image lasted for 500 ms. Participants were instructed to press the space key as soon as they recognized the expression. Finally, they used the mouse to select the corresponding emotional word. All participants were required to complete 64 trials in which the trials with correct responses were used for analysis. In each trial of the static emotion recognition task, at the beginning of each trial a fixation cross was presented 1500 ms at the center of screen. Then an emotional face (happy, sad, angry, or fear) with different emotional intensity (20%, 40%, 60%, 80%, and 100%) or neutral face was presented for 100 ms. A same judgment task as that in the dynamic emotion recognition task was conducted. All participants were required to complete 480 trials in which the trials with correct responses were used for analysis. All participants completed these same tasks after an approximately 4-month time interval. At the initial assessment,

compared with the healthy control group, the StD group demonstrated a stronger sensitivity only to the dynamical angry expression. However, for the static emotional expressions, no significant difference was found between these two groups. At the 4-month follow-up assessment, we found the same results as that in the initial assessment. In conclusion, individuals with StD had a deficit to the perception of the dynamical angry expression but not of the static emotional expressions. These results indicated that the sensitivity to the dynamical emotion expressions might be a biomarker for distinguishing individuals with StD with the healthy individuals. Future research can use the recognition of dynamic emotions as an indicator of improvement in depressive symptoms of StD.

认知的悖论：认知能力越强，越容易被无关情绪信息干扰

陈彦蓉¹（通讯作者） 许树梁¹ 张卫¹

¹ 华南师范大学心理学院/心理应用研究中心，广州，510635, yanrongchen@m.scnu.edu.cn

摘要 任务无关的情绪刺激会损害认知任务的表现，这种现象被称为情绪分心。既往研究发现，增加任务的注意负载时，任务无关情绪刺激对任务表现的损害会减少甚至消失。根据有限认知资源的观点，只有在认知负载较低的情况下，个体才有多余的认知资源用于加工无关的情绪信息。然而，既往研究多直接操纵任务的难度来改变认知负载，很少有研究从个体差异的角度进行分析。不同个体的认知能力不同，因此同一任务在不同个体间占用的认知资源比例会有所差异，进而会影响个体对无关信息的加工。基于上述分析，本研究假设，在同一任务中，那些认知能力更强（无情绪干扰刺激时的任务表现更好）的个体将更容易受无关情绪信息干扰。35名成年人（57%为女性，平均年龄20.1岁，年龄范围19~24岁）参与了本研究。本研究为被试内设计，所有被试均需完成一个知觉任务和一个工作记忆任务，两个任务中均包含54张情绪图片（正性情绪、负性情绪各27张）和27张中性图片，作为干扰刺激。被试在中性情境下的表现作为“认知能力”的指标，而中性情境与正性/负性情境中的表现之差分别作为“正性/负性情绪分心损耗”的指标。将认知能力、年龄、性别作为自变量，将正性情绪分心损耗、负性情绪分心损耗分别作为因变量，使用逐步回归进行数据分析。与假设一致，在知觉任务中，认知能力可显著预测正性、负性情绪分心损耗的程度，在工作记忆任务中，认知能力可显著预测负性情绪分心损耗的程度，但无法预测正性情绪分心损耗的程度。两个任务中，认知能力越强，分心损耗越多。这种预测作用具有任务特异性。此外，本研究还发现，性别可以显著预测工作记忆任务中正性情绪分心损耗的程度，男性的正性情绪分心损耗少于女性。本研究表明，任务特异的认知能力越强，受无关情绪刺激的干扰越大，从个体水平支持了有限认知资源的观点。此外，工作记忆中正性情绪刺激的干扰具有性别差异，男性受到的干扰弱于女性。

The paradox of cognition: the greater the cognitive capacity, the more interference by irrelevant emotional distractors

Yanrong Chen¹, Shuliang Xu¹, Wei Zhang¹

¹ School of Psychology/Center for studies of Psychological Application, South China Normal University, Guangzhou, 510631

Abstract: Task-irrelevant emotional stimuli can impair performance on cognitive tasks, a phenomenon known as emotional distraction. Previous studies have shown that the impairing effect of task-irrelevant emotional stimuli on performance decreases or even disappears when increasing the attentional load. According to the limited cognitive resource perspective, individuals have excess cognitive resources to process irrelevant emotional information when cognitive load is low. However, most previous studies changed the cognitive load by directly manipulating the difficulty of the task itself, and few studies have examined the impairing effect from the perspective of individual differences. Individuals have different cognitive capacity, and therefore the proportion of cognitive resources

occupied by the same task may vary between individuals, which in turn may affect the processing of irrelevant information. Based on the above analysis, the current study hypothesized that individuals with greater cognitive ability (better performance on the task without emotional distractors) would be more likely to be distracted by irrelevant emotional information in the same task. 35 participants (57% female; $M_{age} = 20.1$; range 19 ~ 20 years) participated in the study. The study was a within-subjects design in which all subjects were asked to complete a perception task and a working memory task, both of which contained 54 emotional pictures (27 positive and 27 negative) and 27 neutral pictures as distractors. Performance in neutral condition was seen as “cognitive compacity”, and the difference between the performance in the neutral condition and the positive/negative condition was used as an indicator of “positive/negative emotional distractor impairment”. Cognitive capacity, age and gender were used as independent variables, and positive/negative emotional distractor impairment was used as dependent variable respectively, and the data were analyzed using stepwise regression. Consistent with the hypothesis, cognitive capacity significantly predicted the extent of positive and negative emotional distractor impairment in the perception task, and the extent of negative emotional distractor impairment rather positive emotional distractor impairment in the working memory task. The stronger the cognitive capacity, the greater the emotional distractor impairment in both tasks. This predictive effect was task specific. In addition, the present study found that gender significantly predicted the extent of positive emotional distractor impairment in the working memory task, with male having less positive emotional distractor impairment than female. The present study suggests that the greater the task-specific cognitive capacity, the greater the interference by irrelevant emotional stimuli, supporting the idea of limited cognitive resources from the individual perspective. In addition, there were sex differences in the interference of positive emotional distractors in working memory, and male were interfered less compared to female.

联合层级规则切换中分工要素与操作者选择之间的加工机制

韩佳慧^{1,2*} 管蕾^{1,2} 罗文佩^{1,2}

1 辽宁师范大学脑与认知神经科学研究中心

2 辽宁省脑认与神经科学重点实验室, 通讯作者: jiahui110509@163.com 或 jiahui666@lnnu.edu.cn

摘要 先前的研究已经提出, 当行为选择和操作者选择绑定时, 在联合任务转换实验中会出现个体间转换代价。然而, 任务选择之间的分工也是一种任务要素的分工。我们旨在确定当任务分工和任务执行者选择被绑定时, 联合任务转换实验中是否仍会有个体间转换代价产生。此次研究采用了改进后的层级规则转换范式, 来考察任务类型(实验1)和响应选择(实验2)之间的分工。其中, 线索是同时具有三种不同知觉特征(字体、颜色、正反向)的大写字母 R, 目标是阿拉伯数字(1-9, 5 除外)。根据三种知觉特征的提示, 将线索提示分为高层级规则切换、低层级规则切换和重复; 而根据不同层级规则的提示, 将对目标进行奇偶数或者大小数的判断。实验结果表明, 这两项实验都在联合任务规则转换实验中表现出了个体间的转换代价。这些结果说明参与者会首先处理与判断当前试次是否应该个体本人操作, 并加工与其有关的任务分工要素, 而这一加工过程会导致参与者对属于合作者的分工要素进行共同表征。此外, 与个体独立完成所有实验内容的情境相比, 联合情境实验中表现出的转换代价较小, 这表明了参与者在进行 no-go 试次后不需要太多额外的反应性控制来克服干扰问题。在联合情境的实验条件下, 由于参与者和合作者之间的任务分工减弱了高层级结构的影响, 导致了高层级规则切换和低层级规则切换之间没有显著的表现差异。

价值联结奇异项的主动抑制

涂艳艳 王相珍 任衍具(通讯作者)

山东师范大学心理学院, 济南, 250358, renyanju@gmail.com

摘要 近期的视觉注意理论指出, 与价值建立联结的刺激特征可以通过改变其物理显著性自动捕获注意。最近有研究发现, 人们能够通过习得奇异干扰项的特征对其进行主动抑制。那么一个重要的理论问题就是人们

能否通过学习价值联结奇异项的特征对其进行主动抑制。本研究采用捕获探针范式,通过两个实验对这一理论问题进行探究。在实验1中,通过变化奇异项的颜色特征值对抑制的机制进行研究,结果发现,当奇异项的颜色特征值在试次间变化时,相对于奇异干扰项的缺失试次,奇异干扰项出现试次上的搜索反应时更快;且奇异干扰项位置上的探针字母的回忆率低于中性干扰项位置上的,支持基于特征维度上局部不连续性的二阶特征抑制的观点。在实验2中,首先通过训练将奇异干扰项的颜色特征与价值建立联结,然后探究奖赏联结干扰项能否得到主动抑制,结果发现,相对于奖赏联结干扰项的缺失试次,无奖干扰项出现试次上的搜索反应时更快;且与有、无奖赏建立联结的干扰项位置上的探针字母回忆率低于中性干扰项上的,无奖干扰项上的字母回忆率最低,结果表明,人们能够对价值联结的奇异项进行主动抑制,且抑制程度会受到价值的调节。这些发现在提升人们对奖赏相关刺激注意抑制的理解,减少临床、教育和工作领域中奖赏相关刺激的干扰作用具有重要的启示意义。

Active suppression of value-associated singletons

TU Yanyan, WANG Xiangzhen, REN Yanju

School of Psychology, Shandong Normal University, Jinan 250358, China

Abstract: The recent visual attentional control theory suggests that stimulus features that are associated with values can automatically capture attention by changing their physical saliences. In addition, recent research demonstrates that people can actively suppress singleton distractor by learning the feature of irrelevant stimuli. Hence, a significant theoretical issue is whether irrelevant value-associated singletons can be suppressed through learning their feature. Here, we employed a capture-probe paradigm to test this question through two experiments. Experiment 1 investigated the suppression mechanisms by changing the colors of singletons, the behavioral results showed that when the singleton color changed across trials, reaction times (RTs) were significantly faster on singleton-present trials than those on singleton-absent trials, and probe recall accuracy was greater for the letter in the neutral distractor than that for the letter in the singleton distractors. The suppression effect is consisted with the second-order feature suppression models based on the local discontinuities within specific color dimension. In experiment 2, the association between color and value was firstly established through training, then it was explored whether the value-associated singleton could be suppressed. We found that RTs were faster only in the presence of unrewarded distractor compare with the absence of distractor condition; probe letter recall accuracy for the letter in the neutral distractor was increased than those for letters inside rewarded and unrewarded distractors, and accuracy for the letter inside unrewarded distractors was the lowest. These results showed that the value-associated singletons could be suppressed actively, and the amount of suppression was modulated by value. These findings have important implications for understanding the attentional inhibition of reward-related stimuli and reducing their interference in clinical, educational and work fields.

不同特征空间下注意负荷和时间结构对预测运动估计的影响

刘煜^{1,2} 游旭群^{1,2}(通讯作者)

1 陕西师范大学心理学院, 西安, 710062

2 陕西省行为与认知重点实验室, 西安, 710062, 通讯作者 E-mail: youxuqun@snnu.edu.cn

摘要 在预测运动 (prediction motion, PM) 任务中, 人们判断被遮挡的移动物体的当前位置。越来越多的证据表明, 大脑具有一个通用的速率控制模块, 可以对位置、数字等变化动态心理模拟。以往研究表明注意负荷、刺激运动路径的时间结构(可见路径与被遮挡路径的比值)会对估计位置的 PM 产生影响。然而, 注意负荷和该时间结构与估计 PM 之间的关系尚未得到充分研究。此外, 研究者认为不同特征空间(位置和数字)下个体估计 PM 的表现相似。因此, 本研究采用双任务范式, 通过两个实验探讨了不同特征空间下注意负荷对不同时间结构的 PM 估计的影响。实验1采用2(低负荷, 高负荷)×3(时间结构为0.5, 1, 1.5)的两因素被试内实验

设计,探讨了在位置空间下,注意负荷和时间结构对PM估计的影响。因变量指标为PM估计的均方根误差(Root-mean-squared error, RMSE)、相对偏差BIAS、变量误差(Variable error, VE)。20名在校大学生参与了该实验。实验2探讨了数字空间下,注意负荷对不同时间结构PM估计的影响,其中任务间通过刺激运动速度“百分比/秒”来匹配,其他同实验1,25名在校大学生参与了该实验。采用重复测量方差分析对数据进行分析。实验1结果表明,对于RMSE,注意负荷的主效应显著($p = 0.009$),注意负荷与时间结构交互作用显著($p = 0.007$)。进一步简单效应分析发现,时间结构为0.5 ($p = 0.04$)和1.5 ($p = 0.001$)时,注意负荷对PM估计影响差异显著,时间结构为1时差异不显著($p = 0.29$)。对于VE和BIAS的分析发现,被试估计PM的准确性与其估计敏感性有关。实验2结果表明,对于RMSE,注意负荷的主效应显著($p = 0.047$),注意负荷和时间结构交互作用边缘显著($p = 0.095$)。进一步简单效应分析发现,时间结构为0.5 ($p = 0.019$)和1.5 ($p = 0.038$)时,注意负荷对PM估计影响差异显著,时间结构为1时差异不显著($p = 0.644$)。对于VE和BIAS的分析发现,被试估计PM的准确性与其估计偏差有关。本研究发现遮挡时间为1~2s时,个体会利用时间信息进行PM估计,注意负荷对不同维度下的时间估计影响机制存在差异。

The Influence of Attentional Load and Temporal Structure on The Estimation of Prediction Motion in Different Feature Spaces

Liu Yu^{1,2}, You Xuqun^{1,2}(corresponding author)

1 Department of Psychology, Shaanxi Normal University, Xi' an, 710062

2 Key Laboratory for Behavior and Cognitive Neuroscience of Shaanxi Province, Xi' an, 710062

Abstract: In the prediction motion (PM) task, people judge the current position of a moving object that is occluded. More and more evidence show that the brain has a universal rate control module that can simulate dynamic mental changes such as position and numbers. Previous studies have shown that attention load and the temporal structure of the stimulating motion path (the ratio of the visible path to the occluded path) will affect the estimated position of PM. However, note that the relationship between load and this temporal structure and estimated PM has not been fully studied. In addition, the researchers believe that the performance of individual estimated PM under different feature spaces (location and number) is similar. Therefore, this study adopts the dual-task paradigm and explores the influence of attentional load on the PM estimation of different temporal structures in different feature spaces through two experiments. Experiment 1 uses a two-factor in-subject experimental design of 2 (low load, high load) $\times$ 3 (temporal structure 0.5, 1, 1.5) to explore the influence of attention to load and temporal structure on PM estimation in the location space. The dependent variable indicators are the root-mean-squared error (RMSE), relative deviation BIAS, and variable error (VE) of PM estimation. Twenty college students participated in the experiment. Experiment 2 explored the influence of attentional load on PM estimation of different temporal structures in the digital space, among which tasks were matched by stimulating the movement speed "percent/sec". The others were the same as Experiment 1, and 25 college students participated in the experiment. Repeated measures analysis of variance was used to analyze the data. The results of Experiment 1 show that for RMSE, the main effect of attention load is significant ($p = 0.009$), and the interaction between attention load and temporal structure is significant ($p = 0.007$). Further simple effect analysis found that when the temporal structure is 0.5 ($p = 0.04$) and 1.5 ($p = 0.001$), the effect of attention load on PM estimation is significantly different, and when the temporal structure is 1, the difference is not significant ($p = 0.29$). The analysis of VE and BIAS found that the accuracy of participants' estimation of PM is related to their estimation sensitivity. The results of experiment 2 show that for RMSE, the main effect of attention load is significant ($p = 0.047$), and the interaction between attention load and temporal structure is marginally significant ($p = 0.095$). Further simple analysis of the effects found that when the temporal structure is 0.5 ($p = 0.019$) and 1.5 ($p = 0.038$), the effect of attention load on PM estimation is significant, but when the temporal structure is 1, the difference is not significant ($p = 0.644$). The analysis of VE and BIAS found that the accuracy of participants' estimation of PM is related to their estimation bias. This study found that when the occlusion time is 1~2s, the

individual will use the time information to estimate the PM, paying attention to the difference in the impact mechanism of the load on the time estimation in different dimensions.

摘要 多目标追踪研究关注动态场景中的信息加工, 是探究同时追踪多个目标的容量有限性注意加工机制的经典范式。以往研究大多关注追踪阶段物体特征对多目标追踪绩效的影响, 而线索阶段的目标物体位置以及线索提示方式如何影响多目标追踪绩效, 目前还尚无定论。因此, 本研究目的在于从目标位置和特征突显效应两个角度揭示线索阶段对多目标追踪的影响机制。本研究基于经典多目标追踪范式, 招募 48 名大学生被试 (男性 24 名, 女性 24 名, 18-25 岁), 采用 2*2 被试内实验设计, 以线索提示方式 (内源性线索-目标整体颜色变红; 外源性线索-目标外围处套上红色圆环) 和目标分散程度 (分散、集中) 为自变量, 以多目标追踪准确率为因变量。结果表明: 1) 线索提示方式主效应显著, 内源性线索提示追踪绩效优于外源性线索提示; 2) 分散程度的主效应显著, 目标集中的追踪绩效优于目标分散; 3) 线索提示和分散程度的交互作用显著, 在目标分布集中时, 外源性线索追踪绩效优于内源性线索; 在目标分布分散时, 内源性线索追踪绩效优于外源性线索。基于此, 本研究得出如下结论, 在线索阶段目标位置的分散程度以及线索提示的特征突显均会对多目标追踪绩效产生影响。也就是说, 多目标追踪的线索阶段目标物体位置信息以及表面特征信息得到了进一步加工, 这在一定程度上支持了客体档案理论, 也为复杂视觉条件下的目标刺激呈现方式的设计提供了重要依据。

² Shannxi Key Laboratory of Behavior and Cognitive Neuroscience, Xi'an, Shannxi, 710062, China

Abstract: Multiple object tracking(MOT) research focuses on information processing in dynamic scenes. It is a classic paradigm to study attention mechanisms with limited capacity that track multiple objects simultaneously. Previous studies have focused on the influence of object features in the tracking stage on the performance of MOT, but how the location of the objects and cueing mode affect the performance of MOT has not been determined. Therefore, this study aimed to explore the influence of cueing stage on MOT from the perspectives of target location and feature salience effect. In this study, 48 subjects (male 24, female 24, 18-25 years old) were recruited using the classic MOT paradigm. A 2*2 within-subjects design was used, cueing mode (endogenous cue-the overall color of the target turned red; exogenous cues -the target was surrounded by a red ring) and the degree of dispersion (dispersion and concentration) of the target were independent variables, and the accuracy of MOT was the dependent variable. The results show as follows: 1) the main effect of cueing mode is significant, and the tracking performance of endogenous cueing mode is better than that of exogenous cueing mode; 2) The main effect of dispersion degree is significant, and the tracking performance of target concentration is better than that of target dispersion; 3) The interaction between cueing mode and dispersion degree is significant. When the target distribution is concentrated, the performance of exogenous cue tracking is better than that of endogenous cue tracking. When the target distribution is dispersed, the performance of endogenous cue tracking is better than that of exogenous cue tracking. Conclusion: It shows that the dispersion degree of target location and the feature salience of cueing mode have

influence on MOT. It shows that the location information and surface feature information of the targets are processed in the MOT cue stage, which supports the object archive theory partly and provides an important basis for the design of target stimulus presentation with complex visual conditions.

视觉拥挤和整体知觉共享一个注意机制吗？

林震¹ 龚明亮¹

¹ 江西师范大学, 南昌, 330022, 通讯作者 E-mail: gongml@jxnu.edu.cn

摘要 在外周视野内, 当一个物体被其他相似物体包围时, 对该物体的识别会变得更加困难, 这种现象被称为视觉拥挤, 它反映了视觉注意的局限性。幸运的是, 产生拥挤的机制同时可能促进整体知觉, 以弥补有限的注意力。有充分证据表明, 注意可能在拥挤的产生中发挥重要作用(He et al., 1996), 并调节拥挤(Albonico et al., 2018; Dakin et al., 2009; Freeman & Pelli, 2007; Scolari, Kohnen, Barton, & Awh, 2007; Yeshurun & Rashal, 2010)。然而, 整体知觉是否需要注意仍存在不少争议(Oriet & Brand 2013; Jackson-Nielsen, Cohen, & Pitts, 2017)。鉴于注意在拥挤和整体知觉中的作用, 本研究通过后线索(以降低目标的注意分辨率)和前线索(以提高目标的注意分辨率)来操纵视觉注意, 以考察拥挤和整体知觉是否共享一个注意机制。实验刺激由 7 条不同朝向的线条组成, 被试需根据提示判断所有线条的整体朝向或中心线条的朝向。在实验 1 中, 在刺激消失后通过后线索提示被试需要完成整体朝向判断任务或中心单个线条的朝向判断任务。通过与基线条件(事先告知被试仅需要完成两个任务中的一个)的对比发现, 无论是在强拥挤还是弱拥挤条件下, 降低对目标的注意分辨率都会同时损害拥挤和整体知觉的表现。实验 2 考察了对中心目标位置的预提示对视觉拥挤和整体知觉的影响。结果表明, 在强拥挤条件下, 提高目标的注意分辨率能够同时提高拥挤和整体知觉的表现; 而在弱拥挤条件下, 提高目标的注意分辨率虽也能提高拥挤的表现, 但却会损害整体知觉的表现。本研究的结果综合表明, 视觉拥挤和整体知觉可能在某些层面上具有共同的注意机制。

Do visual crowding and ensemble perception share a common attentional mechanism?

Zhen Lin, Mingliang Gong

Jiangxi Normal University, Nanchang

Abstract: An object will be more difficult to recognize when this object is surrounded by other similar objects in the visual periphery, which is called visual crowding, reflecting limitations of visual attention. Fortunately, the mechanism generating crowding may simultaneously facilitate ensemble perception, which can compensate for the limited attentional capacity. It is well documented that attention plays a critical role in the generation of crowding (He et al., 1996) and modulates crowding (Albonico et al., 2018; Dakin et al., 2009; Freeman & Pelli, 2007; Scolari, Kohnen, Barton, & Awh, 2007; Yeshurun & Rashal, 2010). However, it is still much debated whether ensemble perception requires attention (Oriet & Brand 2013; Jackson-Nielsen, Cohen, & Pitts, 2017). In terms of the role of attention in crowding and ensemble perception, our study manipulated visual attention by postcueing (so as to decrease attentional resolution of the target) and precueing (so as to increase attentional resolution of the target) to test whether crowding and ensemble perception share a common attentional mechanism. The stimulus consisted of 7 bars with different orientations and participants were instructed to judge the ensemble orientation of all bars or the orientation of a crowded bar based on the cue. In experiment 1, participants needed to complete the task of the judgement of ensemble orientation or the judgement of central individual orientation through a postcue after the stimulus disappeared. Compared with the base case (in which participants were told to complete only one of the two tasks in advance), we found that decreasing attentional resolution of the target harmed the performance of both crowding and ensemble perception, whether the crowding condition was strong or weak. Experiment 2 investigated

the influence of precueing to the target location on visual crowding and ensemble perception. The results showed that in strong-crowding condition, increasing attentional resolution of the target enhanced the performance of both crowding and ensemble perception; in weak-crowding condition, increasing attentional resolution of the target harmed the performance of ensemble perception, though it also enhanced the performance of crowding. Taken together, our results indicate that visual crowding and ensemble perception may share a common attentional mechanism at some levels.

基于特征关系的奖赏驱动注意效应

陈艺林, 龚梦园

浙江大学心理与行为科学系, 杭州, 310028, 通讯作者 E-mail: gongmy426@zju.edu.cn

摘要 奖赏关联的视觉刺激能够吸引注意, 并且这种注意效应独立于任务目标和刺激属性驱动的注意。然而, 这种奖赏驱动的关注效应是来源于刺激的特征值(如红色), 还是来源于在不同情境中刺激的特征关系(如相对更红的颜色)还尚不明确。为探讨这两种可能的假设, 本研究采用了奇异刺激搜索范式, 在红色到黄色的连续维度上选取了五种颜色(红色、红橙色、橙色、黄橙色、黄色)。在实验一的训练阶段, 让被试建立起颜色与奖赏之间的联结(如红色高奖赏, 黄色低奖赏); 在测试阶段, 保持奖赏关联刺激的特征值不变, 通过操控刺激的特征关系(如橙色相对于黄色刺激更红, 相对于红色刺激更红), 考察奖赏驱动的关注是否受到特征关系的影响。结果发现, 相较于和低奖赏匹配的特征关系(如更黄的颜色条件: 橙色在红色中), 与高奖赏匹配的特征关系(如更红的颜色条件: 橙色在黄色中)的注意效应更强。实验二采用了同样的训练和测试任务, 并进一步操控使得奖赏关联刺激的特征值与其所对应的特征关系相反(如黄橙色刺激, 其特征值更接近黄色, 但呈现在黄色刺激中, 其特征关系为更红)。结果发现, 相较于和高奖赏关联特征值相近的刺激(如红橙色), 与高奖赏关联特征关系匹配的刺激(如黄橙色在黄色刺激中)所引发的注意效应更强。综合两个实验的结果表明, 奖赏驱动的关注效应来源于特定情境中刺激的特征关系, 且这种效应强于由刺激特征值本身驱动的关注效应。该研究结果挑战了当前对于奖赏学习通过调控特征值的显著性影响选择性注意的理解, 表明了奖赏学习调控注意效应的新机制。

Reward-driven Attention Based on Feature Relationship

Yilin Chen, Mengyuan Gong

Department of Psychology and Behavioral Sciences, Zhejiang University, Hangzhou 310028, China.

Abstract: Reward-associated stimuli attract attention, independent of goal-driven attention and stimulus-driven attention. However, it remains unclear whether the reward-driven attentional effect is achieved through the feature value (e.g., red), or the feature relationship among stimuli (e.g., redder stimulus). To explore these two possible hypotheses, we adopted a singleton search paradigm and selected five colors (red, red-orange, orange, yellow-orange, and yellow) from a red-to-yellow continuum. In Experiment 1, during the training session, participants were asked to establish the association between color and reward (e.g., red with high reward, yellow with low reward). In the test session, we kept the feature value constant, while varied the feature relationship of reward-associated stimuli (e.g., an orange stimulus is redder among yellow stimuli, but it is yellower in red stimuli), to examine whether reward-driven attention is influenced by feature relationship. Our results show that, reward-driven attentional effect is stronger when the feature relationship (e.g., an orange stimulus is redder among yellow stimuli) matches the high-reward association (e.g., red), as compared to the condition where the feature relationship matches the low-reward association. In Experiment 2, using the same training and test task, we rendered the feature value to conflict with the feature relationship of reward-associated stimuli (e.g., a yellow-orange stimulus has a feature value similar to yellow, but its feature relationship is redder among yellow stimuli). Our results show that, reward-driven attentional effect is stronger when the feature relationship (e.g., a yellow-orange stimulus is redder among yellow stimuli) matches the

high-reward association (e.g., red), as compared to the condition when the feature value is similar to the high-reward association (e.g., a red-orange stimulus). Combined results from these two experiments, we show that reward-driven attention effect is achieved through the feature relationship, and the influence of feature relationship could be stronger than that of feature value. Our results challenge the prevailing view that reward biases selective attention by altering the salience of feature value and indicate a new mechanism underlying reward-driven attention.

整体-局部范式下的数字 SNARC 效应

王铖铖¹ 韩磊¹ (通讯作者)

¹ 山东师范大学心理学院, 济南, 250358, hanlei-0333@163.com

摘要 研究者们发现无论采用大小比较任务还是奇偶判断任务, 小数与左方位相关联, 大数与右方位相关联, 并将该现象命名为空间数字联合反应编码(Spatial Numerical Association of Response Codes)效应, 简称 SNARC 效应。关于 SNARC 效应的机制问题, 至今尚存争议——视觉空间编码理论强调该效应发生在早期编码阶段, 言语空间编码理论强调该效应发生在反应选择阶段。本研究拟为两理论之争提供实验证据。采用整体与局部范式, 将数字和具有明确空间特性的箭头进行结合, 构建了一种复合刺激——由数字组成的箭头, 并将其作为实验材料, 在实验一中采用数字大小比较任务(与 5 比较), 在实验二中采用箭头方向判断任务, 实验设计均为 2[数字: 小数(1/2), 大数(8/9)]×2(箭头方向: 左, 右)×2(反应手: 左手, 右手)的三因素完全被试内设计。因变量为反应时。被试为山东省某大学 36 名(女 26 名)全日制本科生。结果显示: 在数字大小比较任务中, 箭头方向和反应手的交互作用显著, SNARC 效应不显著; 在箭头方向判断任务中, SNARC 效应显著(且仅出现在箭头方向向右时), 箭头方向和反应手的交互作用不显著。在数字大小比较任务中, 当个体对数字组成的箭头进行刺激表征时, 整体加工优势显现, 即箭头表征影响了数字表征过程, 个体仅激活了任务所要求的数字大小信息以便做出正确反应, 但并未激活心理数字线(the mental number line, MNL)上数字的空间位置信息, 因此未出现 SNARC 效应, 这说明刺激表征阶段对 SNARC 效应具有重要作用; 在箭头方向判断任务中, 数字的大小比较过程是在无意识状态下进行的自动化加工, 资源更为充足, 同时, 由于任务为判断箭头方向, 数字和箭头在反应选择阶段竞争资源, 而相比左箭头, 个体又对右箭头反应更快, 消耗资源更少, 因此, 仅在箭头方向向右时表现出 SNARC 效应, 这说明反应选择阶段对 SNARC 效应也具有重要作用。综上所述, 本研究发现数字的视觉空间编码和言语空间编码在 SNARC 效应的出现中均起到重要作用。未来研究可考虑进一步丰富实验材料和实验任务, 探讨早期编码阶段和反应选择阶段对 SNARC 效应的作用。

The SNARC effect under global and local paradigms

Wang Chengcheng¹, Han Lei¹

¹ School of Psychology, Shandong Normal University, Jinan, hanlei-0333@163.com

Abstract: Researchers have found that whether in a magnitude comparison task or in a parity judgment task, shorter reaction time was obtained for small numbers responded to with the left key than with the right key, conversely, large numbers were responded to preferentially with the right key. They referred to this phenomenon as the spatial-numerical association of response codes (SNARC) effect. There are mainly two different theories explaining this phenomenon—the visuo-spatial coding account emphasizes the importance of the early coding stage while the verbal-spatial coding account emphasizes the response selection stage in the presence of SNARC effect. The study provided further experiment proofs for the theoretical dispute. Combining numbers with arrows by global and local paradigms, a compound stimulus—arrows made up with numbers was designed as experimental materials. Thirty-six undergraduates (26 females, all right handed) from a university in Shandong Province participated in the study after signing an informed consent. They were asked to judge whether the number is larger or smaller than 5 in experiment1 and judge whether the arrow is left or right in experiment2. The three factors complete within-subject design, 2 [number: the small (1/2), the large (8/9)]×2 (arrow direction: left, right)×2 (response hand: the left, the right), was

made in both experiments. Dependent variable was reaction time. The result indicated that there was significant interaction effect between arrow direction and response hand in the magnitude comparison task. The interaction between number and response hand reached significance (only when right-arrow) in arrow direction judgement task, which suggested that the SNARC effect occurred. In the magnitude comparison task, when representing arrows made up with numbers, the strengthen of global processing influenced number representation in the mental number line, which caused the absence of SNARC effect. It demonstrated that the early coding stage was necessary for the presence of SNARC effect. In the arrow direction judgement task, the numerical value was automatically activated in unawareness level with enough recourse, which profits the SNARC effect. But why barely to right-arrows? The task was judging arrow directions which led to the competition between numbers and arrows in the response selection stage and shorter reaction time was obtained to right-arrows which consumed less recourse than left-arrows, consequently, the SNARC effect only occurred when processing right-arrows. It showed that the response selection stage played an essential role in the performance of SNARC effect. Overall, the study found that both the visuo-spatial coding and the verbal-spatial coding were important in the presence of the SNARC effect. Further researches could explore the role of the early coding stage and the response selection stage in the SNARC effect by enriching experimental materials and tasks.

2 内蒙古师范大学心理学系, 呼和浩特, 010022, yangys@163.com

3 内蒙古人文社科重点研究基地心理教育研究中心, 呼和浩特, 010022

摘 要 关于情绪与表象之间具有特殊联系已经在实验心理学和临床心理学中较为常见。彼德·郎提出的情绪表象生物信息理论假设认为情绪刺激的心理表象激活了重叠的储存信息的联想网络在现实中刺激的实际体验被激活。目前已有研究证明心理表象具有引发情绪反应的能力, 情绪对心理认知活动的影响具有普遍性。由此, 情绪也会影响表象生成过程, 那么不同情绪效价是如何影响心理表象生成过程? 眼动在表象生成过程中扮演功能性角色, 本研究通过三个实验探讨不同情绪效价对表象生成过程中的眼动影响。采用标准化表象生成范式, 使用 3X3 的网格图为材料, 依据情绪二分法将情绪效价划分为积极情绪和消极情绪。实验一为自然状态下的表象生成过程中的眼动行为并记录其眼动指标。实验二为积极情绪启动条件下对表象生成过程的眼动影响并记录其眼动指标。实验三为消极情绪启动条件下对表象生成过程的眼动影响并记录其眼动指标。通过比较三个实验的眼动数据, 预计结果发现, 不同情绪效价会使表象生成过程产生不同规律性的眼动分化, 积极情绪与消极情绪对表象生成过程也会产生不同的眼动行为, 进一步加强情绪与表象之间的关系。

Abstract: The special connection between emotion and appearance has become more common in experimental psychology and clinical psychology. Peter• Lang's bioinformatics theory of emotional imagery hypothesizes that the

psychological imagery of emotional stimuli activates the overlapping associative network of stored information to activate the actual experience of the stimulus in reality. At present, studies have proved that mental imagery has the ability to trigger emotional reactions, and the influence of emotions on mental cognitive activities is universal. Therefore, emotions will also affect the process of image generation, so how does different emotional valence affect the process of mental image generation? Eye movement plays a functional role in the process of image generation. This study uses three experiments to explore the influence of different emotional valence on the process of image generation. Using the standardized representation generation paradigm, using 3X3 grid graphs as materials, the emotional valence is divided into positive emotions and negative emotions according to the emotional dichotomy. Experiment 1 is the eye movement behavior in the process of appearance generation in the natural state and record its eye movement index. Experiment 2 is the influence of eye movement on the process of image generation under the condition of positive emotions and recording its eye movement indicators. Experiment 3 is about the influence of negative emotion on the eye movement of the process of image generation and recording its eye movement indicators. By comparing the eye movement data of the three experiments, it is expected that the results show that different emotional valences will cause different regular eye movement differentiations in the image generation process, and positive emotions and negative emotions will also produce different eye movement behaviors in the image generation process. Further strengthen the relationship between emotion and appearance.

面孔左侧偏爱的异族效应：来自高加索被试的证据

康静¹ 李城林² Werner Sommer³ 曹晓华¹（通讯作者）

1 浙江师范大学心理学系，金华，321001

2 德国耶拿大学认知神经科学和生理研究所，耶拿，07743

3 德国柏林洪堡大学心理学系，柏林，10099

摘要 左侧偏爱效应是面孔知觉领域中稳定的知觉专家化效应。相比于右半边面孔，人们对面孔的识别更依赖于左半边面孔传递的信息。在多种任务中，如身份识别任务，性别/表情判断，年龄预估和审美偏好任务等，都存在稳定的面孔左侧偏爱效应。研究表明，我们对面孔材料的熟悉性/经验会影响我们对面孔左侧偏爱的选择，例如，在人脸（对于被试来说是更多经验的面孔）和猴脸（对于被试来说是更少经验的面孔）的研究中，发现被试对人脸的左侧偏爱强于猴脸。对比成人脸（更多经验的面孔）与婴儿脸（更少经验的面孔）等研究中，也发现了熟悉性对左侧偏爱调制的结果。本研究对面孔经验的一个重要维度，即异族面孔是如何调制左侧偏爱进行探讨。本研究招募了 65 名高加索被试，使用高加索面孔和亚洲面孔材料，要求被试完成身份相似性判断的合成面孔任务。研究结果表明，高加索被试仅在正立的本族面孔上有显著的左侧偏爱效应；另外，面孔的倒置降低了面孔左侧偏爱效应，这与以往的研究结果相同。重要的是，研究表明，被试在异族面孔上未发现左侧偏爱效应，说明面孔的左侧偏爱效应是种族特异的。总之，本研究通过对不熟悉异族面孔如何调制左侧偏爱效应进行研究，比较清楚地揭示面孔加工中的左侧偏爱效应与异族效应是相对独立的加工过程。

3 Department of Psychology, Humboldt-Universität zu Berlin, Germany. 10099

Abstract: The left-side bias (LSB) effect is thought to be a stable marker of perceptual expertise in face perception. People rely more heavily on the information conveyed by the left-side of faces as compared to the right-side. The

LSB has been robustly observed in many tasks, for instance, facial identity recognition, gender/emotion judgement, age and attractiveness evaluation. Previous studies showed that the LSB may be affected by the familiarity or experience with the face stimuli. For example, in studies with faces of human adults (more experience) and monkeys (less experience), adult human participants showed a larger LSB for human than monkey faces. Further, similar findings show familiarity/experience modulations of the LSB with human adult and infant's faces. Our study aimed to extend the LSB to another face experience dimension, namely own/other-race. Therefore, we presented 65 Caucasian participants with Caucasian and Asian faces, asking participants to complete a chimeric face task with identity similarity judgments. Caucasian participants showed a significant LSB only for own race upright faces, and face inversion decreased the LSB, which is consistent with previous studies. More important, there was no LSB for other-race faces. This indicates that the LSB is specific to own-race faces. In conclusion, we investigate how unfamiliar/less experience other-race faces modulate the left-side bias effect in this study, and clearly reveal that it's relatively independent processing between the left-side bias effect and the other-race effect.

Keywords: left-side bias effect, face experience, other-race face processing

体重与情绪表达的跨类别适应

赵丹宁¹ 梅高兴¹(通讯作者)

¹ 贵州师范大学, 通讯作者 E-mail: meigx@gznu.edu.cn

摘要 准确的理解他人的面部表情有助于社会交往。先前的研究表明,面部所呈现出的体重信息(超重、瘦或健康体重)作为一种重要的社会线索,会影响对面部表情的情绪感知(例如,超重的脸可能更容易被认为具有积极情绪)。然而,面部表情和体重是否可以共享共同的神经基质在很大程度上仍然是未知的。为了解决这个问题,我们在这里使用了跨类别适应范式。视觉适应被称为心理物理学的微电极。实验 1a (n = 20) 的每个试次,首先呈现一个适应刺激(例如,瘦的人脸)5000 毫秒,然后是呈现 50 毫秒的噪声掩蔽,然后再呈现模糊情绪的测试脸 200 毫秒。在出现问号后,被试需要通过按左箭头键或右箭头键来表明情绪模糊的测试脸是高兴还是生气。结果表明,与瘦脸相比,在暴露于超重的脸后情绪模糊的脸更容易被感知为愤怒。为了研究适应脸的轮廓是否影响被试随后做出的情绪判断,在实验 1b (n = 20) 中,我们使用了与实验 1a 中相应适应刺激大小相同的圆形适应刺激。结果,未能观察到跨类别的适应,表明实验 1a 的结果并非源自面部刺激的轮廓。为了进一步研究在无意识层面呈现适应刺激时是否仍会观察到跨类别适应,我们在实验 2 (n = 29) 中使用了连续闪光抑制 (CFS) 范式。实验二的主要实验包括三种适应条件(即三种试验)。在抑制试验中,将适应刺激(例如,瘦的人脸)呈现给一只眼睛(适应眼),将高对比度动态噪声呈现给另一只眼睛(测试眼)。适应期持续 4000 毫秒,在适应过程中,参与者被要求通过按键盘上的 Z 键和 C 键(如果他们能看到)来判断适应刺激的位置。适应后,一个模糊的 250 毫秒的测试脸被呈现给测试眼,位于十字的对侧(例如,如果适应刺激出现在十字的左侧,则测试脸将出现在十字右侧)。当噪声掩码出现时,参与者被要求通过按向左或向右箭头键做出强制选择来指示测试刺激是高兴还是生气。在完全优势试验中,也会呈现给一只眼睛一个适应刺激,但另一只眼睛出现了一个与适应刺激大小相同的灰色椭圆。通过这种方式,适应刺激将在意识层面呈现,类似于实验 1a。在基线试验中,其程序与抑制试验相同,只是没有适应刺激。此外,还进行了实验 2 的控制实验。实验过程与主实验中的抑制试验相同,只是没有呈现测试刺激,并且在噪声掩蔽期间指示参与者不管看到与否都要通过按左箭头键或右箭头键指示适应刺激是瘦的还是胖的。结果表明,对于完全优势实验(即有意识的试次),仍然观察到跨类别适应;然而,对于抑制试验(即无意识的试次),体重和情绪表达之间没有跨类别的适应。总之,我们首次提供证据证明体重和情绪之间的跨类别适应存在于意识层面,表明体重和情绪可能具有共享的神经机制。

Cross-category adaptation between body weight and emotional expressions

Danning Zhao¹, Gaoxing Mei^{1,*}

¹ School of Psychology, Guizhou Normal University, Huaxi University Town, Gui'an New District, Guiyang, China

Abstract: Exactly understanding other facial emotional expressions facilitates social interactions. Previous studies have shown that body weight of facial stimuli (overweight, thin or healthy weight), as an important social cue, can bias emotion perception of facial expressions (e.g., an overweight face may be more frequently perceived as having positive emotions). However, whether body weight of faces and facial expressions could share common neural substrates remains largely unknown. To address this issue, here we used a cross-category adaptation paradigm. Visual adaptation is referred to as the psychophysicist's microelectrode. In each trial of Experiment 1a (n = 20), an adaptor (e.g., a thin face) was firstly presented for 5000-ms, followed by a noise mask lasting for 50-ms, and then a test face with ambiguous emotion appeared for 200-ms. After a question mark appeared, participants needed to indicate whether the ambiguous test face was happy or angry by pressing the left or right arrow key. The results showed that an ambiguous emotion face was more easily perceived as angry after being exposed to overweight faces, compared with thin weight faces. To investigate whether the shape of the adapting face influenced participants' subsequent emotional judgments, in Experiment 1b (n = 20) we used the circle adaptors with same sizes as the corresponding adaptors in Experiment 1a. As a result, the cross-category adaptation failed to be observed, indicating that the findings of Experiment 1 did not originate from the shape of facial stimuli. To further investigate whether the cross-category adaptation would be still observed when adaptors were presented at the unconscious level, we used the continuous flash suppression (CFS) paradigm in Experiment 2 (n = 29). The main experiment of Experiment 2 included three adaptation conditions (i.e., three types of trials). On suppression trials, an adaptor (e.g., face with a thin body weight) was presented to one eye (adapted eye) and a high-contrast dynamic noise to the other eye (test eye). The adaptation period lasted for 4000-ms, and during adaptation participants were instructed to make a judgment about the position of the adapting stimulus via pressing Z and C on the keyboard if they saw it. After adaptation, an ambiguous 250-ms test face was presented to the test eye on the opposite side of cross (e.g., if the adaptor appeared at the left of the cross, test face would appear at the right). When a noise mask appeared, participants were required to make a forced choice to indicate whether the test stimulus was happy or angry through pressing the left or right arrow key. On full dominance trials, an adaptor was also presented to one eye but a gray ellipse with the same size as the adaptor was present to the opposite eye. In this way, the adaptor would be presented at the conscious level, similar as that in Experiment 1a. On baseline trials, the procedure was the same as the suppression trials except that there was no adaptor. In addition, a control experiment of Experiment 2 was conducted. The experimental procedure was the same as the suppression trials in the main experiment, except that no test faces were presented and during the noise mask participants were instructed to indicate whether the adaptor was thin or overweight through pressing left arrow key or right arrow key regardless of seeing it or not. The results showed that, for the full dominance trials (i.e., conscious trials), the cross-category adaptation was still observed; however, for the suppression trials (i.e., unconscious trials) there was no cross-category adaptation between body weight and emotional expressions. In summary, we provided first evidence that the cross-category adaptation between body weight and emotion existed at the conscious level, indicating that weight and emotion might have a shared neural mechanism.

Keywords: adaptation, cross-category adaptation, body weight, expression, emotion

提取诱发遗忘：抑制与干扰

潘运¹ 李萌萌^{1,2} 杨环瑜¹ 张建¹ 七十三³ (通讯作者)

摘要 提取诱发遗忘是在对信息进行回忆时, 与目标信息相关联的信息提取失败回忆受损的一种的遗忘现象。然而对提取诱发遗忘现象的解释普遍存在两种不同的理论。抑制理论, 提取诱发遗忘现象是由于在根据某一具体线索对目标信息进行回忆提取时, 对与该线索相关的信息的抑制而产生的。在线索被呈现时, 与该线索有关的信息会同时被启动, 因此为了能够顺利的提取目标信息, 避免其他相关信息的相互竞争和干扰, 就会对相关信息进行抑制, 抑制会减少相关信息对目标信息提取的影响。另一方面抑制理论认为提取诱发遗忘不受项目之间、线索之间或项目于线索之间的关联改变的影响, 只是因为关联项目被抑制而引起提取诱发遗忘现象。干扰说来源于干扰反应竞争理论, 认为在对项目信息进行提取练习时, 加强了线索与项目之间的关联, 相反, 没有进行提取练习的项目与线索之间的联系就被干扰, 甚至出现阻断。即在提取练习时 Rp+项目得到了加强, 而 Rp-项目则没有被强化, 且可能由于这种加强反而阻碍了 Rp-项目的提取, 对 Rp-项目产生干扰导致 Rp-项目的提取回忆成绩低于 Nrp 项目。干扰说认为提取诱发遗忘效应不必产生抑制作用, 提取线索与项目信息之间的链接减弱或被阻碍就能产生提取诱发遗忘现象。本文根据抑制理论提出的提取诱发遗忘的属性: 提取依赖性、强度独立性、干扰依赖性以及线索独立性四个方面对提取诱发遗忘的两个理论进行讨论。随后总结出两种理论在不同场景及背景下可能都对提取诱发遗忘现象产生影响, 两个理论解释可能是共存的, 并在遗忘研究的基础之上探讨两个理论各自解释了不同层面对于提取诱发遗忘的影响。

Retrieval-induced forgetting: Inhibition and Interference

Yun Pan¹, Mengmeng Li^{1,2}, Huanyu Yang¹, Jian Zhang¹, Shisan Qi³

Abstract: Retrieval-induced forgetting refers to a forgetting phenomenon that when recalling information, the information related to the target information fails to be extracted and memory is impaired. However, there are two different theories to explain the oblivion caused by Retrieval. According to the inhibition theory, the phenomenon of Retrieval induced forgetting is caused by the inhibition of the information related to a specific clue when recalling and extracting the target information. When the clue is presented, the information related to the clue will also be activated at the same time. Therefore, in order to extract the target information smoothly and avoid the competition and interference of other related information, the related information will be suppressed and the influence of the related information on the target information Retrieval will be reduced. On the other hand, inhibition theory holds that Retrieval-induced forgetting is not affected by the change of items, clues or items associations among clues, but only because related items are inhibited. The interference theory comes from the interference response competition theory, and it is considered that the connection between clues and projects is strengthened when extracting project information. On the contrary, the connection between items and clues without Retrieval exercises will be interfered or even blocked. That is to say, Rp+ projects have been strengthened, but Rp-projects have not been strengthened, which may hinder the Retrieval of Rp-projects and interfere with Rp-projects, resulting in the recall score of Rp- projects being lower than that of Nrp project. According to the interference theory, the Retrieval-induced forgetting effect does not have to be inhibited, and the link between the Retrieval clue and the item information is weakened or blocked, which can lead to the Retrieval-induced forgetting phenomenon. According to the inhibition theory, two theories of forgetting induced by Retrieval are discussed: Retrieval dependence, strength independence, interference dependence and clue independence. Then, it is concluded that the two theories may have an impact on Retrieval-induced

forgetting phenomenon in different scenes and backgrounds, and the two theories may coexist. Based on forgetting research, it is discussed that the two theories explain the influence of different levels on Retrieval-induced forgetting.

摘要 转换能力 (shifting ability) 是人们日常生活中较为常用的认知能力之一, 能够有效预测个体的学术成就、社会经济地位和身体健康等, 对个体进行多任务操作具有重要意义。近年来, 研究者们尝试将经颅直流电刺激技术 (Transcranial direct current stimulation, tDCS) 运用于任务转换能力增强效应研究中去。然而, 现有研究主要集中在对前额叶皮层 (F3/F4) 进行考察, 少有研究分析 tDCS 刺激其他皮层 (顶叶皮层) 对任务转换能力的增强效应。鉴于影像学研究表明任务转换过程与顶叶皮层关系密切, 当前研究以顶叶皮层为刺激脑区, 考察阳性 tDCS 刺激顶叶皮层在可预测和不可预测任务转换中的增强效应。当前研究共招募 36 名健康年轻被试, 将其随机分为左侧阳性刺激组、右侧阳性刺激组和伪刺激组, 采用强度为 1.5mA 的阳性 tDCS 刺激被试的顶叶皮层 (P3/P4) 20 分钟。刺激结束后, 移除仪器并要求被试完成可预测和不可预测转换任务, 任务顺序效应在被试间进行平衡。研究结果发现阳性刺激顶叶皮层不会对个体的混合任务正确率和混合代价产生显著影响。但是, 值得注意的是当前研究发现了转换代价上的组别和任务可预测性交互作用显著, 即在可预测任务转换中, 右侧阳性刺激组的可预测转换任务转换代价显著高于伪刺激组。同时, 在不可预测任务转换中, 未发现左侧或者右侧阳性刺激组与伪刺激组之间存在显著差异。上述研究结果表明阳性 tDCS 激活右侧顶叶皮层会损害可预测任务转换的转换能力, 证明了右侧顶叶皮层参与了任务转换的主动加工过程, 暗示其与外源性调节过程关系不明显。

² School of Electronic Engineering, Xidian University, Xi'an 710071, China

Abstract: Shifting ability is one of the most commonly used cognitive abilities in daily life. It can effectively predict academic achievement, socioeconomic status, and physical health, and is meaningful to multitasking operation. Recently, researchers have used transcranial direct current stimulation (tDCS) to study task-switching enhancement. However, it's mainly focused on the prefrontal cortex (F3/F4), and few have analyzed the task-switching enhancement by stimulating other cortex (parietal cortex). Since imaging studies have shown that the task-switching process is closely related to the parietal cortex, the current study would examine the task-switching enhancement by active tDCS over the parietal cortex in both predictable and unpredictable switching tasks. 36 participants were recruited and randomly divided into three tDCS groups (including LA, RA, and sham). The parietal cortex (P3/P4) was stimulated with 1.5mA for 20 minutes. After the stimulation, the instrument was removed and the participants were asked to complete both predictable and unpredictable tasks. The task order was balanced among the participants. Results showed that no significant effect was found on the mixed task accuracy and mixing cost. However, it is worth noting that the current study found a significant interaction between the tDCS group and the task predictability on the switching cost. In the predictable task switching, the switching cost of the LA group was significantly higher than the sham group. At the same time, no significant difference was found in unpredictable task

switching. These results indicate that active tDCS over the right parietal cortex can impair the predictable task-switching ability, prove that the right parietal cortex is involved in the active process of task switching, and suggest that it is not significantly related to exogenous regulation.

映射通路数量对隐喻加工影响的 ERP 研究

李骋诗¹ (通讯作者)

¹ 辽宁师范大学心理学院, 大连, 116000

摘 要 隐喻加工是源域到目标域映射的认知加工过程。不同的隐喻具有不同程度的映射难度, 这可能与映射路径的数量有关。隐喻生涯理论将隐喻划分为新颖隐喻, 传统隐喻和死隐喻。鉴于不同新颖性隐喻的加工的特点不同, 实验 1 采用 4 (新颖隐喻、传统隐喻、直接语义) × 2 (多重映射通路、单一映射通路) 被试内设计, 通过词汇的语义判断的 ERP 任务考察了映射路径数量对新颖隐喻和传统隐喻加工的影响。实验 2 同样采用 4 (新颖隐喻、传统隐喻、直接语义) × 2 (多重映射通路、单一映射通路) 被试内设计, 通过成对图片联想的 ERP 任务从表象加工层面对实验 1 的结果进行验证。实验结果表明, 映射通路影响隐喻加工的时间进程。单一映射通路隐喻在任务中的反应时间较短, 并在头皮前方、中部和顶部诱发更多的负 N400 和 LPC。多映射通路隐喻反应时较长, 在头皮顶部又发更多较正的 N400 和 LPC。实验 1 和实验 2 的结果总体上支持了单一映射通路隐喻的加工更加高效。这些结果表明, 在加工中期, 单个映射隐喻需要更多的认知资源来完成语义整合, 而在加工后期, 多个映射隐喻需要更多的认知资源来完成语义选择。总之, 单一映射通路隐喻比多重映射隐喻更容易被加工, 且不同映射通路数量的新隐喻的加工机制明显具有显著差异。

An ERP Study on the Effect of the Number of Mapping Path on Metaphor Processing

Chengshi Li¹

¹College of Psychology, Liaoning Normal University, Dalian, Liaoning Province, China

Abstract: Metaphor processing is a cognitive process of mapping from source domain to target domain. Different metaphors have different degrees of mapping difficulty, which may be related to the number of mapping paths. Metaphor career theory divides metaphor into novel metaphor, traditional metaphor and dead metaphor. The present study focused on the influence of the number of mapping path on novel metaphor processing. In an ERP experiment, a semantic judgment task was performed. The results showed that the response time of single-mapping- metaphor in the task was shorter, and it induced more negative N400 and LPC in front, middle and top of the scalp. These results suggest that in the middle stage of processing, single mapping metaphor requires more cognitive resources to complete semantic integration, while more cognitive resources were required by multiple-mapping-metaphor to complete semantic selection in the late stage. In general, single-mapping- metaphor was easier to process than multiple-mapping-metaphor and the processing mechanism of novel metaphors with different number of mapping path was obviously different.

Keywords: novel metaphor, mapping path, event-related potential

反馈间隔影响反馈加工的脑电研究

秦浩方 万楠 贾世伟

山东师范大学心理学院, 济南, 250358, jiashiwei82@126.com

摘 要 在生活中, 人们需要使用反馈信息指导行为以适应外界环境, 而反馈要想有效, 就必须在某一行为反应结束和反馈开始之间有一个延迟。反馈间隔是指学习者作出反应到接收反馈之间的时间间隔。近年来, 研究者发现, 不同的反馈间隔对反馈加工存在影响。反馈间隔过长或过短都不利于反馈加工。但已有研究尚

未发现激活反馈加工过程所需的最短反馈间隔时间,也不清楚反馈间隔间细微的变化是否也会影响反馈加工。因此,本研究试图探讨激活反馈加工过程所需的最短反馈间隔,以及随反馈间隔的变化,反馈加工过程的变化趋势。在前人研究基础上,本研究以反馈相关负波(feedback related negativity, FRN)为指标,采用时间估计任务,设置反馈间隔为 0ms、100ms、200ms、300ms,探讨 FRN 的波幅随反馈间隔变化的趋势。研究结果发现,在反馈加工过程中,即使反馈间隔为 0ms 时,学习者也可以产生对反馈结果的预期,但 200ms 反馈间隔条件下与 300ms 反馈间隔条件下诱发的 FRN 显著负于 0ms 条件下。此外,为弥补传统的时域 ERP 方法只能分析相位锁定成分的缺陷,除分析 FRN 原始波的平均波幅外,数据分析中增加了时频分析(time-frequency domains analyses)。研究结果发现, delta 能量、beta-gamma 能量对反馈效价和反馈间隔均不敏感。但 theta 能量对反馈效价有敏感的趋势,负反馈条件下 theta 能量更大。同时, theta 能量也对反馈间隔敏感, 200ms、300ms 条件下的 theta 能量显著大于 0ms 条件下的 theta 能量。以上结果表明,学习者做出行为反应后,尽管在极短的时间内就可能产生对反馈结果的预期,但还是需要一定的时间发展对反馈结果的预期,以及学习反馈信息,为后续的行为调整做准备。短时间的反馈间隔可能并不利于注意—处理奖励—调整行为—记忆巩固这一大脑整合过程的较好运行。

The effect of feedback interval on feedback processing: An ERP research

Haofang, QIN, Nan WAN, Shiwei JIA

School of Psychology, Shandong Normal University, Jinan, Shandong

Abstract: In order to guide behavior to adapt to the external environment, people use and rely on feedback information. For feedback to be effective, there must be a delay between the end of a behavioral response and the beginning of feedback. Feedback interval means the duration between initiation of behavior and the appearance of feedback stimulus. In recent years, researchers have found that different feedback intervals have an impact on feedback processing. If the feedback interval is long, learners cannot combine behavioral responses with feedback results, which is not conducive to subsequent behavior adjustment. If the feedback interval is too short, if the learner does not have enough time to expect the feedback result, it is also not conducive to feedback processing. However, no studies have found what is the shortest feedback interval required to activate the feedback processing process, and it is unclear whether subtle changes between the feedback intervals will also affect the feedback processing. This paper attempts to explore the shortest feedback interval required to activate the feedback processing process, and the change trend of the feedback processing process as the feedback interval changes. Based on previous studies, this study uses feedback related negativity (FRN) as an indicator and adopted the time estimation task and set the feedback intervals as 0ms, 100ms, 200ms and 300ms to explore the trend of FRN amplitude changing with the feedback interval. The results of the study showed that in the process of active learning, even if the feedback interval is 0 ms, learners also can produce the result of the feedback of expectations, but under the condition of 200 ms、300ms feedback intervals induced FRN significant loss to 0 ms conditions. In addition, in order to make up for the defect that the traditional time-domain ERP method can only analyze the phase-locked component, in addition to analyzing the average amplitude of the FRN original wave, time-frequency domains analyses are added to the data analysis. The research found that delta power and beta-gamma power are not sensitive to feedback valence and feedback interval. However, the theta power has a tendency to be sensitive to the feedback valence, and the theta power is larger under the condition of negative feedback. And it is sensitive to the feedback interval. The theta power under 200ms and 300ms is significantly greater than the theta power under 0 ms. In summary, this study concludes that after the learner makes a behavioral response, although the feedback result may be expected in a very short period of time, it still takes some time to develop the expectation of the feedback result and learn the feedback information to prepare for subsequent behavior adjustment. The short feedback interval may not be conducive to the attention — processing-reward — adjusted-behavior — memory consolidation of the brain integration process.

感觉记忆可能支持视觉标记机制：来自时间特性的证据

忻可云¹ 李峙¹ (通讯作者)

¹ 浙江大学心理与行为科学系, 杭州, 310000, zli1@zju.edu.cn

摘要 我们所处的世界每时每刻都会传递出海量的视觉信息, 为了能够有效地处理与我们当前任务更相关的信息, 人类发展出了视觉注意的选择机制。大量的研究发现, 记忆系统在视觉选择过程中扮演了很重要的角色, 记忆的加入可以帮助人类提升选择性注意的分配效率。然而, 过往的研究往往更关注视觉工作记忆在视觉选择中的作用, 但近来的研究却发现, 工作记忆不能解释很多相关的现象。因此, 本研究通过视觉标记现象, 探索记忆系统在该现象中表现出的时间特性, 来挖掘感觉记忆系统 (iconic memory) 或脆弱的短时记忆系统 (fragile visual short-term memory) 在视觉选择过程中可能发挥的作用。视觉标记现象是指, 在一个视觉搜索任务中, 如果先呈现一部分干扰子, 再呈现另一部分干扰子和目标, 那么视觉搜索的效率会显著提升, 该现象也被称为预览效应。作为一种依赖时间线索的视觉选择机制, 该过程必然需要记忆的支持, 且已有研究发现了工作记忆无法完全解释视觉标记机制。因此, 视觉标记机制能够帮助我们探究参与视觉选择的其他记忆系统。实验 1 和实验 2 的结果显示, 视觉标记现象中, 对旧刺激的抑制信号可以保持 600-1000 毫秒, 这样的时间特性与感觉记忆很相符, 而与工作记忆或是脆弱的短时记忆系统不符合。实验 3 的结果进一步显示, 对旧刺激的抑制信号可以通过对旧刺激间隔性的短暂 (80 毫秒) 重复呈现而不断激活, 从而使得抑制信号的保持时间长于 1500 毫秒。前人研究显示, 80 毫秒的呈现时间不足以建立视觉标记中对旧刺激的抑制信号, 因此该现象说明对旧刺激的抑制信号可以在不重新建立的情况下被不断激活, 这样的特性同样与感觉记忆很相符。三个实验对结果显示, 感觉记忆可能支持视觉标记机制。本研究的结果不仅拓展了我们对视觉选择与记忆系统的关系的认识, 还使我们对感觉记忆的认知功能有了新的理解。

Visual marking may be supported by iconic memory: Evidence from the temporal property of visual marking

Keyun Xin, Zhi Li*

Department of Psychology and Behavioral Sciences, Zhejiang University

Abstract: The world around us is full of visual information. Visual selection is the mechanism that enables us to attend to the most relevant information of the current task. Lots of studies indicated that visual memory (i.e., temporal buffer for visual information) should be supportive for visual selection. However, previous studies mostly focused on the role of working memory in visual selection, while several findings seems hard to be explained in terms of working memory. In the present study, we examined the potential role of iconic memory and/or fragile visual short-term memory in visual selection, by investigating the temporal properties of visual marking. The visual marking mechanism refers a phenomenon that the efficiency of visual search can be improved by showing a subset of distractors as a preview before the display containing the target (such improvement is also labelled the preview benefit). As a time-based selective mechanism, memory is necessarily involved in the visual marking mechanism. Also, working memory does not appear to be sufficient to explain the visual marking. Thus, we decided to rely on the visual marking mechanism to explore the supporting memory system of visual selection. Experiment 1 and 2 suggested that, after the old stimuli disappear, the effect of visual marking can persist more than 600 ms but less than 1000 ms, the duration of which is consistent with the life time of iconic memory. Experiment 3 further showed that the effect of visual marking can be extended to more than 1500 ms by repeated brief presentation (80 ms) of the old stimuli (previous works have shown that 80 ms presentation of old stimuli is not enough for visual marking to work). The present results are consistent with the idea that iconic memory may support visual marking. These findings not only extend our knowledge of the memory system underlying visual selection, but also shed new light on the function

of iconic memory.

认知负载、注意范围对认知控制的影响-基于分层漂移扩散模型的证据

张娇然 罗婷（通讯作者）

江苏师范大学教育科学学院心理系，徐州，221000，905191282@qq.com

摘要 认知控制被认为是一种积极主动的高级认知过程，受注意、记忆等因素影响。前人有关认知负载、注意范围是否共同影响认知控制的结论存在分歧，也许认知控制任务的类型起重要作用。当前研究采用 Stroop 任务以排除认知控制加工对空间选择性注意的依赖，操控工作记忆的负载水平和注意范围，以考察认知负载、注意范围对认知控制的影响。实验采用双任务范式要求被试记忆颜色的同时判断汉字（“大”或“小”）的字体大小，通过分析被试的反应时间和基于 HDDM(分层漂移扩散模型)的信号累积过程区分认知负载和注意范围对 Stroop 一致性效应的影响。实验结果表明：在反应时上，认知负载和 Stroop 一致性的主效应显著，Stroop 效应与认知负载及与注意范围均未产生交互作用；HDDM 的模型拟合良好，数据结果则表明，注意范围影响了认知控制的反应标准和非决策时间，而认知负载却干扰了认知控制的证据累积速度。本研究的结果显示，认知负载和注意范围分别对认知控制的不同加工过程起作用。当前研究首次采用 HDDM 方法，对一直存在争议的认知负载与认知控制是否共享同一认知资源提供了一种可能的解释，即随着认知负载的增加，认知控制任务的冲突解决速度受到了一定程度的影响。同时也为注意范围如何影响认知控制提供了微弱的证据。

关键词 认知控制，注意范围，认知负载，HDDM，Stroop 任务

Effects of cognitive load and attentional zoom on cognitive control: Evidence from a Hierarchical Drift Diffusion Model

Jiaoran Zhang, Ting Luo (corresponding author)

School of Education Science, Jiangsu Normal University, Xuzhou, China

Abstract: Cognitive control is considered to be an active high-level cognitive process, which is influenced by factors such as attention and memory. Previous studies on whether cognitive load and attentional zoom work together to affect cognitive control are not conclusive. It may be that the task type of cognitive control plays an important role. In the present study, the Stroop task was used to avoid the dependence of cognitive control processing on spatial selective attention. Additionally, the load level and attentional zoom of the working memory task were also manipulated, to investigate the effects of cognitive load and attentional zoom on cognitive control. In the experiment, the dual-task paradigm was used and participants were required to remember colors and judge the font size of Chinese characters ("Big" or "Small"). The reaction times and signal accumulation processes based on HDDM (Hierarchical Drift Diffusion Model) were analyzed to detect the effects of cognitive load and attentional zoom on the Stroop consistency effect. On the measurement of response time, the results showed that the main effects of cognitive load and Stroop congruency were significant and that Stroop congruency did not interact with cognitive load nor with attentional zoom. The HDDM fitted well. The results showed that attentional zoom affected the response criteria and non-decision time of cognitive control on one side. On the other side, cognitive load interfered with the speed of evidence accumulation for cognitive control. The results of this study indicated that cognitive load and attentional zoom play an important part in different processes of cognitive control. The present study initially utilized the HDDM to provide a possible explanation for whether cognitive load and cognitive control share the same cognitive resources. Specifically, with the increase of cognitive load, the speed of conflict resolution of cognitive control tasks was affected to some extent. It also provides weak evidence for how attentional zoom affects cognitive control.

Keywords: cognitive control, attentional zoom, cognitive load, HDDM, Stroop task

分心物突显程度、与目标物距离和语言提示

对 5~6 岁儿童视觉空间注意的影响

梁九清¹ 杨晓¹ 李晗² 李汶娜¹ 卫少迪¹ 曲方炳³ (通讯作者)

1 首都师范大学学前教育学院, 北京, 100048 2 北京市第五幼儿园分园, 北京, 100061

3 首都师范大学学前教育学院, 北京, 100048, qufangbing@cnu.edu.cn

摘要 在儿童早期, 注意对其它各领域的发展有重要影响。本研究采用视觉搜索范式, 通过两个实验考察分心物突显程度、与目标物距离和语言提示对 5~6 岁儿童视觉空间注意的影响。实验 1 采用 2 (分心物突显程度: 低/高) × 2 (分心物与目标距离: 近/远) 两因素被试内实验设计, 探究分心物突显程度对 5~6 岁儿童视觉空间注意的影响, 以及局部注意干扰效应。实验 2 采用 3 (提示内容: 空间提示/客体提示/特征提示) × 2 (提示方式: 直接提示/间接提示) × 2 (分心物与目标距离: 近/远) 三因素被试内实验设计, 进一步探究提示内容和提示方式对 5~6 岁儿童视觉空间注意的影响。结果发现, 与分心物突显程度低的条件相比, 当分心物突显程度高时, 被试对目标判断的反应时显著更长, 在正确率上两者差异不显著; 分心物与目标距离近时, 对目标判断的正确率显著更低, 反应时差异不显著, 显示存在局部注意干扰效应 (实验 1)。直接提示下儿童的视觉空间注意要优于间接提示; 基于空间提示的效果要优于特征提示和客体提示; 并且在有提示下, 局部注意干扰效应消失 (实验 2)。可见, 来自分心物的突显程度、与目标物距离和语言提示均会影响 5~6 岁儿童的视觉空间注意, 体现了自下而上和自上而下加工对于儿童视觉注意的影响。

关键词 分心物突显程度, 局部干扰效应, 提示, 视觉空间注意

Effects of distractor salience, distance from objects and verbal cues on visual spatial attention in 5-6 year old children

Abstract: In the early childhood, attention have important effects on the development of other fields. This research adopted visual search paradigm to investigate the effects of distraction salience, distance from objects and verbal cues on visual spatial attention in children aged 5-6 years through two experiment. Experiment 1 used a 2 (distractor salience, low VS high) x 2 (distance between distractor and target, near VS far) within-subject design to explore the effect of distractor salience on visual spatial attention of 5-6 year old children, as well as localized attention interference. Experiment 2 used a 3 (cue content, space VS object VS feature) x 2 (cue mode, direct VS indirect) x 2 (distance between distractor and target, near VS far) within-subject design to further explore the effects of cue content and cue mode on visual spatial attention of 5-6 year old children. The results showed that compared with the condition of low distractor salience, when the distractor salience was high, the participants' response time to target judgment was significantly longer, and there was no significant difference in accuracy between the two conditions. When the distractor is close to the target, the accuracy of target judgment is significantly lower, and the difference of response time is not significant, indicating the presence of local attentional interference effect (experiment 1). Children's visual spatial attention under direct cues is better than under indirect cues. The effect of spatial cue is better than feature cue and object cue. In addition, the local attentional interference effect disappeared when there was a cue (experiment 2). It can be seen that the salience of the distractors, the distance from the target objects and the verbal cues all affect the visual spatial attention of children aged 5-6, which reflects the impact of bottom-up and top-down processing on children's visual attention.

Keywords: distractor salience, local attention interference effect, cue, visual spatial attention

摘 要 大连市是一个以旅游业为主的城市，大连城市的市中心是以两个商业广场为中心点的城市，多个商业中心的城市容易造成车辆拥堵，本身人口流量大的特点，会使大连市的出行者相对比较困难。对于很多长时间居住在大连市区的人来说，通勤距离成为了很多人选择工作的重要原因。但是由于经济的发展，城市中心的房屋价格提升、市区内公司规模有限等因素，企业办公地点逐渐迁移，通勤时间带来的职业幸福感的问题越来越多。本研究采用 1989 年经 Roznowski 修订的工作描述指数量表对 114 名大连市出行者的职业幸福感进行调查，对有效数据进行独立样本 T 检验，结果显示，通勤时间短的员工和通勤时间长的员工之间的职业幸福感测试存在显著差异， $t(112) = 8.239$, $P < 0.05$ 。具体而言，通勤时间能够影响员工的职业幸福感，通勤时间长的员工其职业幸福感更低。此外，在工作描述指数量表的 5 个维度中，通勤时间对工作岗位的满意度、对上司满意度、对同事满意度均有显著影响，均表现为通勤时间的增长，其满意度就低。这既与“不患寡而患不均”这样的传统思想有关，又与现代经济学中的时间成本有关。这个结论给了很多企业一些关于员工通勤方面的建议，比如通勤车的设置、员工公寓的设置等等，通过缩短通勤时间来提升员工的职业幸福感，从而为企业、为社会创造出更多更优质的产值。

关键词 上班族，职业幸福感，通勤时间

The Influence of Commuting Time on Occupational Well-being of White-collar Workers in Dalian

SONG Shuang¹, ZHAO Zhenrong², LI Feng²

1 College of Preschool Education, Liaoning Institute of Education, Shenyang 110169, China

2 Faculty of Applied Psychology, Shenyang City University, Shenyang 110112, China

Abstract: Dalian is a city with tourism as the main city. The center of Dalian city is a city with two commercial squares as the center. Cities with multiple commercial centers are easy to cause traffic congestion. The characteristics of large population flow in itself will make it relatively difficult for Dalian to travel. For people who have lived in Dalian city for a long time, commuting distance has become an important reason why many people choose to work. However, due to the development of economy, the housing prices in urban centers have increased, and the office locations of enterprises have gradually moved. The problems of occupational well-being brought by commuting time are more and more. In this study, the job description index revised by roznowski in 1989 was used to investigate the occupational well-being of 114 travelers in Dalian. The independent sample t-test was conducted on the valid data. The results showed that there was a significant difference in the occupational well-being between the employees with short commuting time and those with long commuting time, $t(112) = 8.239$, $P < 0.05$. In other words, commuting time can affect employees' occupational well-being, and employees with long commuting time have lower occupational well-being. In addition, in the five dimensions of the job description index, commuting time has a significant impact on job satisfaction, supervisor satisfaction and colleague satisfaction, all of which show that the increase of commuting time leads to low satisfaction. This is not only related to the traditional idea of "not suffering from oligopoly, but also to the time cost in modern economics.". This conclusion gives a lot of enterprises some suggestions on employees' commuting, such as the setting of commuter cars, the setting of employees' apartments and so on. By shortening the commuting time, employees' occupational well-being can be improved, so as to create more and better output value for enterprises and society.

摘要 随着积极心理学的发展，工作投入受到积极组织行为学和职业健康领域学者们的广泛关注。一些研究揭示工作家庭冲突对个体的行为和态度具有重要影响，但较少有研究探讨工作家庭冲突对工作投入的影响。本研究主要探讨工作满意度在工作家庭冲突和工作投入关系中是否存在中介作用以及组织承诺是否调节这一中介效应。采用工作家庭冲突问卷、工作满意度问卷、组织承诺问卷和工作投入问卷对 358 名中小学校长进行调查。结果发现：(1) 工作家庭冲突对中小学校长工作满意度 ($\beta = -0.15, t = -3.80, p < 0.001$) 和工作投入 ($\beta = -0.31, t = -5.46, p < 0.001$) 均存在显著地负向预测作用，而工作满意度对工作投入存在显著地正向预测作用 ($\beta = 0.59, t = 8.06, p < 0.001$)；(2) 工作满意度在工作家庭冲突与工作投入关系中存在部分中介作用 (间接效应 = $-0.09, 95\% CI = [-0.32, -0.12]$)；(3) 组织承诺在工作满意度和工作投入关系中调节效应显著 ($\beta = -0.32, p < 0.01, 95\% CI = [-0.53, -0.10]$)，具体表现为在高低组织承诺条件下，工作满意度对工作投入均存在显著地预测作用 ($b_{simple slope} = 0.36, t = 3.98, p < 0.001$; $b_{simple slope} = 0.68, t = 7.26, p < 0.001$)。这表明工作家庭冲突能直接影响中小学校长们的工作投入，也能通过工作满意度对其产生间接地影响，且这一关系在不同组织承诺水平下有所不同，随着组织承诺水平的增加，工作投入水平也会增加。本研究有助于更好地理解工作家庭冲突对工作投入的影响，也为提升中小学校长工作投入奠定了理论基础。

1 School of Psychology, Guizhou Normal University, Guiyang, 55001

2 School of Psychology, Inner Mongolia Normal University, Hohhot, 010022

Abstract: With the development of positive psychology, work engagement has received widespread attention from researchers in the fields of positive organizational behavior and occupational health. Some studies revealed that work-family conflict have an important impact on individual behaviors and attitudes, but little research has studied the impact of work-family conflict on work engagement. The present study examined whether job satisfaction mediated the relation work-family conflict and work engagement, and whether the mediating effect was moderated by organizational commitment. 358 primary and secondary school principals was surveyed by using the work-family conflict scale, job satisfaction scale, organizational commitment scale, and work engagement scale. The results found that: (1) the working-family conflict had a significantly and negatively predictive effect on the job satisfaction ($\beta = -0.15, t = -3.80, p < 0.001$) and work engagement ($\beta = -0.31, t = -5.46, p < 0.001$) of primary and secondary school principals, while the job satisfaction had a significantly and positively predictive effect on the work engagement ($\beta = 0.59, t = 8.06, p < 0.001$); (2) job satisfaction plays an mediation role in the relationship between working-family conflict and work engagement of primary and secondary school principals (indirect effect = $-0.09, 95\% CI = [-0.32, -0.12]$); (3) the moderating effect of organizational commitment in the relationship between job satisfaction and work engagement was significant ($\beta = -0.32, p < 0.01, 95\% CI = [-0.53, -0.10]$), especially the relationship between family job satisfaction and work engagement was significant for primary and secondary school principal with high and low organizational commitment ($b_{simple slope} = 0.36, t = 3.98, p < 0.001$; $b_{simple slope} = 0.68, t = 7.26, p < 0.001$). This indicates that work-family conflict can directly affect the work engagement of primary and secondary school principals, and can also indirectly affect them through job satisfaction. Moreover, this relationship varies with different levels of

organizational commitment, which the increasing of organizational commitment level, the level of work engagement will also increase. This study helps to better understand the impact of work-family conflict on work engagement, and lays a theoretical foundation for improving the work engagement of primary and secondary school principals.

摘要 事故调查显示, 由飞行员人为因素导致的事故占整个飞行事故的 78.6%, 其中 56.5% 的事故与飞行员决策失误有关。计划延续失误(plan continuation errors, PCEs)作为一种典型的飞行员决策失误类型, 是指飞行员未根据实时情境变化及时调整已不安全的原飞行计划, 仍然按原计划持续飞行的现象, 通常发生在天气相关决策情境中, 表现为飞行员无意或有意地采用目视飞行规则操纵飞机进入仪表气象条件。这种情况下, 飞行员因缺乏对地平面的视觉参考信息, 瞬间失去对飞机状态控制的心理模型和认知技能, 从而造成灾难性后果。本研究通过回顾和梳理已有飞行员计划延续失误的文献, 分别从情境评估、决策框架和认知偏差三个角度对计划延续失误的心理机制进行了阐述和解释。其中, 情境评估机制认为计划延续失误主要源于飞行员在飞行过程中完全没有意识到恶劣的天气状况, 或者没有准确诊断天气变化及其严重程度; 决策框架机制认为计划延续失误是由飞行员的期望构建所致, 到达目的地的强烈期望导致飞行员低估了天气的恶劣程度; 认知偏差机制认为计划延续失误主要源于锚定偏差、证实性偏差、结果偏差等影响了飞行员对天气信息加工的准确性。此外, 本研究还概括出计划延续失误的内部(包括飞行经验、人格和情绪)和外部(包括天气雷达显示系统、飞行环境、组织和社会压力)影响因素, 并总结归纳出可以通过加强飞行员天气相关训练, 改良仪表和自动化设计两种措施来预防计划延续失误的发生。最后指出了飞行员计划延续失误在未来研究的方向, 包括深入探究计划延续失误的发生机制, 开展飞行员天气线索利用特征的研究, 开发更加全面的预防措施等方面。

The psychological mechanism, influencing factors and preventive measures of pilots' plan continuation errors

Xu Quan^{1,2}, Ji Ming^{1,2}, You Xuqun^{1,2}

1 School of Psychology, Shaanxi Normal University, Xi'an, 710062

2 Key Laboratory for Behavior and Cognitive Neuroscience of Shaanxi Province, Xi'an, 710062

Abstract: The accident investigation revealed that accidents caused by pilots' human factors accounted for 78.6% of the total flight accidents, and 56.5% of the accidents were related to pilot errors in decision-making. Plan continuation errors (PCEs), as a typical type of pilot decision-making errors, refer to the phenomenon that the pilots fail to adjust the unsafe original flight plan in time according to real-time situation changes, and continue to fly according to the original plan. This usually occurs in weather-related decision-making situations, it is manifested as pilots unintentionally or intentionally use visual flight rules to control the aircraft into instrument weather conditions. In this case, the pilot loses the mental model and cognitive skills to control the aircraft's state due to lack of visual reference information on the ground plane, causing catastrophic consequences. By reviewing and sorting out the literature of existing pilots' plan continuation errors, this study elaborated and explained the psychological mechanism of plan continuation errors from the perspectives of situation assessment, decision-making framework and cognitive bias. Among them, the situation assessment mechanism believes that the plan continuation errors are mainly caused by the pilots not being aware of severe weather conditions during the flight, or failing to accurately

diagnose the weather changes and their severity; the decision-making framework mechanism believes that the plan continuation errors are constructed by the pilots' expectations. As a result, the strong expectation of reaching the destination led the pilots to underestimate the severity of the weather. The cognitive bias mechanism believes that the plan continuation errors are mainly due to anchoring bias, confirmation bias, and outcome bias, which affect the accuracy of the pilot's weather information processing. In addition, this study also summarizes the internal (including flight experience, personality and emotions) and external (including weather radar display system, flight environment, organizational and social pressure) influencing factors of plan continuation errors, and concludes that it can be achieved by strengthening pilot weather-relevant training, improved instrument and automatic design two measures to prevent the occurrence of plan continuation errors. Finally, it pointed out the direction of future research on pilots' plan continuation errors, including in-depth exploration of the mechanism of plan continuation errors, research on the characteristics of pilots' weather clue utilization, and development of more comprehensive preventive measures.

听觉任务类型与飞行经验对飞行员情境意识的影响 ——基于眼动的证据

解旭东¹² 李甜田¹² 邱燕¹² 姬鸣¹² (通讯作者)

1 陕西师范大学心理学院, 西安, 710062

2 陕西省行为与认知神经科学重点实验室, 西安, 710062, jiming@snnu.edu.cn

摘 要 情境意识是个体对动态环境信息的感知、理解以及对未来状态的预测。视觉信息对情境意识的维持至关重要, 但飞行员常需要同时处理视觉和听觉两种任务, 听觉任务输入在一定程度上影响其认知处理过程。工作记忆是保障飞行员维持良好情境意识的重要认知功能。有研究者认为, 工作记忆对情境意识的影响方向和程度受经验的调节。然而, 不同听觉任务引起的认知负荷对情境意识的影响效果及飞行经验在其中的作用尚未明确。本研究的目的在于探讨听觉任务类型与飞行经验对飞行员情境意识的影响及作用机制。本实验招募 17 名航线飞行员与 17 名大四飞行学员, 采用 2 (听觉任务类型: 听觉工作记忆任务 vs. 听觉计算任务) × 2 (飞行经验: 专家 vs. 新手) 混合设计。被试完成两次模拟定向飞行任务, 并在飞行过程中完成听觉 2-back 任务与听觉计算任务。以冻结探测方法采集被试模拟飞行任务的情境意识得分, 同时采集眼动数据 (任务相关兴趣区的平均注视时间、平均注视率和眼动熵) 作为因变量指标。结果表明: (1) 在情境意识得分方面, 听觉任务类型和飞行经验的主效应与交互效应均显著, 新手飞行员在听觉 2-back 任务下情境意识得分显著小于听觉计算任务下得分。(2) 在眼动指标方面, 飞行经验对眼动熵的主效应显著, 听觉任务类型与飞行经验对任务相关兴趣区的平均注视时间、注视率的主效应与交互效应均显著, 新手飞行员在听觉 2-back 任务下对任务相关兴趣区的平均注视时间、注视率显著低于听觉计算任务下的表现。因此, 本研究得出如下结论: 视听双任务条件下, 听觉工作记忆负荷对新手飞行员情境意识的损害比一般听觉认知负荷的损害更严重; 专家飞行员比新手的视觉扫描模式更有规律性; 由听觉任务引起的工作记忆负荷对新手飞行员的视觉注意产生负面影响, 降低情境意识。本研究结论拓展了双任务条件下情境意识相关理论, 并为飞行员维持良好情境意识的训练提供了科学依据。

The Effect of Auditory Task Type and Flight Experience on Pilots' Situation Awareness——An Eye-movement Study

Xudong Xie¹², Tiantian Li¹², Yan Qiu¹², Ming Ji¹²

1 School of Psychology, Shaanxi Normal University, Xi'an, Shaanxi, 710062, China

2 Shaanxi Key Laboratory of Behavior and Cognitive Neuroscience, Xi'an, Shaanxi, 710062, China
Abstract: Situation awareness is defined as the individual's perception and comprehension of dynamic environmental information and the projection of the future state. Visual information is crucial to the maintenance of situation

awareness, pilots often need to handle both visual and auditory tasks at the same time, and the input of auditory tasks affect their cognitive processing to a certain extent. Working memory is an important cognitive function to guarantee pilot maintain good situation awareness. Some researchers purposed that the direction and degree of the effects of working memory on situation awareness are mediated by experience. However, the effect of cognitive load caused by different auditory tasks on situation awareness and the role of flight experience in this process are still not clear. The purpose of this study was to investigate the effects of different auditory task type and flight experience on pilots' situation awareness and the mechanism. Methods: This experiment recruited 17 airline pilots and 17 senior pilot cadets, and used 2 (auditory task type: auditory working memory task vs. auditory calculating task) $\times$ 2 (flight experience: expert vs. novice) mixed design. Participants completed two simulated directional flight tasks, and completed auditory 2-back task and auditory calculating task during the flight. The freezing probe technique was used to collect participants' situation awareness scores in simulated flight tasks, and eye movement data (average fixation time of the task-related AOIs, average fixation rate of the task-related AOIs, and entropy) were collected as dependent variables. The results show that: (1) In terms of situation awareness score, the main effects and interaction effects of auditory task type and flight experience were significant. The situation awareness score of novice pilots in auditory 2-back task was significantly lower than that of auditory calculating task. (2) In terms of eye movement indicators, the main effect of flight experience on entropy was significant; the main effects and interaction effects of auditory task type and flight experience on average fixation time and average fixation rate of the task-related AOIs were significant. The average fixation time and fixation rate of novice pilots on the task-related AOIs in auditory 2-back task were significantly lower than those in auditory calculating task. Therefore, this study concluded that: the damage of auditory working memory load to novice pilots' situation awareness is more serious than that of general auditory cognitive load in audio-visual dual task condition; the visual scanning pattern of expert pilots is more regular than that of novice pilots; the working memory load caused by auditory task negatively affect the visual attention of novice pilots and reduce situation awareness. The conclusions of this study expand the relevant theories of situation awareness in dual-task conditions, and provide scientific bases for pilots training to maintain good situation awareness.

真实型领导如何影响工作绩效和组织公民行为：心理资本的中介作用

张元元¹ 李春琴¹ 宫淮¹ (通讯作者)

¹ 青岛大学师范学院心理系, 青岛, 266000, gongzhun2001@163.com

摘要 随着我国医疗卫生行业的不断发展, 人们对于医疗服务的需求不断提高, 医院的中层领导作为承上启下的关键人物, 对于发挥公立医院的医疗服务功能以及各部门的统筹协调都产生了举足轻重的影响。Luthans和Avolio在总结积极心理学和积极组织行为学基础上提出的真实型领导理论, 即真实型领导是一种把领导者的积极心理能力与高度发展的组织情境结合起来发挥作用的过程, 对员工工作绩效和组织公民行为都有正向影响。本研究则以真实型领导理论作为理论基础, 选取了青岛市6家公立医院的362名员工作为被试, 采用调查问卷法来揭示真实型领导行为、心理资本、工作绩效和组织公民行为之间的关系。结果表明: (1) 真实型领导与心理资本呈显著正相关($\beta=0.402$, $p<0.001$)。 (2) 真实型领导、心理资本与员工工作绩效呈显著正相关($\beta=0.412$, $p<0.001$; $\beta=0.179$, $p<0.001$)。 (3) 真实型领导、心理资本与员工组织公民行为呈显著正相关($\beta=0.444$, $p<0.001$; $\beta=0.524$, $p<0.001$)。 (4) 心理资本在真实型领导和员工工作绩效间起中介作用。 (5) 心理资本在真实型领导和员工组织公民行为间起中介作用。首先, 在理论上, 本研究验证了真实型领导能够影响员工的工作绩效以及组织公民行为, 并探明了其作用机制。其次, 在实践中, 对对公立医院的管理实践工作具有一定的指导意义。并且指出在未来研究中应采用纵横交叉式和领导-员工配对评价的研究方法, 以验证因果关系和避免社会赞许性偏见。

关键词 真实型领导, 心理资本, 工作绩效, 组织公民行为

The Influence of Authentic Leadership on Job Performance and Organizational Citizenship Behavior: The Mediating Effect of Psychological Capital

Yuanyuan Zhang¹, Li Chunqin¹, Gong Zhun¹ (Corresponding author)

¹ Department of Psychology, Normal College, Qingdao University, Qingdao, 266071,
gongzhun2001@163.com

Abstract: With the continuous development of China's medical and health industry, people's demand for medical services is constantly improving. As a key link between the preceding and the following, the middle-level leaders of hospitals have exerted a decisive influence on the development of the medical service function of public hospitals and the integration and coordination of various departments. On the basis of summarizing positive psychology and positive organizational behavior, Luthans and Avolio put forward the theory of authentic leadership, that is, authentic leadership is a process that combines the positive psychological ability of leaders with highly developed organizational situations, and has a positive impact on employee performance and organizational citizenship behavior. Based on the theory of authentic leadership, this study selected 362 employees from 6 public hospitals in Qingdao as subjects, and adopted the questionnaire method to reveal the relationship between authentic leadership behavior, psychological capital, job performance and organizational citizenship behavior. The results show that: (1) there is a significant positive correlation between authentic leadership and psychological capital ($\beta=0.402$, $p<0.001$). (2) Authentic leadership and psychological capital are positively correlated with employee performance ($\beta=0.412$, $p<0.001$; $\beta=0.179$, $p<0.001$). (3) Authentic leadership, psychological capital and organizational citizenship behavior are positively correlated ($\beta=0.444$, $p<0.001$; $\beta=0.524$, $p<0.001$). (4) Psychological capital plays a mediating role between authentic leadership and employee performance. (5) Psychological capital plays a mediating role between authentic leadership and organizational citizenship behavior. First of all, theoretically, this study verifies that real leadership can affect employees' job performance and organizational citizenship behavior, and explores its mechanism of action. Secondly, in practice, it has certain guiding significance to the management practice of public hospitals. It also points out that cross-sectional and leader-employee pairing evaluation should be adopted in future studies to verify the causal relationship and avoid social desirability bias.

Keywords: authentic leadership, psychological capital, job performance, organizational citizenship behavior

顾客言语侵犯如何影响服务人员离职倾向及工作倦怠——组织氛围和心理资本的作用

孙瑜谦¹ 李春琴¹ 宫淮¹ (通讯作者)

¹ 青岛大学师范学院心理系, 青岛, 266000, gongzhun2001@163.com

摘要 近年来,随着我国经济增长快速,占比最多的第三产业-服务行业得到了大众的关注,如何改善服务人员的消极感受,缓解职业倦怠的状况是有关服务行业的研究热点。本研究立足于资源守恒理论(Conservation of Resources Theory, COR),当个体的内在心理资源不足以消化其所面对的压力时,外界的因素同样可以帮助员工解决其负性的情绪,从而减少负性行为的发生概率。顾客对服务人员的言语态度对其离职倾向和工作倦怠程度具有一定的影响。本研究以345位销售业服务人员为被试,考察了组织氛围和心理资本在顾客言语侵犯与销售人员的离职倾向及工作倦怠的影响关系中的调节作用。结果表明:(1)顾客言语侵犯对销售人员离职倾向和工作倦怠存在显著的正向相关作用($\beta=0.139$, $p<0.01$; $\beta=0.134$, $p<0.01$);(2)组织氛围对顾客言语侵犯和销售人员的离职倾向及工作倦怠之间的关系具有负向调节作用;(3)心理资本对顾客言语侵犯和销售人员的离职倾向之间的关系具有负向调节作用。首先,理论上,本文创新性地探究了顾客言语侵犯对服务人员离职倾向以及工作倦怠的影响,并探明了其作用机制。其次,在实践上,本文对于服务行业的长久发展提供了一定的指导借鉴意义。

The influence of customer's verbal abuse on turnover intention and job burnout of sales service staff ——the adjustment of organizational atmosphere and psychological capital

Yuqian Sun¹, Li Chunqin¹, Gong Zhun¹ (Corresponding author)

¹Department of Psychology, Normal College, Qingdao University, Qingdao, 266071,
gongzhun2001@163.com

Abstract: In recent years, with the rapid economic growth in China, the service industry, which accounts for the largest proportion of the tertiary industry, has attracted the attention of the public. How to improve the negative feelings of service personnel and alleviate the situation of job burnout has become a hot research topic in the service industry. This study is based on the Conservation of Resources Theory (COR). When an individual's internal psychological Resources are not enough to digest the pressure they are facing, external factors can also help employees solve their negative emotions, so as to reduce the probability of negative behaviors. The verbal attitude of customers towards service personnel has a certain influence on their turnover intention and job burnout. This study investigated the moderating effect of organizational atmosphere and psychological capital on the relationship between customer verbal aggression and turnover intention and job burnout of sales staff with 345 sales service personnel as subjects. The results showed that : (1) there was a significant positive correlation between customer verbal aggression on turnover intention and job burnout of sales staff ($\beta=0.139$, $p<0.01$); (2) Organizational atmosphere has a negative regulating effect on the relationship between verbal aggression of customers, turnover intention of sales staff and job burnout; (3) Psychological capital has a negative regulating effect on the relationship between verbal aggression of customers and turnover intention of sales staff. Firstly, theoretically, this paper creatively explores the impact of customer speech aggression on the turnover intention and job burnout of service personnel, and explores the mechanism of action. Secondly, in practice, this paper provides some guidance for the long-term development of the service industry.

Keywords: verbal aggression, turnover intention, job burnout, organizational atmosphere, psychological capital

意义建构对飞行员安全合规性的影响 ——心理授权与安全态度的链式中介效应

唐睿翼¹ 林靖康¹ 游旭群¹ (通讯作者)

¹ 陕西师范大学心理学院, 西安, 710062, youxuqun@snnu.edu.cn

摘要 随着智能化技术的发展与应用, 航空事故逐渐由人为因素主导, 作为航空活动的主体, 飞行员的安全行为与航空安全密切相关。Griffin 与 Neal (2000) 基于 Borman 和 Motowidlo 的二维工作绩效模型, 将安全行为 (Safety Behavior) 分为安全参与 (Safety Participation) 与安全合规性 (Safety Compliance)。其中, 安全合规性包含深层合规性 (Deep Compliance) 与表层合规性 (surface compliance), 是指根据组织完成任务 (即安全规则和程序) 的正式安全要求而执行的行为。已有研究表明, 安全态度与心理授权对安全行为具有正向预测作用, 且安全态度与心理授权存在相关性, 心理授权的工作意义和工作自主性维度是安全态度的影响因素。此外, 意义构建理论 (Sense-Making Theory) 表明, 意义构建允许个人建构和设计自身时空运动的内部 (即认知) 和外部 (即程序) 行为, 为个体行为提供合理解释, 将个体行为与工作的知识、规范与要求紧密联系, 通过改变个体态度, 从而提高个体的自我价值感与效能感, 增强个体对工作意义与工作自主性的认识, 再根据行为动力理论与计划行为理论, 由内部动机变量 (如心理授权) 和社会认知变量 (如态度) 来改变安全行为的模式。因此, 以飞行员为被试, 探讨与航空安全、安全行为相关的意义建构对深层安全合规性和表层安全合规性的影响, 及心理授权与安全态度的链式中介作用, 有助于理解飞行员的不安全行为与设计有关安全教育或行为干预的具体方案。基于已有研究的基础, 考虑到飞行员的内隐安全态度与外显安全态度的分离性已经被证明且两者呈现正相关, 故采用飞行员适用的飞行管理态度问卷 (FMAQ 2.0) 或内隐联想测验 (晏碧华, 2015) 等标准化测验, 编制或修订意义建构量表、安全合规性量表 (Xiaowen Hu 等, 2020)

与心理授权量表（李超平等，2006）等适用于飞行员群体的量表，将有助于检验意义建构、心理授权、安全态度影响安全合规性的路径模型。最后，结合访谈法与问卷调查法进行考察，以期证明心理授权和安全态度在意义建构与安全合规性之间的链式中介作用，以及心理授权和安全态度在意义建构与安全合规性之间的中介作用。

关键词 安全合规性，意义建构，心理授权，安全态度，链式中介模型

The influence of sense-making on pilot safety compliance: the chain mediating effect of psychological empowerment and safety attitude

Tang Ruiyi¹, Lin Jingkang¹, You xuqun¹

Shaanxi Normal University, Xi'an.

Abstract: With the development and application of intelligent technology, aviation accidents are gradually dominated by human factors. As the main body of aviation activities, the safety behavior of pilots is closely related to aviation safety. Griffin and Neal (2000) divided safety behavior into safety participation and safety compliance based on Borman and Motowidlo's two-dimensional work performance model. Among them, safety compliance includes deep compliance and surface compliance, which refers to the behavior performed according to the formal safety requirements of the organization to complete tasks (i.e. safety rules and procedures). Previous studies have shown that safety attitude and psychological empowerment have a positive predictive effect on safety behavior, and there is a correlation between safety attitude and psychological empowerment. The work meaning dimension and work self-determination dimension of psychological empowerment are the influencing factors of safety attitude. In addition, sense-making theory shows that sense-making allows individuals to construct and design their own internal (i.e. cognitive) and external (i.e. procedural) behaviors of space-time movement. Sense-making provides a reasonable interpretation of individual behavior and closely connects individual behavior with the knowledge, norms and requirements of work. By changing the individual attitude, sense-making improves the individual's sense of self-worth and self-efficacy, and enhances the individual's understanding of work meaning and work self-determination. Then, according to behavioral dynamics theory and planned behavior theory, sense-making can change the mode of safe behavior through internal motivation variables (such as psychological empowerment) and social cognitive variables (such as attitude). Therefore, taking pilots as subjects, this paper discusses the impact of sense-making related to aviation safety and safety behavior on deep safety compliance and surface safety compliance, and the chain intermediary role of psychological authorization and safety attitude. This will help to understand the unsafe behavior of pilots and design specific programs related to safety education or behavior intervention. Based on the existing research, considering that the separation of pilots' implicit safety attitude and explicit safety attitude has been proved, and there is a positive correlation between them. Therefore, adopting standardized tests such as flight management attitude questionnaire (FMAQ 2.0) or implicit association test (Yan Bihua et al., 2015) applicable to pilots and compiling or revising scales applicable to pilot groups such as sense-making scale, safety compliance scale (Xiaowen Hu et al., 2020) and psychological empowerment scale (Li Chaoping et al., 2006) will help to test the path model of sense-making, psychological empowerment and safety attitude affecting safety compliance. Finally, combined with interview and questionnaire survey, this paper aims to prove the chain intermediary role of psychological empowerment and safety attitude between sense-making and safety compliance, as well as the intermediary role of safety attitude between sense-making and safety compliance, and the intermediary role of psychological empowerment between sense-making and safety compliance.

父母教养行为对青少年领导力涌现的影响

朱黎明¹ 徐建平¹ (通讯作者)

1 北京师范大学心理学部, 北京, 100785, xujp@bnu.edu.cn

摘要 领导力涌现是指在一个没有正式领导的群体内部, 个体对其他成员所表现出的领导力的感知过程, 领导力的涌现是个体表现出有效领导力的前提。已有研究表明较高的领导者自我效能感和领导动机能促进领导力涌现, 但是相关研究的对象以成人为主, 关于青(少)年领导力的研究则非常稀少。本研究从领导力终生发展的角度切入, 欲探讨负性教养行为, 尤其是父母心理控制对青(少)年领导力涌现影响的机制。

由于关于青少年领导力发展的研究较少, 相关理论缺乏, 同时, 为了获得更多源有效的数据, 研究采用混合研究方法中的探索性时序设计, 实施了三个子研究。研究一为质性研究, 研究者依据制定的访谈提纲对30名16-20岁的高中生和大学生进行深入访谈, 旨在探究影响青(少)年领导力涌现的典型负性教养行为以及这一过程中的影响因素及机制。研究二为实验室研究, 目的在于验证质性研究的结果。实验招募50名初、高中生为被试, 分为6个小组完成6~10人规模的无领导小组讨论任务, 根据任务表现评估被试的领导力涌现水平, 并用问卷测量被试的父母心理控制、观点采择、基本心理需求(自主维度)、领导动机和领导者自我效能感五个变量。研究三为现场研究, 在线发放600份调查问卷以重复研究二的结果。对研究一的访谈数据进行编码分析, 结果发现父母心理控制有损青(少)年三种基本心理需求的满足, 同时影响青(少)年领导他人的愿望和承担领导角色的自信心, 在不同父母心理控制水平下成长的青少年, 其担任领导角色的情况有所差别。部分青(少)年对父母教养行为的理解缓解了父母心理控制带来的影响。研究二的结果与研究一基本耦合, 验证了质性研究的发现。研究三重复验证已有结果, 加强了理论模型的生态效度。研究表明, 父母心理控制会降低青(少)年自主需求的满足, 通过降低领导动机或领导者自我效能感从而抑制领导力涌现, 青(少)年观点采择能力较高时, 领导力涌现水平更高。本研究从领导力终生发展的角度拓展了领导力领域的研究, 同时研究所采用的混合研究方法则从方法论的角度丰富了有关领导力的研究。

关键词 父母教养行为, 基本心理需求, 观点采择, 领导力涌现

Influence of parenting behaviors on youth leadership emergence

Liming Zhu¹, Jianping Xu¹

1 Department of Psychology, Beijing Normal University, Beijing 100875, China

Abstract: Leadership emergence, which is a prerequisite for individuals to show effective leadership, refers to the process of perception of leadership by others displayed by team members in a leaderless group. Based on previous research, leadership emergence will be promoted when individuals have a high sense of self-efficacy and strong motivation to lead. The subjects of related research are mainly adults, while research on youth leadership has been scarce. This research stands on the perspective of leader development across the lifespan, in order to explore the mechanism by which negative parenting behaviors influence the leadership emergence in youth. Due to the lack of research on youth leadership development and the lack of relevant theories, and in order to obtain more valid data from multiple sources, this research adopted the exploratory sequential design in the Mixed-methods and three sub-studies were conducted. Study 1 is a qualitative study. Aiming to explore the typical negative parenting behaviors that influence the leadership emergence in youth and the factors and mechanisms in this process, researchers conducted in-depth interviews with 30 high school and college students aged between 16 and 20 according to the interview outline formulated before. Study 2 is a laboratory study, aimed at verifying the results of Study 1. 50 junior high and high school students were recruited as subjects, divided into six groups to complete leaderless group discussion scaled 6 to 10 people. The level of leadership emergence of the subjects was assessed by the task performance. Five variables including parental psychological control, perspective-taking, basic psychological needs (Autonomy dimension), motivation to lead and leader self-efficacy were measured by questionnaires. Study 3 is a field research, and 600 questionnaires were distributed online to replicate the results of Study 2. Coding and analysis of the interview data of Study 1 showed that parental psychological control damages the satisfaction of the three basic psychological needs of youth, and at the same time affects youth's desire to lead others and self-confidence in

assuming leadership roles. Youth who grew up under different levels of parental psychological control have different situation in assuming leadership roles. Some adolescent's and teenagers' understanding of their parents' parenting behaviors alleviates the negative influence of parental psychological control. The results of Study 2 and Study 1 were coupled, verifying the findings of the qualitative study. Study 3 repeatedly verified the existing results and strengthened the ecological validity of the theoretical model. The research showed that parental psychological control will reduce the satisfaction of autonomy needs of adolescents and teenagers, and will inhibit the leadership emergence by reducing motivation to lead or leadership self-efficacy. Adolescents and teenagers who are more capable in perspective-taking own higher level of leadership emergence. This research expands the leadership research from the leader lifelong development perspective, and also contributed to leadership research from a methodological perspective by adopting mixed-methods.

Keywords: parenting behavior, basic psychological needs, perspective taking, leadership emergence

求同还是存异？领导-员工认知风格匹配对员工组织公民行为的影响

张恬路¹ 李英武¹（通讯作者）

¹ 中国人民大学心理学系，北京，100101

E-mail: liyingwu@126.com

摘要 随着现代企业组织结构的扁平化，领导力的发挥从自上而下的单向输出，逐渐转变为领导员工间的双向互动过程。在此背景下，领导-员工匹配得到了众多研究者的关注。就员工的组织公民行为而言，领导-员工认知风格的匹配是其重要的前因变量，然而何种匹配方式能最有效地推动员工做出组织公民行为，研究尚未形成统一结论。从理论角度出发，由于组织公民行为的既要求员工发挥自主性，又强调员工对组织的顺从，组织内直觉型和分析型认知风格的共存有助于平衡二者之间的关系，进而推动组织公民行为的产生；但部分实证研究却表明，领导员工认知风格的一致性可以正向预测员工的组织公民行为。基于领导-下属交换发展模型，尝试厘清四种领导-员工认知风格组合对员工下属组织公民行为的影响，以及信任的中介作用。采用多源问卷调查方法，得到华东地区 10 制造企业 223 名员工及其直接主管的配对数据，运用 Spss 20.0 和 Mplus 7，结合二次多项式回归分析、响应面分析和 Bootstrap 方法构建中介模型。研究结果表明（1）领导-下属认知风格一致性匹配程度越高，下属越倾向于表现出组织公民行为；（2）在领导-下属认知风格一致性时，领导直觉型-下属直觉型匹配对下属的组织公民行为的正向影响强于领导分析型-下属分析型；（3）在领导-下属认知风格互补时，领导分析型-下属直觉型对下属的组织公民行为的负向影响强于领导直觉型-下属分析型；（4）下属对领导的信任在领导-下属认知风格匹配和组织公民行为之间具有中介作用。研究结果加深了对领导员工匹配与组织公民行为之间关系的理解，对现代企业的管理实践提供了指导。

Identical or Complementary? The Influence of Leader-Member Cognitive Style Fit on Organizational Citizenship

Tianlu Zhang¹, Yingwu Li^{1*}

¹ Department of Psychology, Renmin University of China, Beijing, China

E-mail: liyingwu@126.com

Abstract: The fit between leader and employee's cognitive styles is a vital antecedent variable of organizational citizenship. However, there has not been a consensus on what type of fit is most effective in promoting employees' organizational citizenship. Since organizational citizenship requires both employees' autonomy and compliance, the coexistence of intuitive and analytical cognitive styles within an organization could promote organizational citizenship behavior. However, empirical studies suggest that the consistency of leader-employee cognitive styles positively predicts employee organizational citizenship behavior. Based on the leader-member exchange development model, this study attempts to clarify these contradictory results and explore the effects of four leader-employee

cognitive style combinations on organizational citizenship. We used A multi-source questionnaire method to obtain paired data from 223 employees and their direct supervisors in 10 manufacturing companies in East China. The results indicated that (1) the higher the leader-member cognitive style congruence match, the more employees exhibit organizational citizenship; (2) when the leader-employee cognitive style is congruent in intuitive, the highest citizenship shows. (3) the units of intuitive leader with analytic members are better than an analytic leader with intuitive members (4) trust mediates the relationship between leader-member cognitive style congruence fit and organizational citizenship.

Keywords: Cognitive styles, Leader-member fit, Organizational citizenship, Trust

女性一线服务人员外表社会压力对工作投入的影响： 自我客体化的中介作用和自我同一性的调节作用

李修美

哈尔滨师范大学心理学系，哈尔滨，150025，17753921516@163.com

摘要 当下无论是现实生活中，还是网络媒体中，人们对于身体形象的讨论不休不止，尤其是针对女性形象。不可否认，优秀的外貌条件有利于成为良好的第一印象的加分项，对人际交往、工作学习等产生有利影响。但是反观当下现实与媒体网络，人们对于身材外貌过度关注，“形象绑架”产生了严重不良后果：演员明星等定义了你的穿衣风格；大众媒体定义了你以瘦为美的身材追求；服装、化妆品等广告定义了你的消费观；“你的身材，藏着你的自律，出卖了你的生活层次”、“美体身高体重对照表”诸如此类的大流量文章所宣称的观点成为了你的信条。在这种氛围下，人们潜移默化的将外界定义的理想型内化为自己的身体自我的一部分，形成自我客体化。人们过分关注自己的身材和外貌特征，会导致个体的内部感知迟钝，降低个体工作和学习的高度投入状态（即心流），侵占个体有限的注意认知资源；当与理想外表比较时，就容易引发焦虑、自卑、身体羞耻等负面情绪，破坏个体积极的情绪状态；也对身体健康产生影响，如无节制节食、盲目整形、甚至抑郁等。当前多数研究均集中于外表社会压力、自我客体化对女性身体满意度或饮食障碍的消极影响，很少关注它们对组织中员工工作表现的影响，基于这一思考，本研究以对外外表有较高要求的行业（如彩妆、服装、服务业销售行业）等女性一线工作人员为对象，探讨外表社会压力、自我客体化、自我同一性对工作投入的影响。方法：采用对外表的社会文化态度问卷($\alpha=0.906$)、客体化身体意识量表($\alpha=0.965$)、同一性风格问卷($\alpha=0.820$)、工作投入问卷($\alpha=0.953$)作为研究工具，对彩妆、服装、服务业销售行业 400 名女性一线服务人员进行调查。结果：外表社会压力对工作投入呈显著的负相关。自我客体化与工作投入呈显著的负相关。自我客体化在外表社会压力和工作投入间起中介作用。自我同一性在外表社会压力和工作投入间起调节作用，外表社会压力对工作投入的负面影响随同一性程度的升高而降低。结论：揭示了自我客体化在外表社会压力和工作投入间起中介作用/同一性在外表社会压力和工作投入间起调节作用的内在机制。

The Influence of Female Frontline Services Employees' Social Pressure of Apperence on Work Engagement: The Mediating Effect of Self-objectification and the Moderating Effect of Slef-identity

Li Xiumei

Harbin Normal University, Harbin, 150025, 17753921516@163.com

Abstract: Whether in real life or online media, people have endless discussions about body image, especially the image of women. It is undeniable that excellent appearance conditions are conducive to becoming a plus point for a good first impression, and have a beneficial impact on interpersonal communication, work and study. However, in contrast to the current reality and media networks, people pay too much attention to the appearance of the body, and the "image kidnapping" has produced serious adverse consequences: actors and stars define your style of dressing; mass media define your pursuit of thinness for beauty; clothing, Advertisements such as cosmetics define your view

of consumption; "Your figure hides your self-discipline, betrays your level of life", "Body Height and Weight Comparison Table" and the views declared by high-traffic articles have become your creed. . In this atmosphere, people subtly internalize the ideals defined by the outside world as part of their physical self, forming self-objectification. When people habitually observe and pay much attention to their own body and appearance characteristics, which will cause the individual's internal perception to be slow and reduce the individual's work and study state of high engagement (namely flow), seize the attention of the individual limited cognitive resources. When people compare them with the external defined perfect type, it is easy to trigger negative emotions such as anxiety, low self-esteem, body shame, etc., destruct individual's positive emotional state. This also has an impact on physical health, such as uncontrolled dieting, blind plastic surgery, and even depression. Most current researches focus on the negative effects of the social pressure of appearance and self-objectification, and seldom pay attention to the impact of the social pressure of appearance and self-objectification on the work engagement in the organization. Based on this point, this study focuses on female frontline services employees (e.g., cosmetics, clothing, services industry) in the organization to explore the influence of the social pressure of appearance, self-objectification, self-identity style, on work engagement. Methods: Using 400 female frontline services employees as a sample, using The sociocultural attitudes towards appearance scale($\alpha=0.906$), self-objectification questionnaires ($\alpha=0.965$), Identity Style Inventory ($\alpha=0.820$), Utrecht work engagement questionnaires ($\alpha=0.953$) as research tools. Results: The social pressure of appearance has a significant negative correlation with work engagement. The social pressure of appearance has a significant negative correlation with Self-objectification. Self-objectification has a significant negative correlation with work engagement. Self-objectification has a mediating effect on the relationship between the social pressure of appearance and work engagement. The relationship between the social pressure of appearance and work engagement is moderated by self-identity, and the level of the negative impacts which the social pressure of appearance caused to work engagement decreases with the increase of employees' level of self-identity. Conclusion: It reveals the mediating effect of self-objectification between the social pressure of appearance and work engagement, and the moderating effect of self-identity between the social pressure of appearance and work engagement.

边缘性人格障碍者在负性情绪加工任务中的杏仁核功能特征

彭婉蓉¹ 刘朝霞 蚁金瑶^{1,2,3} (通讯作者)

¹中南大学湘雅二医院医学心理研究中心, 长沙, 410011

²中南大学医学心理研究所, 长沙, 410011

³国家精神心理疾病临床医学研究中心, 长沙, 410011, Email: jinyaoyi@csu.edu.cn

摘要 研究背景: 边缘性人格障碍 (Borderline Personality Disorder, BPD) 是一种以高情感反应与低情绪调节能力等为主要表现的严重精神疾病。现有的神经影像学研究表明, 大脑额叶-边缘系统的功能异常与情绪紊乱密切相关, 而杏仁核则是该系统中负责情绪加工与调控的关键脑区。因此, 本研究拟分析 BPD 患者在负性情绪加工任务下的杏仁核功能异常特征, 阐明杏仁核在 BPD 情绪加工与调节紊乱中的神经病理机制。**方法:** 36 名符合入组标准与排除标准的未服药 BPD 患者与 36 名在性别、年龄、教育水平与 BPD 患者相匹配的健康对照者均完成了结构磁共振与情绪加工任务 (匹配情绪面孔) 中的功能磁共振扫描。所有被试也完成了系列心理评估量表与访谈, 包括状态特质焦虑量表、流调中心用抑郁量表与简明韦氏成人智力量表。采用基于 Matlab 平台的 DPARSF 与 SPM 工具包对 MRI 数据进行处理与分析: (1) 定位所有被试在情绪加工任务下左右杏仁核的最大激活点。(2) 比较 BPD 组与 HC 组在负性情绪加工任务下脑区间的功能激活差异。(3) 分别选取左右杏仁核的最大激活坐标为球心, 以 6mm 为半径的球形范围为感兴趣区, 采用心理-生理交互作用分析方法计算任务态功能连接 (task state-Functional Connectivity, taskFC) 值, 比较 taskFC 值的组间差异。**结果:** (1) 与基线状态 (匹配形状) 相比, 所有被试在完成负性情绪面孔匹配时, 双侧杏仁核、前额叶与枕叶的激活强度均显著增强 ($p < 0.05$, FWE 体素水平校正)。(2) 在执行情绪加工任务时, BPD 组的右侧杏仁核、海马、海马旁回、后扣带回、楔前叶以及左侧海马旁回、梭状回的激活强度均较 HC 组显著增强 ($p_{\text{uncorr}} < 0.001$, $p_{\text{FWE-corr}} < 0.05$)。(3) 与 HC 组相比, BPD 组右侧杏仁核至同侧额上回与对侧中扣带回的 taskFC 值增强 ($p_{\text{uncorr}} < 0.005$), 且 BPD 组左侧杏仁核至同侧额上回的 taskFC 值降低 ($p_{\text{uncorr}} < 0.005$)。**结论:** 在负性情绪加工任务中, BPD 患者的杏仁核表现出异常激活且与特定脑区表现出异常的功能连接, 共同提示 BPD 患者在执行负性情绪时杏仁核存在功能异常, 且这种异常的功能模式可能是 BPD 情绪加工与调节异常的神经病理机制。

² Medical Psychological Institute, Central South University, Changsha 410011, China

³ National Clinical Research Center for Mental Disorders, Changsha 410011, China

Email: jinyaoyi@csu.edu.cn

Abstract: Background: Borderline Personality Disorder (BPD) is a serious mental illness characterized by high emotional response and poor emotion regulation ability. Previous neuroimaging studies have shown that abnormal functions of the prefrontal and limbic system were closely related to emotion dysregulation, in which the amygdala is a key brain region responsible for emotional processing and regulation. Hence, this study was aimed to examine the abnormal functional characteristics of amygdala of BPD patients during negative emotion processing task, and clarify the neuropathological mechanism of amygdala in the impaired emotion processing and regulation of BPD. **Method:** Thirty-six drug-naïve BPD patients and 36 gender-, age-, and education- matched Healthy Controls (HCs) completed

the structural Magnetic Resonance Imaging (sMRI) and the functional MRI during emotional processing task (matching emotional faces) scans. In addition, all participants completed a series of psychological assessment scales and interviews, including State-Trait Anxiety Inventory (STAI), Center for Epidemiologic Studies Depression Scale (CES-D), and Wechsler Adult Intelligence Scale - Revised China (WAIS-RC). Data processing and analysis were performed with DPARSF and SPM toolboxes based on Matlab platform: (1) Locating the maximum activation point of bilateral amygdala caused by emotional processing task in all participants. (2) Comparing the group differences in activation of brain regions during matching negative face. (3) Selecting the maximum activation coordinates of bilateral amygdala as the centers of sphere, and spherical regions of interest (ROIs) were defined with a radius of 6mm. Psycho-Physiological Interaction (PPI) analyses were performed to examine the task state functional connectivity (taskFC) value, and the differences in taskFC between two groups were compared. **Results:** (1) In all participants, the bilateral amygdala, prefrontal lobe, and occipital lobe were significantly activated during emotional processing task compared with baseline task (matching shape; $p < 0.05$, voxel-level FWE corrected). (2) During the emotional processing task, the activation of right amygdala, hippocampus, parahippocampal gyrus, posterior cingulate gyrus, precuneus, left parahippocampal gyrus and fusiform gyrus was significantly enhanced in the BPD group compared with the HC group ($p_{\text{uncorr}} < 0.001$, $p_{\text{FWE-corr}} < 0.05$). (3) Compared with the HC group, the BPD group showed enhanced taskFC values of right amygdala to ipsilateral superior frontal gyrus and contralateral middle cingulate cortex ($p_{\text{uncorr}} < 0.005$), and decreased taskFC value of left amygdala to ipsilateral superior frontal gyrus ($p_{\text{uncorr}} < 0.005$). **Conclusions:** The amygdala of BPD patients showed abnormal activation and abnormal functional connection with specific brain regions during negative emotion processing, which indicate the functional abnormalities of amygdala in BPD patients may be the neuropathological mechanism underlying the abnormal emotional processing and regulation of BPD.

Abstract: Objective The problem of learning burnout of medical students is becoming prominent, and empathy can play a good predictive role in learning burnout. The present study aimed to investigate the relationship between empathy and learning burnout, as well as the mediation effect of resilience and the moderation effect of Family Socioeconomic Status (FSES) in this relation. **Methods** A random sample of 552 college students from a key medical university in Yunnan Province was investigated using the Basic Empathy Scale, Learning Burnout Scale, Connor-Davidson Resilience Scale and Family Socio-economic Status Questionnaire. All the measures showed good reliability and validity in the present study. Data were analyzed using SPSS 23.0 and the SPSS macro-PROCESS. **Results** indicated that: (1) empathy negatively and significantly predicted learning burnout; (2) resilience partially mediated the relationship between empathy and learning burnout; and (3) the intermediary role of resilience between medical students' empathy and learning burnout is moderated by FSES with the indirect effect being more potent in children with high FSES than in children with low FSES. **Conclusion** These findings highlight the mediating role of resilience and the moderating role of FSES in the effect of empathy on learning burnout of medical college students. It may contribute to a better understanding of the effect of empathy. Moreover, it can also provide constructive suggestions for protecting and improve resilience of medical college students.

摘要 研究目的: 1 型糖尿病 (Type 1 diabetes mellitus, T1DM) 是糖尿病的一种特殊类型, 多于儿童期(<18 岁)起病。目前有研究对 1 型糖尿病患者认知功能进行了探讨, 但研究结果存在不一致性, 且认知功能损伤的神经机制也不清楚。本研究试图通过检测儿童期起病的 1 型糖尿病成年患者的认知功能与脑功能特征, 以了解儿童期 1 型糖尿病患者是否存在认知损伤与脑功能异常; 并通过分析脑功能特征及其与患者认知功能受损的关系, 来探讨 1 型糖尿病患者认知功能损伤的神经机制。**研究方法:** 30 名儿童期起病的 1 型糖尿病患者和 28 名健康对照进行了韦氏智力测验、韦氏记忆测验、威斯康辛卡片分类测验 (WSCT)、持续注意反应任务 (SART) 等神经心理测验, 并接受了功能核磁共振扫描。比较两组被试在智力、记忆功能、执行功能与持续注意等认知功能的差异, 采用低频振幅的方法 (ALFF) 对两组被试的静息态数据进行分析, 探讨 1 型糖尿病患者在静息状态下大脑神经元自发活动特征, 并进一步分析患者静息态脑功能改变与其认知功能损伤的关系。**研究结果:** 儿童期起病的 1 型糖尿病成年患者在智商测验得分、言语听觉记忆测验得分、视觉图形记忆测验得分、WSCT 总错误和持续错误得分均显著低于健康对照组, SART 误按数显著多于健康对照组 ($p < 0.05$)。同时患者存在静息态脑功能的异常, 主要表现为在左侧中央前回、左侧中央后回、左侧脑岛、左侧顶叶缘上回的 ALFF 值显著增高; 在右侧基底核 (壳核)、右侧脑岛、右侧颞上回、左右侧小脑后叶的 ALFF 值显著降低。通过相关分析发现 1 型糖尿病患者的右侧脑岛与颞上回这一区域 ALFF 值与言语听觉记忆-延时呈显著正相关 ($r = 0.422, p = 0.040$), 左侧小脑 ALFF 值与 SART 测验反应时呈显著负相关 ($r = -0.473, p = 0.020$)。**结论:** 儿童期起病的 1 型糖尿病患者在成年后存在认知功能的损伤与脑功能异常, 这些脑功能的异常可能是认知功

能损伤的神经病理学基础。

Cognitive function and neuroimaging characteristics in patients with childhood onset type 1 diabetes

Abstract: Objective: Type 1 diabetes mellitus (T1DM) is a chronic metabolic condition characterized by a lifelong dependence on exogenous insulin that occurs predominantly in children and adolescents. The central nervous system is a major organ system affected in type 1 diabetes. In this study, we used cognitive assessment and neuroimaging to examine brain function in patients with type 1 diabetes mellitus. **Methods:** A total of 30 adults with childhood onset type 1 diabetes mellitus, 28 healthy controls participated in the study. The study evaluated the differences between the two groups in terms of cognitive function, IQ, memory, attention, information processing speed and executive function. Resting-state functional MRI (rs-fMRI) data were obtained using a 3-T Siemens Magnetom Trio scanner. ALFF analysis was used to detect neural spontaneous activity and the between-group differences in ALFF values were compared. And to analyze the relationship between the ALFF values and cognitive impairment in patients with type 1 diabetes mellitus. **Results:** Adult patients with childhood onset type 1 diabetes mellitus were significantly lower scores than the healthy controls in terms of IQ, the digit span test, picture completion test, block design test, verbal memory, visual memory, SART, and WCST ($p < 0.05$). Adults with childhood onset type 1 diabetes mellitus have the abnormality of ALFF values. The ALFF values in the left precentral gyrus, the left postcentral gyrus, the left insula, and the left supramarginal gyrus were significantly higher than those in the healthy control group, and the ALFF values of the basal ganglia (putman nucleus), the right insula, the right superior temporal gyrus, and the cerebellar posterior lobe were significantly lower than those in the healthy control group. And through correlation analysis, it was found that the abnormality of ALFF values in these brain regions were associated with impaired cognitive function in patients with type 1 diabetes mellitus. The ALFF values in the the right insula and the right superior temporal gyrus was positively related to the verbal memory scores ($r = 0.422, p = 0.040$), the left cerebellar posterior lobe was negatively related to the response time of SART ($r = -0.473, p = 0.020$). **Conclusions:** Compared with healthy controls, adult patients with type 1 diabetes mellitus in childhood have cognitive impairment and functional abnormalities. The functional abnormalities in these brain regions may be the neuropathology of cognitive deficits in patients with type 1 diabetes mellitus.

摘要 目的: 童年创伤 (Childhood trauma, CT) 已被证明是抑郁症 (Major depressive disorder, MDD) 的重要风险因素。然而 CT 在 MDD 发生发展中的具体作用及其神经机制尚不清楚。本研究的目的是在 MDD 患者及健康被试 (Healthy controls, HC) 中, 探索童年创伤相关的静息态脑自发活动和功能连接 (Functional connectivity, FC) 特征, 并明确其在 CT 和抑郁关系间的作用。 **方法:** 本研究纳入性别、年龄及言语智商上均匹配的四组被试: 有 CT 的 MDD 患者 (n=91)、无 CT 的 MDD 患者 (n=32)、有 CT 的 HC (n=33) 以及无 CT 的 HC (n=46)。所有被试完成贝克抑郁量表、状态特质焦虑问卷、压力知觉量表评估以及静息态功能磁共振扫描。采用 2 (CT: 有/无) × 2 (诊断: MDD/HC) 析因设计, 探索低频振幅 (ALFF) 值存在 CT 主效应及 CT 和诊断交互效应的脑区, 并将其作为感兴趣区 (ROI) 进行基于种子点的全脑 FC, 探索 FC 存在

CT 主效应或 CT 和诊断交互效应的脑区。对有显著差异脑区的 FC 值与临床症状之间进行偏相关分析及中介效应检验,来探讨 CT 影响抑郁的潜在神经机制。以上统计分析均控制人口学变量,在涉及 CT 的影响时,将压力知觉作为额外的控制变量。**结果:** ALFF 值存在 CT 主效应的脑区为左侧颞下回 (FWE 校正, $p<0.05$, 39 体素)。FC 分析显示左侧颞下回与双侧楔前叶的 FC 存在童年创伤与诊断的交互效应 (FWE 校正, $p<0.05$, 50 体素);简单效应分析表明,CT 使得 MDD 患者左侧颞下回-楔前叶 FC 减弱,但在 HC 中,CT 则使得该 FC 增强。偏相关性分析及中介效应检验显示,在 MDD 中,左侧颞下回-楔前叶 FC 值与抑郁得分显著相关 ($r=-0.30$, $p=0.001$),且 FC 完全中介情感忽视和抑郁水平的关系 ($\beta=0.10$, 95% CI: 0.03-0.29);在 HC 中,左侧颞下回-楔前叶 FC 值与特质焦虑得分显著相关 ($r=0.38$, $p=0.001$),FC 完全中介性虐待与特质焦虑的关系 ($\beta=0.09$, 95% CI: 0.07-1.02)。**结论:** 相比于无 CT 的被试,有 CT 的被试左侧颞下回脑自发活动减弱,然而 CT 相关的左侧颞下回-楔前叶的 FC 异常改变在 MDD 患者和 HC 中的表现不同。左侧颞下回脑自发活动及其与楔前叶功能连接异常改变可能在童年创伤影响抑郁症发生发展的机制中产生重要影响。

3 National Clinical Research Center for Mental Disorders, Changsha, Hunan, China

Abstract: Purpose: Childhood trauma (CT) has been proven to be a high-risk factor for major depressive disorder (MDD), but the specific role of CT in the occurrence and development of MDD and its neural mechanisms are still unclear. The purpose of this study is to explore the characteristics of resting state brain spontaneous activity and functional connectivity (FC) related to CT in MDD patients and healthy controls (HC), and to clarify its role in the relationship between childhood trauma and depression. **Methods:** Four age, gender, verbal IQ matched groups of subjects were included in this study: MDD patients with CT ($n=91$), MDD patients without CT ($n=32$), HC with CT ($n=33$), and HC without CT ($n=46$). All subjects completed clinical assessments including Beck Depression Inventory (BDI), Spielberger State-Trait Anxiety Inventory (STAI), and Perceived Stress Scale (PSS), as well as resting-state functional magnetic resonance scan. 2 (CT: yes / no) $\times$ 2 (MDD / HC) factorial design was used to explore the brain regions of the main effect of CT and / or the effect of MDD diagnosis-by-CT interactions on the low-frequency amplitude (ALFF) value. Then, the regions showed altered ALFF value related to CT were chosen as regions of interest (ROIs) for whole brain FC analysis to explore the brain areas where the main effect of CT or the effect of MDD diagnosis-by-CT interactions on seed-based FC existed. Finally, the partial correlation analyses between altered FC values related to CT and the clinical symptoms were performed, and the mediation tests were further carried out to explore the potential neural mechanism of the effect of childhood trauma on depression. Age, gender, and verbal IQ were controlled in all steps. The recent stress level (PSS) was additionally controlled when investigating the effects involving CT. **Results:** The left inferior temporal gyrus (left ITG) was detected as the region of the main effect of CT on ALFF value (FWE corrected, $p<0.05$, voxel size = 39). Thus, left ITG was chosen as the region of interest (ROI) to perform the seed-to voxel FC. For FC based on left ITG seed, there was significant effect of MDD diagnosis-by-CT interactions was observed in bilateral precuneus (FWE corrected, $p<0.05$, voxel size = 50). Simple effect analysis shows that in MDD patient group, CT weakened the left ITG-precuneus FC, but in HC group, CT could enhance the FC between left ITG and bilateral precuneus. Partial correlation analyses and mediation tests showed that in MDD group, the left ITG-precuneus FC value was significantly correlated with the BDI score ($r = -0.30$, $p = 0.001$), and FC completely mediates the relationship between emotional neglect and depression level ($\beta = 0.10$, 95% CI: 0.03 to 0.29); in HC group, left ITG-precuneus FC value is significantly correlated with trait anxiety (r

= 0.38, $p = 0.001$), FC completely mediates the relationship between sexual abuse and trait anxiety ($\beta = 0.09$, 95% CI: 0.07 to 1.02). **Conclusion:** Independent of MDD diagnosis, participants with CT indicated decreased spontaneous brain activity (ALFF) in the left inferior temporal gyrus. However, the effect of CT on altered FCs of the left ITG-precuneus are different in MDD group and HC group. The altered spontaneous activity of the left inferior temporal gyrus and its FC with the precuneus may play an important role in the mechanism of the effect of childhood trauma on depression.

Abstract: Medical students are future medical workers. They should not only face the accumulation of professional knowledge and skills, but also face the adjustment and management of various negative emotions brought by academic, interpersonal and social environment, so that they can take on the important responsibility of saving lives in the future. However, in recent years, the level of anxiety and depression of medical students remains high, and their scores are higher than the national norm of college students. Therefore, it is of great practical significance to explore the negative emotion level of medical students in depth. Objective: To explore the relationship between emotional self-efficacy, interpersonal adaptation, self-acceptance and negative emotions of medical students. Methods: A questionnaire survey was conducted among 539 medical students with Interpersonal Adaptability Scale, Emotional

Self-efficacy Scale, Self-acceptance Scale and Depression-Anxiety-Stress Scale. Results: ① Emotional self-efficacy and interpersonal adaptability were positively correlated with self-acceptance, but negatively correlated with negative emotions; ② Mediating model test shows that the Bootstrap 95% confidence interval of indirect effects of interpersonal adaptation and self-acceptance does not contain 0, which indicates that interpersonal adaptation and self-acceptance are mediating variables of emotion regulating self-efficacy affecting negative emotions, and the total mediating effect value is -0.33, accounting for 84.62% of the total effect (-0.39). Specifically, it consists of three paths: first, the indirect effect of emotion regulating self-efficacy → interpersonal adaptation → negative emotion composition (effect value-0.22); Second, emotion regulates the indirect effect of self-efficacy → interpersonal adaptation → self-acceptance → negative emotion composition (effect value-0.06); Thirdly, emotion regulates the indirect effect of self-efficacy → self-acceptance → negative emotion composition (effect value -0.05). Conclusion: Emotion-regulated self-efficacy indirectly affects the negative emotions of medical students through the mediation of interpersonal adaptation and self-acceptance and the chain mediation of interpersonal adaptation and self-acceptance.

新冠疫情期医护人员心理应激、社会支持与职业倦怠：有调节的中介模型

刘宗玉¹ 田丝雨¹ 孙国晓¹ (通讯作者)

¹ 山东大学体育学院, 济南, 250000, sunguoxiao@sdu.edu.cn

摘要 背景: 当前研究发现, 应激与职业倦怠呈显著正相关, 但其作用机制尚不清楚。本研究旨在探讨新冠疫情期间心理应激对医护人员职业倦怠的影响, 以及创伤后应激障碍在两者之间的中介作用和社会支持的调节作用。方法: 以新型冠状病毒公共卫生事件和医学为研究基础, 550 名医护人员为研究对象, 以电子问卷的形式向各医院的医护人员发放问卷。本研究以创伤后应激障碍作为中介变量, 以社会支持作为调节变量。利用 spss24.0 统计软件对数据进行统计分析, 建立并检验中介效应模型, 采用偏差修正百分位 bootstrap 方法对所有回归进行系数检验。结果: PTSD 部分中介了应激对职业倦怠的影响[间接效应=0.016, 95%可信区间(CI)=0.010, 0.023], 中介效应占总效应的 24%。间接效应受社会支持的影响($\beta=0.045$, $P<0.001$), 且在社会支持水平较低的医护人员中调节效应更为显著。结论: 社会支持调节了创伤后应激障碍对应激和职业倦怠之间关系的间接影响。在新冠疫情期间, 减少心理应激对医护人员的影响, 增强医护人员的社会支持感, 有利于减轻医护人员的职业倦怠, 提高医护人员的心理健康水平, 改善服务质量。

Psychological stress, social support, and job burnout of medical staff during the COVID-19 pandemic period: a moderated mediation model

Zongyu Liu¹, Siyu Tian¹, Guoxiao Sun^{1,*}

¹ Department of Sport and Health, School of Physical Education, Shandong

Abstract: Background: Current research has found that stress is substantially positively correlated with job burnout, but its mechanism of action is unclear. This study aims to explore the impact of psychological stress on the job burnout of the medical staff during the COVID-19 epidemic, as well as the mediating role of PTSD between the two and the moderating role of social support. Methods: Based on the new coronavirus public health incident and medicine, with medical staff at the research object, 550 questionnaires were distributed to medical staff in various hospitals in the form of electronic questionnaires. This study uses PTSD as the mediating variable, and social support as the moderating variable. Use spss24.0 statistical software to perform statistical analysis on the data, establish and test the mediating effect model, and use the deviation-corrected percentile bootstrap method to test all regression coefficients. Results: PTSD partially mediates the effect of stress on job burnout [indirect effect=0.016, 95%

confidence interval (CI)=0.010, 0.023], and the mediation effect accounts for 24% of the total effect. The indirect effect is affected by social support ($\beta=0.045$, $P<0.001$), and is more significant among medical staff with lower levels of social support. Conclusion: Social support moderates the indirect effects of post-traumatic stress disorder on the relationship between stress and job burnout. During the COVID-19 epidemic time, reducing the impact of adverse psychological stress on medical workers and enhancing their sense of social support are conducive to reducing their job burnout, improving their mental health and improving service quality.

摘要 目的: 迄今为止, 考察社会关系和老年人肺功能关联的研究仍然较少, 且被试大都局限于慢性肺部疾病患者。本研究拟在中国一般中老年人群中, 探究社会隔离和孤独感与肺功能的纵向关联。**方法:** 研究基于中国健康与养老追踪调查 (China Health and Retirement Longitudinal Study, CHARLS)。本研究使用了 2011、2013 和 2015 年三波的数据, 分析样本限定为 45 周岁以上人群。最终有 11055 名被试 (平均年龄=58.59 岁, SD=9.31; 女性: 53.6%) 完成全部测量进入分析。肺功能使用最大呼气流量 (peak expiratory flow, PEF) 进行测量。本研究使用多层次线性混合增长模型考察了社会隔离、孤独感和中老年人肺功能的前瞻性关联。**结果:** 在调整了一系列协变量之后, 社会隔离 ($B=-4.27$, $p=0.002$) 而非孤独感 ($B=-3.73$, $p=0.113$) 与最大呼气流量显著负相关。社会隔离与时间变量之间存在显著的交互作用 ($B=-1.17$, $p=0.004$)。**结论:** 本研究发现, 在一般中国中老年人群中, 社会隔离而不是孤独感显著预测了最大呼气流量的下降。社会隔离程度越高, 个体的最大呼气流量随时间下降的越快。研究结果提示, 通过增加社会连接, 降低社会隔离, 有可能改善中老年人的肺功能。

Abstract: Background: Quite a few studies have evaluated the impact of social relationships on lung function, and most of them are limited in patients with chronic lung diseases. The purpose of this study was to examine the relationships of social isolation and loneliness, both individually and simultaneously, on lung function among general Chinese middle-aged and older adults. **Methods:** This study used data from the China Health and Retirement Longitudinal Study (CHARLS). Analyses were conducted with data from three waves (2011, 2013, and 2015) and were restricted to those respondents aged 45 and older. Finally, 11,055 individuals [mean age (SD)=58.59 (9.34); female, 53.6%] were included in analysis. Lung function was assessed by peak expiratory flow (PEF). Two-level

linear mixed growth models were used to evaluate the longitudinal association between social isolation, loneliness and PEF. **Results:** Social isolation ($B=-4.27, p=0.002$), rather than loneliness ($B=-3.73, p=0.113$) was significantly associated with PEF after adjusted for multiple confounding factors. Moreover, a significant interaction between time and social isolation was found ($B=-1.17, p=0.004$). **Conclusions:** This longitudinal study found that increased social isolation, rather than increased loneliness was significantly associated with reduced PEF among general middle-aged and older adults in China. Participants with a higher level of social isolation experienced a faster decrease in PEF over time. Efforts to reduce isolation may have substantial benefits in terms of lung function among middle-aged and older adults in China.

动物 PTSD 模型中母婴分离诱导的组蛋白乙酰化与 BDNF 程序性突触改变相关

孙浩然¹ 刘陶然¹ 宋丰体¹ 孙琳^{2*}

¹ 潍坊医学院临床医学院, 山东, 261053

^{2*} 潍坊医学院心理系, 山东, 261053, linsun2013@wfmc.edu.cn

摘要 母婴分离 (maternal separation, MS) 会导致脑部长期的表观遗传变化, 并增加成年后对创伤性事件的脆弱性, 脆弱性的增加可能具有性别差异性。至今, 尚不清楚 MS 和随后的成人创伤后应激障碍 (Post-traumatic stress disorder, PTSD) 是否对表观遗传修饰有影响。在这项工作中, 我们研究了海马 (hippocampus, HIP) 的表观遗传变化和脑源性神经营养因子 (brain-derived neurotrophic factor, BDNF) 的表达, 以确定 BDNF 是否在因早期 MS 导致的 PTSD 风险中发挥作用。分离大鼠子代 (PND2~PND14 3 h/d 或 6 h/d)。待幼崽长大成年 (PND80), 进行单次延长应激 (single prolonged stress, SPS) 处理。我们发现, 大鼠在 SPS 处理后出现了情绪和记忆的体征改变以及 BDNF 总 mRNA 和蛋白水平的降低。这些变化与组蛋白修饰相关, 如 H3K9ac 水平降低和 HDAC2 水平升高。此外, 在海马 CA1 和 CA3 区域的突触结构中也发现了类似的趋势。在一些测试中, 经历过 MS3h 的雄性大鼠比只经历 PTSD 的大鼠表现更好, 但是在雌性中没有发现这种效果。我们的数据表明, 经历 MS (6h/d, PND1~21) 的雌性大鼠背景关联型恐惧记忆形成减少, 降低了雌性患 PTSD 的风险, 我们发现雄性大鼠 MS6h-PTSD 组的 CA1 区和 MS3h-PTSD 组的 CA3 区突触间隙相对雌性大鼠的更宽。此外, 与雄性大鼠相比, 雌性 MS6h-PTSD 组大鼠在 CA1 中的 PSD 区域明显增厚。这体现了明显的性别差异性。这些结果支持了该观点, 即雌性啮齿动物在慢性应激后神经重塑模式的表现与雄性不同, 这意味着在突触可塑性调节方面雌性可能比雄性能更好地适应应激。这些结果表明, 暴露于二次创伤后大鼠的反应有显著的性别差异。出生后经历 MS 和随后的 PTSD (经 SPS 诱发) 可能会影响海马 BDNF 表达的变化, 从而导致突触的病理改变。进一步的相关研究表明, 这种变化可能受到组蛋白修饰的调控, 并与行为学表型相关。HIP 中组蛋白乙酰化改变可能成为有价值的 PTSD 生物标志物或创伤暴露后精神症状的有效指标。此外, 也可能具有作为治疗靶点或评估 PTSD 治疗疗效的指标的价值。

^{2*}Department of Psychology, Weifang Medical University, 7166# Baotong West Street, Weifang Shandong, 261053, P. R. China

Abstract: Maternal separation (MS) causes long-lasting epigenetic changes in the brain and increases vulnerability to traumatic events in adulthood in a manner that may be sex-specific. To date, it has been unclear whether MS and

subsequent adult post-traumatic stress disorder (PTSD) have an effect on epigenetic modifications. In this work, we studied epigenetic changes in the hippocampus (HIP) and the expression of BDNF to determine whether BDNF plays a role in determining risk of PTSD due to MS in early life. Rat offspring were separated from their dams (3 h/d or 6 h/d from PND2~PND14). Pups were treated with a single prolonged stress (SPS) procedure when they reached adulthood (PND80). We found that rats had symptomatic changes in mood and memory as well as reduced levels of total BDNF mRNA and protein after SPS treatment. These changes were correlated with histone modification, as reflected by decreased H3K9ac levels and increased HDAC2 levels. Moreover, similar trends were found in the synaptic structure of the CA1 and CA3 region of HIP. Male rats with MS3h showed better performance on some tests than rats treated with PTSD alone, however this effect was not found in females. Our data suggested that female rats that experienced MS(6h/d, PND1~21), had reduced formation of contextual fear memory and less risk of PTSD in females. We found that the synaptic cleft of male rats was wider in the MS6h-PTSD group on CA1 and in the MS3h-PTSD group on CA3 relative to with female rats. Further, compared with male rats, female rats in the MS6h-PTSD group had a significantly thickened PSD area in CA1, suggesting significant gender specificity. These results support the idea that female rodents do not show the same pattern of neural remodeling after chronic stress as do males, which means females may be better than males at adapting to the challenge of stress in regulating synaptic plasticity. These results suggested that postnatal MS and subsequent PTSD (induced by the SPS procedure) might affect changes in BDNF expression in the HIP, resulting in pathological changes at synapses. Further correlation studies suggested that this change may be modulated by histone modifications and related to behavioral phenotypes. Altered histone acetylation in the HIP may be a valuable biomarker of PTSD or an indicator of mental overload after trauma exposure. Further, this may have value as a therapeutic target or as an index for evaluating the efficacy of PTSD treatments.

病耻感在维持性血液透析患者 D 型人格与抑郁症状之间的中介作用

杨瑶瑶¹ 路梦新¹ 封丹珺¹ (通讯作者)

山东大学护理与康复学院, 济南, 250012, fdj19@sdu.edu.cn

摘要 目的 维持性血液透析患者在长期的治疗过程中, 由皮肤色素沉着、呼吸伴有氨臭味等改变, 以及经济负担沉重、社会功能丧失等一系列问题引发的病耻感, 将给患者带来巨大的精神负担, 增加焦虑、抑郁等症状的发生风险。D 型人格特征是消极情绪与社交抑制相互作用的结果, 该人格特征下的血透患者由于消极情绪的长期存在, 以及在社会交往中的压抑与回避, 其病耻感易感性可能更高, 抑郁症状可能更加严重。本研究旨在调查维持性血液透析患者的病耻感现状及抑郁症状的严重程度, 探讨维持性血液透析患者的 D 型人格, 病耻感及抑郁症状之间的关系, 并进一步分析病耻感在 D 型人格与抑郁症状之间的中介效应。方法 采用便利抽样法, 选取济南市某两所三级甲等医院 93 名维持性血液透析患者为研究对象, 使用 D 型人格量表 (DS-14)、社会影响量表(SIS)及病人健康问卷(PHQ-9)对其进行问卷调查, 采用 Person 相关分析及 Process 宏插件分析 D 型人格、病耻感与抑郁症状的关系。结果 48.4%的血透患者存在抑郁症状。患者的病耻感总分为 64.95 ± 12.46 分。相关性分析结果显示, 血透患者 D 型人格倾向与其病耻感水平及抑郁症状呈显著正相关 ($r=0.399, p<0.001$; $r=0.638, p<0.001$), 患者病耻感越高, 其抑郁症状越严重 ($r=0.602, p<0.001$)。中介效应分析结果显示, 病耻感在血透患者的 D 型人格与抑郁症状之间存在显著的部分中介作用 ($\beta=0.099$, 95%CI [0.042, 0.167])。结论 维持性血液透析患者的病耻感水平及抑郁症状不容乐观。血透患者的 D 型人格倾向可直接促进其抑郁症状的产生, 也可通过提高自身病耻感水平间接增加抑郁症状。

Mediating role of stigma on the relationship between type D personality and depression symptoms among maintenance hemodialysis patients

Yaoyao Yang¹, Mengxin Lu¹, Danjun Feng¹

School of Nursing and Rehabilitation, Shandong University, Wenhua Road 44, Jinan

Abstract: Objectives During long-term treatment with maintenance hemodialysis (MHD), patients may experience high level of stigma caused by a series of problems, including skin pigmentation, the uremic fetor, heavy economic burdens, social dysfunction, etc. These problems also place a great mental burden, which can lead to depression symptoms for MHD patients. Type D personality trait stems from interactions between negative affectivity and social inhibition. Because of the tendency to experience a high level of negative affectivity and social inhibition, MHD patients with type D personality may have higher susceptibility to stigma which in turn increase exposure to depressive symptoms. This study aimed to investigate the current state of stigma and depression symptoms, and explore the mediating role of stigma between type D personality and depression symptoms in MHD patients. **Methods** A total of 93 MHD patients from 3A hospital in Jinan were recruited through convenience sampling to complete Type D Scale-14 (DS-14), Social Impact Scale (SIS) and Patient Health Questionnaire-9 (PHQ-9). **Results** 48.4% of patients have depression symptoms. The total score on SIS of MHD patients is 64.95 ± 12.46 . Correlational analyses revealed that higher type D personality was significantly and positively associated with stigma and depression symptoms, respectively ($r=0.399, p<0.001$; $r=0.638, p<0.001$). There was also a significant positive association between stigma and depression symptoms in MHD patients ($r=0.602, p<0.001$). Bootstrapping analyses using the PROCESS macro showed that stigma significantly and partially mediated the relationships between type D personality and depression symptoms ($\beta=0.099$, 95%CI [0.042,0.167]). **Conclusions** MHD patients have obvious stigma and serious depression symptoms. Type D personality had a direct positive impact on depression symptoms, and it also had an indirect positive effect on depression symptoms through stigma.

Keywords: maintenance hemodialysis, type D personality, stigma, depression symptoms

分裂型特质与生活满意度的关系：特质焦虑和心智游移的中介作用

章琴^{1,2} 贾璐霞^{1,2} 叶俊延^{1,2} 王亚^{1,2}（通讯作者）陈楚侨^{1,2}

通讯作者 E-mail: wangya@psych.ac.cn

摘要 目的：既往研究发现分裂型特质与特质焦虑、心智游移、生活满意度之间存在密切联系，但分裂型特质与生活满意度之间关系的心理机制尚不清楚。本研究试图探讨分裂型特质与生活满意度的关系及特质焦虑和心智游移在这两个变量之间的中介作用。方法：通过分裂型人格问卷在约 1000 名大学生中筛选出 102 名高分裂型特质个体和 104 名低分裂型特质个体，被试填写了生活满意度量表、特质焦虑量表、心智游移问卷。结果：1) 独立样本 t 检验结果表明生活满意度，特质焦虑和心智游移在高低分裂型特质组别上存在显著差异，高分裂型特质组的特质焦虑总分、心智游移总分均显著高于低分裂型特质组，生活满意度得分显著低于低分裂型特质组。2) 回归分析结果显示分裂型特质组、特质焦虑总分、心智游移总分对生活满意度总分有显著负向预测作用。3) 中介分析表明，特质焦虑和心智游移分别在分裂型特质与生活满意度之间起中介作用；特质焦虑和心智游移在分裂型特质与生活满意度之间起链式中介作用。结论：分裂型特质、特质焦虑和心智游移是低生活满意度的风险因素。特质焦虑和心智游移在分裂型特质和生活满意度之间起中介作用，并且具有链式中介效应。该结果对于提高分裂型特质个体生活满意度有一定的启示意义。

2 Department of Psychology, University of Chinese Academy of Sciences, Beijing, 100101

Abstract: Objective: The psychological mechanisms underlying the relationship between schizotypal traits and satisfaction with life are not well understood. This study investigated the association between schizotypal traits and satisfaction with life, and explored the mediating role of trait-anxiety and mind-wandering in the relationship between those two variables in a sample of Chinese young adults. **Methods:** One-hundred and two individuals with high schizotypal traits and 104 individuals with low schizotypal traits were screened from about 1000 university students using the Schizotypal Personality Questionnaire. They completed a series of questionnaires including the Satisfaction with Life Scale, Trait Anxiety Inventory, and Mind Wandering Questionnaire. **Results:** 1) The high schizotypal trait group showed higher trait anxiety and mind-wandering frequency, and lower satisfaction with life than the low schizotypal trait group. 2) High schizotypal trait group, trait anxiety total score, and mind-wandering total score negatively predicted the satisfaction with life total score. 3) The mediation analysis showed that all indirect effect paths in the mediation models were significant. First, trait anxiety mediated the relationship between schizotypal trait group and satisfaction with life. Second, mind-wandering mediated the relationship between schizotypal trait group and satisfaction with life. Third, trait anxiety and mind-wandering mediated the relationship between schizotypal trait group and satisfaction with life. **Conclusions:** Schizotypal traits, trait-anxiety and mind-wandering are risk factors for low satisfaction with life. The influence of schizotypal traits on satisfaction with life was mainly mediated by the combination of trait-anxiety and mind-wandering. This study has implications for improving life satisfaction in individuals with schizotypal traits.

良性家族性肌阵挛癫痫的小脑解剖连接异常

李翊君 毋琳 梁伟 林鑫鑫 方鹏 (通讯作者)

空军军医大学, 西安, 710000, 通讯作者 E-mail: fangpeng@fmmu.edu.cn

摘要 小脑功能障碍在良性成人家族性肌阵挛癫痫(BAFME)的发病机制中起着关键作用。然而,BAFME在小脑的神经病理通路机制尚不清楚。因此,本研究对一个BAFME家系的病史和电生理检查进行了深入的调查,并对其小脑的结构连接异常进行了研究。本研究通过对11名FCMTE患者和15名健康对照组进行DTI扫描并提取小脑解剖网络。使用统一肌阵挛评分量表(UMRS)和Fahn-Tolosa-Marin评估肌阵挛和震颤的严重程度;使用追踪测试A部分和B部分(TMTA、TMTB)数字符号测试(DST)和语言流畅性测试(VFT)评估执行和注意功能。结果表明:BAFME患者的VFT和DST评分显著低于健康对照组($p=0.019$; $p=0.048$),而TMTA和TMTB评分则无显著性差异($p=0.399$; $p=0.169$)。BAFME患者的8个连接在排列试验校正后与健康对照组有显著差异。与对照组相比,BAFME患者left cerebellum crus I至right cerebellum crus II和right Cerebellum VIII的连接减少, right cerebellum crus I至left cerebellum crus II和right cerebellum IV和right cerebellum V的连接减少, left cerebellum VI至right cerebellum crus I和right cerebellum II的连接减少,从right cerebellum VI到蚓部IV、V和VI。right cerebellum crus II至left cerebellum crus I的连接($p=0.0043$, $R=0.54$)和left cerebellum VI的连接($p=0.0058$, $R=0.62$)与DST呈显著正相关。从left cerebellum VI到right cerebellum crus I的连接与VFT呈显著正相关($p=0.0007$, $R=0.62$)。right cerebellum VI与蚓VI的连接与FTRS呈负相关($p=0.0023$, $R=-0.81$)。与对照组相比,BAFME患者小脑内8个解剖连接强度显著降低,认知和运动功能下降。这些发现可能为BAFME的病理生理学提供新的认识,并解释BAFME患者的认知和运动障碍。

Cerebellar anatomical connection dysfunction in benign adult familial myoclonic epilepsy

Yijun Li, Lin Xu, Wei Liang, Xinxin Lin, Peng Fang

Department of Psychology, Air Force Medical University, Xi'an, China, 710000

Abstract: Cerebellar dysfunction plays a key role in the pathogenesis of benign adult familial myoclonic epilepsy (BAFME). However, the mechanism of neuropathological pathway of BAFME in cerebellum is unclear. Therefore, the history and electrophysiological examination of a BAFME family were deeply investigated, and the connectivity dysfunction of cerebellum was studied. In this study, 11 patients with FCMTE and 15 healthy controls were scanned by DTI and the cerebellar anatomical network was extracted. The severity of myoclonus and tremor was assessed using the unified myoclonus score scale (UMRS) and Fahn Tolosa Marin; Executive and attentional functions were assessed using tracking tests Part A and part B (TMTA、TMTB), digital symbol test (DST) and language fluency test (VFT). The results showed that the scores of VFT and DST in BAFME patients were significantly lower than those in healthy controls ($P = 0.019$; $P = 0.048$), but there was no significant difference between TMTA and TMTB scores ($P = 0.399$; $p=0.169$). The 8 connections of BAFME patients were significantly different from those of healthy controls after alignment test correction. Compared with the controls, BAFME patients showed decreased connectivity in connections from left cerebellum crus I to right cerebellum crus II and right Cerebellum VIII, from right cerebellum crus I to left cerebellum crus II and right cerebellum IV and V, from left cerebellum VI to right cerebellum crus I and II, from right cerebellum VI to vermis IV, V and VI. The connections from the right cerebellum crus II to the left cerebellum crus I ($p = 0.0043$, $R = 0.54$, Pierson correlation) and left cerebellum VI ($p = 0.0058$, $R = 0.62$, Pierson correlation) showed significantly positive correlation with DST. The connection from the left cerebellum VI to the right cerebellum crus I exhibited significantly positive correlation with VFT ($p = 0.0007$, $R = 0.62$, Pierson correlation). The connection from the right cerebellum VI to the vermis VI was negatively correlated with FTRS ($p = 0.0023$, $R = -0.81$, Pierson correlation). Compared with the control group, the connectivity of 8 anatomical connections in the cerebellum of BAFME patients decreased significantly, and the cognitive and motor functions decreased. These findings may provide a new understanding of the pathophysiology of BAFME and explain the cognitive and motor disorders in patients with BAFME.

睡眠剥夺早期对大脑执行功能的影响：一项 ERP 研究

曾玲婧¹ 李佳露¹ 解颂悦¹ 王海腾¹ 杨天意¹ 邵永聪¹（通讯作者）

¹ 北京体育大学心理学院，北京，100084，budeshao@aliyun.com

摘要 背景：完全睡眠剥夺（total sleep deprivation, TSD）会导致认知功能的损害，其中受影响最为严重的是大脑执行功能。目前对于睡眠剥夺早期阶段影响大脑执行功能的相关神经心理生理证据依然比较欠缺。

目的：探讨大脑执行功能在 12h TSD 条件下是否就已经出现了异常。**方法：**以 16 名健康的男性青年受试者为研究对象，分别在正常静息状态下和 12h TSD 后进行 Go/Nogo 任务测试。测试共分为两个组块，在第一个组块下，受试者需要对“向左”的箭头，即 Go 刺激作出反应，并按下键盘上的“左键”，对 Nogo 刺激（“向右”箭头）不作反应。第二个组块用相反的刺激类型作为平衡测验（Go：向右；Nogo：向左）。在整个测验中，要求受试者在保证正确的前提下尽快作出反应。采集测验的行为学数据（反应时和正确率）并同步记录受试者的脑电图（EEG）数据。受试者于第一天晚上 20 时来到实验室并进行正常睡眠，第二天早上 8 时（剥夺 0h）进行 Go/Nogo 的 ERP 测试，将其结果作为基线，随后开始 24h 睡眠剥夺试验。在当晚 20 时（剥夺 12h）进行第二次 Go/Nogo 任务的 ERP 测试。选用重复测量方差分析的统计方法探讨 12h TSD 后行为学指标和脑电指标是否存在明显变化。**结果：**与正常静息状态下相比，12h TSD 后 Go 刺激的反应时缩短[(293.75s)vs.(287.01s)] ($t=1.710$, $p=0.103$)，其反应正确率下降[(94.18%) vs. (91.60%)] ($t=1.755$, $p=0.095$)。对 P2 波幅与潜伏期的统计分析发现，Go-P2 的潜伏期测量时间的主效应无统计学意义 ($F_{(1, 25)}=0.306$, $p=0.585$)，其波幅在测量时间的主效应上有统计学意义，在测量时间水平上，Go-P2 波幅与基线值相比，在 12h TSD 后波幅下降 ($F_{(1, 25)}=6.335$, $p<0.05$)；Nogo-P2 的波幅与潜伏期在测量时间的主效应均有统计学意义，在测量时间水平上，Nogo-P2 波幅与基线值相比，12h TSD 后下降 ($F_{(1, 25)}=6.043$, $p<0.05$)，潜伏期与基线值相比，12h 后延长 ($F_{(1, 25)}=8.210$, $p<0.01$)。**结论：**大脑执行功能在睡眠剥夺 12h 后就已经下降，主要表现为 ERP 中的 P2 成分受损，尤其是 Go/Nogo 任务中的 Nogo-P2 波幅的下降。研究表明 P2 是反映执行控制功能影响的敏感指标，是观察睡眠剥夺影响认知功能的重要窗口。

Effects of early sleep deprivation on executive function of the brain: an ERP study

Lingjing Zeng¹, Songyue Xie¹, Jialu Li¹, Haiteng Wang¹, Tianyi Yang¹, Yongcong Shao^{1*}

¹ School of Psychology, Beijing Sport University, Beijing, 100084, budeshao@aliyun.com

Abstract: Background: Total sleep deprivation (TSD) will cause cognitive impairment, in which the executive function of the brain is the most seriously affected. However, the evidence for the neuropsychophysiological effects of early sleep deprivation on executive function remains scant. **Objective:** This study aimed to investigate whether the executive function of the brain is impaired after 12 hours TSD (12h TSD). **Methods:** 16 healthy young males were tested by Go/Nogo task in normal resting state and after 12h TSD. The test was divided into two blocks. In the first block, the participants were asked to respond to the “left” arrow, the Go stimulus, and to press the “left” button on the keyboard, but not to the Nogo stimulus (the “right” arrow). The second block used the opposite stimulus type as a balance test (Go: “right”; Nogo: “Left”). Throughout the test, the participants were asked to respond as quickly as possible to ensure correctness. Behavioural data (response time and accuracy) were collected and EEG data were recorded simultaneously. The participants came to the laboratory at 20:00 PM on the first day and had a normal sleep. At 8:00 AM on the second day, the event-related potential (ERP) test of Go/Nogo task was performed as a baseline value (deprivation 0h), and then the 24h SD test was officially started. The second ERP test of Go/Nogo task was performed at 20:00 PM on the second day (deprivation 12h). The statistical method of repeated measurement analysis

of variance was used to investigate whether there were significant changes in behavioral indicators and EEG indicators after 12h TSD. **Results:** Compared to the normal resting state, the response time of Go stimulus after 12h TSD was shortened [(293.75s) vs. (287.01s)] ($t=1.710, p=0.103$), and the response accuracy was decreased [(94.18%) vs. (91.60%)] ($t=1.755, p=0.095$). The statistical analysis of P2 amplitude and latency showed that the main effects of Go-P2 amplitude was statistically significant while the main effect of Go-P2 latency was not statistically significant ($F_{(1,25)}=0.306, p=0.585$). At the measured time level, the amplitude of Go-P2 amplitude decreased after 12h TSD compared to the baseline value ($F_{(1,25)}=6.335, p<0.05$). The main effect of Nogo-P2 amplitude and latency were statistically significant. At the measurement time level, the amplitude of Nogo-P2 decreased after 12h TSD compared to the baseline value ($F_{(1,25)}=6.043, p<0.05$), and the latency was prolonged after 12h TSD compared to the baseline value ($F_{(1,25)}=8.210, p<0.01$). **Conclusion:** Executive function of the brain declines after 12h SD mainly manifested by impaired P2 components, especially the decrease of Nogo-P2 amplitude in Go/Nogo task. Study has shown that P2 is a sensitive indicator reflecting the influence of executive control function and it is also an important window to observe the effects of sleep deprivation on cognitive function.

自闭症谱系障碍感觉认知加工时空特征分析：系统综述

曾玲婧¹ 解颂悦¹ 李佳露¹ 王海腾¹ 杨天意¹ 邵永聪¹ (通讯作者)

¹ 北京体育大学心理学院, 北京, 100084, budeshao@aliyun.com

摘要 自闭症谱系障碍(ASD)是一类以社交能力障碍、重复性行为以及对外界刺激的不当反应为特征的精神疾病。研究表明, ASD 患者对感觉通道信息的统合、加工和解释是存在困难的。因此, 本系统综述的目的是通过检索近年来流行使用脑电图(EEG)和功能磁共振(fMRI)研究 ASD 患者听觉、视觉和触觉的文章, 探究 ASD 患者感觉加工的时空特征, 从而为更深入的 ASD 神经机制研究提供理论支持。本文采用系统综述的方法, 从 Pubmed、PsycINFO、EBSCO 系列和 Web of science (SCIE/SSCI/BP 数据库)进行文献检索。结果: 从 583 篇文献中确定了符合纳入标准的 135 篇高相关性文献作为综述依据。按本综述的探究角度将入选的 135 篇文献大体分为三类: 描述 ASD 发生发展的时间特征、空间特征和时空特征。具体来说, 所有研究中涉及指标数据随时间变化的研究, 如事件相关电位(ERP)研究、长期随访研究等, 分长时、短时两种归入时间特征中, 共 67 篇; 涉及指标数据具有空间特异性的研究, 如 fMRI 研究中不同脑区激活、连接性类研究, 归入空间特征中, 共 58 篇。时空特征研究为指标数据既与时间相关, 又具有空间特异性, 如短时空研究: ERP-fMRI 联合研究; 或长时空研究: 长期随访的 fMRI 研究, 纳入时空特征中, 共 10 篇。结论: 到目前为止关于 ASD 感觉通道异常的研究仍未得出一致性的结论。ASD 感觉通道的异常与脑内的时空变化异常、脑神经网络受损密切相关, 且 ASD 感觉通道信息加工存在神经系统水平上的时间和空间异常, 呈现出 ASD 独特的时空特征。然而, 目前关于 ASD 神经机制的理解仍处于该疾病研究的初期阶段, 还有一系列的问题需要进一步澄清。比如 ASD 个体在感觉加工通道中的 ERP 成分异常与脑区激活和脑区之间的功能连接异常之间是否存在因果关系等。因此, 进一步从感觉综合的时空特征分析上开展自闭症的系列研究是必要的, 围绕 ASD 的神经网络演变特征, 从时空角度深入探究 ASD 患者异常的感觉加工模式, 使用多模态和纵向研究以确定 ASD 神经网络的时空动态变化, 有利于我们系统地观测 ASD 的发生机制和发展状况, 并为未来 ASD 神经生理机制研究提供新思路。

Spatiotemporal characteristics of sensory cognitive processing in autism spectrum disorders: A systematic review

Lingjing Zeng¹, Songyue Xie¹, Jialu Li¹, Haiteng Wang¹, Tianyi Yang¹, Yongcong Shao^{1*}

¹ School of Psychology, Beijing Sport University, Beijing, 100084, budeshao@aliyun.com

Abstract: Autism spectrum disorder (ASD) is a kind of mental illness characterized by social disorder, repetitive

behavior, and inappropriate response to external stimuli. Previous studies have shown that ASD patients have difficulty in integrating, processing, and interpreting sensory information. Therefore, the purpose of our systematic review is to retrieve studies that used electroencephalogram (EEG) and functional magnetic resonance imaging (fMRI) as the key technology for assessing the auditory, visual, and tactile aspects of ASD patients, and to explore the Spatiotemporal characteristics of sensory processing of ASD patients, so as to provide theoretical support for further research on neural mechanism of ASD. We used the method of systematic review to search studies from PubMed, PsychINFO, EBSCO series, and Web of Science (SCIE/SSCI/BP database). Results: 583 papers were excluded after screening according to the above criteria, and 135 suitable papers with high correlation were selected as the basis for review. 135 studies were divided into three categories: describing the temporal, spatial, and spatiotemporal characteristics of the occurrence and development of ASD. Specifically, all studies involving changes in index data over time, such as the ERP studies, the long-term follow-up studies, etc., were classified into two temporal characteristics, long-term and short-term, totaling 67 articles. Studies involving the spatial specificity of index data, such as the fMRI studies of activation and connectivity of different brain areas, were classified as having spatial characteristics, totaling 58 articles. Spatiotemporal characteristics are indicators of both temporal and spatial specificity, such as short-term studies, for example, ERP and fMRI studies, or long-term studies, for example, follow-up fMRI studies, totaling 10 articles. Conclusion: Up to now, there is no consistent conclusion about atypical sensory channels of ASD patients, which are closely related to the temporal and spatial abnormalities in the brain. Moreover, these abnormalities are demonstrated in processing sensory information at the level of the neural system, mainly in the brain neural networks, showing the unique temporal and spatial characteristics of ASD. However, the current findings of the neural mechanism of ASD are still in the early stage, and a series of questions need to be further answered. For example, is there a causal relationship between abnormal ERP components in sensory processing channels and abnormal brain activation and functional connectivity between brain areas in individuals with ASD? Therefore, it is necessary to further carry out a series of studies on autism and the spatiotemporal characteristics of sensory synthesis. Based on the evolutionary characteristics of the neural network of ASD patients, we should explore the abnormal sensory processing patterns in ASD patients from the perspective of time and space, and use multimodal and vertical research to determine the spatiotemporal dynamic changes of the ASD neural network. It is helpful for us to observe the mechanism and development of ASD, and to provide new ideas for future research on the neurophysiological mechanism of ASD.

睡眠剥夺影响静息态大脑苍白球功能连接的 fMRI 研究

解颂悦¹ 王海腾² 曾玲婧²

李佳露² 杨天意² 邵永聪² (通讯作者)

1 首都师范大学心理学院, 北京, 100048

2 北京体育大学心理学院, 北京, 100084, budeshao@aliyun.com

摘要 背景: 睡眠剥夺在现代生活中较为常见, 会损害个体的认知功能, 这与相关大脑神经网络的功能连接被扰乱密切相关。本研究探讨个体在经历 36 小时的睡眠剥夺后, 静息状态下基底神经节中苍白球功能连接性的变化。方法: 30 名健康男性受试者 (年龄 25.9 ± 2.3 岁) 参与了这项自身前后对照的 36 小时睡眠剥夺研究。受试者共进行 2 次磁共振成像扫描 (EPI 序列, 扫描参数: TE=30ms, TR=2000ms, FOV=256*256mm, 层厚=5mm, 间隔=1mm, 反转角=90°, 矩阵=64*64, 20 层), 一次在觉醒期间 (基线扫描), 另一次在 36 小时的睡眠剥夺后。两次 fMRI 扫描之间间隔 3 周, 均在同一时间 (20:00) 进行。扫描顺序在受试者之间进行平衡。结果: 以苍白球为种子点, 经全脑静息态功能连接分析发现, 在 36 小时的睡眠剥夺后, 受试者左苍白球与右侧枕叶皮层、枕叶梭状回右侧及左侧颞叶皮层之间的功能连接下降, 而右苍白球与右侧颞叶之间的功能连接下降 ($p < 0.001$)。在任何显著集群 ($k > 20$) 中, 睡眠剥夺后苍白球没有表现出比清醒状态时更强

的连接性。讨论：以往研究表明基底神经节，特别是苍白球，在注意控制、无关信息的过滤等过程中起重要作用。本研究发现在 36 小时的睡眠剥夺后，苍白球与枕叶及颞叶的部分区域间的功能连接降低。而枕叶与颞叶作为主要的视觉及听觉皮层，对个体视觉及听觉信息的初级加工有着极其重要的作用。因此，我们猜测苍白球与枕叶及颞叶部分区域间功能连接性异常是睡眠剥夺后个体警觉性、视听信息整合等初级认知功能异常的原因之一。结论：36 小时的睡眠剥夺导致了苍白球与枕叶及颞叶的部分区域间的功能连接降低，这为睡眠缺失后个体的部分初级认知功能受损提供了可能的大脑影像学基础。

Sleep deprivation affects the resting-state functional connectivity of globus pallidus: an fMRI study

Songyue Xie¹, Haiteng Wang², Lingjing Zeng², Jialu Li², Tianyi Yang², Yongcong Shao^{2*}

¹ School of Psychology, Capital Normal University, Beijing, 100048

² School of Psychology, Beijing Sport University, Beijing, 100084, budeshao@aliyun.com

Abstract: Backgrounds: Sleep deprivation is common in modern society leading to deterioration of cognition, which is closely related to the disruption of functional connectivity of the relevant brain neural networks. Our aim is to investigate changes of the resting-state functional connectivity of globus pallidus in the basal ganglia after 36 hours of sleep deprivation. Methods: 30 healthy male subjects (mean age 25.9 ± 2.3 years) participated in this self-controlled 36-hour sleep deprivation experiment. The subject underwent 2 fMRI scans (EPI Sequence: TE = 30 ms, TR = 2000 ms, FOV=256*256mm, slice thickness = 5 mm, slice gap = 1 mm, flip angle = 90°, matrix = 64*64, 20 oblique slices), one at awakening (baseline scan) and the other after 36 hours of sleep deprivation. The interval between the two fMRI scans was 3 weeks. Both scans were performed at the same time (20:00). The sequence was balanced between the subjects. Results: Globus pallidus was defined as seed region for the resting-state functional connectivity analysis. We found that: after 36 hours of sleep deprivation, the left globus pallidus showed decreased functional connectivity with the right occipital cortex, occipital fusiform gyrus right, temporal occipital fusiform cortex right and left planum temporale; the right globus pallidus showed decreased functional connectivity with right temporal gyrus ($p < 0.001$). In any significant cluster ($k > 20$), the globus pallidus after sleep deprivation showed no greater connectivity than when awake. Discussion: Previous studies have shown that basal ganglia, especially the globus pallidus, plays an important role in attention control and filtering of irrelevant information. This study found that after 36 hours of sleep deprivation, functional connectivity between the globus pallidus and regions of the occipital and temporal cortex were decreased. As the main visual and auditory cortex, the occipital cortex and temporal cortex are critical to the primary processing of visual and auditory information. Therefore, we suppose that abnormal functional connectivity between the globus pallidus and regions of the occipital and temporal cortex is one of the reasons for the decreased primary cognitive function such as alertness and audio-visual information integration after sleep deprivation. Conclusion: 36 hours of sleep deprivation resulted in decreased functional connectivity between regions of the globus pallidus and regions of the occipital and temporal cortex, which provided a possible brain imaging basis for the individual's deterioration of the primary cognitive function after sleep loss.

完全睡眠剥夺对静息态壳核功能连接的影响

王海腾¹ 曾玲婧¹ 李佳露¹ 解颂悦¹ 杨天意¹ 邵永聪¹（通讯作者）

¹ 北京体育大学心理学院，北京，100084，budeshao@aliyun.com

摘要 背景：完全睡眠剥夺（total sleep deprivation, TSD）会导致个体运动控制功能受损。目前对于睡眠剥夺条件下壳核的神经认知功能研究较少，对于其生理心理机制了解不足。本研究探讨 36 小时完全睡眠剥夺后

壳核功能连接模式的改变。**方法:** 30 名受试者参与了本项自身对照试验研究。受试者分别在正常觉醒状态 and 36 小时急性睡眠缺失后采集功能影像学数据。以壳核作为种子区分析正常觉醒状态和急性睡眠缺失后的静息态大脑功能连接。**结果:** 与正常觉醒状态相比, TSD 后的受试者左壳核与双侧中央前回及中央后回的功能连接减弱; 与双侧颞上回、颞中回功能连接减弱; 与右侧缘上回连接增强。对于右侧壳核, TSD 后与双侧中央前回及中央后回功能连接减弱; 与右侧颞上回、颞中回功能连接减弱, 但右侧壳核未发现功能连接的显著增强。**讨论:** 壳核作为纹状体的一个重要结构是皮层下灰质最重要的核团之一, 与皮质运动区有解剖学联系, 在运动控制功能中发挥着重要作用。通过比较因睡眠缺失而引起的壳核连接性变化, 我们发现壳核和中央前回部分区域之间的功能连接性降低。中央前回是躯体的运动中枢, 因此与正常觉醒情况下相比, 受试者在 TSD 后壳核和中央区前回功能连接降低可能反映了 TSD 后基底神经节的运动调节功能与皮质运动区功能的分离, 导致了个体随意运动功能受损。同时, 壳核和中央后回部分区域之间的功能连接性也降低, 可能与 TSD 后个体感觉性降低有关。结果还发现壳核与颞上回、颞中回深层区域功能连接降低, 此功能连接的降低可能影响个体学习记忆功能, 进而导致个体运动信号加工整合受阻, 由此推测 TSD 后壳核功能连接模式变化与视觉控制、精细运动控制有关。另外, 结果中左壳核与右侧缘上回功能连接性的增强, 还需进一步研究探索。**结论:** TSD 损害了个体躯体运动控制功能, 与壳核同中央前回、中央后回、颞叶等区域的功能连接减弱有关。**关键词** 睡眠剥夺, 躯体运动控制, 壳核, 静息态, 功能连接

Effects of total sleep deprivation on resting state functional connectivity of putamen

Haiteng Wang¹, Lingjing Zeng¹, Songyue Xie¹, Jialu Li¹, Tianyi Yang¹, Yongcong Shao^{1*}

¹ School of Psychology, Beijing Sport University, Beijing, 100084, budeshao@aliyun.com

Abstract: Background: Total sleep deprivation (TSD) can lead to impaired motor control in individuals. At present, there are few studies on the neurocognitive function of the putamen under sleep deprivation, and the understanding of its physiological and psychological mechanisms is insufficient. Our study investigated the changes in functional connectivity patterns in the putamen after 36 hours of TSD. **Methods:** Thirty subjects were recruited to our self-controlled study. Functional imaging data were collected after normal awakening and 36 hours of acute sleep deprivation. The putamen was used as the seed area to analyze resting state brain functional connectivity after normal awakening and TSD. **Results:** Compared with the normal state of awakening, we found decreased functional connectivity between the left putamen and bilateral precentral gyrus, bilateral postcentral gyrus, bilateral superior temporal gyrus and bilateral middle temporal gyrus. We also found the increased connectivity between the left putamen and the right supramarginal gyrus after TSD. For the right putamen, the functional connectivity with bilateral precentral gyrus and postcentral gyrus decreased after TSD; the functional connectivity with the right superior temporal gyrus and middle temporal gyrus was decreased, but no significant increase of the functional connectivity was found. **Discussion:** Putamen as an key structure in the striatum is one of the most important nuclei in subcortical gray matter. It has anatomical relationship with cortical motor areas and plays an indispensable role in motor control function. By comparing the changes in putamen connectivity caused by TSD, we found that functional connectivity between the putamen and parts of the precentral gyrus was decreased. The precentral gyrus is the motor center of the body, so the decreased functional connectivity between the putamen and the precentral gyrus in subjects after TSD may reflect the functional separation of basal ganglia from cortical motor area after TSD, resulting in impaired voluntary motor function in individuals compared with normal arousal. At the same time, functional connectivity between the putamen and parts of the postcentral gyrus was also decreased, possibly related to the decreased individual sensitivity after TSD. The results also showed that the functional connectivity between the putamen and the deep regions of the superior and middle temporal gyrus was decreased, which may affect the individual's learning and memory function, and then lead to the hindrance of the integration of individual motor signal processing. Therefore, it is speculated that the change of putamen functional connectivity pattern after TSD is related to visual motor alertness control and fine motor control. In addition, the increase of functional connectivity

between the left putamen and the right supramarginal gyrus in the results needs further study and exploration.

Conclusion: TSD impairs the individual's somatic motor control function, which is related to the decreased functional connectivity between the putamen and regions such as the precentral gyrus, the postcentral gyrus, and the temporal lobe.

摘要 背景: 睡眠为人类正常生活所必需, 但随着科技进步和社会发展, 越来越多的人因持续工作、熬夜而出现了主动或被动失眠, 从而导致睡眠剥夺 (sleep deprivation, SD)。研究表明, SD 会降低人类大脑对视警觉信息的认知加工。由于视觉是个体接受外界刺激的重要感官通道, 其认知加工功能受损会严重影响个体的日常生活。但迄今为止, 对于视警觉网络是如何受到 SD 影响仍鲜有研究。**目的:** 本研究旨在从大脑有效功能连接和静息状态网络 (resting state networks, RSN) 两方面的改变入手, 分析 SD 对视警觉网络功能连接的影响, 旨在为了解 SD 后大脑的视警觉加工神经机制提供试验依据。**方法:** 34 名健康受试者自愿参与 36h-SD 试验, 并在 SD 前后分别采集静息态脑电数据。通过孤立有效相关 (isolated effective coherence, iCoh) 和功能独立成分分析 (functional independent components analysis, fICA) 两种方法, 分析 SD 后视警觉网络的功能连接变化, 主要包括双侧舌回 (BA18)、双侧楔叶 (BA18)、双侧枕叶 (BA19)、双侧梭状回 (BA19) 等, 并分析个体 RSN 活动在 SD 后的变化, 从而评估 SD 后视警觉网络有效功能连接活动的变化, 以探索 SD 对个体视警觉功能的影响。**结果:** iCoh 分析结果显示, 在 alpha 频段, 睡眠剥夺导致右侧舌回 (BA18) 到右侧枕上回 (BA19) 的功能连接下降; 同时, fICA 结果显示, 在静息状态下, 睡眠剥夺后的个体枕叶 alpha 振荡减弱, 尤其体现在楔叶 (BA19) 和枕上回 (BA19)。**结论:** SD 改变了视警觉网络的有效功能连接活动, 影响个体的视警觉信息加工过程, 这可能与损害视警觉皮层中枢, 尤其是右侧舌回同右侧枕上回的信息交互密切相关。

Effects of sleep deprivation on functional connectivity of visual vigilance network

Jialu Li¹, Lingjing Zeng¹, Songyue Xie¹, Haiteng Wang¹, Tianyi Yang¹, Yongcong Shao^{1*}

¹ School of Psychology, Beijing Sport University, Beijing, 100084, budeshao@aliyun.com

Abstract: Background: Sleep is a necessity in the normal life of human beings, but with the technology advance and social development, a growing number of people suffer from active or passive insomnia due to continuous work and staying up late, which leads to sleep deprivation (SD). Studies have shown that SD can reduce the cognitive processing of visual vigilance information in human brain. As visual sense is an important sensory channel to receive external stimuli, its cognitive processing function is impaired, which will seriously affect individual's daily life. But so far, there is little research on how the visual vigilance network is affected. **Objective:** The purpose of this study is to analyze the effect of SD on the functional connectivity of visual vigilance network from the changes of brain effective functional connectivity and resting state networks (RSN), so as to provide an experimental basis for understanding the neural mechanism of visual vigilance processing after SD. **Methods:** 34 healthy subjects participated in the 36h-SD trial voluntarily, and the resting state EEG data were collected before and after SD. Two methods, isolated effective correlation (iCoh) and functional independent component analysis (fICA), were used to analyze the changes of functional connectivity in visual vigilance network after SD, mainly including bilateral lingual gyrus (BA18), bilateral cuneus (BA18), bilateral superior occipital gyrus (BA19), bilateral fusiform gyrus (BA19), etc., and to analyze the changes of RSN activity after SD, in order to evaluate the changes of effective functional

connectivity of visual vigilance network after SD, so as to explore the effect of SD on individual visual vigilance function. **Results:** iCoh analysis demonstrated that in the alpha band, sleep deprivation caused a decrease in the functional connectivity from the right lingual gyrus (BA18) to the right superior occipital gyrus (BA19); at the same time, the fICA results showed that in the resting state, occipital lobe alpha oscillations were weakened after sleep deprivation, especially in the cuneus (BA19) and superior occipital gyrus (BA19). **Conclusion:** SD changes the effective functional connectivity of visual vigilance network and affects the visual vigilance information processing of individuals, which may be closely related to the damage of visual vigilance cortex, especially the information interaction between right lingual gyrus and right superior occipital gyrus.

36 小时睡眠剥夺影响躯体感觉的脑功能连接分析

杨天意¹ 曾玲婧¹ 李佳露¹ 解颂悦¹ 王海腾¹ 邵永聪¹ (通讯作者)

¹ 北京体育大学心理学院, 北京, 100084, budeshao@aliyun.com

摘要 背景: 睡眠剥夺 (sleep deprivation, SD) 会导致躯体感觉功能受损, 进而影响个体行为。躯体感觉与个体的注意、警觉等认知行为密切相关, 但是目前针对 SD 影响个体躯体感觉功能的神经生理学机制还鲜有研究。目的: 探讨 SD 后与躯体感觉相关的神经环路功能连接模式的变化特征。方法: 30 名健康男性 (年龄 25.9 ± 2.3 岁) 受试者参与了本项自身对照试验研究。分别在正常觉醒状态和 36h-SD 后采集受试者的功能影像学数据。以尾状核为种子区分析两种状态下静息态脑功能连接的变化。结果: 与静息觉醒状态相比, SD 后受试者左侧尾状核同双侧顶叶中央后回、颞下回左前分区和左后分区的功能连接性均显著降低; 而受试者左侧尾状核同顶叶缘上回右前庭区域的功能连接显著增强。右侧尾状核无连接性的显著变化。

讨论: 尾状核是躯体感觉传导的重要脑区, 而中央后回在刺激的辨别、视觉信息的处理、空间信息的定位过程中发挥重要作用, 因此 SD 后尾状核同中央后回的功能连接下降反映了受试者躯体感觉功能在 SD 后受到损害, 这会在一定程度上影响个体对于危险的感知。颞下回与视觉关联加工有关, 尾状核同颞下回功能连接的下降, 反映了 SD 后受试者对视觉信息的认知加工功能受损。由于缘上回与空间辨别功能有关, 尾状核与缘上回的功能连接增强, 可能与个体空间辨别能力的代偿性强化有关。以上结果表明, 受试者的躯体感觉相关认知加工在 36h-SD 后受损。结论: SD 损害了受试者的躯体感觉认知加工功能, 与尾状核同中央后回等脑区的功能连接变化有关。

Brain functional connectivity analysis of 36 hours sleep deprivation affecting somatosensory function

Tianyi Yang¹, Lingjing Zeng¹, Songyue Xie¹, Jialu Li¹, Haiteng Wang¹, Yongcong Shao^{1*}

¹ School of Psychology, Beijing Sport University, Beijing, 100084, budeshao@aliyun.com

Abstract: Background: Sleep deprivation (SD) can lead to the impairment of somatosensory function, and then affect individual behavior. Somatosensory is closely related to cognitive behaviors such as attention and alertness. However, there are few studies on the neurophysiological mechanism of SD affecting individual somatosensory function. Purpose: To investigate the changes of functional connectivity patterns of neural circuits related to somatosensory function after SD. Methods: Thirty healthy male subjects (age 25.9 ± 2.3 years) participated in this self-control study. Functional imaging data of subjects were collected after 36h-SD and normal wakefulness. The caudate nucleus was used as seed region to analyze the changes of brain functional connectivity in resting state. Results: Compared with the resting state, the functional connectivity of the left caudate nucleus to the bilateral parietal gyrus, left anterior and left posterior regions of inferior temporal gyrus were significantly decreased after SD, while the functional connectivity between the left caudate nucleus and the right vestibular region of the superior parietal lobe marginal

gyrus was significantly enhanced. There was no significant change of connectivity in the right caudate nucleus. Discussion: Caudate nucleus is an important brain region of somatosensory conduction, and the postcentral gyrus plays an important role in the process of stimulus discrimination, visual information processing and spatial information positioning. Therefore, the functional connectivity between caudate nucleus and postcentral gyrus is decreased, which reflects that the somatosensory function of subjects is impaired after SD, which will affect the individual's perception of danger to a certain extent. The inferior temporal gyrus is related to visual processing, the decrease of functional connectivity between caudate nucleus and inferior temporal gyrus reflects that the cognitive processing function of visual information is impaired after SD. Because the superior marginal gyrus is related to spatial discrimination, the functional connectivity between caudate nucleus and superior marginal gyrus is enhanced, which may be related to the compensatory enhancement of individual spatial discrimination ability. These results indicate that the cognitive processing related to somatosensory is impaired after 36h-SD. Conclusion: SD impairs the somatosensory and cognitive processing function of subjects, which is related to the functional connectivity between caudate nucleus and postcentral gyrus.

恢复性睡眠对完全睡眠剥夺后受损工作记忆的改善作用： 视觉事件相关电位研究

彭子伊¹ 邵永聪¹（通讯作者）

¹ 北京体育大学心理学院，北京，100084，budeshao@aliyun.com

摘要 睡眠问题俨然已成为威胁大众身心健康的一个核心问题。睡眠缺失会损害个体认知功能，进而严重影响人们正常的工作生活。工作记忆在个体众多复杂认知活动中扮演着重要的角色。因此寻找有效干预措施来对抗睡眠缺失对工作记忆的负面影响十分有必要。有研究表明咖啡因等药物能有效地维持工作表现和警觉性，但其对高级认知功能的恢复作用却是十分有限的，且在长期睡眠不足的情况下，使用咖啡因可能会带来恢复成本。恢复性睡眠是指在睡眠剥夺后给予短时间的充分睡眠，其作为一种非药理学的恢复策略，已有不少研究探讨了其对因睡眠剥夺而受损的功能存在的恢复作用。但恢复性睡眠对于因睡眠剥夺而受损的工作记忆是否存在恢复作用，以及8小时时长的恢复性睡眠能对受损的认知功能恢复到何种程度，还需要进一步研究。本研究主要通过事件相关电位分析技术，探讨8小时恢复性睡眠对36小时完全睡眠剥夺后受损的工作记忆的恢复性作用。经筛选入组的16名健康男性受试者参与本次试验，受试者分别在36小时完全睡眠剥夺前后和8h恢复性睡眠后接受2-back工作记忆任务，并在完成任务的同时记录事件相关电位。结果显示与基线状态相比，36小时完全睡眠剥夺后，个体的工作记忆能力显著受损，与工作记忆相关的N2-P3成分呈现低幅慢波特征。在8小时恢复性睡眠后，受试者完成工作记忆任务时的N2波潜伏期显著减少，P3波波幅显著增大，潜伏期显著减少。研究结果表明因36h睡眠剥夺受损的工作记忆能力可以在8h恢复性睡眠中得到恢复。恢复性睡眠的作用可能集中在对持续性注意、警觉性的恢复，这一作用可能发生在恢复性睡眠过程中占主导地位慢波睡眠阶段，但这种恢复作用是有限的，并不能使反工作记忆能力恢复到基线水平。

The restorative effects of recovery sleep on impaired working memory after total sleep deprivation: evidence from a visual event related potentials

Peng Ziyi, Shao Yongcong

School of Psychology, Beijing Sport University, Beijing, China

Abstract: Considering the well-known detrimental effects of sleep deprivation (SD) on cognitive function and quality of life, sleep disturbances represent a major physical and mental health issue. Because working memory plays an

important role in many complex cognitive processes, it is necessary to identify strategies that can effectively counteract the negative effects of SD on working memory. Although caffeine and other drugs can effectively maintain work performance and alertness, their effects on high-level cognitive functions are quite limited, and the use of caffeine may be associated with recovery costs in individuals with long-term sleep deficiency. Recovery sleep (RS) refers to a short period of adequate sleep that follows SD, representing a potential non-pharmacological strategy for combating the effects of SD on cognitive function. Nevertheless, the amount of sleep required to restore cognitive function following extended wakefulness remains unclear. In the present study, we utilized event-related potentials (ERPs) to investigate the restorative effect of 8 h of recovery sleep (RS) on working memory impairments induced by continuous 36 hours awake. We analyzed data from 16 healthy male participants. All participants completed a 2-back working memory task before and after 36 h of total sleep deprivation (TSD) and after 8 h of RS. Electroencephalography (EEG) data were recorded during the task. Results: N2 and P3 components related to working memory exhibited low-amplitude slow-wave characteristics following 36 h of TSD. Significant decreases in the latency of the N2 component were observed after 8 h of RS. RS also induced significant increases in the amplitude of the P3 component, along with significant decreases in P3 latency. Conclusions: Eight hours of RS attenuated decreases in working memory performance caused by 36 h of TSD. However, the effects of RS appear to be limited, the affected working memory capacity failed to reverse after 8 h of RS.

数学归纳推理中晚期正成分区分规则识别和规则确认：一项 ERP 研究

梁坤 王志东 肖凤（通讯作者）

山西师范大学教育科学学院，山西太原，030000，xiaofeng19850328@gmail.com

摘要 归纳推理是智力的核心组成部分，是从特定实例中提取新知识的过程。一项典型的归纳推理任务，数字序列完形，经常在各种智力测验中使用。数字序列完形任务，如“12 14 16 18”，要求识别数字规则并应用它们来确定答案，可分为规则获得和规则应用两个阶段。因此，数字规则通常根据规则的应用或外推法评估数列来识别。为探索规则识别的相关认知神经基础，本研究在数字归纳推理任务前使用不同线索提示：无线索（如“2，4，6”或“2，4，7”，这样可以防止被试在第三个数字前猜测到规则）、部分线索（例如“2 4 6”的“+”或“2 4 7”的“++”）和完全线索（例如“2 4 6”的“+2”或“2 4 7”的“++2”）。被试首先被要求识别前三个数字中的隐藏规则，然后确定第四个数字是否与规则一致。根据已有线索和对应数字，无线索条件在第三个数字识别规则；部分线索条件可在第二个数字识别规则，在第三个数字确认规则；完全线索条件下的数字均在确认线索提示是否正确。与该系列中三个数字相关的事件相关电位结果显示，在第二个数字上，部分线索条件比完全线索条件下诱发出更大的中心顶叶晚期正成分（LPC）；在第三个数字上，在无线索条件下比在部分和完全线索条件下诱发了更大的 LPC。因此，研究结果反映了 LPC 区分规则提取和规则确认的神经活动。

Late positive components distinguish rule identification from rule confirmation in numerical inductive reasoning: an ERP study

Liang Kun, Wang Zhidong, Xiao Feng

Shanxi Normal University, School of Education Science, Tai Yuan, 030000

Abstract: Inductive reasoning, the central component of intelligence, is the process of abstracting new knowledge from specific instances. A typical inductive reasoning task, the number series completion is constantly used in various intelligence tests. The number series completion, such as “12 14 16 18”, requires one identifying the numerical rules and apply them to determine the answer and can be divided into rule acquisition and rule application phases. Thus, numerical rules are usually identified by evaluating the series according to the application of a rule or extrapolation. To explore the neural correlates of rule identification, this study used a numerical inductive reasoning task with

different cues before number triplets: no-cue (e.g., “*” for “2 4 6” or “*” for “2 4 7”, it will prevent the participants speculating the rule before the third number), partial-cue (e.g., “+” for “2 4 6” or “++” for “2 4 7”) and complete-cue (e.g., “+2” for “2 4 6” or “++2” for “2 4 7”). Participants were first asked to identify hidden rules within the first three numbers and then to determine whether for the fourth number was consistent with the rules. According to the existing cues and the corresponding number, the rules in the no-cue condition would be identified in the positions of the third number; the rules in the partial-cue condition could be identified by integrating the cues and first two numbers and later confirmed by the second number, as well as all the numbers of complete-cue were confirmed whether the clue is right. The event-related potential (ERP) results locked to the three numbers showed that for the second number position, a larger centroparietal late positive components (LPC) was elicited by the partial-cue condition than in the complete-cue condition; for the third number position, a larger LPC was elicited by the no-cue condition than in the partial-and complete-cue conditions. Therefore, this study revealed that the LPC differentiates the activation of rule abstraction from that of rule confirmation.

体育锻炼对初中生手机依赖的影响——心理韧性和锻炼自我效能感的中介效应

董亚琦^{1,2} 陈伟琴² 方梅¹ 余虎霞¹ 龚理睿¹

1. 共青城市中学; 江西九江, 332020

2. 江西师范大学体育学院, 江西南昌, 330022, 1052583225@qq.com

摘要 目的: 探究初中生体育锻炼对手机依赖的影响机制, 考察心理韧性和锻炼自我效能感的中介效应, 以期通过科学适宜的体育锻炼干预初中生的手机依赖。**方法:** 采用体育锻炼问卷、心理韧性量表、锻炼自我效能感量表、手机依赖量表对 882 名初中生进行调查, 通过 Amos 构建结构方程模型对数据进行拟合。**结果:** 在性别上, 初中男生的在体育锻炼、心理韧性、锻炼自我效能感方面的得分较高, 初中女生在手机依赖上的得分略高。本文将年龄、性别、年级作为控制变量, 对其他变量进行标准化处理。初中生体育参与对手机依赖有负向预测作用 ($R^2=0.011$, $F=3.329$, $\beta=-0.107$, $P=0.003$); 也可以显著正向预测心理韧性 ($R^2=0.017$, $F=5.081$, $\beta=0.118$, $P=0.001$); 当初中生体育参与和心理韧性同时进入回归方程后, 体育锻炼能显著正向的预测锻炼自我效能感 ($\beta=0.098$, $P=0.007$)。当初中生体育锻炼、心理韧性、锻炼自我效能感同时预测手机依赖时, 体育锻炼具有显著的负向预测作用 ($\beta=-0.063$, $P=0.043$), 心理韧性和锻炼自我效能感分别有显著的负向预测作用 ($\beta=-0.314$, $P=0.000$; $\beta=-0.336$, $P=0.000$)。其中, 心理韧性的中介效应占比为 34.6%, 锻炼自我效能感的中介效应占比为 30.8%。**结论:** 体育锻炼、心理韧性和锻炼自我效能三者之间呈现正相关; 体育锻炼、心理韧性、锻炼自我效能感均与初中生手机依赖之间存在显著负相关。体育锻炼可以直接预测初中生手机依赖; 也可以通过心理韧性和锻炼自我效能感的链式中介作用来预测初中生的手机依赖。体育教师要引导学生积极参与集体性运动, 使学生在运动中获得成功体验, 提高学生的锻炼自我效能感, 提高学生心理韧性水平, 使学生通过体育锻炼调控自身情绪, 释放心理压力, 最终降低初中生手机依赖行为。

关键词 初中生, 体育锻炼, 心理韧性, 锻炼自我效能感, 手机依赖

The effect of physical exercise on mobile phone dependence of junior high school students: the mediating effect of mental toughness and exercise self-efficacy

Yaqi Dong^{1,2}, Weiqin Chen², Mei Fang¹, Huxia Yu¹, Lirui Gong¹

1. Gongqing City Middle School; Jiujiang, Jiangxi 332020

2. School of Physical Education, Jiangxi Normal University, Nanchang 330022

Abstract: Objective: To explore the influence mechanism of physical exercise of junior high school students on mobile phone dependence, and to investigate the mediating effect of mental toughness and exercise self-efficacy, with a view to intervening the mobile phone dependence of junior high school students through scientific and appropriate physical exercise. **Methods:** A survey was conducted on 882 junior high school students using physical exercise questionnaire, mental toughness scale, exercise self-efficacy scale, and mobile phone dependence scale, and the data was fitted with a structural equation model constructed by Amos. **Results:** In terms of gender, junior high school boys scored higher on physical exercise, mental toughness, and exercise self-efficacy, while junior high school girls scored slightly higher on mobile phone dependence. This article takes age, gender, and grade as control variables, and standardizes other variables. Sports participation of junior high school students has a negative predictive effect on mobile phone dependence ($R^2=0.011$, $F=3.329$, $\beta=-0.107$, $P=0.003$); it can also significantly positively predict mental toughness ($R^2=0.017$, $F=5.081$, $\beta=0.118$, $P=0.001$); when middle school students' physical participation and mental toughness entered the regression equation at the same time, physical exercise can significantly and positively predict exercise self-efficacy ($\beta=0.098$, $P=0.007$). When junior high school students' physical exercise, mental toughness, and exercise self-efficacy also predicted mobile phone dependence, physical exercise had a significant negative predictive effect ($\beta=-0.063$, $P=0.043$), and mental toughness and exercise self-efficacy were significant respectively Negative prediction effect ($\beta=-0.314$, $P=0.000$; $\beta=-0.336$, $P=0.000$). Among them, the mediating effect of mental toughness accounted for 34.6%, and the mediating effect of exercise self-efficacy accounted for 30.8%. **Conclusion:** Physical exercise, mental toughness and exercise self-efficacy are positively correlated; physical exercise, mental toughness, exercise self-efficacy are all significantly negatively correlated with mobile phone dependence of junior high school students. Physical exercise can directly predict the mobile phone dependence of junior high school students; it can also predict the mobile phone dependence of junior high school students through the intermediary effect of mental toughness and exercise self-efficacy. Physical education teachers should guide students to actively participate in collective sports, so that students can have a successful experience in sports, improve their self-efficacy in exercise, improve their mental toughness, and enable students to regulate their emotions through physical exercise, release psychological pressure, and ultimately reduce junior high school Mobile phone dependent behavior.

不同工具熟悉度群体的空间注意分配差异：基于乒乓球和羽毛球运动

车翔^{1,2} 郑超^{1,3} 戴劲¹ 李杰⁴(通讯作者) 张禹¹(通讯作者)

1 陕西师范大学心理学院, 西安, 710061

2 北京体育大学心理学院, 北京, 100084, btzy1973@126.com

3 华南师范大学心理学院, 广州, 510631

4 杭州师范大学心理科学研究院, 杭州, 311121, lijie.psy@hznu.edu.cn

摘要 目的: 空间注意分配是指通过关注视觉场景的某个位置, 让我们有选择地处理信息, 优先处理信息的某些方面, 而忽略其他方面的过程。以往的研究表明握持工具的手因对该工具的熟悉度不同, 会对其附近空间的注意分配产生影响。由于乒乓球和羽毛球实际运动中务必使用球拍工具才能进行, 前人的研究往往忽视了球拍的存在及其熟悉度对注意分配影响, 生态学效度较低。因此本研究的目的是探讨对于乒乓球拍拥有

不同熟悉度乒乓球和羽毛球运动员群体,握持乒乓球拍时对其空间注意分配的影响。**方法:**招募了各 18 名乒乓球($M=21.4$, $SD=1.8$)和羽毛球($M=20.9$, $SD=1.3$)右利手国家二级运动员,进行空间线索提示任务。实验任务中的正中央有一个十字注视点,其左右两侧各有一个正方形方框,线索的提示体现为以任意一个方框的边框变亮加粗。有效线索条件下,目标会随后出现在有线索提示的方框中;无效线索条件则相反。实验中要求所有被试握持乒乓球拍,并分别放置到任务中距离右方框等距的两个位置。本研究采用 2(被试群体:乒乓球运动员,羽毛球运动员) $\times$ 2(线索有效性:有效,无效) $\times$ 2(目标位置:左,右) $\times$ 手位置(中间,右边)的四因素混合实验设计。**结果:**进行重复测量方差分析后发现,目标位置主效应显著, $F(1,34)=13.840$, $p=.001$, $\eta_p^2=.289$; 线索有效性主效应显著, $F(1,34)=92.485$, $p<.001$, $\eta_p^2=.731$; 目标位置和群体交互作用显著, $F(1,34)=4.868$, $p=.034$, $\eta_p^2=.125$; 目标位置和线索有效性交互作用显著, $F(1,34)=8.998$, $p=.005$, $\eta_p^2=.209$ 。对目标位置和群体的交互作用进行事后检验发现,乒乓球运动员对于右目标的反应时快于左目标($p<.001$),而羽毛球运动员左右目标反应时无显著差异($p=.292$)。对目标位置和线索有效性的交互作用进行事后检验发现,无效线索条件下,右目标的反应时快于左目标($p=.001$);而有效线索条件下,左右目标的反应时无显著差异($p=.135$)。**结论:** 1.在握持乒乓拍条件下,乒乓球运动员对离球拍工具较近的右侧空间的注意分配较多,而这在羽毛球群体中没有发现。2.无效线索条件更能表现出右侧空间的注意分配优势。

关键词 空间注意分配,工具熟悉度,乒乓球,羽毛球

The difference of different group with tool familiarity in allocation of spatial attention: basing on table tennis and badminton sport

CHE Xiang^{1,2}, ZHENG Chao^{1,3}, DAI Jing¹, LI Jie^{4,1}, ZHANG Yu¹

1 School of Psychology, Shaanxi Normal University, Xian, 710061

2 School of Psychology, Beijing Sport University, Beijing, 100084

3 School of Psychology, South China Normal University, Guangzhou, 510631

4 Institutes of Psychological Sciences, Hangzhou Normal University, Hangzhou, 311121

Abstract: Purpose: Allocation of spatial attention refers to focusing on a certain location of the visual scene, attention allows us to selectively process information, prioritizing some aspects of information while ignoring others. Previous studies have shown that due to the different familiarity of the hand holding the tool, the attention allocation of the space around the tool will be affected. Racket tools must be used in the actual sports of table tennis and badminton, but previous studies have often ignored the effects of racket existence and familiarity on attention allocation, so the ecological validity is low. Therefore, the purpose of this study was to investigate the influence of holding table tennis racket on spatial attention allocation among players with different familiarity levels of this racket. **Method:** 18 table tennis ($M=21.4$, $SD=1.8$) and badminton ($M=20.9$, $SD=1.3$) right-handed national level 2 athletes were recruited to participate covert-orienting paradigm. There was a cross fixation point, which two square boxes present on both left and right side, in the center of task, and the clue was indicated by the brightening and bolding of the border of any box. Under the condition of valid clues, the target will subsequently appear in the box with clues, and the invalid cue condition is the opposite. In the experiment, all subjects were required to hold table tennis racket and place them in two positions equidistant from the right square box in the task. In this study, a four-factor mixed experimental design of 2(groups: table tennis athletes, badminton athletes) $\times$ 2(validity: valid, invalid) $\times$ 2(target position: left, right) $\times$ hand position (middle, right) was adopted. **Result:** After repeated measures ANOVA, it was found that the main effect of target position was significant, $F(1,34)=13.840$, $p=.001$, $\eta_p^2=.289$. Effect of validity was significant, $F(1,34)=92.485$, $p<.001$, $\eta_p^2=.731$. Interaction between group and target position was significant, $F(1,34)=4.868$, $p=.034$, $\eta_p^2=.125$. And interaction of validity and target position was significant, $F(1,34)=8.998$, $p=.005$, $\eta_p^2=.209$. After post-hoc of the interaction between the target position and the group, we found that the response time of the table tennis athletes group to the right target was faster than the left target($p<.001$), while there is no significant effect in badminton athletes group. After another post-hoc of the interaction between the target position and the validity, we found that the response time of the right target was faster than the left target under the

condition of invalid cue. **Conclusion:**1. Under the condition of holding table tennis racket, table tennis athletes perform allocation of spatial attention higher in right space near the racket, while we didn't find the same effect in badminton group. 2. All the participant perform attention allocation better in the right space under the condition of invalid cue than valid cues.

摘要 在运动竞赛场景中, 运动员需借助视觉搜索或选择性注意捕获、加工信息, 同时避免和排除无关信息的干扰, 进而做出有效决策。研究发现, 在一般的视觉搜索任务中, 自我相关信息存在知觉优势效应, 能自动吸引个体的注意。那么, 当运动场景中的信息与自我高度相关时会对个体的运动决策产生怎样的影响? 本研究采用双任务范式, 使用事件相关电位技术, 选取某大学二级及以上水平篮球运动员 17 人 (年龄 22.65 ± 2.32 岁、运动年限 10.53 ± 2.90 年)、爱好者 11 人 (23.18 ± 3.74 岁), 考察自己姓名、朋友姓名及陌生人姓名对篮球运动决策的影响。行为结果显示, 在决策反应时上, 自我相关信息主效应边缘显著 ($F_{(2, 22)} = 2.84, p = .069, \eta_p^2 = 0.11$), 呈现陌生人姓名时的决策反应时快于呈现自己姓名和朋友姓名信息; 运动水平主效应不显著; 两者交互作用显著 ($F_{(2, 22)} = 3.77, p = .03, \eta_p^2 = 0.14$), 简单效应分析发现, 对于篮球运动员, 自己姓名下的决策反应时和朋友姓名下差异不显著, 自己姓名下的决策反应时显著长于陌生人姓名下的决策反应时, 朋友姓名下的决策反应时与陌生人姓名下的决策反应时差异不显著; 对于篮球爱好者, 不同姓名信息下的决策反应时差异不显著。在决策正确率上, 只发现了自我相关信息和运动水平的交互作用边缘显著 ($F_{(2, 22)} = 2.94, p = .06, \eta_p^2 = 0.11$), 简单效应分析发现, 对于篮球运动员, 呈现自己姓名时的决策正确率显著高于朋友姓名时的正确率, 显著高于陌生人姓名信息, 朋友姓名下的决策正确率与陌生人姓名下的决策正确率差异不显著; 对于篮球爱好者, 三种姓名信息下的决策正确率差异不显著。ERP 结果发现, 大脑前额区和中央区在自己姓名和朋友姓名信息条件下进行决策可诱发出更大的 N1 波幅, 且运动员的 P2 平均波幅显著大于爱好者。在晚期阶段 (350~420ms), 大脑左侧前额区在自己姓名和朋友姓名信息条件决策时诱发出更大的 N400 平均波幅。在 550~650ms 阶段, 运动员 LPP 平均波幅显著大于爱好者。由此, 自我相关信息影响运动决策的认知加工, 存在知觉优势效应, 且运动水平越高对决策信息简单特征定义的能力越强。

Perceptual Advantage Effect of Self-related Information in Basketball Decision-making: Evidence from ERP

Chen Jing, Ren Pengfei, Wang Xiaoting, Zhang Xin, Chi Lizhong

¹ School of Psychology, Beijing Sport University, Beijing, 100084

Abstract: In sports competition situations, athletes need to use visual search or selective attention to capture and process information and at the same time need to avoid and eliminate distractions, and then make effective decisions. So, how does the information in the sports scene have a high correlation with the self? This study adopted the dual-task paradigm and ERP, The participants were 17 basketball athletes and 11 college students from a university in China. To explore the effect of self-name, friend-name and unfamiliar-name on basketball decision-making. The behavior results show that the main effects of self-related information is margin significant in response time of decision making, the response time when presenting the unfamiliar-name is faster than presenting the self-name and friend-name; and the main effect of skill level is not significant; and the interaction between the two variables is significant in the decision response time, simple effect analysis found that for basketball players, the difference between the decision response under self-name and the friend-name is not significant, the decision response under self-name is significantly longer than that under unfamiliar-name, and the difference between the decision response

under friend-name and unfamiliar-name is not significant; for basketball amateur, the difference in decision-making response under different name information is not significant. The main effect of self-related information and group are not significant, and the interaction between the two is significant in the decision accuracy. Simple effect analysis found that for basketball players, the decision accuracy under self-name is significantly higher than that under friend-name, unfamiliar-name, and the difference between the decision accuracy under friend-name and unfamiliar-name is not significant; for basketball amateur, the difference in decision accuracy under different name information is not significant. The ERP results show that, when decision-making under the condition of self-name and friend-name information, the brain's prefrontal area and central area can induce a larger N1 amplitude, and the average P2 amplitude of athletes is significantly larger than that of amateur. In the late stage (350~420ms), when decision-making under the condition of self-name and friend-name information, the average amplitude of N400 induced by the left frontal area of the brain is significantly greater than the unfamiliar-name, while the average amplitude of the N400 induced by the right prefrontal area of brain is significantly smaller than the unfamiliar-name. During the period of 550~650ms, the average amplitude of LPP of athletes is significantly larger than that of amateur. The ability of decision-making in sports are impacted by self-related information, there is a perceptual advantage effect, and the higher the level of sports, the stronger the ability to define simple features of decision information.

Keywords: self-related information, decision-making in sport, basketball athletes, dual-task paradigm, ERP

锻炼的心理效益的安慰剂效应：一项元分析

张铭娜¹ 郭璐²（通讯作者）

¹ 北京体育大学，北京，100084

² 北京体育大学心理学院，北京，100084，guolu2000@163.com

摘要 目的：由于目前人们对锻炼对心理健康的影响寄予了很高的期望，很难检验锻炼干预本身对心理的影响。因此，本研究旨在通过元分析方法评估实验诱发的期望带来的安慰剂效应。方法：利用 EBSCO、ProQuest、ScienceDirect 等数据库，检索从各数据库建库开始至 2020 年 3 月 21 日前发表的文献，为了排除受试者对不同种类、不同强度的锻炼抱有不一致的结果预期，本研究将纳入采用“期望修正”设计的研究，“期望修正”设计旨在使用情境或行为线索来引起或增强某种结果将会发生的信念，即对受试者的期望进行操纵的锻炼干预研究进行元分析，评估积极期望引起的安慰剂效应。纳入的研究中，实验组和对照组应进行相同类型、时间、强度的锻炼干预。共纳入 6 项研究。采用 RevMan5.3 进行元分析，通过比较实验组（提供关于锻炼的心理益处的信息）与对照组（不提供锻炼的心理益处相关信息）锻炼后情绪的改善情况，估计锻炼干预实验中实验诱发的期望对情绪的影响，探究锻炼改善情绪的机制。结果：与对照组相比，实验诱导的期望能够显著提升锻炼后的积极情绪，其合并效应量为小效应量（SMD=0.36，95%CI：0.16~0.57）。结论：对锻炼结果持有积极期望的个体运动后的情绪提升存在安慰剂效应，尤其是在短时、中低强度的有氧运动中，个体的情绪更容易受预期影响。

Placebo effect on the psychological benefits of exercise:

A meta-analysis

Zhang Mingna Guo Lu

School of Psychology, Beijing Sport University, Beijing, 100084

Abstract: Objective: Because of the high expectations placed on the effect of exercise on mental health, it is difficult to verify the effect of exercise intervention on the psychological components. This study aims to estimate the placebo effect of experimentally-induced expectations through meta-analysis. Methods: Articles published before 21 March 2020 were located using EBSCO, ProQuest, ScienceDirect, and other databases. In order to rule out that subjects have incompletely consistent outcome expectations for different types and different intensities of exercises, this study

will include studies that adopt an "expectation modification" design. The "expectation modification" design aims to use situational or behavioral cues to cause or to strengthen the belief that a certain result will occur, that is, to conduct a meta-analysis of an exercise intervention study that manipulates the expectations of the subjects to assess the placebo effect caused by positive expectations. A total of 6 studies were included. RevMan5.3 was used for meta-analysis. Evaluating the size of the placebo effect, and exploring the mechanism of emotional improvement after exercise by comparing the improvement of the emotion between the experimental group (providing information about the psychological benefits of sports) and the control group (not providing information about the psychological benefits of sports) after exercise. Results: Compared with the control group, the experimentally-induced expectation had a significant effect on the improvement of positive emotions after exercise (SMD = 0.36, 95% CI: 0.16 ~ 0.57). Conclusion: There is a placebo effect in participants who have positive expectations for exercise. Especially in a short-term, light or moderate intensity aerobic exercise, the experience of exercise is more likely to be affected by the expectation.

Keywords: placebo effect, exercise intervention, exercise; expectation, meta-analysis

正念训练对业余篮球运动员认知控制和心理状态的影响和预测

2 北京体育大学运动医学与康复学院, 北京, 100084

摘 要 正念训练是以接受为基础的一种心理行为训练方法, 近年来广受大众关注, 并开始在竞技运动领域兴起。但由于各派正念训练方法纷杂、适用范围不同, 在应用上常引发争议。本研究旨在探究针对亚洲运动员的“正念—接受—觉悟—投入 (MAIC)”正念训练对业余篮球运动员的认知控制和心理状态的影响, 以及正念不同成分的影响作用。

本研究采用 2(组别:干预组和对照组)×2(时间:前测和后测)的混合实验设计, 组别为被试间变量, 时间为被试内变量。选取北京某体育大学的 24 名大学生业余篮球运动员 (其中男性 11 名, 平均年龄 20.5 ± 2.7 岁) 作为实验参与者, 依照《运动员正念训练手册》对干预组进行为期 7 周的 MAIC 正念训练。在干预前后对两组实验参与者进行测量, 认知控制评估采用 Stroop 测验程序, 评估量表采用五因素正念量表 (FFMQ)、接纳与行动问卷 (AAQ-2) 和竞赛状态焦虑问卷 (CSAI-2)。对数据进行重复测量方差分析和多元回归分析, 分别探究正念训练对业余篮球运动员认知控制和心理状态的干预效果以及对干预效果有贡献的正念成分。

重复测量方差分析结果显示, 在五因素正念量表中的“觉知的行动”“不判断”“不行动”维度及其总分、接纳与行动问卷以及竞赛状态焦虑问卷中的“状态自信心”维度中, 时间和组别交互作用均显著; 分层回归结果表明, 五因素正念量表中的“观察”和“不判断”能够显著地正向预测 Stroop 正确率 ($\beta = 0.005, t = 2.856, p < 0.05$; $\beta = 0.004, t = 2.969, p < 0.05$), “不行动”能够显著地负向预测 Stroop 正确率 ($\beta = -0.012, t = -4.592, p < 0.01$)。

结论: MAIC 正念训练能够提高大学生业余篮球运动员的正念水平, 减少对经验的回避, 并提升状态自信心水平。此外, 正念五因素中的“观察”“不判断”和“不行动”维度对于认知控制有预测作用。本研究结果提示, MAIC 正念训练可被用于改善业余篮球运动员认知控制和心理状态。本研究有助于解释正念训练在业余篮球运动员表现中的作用及机制。

Abstract: Mindfulness training is a psychological behavior training method based on accepting, which has attracted wide public attention and begun to rise in the field of competitive sports in recent years. However, due to the diverse application scope of different mindfulness training methods, their application is often controversial. The purpose of this study was to explore the influence of Mindfulness-Acceptance-Insight-Commitment (MAIC) on the cognitive control and mental state of amateur basketball players, as well as the influence of different components of mindfulness. This study adopted a mixed experimental design of 2(groups: intervention group vs. control group) × 2(time: pre-test vs. post-test) with groups as between-subjects factors and time as within-subjects factors. A total of 24 undergraduate amateur basketball players (11 males, $M_{age} = 20.5 \pm 2.7$ years) from a Sport university in Beijing participated in the experiment. The intervention group received 7 weeks of MAIC mindfulness training according to the Athlete's Mindfulness Training Manual. Participants in both groups were measured before and after the intervention. Cognitive control was assessed using the Stroop test. Three scales are used in this study, including Five Facet Mindfulness Questionnaire (FFMQ), The Acceptance and Action Questionnaire (AAQ-2) and Competitive State Activity Inventory-2(CSAI-2). Repeated measures ANOVA and multiple regression analysis were carried out to explore the intervention effect of mindfulness training on the cognitive control and mental state of amateur basketball players and the mindfulness components contributing to the intervention effect. The results of ANOVA showed that interactions between time and group were significant in the dimensions of “acting with awareness”, “nonjudging of inner experiences” and “nonreaction to inner experiences” and the total score of FFMQ, as well as in the AAQ-2, and in the dimensions of “state confidence” in the CSAI-2. Hierarchical regression results showed that “observing” and “nonjudging of inner experiences” in the FFMQ significantly positively predicted Stroop accuracy ($\beta = 0.005$, $t = 2.856$, $p < 0.05$; $\beta = 0.004$, $t = 2.969$, $p < 0.05$), while “nonreaction to inner experiences” significantly negatively predicted Stroop accuracy ($\beta = -0.012$, $t = -4.592$, $p < 0.01$). Conclusion: MAIC can improve the mindfulness level of college amateur basketball players, reduce their avoidance of experience, and improve the level of state confidence. In addition, the dimensions of “observing”, “nonjudging of inner experiences” and “nonreaction to inner experiences” in the FFMQ can predict cognitive control. The results of this study suggest that MAIC mindfulness training can be used to improve the cognitive control and mental state of amateur basketball players. This study helps to explain the role and mechanism of mindfulness training in the performance of amateur basketball players.

外周视角在运动表现中的应用

刘艳艳¹ 苗秀影¹ 迟立忠¹ (通讯作者)

¹ 北京体育大学心理学院 北京 100084, chilizh3804@163.com

摘要 外周视觉可以弥补注意凝视转换带来的代价, 同时实现对多个位置信息的监控, 提高运动表现。个体在日常生活中充分地利用了外周视觉的优势, 如在保持姿势平衡时、动作捕捉及汽车驾驶领域等。在时间高度受限制的赛场上, 场景时刻处于动态变化, 需要运动员根据情境变化转移注意, 这种注意的转移可以是公开的(迅速扫视到新位置), 也可以是隐蔽的(凝视保持稳定但注意力重新分配), 后者多依赖外周视觉。本文梳理了近几年外周视觉在体育运动领域中的测量方法、范式及不同范式的结合等发现, 研究者通常使用手眼协调测试、韦恩电脑扫视固定器、周边视觉测试、维也纳测试系统、有用视野范式、注意窗口范式及将

外周视觉与多目标追踪任务、移动窗口任务相结合,探讨专家与新手运动员外周视觉的差异。结果发现外周视觉在运动领域中发挥着重要的作用,运动场景复杂多变且时间高度受限,如果仅使用中央凹视觉,对目标进行凝视,增加了扫视行为所带来的代价,反而不利于运动表现。且专家与新手的外周视觉能力有差异,专家型运动员好于新手及非运动员。但是上述研究方法多采用基础实验材料测量运动员的外周视觉能力,脱离了真实的运动场景。此外,关于运动员外周视觉的神经生物基础研究较少。未来可结合虚拟现实等技术创新真实的运动场景,将外周视觉范式与眼动、脑电、脑磁图等相结合,多模态下探讨其机制;同时也可开展提高外周视觉的注意训练。

关键词 外周视觉, 运动表现, 注意

Application of Peripheral Vision in Sports Performance

Liuyanyan¹, Miaoxiuying¹, Chilizhong¹ (Corresponding Author)

¹ School of Psychology, Beijing Sport University, Beijing 100084, chilizh3804@163.com

Abstract: Peripheral vision can make up for the cost of attentional gaze conversion, while monitoring multiple location information to improve sports performance. Individuals make full use of the advantages of peripheral vision in their daily lives, such as maintaining posture balance, motion capture, and car driving. In a stadium where time is highly restricted and constantly changing, requiring athletes to shift their attention according to the changes in the situation. The attention shift can be public (sweeping to a new position quickly) or hidden (the gaze remains stable but attention redistribution), the latter mostly rely on peripheral vision. This article combines through the measurement methods, paradigms and combinations of different paradigms in the field of sports in recent years. Researchers usually use Eye-hand coordination test, Wayne Computerized Saccadic Fixator, Peripheral Vision Test, Vienna test system, Useful field of view paradigm, Attention window paradigm and the combination of peripheral vision with multi-target tracking tasks and moving window tasks to explore the differences in peripheral vision between expert and novice athletes. It turns out that peripheral vision plays an important role in the field of sports. The sports scenes are complex and changeable and the time is highly limited, if only foveal vision is used to stare at the target, the cost of saccadic behavior is increased, which is not conducive to athletic performance. Moreover, the peripheral visual ability of experts and novices is different, which indicates expert athletes have better peripheral vision ability than novices and non-athletes. However, aboved research methods mentioned mostly use basic experimental materials to measure the peripheral visual ability of athletes, which are out of the real sports scene. In addition, there are few neurobiological studies on the peripheral vision of athletes. In the future, virtual reality and other technologies can be combined to create real sports scenes, and peripheral vision paradigms can be combined with eye movements, EEG and MEG to explored the neurobiological mechanism under multi-modality. At the same time, attention training to improve peripheral vision can also be carried out.

基于声音的反馈对运动表现的影响

王晓婷¹ 任鹏飞² 迟立忠³ (通讯作者)

摘要 虽然视觉模型在掌握新的运动姿势方面很有用,但没有明确的证据表明它们在优化已形成运动图式的动作执行中的优势。听觉模型,即再现特定动作的声音序列,被证明比视觉模型更有效地促进对精确定时动作的识别、记忆和再现,鉴于此,前人研究了听觉模型在优化运动员动作执行、促进运动表现方面的作用。

运动员在执行动作前,听取自己表现最佳时的动作声音序列(又称离线反馈),可以提高后继动作执行的稳定性和运动成绩,且这一提高效果,不仅是即时的,经过两个月的训练,在撤销干预一段时间后,提高效果仍保持。此外,研究者还探讨了实时发声(real-time feedback)对动作表现的影响(即在线反馈),即

在动作执行过程中，即时将动作执行产生的声音以某种合成音传递给运动员，运动员据此随时调整自己的动作执行或节奏。这被证明在赛艇、跨栏、高尔夫等项目中可以提高运动成绩。

事件编码理论（TEC）解释了听觉反馈对运动表现的这一促进作用，在动作形成过程中，听觉与行动共享一个共同的表征系统，当听到与动作相关的声音时，会预先激活动作相关（时间）特征的编码，这些代码将有更高的概率用于运动规划，从而促进具有与感知声音相同时间特征的动作的产生。这一解释得到了功能磁共振研究的支持，当参与者在听稍后需要其进行演奏的曲目时，其运动区(辅助运动区、运动前皮质和小脑)神经元被激活；当运动员当被动倾听熟悉的运动声音时，他们在参与动作规划的脑区(辅助运动区、中央前回和中央后回、额下回和顶叶)表现出激活。

基于声音的反馈可以优化已形成的技术动作，且主要体现在闭环性、计时性运动项目，难点是要克服反馈依靠，从根本上优化动作。未来研究一方面可以继续探索听觉反馈的剂量效应和长期效果；另一方面可以尝试将离线反馈与在线反馈结合，以寻求更佳的干预方法。

The Effect of Audio-based Feedback on Motor Performance

Wang Xiaoting¹, Ren Pengfei², Chi Lizhong³(Corresponding Author),

¹ School of Psychology, Beijing Sport University, Beijing, 100101

² School of Sport, Yan'an University, Shanxi, 716000

³ School of Psychology, Beijing Sport University, Beijing, 100101, chilzh3804@163.com

Abstract: While visual models are useful in the acquisition of new motor gestures, there is no clear evidence of their effectiveness in optimizing the execution of movements whose motor schemata are already developed. The auditory model such as sequences of sounds reproducing the timing of a given movement, are more effective than visual ones in promoting the identification, the memorization and the reproduction of precisely timed movements. In view of this, previous studies focused on the role of auditory models in optimizing athletes' action execution and promoting sports performance.

Before performing an action, the athletes listen to the sound sequence of his best performance (also known as offline feedback), which can improve the stability of subsequent action execution and sports performance, and the improvement is not immediate. After two months of training, after withdrawing the intervention for a period of time, the improvement effect is still maintained. The researchers also explored the effect of real-time feedback on action performance (online feedback), which is, in the process of action execution, the sound generated by action execution is transmitted to athletes in a certain kind of synthetic sonification, so that the athletes can adjust their action execution or rhythm at any time. It has been proved that can improve performance in rowing, hurdles, golf and other sports.

The theory of Event coding (TEC) explains the role of auditory feedback in optimizing motor performance. In the process of action formation, perception and action share a common representational system. When hearing action related sounds, the encoding of action related (temporal) features will be pre-activated. The pre-activated codes will have a higher probability of being used in motion planning, so as to promote the production of movements with the same temporal features of the perceived sound. This explanation received support from fMRI studies. Indeed, participants were registered activation in motor regions (supplementary motor area, mid-premotor cortex, and cerebellum) while they were listening to rhythms to be later reproduced by tapping. Moreover, the athletes were registered activation in areas involved in action planning (supplementary motor area, pre- and postcentral gyri, inferior frontal gyrus, and parietal operculum) when they were passively listening to familiar sport sounds.

The audio-based feedback can optimize the formed technical actions, which is mainly reflected in the closed-loop and timing sports. The difficulty is to overcome the feedback dependence and fundamentally optimize the action. The future studies, on one hand, can continue to explore the dose effect and long-term effect of audio-based feedback; on the other hand, can try to combine offline feedback with online feedback to seek better intervention

methods.

团体心理辅导对青少年乒乓球运动员应激水平的干预研究

欧阳灵青

湖北省体育科学研究所, 武汉, 430205, 369818175@qq.com

摘要 运动员的应激已成为国内外学者普遍关注的焦点问题之一。运动员在激烈的竞争环境中要应对各种挑战,属于高应激性人群。过度的应激是负面的心理因素,运动员在高应激状态下容易出现焦虑、紧张,影响心理健康、训练和比赛状态。乒乓球运动由于需要在短时间内高强度的注意力集中,因此对植物神经系统有很高的要求。有研究表明影响高水平乒乓球运动员状态性自信心的主要因素就是心理应激,因此乒乓球运动员合理对应激对于保持良好的心理健康状况和维持积极的行为表现至关重要。研究目的:本研究从运动员常见的应激源出发,设计并验证针对性的团体心理辅导方案对降低青少年乒乓球运动员的应激水平的有效性。方法:选取某省队乒乓球男子运动员21人,平均年龄为 14.9 ± 2.87 ,分为干预组10人,接受为期八周,每周一次的团体心理辅导干预;对照组11人,不接受团体心理辅导干预。使用《运动员应激量表》在干预前、干预后测量运动员的应激水平。结果:干预后,干预组与对照组在人际关系、运动损伤、比赛失利、日常生活遭遇上得分存在显著差异($p<0.05$);干预组人际关系、日常生活遭遇显著下降($p<0.05$),运动损伤、比赛失利、环境因素和内外压力上的得分无显著差异($p>0.05$);对照组干预前后在应激各分量表得分上无显著差异($p>0.05$)。结论:团体心理辅导能够降低青少年乒乓球运动员的人际关系、日常生活遭遇应激水平。**关键词** 应激,乒乓球运动员,团体心理辅导

The Intervening Effect of Group Counseling On Stress Level Of Young Table Tennis Players

Ouyang Lingqing

Hubei Institute of Sports Science, Wuhan

Abstract: The stress of athletes has become one of the focus issues of domestic and foreign scholars. Athletes have to deal with various challenges in a fiercely competitive environment and belong to a highly stressed group. Excessive stress is a negative psychological factor. High stress can cause anxiety and tension, which affect their mental health, training and competition status. Because table tennis requires high-intensity concentration in a short period of time, it places high demands on the autonomic nervous system. Studies have shown that the main factor that affects self-confidence of high-level table tennis players is psychological stress. Therefore, a reasonable response to stress for table tennis players is essential for maintaining good mental health and maintaining positive behaviors. Research purpose: This study designed and verified the effectiveness of targeted group psychological counseling intervention in reducing the stress level of young table tennis players from the common stressors of athletes. Method: A selection of 21 male table tennis players from a provincial team, with an average age of 14.9 ± 2.87 , were divided into an intervention group of 10 and received an eight-week group psychological counseling intervention once a week; 11 people in the control group did not receive group psychology Counseling intervention. Use the "Athlete Stress Scale" to measure the athlete's stress level before and after the intervention. Results: After the intervention, the intervention group and the control group had significant differences in the scores of interpersonal relations, sports injuries, competitive failures, and daily life experiences ($p<0.05$); the intervention group's interpersonal relations and daily life experiences decreased significantly ($p<0.05$). There were no significant differences in the scores of sports injuries, competitive failures, environmental factors, and internal and external pressures ($p>0.05$); the control group had no significant differences in the scores of the stress subscales before and after intervention ($p>0.05$). Conclusion: Group psychological counseling can reduce the interpersonal relationship and daily life stress levels of young table tennis players.

摘要 研究目的: 很多体育项目需要双人合作完成比赛竞争, 运动员间的社会认知交互机理成为了当前运动认知神经科学的热点问题。人际同步是指两个及两个以上的人, 其行为表现在时间上的重合现象。人际同步不仅仅局限于行为同步, 还包括在神经、生理和情感等层面上的同步, 具体是指在社会互动过程中, 个体与个体间或个体与群体间出现的情绪、行为和神经反应等方面高度协调一致的现象。大量研究证实, 人际同步能够促进个体间的一致性行为, 在同步条件下, 内侧前额叶的激活程度与被试主观评定的亲近感相关联, 内侧前额叶激活越强, 被试感受到的亲近感越多, 增加被试间的合作行为。但也有研究认为人际同步仅仅是一种“模仿行为”, 是不同的个体间行为在节奏和时间尺度上的协调性。体育运动为要求既要求镜像神经元系统(动作表征)也需要心理网络(情感认知)的参与, 为人际同步的功能研究提供了一个天然平台, 因此, 本研究采用基于脑电的超扫描技术, 利用体感游戏这一高生态效度的自然交互情境中, 通过运动员间合作条件下的神经活动一致性模式的异同, 从脑际视角探索运动合作的神经机制。**研究方法:** 选取国内某体育大学双人羽毛球二级及以上运动员 20 组, 平均年龄 (25.467 ± 4.912 岁), 平均运动年限 (11.071 ± 3.912 年), 所有参与者都神经健康, 右利手, 视力或矫正视力正常。网球合作任务选取的视频素材来自 2012 年世锦赛比赛。用 kinovea 软件截取比赛中的动作视频(时间为 3 秒), 应用 Movavi Video Suite 2020 工具箱进行视频像素编辑, 共截取 120 视频素材, 由 2 名具有丰富经验的羽毛球的国家一级运动员(平均年龄 21.5, 平均运动年限 8.2)对初步截取的视频进行评价与筛选, 出两种具有代表性的视频素材, 不同难度各 40 个视频, 采用 2(难度[高、低]) $\times$ 2(分组[同步高、同步低])的混合实验设计, 因变量为决策一致性、判断正确率。被试被要求佩戴 VR 眼镜, 在两个组块内分别对视频中的羽毛球落点进行判断, 最后用于正式实验的视频 160 个。正式实验指导语: 要求被试观看 3 秒钟的比赛视频, 假设你和你的队友是视频中的运动员, 请为你们的决策做出选择, 羽毛球落点区域前左、前中、前右、后左、后中、后右六个分区。视频随机呈现, 记录被试的决策正确率和反应时, 一致选项数量。EEG 数据采集使用 Neuroscan SynAmps 放大器, 采用 64 导的 10-20 标准的双电极帽同步采集。脑电信号经 0.05~100Hz 带通滤波器放大, 采样率为 500Hz, 所有导联阻抗均保持在 5k Ω 以下。使用 eeglab17.0 采用 ICA 法去除带有眼动、心电或其他运动伪迹。计算了每个 trials 的信号源和相位同步值, 并将其平均化。实验中将动作任务阶段和静息状态两个状态下的相干性的差值界定为任务关联的相干性, 并将这一相干性进行 Fisher z 转换。对于计算得到的相干性, 进行独立样本 t 检验。如果相干性显著高于 0, 则表示该探测通道存在脑间同步。由于进行了多重比较, 对 t 检验结果做错误发现率法(False discovery rate; FDR)校正。**研究结果:** 行为分析结果表明, 高难度条件下同步高组的决策一致性显著高于同步低 ($t_{(59)}=1.35, P<0.05$), 低难度条件下无显著差异。从波幅和相位两个角度发现, 只有在高难度下脑际幅度一致性会有显著差异, 具体表现在 theta、alpha 和 beta 频段的不同空间模式上。研究结论: (1) 脑际同步会影响到运动员间的合作行为; (2) 任务难度在人际同步对合作行为的影响中发挥调解作用, 高难度任务对运动员间的脑际同步要求更高。这些发现对介绍合作过程的时间动态特征上的差异提供了新实验证据, 展示了基于自然情境超扫描技术的脑际视角神经科学研究方法的潜力。

Interpersonal synchronization perspective on the influence of athletes' cooperative behavior and its neural basis

Zhang Xin Beijing Sports University 1004320180051@bsu.edu.cn

Mingming Yin Shenyang Institute of Sports 25144506@qq.com

Chi Lizhong Beijing Sports University chilizh3804@163.com

Abstract: Purpose of the study: Many sports require two-person cooperation to complete competition, and the mechanism of social cognitive interaction between athletes has become a hot issue in current sports cognitive neuroscience. Interpersonal synchronization refers to the phenomenon of temporal overlap in the behavioral performance of two and more people. Interpersonal synchronization is not only limited to behavioral synchronization, but also includes synchronization at the neural, physiological and emotional levels, specifically, a high degree of coherence in emotional, behavioral and neural responses between individuals and individuals or between individuals and groups during social interactions. Numerous studies have confirmed that interpersonal synchronization can promote coherent behavior among individuals, and under synchronization conditions, the degree of medial prefrontal activation correlates with subjects' subjective ratings of closeness; the stronger the medial prefrontal activation, the more closeness subjects feel, increasing inter-subject cooperative behavior. However, it has also been suggested that interpersonal synchrony is simply a "mimicry", a coordination of behaviors between individuals on a rhythmic and temporal scale. Therefore, the present study used EEG-based ultrascan technology to explore the neural mechanisms of interpersonal synchronization from an intercerebral perspective by using a natural interaction context with high ecological validity, the somatic game, and the similarities and differences in neural activity coherence patterns under cooperative conditions among athletes. perspective to explore the neural mechanisms of motor cooperation.

Methods: Twenty groups of two-player badminton players of level 2 and above from a domestic sports university were selected, with a mean age (25.467 ± 4.912 years) and mean years of sport (11.071 ± 3.912 years), and all participants were neurologically healthy, right-handed and with normal vision or corrected vision. The video footage selected for the tennis cooperative task was taken from the 2012 World Championships matches. A total of 120 video clips were intercepted using kinovea software to capture video of the action in the tournament (3 seconds in duration), and the Movavi Video Suite 2020 toolbox was applied to edit the video pixels. 2 national-level players with extensive experience in badminton (mean age 21.5, mean years of sport 8.2) evaluated and screened the preliminary intercepted videos. Out of two representative video clips, 40 videos of each different difficulty, a mixed experimental design of 2 (difficulty [high, low]) $\times$ 2 (grouping [synchronized high, synchronized low]) was used, and the dependent variables were decision consistency, and correct judgment rate. Subjects were asked to wear VR glasses and judge the badminton drop in the video within each of the two group blocks, and the final 160 videos used in the formal experiment. Formal experiment guideline: subjects were asked to watch a 3-second video of the match, assuming you and your teammates were the athletes in the video, please make a choice for your decision, badminton landing point area front left, front center, front right, back left, back center, back right six partitions. The video was presented randomly and the number of consistent options was recorded when subjects made correct decisions and responses. eeg data were acquired using a Neuroscan SynAmps amplifier with a 64-conductance 10-20 standard dual electrode cap synchronized acquisition. EEG signals were amplified by a 0.05-100 Hz band-pass filter with a sampling rate of 500 Hz, and all lead impedances were kept below 5 k Ω . The ICA method with eye movement, ECG or other motion artifacts was removed using eeglab17.0. The signal source and phase synchronization values were calculated for each trials and averaged. The difference between the coherence in the two states of action task phase and resting state was defined as the task-associated coherence, and this coherence was Fisher z-transformed. For the calculated coherence, an independent samples t-test was performed. If the coherence was significantly higher than 0, it indicated the presence of interbrain synchronization for that detection channel. Because multiple comparisons were performed, the t-test results were corrected for the false discovery rate (FDR) method. **Results:** The results of the behavioral analysis showed that the decision consistency was significantly higher in the high-synchrony group than in the low-synchrony

group in the high difficulty condition ($t(59)=1.35, p<0.05$), with no significant difference in the low difficulty condition. Significant differences in interbrain amplitude consistency were found from both wave amplitude and phase perspectives only at high difficulty, as evidenced by different spatial patterns in the theta, alpha, and beta frequency bands. It was concluded that (1) interbrain synchronization affects cooperative behavior among athletes and (2) task difficulty plays a mediating role in the effect of interpersonal synchronization on cooperative behavior, with high difficulty tasks requiring higher interbrain synchronization among athletes. These findings provide new experimental evidence for introducing differences in the temporal dynamic characteristics of cooperative processes, demonstrating the potential of a neuroscientific approach to interbrain perspective based on naturalistic contextual hypercanning techniques.

运动员运动特质自信对竞赛状态焦虑的影响：意志力的中介作用

侯俊如¹ 赵国明²

1 北京体育大学运动心理学院, 北京, 100084

2 北京市体育科学研究所, 北京, 100075, zhgm32@163.com

摘要 目的: 运动员在面临比赛时的紧张焦虑体验, 会对其心态调整和比赛发挥产生影响。而运动员的自信水平和意志品质作为个体的重要特质, 能够支撑他们应对应激状态。因此准确把控影响运动员焦虑的因素, 才能有效理解运动员的认知及生理反应并进行干预。**方法:** 本研究对 557 名运动员进行了调查, 涵盖了体能主导类和技能主导类的 26 个运动项目, 最终纳入分析的有效数据共 475 份。本研究首先对不同运动等级、不同运动项群运动员在运动特质自信和竞赛状态焦虑上的差异进行了分析, 其次探究意志力在运动特质自信影响竞赛状态焦虑上是否存在中介作用, 最后采用判别分析探究能够影响运动员竞赛状态焦虑的因素, 从而依据多维焦虑理论和所得判别公式对运动员实际的焦虑状态进行干预。**结果:** (1) 不同等级运动员在运动特质自信和竞赛状态焦虑上都有显著差异, 健将级、国际健将级和一级运动员的运动特质自信显著高于二级运动员, 相反, 一级和二级运动员在认知状态焦虑、躯体状态焦虑上显著高于健将级、国际健将级运动员; 不同运动项群运动员在运动特质自信和竞赛状态焦虑上也有显著差异, 体能主导类运动员的运动特质自信和状态自信心显著高于技能主导类运动员, 技能主导类运动中, 格斗对抗性和隔网对抗性运动员的躯体状态焦虑显著高于其他运动项群运动员。(2) 运动特质自信程度高的运动员表现出较低的认知状态焦虑和躯体状态焦虑, 且意志力存在显著的中介作用。具体而言, 对于认知状态焦虑来说, 意志力的果断性、自控力、自信心维度存在显著的中介作用, 对于躯体状态焦虑来说, 意志力的果断性、自信心维度存在显著的中介作用, 对于状态自信心来说, 意志力的果断性、清晰度维度存在显著的中介作用。**结论:** 无论从特质自信还是状态焦虑来看, 健将级运动员都比运动等级较低的运动员有更大的优势以应对日常训练和比赛。此外, 运动特质自信对竞赛状态焦虑有显著影响, 其中运动员的意志力起到了部分中介作用。

The Influence of Athlete's Sports Traits Self-confidence on Competition State Anxiety: The mediating role of willpower

Hou Junru¹, Zhao Guoming²

1 Department of Psychology, Beijing Sports University, Beijing, 100084

2 Beijing Sports Science Institute, Beijing, 100075, zhgm32@163.com

Abstract: Objective: The nervous anxiety experience of athletes in the face of competition will affect their mentality adjustment and competition. As an important trait of individual, athletes' confidence level and willpower can support them to deal with stress state. Therefore, to accurately control the factors affecting athletes' anxiety can effectively understand the cognitive and physiological responses of athletes so that we can intervene. **Methods:** In this study, we investigated 557 athletes, covering 26 sports of physical ability leading classes and skill leading classes. Firstly, we

analyzed the differences between athletes of different sports grades and different sports item groups in sports traits self-confidence and competition state anxiety, then we explored whether willpower play an intermediary role in the influence of sports traits self-confidence on competition state anxiety. Finally, discriminant analysis was used to explore the factors that can affect the anxiety of athletes' competition state, so as to intervene the actual anxiety state of athletes according to the multidimensional anxiety theory and the obtained discriminant formula. **Results:** (1) There were significant differences in sports trait self-confidence and competition state anxiety among athletes of different grades. Athletes of general level, international general level and first class were significantly more confident than those of second class athletes. On the contrary, first and second class athletes were significantly higher in cognitive state anxiety and physical state anxiety than those of general level and international general level athletes; There were also significant differences in sports trait self-confidence and competition state anxiety among athletes in different sports item groups. The sports trait self-confidence and state self-confidence of athletes in physical ability leading classes were significantly higher than that of skill leading classes. In the skill leading classes sports, the physical state anxiety of combat adversarial and anti-network athletes was significantly higher than that of other sports group athletes. (2) Athletes with high self-confidence showed low cognitive state anxiety and physical state anxiety, and willpower played a significant intermediary effect. Specifically, for cognitive state anxiety, the decisive, self-control, self-confidence dimension of willpower had a significant intermediary role, for physical state anxiety, the decisive and self-confidence dimension of willpower had a significant intermediary role, for state self-confidence, The decisive and clear dimension of willpower had a significant intermediary role. **Conclusions:** From the point of view of trait self-confidence and state anxiety, athletes of general level had more advantages than athletes with lower sports level to cope with daily training and competition. In addition, sports traits self-confidence had a significant impact on competition state anxiety, in which athletes' willpower played a part of the intermediary role.

体育活动对青少年社会适应的影响：链式中介模型及性别差异

孙启菲¹ 张国礼¹ (通讯作者)

¹ 北京体育大学心理学院, 北京, 100084, guoli_zhang@126.com

摘要 为了调查体育活动对青少年社会适应的影响, 使用体育活动等级量表(PARS-3), 主观锻炼体验量表(SEES)中的锻炼体验幸福感维度, 身体自我描述问卷(PSDQ)中的身体自尊维度和青少年社会适应状况评估问卷(ASAAS)中的自我肯定、亲社会倾向、行事效率、积极应对四个维度, 对 460 名中学生进行问卷调查, 有效数据 453 份(男 227 份, 女 226 份), 有效率 98.48%。结果发现, Harman 单因子检验法证明本研究不存在严重共同方法偏差。男生在体育活动量和锻炼体验幸福感上得分明显高于女生。不同水平的体育活动对青少年的锻炼体验幸福感($F=11.481, p=0.000$)、身体自尊($F=6.070, p=0.003$)、社会适应($F=5.991, p=0.003$)存在显著差异。多重比较发现: 高水平体育活动青少年的锻炼体验幸福感、身体自尊和社会适应显著高于低水平体育活动青少年的情况。由体育活动、锻炼体验幸福感、身体自尊、社会适应构成的链式中介模型拟合良好: $\chi^2/df=1.917$, $CFI=0.987$, $TLI=0.979$, $RMSEA=0.045$, $SRMR=0.023$ 。检验锻炼体验幸福感和身体自尊的中介效应跨性别的一致性发现, 男生模型拟合指标为: $\chi^2/df=1.410$, $CFI=0.990$, $TLI=0.983$, $RMSEA=0.042$, $SRMR=0.034$; 女生模型拟合指标为: $\chi^2/df=1.520$, $CFI=0.984$, $TLI=0.974$, $RMSEA=0.048$, $SRMR=0.030$ 。跨组比较发现, 模型在锻炼体验幸福感和社会适应上的各项指标拟合良好, 且各模型两两间拟合指数差异 ΔTLI 和 ΔCFI 均 <0.01 , 但是在身体自尊上存在着拟合不良的情况, 表示该中介模型因为身体自尊的性别差异在不同性别中的应用上存在区别。基于上述结果本研究得出结论: 青少年在体育活动、锻炼体验幸福感上存在性别差异, 体育活动对身体自尊的影响存在性别差异。体育活动可正向预测青少年社会适应, 体育活动量越高, 青少年社会适应越好。体育活动、锻炼体验幸福感、身体自尊、社会适应构成的多重中介模型成立, 体育活动通过增加青少年的锻炼体验幸福感和身体自尊促进其社会适应。中学学校教育应当重视体育课和体育活动为中学生带来的心理效益。

The effect of physical activity on adolescent social adjustment: A serial mediation model and gender differences

Sun Qifei, Zhang Guoli

Beijing Sport University, 48 Xinxu Street, Haidian Distract, Beijing, China

Abstract: To investigate the effect of physical activity on adolescents' social adjustment, Physical Activity Rating Scale (PARS-3), the exercise experienced well-being dimension of the Subjective Exercise Experience Scale (SEES), the body esteem dimension of the Physical Self-Description Questionnaire (PSDQ), and the four dimensions (self affirmation, pro-social tendency, acting efficiency, and active coping) of the Adolescent Social Adjustment Assessment Questionnaire (ASAAS) were used. The questionnaire was administered to 460 secondary school students, with 453 valid data (227 males and 226 females) and an effective rate of 98.48%. The results found that the Harman one-way test proved that there was no serious common method bias in this study. Boys scored significantly higher than girls on the amount of physical activity and exercise experienced well-being. There were significant differences between different levels of physical activity on adolescents' exercise experienced well-being ($F=11.481$, $p=0.000$), body esteem ($F=6.070$, $p=0.003$), and social adjustment ($F=5.991$, $p=0.003$). Multiple comparisons revealed that exercise experienced well-being, body esteem, and social adjustment were significantly higher among adolescents with high levels of physical activity than among those with low levels of physical activity. The chain mediation model consisting of physical activity, exercise experienced well-being, body esteem, and social adjustment fitted well: $\chi^2/df=1.917$, $CFI=0.987$, $TLI=0.979$, $RMSEA=0.045$, and $SRMR=0.023$. Testing the consistency of the mediation effects of exercise experienced well-being and body esteem across genders revealed that the model fit indicators for boys were $\chi^2/df=1.410$, $CFI=0.990$, $TLI=0.983$, $RMSEA=0.042$, $SRMR=0.034$; for female students, the model fit indicators were: $\chi^2/df=1.520$, $CFI=0.984$, $TLI=0.974$, $RMSEA=0.048$, $SRMR=0.030$. Cross-group comparison revealed that the model The models fit well on the indicators of exercise experienced well-being and social adjustment, and the difference in fit indices between the two models ΔTLI and ΔCFI were <0.01 , but there was a poor fit on body self-esteem, indicating that the mediated model differed in its application across genders because of gender differences in body esteem. Based on the above results this study concludes that there are gender differences in adolescents' physical activity, exercise experienced well-being, and gender differences in the effect of physical activity on body esteem. Physical activity positively predicted adolescents' social adjustment, and the higher the amount of physical activity, the better the adolescents' social adjustment. The multiple mediation model consisting of physical activity, exercise experienced well-being, body esteem, and social adjustment was established, and physical activity promoted adolescents' social adjustment by increasing their exercise experienced well-being and body esteem. Secondary school education should emphasize the psychological benefits of physical activity for secondary school students.

足球动态决策中无模型策略和基于模型策略选择的 ERP 研究

王郑含笑¹ 迟立忠² (通讯作者) 张鑫¹ 任鹏飞¹

¹ 北京体育大学, 北京, 100084

² 北京体育大学心理学院, 北京, 10084, 通讯作者 E-mail (小五号宋体)

摘要 动态决策 (Dynamic Decision Making, DDM) 指由一序列相互关联的决策组成的, 当前决策受之前决策结果和之后决策选项影响的连续性决策过程。动态决策作为决策研究的重要组成及新近发展趋势已在一些领域进行了探索性研究。虽然运动员决策行为的连续性、动态性契合动态决策的基本特征, 但以往的运动决策研究多限于考察运动员一次性、静态的决策表现, 而较少从动态决策角度开展运动领域的决策研究。本研究拟以动态决策理论为基础, 采用动态决策研究经典的马尔可夫两步决策任务范式, 以及结合足球传球情景改编的足球动态决策任务, 运用 ERP 技术, 尝试探讨足球传球动态决策中的决策策略选择及其神经机制, 以

及决策策略选择与运动员认知控制类型的关系。

本实验采用 2(运动水平: 足球专项大学生、普通大学生)×2(决策任务: 马尔科夫两步决策任务、足球动态决策任务)混合实验设计, 探究足球专项大学生与普通大学生在经典动态决策任务与足球传球动态决策任务中的决策策略选择差异及其神经机制。17 名足球专项大学生和 17 名普通大学生参与本实验。结果表明, 决策任务、运动水平在 model-free 得分上主效应及交互作用均不显著; 在 model-based 得分上, 两者主效应不显著, 但交互作用显著。运动水平在足球决策任务的正确率上主效应显著, 且决策策略的选择与决策正确率之间呈显著正相关。P300 波幅上, 决策任务和电极点交互作用显著; 在 FRN 波幅上, 电极点主效应显著, 决策任务和电极点的交互作用显著。

研究得出以下结论: (1) 足球专项大学生在进行足球动态决策过程中会更多使用习惯导向的 model-free 决策策略, 且会产生较好的决策结果。(2) P300 反映出足球专项大学生在足球动态决策中对意外事件更敏感, 支持足球专项大学生在足球动态决策时 model-free 决策策略占优势; FRN 反映出在足球动态决策中足球专项大学生比普通大学生对奖励更敏感, 支持足球专项大学生比普通大学生更多使用 model-based 决策策略。

An ERP Research on Mode-Free and Model-Based Strategies in Football Dynamic Decision-Making

WANG Zhenghanxiao, CHI Lizhong, ZHANG Xin, REN Pengfei

Beijing Sport University, Beijing

Abstract: Dynamic Decision Making (DDM) refers to a series of interrelated decisions which the current decision is affected by the results of the previous decisions and the options of the subsequent decisions. As an important part of decision-making research, dynamic decision-making has been widely studied in many fields. Although athletes' decision-making process is continuous and dynamic, previous researches on sports decision-making are mostly limited to examining the athletes' one-time and static decision-making performance. Therefore, it is of great significance to introduce the dynamic field into the sports area. Based on the dynamic decision theory, this research used the classic Markov two-step decision task paradigm, the football passing decision task and ERP technology to explore the strategic selection of football passing dynamic decision-making and its neural mechanism. Moreover, it revealed the relationship between athletes' dynamic decision-making selections and their cognitive control types.

This study used a 2 (level of football ability: Football player, ordinary university student) ×2 (tasks type of decision-making: Markov two-step decision task, Football dynamic decision task) mixed research design to explore the difference of the decision-making strategies between football players and ordinary college students in both classic dynamic decision-making tasks and the football passing dynamic decision-making tasks. Their corresponding EEG analysis was conducted simultaneously. 17 football players and 17 ordinary college students were invited to participate in this study. Tasks and levels of sports have no significant different on model-free, but they have a significant interaction on model-based. The decision-making accuracy of football task has a significant difference between different level of participants, and decision-making strategies selection related positively with decision-making accuracy. Tasks and electrode points have a significant difference on P300. Electrode points have a significant difference on FRN, and there is an interaction between tasks and electrode points on FRN.

The conclusions of this research are as follows: (1) Football players prefer model-free decision-making strategy in football dynamic decision-making task, which will lead to better results than using model-based strategy. (2) P300 reflects that football players are more sensitive to unpredictable events in football dynamic decision-making task, which indicates that the model-free decision-making strategy is more dominant than model-based strategy for football players; additionally; FRN reflects that football players are more sensitive to awards than ordinary students in football dynamic decision-making task, which demonstrates that football players are more likely to use model-based strategy than ordinary college students.

12 周有氧运动对肥胖大学生工作记忆能力及其身体自尊的影响

李华蕊¹, 翟一飞² (通讯作者)

1 南京大学体育科学研究所, 南京, 210046

2 南京大学体育科学研究所, 南京, 210093, zyf@nju.edu.cn

摘要 目的: 探讨 12 周中等强度有氧运动对肥胖大学生工作记忆能力及其身体自尊的影响, 同时降低肥胖大学生 BMI (Body Mass Index) 指数, 提高其体质健康。方法: 招募 BMI 指数在 28 以上的肥胖大学生 80 名, 随机分为 2 组: 肥胖对照组 (OC, n=40), 肥胖运动组 (OE, n=40)。所有被试于正式实验前完成体成分 (Body composition)、再记忆任务 (recognition memory task) 测试以及 PSPP 身体自尊量表, 进而每四周测一次。有氧运动干预共计 12 周, 每周 3 次, 每次 50min, 运动强度为 55%-69% 最大心率。体成分测试用于监测被试体重、BMI 指数、脂肪率等指标变化; 再记忆任务记录被试任务的正确率和反应时, PSPP 身体自尊量表用于反映肥胖被试在干预前后对自我运动技能、身体状况、身体吸引力以及身体素质等 4 个维度的心理感知。结果: (1) 于正式试验开始前, OC 组和 OE 组在 BMI 指数、再记忆任务结果正确率、反应时以及身体自尊感知等指标上无显著性差异; (2) 与 OC 组相比, 随运动周期的增长 OE 组被试体重显著降低 ($P<0.01$), BMI 指数降低 ($P<0.05$), 再记忆任务结果正确率提高 ($P<0.05$); 在 PSPP 身体自尊量表自我感知评价中, OE 组被试在身体状况、身体吸引力、身体素质等 3 个维度上自尊感有所提高。结论: (1) BMI 指数与认知相关的工作记忆功能呈负相关; (2) 12 周有氧运动可以提高肥胖运动组被试的身体自尊, 主要体现在身体状况、身体吸引力、身体素质等 3 个维度 (3) 12 周有氧运动可以改善肥胖大学生的工作记忆能力, 同时笔者在研究中发现, 虽然 OE 组被试随运动周期的增长 BMI 指数持续下降, 但是其再记忆任务结果正确率变化较小, 因此, 运动降低 BMI 指数从而改善肥胖个体工作记忆能力的作用机制需要进一步探讨。

Effect of 12-week Aerobic Exercise on the Working Memory of Obese University Students

Li Hua-rui, Zhai Yi-fei*

1 Sports Science and Research Institute Nanjing University, Nanjing, 210046

2 Sports Science and Research Institute Nanjing University, Nanjing, 210046, zyf@nju.edu.cn

Abstract: Objective: This research aims to analyze how 12-week aerobic exercise of moderate intensity would influence the working memory of obese university students, and how it would reduce their BMI (Body Mass Index) and improve their physical health. **Methods:** 80 volunteers whose BMI were above 28 were randomly divided into two groups: the obesity control group (OC, n=40) and the obesity exercise group (OE, n=40). All the subjects had completed body composition test and recognition memory task before the formal experiment. OC group also took the body composition test and recognition memory task after every 4-week exercise done by the OE group. The aerobic exercise intervention last for 12 weeks, three times a week, 50 minutes each time, and the exercise intensity should be 55%-69% of the maximal heart rate. The body composition test is to measure the weight, BMI and body fat rate of the subjects; the recognition memory task is to record the accuracy and response time when the subjects perform the task. **Results:** (1) Before the formal experiment, there was no significant difference in BMI, accuracy and response time of recognition memory task between OC group and OE group. (2) Compared with those of OC group, the subjects of OE group had their weight decreased ($P<0.01$), their BMI decreased ($P<0.05$), and the accuracy of recognition memory task increased ($P<0.05$) as the exercise period extended. **Conclusion:** (1) There is a negative correlation between BMI and working memory related to recognition. (2) The 12-week aerobic exercise can improve the obese university students' working memory. Also, though the OE group had their BMI steadily decreased as the exercise period extended, their accuracy of recognition memory task only changed a little. Therefore, how exercise decreases BMI and then improves the obese individual's working memory still needs to be discussed in the future.

运动干预改善肥胖动物模型认知功能障碍及其机生理制探索

李华蕊¹, 翟一飞²

1 南京大学体育科学研究所, 南京, 210046

2 南京大学体育科学研究所, 南京, 210046, zyf@nju.edu.cn

摘要 肥胖已成为全球性的健康问题, 是多种中枢神经系统疾病发生发展的危险因素之一。运动在降低神经系统疾病的患病风险中发挥重要作用, 如阿尔兹海默症以及帕金森病等。然而, 运动是否能够改善认知功能的研究尚且缺乏。目的: 探究运动对于肥胖小鼠认知功能障碍的影响。方法: 选用 4 周龄雄性 C57BL/6Cnc 小鼠, 构建高脂高糖肥胖模型, 以跑台运动实验对小鼠进行中等强度的训练, 采用酶联反应吸附实验测定血清中炎症因子水平, 并通过行为学实验探究运动对于肥胖引起的小鼠认知功能障碍的影响。结果: 研究发现高脂高糖饮食诱导的肥胖小鼠血清中炎症因子水平上升, 而中等强度运动会降低肥胖小鼠血清中的炎症因子水平, 包括白介素 1 β , 肿瘤坏死因子 α 以及白介素 6。高脂高糖饮食诱导的肥胖小鼠出现认知功能障碍, 而中等强度的训练可以明显增加肥胖小鼠在新物体识别实验中对新物体的探究时间, 以及增加肥胖小鼠在三箱社交实验中与陌生鼠的交流时间。结论: 采取适当强度的训练可以改善肥胖患者的认知功能, 其机制可能是通过降低机体炎症反应发挥作用, 这为肥胖伴随认知功能障碍患者的运动治疗提供了理论支持。

Exercise intervention to improve cognitive dysfunction in obesity model mice and its physiological mechanism

Li Hua-rui, Zhai Yi-fei*

1 Sports Science and Research Institute Nanjing University, Nanjing, 210046

2 Sports Science and Research Institute Nanjing University, Nanjing, 210046, zyf@nju.edu.cn

Abstract: Background: Obesity has become a global health problem, and has been proven to be one of the risk factors for a variety of central nervous system diseases. Exercise plays an important role in reducing the risk of neurological diseases, such as Alzheimer's disease and Parkinson's disease. However, research on whether exercise can improve cognitive function is still lacking. Objective: To explore the effect of exercise on cognitive dysfunction induced by high fat high fructose diet. Methods: A mouse model fed with high fat high fructose diet was used to conduct moderate-intensity training on the treadmill exercise experiment, behavioral experiments were used to explore the effect of exercise on cognitive dysfunction caused by obesity in mice, and the enzyme-linked immunosorbent adsorption experiment was used to determine the level of inflammatory factors in serum. Results: The study found that serum levels of inflammatory factors including interleukin-1 β , tumor necrosis factor- α , and interleukin-6 in obese mice induced by a high fat high fructose diet increased, while moderate-intensity exercise reduced the levels of inflammatory factors in obese mice. Moreover, obese mice induced by high fat high fructose diet have cognitive dysfunction. Moderate-intensity training can significantly increase the time for obese mice to explore new objects in novel object recognition test, and increase the interaction time with stranger mouse 2 in three-chamber interaction test. Conclusion: Exercise with appropriate intensity can improve the cognitive function of obese mice. The possible mechanism may be that appropriate exercise reduces inflammatory response. These provide evidence for the exercise therapy for obese patients with cognitive dysfunction.

“体悟”在武术教学中的价值研究

刘鲲 刘娜

江西中医药大学体育教学部，南昌，330000

摘要 2017年，中共中央办公厅、国务院办公厅印发《关于实施中华优秀传统文化传承发展工程的意见》。改文件的颁布，标志着我国把中华优秀传统文化传承开始提上日程。中国武术作为中华优秀传统文化的重要组成部分，其传承和发展一直受到国家和社会的关注。

武术教学中的“体悟”法就是指在武术教学中，通过各种方法和手段，引导学生进行由外及内、由身体到心理的逻辑推理式学习，从而加深学生对武术知识、武术技能、武术理论、武术价值的理解，培养学生自主学习的能力、思维能力、创新能力等为目的的教学活动。

本文采取文献资料法、比较研究法、田野调查法、逻辑法等方法，以文化学、社会学、教育学等学科的相关知识为理论基础，将传统武术传承中的“体悟”教学方法引入武术教学中。研究发现：第一，“体悟”产生于农耕文明，具有浓郁的民族文化色彩，是建立在中国古代“身心合一”的哲学基础上的，属于一种整体性思维认知。它注重的是从外在的身体感知逐步过渡到内在的心理感知，因此，它是一种由外及内的心理感知过程。第二，通过学习者长时间的进行身体直觉的感知（年复一年的练拳习武），过渡到内在的直觉体悟的思维认知。它是武术教学传承的必要环节和学习途径之一，也是认识中国武术文化的重要方式之一。第三，作为教学形态之一的“体悟”教学方式，它能够传承武术文化基因，并深度符合武术教学改革的需要，是一种建立在中国传统“修身”文化基础上的一种古老的教学理念。其目的是促进广大学生对民族文化的传承和身心全方位的发展。第四，“体悟”教学包括学生主体性参与、合理情景创造、个体化的价值三个方面因素。主体性参与包括行为、情感和思维的参与。合理化情形是保障体悟教学的外部条件。个体化的价值是指体悟教学的过程是一个学生们从外及内，从个体到团体的一种寻求个体新生命，实现个体价值的过程。因此，武术“体悟”教学其过程包括认知、体认、领悟、内省这几个步骤。

关键词 体悟，武术，教学，价值

Research on the Value of "Understand" in Wushu Teaching

Liu kun, Liu na

Abstract: Jiangxi University of Traditional Chinese Medicine, Nanchang 330000, China In 2017, the General Offices of the CPC Central Committee and the State Council issued the Opinions on implementing the Project to Inherit and Develop China's Fine Traditional Culture. The issuance of the reform document marks the beginning of China's agenda to carry forward the fine traditional Chinese culture. As an important part of Chinese excellent culture, Chinese wushu has been concerned by the state and society for its inheritance and development.

The "connect" in the martial arts teaching method is refers to in the martial arts teaching, through a variety of ways and means to guide students from outside and inside, from physical to psychological logic reasoning, learning, to deepen students' knowledge of martial arts, martial arts skills, martial arts, martial arts theory value understanding, cultivate students' autonomous learning ability, thinking ability, innovation ability and so on for the purpose of teaching activities.

This paper adopts the methods of literature review, comparative research, field investigation, logic method and so on. Based on the relevant knowledge of culture, sociology, pedagogy and other disciplines as the theoretical basis, this paper introduces the "understanding" teaching method of traditional martial arts inheritance into the teaching of martial arts. The findings are as follows: first, "comprehension" originated from agricultural civilization, has a strong national cultural color, and is based on the ancient Chinese philosophy of "unity of body and mind". It is a kind of holistic thinking cognition. It focuses on the gradual transition from external physical perception to internal psychological perception, so it is a psychological perception process from the outside to the inside. Second, through a long time of physical intuition perception (year after year of practicing martial arts), learners transition to internal intuitive understanding of thinking cognition. It is a necessary link and one of the learning ways of wushu teaching inheritance, and also one of the important ways to understand Chinese wushu culture. Thirdly, as one of the teaching

forms, the teaching method of "understanding" can inherit the cultural genes of wushu and meet the needs of wushu teaching reform in depth. It is an ancient teaching idea based on the traditional Chinese culture of "cultivating one's moral character". Its purpose is to promote the majority of students on the inheritance of national culture and all-round physical and mental development. Fourth, the teaching of "understanding" includes three factors: students' subjective participation, reasonable scene creation and individual value. Subjective participation includes the participation of behavior, emotion and thinking. Rationalization is the external condition to guarantee the teaching of comprehension. The value of individuation means that the process of understanding teaching is a process in which students seek for new life of individuals and realize individual value from outside and inside, from individuals to groups. Therefore, the process of wushu "understanding" teaching includes cognition, cognition, comprehension and introspection.

Keywords: Understand, martial arts, teaching, value

注意偏向训练结合脑干预技术改善羽球初学过程中的注意捕获现象

腾戈思¹, 赵洪朋¹ (通讯作者)

¹ 沈阳体育学院运动人体科学学院, 沈阳, 110000,

¹ 沈阳体育学院运动人体科学学院, 沈阳, 110000, clark-72@163.com

摘要 研究目的: 以往研究表明, 注意偏向训练有助于提升个体的注意品质, 而该训练是否能够减少注意捕获现象的证据并不是很充足。本研究结合羽毛球运动学习过程并利用脑干预技术, 探究注意偏向训练是否有助于改善羽毛球运动初学过程中的注意捕获现象, 同时考察脑干预技术能否提高注意偏向训练的效率, 并利用 ERP 技术得出注意捕获现象的相关脑机制。研究方法: 采用注意偏向训练作为干预手段, 脑干预技术为自变量之一, 对羽毛球运动初学者进行周期性的干预, 考察注意偏向训练结合脑干预对于羽毛球运动初学过程中注意捕获现象的影响。研究结果: 实验 1 采用常规注意偏向训练 (点探测任务、视觉搜索任务) 对羽毛球初学者进行 8 周的干预, 发现实验组的注意捕获现象显著低于对照组。实验 2 在进行注意偏向训练的同时结合脑干预技术, 对羽毛球初学者进行 8 周干预, 结合脑干预技术的实验组注意捕获现象显著低于未结合脑干预的实验组和对照组。实验 3 在运动成绩实验中, 表现为结合脑干预实验组优于未结合脑干预实验组, 且二者皆优于对照组。这些结果表明: (1) 为期 8 周的注意偏向训练可以显著降低羽毛球运动初学过程中的注意捕获现象, 提高运动学习效率; (2) 为期 8 周结合脑干预技术的注意偏向训练相比常规注意偏向训练其效率更高; 对改善注意捕获现象的积极影响高于单一常规注意偏向训练。(3) 注意捕获现象可直接影响羽毛球运动初学过程中的运动表现; (4) ERP 结果中, 结合脑干预实验组的 N2pc 与 SPCN 波幅显著高于未结合脑干预实验组。

Attention training combined with brain intervention to reduce the attention captured while in badminton learning

Tengge Si¹, Zhao Hongpeng¹

¹ College of Human Sport Science Shenyang Sport University, Shenyang, 110000

Abstract: Object: Previous studies have shown that attention training could help to improve the individual's attention quality. But, the evidence for whether this training can reduce attention capture is not very sufficient. This study combines the learning process of badminton and uses brain intervention techniques to investigate whether attention training has a positive impact on attention-captured phenomena in badminton learning, and use brain intervention techniques to improve the efficiency of attention training, finally get the brain mechanism of this process through ERP technology. Method: Take attention training as the intervention method and brain intervention technology as one of the independent variables, periodic interventions for badminton beginners, survey the effects of attention training brain intervention techniques on attention-captured phenomena in badminton learning. Result: Experiment 1 uses

conventional attention training---including dot-probetask and visual search task---to intervention for badminton beginners. The results showed that the attention-captured phenomenon in the experimental group was significantly lower than in the control group. Experiment 2 added brain intervention on the basis of the previous experiment it was found that individuals who received brain intervention performed better than those who did not. Experiment 3 examined everyone's sports performance, and the results of the experimental group were better than those of the control group. Conclusion: 8 weeks of attention training can reduce attention-captured phenomena in badminton learning and improve learning efficiency. Attention training with brain intervention technology is more efficient. Attention-captured phenomena could directly affect the performance of badminton learning. In the ERP results, the amplitude of N2pc and SPCN in the experimental group with brain intervention was significantly higher than that in the experimental group without brain intervention.

不同运动方式对 CUMS 大鼠抑郁行为的影响

尹金玲¹ 沈玲丽¹ 季彦霞¹ 吕万刚² (通讯作者)

1 武汉体育学院研究生院, 湖北省武汉市, 430079

2 武汉体育学院, 湖北省武汉市, 430079, 937757336@qq.com

摘要 目的: 通过大鼠行为学变化(糖水偏爱实验、饲料消耗量)和血清 5-羟色胺(5-HT)水平来反应抑郁程度与运动干预效果, 探讨不同运动方式对慢性不可预知性温和刺激(CUMS)抑郁大鼠行为的影响。**方法:** 将 24 只 CUMS 大鼠随机分为 3 组, 包括抑郁强迫游泳运动组(有氧运动组), 抑郁负重攀爬垂梯运动组(抗阻运动组), 抑郁对照组, 并选取 8 只正常大鼠为空白对照组。所有实验组进行 8 周运动后, 记录大鼠的糖水偏爱指数、饲料消耗量和血清中 5-HT 浓度, 并使用 SPSS 25.0 进行单因素方差分析。**结果:** 1) 抑郁强迫游泳实验组与抑郁负重攀爬垂梯实验组的糖水偏爱指数明显高于抑郁对照组 ($P<0.05$), 但低于空白对照组 ($P<0.05$), 且抑郁强迫游泳实验组的糖水偏爱指数显著高于抑郁负重攀爬垂梯实验组 ($P<0.05$)。2) 抑郁强迫游泳实验组的饲料消耗量高于抑郁对照组 ($P<0.05$), 低于空白对照组 ($P<0.05$), 但抑郁负重攀爬垂梯实验组与抑郁对照组的饲料消耗量差距不明显 ($P>0.05$), 且抑郁负重攀爬垂梯实验组的饲料消耗量低于抑郁强迫游泳实验组。3) 大鼠中血清 5-HT 浓度显示, 抑郁强迫游泳实验组与抑郁负重攀爬垂梯实验组血清 5-HT 浓度高于抑郁对照组 ($P<0.05$), 但低于空白对照组 ($P<0.05$)。且抑郁负重攀爬垂梯实验组的血清 5-HT 浓度低于抑郁强迫游泳实验组, 但与抑郁强迫游泳实验组结果不具有显著差异 ($P>0.05$)。**结论:** 1) 不同运动方式(游泳运动与负重攀爬垂梯运动)都能在一定程度上改善 CUMS 大鼠中糖水偏爱指数降低的情况, 但不能完全改善, 且游泳运动改善效果显著优于负重攀爬垂梯运动 2) 游泳运动能在一定程度上改善 CUMS 大鼠中饲料消耗量减少的情况, 但不能完全改善, 而负重攀爬垂梯运动几乎没有起到上述作用。3) 不同运动方式(游泳运动与负重攀爬垂梯运动)都能在一定程度上改善 CUMS 大鼠中血清 5-HT 浓度降低的情况, 但不能完全改善, 且两者无显著差异。4) 综上, 本文认为不同运动均可改善 CUMS 大鼠的抑郁症状, 但游泳运动对 CUMS 大鼠的抗抑郁作用优于负重攀爬垂梯运动。

2 Wuhan Sports University, Wuhan 430079, China

Corresponding Author: Lv Wangang, Email: 937757336@qq.com

Abstract: Objective: The behavioral changes of rats (sugar water preference experiment, feed consumption) and serum 5-hydroxytryptamine (5-HT) level were used to reflect the degree of depression and the effect of exercise intervention, and to investigate the effects of different exercise modes on depressive behavior in rats with the chronic unpredictable mild stimulus (CUMS). **Methods:** 24 CUMS rats were randomly divided into 3 groups, including

depression forced swimming exercise group (aerobic exercise group), depression weight-bearing climbing ladder exercise group (resistance exercise group), depression control group, and eight normal rats were selected as the blank control group. After 8 weeks of exercise in all experimental groups, the sugar water preference index, feed consumption and serum 5-HT concentration of rats were recorded, and SPSS 25.0 was used for a one-way analysis of variance. **Results:** 1) The sugar water preference index of the depression forced swimming experimental group and the depression weight-bearing climbing ladder experimental group was significantly higher than that of the depression control group ($P<0.05$), but lower than the blank control group ($P<0.05$), and the sugar water preference index of depression forced swimming experimental group was significantly higher than that of the depression weight-bearing climbing ladder experimental group ($P<0.05$). 2) The feed consumption of the depression forced swimming experimental group was higher than that of the depression control group ($P<0.05$) and lower than the blank control group ($P<0.05$), there was no significant difference in feed consumption between the depressed group and the depressed control group ($P>0.05$), and the feed consumption of the depression weight-bearing climbing ladder experiment group was lower than that of the depression forced swimming experiment group. 3) The serum 5-HT concentration in rats showed that the serum 5-HT concentration of the depression forced swimming experimental group and the depression weight-bearing climbing ladder experimental group was higher than the depression control group ($P<0.05$), but lower than the blank control group ($P<0.05$). And, the serum 5-HT concentration of the depression weight-bearing climbing ladder experimental group was lower than that of the depression-forced swimming experimental group, but there was no significant difference from the depression forced swimming experimental group ($P>0.05$). **Conclusion:** 1) Different exercise modes (swimming exercise and weight-bearing ladder exercise) can improve the decrease of sugar water preference index in CUMS rats to some extent, but not completely, and the improvement effect of swimming exercise was significantly better than that of weight-bearing climbing ladder exercise. 2) Swimming can improve the reduction of feed consumption in CUMS rats to a certain extent, but it cannot be completely improved, while weight-bearing climbing ladder exercise hardly plays the above role. 3) Different exercise methods (swimming exercise and weight-bearing climbing exercise) can improve the reduction of serum 5-HT concentration in CUMS rats to a certain extent, but cannot completely improve, and there is no significant difference between the two. 4) In summary, this article believes that different exercises can improve the depressive symptoms of CUMS rats, but the antidepressant effect of swimming exercise on CUMS rats is better than that of weight-bearing climbing exercise.

核心力量训练和下肢力量训练对自我控制能力的影响

乐欣¹ 常若晗² (通讯作者)

1 北京体育大学心理学院, 北京, 100084

2 北京体育大学心理学院, 北京, 100084, changruohan@163.com

摘要 自我控制是自我的知、情、意成份中“意”这个成份的核心, 是执行功能的重要体现, 是个体适应社会的前提。对于自我控制能力的提高, 国内外研究多关注于有氧运动的效益, 日益受人们重视的核心力量运动的效益却少有研究。目的: 本研究基于自我控制的力量模型, 探讨 2 周的核心力量训练和下肢力量训练对自我控制能力的影响, 以及一般自我效能感的中介作用。方法: 招募无规律锻炼习惯的女性大学生 30 名, 将其随机分配到核心力量训练组、下肢力量训练组和解数学题组, 在 2 周内进行 7 次任务干预, 每次任务间隔至少 1 天。在 2 周内记录被试自我控制能力(自我控制失败数)的变化, 同时在干预任务当天测量一般自我效能感。结果: (1) 以干预方式和 7 个测量时间点(第 1、3、5、7、9、11、13 天)为自变量, 以自我控制能力为因变量进行重复测量剖面图分析, 结果显示, 测量时间点的主效应显著 [$F(6,18) = 5.110, p < .05$, 偏 $\eta^2 = .630$], 干预方式主效应不显著, 测量时间点和干预方式的交互作用不显著, 表明 2 周的力量训练不可以提高自我控制能力, 核心力量训练和下肢力量训练对自我控制能力的影响没有差别。(2) 对比干预前后个体的一般自我效能感, 结果显示第 1 天到第 13 天, 核心力量训练组的一般自我效能感显著提高 [$t = 3.143, p = .012$],

下肢组和解数学题组的一般自我效能感在干预前后无显著差异,表明核心力量训练能提高一般自我效能感。
(3)对核心力量训练组的一般自我效能感和自我控制能力的改变量进行相关分析,结果显示两者相关不显著,表明一般自我效能感在核心力量训练和自我控制能力之间不起中介作用。结论:力量训练不能提高自我控制能力,核心力量训练和下肢力量训练对自我控制能力的影响无差别。核心力量训练能提高一般自我效能感,但核心力量训练并不通过提高一般自我效能感而提高自我控制能力。

The Influence of Core Strength Training and Lower Limb Strength Training on Self-control Ability

Yue Xin, Chang Ruohan

School of Psychology, Beijing Sport University, Beijing, 100084

Abstract: Self-control is the core of "meaning" in cognition, emotion and volition, an important embodiment of executive function and a prerequisite for individuals to adapt to society. For the improvement of self-control, domestic and foreign researches mostly focus on the benefits of aerobic exercise, while the benefits of core strength exercise, which is increasingly valued by people, are rarely studied. Objective: Based on the strength model of self-control, this study explored the influence of two weeks' core strength training and lower limb strength training on self-control, and the mediating effect of general self-efficacy. Methods: 30 female college students with irregular exercise habits were recruited and randomly assigned to the core strength training group, the lower limb strength training group and the math problem solving group. Seven task interventions were conducted within 2 weeks, and each task interval was at least one day. The change of self-control ability (number of self-control failures) was recorded within 2 weeks, and the general self-efficacy was measured on the day of intervention task. Results: (1) Repeated measurement profile analysis was carried out with intervention mode and 7 measurement time points (days 1, 3, 5, 7, 9, 11 and 13) as independent variables and self-control ability as dependent variable. The results showed that the main effect of measurement time points was significant [$F(6,18) = 5.110, p < .05$, partial $\eta^2 = .630$]. (2) Comparing the general self-efficacy of individuals before and after intervention, the results showed that the general self-efficacy of core strength training group increased significantly from the first day to the thirteenth day [$t = 3.143, p = .012$], while there was no significant difference between lower limb group and math problem solving group before and after intervention, indicating that core strength training can improve the general self-efficacy. (3) The correlation between the general self-efficacy and self-control ability in the core strength training group is analyzed, and the results show that there is no significant correlation between them, which indicates that the general self-efficacy does not play an intermediary role between core strength training and self-control ability. Conclusion: Strength training can not improve self-control, and there is no difference between core strength training and lower limb strength training. Core strength training can improve general self-efficacy, but core strength training does not improve self-control ability by improving general self-efficacy.

Keywords: Self-control ability, Core strength training, Lower limb strength training, General self-efficacy

不同持续时间的羽毛球运动对吸烟成瘾者执行功能的影响：来自行为和 ERP 研究的证据

于秋月¹ 赵洪朋² (通讯作者)

¹ 沈阳体育学院研究生部, 沈阳, 100102

² 沈阳体育学院运动人体科学学院, 沈阳, 100102, clark-72@163.com

摘要 执行功能是一个高级的认知过程,可以调节和控制其他的认知过程,使个体产生协调、有序和有目的的行为。执行功能主要包括抑制、刷新和转换3个子功能。研究发现,长期吸烟者会损伤其大脑的执行功能,并且受损后的成瘾个体无法正确做出计划、决策,进行自我调整等,难以控制强迫性的寻求。**目的:**本

研究探求不同持续时间的羽毛球运动对吸烟成瘾者执行功能各个子成分的影响，为运动辅助成瘾治疗的机制研究提供理论依据。**方法：**研究采用混合设计，选取 60 名久坐吸烟成瘾者，将其随机分为实验组和对照组，实验组主要内容为羽毛球运动项目、中等强度、每次 10min、20min、30 min 的运动干预，对照组在相同时间进行常规的学习生活。分别使用 Flanker 任务、n-back 任务、More-odd shifting 任务同时采用事件相关电位技术（ERP）进行全面评价一次不同持续时间的羽毛球运动前后各组吸烟成瘾者执行功能的抑制、刷新和转换 3 个子功能的变化。**结果：**对所收集的数据进行重复测量方差分析，相对于不运动组，中等强度羽毛球运动可以提高吸烟成瘾者的执行功能（抑制、转换、刷新）具有显著性影响($P < 0.01$)，但不同持续时间的运动对吸烟成瘾者执行功能的影响具有差异性。具体行为指标表现为：在抑制功能方面，30min 运动组、20min 运动组 10min 运动组 > 对照组；在转换功能方面，30min 运动组 > 20min 运动组、10min 运动组 > 对照组；在刷新功能方面，10min 运动组 > 20min 运动组 > 30min 运动组。脑电指标表现为：N2、P3 波幅、潜伏期具有显著差异，其中不同持续时间羽毛球运动组在 N2 波幅、潜伏期存在显著性，P3 的波幅、潜伏期不存在显著差异。**结论：**中等强度羽毛球运动可以提高吸烟成瘾者的执行功能，但效果与运动持续时间有关；30min 羽毛球运动对吸烟成瘾者执行功能改善效果最好。

Effect of badminton at different duration on the functioning of smoking addicts: evidence from behavior and ERP studies

Yu Qiuyue¹, Zhao Hongpeng²

1 Graduate department, Shenyang Sport University, Shenyang 110102,

2 College of sports and Human Sciences, Shenyang Sport University, Shenyang 110102

Abstract: Executive function is an advanced cognitive process that can regulate and control other cognitive processes, enabling individuals to produce coordinated, orderly, and purposeful behavior. Execution functions mainly include suppressing, refreshing, and converting 3 sub-functions. The study found that long-term smokers will damage the performance function of their brain, and damaged addicted individuals can not make correct plans, decisions, self-adjustment, etc., so it is difficult to control compulsive seeking. Objective: To explore the influence of badminton with different duration on the various subcomponents of smoking addicts and provide theoretical basis for the mechanism of sports-assisted addiction therapy. Methods: Study acquisition With mixed design, 60 sedentary smoking addicts were selected and randomly divided into experimental group and control group. The main contents of the experimental group were badminton sports, moderate intensity and 10min, 20min, 30 min per time. The control group conducted routine study and life at the same time. Flanker, n-back and More-odd shifting tasks comprehensively evaluate the inhibition, refresh and rotation of smoking addicts before and after a different duration of badminton using both and event-related potential technology (ERP) Change for 3 subfunction changes. Results: Repeated measurement variance analysis of the data collected can improve the execution function (inhibition, conversion, refresh) compared to the nonexercise group ($P < 0.01$), but the influence of different duration on the execution function of smoking addicts is different. Specific behavior indicators are: in terms of inhibition function, 30min movement group, 20min movement group 10min movement group > control group; in terms of conversion function, 30min movement group > 20min movement group, 10min sports group > Control group; in refresh function, 10min sports group > 20min sports group > 30min sports group. The EEG index showed: N2, P3 amplitude and latency period varied significantly, where badminton groups were significant in N2 amplitude and incubation period, and no wave amplitude and incubation period of P3. Conclusion: Moderate intensity badminton can improve the execution function of smoking addicts, but the effect is related to the exercise duration; 30min badminton improves the best effect of smoking addicts.

篮球运动员多目标追踪功能网络连接更高效：一项独立成分分析研究

田树栋 牟洪 邱方晖

青岛大学体育学院, 青岛, 266071, qfhpysy@163.com

摘要 本研究采用行为测量和磁共振成像技术, 使用独立成分分析方法, 比较专业篮球运动员和非运动员在多目标追踪任务中背侧注意网络和默认网络的功能连接模式的差异, 探讨长期运动技能训练对多目标追踪任务中大脑功能网络连接强度的影响。实验选取 23 名专业篮球运动员和 24 名年龄和教育年限相匹配的非运动员, 所有被试在完成追踪三个目标的多目标追踪任务的同时使用磁共振成像扫描大脑活动, 采用独立成分分析对篮球运动员和非运动员在多目标追踪任务中的功能网络连接进行比较分析, 将功能网络连接分析得到的差异显著的脑区作为模板, 提取每个被试相应成分中每个模板的时间序列, 以此时间序列与多目标追踪正确率进行皮尔逊相关分析。行为分析结果发现, 运动组的追踪正确率显著高于对照组。独立成分分析和相关分析结果发现, 与非运动员相比, 篮球运动员在多目标追踪任务中, 背侧注意网络的双侧额眼区、顶上小叶/顶内沟的功能连接强度有显著的降低, 且背侧注意网络核心脑区双侧额眼区和右侧顶上小叶/顶内沟的功能连接强度与追踪正确率存在显著负相关, 表明长期运动训练可能使任务正网络的组织更加集中、协调、高效, 从而使运动训练中所获得的认知技能迁移到一般认知领域; 运动组默认网络前部的右侧内侧额上回和双侧前扣带回的功能连接强度增强, 且默认网络核心脑区右侧内侧额上回和双侧前扣带回的功能连接与追踪正确率存在显著正相关, 反映了篮球运动员在完成多目标追踪任务时比非运动员需要更少的外部注意, 体现了任务加工的自动化过程。这些结果表明运动员可能在执行迁移的认知任务时具有更高的神经效率。

Efficient functional network connectivity in basketball players during multiple object tracking: An independent component analysis

Tian Shudong, Mou Hong, Qiu Fanghui

School of physical education, Qingdao University

Abstract: Although previous studies have shown that cognitive skills trained in sports can transfer to performance on general cognitive abilities, it remains unclear how long-term sports training influences functional connectivity within task-positive networks and default mode network during a transferred cognitive task. The aim of the present study was to examine differences in functional network connectivity between basketball players and non-athletes during a multiple object tracking (MOT) task. Blood oxygenation-level dependent (BOLD) functional MRI (fMRI) was performed in 23 basketball players and 24 age- and education-matched control subjects during an MOT task. Group independent component analysis (ICA) was used to analyze the fMRI data. Task fMRI data were decomposed into distinct spatial independent components (ICs) and associated time courses, and dorsal attention network (DAN) and default mode network (DMN) were selected for further analysis of functional connectivity. Results showed that, as compared to non-athletes, athletes had significantly higher scores on the MOT task and showed decreased functional network connectivity of regions within the DAN, suggesting that an automation process was being used to complete the task. Athletes also showed increased functional connectivity within DMN, indicative of effortless processing. Finally, we found that MOT performance was negatively correlated with functional connectivity of core areas in DAN, and positively correlated with functional connectivity of core areas in DMN. This study contributes to our understanding of the neural correlates underlying the transfer of enhanced abilities trained in sports to the general cognitive domain.

高水平篮球运动员多目标追踪能力的脑功能和结构特征

牟洪 田树栋 邱方晖

青岛大学体育学院, 青岛, 266071, qfhpsy@163.com

摘要 我们前期的研究发现, 与非运动员相比, 高水平篮球运动员具有更好的多目标追踪正确率, 然而尚不清楚这种更好的注意能力与静息态功能连接之间的关系, 以及这种功能可塑性是否有其结构基础。本研究招募 28 名高水平篮球运动员和 30 名非运动员, 所有被试完成追踪 2 个、3 个和 4 个目标的多目标追踪任务, 随后扫描大脑静息态功能像和结构像, 以前期研究发现的连接存在组间差异的脑区作为感兴趣区, 比较高水平篮球运动员和非运动员在静息状态下每个感兴趣区与全脑体素的功能连接, 探讨高水平篮球运动员和非运动员大脑静息态功能连接的差异及其与行为表现的相关, 并考察了高水平篮球运动员与非运动员大脑灰质体积的差异及其与行为表现的关系。静息态功能连接分析结果发现, 与非运动员相比, 篮球运动员右侧顶上小叶/顶内沟与右侧背外侧前额叶、双侧前扣带回与左侧颞中回/角回均表现出显著增强的功能连接, 且右侧顶上小叶/顶内沟与右侧背外侧前额叶的功能连接与追踪 4 个目标的正确率存在显著的正相关, 可能反映了篮球运动员更好的注意和执行功能整合能力; 右侧内侧额上回与左侧小脑后叶表现出显著降低的功能连接, 且功能连接强度与追踪 4 个目标的正确率呈显著的负相关, 可能反映了默认网络与运动相关的小脑的分离程度更大, 两者的有效分离可能可以减少篮球运动中对运动执行的干扰, 以保证运动动作的精确性。基于体素的形态学分析发现, 篮球运动员双侧海马旁回/梭状回、双侧中央后回以及顶上小叶/顶内沟的灰质体积显著大于非运动员组, 相关分析发现右侧中央后回的体积与追踪 4 个目标的正确率存在显著正相关, 左侧顶上小叶/顶内沟的体积与追踪 3 个目标的正确率存在显著的正相关, 表明篮球运动员可能经过长期篮球训练而具有更出色的感知和动作执行以及注意能力。本研究的结果表明高水平篮球运动员更好的注意能力与静息态功能连接和结构变化有关。

Brain functional and structural characteristics of multiple object tracking in high-level basketball players

Mou Hong, Tian Shudong, Qiu Fanghui

School of physical education, Qingdao University 266071, qfhpsy@163.com

Abstract: Our previous study have found that, compared with non-athletes, high-level basketball players showed better multiple object tracking (MOT) accuracies. However, the relationships between this better attentional ability and resting state functional connectivity as well as structural changes need further investigation. Twenty-eight high-level basketball players and 30 non-athletes were recruited to complete an MOT task with 2, 3, and 4 targets. Resting-state functional connectivity was used to compare functional connectivity patterns in basketball players and non-athletes, and the brain regions found in our previous study were regarded as regions of interest. Voxel-based morphometry (VBM) were used to investigate training-induced gray matter changes in basketball players. Results showed that, as compared to non-athletes, athletes had significantly higher functional connectivity between right superior parietal lobule/intraparietal sulcus (SPL/IPS) and right dorsal lateral prefrontal cortex (DLPFC), and between bilateral anterior angular cortex and left middle temporal gyrus/angular gyrus. We also found lower functional connectivity between right medial superior frontal gyrus (mSFG) and left cerebellum in athletes. MOT performance was positively correlated with functional connectivity between right SPL/IPS and right DLPFC, and negatively correlated with functional connectivity between right mSFG and left cerebellum. These results may reflect a better attention and executive function integration ability in basketball players. VBM analysis found significantly increased gray matter volume in basketball players, especially in the bilateral parahippocampal gyrus/fusiform, bilateral postcentral gyrus, and the left SPL. MOT performance was positively correlated with grey matter volume in right postcentral gyrus and left SPL. We speculate that the brain changes of the basketball players may reflect their extraordinary ability to estimate the direction of their movements, their speed of execution, and their identification of

their own and surrounding objects' locations.

Keywords: multiple object tracking, resting state functional connectivity, gray matter volume, basketball player

大学生自我身体形象对体育锻炼的影响-自尊的中介作用

秦月¹ 李惠娟² 李杰³ 张禹¹ (通讯作者)

摘要 目的: 自我身体形象是每个人对自己身体的看法和评价。当今社会中, 对自我身体形象的关注越来越成为人们参与各项身体活动的动机。本文主要研究大学生自我身体形象对体育锻炼参与的影响以及自尊对其所发挥的中介作用。**方法:** 采用多维度自我身体形象关系问卷、体育锻炼等级量表、自尊量表、基本情况调查问卷对 402 名大学生(男 144 人, 女 258 人)进行调查, 考查大学生自我身体形象与体育锻炼之间的关系并检验自尊的中介效应。**结果:** (1)被调查大学生参加体育锻炼的时间、频率、强度均处于中等偏低水平。(2)自我身体形象与体育锻炼之间呈显著正相关($r=0.205, p<0.001$); 自尊与体育锻炼之间呈显著正相关($r=0.338, p<0.001$); 自我身体形象与自尊之间呈显著正相关($r=0.239, p<0.001$), 即自我身体形象、体育锻炼、自尊两两之间关系密切。(3)自我身体形象对自尊的预测作用显著($\beta=0.018, p<0.001$); 自尊对体育锻炼的预测作用显著($\beta=0.353, p<0.001$); 自我身体形象对体育锻炼预测作用显著($\beta=0.11, p<0.001$), 由于依次检验相关系数均显著, 经中介效应检验可知在自我身体形象与体育锻炼的影响中, 自尊起着部分中介效应。结论: 由于自尊在大学生自我身体形象与体育锻炼之间的影响中起着部分中介作用, 因此, 在提高大学生体育锻炼水平时, 不仅要从小学生的自我身体形象出发, 也要提高大学生的自尊水平。本研究从自我形象的角度为大学学生的体育锻炼提供相关的理论依据和指导, 有助于促进大学生参与和保持体育锻炼。

Abstract: Purpose: Body image is how each person views and evaluates his or her own body. In today's society, more and more attention to self body image has become the motivation for people to participate in various physical activities. This paper mainly studies the influence of self-image on physical exercise participation and the mediating effect of self-esteem on college students. **Methods:** 402 college students (144 male and 258 female) were investigated by using the multi-dimensional self body image questionnaire, physical exercise rating scale, self-esteem scale and basic information questionnaire. **Results :** (1) the time, frequency and intensity of participating in physical exercise were all at the low level. (2) There was a significant positive correlation between body image and physical exercise ($r=0.205, P<0.001$). There was a significant positive correlation between self-esteem and physical exercise ($r=0.338, P<0.001$). There was a significant positive correlation between self-body image and self-esteem ($r=0.239, p<0.001$), that is, there was a close relationship between self-body image, physical exercise and self-esteem. (3) Self-body image had a significant effect on self-esteem ($\beta=0.018, P<0.001$). Self-esteem had a significant predictive effect on physical exercise ($\beta=0.353, P<0.001$). The self-image had a significant effect on the prediction of physical exercise ($\beta=0.11, P<0.001$). Since the correlation coefficients were all significant in turn, the mediating effect test showed that self-esteem played a part in the influence of self-image and physical exercise. **Conclusion:** Since

self-esteem plays a mediating role in the influence between the self-image and physical exercise of college students, it is not only necessary to start from the self-image of college students, but also to improve the self-esteem of college students. This study provides theoretical basis and guidance for college students' physical exercise from the perspective of self-image, which is helpful to promote college students' participation in and maintenance of physical exercise.

新冠疫情下青少年乐商与生活满意感的关系： 体育活动和心理资本的多重中介作用

焦陆英 张国礼（通讯作者）

北京体育大学心理学院，北京，100084 通讯作者邮箱：guoli_zhang@126.com

摘 要 《“健康中国 2030”规划纲要》中明确将“提高全民健康素养”作为“健康中国 2030”建设工作的重要举措。“青年兴则国兴，青年强则国强”，青少年身心健康素养的提升是“健康中国”国家战略的重要环节。心理健康不仅是没有心理疾病，还包括生活满意感等积极心理健康状态的拥有。因此生活满意感是疫情期间衡量青少年心理健康状态变化的一个重要指标。乐商界定为人乐观的能力，既包括一个人乐观水平的高低，也包括个体从所经历的消极事件中获取积极成分(或力量)的能力，以及影响或感染他人的能力。个体的乐观能力和积极心理品质有着密切的关系，高乐商的青少年能更多地体验到积极情绪从而收获幸福。参与体育活动有利于改善青少年的负性情绪体验，改善心理健康水平，因此体育活动是积累心理资本、提升生活满意感的有效途径。本研究认为体育活动和心理资本在乐商与生活满意感关系中发挥重要作用。为了更清晰地解释其中的影响机制，以陕西、甘肃、河北、河南等地初一至高三年级的 517 名青少年为研究对象，采用《中小学生乐商问卷》、《体育活动等级量表》、《积极心理资本问卷》以及《生活满意感量表》进行问卷调查。结果发现：（1）疫情下青少年生活满意感显著低于常模($t=-9.71, p<0.001$)；（2）学习压力比较大的学生生活满意感显著低于学习压力中等和学习压力较小学生的生活满意感($F=-14.18, p<0.001$)；（3）乐商可以通过心理资本的中介作用影响生活满意感，95% 的置信区间为[0.08, 0.24]；（4）体育活动、心理资本在乐商预测生活满意感中起多重中介作用，95% 的置信区间为[0.003, 0.02]。本研究验证了体育活动和心理资本在乐商与生活满意感间的多重中介作用，为后续的理论研究和青少年心理健康教育工作实践提供了建议：在特殊时期应该引导青少年保持乐观信念，鼓励青少年开展体育活动对抗不良情绪从而提高心理健康水平。

The Roles of Physical Activity and Psychological Capital in the Relationship between Optimistic Intelligence Quotient and Life Satisfaction among Adolescents under the COVID-19

JIAO Luying, ZHANG Guoli

School of Psychology, Beijing Sport University, Beijing, 100084

Abstract: In the "Healthy China 2030", "improving the health literacy of the whole population" is clearly stated as an important initiative in the construction of "Healthy China 2030". The improvement of physical and mental health literacy of young people is an important part of the national strategy of "Healthy China". Mental health is not only the absence of mental illness, but also the possession of a positive mental health state such as life satisfaction. Therefore, life satisfaction is an important indicator to measure the change of adolescents' mental health status during the COVID-19. Optimistic intelligence quotient (OQ) is defined as the ability to be optimistic, both in terms of the level of one's optimism and the individual's ability to derive positive components (or strength) from the negative events experienced, as well as the ability to influence or infect others. There is a close relationship between an individual's ability to be optimistic and positive psychological qualities, and adolescents with high OQ experience more positive emotions and thus reap happiness. Participation in physical activity is conducive to improving adolescents' negative

emotional experiences and mental health, so physical activity is an effective way to accumulate psychological capital and enhance life satisfaction. This study consider that physical activity and psychological capital play an important role in the relationship between OQ and life satisfaction. In order to explain the influence mechanism more clearly, a sample of 517 middle school students was recruited in the study to complete the Primary and secondary school students optimistic intelligence quotient questionnaire, the Physical Activity Rating Scale, the Positive Psychological Capital Questionnaire, and the Satisfaction with Life Scale. The results found that (1) life satisfaction of adolescents under COVID-19 was significantly lower than the norm ($t=-9.71, p<0.001$); (2) life satisfaction of students with higher academic stress was significantly lower than that of students with moderate and lower academic stress ($F=-14.18, p<0.001$); (3) optimistic intelligence quotient could influence life satisfaction through the mediating effect of psychological capital, 95% confidence interval was [0.08, 0.24]; (4) physical activity and psychological capital play multiple mediating effects between optimistic intelligence quotient and life satisfaction, 95% confidence intervals of [0.003, 0.02]. This study verified the multiple mediating roles of physical activity and psychological capital in the relationship between OQ and life satisfaction, also provided suggestions for subsequent theoretical research and adolescent mental health education practice: adolescents should be guided to maintain optimistic beliefs during special times, and encouraged to engage in physical activities to combat bad emotions and thus improve their mental health.

自我谈话在不同运动项目中的评价与应用

杨柳¹ 蒋珊¹ 王英春¹ (通讯作者)

1 北京体育大学心理学院, 北京, 100084, 通讯作者 E-mail: 13521531556@163.com

摘 要 自我谈话 (self-talk) 指人们对自己大声或无声、自然地或策略性地说的, 去激励、指导、反应、评价事件或行动的话, 是体育运动领域常见的心理干预方式。在运动领域, 自我谈话被认为是提高运动表现和心理状态的关键因素, 是运动心理学领域的重要研究主题。根据自我谈话的策略 (strategic) 特点, 研究者将自我谈话划分为动机性自我谈话和指导性自我谈话; 根据自我谈话的内容和效价特点, 可分为积极性自我谈话和消极性自我谈话; 根据自动化的特点, 自我谈话被分为了非导向性自我谈话和目标导向性自我谈话, 并且后续的研究将目标导向性自我谈话进行了进一步的细分。

自我谈话对运动成绩的提高作用已经在运动员与教练员之中得到了广泛的认可, 但其效果在不同运动项目中不一致, 甚至有相反的结果, 这可能与运动项目的复杂程度和认知资源的占用程度有关。因此, 本文对自我谈话在不同运动项目的应用进行了总结。在网球运动中, 动机性自我谈话和指导性自我谈话均能提高新手的发球水平, 但受到压力水平的调节; 在高尔夫运动中, 动机性、积极性自我谈话对高尔夫推杆任务的影响更积极; 88%的马拉松跑者在运动过程中会使用自我谈话, 其中 43.06%的精英运动员会使用专注于身体的联想性自我谈话; 在篮球运动中, 精英运动员使用指导性自我谈话提高了罚篮的准确性, 降低了动作协调变异性; 在足球运动中, 积极性自我谈话和动机性自我谈话对运动员更有益。所以需要结合不同运动项目以及运动员自身心理状态、运动水平与不同的运动阶段, 合理运用自我谈话以提高运动成绩。最后本文对未来的研究方向提出了展望: (1) 建立系统的分类框架, 帮助选取最优自我谈话方式, 进行最有效的干预; (2) 扩大精英运动员的被试量, 考察专家与新手在自我谈话使用上的差别; (3) 将竞赛情境与长期干预相结合, 提高研究的外部效度; (4) 结合多种方法探讨自我谈话的内在机制, 对自我谈话行为发生的脑机制进行研究。

关键词 自我谈话, 运动表现, 心理技能

Evaluation and application of self-talk in different sports

Liu Yang, Shan Jiang, Yingchun Wang*

School of Psychology, Beijing Sport University, Beijing 100084

Abstract: Self-talk refers to what people say loudly or silently, naturally or strategically to themselves, to motivate, guide, respond, evaluate events or actions, it's a common psychological intervention method in sport psychology. In

the field of sports, self-talk is considered to be a key factor in improving athletic performance and psychological status, and it's an important research topic in sport psychology. According to the strategic characteristics of self-talk, researchers divide self-talk into motivational self-talk and instructional self-talk; according to the content and valence characteristics of self-talk, it can be divided into positive self-talk and negative self-talk; according to the characteristics of automation, self-talk is divided into undirected self-talk and goal-directed self-talk, and subsequent studies further subdivided goal-directed self-talk.

The effect of self-talk on the improvement of sports performance has been widely recognized among athletes and coaches, but its effect has not been unified in different sports, and there are even counter results, which may be related to the complexity of sports and the occupancy of cognitive resources. Therefore, this paper summarizes the application of self-talk in different sports. In tennis, both motivational self-talk and instructive self-talk can improve the serving level of novices, but they are moderated by the level of pressure; in golf, motivational self-talk and positive self-talk has a more positive impact on the golf putter task; 88% of marathon runners use self-talk during the exercise, of which 43.06% of elite athletes use self-talk that associated with body to keep focused; in basketball, elite athletes use instructional self-talk to improve the accuracy of free throw, reduce the movement coordination variability; in football, positive self-talk and motivational self-talk are more beneficial to athletes. Therefore, it is necessary to use self-talk correctly in combination with different sports, psychological state of athletes, sport levels and different stages of sports to improve sports performance. Finally, this paper puts forward prospects for future research directions: (1) Establishing a systematic classification framework to select the best way of self-talk and conduct the most effective intervention; (2) Expanding the number of elite athletes to examine the differences in the use of self-talk between experts and novices; (3) Combining competition situations with long-term intervention to improve the external validity; (4) Use variety of methods to explore the intrinsic mechanism of self-talk and explore the brain mechanism of self-talk.

短时有氧运动影响抑制功能的安慰剂效应

许意佳¹(通讯作者) 郭璐¹

¹ 北京体育大学心理学院, 通讯作者 E-mail: 2458598079@qq.com

摘要 为考察短时中等强度的有氧运动影响抑制功能的安慰剂效应, 探讨安慰剂效应在动态时间进程中的作用, 本研究随机选取 104 名大学生进行 10min 中等强度的有氧运动, 采用 2(干预类型: 有安慰剂干预、无安慰剂干预)×3(测量时间点: 运动后恢复静息心率即刻、运动后休息 10min 时、运动后休息 20min 时)的组间设计, 将被试随机分为 6 组, 每个被试接受前测、后测共两次测量抑制功能的 Stroop 任务, Stroop 任务成绩由 Psychopy 线上程序收集, 获得有效数据 90 份。二因素组间设计的方差分析显示: (1)干预类型主效应显著, 有安慰剂干预组抑制功能的提高量大于无安慰剂干预组; (2)测量时间点主效应不显著, 在不同时间点测量的抑制功能无显著差异; (3)干预类型×测量时间点交互作用显著, 运动后恢复静息心率即刻时, 无安慰剂干预组的抑制功能提高量大于有安慰剂干预组。运动后休息 20min 时, 有安慰剂干预组的抑制功能提高量大于无安慰剂干预组。结论: 随着测量时间点的延长, 安慰剂效应的作用逐渐显现, 预期启动的安慰剂效应能影响认知效益的改善, 通过诱发期望启动安慰剂效应进行非运动因素干预同样是提高抑制功能的有效手段。

追求健康目标中自我调节与解释水平的匹配效应

陈慧娟¹ 张哲媛¹ 荆一卓¹ 李俊毅¹ 黄杨¹ 柴倩琳¹ 李艳¹ 张国礼¹(通讯作者)

¹ 北京体育大学心理学院, 北京, 100084, guoli_zhang@126.com

摘要 **目的:** 追求健康目标过程中的自我调节根据是否存在动机冲突分为自我控制与行为执行。针对不同的自我调节给予不同的解释水平指导会提高个体解决问题的能力。个体在面对不同自我调节情境时是否表现

出自我调节与解释水平的匹配效应，即自我控制与高解释水平，行为执行与低解释水平相匹配。**方法：**本研究招募 130 名实验参与者，从时间距离（实验 1）、可能性（实验 2）和原因手段任务（实验 3）3 种解释水平操控方式探讨自我调节与解释水平是否确有匹配效应。三个实验均为两因素被试内设计，自变量为自我调节（自我控制 vs. 行为执行）以及解释水平（高解释水平 vs. 低解释水平），因变量为知觉到的解释水平的有用程度以及对不同解释水平的偏好。通过描述自我控制和行为执行情境评估个体是否识别到高、低解释水平对追求健康目标的不同作用。**结果：**3 个实验都表明参与者能够区分自我控制和行为执行情境。实验 1 只发现了行为执行情境与低解释水平的匹配关系，实验 2 中自我调节与解释水平之间并没有表现出明显的匹配效应；但实验 3 中不仅发现了行为执行情境与低解释水平的匹配，也检测到了自我控制与高解释水平之间的匹配。综上所述，个体在面对不同的自我调节情境表现出了与高、低解释水平的匹配关系，但个体对这一匹配关系的认识具有一定的局限性，原因手段任务更便于这种匹配关系的认识。

关键词 自我调节，解释水平，目标追求

The matching effect of self-regulation and construal level in pursuing health goals

Huijuan Chen¹, Zheyuan Zhang¹, Yizhuo Jing¹, Junyi Li¹, Yang Huang¹, Qianlin Chai¹, Yan Li¹,
Guoli Zhang¹

School of Psychology, Beijing Sport University, Beijing, 100084, guoli_zhang@126.com

Abstract: Self-regulation in the process of pursuing health goals can be divided into self-control and behavioral execution according to whether there is a conflict of motivation. Giving different construal level for different self-regulation will improve the individual's ability to solve problems. Whether the individual shows the matching effect of self-regulation and construal level when facing different self-regulation situations, that is, self-control and high explanation level, behavior execution and low explanation level match. **Methods:** This study recruited 130 participants, and explored whether self-regulation and construal level actually have a matching effect from three construal levels: time distance (experiment 1), possibility (experiment 2) and cause means task (experiment 3). The three experiments are designed within a two-factor subject. The independent variables are self-regulation (self-control vs. behavioral execution) and construal level (high construal level vs. low construal level), and the dependent variable is the perceived usefulness of the explanatory level and preferences for different levels of interpretation. By describing self-control and behavioral execution situations, assess whether the individual recognizes the different effects of high and low construal levels on the pursuit of health goals. **Results:** All three experiments showed that participants were able to distinguish between self-control and behavioral execution situations. Experiment 1 only found the matching relationship between behavior execution context and low construal level. Experiment 2 did not show a significant matching effect between self-regulation and construal level; but in Experiment 3, not only the matching relationship between behavior execution context and construal level was found. A match between self-control and low construal levels was also detected. To sum up, individuals have shown matching relationships with high and low construal levels in different self-regulation situations, but individuals' understanding of this matching relationship has certain limitations, and the cause-means task is more convenient for awareness of relationship.

Keywords: self-regulation, construal level, goal pursuit

非侵入性脑刺激技术在运动认知研究中的应用

巴一¹ 李杰² 张禹¹ (通讯作者)

¹ 北京体育大学心理学院，北京，100084，E-mail: btzy1973@126.com

² 杭州师范大学心理科学研究院，杭州，311121

摘要 非侵入性脑刺激技术包括经颅磁刺激技术（transcranial magnetic stimulation, TMS）和经颅直流电刺

激技术 (transcranial direct current stimulation, tDCS), 目前已经被广泛用于心理学研究中。本文总结了非侵入性脑刺激技术在运动认知中的研究现状, 分析了其中研究的不足, 并提出了未来的研究方向。经颅直流电刺激对于注意力有一定的促进作用, 刺激脑区主要为背外侧前额叶皮层 (DLPFC) 和顶叶皮层 (PC)。对于工作记忆, 经颅直流电刺激能够提高工作记忆的容量, 刺激脑区主要为前额叶皮层 (PFC) 和后顶叶皮层 (PPC)。对于动态视觉追踪, 非侵入性脑刺激结果存在一定的争议, 问题集中在电刺激顶叶皮层 (PC) 促进还是损害多目标追踪的成绩。不过可以肯定的是非侵入性脑刺激会对多目标追踪造成显著影响, 但这种影响的方向还需要进一步考虑。非侵入性脑刺激对于动作学习具有一定的改善作用, 表现为对动作技能学习的更快, 保持的更久。刺激的脑区域主要为小脑 (cerebellum) 和初级运动皮层 (M1)。非侵入性脑刺激运用在风险决策、跨期决策、社会决策的研究比较多, 但在运动决策领域研究比较少, 而运动决策的神经机制是值得探讨的问题, 这提示运动心理学研究者在今后研究中可以尝试运用此方法以揭示运动决策的神经机制。展望: 非侵入性脑刺激技术的优势在于可以揭示行为与神经活动的因果关系, 运动心理学家可以在此技术的基础上结合脑电、近红外、功能性磁共振等技术以揭示运动认知的神经机制。

Application of non-invasive brain stimulation techniques in motor cognition research

BaYi¹, Li Jie², Zhang Yu¹

¹ School of Psychology, Beijing Sport University, Beijing, 10084, E-mail: btzy1973@126.com

² Institutes of Psychological Sciences, Hangzhou Normal University, Hangzhou, 311121

Abstract: Non-invasive brain stimulation techniques, including transcranial magnetic stimulation (TMS) and transcranial direct current stimulation (TDCS), have been widely used in psychological research. This paper summarizes the research status of non-invasive brain stimulation technology in motor cognition, analyzes the shortcomings of the research, and puts forward the future research direction. Transcranial direct current stimulation (TDCS) has a certain promotion effect on attention, stimulating brain areas mainly include dorsolateral prefrontal cortex (DLPFC) and parietal cortex (PC). For working memory, transcranial direct current stimulation (TDCS) can improve the capacity of working memory, stimulating brain areas mainly including prefrontal cortex (PFC) and posterior parietal cortex (PPC). For dynamic visual tracking, there is some controversy about the results of non-invasive brain stimulation, which focuses on whether the electrical stimulation of the parietal cortex (PC) promotes or damages the performance of multi-objective tracking. It is certain that non-invasive brain stimulation has a significant effect on multi-target tracking, but the direction of this effect needs further consideration. Non-invasive brain stimulation has a certain improvement effect on motor learning, which is manifested as faster learning of motor skills and longer retention. The stimulated brain regions were mainly cerebellum and primary motor cortex (M1). Non-invasive brain stimulation is widely used in risk decision-making, intertemporal decision-making and social decision-making, but there are few researches in motor decision-making. The neural mechanism of motor decision-making is worth exploring, which suggests that the researchers of sports psychologists may try to use this method to reveal the neural mechanism of motor decision-making in future studies. Prospect: The advantage of non-invasive brain stimulation technology is that it can reveal the causal relationship between behavior and neural activity. Based on this technology, sports psychologists can combine EEG, fNIRS, fMRI and other technologies to reveal the neural mechanism of motor cognition.

摘要 对于青少年运动员,运动心理学研究的目标已不满足于对其训练和比赛中心理问题的应对,而是从积极心理学出发,致力于激发和培养他们的积极的心理品质,促进其良好心理品质形成和心理健康发展。本研究基于积极心理学视域,设计一套以青少年运动员为对象,以提高其意志品质为目的的团体心理干预方案,为青少年运动员的心理辅导和积极心理品质(意志品质)培养提供具体的操作文本。以北京市体育学校青少年运动员为研究对象,采用实验组和控制组前后测的实验设计,实验组、控制组各24人,实验组平均年龄 15.25 ± 1.20 岁;控制组平均年龄 16.08 ± 0.89 岁。对实验组被试进行为期三个半月,每周一次,每次90分钟形式多种的团体心理辅导(包括主题活动、课后家庭作业和由微信公众号制作的课后读本)干预;采用殷小川等编制的《青少年意志品质问卷》对实验组和控制组被试在团体心理辅导干预前、后意志品质进行测量,并结合对教练员和运动员的访谈,评估团体心理辅导干预效果。研究结果发现:(1)实验前两组被试的意志品质总分及各维度得分均不存在显著性差异,实验组和控制组的被试具有同质性。(2)后测结果表明:实验组的被试在坚韧性、自制力、独立性和自觉性维度得分显著高于控制组($p < 0.05$)。(3)实验组被试干预前后意志品质的总得分及三个维度上的得分都有明显的提高($p < 0.05$),仅在独立性维度上没有显著变化($p > 0.05$)。(4)控制组被试干预前后,在意志品质总得分和各维度得分上没有显著性提高($p > 0.05$)。由此得出结论:以积极心理学为基础,内容涉及积极认知、积极情绪、积极应对、积极行为等方面的团体心理辅导干预方案,对提高青少年运动员意志品质具有实效性。

3. Graduate department of Capital University of Physical Education and Sports, Beijing, 100191

Abstract: For adolescence athletes, the goal of sports psychology research is not satisfied with coping with their psychological problems in training and competition, but from the perspective of positive psychology, it is committed to stimulating and cultivating their positive psychological quality, promote the formation of good psychological quality and the development of mental health. Based on the perspective of positive psychology, this study designed a group psychological intervention program aiming at improving adolescence athletes' will-power, which provides specific operation text for psychological guidance and positive psychological quality (will-power) training of adolescence athletes. Taking the adolescence athletes of Beijing sports school as the research object, the experimental group and the control group had 24 people in each group. The average age of the experimental group was 15.25 ± 1.20 years old, and that of the control group was 16.08 ± 0.89 years old. The subjects in the experimental group was given a variety of group psychological guidance (including thematic activities, after-school homework and after-school reading by WeChat official account) intervention for three and a half months, once a week for 90 minutes; by using the Adolescent Will-power Questionnaire compiled by Yin Xiaochuan and others, the will-power of the subjects in the experimental group and the control group before and after the group psychological guidance intervention was measured, and the effect of group psychological guidance intervention was also evaluated by interviewing coaches and athletes. The results showed that: (1) Before the experiment, there was no significant

difference in the total score of will-power and the scores of each dimension between the subjects in two groups. The subjects in the experimental group and the control group were homogeneous. (2) The results of the post-test showed that the scores of resilience, self-control, independence and consciousness of the subjects in the experimental group were significantly higher than those of the control group ($P < 0.05$). (3) Before and after the intervention, the total score and three dimensions scores of the subjects in the experimental group were significantly improved ($P < 0.05$), but there was no significant change in the independence dimension ($P > 0.05$). (4) Before and after the intervention, there was no significant improvement in the total score of will-power and the scores of each dimension of the subjects in the control group ($P > 0.05$). It is concluded that: Based on positive psychology, the group psychological guidance intervention program involving positive cognition, positive emotion, positive response and positive behavior is effective in improving the will-power of adolescence athletes.

压力下否定形式自我谈话对射击任务中注意控制的影响

夏梦丽 张力为（通讯作者）

北京体育大学心理学院，北京，100084

通讯作者 E-mail: liweizhang@hotmail.com

摘 要 自我谈话是运动员在赛场上常用的心理调节方式，优秀运动员在训练和比赛中会更多地使用自我谈话。然而，并不是所有自我谈话都有益于运动中的自我控制与动作表现，否定形式自我谈话可能引起与意愿相反的自我控制逆效应。前人对运动中注意控制逆效应的研究多局限于控制过程中出现的效应，而在思维抑制领域中，逆效应可分为即时增强效应和反弹效应，前者发生在个体思维抑制的过程中，后者则在个体思维抑制之后出现。本研究采用虚拟现实与眼动相结合的技术，监测参与者在虚拟现实射击任务中注意的变化，不仅探究使用否定形式自我谈话是否会引起注意控制的即时增强效应，更进一步探索注意控制中的反弹效应。

研究参与者共 72 名普通大学生，使用三因素混合实验设计，组内自变量为测量次序（基线、干预、干预停止），组间自变量为压力设置（有、无）和自我谈话（否定、肯定），其中否定形式自我谈话的内容为“别盯靶子”，相对应的肯定形式自我谈话的内容为“精力回收”。因变量为完成射击任务时注视的眼动指标：对靶子的注视次数百分比、注视总持续时间百分比以及平均注视持续时间。结果显示：有压力的情境中，进行肯定自我谈话干预的参与者对靶子的注视减少了（对运动表现有利），而使用否定自我谈话的参与者对靶子的注视增加了（对运动表现不利）；无压力设置的情境中，肯定自我谈话与否定自我谈话组对靶子的注视均减少了。这提示，压力下否定的自我谈话将引起注意控制的即时增强效应。结果还显示，不受压力设置的影响，在干预停止后，曾使用否定自我谈话的参与者再次进行射击时比基线测试时更多地注视靶子（对运动表现不利），说明注意控制中也存在反弹效应，且不受压力的调节。

综上，本研究提示，否定形式自我谈话将引起注意控制的即时增强效应与反弹效应，其中即时增强效应仅在压力情境中出现，反弹效应则不受压力的影响。

Influence of Negation-formed Self-talk under pressure on attention control in shooting task

XIA Meng-li, ZHANG Li-wei

School of Psychology, Beijing Sport University, Beijing 100084, China

Abstract: Self-talk is a common way of psychological adjustment for athletes on the field. Elite athletes will use self-talk more often in training and competition. However, not all self-talk is beneficial to self-control and motor performance in sports, and negation-formed self-talk may cause the ironic effect of self-control that is contrary to the intention. Previous studies on the ironic effect of attention control in sports are mostly limited to the effect occurring in the process of control. In the field of thought suppression, the ironic effect can be divided into immediate

enhancement effect and rebound effect, in which immediate enhancement effect occurs in the process of individual thought suppression, while rebound effect appears after individual thought suppression. In this study, a combination of virtual reality and eye movement technology was used to monitor the changes of participants' attention in the virtual reality shooting task, not only to explore whether using negation-formed self-talk will cause immediate enhancement effect of attention control, but also to further explore the rebound effect of attention control.

A total of 72 college students participated in the study, using a three-factor mixed experimental design. The within-subject variable was the measurement order (baseline, intervention, and cessation of intervention), and the between-subject variables were stress setting (presence or absence) and self-talk (negation, affirmation). The content of negation-formed self-talk was "don't look at the target", and the content of corresponding affirmative self-talk was "energy retract". The dependent variable was the eye movement index of fixation when completing the shooting task: the fixation count (%), the total fixation duration (%) and the average fixation duration (s). The results showed that in the stressful setting, the participants who had the affirmative self-talk intervention focused less on the target, while the participants who had the negation-formed self-talk focused more on the target. In the stress-free setting, both the affirmative self-talk and negation-formed self-talk groups focused less on the target. This suggests that negation-formed self-talk under pressure will cause immediate enhancement effect of attention control. The results also showed that, independent of the stress setting, participants who had used the negation-formed self-talk focused more at the target when shooting again after the intervention had stopped than taking the baseline test, suggesting that there is a rebound effect in attention control that is not regulated by stress.

To sum up, this study suggests that negation-formed self-talk will cause immediate enhancement effect and rebound effect of attention control, in which immediate enhancement effect only appears in stress situation, while rebound effect is not affected by stress.

Keywords: Self-talk, self-control, ironic effect, stress

虚拟现实技术下的青少年足球运动员多目标追踪表现特征

张雨璐¹ 李杰¹ 张禹² (通讯作者)

¹ 北京体育大学, 北京, 100084

摘要 近年来, 已有研究表明在成年运动员中, 运动员的运动水平和运动年限与其多目标追踪表现有一定的联系, 尤其是在同场对抗性的集体项目中, 多目标追踪表现对运动员在场上的发挥具有重要的作用。有研究显示虚拟现实技术场景下的多目标追踪能力的提高可以影响运动员场上对视觉信息的处理, 提高足球运动员的传球决策准确性。本研究旨在通过多目标追踪范式结合虚拟现实技术, 比较 12 岁至 18 岁青少年足球运动员的多目标追踪表现, 探讨青少年足球运动员多目标追踪表现特征。实验参与者来自北京某体育大学附属实验中学 12 岁至 18 岁的男子足球运动员, 分为 12 岁, 13 岁, 14 岁, 15 岁, 16 岁, 17 岁, 18 岁, 7 个年龄组, 共计 404 人, 以虚拟现实技术下的多目标追踪速度阈值, 包括极值, 平均阈值, 和最后四次阈值作为因变量指标。研究发现: (1) 在虚拟现实技术场景下, 12 岁至 18 岁青少年足球运动员的多目标追踪表现会随着年龄的增长而提高。进一步成对比较发现, 追踪速度阈值在 12 岁和 13 岁年龄段提高的幅度要高于 14 岁、15 岁、16 岁、17 岁, 18 岁。(2) 12 岁至 18 岁青少年足球运动员极值提高的幅度要大于平均阈值, 平均阈值要大于最后四次阈值。上述研究结果表明, 在虚拟现实技术场景中, 青少年足球运动员的多目标追踪能力表现出了随着年龄的增长而提高的特征, 并且 12 岁, 13 岁是多目标追踪表现提高较为敏感的年龄阶段, 相较于其他年龄组别的足球运动员, 该年龄阶段运动员的多目标追踪表现提高的幅度更大。另外, 追踪速度阈值的极值与平均阈值和最后四次阈值相比, 提高幅度更为显著, 说明极值与运动员的年龄关系更为密切。

Multi-target tracking performance characteristics of young football players under virtual reality technology

Yulu Zhang

Information Road, Haidian District, Beijing, Beijing sports university

Abstract: In recent years, studies have shown that among adult athletes, the athletes' sports level and years are related to their multi-objective tracking performance, especially in the antagonistic collective events in the same field. Studies have shown that the improvement of multi-target tracking ability in virtual reality technology can affect the processing of visual information on the field and improve the accuracy of soccer players' passing decisions. The purpose of this study is to compare the multi-target tracking performance of young football players aged from 12 to 18 by using the multi-target tracking paradigm and virtual reality technology, and to explore the characteristics of multi-target tracking performance of young football players. The experimental participants were 404 male soccer players aged 12 to 18 from an experimental middle school affiliated to a sports university in Beijing. They were divided into 12 years old, 13 years old, 14 years old, 15 years old, 16 years old, 17 years old, and 18 years old. The multi-target tracking speed thresholds under virtual reality technology, including extreme value, average threshold and the last four thresholds, were used as dependent variables. The findings are as follows: (1) In the virtual reality scene, the multi-target tracking performance of young football players aged 12 to 18 will increase with age. Furthermore, it is found that the threshold of tracking speed is higher at 12 and 13 years old than at 14, 15, 16, 17 and 18 years old. (2) The extreme value of 12-to 18-year-old young football players increased more than the average threshold, and the average threshold was greater than the last four thresholds. The above research results show that, in the virtual reality technology scene, the multi-target tracking ability of young football players shows the characteristics of increasing with age, and 12 years old and 13 years old are the more sensitive age stages for improving the multi-target tracking performance. Compared with football players of other age groups, the multi-target tracking performance of young football players in this age stage has a greater improvement. In addition, compared with the average threshold and the last four thresholds, the extreme value of tracking speed threshold has a more significant increase, which shows that the extreme value is more closely related to the age of athletes.

足球裁判决策研究综述：心理影响因素及训练方法

林萱¹, 解颂悦¹, 陈慧娟¹, 郑佳鑫¹, 李杰^{2,1}(通讯作者), 张禹¹(通讯作者)

1 北京体育大学心理学院, 北京, 100084, btzy1973@126.com

2 杭州师范大学心理科学研究院, 杭州, 311121, lijie.psy@hznu.edu.cn

摘要 目的: 在比赛中, 足球裁判常常需要克服由于生理、心理和环境变化所带来的影响, 才能在不同情境中快速准确地做出判决。以往的研究多侧重于生理因素带来的影响, 而心理因素对足球裁判决策的影响也是不容忽视的。因此, 本研究对足球裁判决策的心理影响因素及心理训练方法的一系列相关研究结果进行了梳理和总结。方法: 本文以“soccer referee/football referee”和“decision/decisions/decision making/judge/judging”为关键词, 从 Web of Science (核心数据库) 和 EBSCO (PsycINFO, SPORTDiscus with Full Text, Psychology and Behavioral Sciences Collection) 中进行文献检索。结果: 从 344 篇文献中筛选出 91 篇有关研究纳入分析, 主要从足球裁判决策的自身心理特点、外部因素、训练方法三个方面来进行综述。在自身心理特点的影响方面, 裁判任职之前在足球领域的间接经验会影响决策表现。此外, 视觉能力、视觉搜索策略、领域特定技能和情绪控制能力都对主裁决策有影响。对助理裁判来说, 决策影响因素更多地体现在对闪光滞后效应的处理上而非视觉搜索策略上。在外部因素方面, 最初判罚标准、球队分数差、球队或球员名声、现场观众数量、球场噪音和主客场等外部环境因素都会通过影响裁判对比赛形势的认知, 进而影响决策。在决策训练方面, 目前主要是表象训练和视频模拟训练, 后者又分为动画模拟训练、真实视频模拟训练和虚拟现实 3D 模拟训练。展望: 首先, 目前多采用领域通用的测量方法来探究裁判心理的因素, 未来研究可以开发更多针对足球主裁

和助理裁判的测量方法。其次，现在开发的训练方法主要集中于助理裁判的越位判决，未来可以拓展更多应用场景的训练。最后，目前的研究多为相关研究，而缺少对背后心理、神经作用机制的探索，未来研究可以弥补这方面的不足。

lijie.psy@hznu.edu.cn.

Abstract: **Objects:** football referees often need to overcome the impact of physiological, psychological, environmental changes to make a series of fast and accurate decisions in dynamic situations. Previous studies focused mostly on physiological factors, while psychological factors on the decision-making of football referees can not be ignored. Therefore, the current study combs the results of a series of studies on the psychological factors and psychological training methods of football referee decision-making. **Method:** with "soccer reference/football reference" and "decision/decisions/decision making/judge/judging" as keywords, literature retrieval was conducted from Web of Science (Core Database) and EBSCO (PsycINFO, SPORTDiscus with Full Text, Psychology and Behavioral Sciences Collection). **Results:** From 344 pieces of literature, 91 papers were included in the analysis, which mainly summarized the psychological characteristics, external factors, and training methods of football referee decision-making. In terms of psychological characteristics, the referee's indirect experience in football before taking office will affect the performance of decision-making. For referees, visual skills, visual scan patterns, domain-specific skills, and emotion control ability all influence the decision-making process. For assistant referees, the decision-making factors are more reflected in handling the flash-lag effect than in visual scan patterns. In terms of external factors, external environmental factors, such as the initial penalty standard, team score, team or player reputation, the number of crowds, crowd noise, and home advantage will affect the referee's cognition of the game, therefore affect the decision-making process. In the aspect of decision-making training, there are mainly imagery training and video simulation training. The latter is divided into animation simulation training, real-situation video simulation training, and virtual reality 3D simulation training. **Prospects:** First of all, current research mostly used general measurements to explore the psychological factors of referees. In the future, more measurements specifically designed for football referees and assistant referees can be developed. Secondly, the training methods developed now mainly focus on the offside judgment of assistant referees, which can be expanded to more application scenarios in the future. Finally, most of the current research discovered the correlation between psychological factors and decision, but a lack of explanation of the underlying psychological and neural mechanism. Future research can make up for this deficiency.

身体活动对时空隐喻表征的影响

黄秋艳¹ 郑玮琦¹ (通讯作者)

1 北京体育大学心理学院, 北京, 100084, 通讯作者 E-mail: weiqi71@126.com

摘要 时空隐喻是一种借用空间概念来表示时间概念的概念隐喻, 例如“上午”, “后天”等。Clark(1973)提出在前后轴上表征时间运动时有两种时间运动视角的时空隐喻表征方式: 自我动和时间动。自我动将自己当作主动的个体, 主动地向未来移动; 时间动将自己当作被动的个体, 等待未来向自己移动。本研究关注两个科学问题, 首先以往研究发现在头脑中构建不同方向的运动会影响时空隐喻的两种表征(Boroditsky, 2000;

Boroditsky, Ramsca & Frank, 2001), 本研究借鉴前人的周三会议问题(McGlone & Harding, 1998)、心情图问题(直观的时空隐喻图示表征)(Zheng et al., 2019)和飞船图问题(转化为空间维度上的时空隐喻图示表征)(Loeffler et al., 2017)作为两种时间运动视角选择的指标, 从而探究真实的身体活动是否会影响时空隐喻的不同表征。其中, 身体活动会影响情绪(张国礼等人, 2019), 且情绪对时空隐喻表征有影响(Zheng et al., 2019), 因此本研究将情绪作为控制变量。第二, 时距知觉是对时间长短的估计, 在其他因素的影响下, 个体在主观上可能感受到时距知觉压缩或扩张。以往研究发现身体活动会影响时距知觉(刘瑞光, 黄希庭, 1999), 时距知觉判断会结合时间和空间的信息(Casasanto, 2005), 因此本研究采用 1 分钟时距判断任务, 探究时距知觉与时空隐喻表征之间是否存在相关。

本研究通过设置在跑步机上的运动方向, 将被试随机分配到前进组、后退组和静止组, 结果表明周三会议问题和飞船图问题的检测有效性较差, 对于大学生群体来说从语言习惯上更倾向于选择自我动的视角, 无法有效区分两种时空隐喻表征。但采用直观的时空隐喻图示表征的心情图问题能有效区分不同身体运动方向条件下的两种时空隐喻表征。本研究发现: (1)真实的身体活动会影响时空隐喻的不同表征, 前进组相较于后退组和静止组更能激发出自我动的视角; (2)虽然消极情绪在实验过程中减弱, 但通过协变量分析发现其变化不影响身体活动引起的时空隐喻表征变化, 因此本研究可以排除情绪在其中的影响, 进一步证明身体活动会直接影响时空隐喻的不同表征; (3)时空隐喻表征与时距知觉之间不存在显著相关。

The Influence of Physical Activity on the Space-Time Metaphor

Qiuyan Huang¹, Weiqi Zheng¹

1 School of Psychology, Beijing Sport University, 100084,

Corresponding Author Email: weiqi71@126.com

Abstract: Space-time metaphor is a conceptual metaphor that borrows the space concept to represent the time concept, such as "Shang Wu"(Morning)(The character of "Shang" denotes "up") and "Hou Tian"(The day after tomorrow)(The character of "Hou" denotes "back"). Clark (1973) proposed that there are two ways representing the temporal motion perspective of space-time metaphor on the front—rear axis: ego-moving and time-moving. In ego-moving condition, people treat themselves as active individuals, and actively move towards the future; In time-moving condition, people treat themselves as passively individuals, waiting for the future to move towards us. This research focused on two scientific issues. First of all, previous studies have found that constructing different orientation of physical activities in the mind can affect two representations of space-time metaphor (Boroditsky, 2000; Boroditsky, Ramsca & Frank, 2001). Our research drew on the previous question, the Wednesday Meeting question (McGlone & Harding, 1998), the Mood Schema question (visualized representation of space-time metaphor) (Zheng et al., 2019) and the Spaceship Map question (spatial dimension of space-time metaphor) (Loeffler et al., 2017), as indicators for the representation of two temporal motion perspectives, so as to explore whether the real physical activity will affect different representations of space-time metaphor. Among them, physical activity affects emotion (Zhang et al., 2019), and emotion have an impact on the space-time metaphor (Zheng et al., 2019), so our experiment took emotion as control variables. Second, time perception is an estimation of the duration length. Under the influence of other factors, the compression and expansion of time perception may be subjectively perceived. Previous studies have found that physical activity affects time perception (Ruiguang Liu, Xiting Huang, 1999), and the information of time and space is combined during time perception (Casasanto, 2005), so our experiment used 1-minute time interval judgment task to explore whether there was a tight correlation between the time perception and the space-time metaphor.

In this study, the participants were randomly assigned to the group of forward, backward or stationary by setting the direction of movement on the treadmill. The results showed that the Wednesday meeting question and the Spaceship schema question was less effective, which cannot effectively distinguish the two choices of temporal motion perspectives, because the college students were more inclined to choose the ego-moving from their language customs. However, the Mood Schema question in which a visualized representation of space-time metaphor could

effectively distinguish the selection methods of temporal motion perspective under different body motion directions. This study suggested that: (1) Real physical activity will affect different representations of space-time metaphor, the forward group more generate the perspective of ego-moving than other two groups; (2) The negative emotion was weakened during the experiment. Through covariance analysis suggests that the negative emotion did not affects the changes of space-time metaphor representation which caused by physical activity. Thus the influence of emotion can be excluded and further prove that real physical activity can affect different representations of space-time metaphor; (3) There is no correlation between space-time metaphor representation and time perception.

状态焦虑对篮球运动员自我-他人决策的影响 ——执行功能的调节作用

李婉叶¹, 迟立忠²

1 北京体育大学心理学院, 北京, 100084

2 北京体育大学心理学院, 北京, 100084, 通讯作者 E-mail: chilizhong3804@163.com

摘要 目的: 对于篮球运动员而言,“自我决策”(在自己持球时做出传球、投篮、突破的决策)与“预期他人决策”(在并未持球的空手跑位阶段,预测队友会做出怎样的决策),都存在于比赛之中,通过预期他人决策,篮球运动员能够决定自己在赛场上的下一个动作,来与持球队友之间形成配合,使战术能够流畅运转,从而提高进攻成功率或二次进攻概率。目前有关运动领域自我-他人决策的研究相对较少,但已有研究表明,情绪是影响预期他人决策的重要因素;执行功能会对运动决策结果产生重要影响。**方法:**以CBA联赛参赛队员和篮球专项运动员为研究参与者,在实验一中采用2(决策角色:自我决策/预期他人决策,组内)×2(运动水平:高水平/一般水平,组间)混合设计;在实验二中采用2(状态焦虑水平:高/低状态焦虑,组间)×2(决策角色:自我决策/预期他人决策,组内)×2(执行功能:高/低执行功能)混合设计,以决策正确率/反应时/一致率为因变量,通过自编篮球运动自我-他人决策测试系统和焦虑诱发范式,及色-词 Stroop 任务、More-odd shifting 任务和 2-back 任务,验证篮球运动中自我-他人决策差异的存在,状态焦虑对篮球运动员自我-他人决策的影响,以及执行功能在篮球运动员状态焦虑与自我-他人决策关系中的调节作用。**结果与结论:**(1)篮球运动中存在着自我-他人决策差异,预期队友决策比自我决策反应速度慢。抑制功能在这一过程中起调节作用,低抑制功能削弱了这一效应。(2)高状态焦虑不利于正确决策,刷新功能在这一过程中起调节作用,高状态焦虑下,低刷新功能不利于参与者进行自我决策,高刷新功能不利于参与者进行预期他人(预期队友)决策。(3)高运动水平和低状态焦虑水平可以使篮球运动员更准确地判断队友的决策选择。**关键词** 自我-他人决策,预期他人决策,状态焦虑,执行功能,篮球

Impact of State Anxiety on Basketball Players' Self-Other Decision Making--Moderating Role of Executive Function

LI Wan-ye-he, CHI Li-zhong

Psychology College, Beijing Sport University, Beijing, China

Abstract: Objective: For basketball player, "self-decision" (in his holding the ball, decide whether he is passing, shooting, or a breakthrough), and "predicting other' s decision" (in his own did not take the ball, just on the pitch while they are running, predict teammates will make what decisions), all exists in the game, through the predicted others decisions, basketball player can decide their next action on the pitch, and holding the team formed between cooperate, make tactical can smooth operation, so as to improve the success rate of attack or secondary attack probability. At present, there are relatively few studies on self-others decision-making in the field of sports, but existing studies have shown that emotion is an important factor affecting the decision of others. Executive function has an important influence on the result of motion decision. **Methods:** This study used basketball as the study object, used CBA league players and second class basketball players, through two experiments, to study the relationship

between self - others decision-making in basketball players, the impact of state anxiety on basketball players' self-other decision making, and the moderating role of executive function. The first experiment used 2 (movement level: high level and average) x 2 (decision-making role: self decision, predicting other' s decision) of the mix design of experiment. The second experiment used 2 (state anxiety level: high /low state anxiety) x 2 (decision-making role: self decision / predicting other' s decision) x 2 (executive function: high /low executive function) of the mix design of experiment. The dependent variables are decision accuracy, decision response time and decision consistency rate. The experiment used self-made basketball self-others decision testing system and anxiety-inducing paradigm, as well as color-word Stroop task, More-odd shifting task and 2-back task. **Result and Conclusion:** (1) there is a self-others decision-making difference in basketball, and the reaction speed of predicting teammates' decision is slower than that of self-decision-making. Inhibition function play a moderating role in the influence of decision-making role on reaction time, and low inhibition function weakens this difference. (2) the level of state anxiety is not conducive to correct decision-making, and the updating function plays a regulating role in this process, with the increase of state anxiety, the low refresh function is not conducive to the self-decision-making of the participants, while the high updating function is not conducive to the predicted decision-making of teammates. (3) high level of sports and low level of state anxiety are conducive to improving the accuracy of basketball players' prediction of teammates' decisions.

出发反应时认知干预训练对青少年游泳运动员出发表现的影响

贾丽媛¹ 熊大林² 郑玮琦¹ (通讯作者)

1 北京体育大学心理学院, 北京, 100084, weiqi71@126.com

2 济南市皇亭竞技体育学校, 济南, 250011

摘要 出发反应时是运动员取得优异成绩的重要影响因素,特别是在短距离项目中,出发反应时快 0.01 秒便能抢占先机(宋耀伟, 2019)。对出发反应时所涉及到的心理和认知机制的探究是提高运动员出发反应表现的基础。青少年时期是进行针对性训练的关键时期,该年龄阶段的人群对于视听刺激的感知精度以及反应准确率逐渐提高(Chen et al., 2007)。本研究将反应时范式与游泳运动相结合,探索不同通道信号刺激认知干预训练对青少年运动员出发反应时的影响。为传统的出发反应训练提供了一种与心理学进行结合的新思路和新方法。

研究参与者选取 59 名济南市游泳队青少年运动员(平均年龄 9.5 岁)。按照其比赛出发主要依赖的信号刺激类别,分为 3 个干预组:听觉组(18 人)、视听组(13 人)、视觉组(14 人)以及 1 个对照组(14 人)。将简单反应时范式与游泳比赛出发信号进行结合,生成 3 种干预训练程序,进行 4 周(总计 60 分钟)出发反应认知干预训练。以听觉干预程序为例:屏幕呈现 500ms 的注视点后,出现刺激 S1“Take your marks!”,在 1-2.5s 区间内的随机间隔后,呈现刺激 S2“滴”(模拟比赛出发信号声音),研究对象听到刺激 S2 时,尽快按下空格键做出反应。对照组仅跟随教练进行日常游泳训练。干预前、后对所有研究参与者分别进行跳水出发反应时的前测和后测,每次测试跳三次出发并取平均值。使用 SPSS 23.0 分析前、后测的出发反应时变化。

研究结果表明该认知干预训练对出发反应时表现具有显著的改善作用。具体表现在:(1)所有干预组的后测反应时均显著低于前测反应时($F(1,55)=28.92$, $p<.001$, $\eta^2=.345$)。(2)干预训练结束后,视觉组($p<.001$)、视听组($p<.05$)与听觉组($p<.001$)的反应时前、后测均具有显著差异,对照组前、后测数据差异不显著。由此可见,不仅是肌肉、爆发力训练,对青少年运动员进行认知反应训练也是非常必要的,可以帮助游泳运动员在青训初期建立出发反应优势,形成较为稳定的出发反应。

The effect of cognitive intervention training of starting reaction time on the starting performance of young swimmers

Liyuan Jia¹, Dalin Xiong², Weiqi Zheng¹

School of Psychology, Beijing Sport University, Beijing, 100084, weiqi71@126.com

Jinan huangting competitive sports school, Jinan, 250011

Abstract: Starting reaction time is an important factor for athletes to achieve excellent results, especially in short distance events 0.01 seconds faster starting reaction time can better seize the opportunity(Song, 2019). To explore the psychological and cognitive mechanisms involved in starting reaction is the basis of improving athletes' starting reaction performance. Adolescence is the key period for targeted training, and the perception accuracy and response accuracy of audio-visual stimulation are gradually improved (Chen et al., 2007). This study combined the response time paradigm with swimming exercise to explore the effect of cognitive intervention training on young athletes' starting response time. The study provides a new idea and method combined with psychology for the traditional starting reaction training.

59 young swimmers of Jinan swimming team (average age 9.5 years old) participated in the study. They were divided into three intervention groups: auditory group (18), audio-visual group (13), visual group (14) and one control group (14). The simple reaction time paradigm was combined with the starting signal of swimming contest to generate three kinds of intervention training procedures, and the cognitive intervention training of starting reaction was carried out for 4 weeks (60 minutes in total). Take the auditory intervention program as an example: after 500 ms of fixation on the screen, S1 "Take your marks!" appears, arising a random interval of 1-2.5 seconds, and then S2 "Di"(simulating the start signal sound of the swimming contest) appears. When the participants hearing S2, they should press the space bar as soon as possible to respond. The control group only followed the coach for daily swimming training. Before and after the intervention, all the participants received the pretest and posttest of starting reaction time of diving, jumped three times for each test and took the average value. SPSS 23.0 was used to analyze the changes of starting reaction time of pretest and posttest.

The result showed that the cognitive intervention training could significantly improve the performance of starting reaction time. The specific manifestations were as follows:(1)The posttest reaction time of all intervention groups was significantly lower than the pretest reaction time($F(1,55)=28.92$, $p<.001$, $\eta^2=.345$). (2)After the intervention training, there were significant differences in the pretest and posttest of starting reaction time between the visual group($p<.001$), the audio-visual group($p<.05$)and the auditory group($p<.001$), but there was no significant difference in the pretest and posttest data of the control group. It can be seen that it is not only muscle and explosive force training, but also cognitive reaction training for young athletes, which can help swimmers establish starting reaction advantages and form a more stable starting reaction in the early stage of youth training.

Keywords: starting reaction time, audio-visual modality, cognitive training

竞赛状态焦虑对自由投篮准确率的影响

彭凡¹ 张力为² (通讯作者)

1 北京体育大学, 北京, 100084

2 北京体育大学心理学院, 北京, 100084, liweizhang@hotmail.com

摘要 本研究旨在检验由比分差距引发的竞赛状态焦虑(强度与方向)对自由投篮任务准确率的影响。选取了院级和校级篮球运动员 167 名, 其中男 89 名, 女 78 名。采用 2×2 的混合实验设计, 自变量为分数高下(领先 vs 落后)和分数悬殊的程度(大 vs 小), 其中, 分数悬殊程度为组间自变量, 因变量为自由投篮准确率前后测差值, 前测为无情境操纵自由投篮。另外, 设置特质焦虑水平和竞赛状态焦虑前测水平为协变量。首先对实验情境进行操控检查, 结果显示: 比分的操纵成功诱发了参与者的竞赛状态焦虑, 并在强度上呈现小分差落后>小分差领先>大分差落后>大分差领先的趋势。2×2 重复测量方差分析结果显示: 1) 分数高下

主效应显著 ($F=5.746, p=0.020, \beta^2=0.084$), 相比领先组, 落后组投篮准确率差值更大; 2) 分数悬殊程度主效应显著 ($F=35.962, p<0.001, \beta^2=0.363$), 相比大分差组, 小分差组投篮准确率差值更大; 3) 分数高下与分数悬殊程度交互作用不显著。相关分析结果显示: 竞赛状态焦虑方向与自由投篮准确率差值之间相关系数 $r=0.171, \alpha=0.166$, 表明竞赛状态焦虑方向与自由投篮准确率间存在正相关趋势, 相关程度较低, 且结果不显著。总结而言, 方差分析结果支持了, 比分差距诱发的竞赛状态焦虑强度越大, 自由投篮准确率越低; 相关分析结果显示, 比分差距诱发的竞赛状态焦虑方向对投篮准确率的影响不明显。本研究提示我们, 竞赛状态焦虑对自由投篮准确率的影响需要从强度和方向两个方面分别探索。

The Influence of Competitive State Anxiety on the Accuracy of Free Throw

Fan PENG¹, Li-Wei ZHANG²

1 Beijing Sport University, Beijing, 100084

2 School of Psychology, Beijing Sport University, Beijing, 100084, liweizhang@hotmail.com

Abstract: This study aimed to examine the influence of competitive state anxiety (intensity and direction) induced by a score manipulation on the accuracy of free throw. 167 basketball players were selected, including 89 males and 78 females. A 2×2 mixed experimental design was adopted. The independent variables were the score comparison (leading vs lagging) and the degree of score disparity (large vs small). The dependent variable was the accuracy rate gap between pretest and post-test of free throw, and the pretest was the free throw without manipulation. In addition, trait anxiety and the pretest of competitive state anxiety scale served as co-variables. First of all, manipulation check results showed a successful manipulation of competitive state anxiety. The trend is that small lagging > small leading > large lagging > large leading. The results of 2×2 repeated measure ANOVA analysis showed that: 1) The main effect of high score was significant ($F=5.746, P=0.020, \beta^2=0.084$), showing that the accuracy of the lagging group was poorer than that of the leading group. 2) The main effect of score disparity was significant ($F=35.962, P<0.001, \beta^2=0.363$). Compared with the large score difference group, the accuracy in the small score difference group was poorer. 3) There was no significant interaction between score comparison and score disparity. The results of correlation analysis showed that the correlation coefficient $r=0.171, \alpha=0.166$ between the direction of competitive state anxiety and the throwing accuracy, indicating that there is a positive correlation between the direction of competitive state anxiety and the throwing accuracy, but the correlation is weak. In conclusion, the results of variance analysis supported that a higher level of competitive state anxiety intensity caused a lower rate of the throwing accuracy; The correlation analysis results did not show a significant effect of the direction of competitive state anxiety on the throwing accuracy. It is suggested that the influence of competitive state anxiety on the throwing accuracy should be explored from two aspects, namely intensity and direction.

先验信息对乒乓球运动员预判的影响

伦梓文¹ 周成林¹ (通讯作者)

1 上海体育学院心理学院, 上海, 200438, chenglin_600@126.com

摘要 在竞技运动比赛中, 教练员会在赛前统计对手行为的倾向性并告知运动员, 运动员就能得到先验信息。这种先验信息对运动员预判有重要的作用。前人研究发现, 大多数从事开放性运动项目的运动员在有先验信息的条件下预判正确率更高。但是先验信息对乒乓球运动员预判的影响的关键时间点和对预判准确性提高的效果却鲜有研究涉及。基于此, 本研究旨在探讨先验信息对乒乓球运动员落点预判影响的关键时间点及其是否提高运动员预判正确率。实验一探究先验信息影响运动员预判的关键时间点。21 名乒乓球运动员参与

本实验，他们均为二级及以上水平运动员。实验采用 2 先验信息（有、无） $\times$ 3 截至时间点（击球前 100ms、击球瞬间、击球后 100ms）被试内设计。因变量为被试按键的偏向性。实验时向被试呈现乒乓球发球视频，4 种落点视频随机呈现，视频播放后要求被试判断乒乓球落点。研究表明，乒乓球运动员在乒乓球落点判断中会受到先验信息的影响，关键时间点为球与球拍接触瞬间。表现为在一开始运动信息缺乏时先验信息对运动员落点预判有较大影响，随着时间的推移，先验信息对运动员落点预判的影响越来越小，在球与球拍接触后 100ms 先验信息对预判的影响不显著。实验二探究先验信息对乒乓球运动员预判正确率的影响，实验采用 2 先验信息（有、无） $\times$ 2 截至时间点（击球前 100ms、击球瞬间）被试内设计。因变量为正确率。实验时向被试呈现乒乓球发球视频，右前落点呈现的概率为 40%，其余落点视频随机呈现，视频播放后要求被试判断乒乓球落点。研究表明，先验信息能提高运动员判断准确率，特别是在击球瞬间时的判断。综上所述，先验信息会影响乒乓球运动员落点预判，特别是在球与球拍接触前。这种影响在球与球拍接触时能显著提高运动员的预判正确率。

Effect of prior cues on action anticipation in table tennis players

Ziwen Lun¹, Chenglin Zhou¹ (Correspondence author)

1 School of psychology, Shanghai university of sport, Shanghai, 200438

Abstract: In competitive sports games, coaches count the probability of the opponent's actions and inform the athletes before the game, and the athletes can get a priori information. So, athletes can get a priori cues. Prior cues play an important role in action prediction. Previous studies have found that most athletes in open sports have a higher rate of correct prediction when a priori information is available. However, few studies have addressed the key timing of the effect of a priori information on the prediction of table tennis players and the effect on the improvement of prediction accuracy. The purpose of this study is to investigate the key timing of the effect of a priori information on table tennis players' prediction of the drop point and whether it improves the correct prediction rate of the players.

Experiment 1 explored the key timing at which a priori information affects a player's prediction. 21 table tennis players, all of whom were at Level 2 and above, participated in this experiment. The experiment used a 2 a priori information (yes, no) $\times$ 3 as of time points (100 ms before the hit, instant of hit, and 100 ms after the hit) within-subjects design. The dependent variable was the bias of the subject's keystroke. A video of a table tennis serve was presented to subjects during the experiment, and four drop point videos were presented randomly, and subjects were asked to judge the drop point of the table tennis ball after the video was played. The results showed that table tennis players are influenced by a priori information in the judgment of ping pong ball drop, and the key time point is the moment of contact between the ball and the paddle. The effect of a priori information on players' landing point prediction at the beginning when the motion information was lacking was greater, and the effect of a priori information on players' landing point prediction became less and less as time went on, and the effect of a priori information on prediction was not significant 100 ms after the contact between the ball and the paddle.

Experiment 2 explored the effect of a priori information on the correct rate of pre-determination of table tennis players, and the experiment used a 2 a priori information (yes, no) $\times$ 2 as of time point (100ms before the stroke, instant of the stroke) within-subjects design. The dependent variable was the correctness rate. The subjects were presented with a video of a ping pong ball serve, with a 40% probability of the right front drop being presented and the rest of the drop being presented randomly, and the subjects were asked to judge the drop of the ping pong ball after the video was played. The results of the study showed that a priori information could improve the judgment accuracy of the players, especially at the moment of hitting the ball. In summary, a priori information affects table tennis players' landing point prediction, especially before the ball makes contact with the paddle. This influence can significantly improve the correctness of players' prediction when the ball makes contact with the paddle.

乒乓球运动员不同意识水平下的语义启动研究

张丽娜¹ 伦梓文¹ 李安民¹ (通讯作者)

¹ 上海体育学院心理学院, 上海, 200438, anminli@sus.edu.cn

摘要 运动训练对认知加工具有促进作用, 这一观点在意识及无意识层面都已得到相关研究的证实。但前人研究多聚焦于探讨专家与新手的认知水平差异, 却鲜有关注运动员本身在意识与无意识这两种意识水平状态下的认知差异。此外, 前人研究多集中于探讨较低水平的知觉加工, 关于知觉更高层次的信息加工过程如语义和概念分析仍有待探究。基于此, 本研究选取 20 名 2 级及以上水平的乒乓球专业运动员为实验对象, 采用掩蔽语义启动范式探讨不同意识水平对乒乓球运动员语义启动的影响。本研究为 2×2 的被试内设计。其中, 自变量一为启动条件, 本研究通过控制启动刺激的呈现时间将启动条件分为阈下和阈上两种水平; 自变量二为启动刺激与目标刺激反应的一致性, 有反应一致和不一致两种水平。因变量为反应时。结果显示, 启动条件主效应不显著, 启动刺激与目标刺激的反应一致性主效应显著。启动条件与反应一致性的交互作用显著。在对交互作用进行简单效应分析, 结果发现, 与阈下启动条件相比, 乒乓球运动员在阈上启动条件中, 表现出更为显著的启动效应, 即运动员在启动刺激与目标刺激所属种类范畴一致的条件下的反应时要显著快于所属种类范畴不一致的条件。此外, 通过对两种启动条件下乒乓球运动员语义加工的启动量进行 t 检验发现, 乒乓球运动员在阈上启动条件下的启动量要显著大于在阈下启动条件的启动量。研究结论: (1) 乒乓球运动员的无意识知觉加工可以达到语义加工水平; (2) 无论在阈上还是阈下启动条件下, 乒乓球运动员都出现了明显的语义启动效应; (3) 乒乓球运动员在阈上启动条件中表现出更好的语义启动效果, 但运动员在阈下启动条件下的平均反应速度更快。

Research on Semantic Priming of Table Tennis Players at Different Consciousness Levels

Lina Zhang¹, Ziwen Lun¹, Anmin Li¹ (Corresponding author)

¹ School of Psychology, Shanghai University of Sport, Shanghai, 200438, anminli@sus.edu.cn

Abstract: Motor training has a boost to cognitive processing, which has been confirmed by studies at both the conscious and unconscious levels. However, previous studies mostly focused on the cognitive level differences between experts and novices, but seldom paid attention to the cognitive differences of the athletes themselves in the two states of consciousness and unconsciousness. In addition, previous studies have mostly focused on the lower level of perceptual processing, and the higher level of perceptual information processing such as semantic and conceptual analysis remains to be explored. Based on this, this study selected 20 professional table tennis players of level 2 and above as experimental subjects, and used the masked semantic priming paradigm to explore the influence of different consciousness levels on the semantic priming of table tennis players. This study is a 2 × 2 in subject design. Among them, the first independent variable is the priming condition. This study divides the priming conditions into subliminal and supraliminal levels by controlling the presentation time of the prime. The second independent variable is the consistency between the response of priming stimulus and target stimulus, which has two levels: consistent response and inconsistent response. And the dependent variable is reaction time. The results show that the main effect of priming condition is not significant, and the response consistency of prime and target stimulus is significant. The interaction between priming conditions and response consistency is significant. In a simple effect analysis of the interaction, the results show that compared with the subliminal priming condition, the table tennis player shows a more significant priming effect in the supraliminal priming condition, that is, the athletes react significantly faster under the condition that the prime and the target belong to the same category than in different category. In addition, through the t-test of the priming amount of semantic processing of table tennis players under the two priming conditions, it is found that the priming capacity of table tennis players under the supraliminal priming condition is significantly greater than that under the subliminal priming condition. Conclusions: (1) The

unconscious perception processing of table tennis players can reach the level of semantic processing (2) Under both supraliminal and subliminal priming conditions, table tennis players have obvious semantic priming effects (3) Table tennis players show a better semantic priming effect in the supraliminal priming condition, but the average reaction speed of the athletes in subliminal priming condition is faster.

中超足球球迷的愤怒表达及影响因素研究 ——以广州赛区为例

胡伊迪¹ 王冰¹ 张和平² (通讯作者)

¹ 太原理工大学体育系, 山西省晋中市, 030600, 1245423909@qq.com

摘要 激烈的对抗和比赛结果的不可预测性容易激发球迷的高唤醒水平。近年来,个别球队的表现不尽人意,裁判误判现象的出现使得球迷愤怒情绪的宣泄现象频发。不仅影响比赛的顺利进行,还会导致体育攻击或暴力事件,也在一定程度上造成危害。为正确引导球迷合理表达愤怒情绪,本研究以此为切入点,以2021中国超级联赛广州赛区(其中老牌球队球迷具有代表性)为例,探究中超足球球迷愤怒表达及其影响因素。本研究旨在探究中超球迷愤怒表达的类型及表现,明确愤怒表达的影响因素,减少因为不当的愤怒表达所造成的财产损失与人身危害。首先通过文献研究法收集资料,梳理文献。了解愤怒表达的相关理论研究的进展,明确中超足球球迷愤怒表达及影响因素的研究主题;其次通过质性研究法,先利用观察法了解球迷愤怒表达的方式,明确球迷愤怒表达的类型和具体表现,并确定下一步访谈的访谈对象;然后通过问卷调查法,调查中超足球球迷愤怒表达的现状并分析其差异性;再次通过深度访谈法,对文献资料进行整理与帕累托分析,深入探讨球迷愤怒表达的影响因素。最后,总结研究结果,在前期研究的基础上提出中超足球球迷愤怒表达的应对策略。研究结论如下:(1)通过扎根理论编码,分析出中超球迷愤怒表达有三种类型:愤怒外投、愤怒内投和愤怒控制。愤怒外投包括行为愤怒表达和言语愤怒表达;愤怒控制包括控制愤怒思想和控制愤怒行为;愤怒内投包括拒绝交流和拒绝合作这两个范畴。(2)中超球迷愤怒表达整体偏向愤怒内投和愤怒控制。其中不同性别对中超足球球迷在愤怒表达三个维度上均不存在显著性差异;不同年龄中超足球球迷愤怒表达在愤怒控制维度上存在显著性差异;不同职业中超球迷在三个维度上均存在显著性差异。(3)影响中超足球球迷愤怒表达的因素中,其中主要影响因素为球员表现不佳、教练安排不妥和裁判偏哨;次要影响因素为比赛输赢;一般影响因素为球员恶意犯规、球员不积极、球迷煽动、个人情绪、天气环境和球赛不精彩等。(4)根据中超球迷愤怒表达的类型及影响因素,有针对性地提出有效策略:在国家层面,通过法律威慑来杜绝不良行为的发生;在球迷层面,在管理自身情绪方面,要加强愤怒情绪的控制训练;在俱乐部层面,要宣传积极的中超足球文化。

A Study on the Angry Expression of CSL Fans and Its Influencing Factors——Take Guangzhou Aompetition Area as an Example

Huyidi, Wangbing

Taiyuan University of Technology, Shanxi Province

Abstract: Heavy confrontation and unpredictability of game results easily lead to high wake-up levels for fans. In recent years, the performance of individual teams is unsatisfactory, and the phenomenon of referee misjudgment has made the phenomenon of fan anger vent out frequently. Not only affects the smooth progress of the game, but also leads to sports attacks or violence, but also to a certain extent. In order to correctly guide the fans to reasonably express their anger emotions, this study takes this as the starting point, taking the 2021 Chinese Super League Guangzhou Division (which is representative of the old team fans) as an example, to explore the anger expression of the Chinese Super League football fans and its influencing factors. This study aims to explore the anger of Chinese Super League fans Type and performance of expression, clarify the influencing factors of anger expression, and

reduce the property loss and personal harm caused by improper expression of anger. First, the data is collected through the literature research method, and the literature is sorted out. Understand the relevant theory and research progress of anger expression, clarify the theme of anger expression and influencing factors; secondly, clarify the type and performance of anger expression of the fans; then investigate the current situation of CSL fans and analyze the differences; again through deep The degree interview method, compiled the literature and analyzed Pareto, and deeply discussed the influencing factors of fan anger expression. Finally, summarize the research results and propose the response strategy of CSL football fans.

The conclusions are as follows:

(1) Through rooted theory coding, we analyze three types of anger expression of CSL fans: anger casting, anger injection and anger control. Angry investment includes anger and verbal anger; anger control includes control of anger thoughts and the denial of communication and cooperation.

(2) Chinese Super League fans angrily expressed the overall bias towards anger in the internal investment and anger control. Among them, there is no significant

difference in anger expression, significant difference in anger control dimension of different ages, and significant difference in all three aspects of different professions.

(3) Among the factors that affect the anger expression of CSL fans, the main factors are poor performance, improper coaching arrangement and partial referee sentinel; the minor factors are the game; generally the factors are malicious foul, player inactive, fan agitation, personal mood, weather environment and poor game, etc.

(4) According to the type and influencing factors of CSL football fans, the effective strategy is put forward: prevent the legal deterrent at the national level, strengthen the training to control the management of anger, and promote the positive CSL football culture at the club level.

大学生网球运动员视觉选择反应的行为优势及 ERP 特征

杨东¹ 张建梅¹ 冯琰²

1 沈阳体育学院研究生部, 沈阳, 110102

2 沈阳体育学院运动人体科学学院, 沈阳, 110102, fy241919@qq.com

摘要 目的: 由于我国网球赛事不断的增多, 如何提高运动员的网球竞技水平, 已经成为一个热门话题。而视觉选择在运动员击球过程中起着至关重要的作用。本研究采用记录技术, 比较不同网球水平的大学生在完成视觉选择反应任务的行为及其脑神经活动水平的差异, 以揭示大学生网球运动员其注意、选择反应的优势及其可能的神经机制, 不仅可以丰富相关的运动认知理论内涵, 而且为网球教学中, 能够有效指导学生快速搜索有效信息提供方法学上的指导。

方法: 运用专家—新手研究范式, 选取沈阳体育学院网球二级及以上 10 名大学生为专家组(男 6 名, 女 4 名, 平均年龄 22.5 ± 2.01 岁); 沈阳体育学院体育教育专业网球普修 10 名大学生为新手组(男女各 5 名, 平均年龄 19.7 ± 1.06 岁)采用事件相关电位(ERP)记录技术, 采集大学生完成视觉选择反应任务时的行为和脑电数据。ERP 实验中的刺激材料根据 Type Token 模型来绘制, 视觉选择反应任务要求被试根据图片中的圆与横线是否相切于右上方(45°)或左上方(315°)来进行按键反应。如有在右上方有相切的图片出现, 则按"j"键, 如有在左上方(45°)有相切的图片出现, 则按"i"键, 如若在其他位置有相切的图片则不做反应。

结果: 行为结果显示, 不同组别的准确率差异不显著($P > 0.05$), 反应时差异显著($P < 0.05$), 表现为专家组平均反应时明显短于新手组。ERP 结果显示: 不同组别的大学生诱发的 P2、P3 峰波幅差异显著($P < 0.05$)、P3 峰潜伏期差异显著($P < 0.05$), 表现为专家组诱发的 P2 峰波幅高于新手组, P3 峰波幅低于新手组, 且 P3 潜伏期明显短于新手组。

结论:

(1) 在选择反应任务中, 与网球普修大学生相比, 大学生网球运动员进行视觉选择反应时, 具有反应速度快的行为优势。

(2) 大学生网球运动员在注意觉察阶段的 ERP 特征表明, 注意指向具有较强的抑制非目标刺激能力。在选择反应阶段的 ERP 特征表明, 靶刺激诱发的特征属性的注意活动较早, 消耗的心理运算资源较少。

关键词 大学生网球运动员, 视觉, 选择反应, 行为优势, ERP 特征

Behavioral Advantages and ERP Characteristics of Visual Selection Response of College Tennis Players

Yang Dong¹, Zhang Jianmei¹, Feng Yan²

1 Shenyang Sport University, Shenyang, 110102

2 College of Sports Human Science, Shenyang Sport University, Shenyang, 110102,

fy241919@qq.com

Abstract: Purpose: Because of the increasing number of tennis tournaments in China, how to improve the level of tennis competition of athletes has become a hot topic. Visual selection plays a vital role in the player's batting. This study uses recording technology to compare the behavior of college students at different tennis levels in completing visual selection reaction tasks and the differences in their level of brain neural activity, so as to reveal the advantages of college tennis players' attention, choice of reaction and their possible neural mechanisms, which can not only enrich the relevant theoretical connotation of sports cognition, but also provide methodological guidance for students to search for effective information quickly in tennis teaching.

Methods: Using the expert-novice research paradigm, 10 college students from shenyang Sports College tennis level II and above were selected as expert groups (6 males, 4 women, with an average age of 22.5 ± 2.01 age); Shenyang Sports College Sports Education Professional Tennis 10 college students for the novice group (5 men and women, average age 19.7 ± 1.06 age) using event-related potential (ERP) recording technology, collecting college students to complete the visual selection response tasks of behavior and ERP data. The stimulation material in the ERP experiment is drawn according to the Type Token model, and the visual selection response task requires the subject to perform a key reaction based on whether the circle and horizontal line in the picture are tangent to the upper right (45 degrees) or the upper left (315 degrees). If there is a tangent picture in the upper right, press the "j" key, if there is a tangent picture in the upper left (45 degrees), press the "f" key, if there is a tangent picture in other places do not react.

Results: The behavioral results showed that the difference in accuracy between different groups was not significant ($P > 0.05$), and the difference in reaction was significant ($P < 0.05$), which showed that the average response of the expert group was significantly shorter than that of the novice group. ERP results show that the difference of P2 and P3 peak amplitude induced by different groups of college students is significant ($P < 0.05$), and the incubation period of P3 peak is significantly different ($P < 0.05$), which is shown that the P2 peak amplitude induced by the expert group is higher than that of novice group, P3 peak amplitude is lower than that of novice group, and the incubation period of P3 is significantly shorter than that of novice group.

Conclusion: In the selection of reaction tasks, compared with tennis students, college tennis players have the behavior advantage of fast reaction speed when they react to visual selection. The ERP characteristics of college tennis players in the attention awareness stage show that attention points to a strong ability to suppress non-target stimulation. The ERP characteristics in the selection reaction stage show that the attention activity of the characteristic attribute induced by target stimulation is earlier and the psychological computing resources are consumed less.

Keywords: college tennis players, vision, choice reaction, behavioral advantage, ERP characterist

类比在运动技能学习中的作用及其影响因素

王超¹ 李瑞烜¹ 郑玮琦¹ (通讯作者)

¹ 北京体育大学心理学院, 北京, 100084, zhengweiqi@bsu.edu.cn

摘要 为了克服在现实情境下学习者使用传统内隐学习方法所习得的运动技能表现低于使用外显学习的情况, Liao 和 Masters (2001) 使用类比的方式提供指导, 发现类比学习不仅具有内隐学习的特征且与外显学习条件下的运动表现无显著差异, 可以作为一种更为有效的内隐学习方法在现实中使用。类比学习 (analogy learning) 是将所要学习的运动技能的整体知识和规则整合成一个更容易理解的单一的生物学隐喻。在运动技能学习的过程中, 相比于使用外显学习的参与者, 使用类比学习的参与者能够在压力情境下、干扰情境下和高复杂决策条件下保持运动表现的稳定, 但其学习效果也会受学习者运动水平, 认知因素以及指导内容的影响。类比学习影响运动表现的认知机制可能存在以下几种解释。第一, 类比学习将运动技能规则整合到一个个的组块中, 使学习者自动化地执行动作, 减少了工作记忆的负荷, 从而保持运动表现的稳定。但由于类比学习领域中现有研究范式的限制, 即外显指导语数量和类比指导语数量上的不匹配, 难以消除指导语数量对工作记忆的影响, 因此以往研究可能夸大了工作记忆在类比学习中的作用。第二, 类比条件下的学习者更易使用外部注意焦点从而降低运动规则的再投资, 提高运动表现的稳定。同时相比于外显学习, 再投资的降低可以减少工作记忆的负荷, 从而进一步促进运动表现的稳定。此外, 现有研究存在指导语数量不匹配, 指导语提供方式生态效度低、指导内容编写方法及评价标准缺乏标准化以及所研究运动类型差异较大难以横向对比的局限, 可能存在歪曲和夸大类比学习对运动技能学习的作用。因此, 未来研究可以从平衡指导语数量, 改变指导语提供方式, 指导语编写评价标准化以及运动任务选取等方面继续深入研究。同时, 现有对类比学习的内在机制的讨论大多以行为数据作为推测依据, 缺少真正的神经机制数据, 因此未来可以使用 EEG, fNIRS 等技术探究类比学习状态下学习者的脑区激活, 对类比学习的神经机制进一步探索。

The Effect of Analogy in Motor Skill Learning and Its Influential Factors

Chao Wang, Ruixuan Li, Weiqi Zheng

School of Psychology, Beijing Sport University, Beijing 100084, China

Abstract: In order to overcome the situation that traditional implicit learners consistently showed a lower level of performance than those explicitly learners in real situations. Liao and Masters (2001) used analogy instructions and found that analogy learning not only is implicit in nature and has the characteristic of implicit learning, but also has no significant difference in performance with explicit learning, which can be used as a more effective implicit learning method in reality. Analogy learning is a simple biomechanical metaphor which is easier to understand by integrating the complex rule structure of the motor skills. In the process of motor skill learning, performance induced by analogy instructions is more robust than induced by explicit instructions under pressure, distracting situation and high-complexity decision-making condition. However, the effect of analogy learning would also be affected by individual motor level, cognitive factors and instruction's content. The cognitive mechanism that how analogy learning affects performance may be explained in the following ways. First, large amounts of the motor rules are organized into a single representative chunk, which increases the automaticity of the movement, reduces the load of working memory, and thus maintains the stability of performance. However, due to the limitation of research paradigms in analogy learning that the imbalance of instruction's quantity between explicit and analogy motor learning, it is difficult to eliminate the effect of instruction's quantity on working memory. Therefore, previous studies may have exaggerated the effect of working memory in analogy learning. Secondly, analogy learners are more likely to use external focus of attention to reduce the reinvestment, and improve the stability of performance. Meanwhile, compared with explicit learning, low reinvestment can reduce the load of working memory, which can further promote the performance stability. In addition, previous studies exist some limitations that misrepresent real-world

settings, such as imbalance of instructions quantity, the provision of instructions with low ecological validity, lack of standardization of the compilation and evaluation criteria of the instructions, and large differences in the types of sports tasks that makes it difficult to compare performance horizontally. Therefore, further research can be carried out from such aspects to balance the number of instructions, change the way of instruction provision, standardize the compilation and evaluation of instructions, and focus on selecting exercise tasks. Furthermore, the existing theories on the internal mechanism of analogy learning are mostly based on behavioral research results without neural mechanism results. Therefore, EEG, fNIRS and other technologies can be used to explore the activation of brain regions of participants in further research and the neural mechanism of analogy learning.

摘要 拖延行为是指个体在没有明确理由的情况下,不自觉地延迟预定行动的非适应性行为,即便个体可以预测拖延带来的不利结果,但依旧推迟完成任务。体育锻炼可以促使机体分泌多种物质,能够增强体质、缓解压力、舒缓情绪,在《“健康中国 2030”规划纲要》的提倡下,越来越多的运动热已经成为一种潮流,更多的人参与到各种运动当中。通过对国内外相关研究文献进行分析,分析体育锻炼对拖延行为的影响效应,归纳体育锻炼影响拖延行为的作用路径,发现:1、体育锻炼对大学生学习拖延有显著的负向预测作用。2、体育锻炼可以通过不同的中介作用对学习拖延产生间接影响,可通过时间管理倾向、自我控制的中介路径进行影响。3、研究显示:拖延与海马旁回(PHG)和眶额叶的灰质体积呈正相关,而与额中回(MFG)和额下回(IGF)的灰质体积呈负相关;在动物和人类模型中,体育锻炼对海马旁功能有广泛的影响,海马旁回神经兴奋性增加,灰质/白质增加。因此,在未来的研究中可增加体育锻炼对睡眠拖延、学业拖延等的研究,以及开展对拖延行为认知机制及神经基础方面研究。

Prospects of the relationship between physical exercise and procrastination behavior and its physiological mechanism

Yin Yikun¹, Guanrui²

1 College of physical education and health, Guangxi Normal University

2 Guangxi Normal University, Ministry of education

Abstract: Procrastination behavior refers to the non-adaptive behavior that an individual unconsciously delays a predetermined action without a clear reason. Even though an individual can predict the adverse results of procrastination, he still delays the completion of the task. Physical exercise can promote the body to secrete a variety of substances, can enhance physical fitness, relieve stress, relieve mood, under the "Healthy China 2030" planning outline, more and more exercise fever has become a trend, more and more people participate in a variety of sports. Based on the analysis of relevant research literature at home and abroad, this paper analyzes the effect of physical exercise on procrastination behavior, and concludes the action path of physical exercise on procrastination behavior. It is found that :1. Physical exercise has a significant negative prediction effect on college students' learning procrastination. 2. Physical exercise can indirectly affect learning procrastination through different mediating effects, and it can be influenced by the mediating paths of time management inclination and self-control. 3. Studies showed that procrastination was positively correlated with the volume of gray matter in the parahippocampus gyrus (PHG) and orbitofrontal lobe, but negatively correlated with the volume of gray matter in the middle frontal gyrus (MFG) and inferior frontal gyrus (IGF). In animal and human models, physical exercise has a broad effect on

parahippocampal function, with increased nerve excitability in the parahippocampal gyrus and increased gray/white matter. Therefore, in the future, the research on the effect of physical exercise on sleep delay and school delay should be added, and the cognitive mechanism and neural basis of procrastination behavior should be carried out.

Keywords: Physical exercise, procrastination behavior, parahippocampal gyrus, neural mechanisms

运动提升抗脑力疲劳能力的相关机制研究进展与展望

陈鹰鹏¹ 张一民²

¹ 北京体育大学, 北京市, 100080

² 北京体育大学体质与健康重点实验室, 北京市, 100080, ymzhangno1@163.com

摘要 目的:通过分析整合脑力疲劳的发生机制,并结合运动锻炼的调控作用,系统地整理运动锻炼提升机体抗脑疲劳的可能性机制。**方法:**通过 Pubmed 和 ScienceDirect 等网站中搜索关键"exercise"、"mental fatigue"、"neurotrophic factors"、"HPA axis"、"immune system"、"BDNF"等,分析相关文献,综述脑力疲劳发生机制以及运动锻炼提升机体抗脑疲劳的可能性机制。**结果:**脑力疲劳发生机制:(1)脑内腺苷瞬变,腺苷转运调节神经活动,通过 A1 受体抑制多巴胺释放;(2)多巴胺的失衡导致整个智力系统紊乱,抑制系统被激活;(3)皮层-皮层下中枢给予下丘脑信号,交感神经-副交感神经失衡,HPA 功能紊乱,海马接收 HPA 负反馈加剧扣带回的多巴胺系统紊乱;(4)额叶自上而下加工失衡和错误负波的增多加剧多巴胺系统的失衡;(5)脑 ATP 浓度下降,糖原作为大脑主要供能物质含量显著减少,五羟色胺浓度升高,对中枢神经系统产生了保护性抑制作用。运动改善脑功能机制:(1)运动塑造大脑。增加前额叶皮质、海马等相关脑区皮质厚度,神经发生增多,相关神经回路的连接增强;相关脑区功能激活水平提高,加强脑区之间的连接。(2)运动增加神经营养因子。运动促进 BDNF、VEGF 和 IGF-1 的含量增加,增加海马体神经发生。(3)运动平衡神经递质分泌。运动产生内源性大麻素和内啡肽改变神经递质的释放,影响奖赏、认知控制等高级认知环路的功能。(4)运动增强自主神经系统调控。运动促进皮质醇水平出现下降,进而导致 CRH mRNA 的表达量和血清中 ACTH 水平下降,从而优化 HPA 的功能。(5)运动提高脑代谢。乳酸既可作为能源底物,也可作为信号分子促进突触可塑相关信号的激活,进而提高认知能力。(6)运动提升脑抗炎抗氧化。运动后过氧化氢酶活性和 ROS 水平降低,亚硝酸盐水平增加,白细胞介素 4 水平增加,后神经元特异性烯醇化酶的水平下降。**结论:**(1)运动能通过脑可塑性、免疫系统、能量代谢、自主神经直接或间接提升抗脑疲劳能力;(2)未来研究可结合 HIIT、身心训练、正念瑜伽等不同形式运动,探究不同运动与脑抗疲劳能力的关系。

Research Progress and Prospects of the Mechanisms For Exercises Improving Mental Fatigue Resistance Ability

Chen Yingpeng¹, Zhang Yimin²

¹ Beijing Sport University, Beijing, 100080

² Laboratory of Physique and Health, Beijing Sport University, Beijing, 100080, ymzhangno1@163.com

Abstract: Objective: By analyzing and integrating the mechanism of mental fatigue, combined with the regulation of exercise exercise, systematically sort out the possible mechanisms of exercise exercise to improve the body's anti-brain fatigue. **Methods:** Search for the key "exercise", "mental fatigue", "neurotrophic factors", "HPA axis", "immune system", "BDNF", etc. through websites such as Pubmed and ScienceDirect, analyze relevant literature, and summarize the mechanism of mental fatigue and Physical exercise enhances the possible mechanism of the body's anti-brain fatigue. **Results:** The mechanism of mental fatigue: (1) adenosine transient in the brain, adenosine transport regulates neural activity, and inhibits the release of dopamine through A1 receptors; (2) the imbalance of dopamine leads to the disorder of the entire mental system and the inhibitory system is activated; (3) The cortex-subcortical center gives hypothalamic signals, sympathetic-parasympathetic nerve imbalance, HPA dysfunction, and the

hippocampus receives HPA negative feedback to aggravate the dopamine system disorder of the cingulate gyrus; (4) Top-down processing imbalance and errors in the frontal lobe The increase of negative waves aggravates the imbalance of the dopamine system; (5) The concentration of brain ATP decreases, the content of glycogen as the main energy supply substance of the brain is significantly reduced, and the concentration of serotonin increases, which has a protective inhibitory effect on the central nervous system. Exercise improves brain function mechanism: (1) Exercise shapes the brain. Increase the cortical thickness of the prefrontal cortex, hippocampus and other related brain areas, increase neurogenesis, and strengthen the connection of related neural circuits; increase the level of functional activation of related brain areas, and strengthen the connections between brain areas. (2) Exercise increases neurotrophic factors. Exercise promotes the increase of BDNF, VEGF and IGF-1 content and increases hippocampal neurogenesis. (3) Exercise balance neurotransmitter secretion. Exercise produces endocannabinoids and endorphins to change the release of neurotransmitters and affect the functions of higher cognitive circuits such as rewards and cognitive control. (4) Exercise enhances the regulation of the autonomic nervous system. Exercise promotes a decline in cortisol levels, which in turn leads to a decline in CRH mRNA expression and serum ACTH levels, thereby optimizing the function of HPA. (5) Exercise improves brain metabolism. Lactic acid can be used not only as an energy substrate, but also as a signal molecule to promote the activation of synaptic plasticity-related signals, thereby improving cognitive ability. (6) Exercise improves brain anti-inflammatory and anti-oxidation. After exercise, catalase activity and ROS levels decrease, nitrite levels increase, interleukin 4 levels increase, and post-neuron-specific enolase levels decrease. **Conclusion:** (1) Exercise can directly or indirectly improve the ability to resist brain fatigue through brain plasticity, immune system, energy metabolism, and autonomic nerves. (2) Future research can combine HIIT, physical and mental training, mindfulness yoga and other different forms of exercise to explore the relationship between different exercises and brain fatigue resistance.

Keywords: mental fatigue, exercise, central nervous system, neurotrophic factors, brain plasticity

运动员动作预期结果加工的行为与神经活动特点

王吟月¹ 赵祁伟¹ 山峡¹ 陆颖之¹ (通讯作者)

¹ 上海体育学院心理学院, 上海市, 200438, luyingzhi@sus.edu.cn

摘 要 乒乓球项目中, 正确快速的预判使运动员有更好的绩效表现, 但预期结果与实际结果不一致时, 如球在飞行时擦网, 落点方向突然改变, 运动员仍可以在最终决策前, 调整身体反应, 应对意外事件。此时预期的结果加工如何进行尚不清楚。以往研究集中在预期结果与实际结果完全不一致(如预期落点在左半台, 实际落点在右半台)或完全一致(预期与实际落点在相同半台)两种条件下。而在实际运动场景中, 落点预判不仅是左右两个方向, 随着球的轨迹逐渐完整, 预期落点可能从左半台缩小为左 1/3 台, 逐渐确定。那么预期落点与实际落点的差异不同时预期结果的加工是否不同呢? 本研究从此问题出发, 探究运动员在不同差异距离下预期结果加工的行为与神经活动特点。本实验将球桌水平方向 7 等分(左至右 1-7), 要求运动员进行此 7 个方向的发球, 将发球视频从球-拍接触瞬间断开为前后两部分, 之后重新组合, 以此设置根据身体动作得到的预期落点与实际落点不同的差异。进一步测试参与者是否发现落点不同以及之后的应对。记录数据: 正确率、反应时间、Theta 能量值。结果显示, 随着预期与实际落点差异增大, 运动员对两者差异识别的正确率增大; 预期与实际落点差异距离超过 1/2 球台(如预期落点在 1 区, 实际落点在 5、6、7 区), 反应时间增长; 做出预期结果之后, 随着实际结果的呈现, Theta 能量值逐渐增大; 差异距离大于 1/2 球台时, Theta 能量值大于差异距离小于或等于半台 ($P < .05$)。研究结论: 乒乓球运动员能根据已有知识经验, 监控预期结果与实际结果, 保证决策准确性; 采取不同策略应对不同差异, 差异距离大于 1/2 球台时, 激活 Theta 振荡, 调配认知资源以应对预期外事件。

The Characteristics of Athletes' Behavior and Neural Activity on the Processing of Predicted Response-Outcome

Yinyue Wang¹, Qiwei Zhao¹, Xia Shan¹, Yingzhi Lu¹

¹ Shanghai University of Sport, Shanghai

Abstract: The better performance of table tennis athletes depends on correct and rapid prediction. However, when the predicted outcome is not consistent with the observed outcome, for example, when the ball suddenly changes the direction of the landing point due to the wiping of the net during flight, the athletes can adjust the physical movements to deal with the unexpected event before the final decision. At this time it is not clear how the predicted response-outcome will proceed. Previous researches focused on two conditions: the predicted outcome was completely inconsistent with the observed outcome (such as, the predicted landing point was in the left half of the station, while the observed landing point was in the right half of the station) or completely consistent (landed on the same half of the station). In the actual motion scene, the prediction is not only about the left and right directions. As the trajectory of the ball is gradually complete, the range of the predicted falling point shrinks and becomes more and more accurate. Does the difference in the distance between the predicted landing point and the observed landing point affect the process of predicted response-outcome? Based on this problem, this study explored characteristics of athletes' behavior and neural activity on the processing of predicted response-outcome. In this experiment, the horizontal direction of the table is divided into 7 equal parts (1 to 7 from left to right), and the athlete was required to serve in these 7 directions. The serving videos were divided into two parts from the ball-racket contact moment, and then were recombined to obtain the different distance between the predicted and the observed landing point. Experiment tasks were to ask the subjects to determine whether the drops were different and to press the number key corresponding to the observed drops. The accuracy, response time and Theta power values were recorded. The results show that with the increase of the difference between predicted and observed landing points, the accuracy of athletes' recognition of the difference between them increases. When the predicted distance from the observed landing point exceeds 1 / 2 of the table (for example, the predicted landing point is in part 1 and the observed landing point is in parts 5, 6 and 7), the response time of athletes increases. After the athletes made the prediction, Theta power gradually increased with the presentation of the observed outcomes; When the difference distance is greater than 1/2 table, Theta power is greater than the difference distance is less than or equal to half table ($P_s < .05$). Research conclusion: athletes can monitor the predicted and observed outcomes according to their existing knowledge and experience, so as to ensure the accuracy of decision-making. They adopt different strategies to deal with different distances. When the distance is greater than 1 / 2 of the table, they activate Theta oscillation and allocate cognitive resources to deal with unexpected events.

大学生绿色锻炼的情绪效益研究

冷宇欣 姚本先（通讯作者）

合肥师范学院，合肥，230031；通讯作者 E-mail: ybx7756@126.com

摘要 绿色锻炼是指人类在大自然环境中进行的身体锻炼，包括在有绿色植物的环境中或在自然环境中进行行走、慢跑、快跑、骑行等运动。随着人类生活水平的提高，越来越多的人开始重视绿色锻炼。而现如今，国内对于绿色锻炼这样一种新型运动方式的研究起步较晚。以往的研究证明，与非绿色锻炼相比，绿色锻炼更有益于健康。本研究立足于现有的研究成果，以大学生为主要研究对象进行调查。目的：比较在这两个不同的锻炼环境下其情绪状态是否有差异并分析情绪状态的主要影响因素，进一步探讨绿色锻炼对其情绪状态的影响及其内心理机制。方法：采用由 McaNair 等人在 1971 年编制的简明心境量表 (poriflor Mood Saets, POMS)，该量表用以测量被试的心境状态的得分，即对个体在紧张、愤怒、慌乱、抑郁、疲劳、精力、自尊这七个维度上的得分进行相加减以计算总分，用该量表对 365 名在校大学生进行问卷调查，所得数据均用 spss

进行统计学分析处理。结果：（1）非绿色锻炼相比，绿色锻炼对心境状态的七个维度均有积极影响。（2）进行中等强度运动量的绿色锻炼更有助于提高心境状态。因此，本研究得出结论：与非绿色锻炼相比，绿色锻炼更有助于大学生改善心境、调节情绪。

Study on the emotional benefits of green exercise for college students

Leng Yuxin, Yao Benxian (Corresponding author)

HEFEI NORMAL UNIVERSITY, HEFEI, 230031

Abstract: Green exercise refers to human physical exercise in the natural environment, including walking, jogging, fast running, cycling and other sports in the environment with green plants or in the natural environment. With the improvement of human living standard, more and more people begin to pay attention to green exercise. At present, the research on green exercise, a new type of exercise, started late in China. Previous studies have shown that green exercise is better for your health than non-green exercise. This study is based on the existing research results, with college students as the main object of investigation. Objective: To investigate the effect of green exercise on their emotional state and its internal psychological mechanism by comparing the differences of their emotional state in two different exercise environments and analyzing the main influencing factors of their emotional state. Methods: Using the Poriflor Mood Saets (POMS) compiled by McaNair et al in 1971, which is used to measure the Mood state score of the subjects, In other words, the scores of individuals in the seven dimensions of stress, anger, panic, depression, fatigue, energy and self-esteem were added and subtracted to calculate the total score. This scale was used to conduct a questionnaire survey on 365 college students, and the data obtained were statistically analyzed and processed with SPSS. Results : (1) compared with non-green exercise, green exercise had positive effects on seven dimensions of mood state. (2) Moderate intensity green exercise is more beneficial to improve mood state. Therefore, this study concluded that compared with non-green exercise, green exercise is more helpful to improve the mood and regulate the mood of college students.

A Study on the Relationship between Mental Health Literacy and Physical Exercise Quality of College Students

Yue Yuhao, Wang Bing, He Suyan

Taiyuan University of Technology, Taiyuan

Abstract: Objective Assess the level of mental health literacy of college students, explore the relationship between mental health quality and physical exercise, provide data support for the research of mental health literacy and physical exercise, expand the research related to physical exercise and mental health literacy, improve the level of college students' mental health quality, and promote the harmonious development of their body and mind. **Methods** Using the mental health literacy questionnaire and physical exercise grade scale, 750 college students were investigated, and it revealed the relationship between mental health literacy and physical exercise through relevant analysis, variance analysis and regression analysis. **Results** 1. College students' mental health literacy level was relatively low, and there were no significant differences in gender and grade, but there were significant differences in school and major. 2. College students' physical exercise level was relatively low, and there were significant differences in gender, grade, school and major. 3. Through correlation analysis, it had found that there was a positive correlation between mental health literacy and physical exercise. 4. Through the analysis of variance and regression analysis, it had found that physical exercise could have an impact on mental health literacy, in which the intensity of physical exercise had an impact on the behavior and skills of maintaining mental health, the attitude of maintaining mental health, the attitude of coping with mental diseases, the knowledge and concept of mental health, the behavior and skills of coping with mental diseases. The knowledge and concept of mental illness had a significant impact. Physical exercise time and physical exercise frequency had no significant impact on the knowledge and concept of mental illness of mental health literacy level, but had a significant impact on the behavior and skills of maintaining mental health, the attitude of maintaining mental health, the attitude of coping with mental illness, the knowledge and concept of mental health, and the behavior and skills of coping with mental illness. **Conclusion** There is a correlation between mental health literacy and physical exercise, mental health literacy is affected by the amount of physical exercise, intensity, time and frequency, therefore, the regression equation of the relationship between mental health literacy and physical exercise is constructed, $y = 2.719 + (-0.018 \times \text{Physical exercise intensity}) + (0.061 \times \text{Physical exercise time}) + (0.012 \times \text{Physical exercise frequency})$, improving college students' physical exercise level can promote the improvement of their mental health literacy level.

高校女大学生体育锻炼认知观念的研究

王娜

1 中国科学院心理研究所, 北京, 100101

2 太原理工大学体育学院, 晋中市, 030600, 1951710964@qq.com

摘要 高校操场永远不缺起舞翩翩、花枝招展的女大学生,但这些女大学生都是去操场上运动的嘛?如果是她们对体育锻炼的认知是什么?认知是否正确?为了女大学生对体育锻炼有正确的认知观念和体育锻炼时获得更好的健康效益。本研究采用文献资料法、问卷调查法、数理统计法等研究方法对高校15名女大学生进行一对一深度访谈,去了解女大学生体育锻炼的认知观念。研究表明:(1)女大学生体育锻炼认知观念是指女大学生在体育锻炼过程中因受个体差异、内外部环境的影响导致不同的看法和想法。其中,合理的认知观念包括符合逻辑、有证据支持、合乎现实、正确认识体育锻炼的效益;不合理的认知观念包括:缺乏证据、夸大负面影响、不切实际、不符合逻辑的。(2)女大学生体育锻炼合理的认知观念特征包括:全面性、相对性、符合现实性、符合逻辑性;女大学生体育锻炼不合理认知观念特征包括:概括化、绝对化、经验性、两级思维。(3)影响女大学生体育锻炼的主要因素为:生活习惯、同伴影响、重视程度、学校要求。次要因素为:运动经历。一般因素为:生活压力、家庭观念。(4)通过构建高校女大学生体育锻炼认知观念理论模型,可

以看出体育锻炼认知观念的影响因素会导致不同的体育锻炼认知观念，合理的认知观念会导致合理的体育锻炼行为，不合理的认知观念会导致不合理的体育锻炼行为。

关键词 女大学生，体育锻炼，认知观念

Research on Cognitive Concepts of Physical Exercises of Female University Students

WANG Na

School of Physical Education, Taiyuan University of Technology, jinzhong, 030600, china

Abstract: Especially in the hot summer evening, there are many people sitting on the lawn and chatting, walking, exercising, etc. on the college campus track and field. Male students' sports may be real sports. This study does not pay too much attention to boys, but how many female students are really sports? Most girls are sitting on the lawn of the playground and chatting, or just walking on the track without exercise load, and the proportion of exercises that actually participate in running, playing, etc. even with a little exercise load is very small. By analyzing the cognitive concept of physical exercise of female college students, we can obtain better health benefits for female college students' physical exercise. In this study, one-on-one in-depth interviews were conducted with 15 female college students in universities using literature data method, questionnaire survey method, mathematical statistics method and other research methods. The research results show that: (1) Female college students' physical exercise cognitive concept refers to the different opinions and ideas of female college students due to individual differences and internal and external environment influences during physical exercise. Among them, reasonable cognitive concepts include logical, evidence-supported, realistic, and correct understanding of the benefits of physical exercise. Unreasonable cognitive concepts include: lack of evidence, exaggerated negative effects, unrealistic, and illogical. (2) The characteristics of reasonable cognitive concepts of female college students' physical exercise include: comprehensiveness, relativity, conformity to reality, and logicity: Female college students' irrational cognitive concepts of physical exercise include: generalization, absoluteness, experience, Two-level thinking. (3) The main factors that affect the physical exercise of female college students are: living habits, peer influence, degree of importance, and school requirements. The secondary factor is: sports experience. The general factors are: life pressure, family values. (4) By constructing a theoretical model of physical exercise cognitive concepts for female college students, it can be seen that the influencing factors of physical exercise cognitive concepts will lead to different physical exercise cognitive concepts, and reasonable cognitive concepts will lead to reasonable physical exercise behaviors. Unreasonable cognitive concepts can lead to unreasonable physical exercise behaviors.

高强度间歇运动对高低心肺功能大学生转换功能影响的时程效应：来自 fNIRS 的证据

史慧¹ 陶成¹ 许昭²

¹ 山东体育学院，山东，250102

² 山东体育学院研究生教育学院，济南，250102, Psy31@126.com

摘要 研究目的：执行功能是指个体在完成复杂认知任务时，对各种基本认知过程进行协调和控制的高级认知过程，包括抑制功能、刷新功能和转换功能。其中，转换功能是个体执行复杂任务时操作或心理定势间的来回转换，对个体调节行为和情绪的能力具有重要作用。研究发现，高强度间歇运动（HIIE）对转换功能具有改善作用，且在运动后可以延迟一段时间，但 HIIE 对转换功能影响的时程效应结论不一致。此外，心肺功能水平与执行功能水平存在相关关系，心肺功能可以调节急性运动对执行功能的影响。因此，本研究将结合 fNIRS 技术，进一步探究 HIIE 对高低心肺功能大学生转换功能影响的时程效应。

研究方法：选取 75 名 18-22 岁的大学生为研究对象，采用 2(高强度间歇运动干预：有、无)×2(心肺功

能水平：高、低）×5（施测时间：实验前、运动后即刻、运动后 0.5h、运动后 1h、运动后 24h）的混合实验设计。因变量：正确率和反应时指标、氧合血红蛋白浓度变化值；自变量：有无运动干预、心肺功能水平、施测时间。有无运动干预和心肺功能水平为组间变量，施测时间为组内变量。在实验前、运动后即刻、运动后 0.5h、运动后 1h、运动后 24h，被试进行转换功能任务测试，并使用 fNIRS 同步测量大脑的血液动力学变化，从行为学和神经学两个层面综合分析 HIIE 对高低心肺功能大学生转换功能影响的时程效应。

研究结果：（1）行为学结果表明：在正确率上，运动干预主效应显著 $F(1, 73)=17.93, p<0.01, \eta^2=0.27$ ，HIIE 组的正确率显著高于静息组。在反应时上，运动干预主效应显著 $F(1, 73)=32.29, p<0.01, \eta^2=0.40$ ，HIIE 组的反应时显著低于静息组；心肺功能主效应显著 $F(1, 73)=5.38, p<0.01, \eta^2=0.16$ ，高心肺组的反应时显著低于低心肺组；施测时间主效应显著 $F(4, 70)=13.72, p<0.01, \eta^2=0.55$ ，反应时随着 HIIE 干预进程呈现下降的趋势；运动干预×心肺功能交互效应显著 $F(1, 73)=6.07, p<0.05, \eta^2=0.16$ ，高、低心肺功能大学生在进行 HIIE 干预后反应时显著低于静息组；施测时间×运动干预交互效应显著 $F(4, 70)=11.34, p<0.01, \eta^2=0.50$ ，HIIE 组在运动后即刻、运动后 0.5h、运动后 1h、运动后 24h 的反应时显著低于运动前。

（2）fNIRS 结果表明：在 ch7、ch8、ch9、ch14、ch15、ch16、ch17、ch20、ch21、ch22 中运动干预主效应显著（ $p<0.05$ ），HIIE 组在背外侧前额叶皮质、腹外侧前额叶皮质、额极区的激活水平显著高于静息组；在 ch6、ch14 中心肺功能主效应显著（ $p<0.05$ ），高心肺组在额极区的激活水平显著高于低心肺组。

研究结论：

（1）高心肺功能大学生的转换功能优于低心肺功能大学生。

（2）高强度间歇运动可以改善高低心肺功能大学生的转换功能，并且高强度间歇运动对大学生转换功能的改善作用在行为学效益上可以持续到运动后二十四小时。

The time course efficiency of high intensity intermittent exercise on switch function of College students with different cardiorespiratory fitness: Evidence from fNIRS

Hui Shi¹, Cheng Tao¹, Zhao Xu²

1 Shandong Sport University, Shandong, 250102

2 Graduate school of Shandong Sport University, Jinan, 250102, Psy31@126.com

Abstract: Objective: Executive function refers to the higher cognitive processes that coordinate and control various basic cognitive processes when individuals perform complex cognitive tasks, including inhibition, refreshment, and conversion functions. The switching function is a back-and-forth transition back and forth operationally or mentally between stereotypes when individuals perform complex tasks, which plays a vital role in individuals' ability to regulate behavior and emotions. It was found that high-intensity intermittent exercise (HIIE) has an ameliorative effect on switching function and can be delayed for some time after exercise, but the findings on the time-course effect of HIIE on switching function are inconsistent. Furthermore, there is a correlation between the level of cardiorespiratory fitness and the level of executive function, and cardiorespiratory fitness can modulate the effects of acute exercise on executive function. Therefore, the present study will further investigate the time-course effect of HIIE on the effect of a conversion function in high and low cardiorespiratory fitness college students in combination with the fNIRS.

Methods: Seventy-five college students aged 18-22 years were selected for the study, and a mixed experimental design of 2 (high-intensity intermittent exercise intervention: yes, no) × 2 (cardiorespiratory fitness level: high, low) × 5 (administration time: pre-experimental, immediate post-exercise, half-hour post-exercise, one-hour post-exercise, and twenty-four hours post-exercise) was used. Dependent variables: correct rate and response time indicators, change in oxyhemoglobin concentration values; independent variables: presence or absence of exercise intervention, cardiorespiratory fitness level, and administration time. The presence or absence of exercise intervention and

cardiorespiratory fitness level were between-group variables, and the time of administration was a within-group variable. Before the experiment, immediately after exercise, half an hour after exercise, one hour after exercise, and twenty-four hours after exercise, subjects were tested on a conversion function task, and hemodynamic changes in the brain were measured simultaneously using the fNIRS device to analyze the time-course effects of the effects of HIIE on conversion function in high and low cardiorespiratory fitness college students at both behavioral and neurological levels in a comprehensive manner.

Results:

(1) Behavioral results showed that the main effect of the exercise intervention was significant in terms of correctness, $F(1, 73)=17.93$, $p<0.01$, $\eta^2=0.27$, and the HIIE group had a significantly higher correctness rate than the resting group. On response time, the exercise intervention main effect was significant, $F(1,73)=32.29$, $p<0.01$, $\eta^2=0.40$, with the HIIE group having a significantly lower response time than the resting group; the main cardiorespiratory effect was significant $F(1,73)=5.38$, $p<0.01$, $\eta^2=0.16$, with the high cardiorespiratory group having a significantly lower response time than the low cardiorespiratory group; and the administration time main effect was significant, $F(4, 70)=13.72$, $p<0.01$, $\eta^2=0.55$, with a decreasing trend of reaction time with the HIIE intervention process; The exercise intervention $\times$ cardiorespiratory function interaction effect was significant $F(1, 73)=6.07$, $p<0.05$, $\eta^2=0.16$, with high and low cardiorespiratory function college students having significantly faster reaction times than the resting group after the HIIE intervention; The administration time $\times$ exercise intervention interaction effect was significant $F(4,70)=11.34$, $p<0.01$, $\eta^2=0.50$, with the HIIE group having significantly faster reaction times immediately after exercise, half an hour after exercise, one hour after exercise, and twenty-four hours after exercise.

(2) The fNIRS results showed that the main effect of exercise intervention was significant ($p<0.05$) in ch7, ch8, ch9, ch14, ch15, ch16, ch17, ch20, ch21, ch22, and the activation levels in the dorsolateral prefrontal cortex, ventral lateral prefrontal cortex, and frontopolar area were significantly higher in the HIIE group than in the resting group; in ch6, ch14 the main effect of cardiorespiratory function was significant ($p<0.05$), and the activation level in the frontopolar region was significantly higher in the high cardiorespiratory group than in the low cardiorespiratory group.

Conclusions:

(1) High cardiorespiratory college students have better conversion function than low cardiorespiratory college students.

(2) High-intensity intermittent exercise improved the conversion function of high and low cardiorespiratory college students, and the improvement of conversion function by high-intensity intermittent exercise lasted up to twenty-four hours after exercise in terms of behavioral benefits.

8 周健美运动对年轻成年人自尊的影响研究

刘锡鹏¹ 陆莉萍¹

上海体育学院休闲学院, 上海, 200438, luliping@sus.edu.cn

摘要 目的: 健美运动近年来逐渐为社会大众所熟悉, 它指通过徒手或利用各种器械, 依据一定的科学方法和个人特点, 以促进身体和心理双重健康的运动。然而, 先前的研究多集中于健美运动对于个体身体的塑造, 而较少的突出其对于个体心理健康的作用。因此, 本研究通过八周系统性的健美运动干预, 来探索其对于年轻成年人的个体心理自尊的作用。**方法:** 31 名无健美运动经验的年轻成年人 (平均年龄: 20.64 岁) 被随机分成实验组 (15 人) 与对照组 (16 人)。实验组每周进行三次训练干预, 每次训练安排 6 个覆盖全身肌群的动作, 每个动作各进行 6 组; 对照组进行相应的动态拉伸动作干预。在八周干预前后, 分别测量被试的身体围度、身体成分以及力量素质, 并使用中文修订版罗森伯格自尊量表 (RSES) 以及一般自我效能感量表 (GSES) 对被试的自尊与自我效能感前后水平的变化进行衡量。随后对所有的数据进行 2×2 重复测量方差分

析。**结果:**在个体自尊上,我们的结果表明,相比于对照组,通过8周健美运动可以有效的提升实验组的个体自尊水平($P=0.000$, $\eta^2=0.52$)。进一步的相关分析表明,8周健美运动带来的体重的减轻($r=0.42$)以及力量素质的提升($r=0.43$)是促进实验组自尊水平提升的积极因素。其次,我们的结果表明个体的一般自我效能感水平不受8周健美运动的影响。**结论:**通过系统性的长期健美运动干预,可以有效改善个体的身体围度以及力量素质,并进一步的提升个体的自尊水平,促进个体的身体和心理的共同健康。

关键词 健美运动,8周干预,个体自尊

Research on the Effect of Eight-week Bodybuilding Exercise on Self-esteem of Young Adult

Xipeng Liu¹, Liping Lu¹

¹School of leisure sport, Shanghai University of Sport, Shanghai,200438

Abstract: Purpose: Bodybuilding exercises have gradually become familiar to the public in recent years, which refers to exercises that promote physical and mental health by using bare hands or using various equipment, based on specific scientific methods and personal characteristics. However, previous studies have mostly focused on the shaping of individual bodies by bodybuilding exercises, and have less emphasized its effects on individual mental health. Therefore, this study explored its effect on the individual psychological self-esteem of young adults through eight weeks of systematic bodybuilding intervention. **Methods:** 31 young adults (mean age: 20.64 years old) without bodybuilding experience were randomly divided into an experimental group (15 person) and a control group (16 person). The experimental group performed training interventions three times a week, and each training was arranged with 6 exercises covering the whole body muscles, each of which was performed in 6 groups; the control group received corresponding dynamic stretching interventions. Before and after the eight-week intervention, the subjects' body circumference, body composition and strength quality were measured, meanwhile, the Chinese revision of the Rosenberger Self-Esteem Scale (RSES) and General Self-Efficacy Scale (GSES) were used to measure the level of self-esteem and self-efficacy. Then, all the data were analyzed with 2×2 repeated measures analysis of variance. **Results:** In terms of individual self-esteem, our results showed that, compared with the control group, 8 weeks of bodybuilding exercise can effectively improve the individual self-esteem level of the experimental group ($P=0.000$, $\eta_p^2=0.52$). Further correlation analysis showed that the weight loss ($r=0.42$) and the improvement of strength quality ($r=0.43$) brought about by the 8-week bodybuilding exercise were the positive factors that promoted the improvement of the self-esteem level of the experimental group. Second, our results show that the individual's general self-efficacy level is not affected by the 8-week bodybuilding exercise. **Conclusion:** Through systematic and long-term bodybuilding intervention, the individual's body circumference and strength quality can be effectively improved, and the individual's self-esteem level can be further improved, and the individual's physical and mental health can be promoted together.

大学生社会支持与锻炼行为的关系及其链式中介效应研究

谢文静¹ 杨阿丽² (通讯作者)

¹ 沈阳体育学院研究生部, 沈阳 110102

² 沈阳体育学院运动人体科学学院, 沈阳, 110102, E-mail: yalabc135@163.com

摘要 在全民健身战略和迈向体育强国的大背景下,体育锻炼已经成为人们生活的一部分内容。而大学生作为社会未来发展主力,其体育锻炼意识及锻炼行为在日后都将对社会的体育事业发展产生巨大影响,故研究大学生体育锻炼行为的影响因素以及如何能更好促进大学生体育锻炼行为,具有十分重要的意义。本研究目的是研究大学生的社会支持与锻炼行为之间的关系,揭示锻炼自我效能、锻炼动机在其中的内在作用机制,为促进大学生锻炼提出建议。研究主要采用问卷法,使用《体育活动等级量表(PARS-3)》、《社会支持评定

量表》、《锻炼自我效能量表》和《锻炼动机量表（MPAM-R）》对沈阳体育学院 233 名学生进行调查，其中体育专业 116 名，非体育专业 117 名。结果表明：（1）社会支持、锻炼自我效能、锻炼动机与锻炼行为两两之间均显著正相关；（2）大学生社会支持对锻炼行为的直接效应和间接效应均显著。直接效应的效应量为 0.07。间接效应包含了三条路径：通过锻炼自我效能感的中介作用，效应量为 0.80，通过锻炼动机的中介作用，效应量为 0.07；通过锻炼自我效能感到锻炼动机的链式中介作用，效应量为 0.06。结论：当从外部给予大学生社会支持将提升内部锻炼自我效能感和锻炼动机，从而能加强锻炼行为，这是促进锻炼行为可行性较高的外因转化内因的手段。同时在探讨大学生社会支持对锻炼行为的影响时，不能只重视锻炼自我效能和锻炼动机的单独作用，更应该关注锻炼自我效能和锻炼动机的双重作用，并且锻炼自我效能和锻炼动机间还具有一定的顺序性，动机的作用需要通过提升自我效能激发，才能对大学生锻炼行为产生重要影响。研究验证和说明了大学生社会支持、锻炼自我效能、锻炼动机和锻炼行为关系密切，揭示了锻炼自我效能与锻炼动机在社会支持对锻炼行为的影响过程中的机制，有助于深入理解大学生锻炼行为，丰富和发展现有的锻炼理论，为后续更好促进大学生进行锻炼行为提供了一定的理论基础。

关键词 社会支持，锻炼自我效能，锻炼动机，锻炼行为，链式中介

The relationship between College Students' social support and exercise behavior: and its chain mediating effect

Xie Wenjing, Yang Ali

Shenyang Sport University, No.36 jinqiansong east road, sujiatun district, Shenyang

Abstract: Under the background of the national fitness strategy and moving towards a sports power, physical exercise has become a part of people's life. As the main force of social development in the future, college students' physical exercise consciousness and exercise behavior will have a great impact on the development of social sports in the future. Therefore, it is of great significance to study the influencing factors of College Students' physical exercise behavior and how to better promote college students' physical exercise behavior. The purpose of this study is to study the relationship between College Students' social support and exercise behavior, reveal the internal mechanism of exercise self-efficacy and exercise motivation, and put forward suggestions for promoting college students' exercise. Using the questionnaire method, 233 students of Shenyang Institute of physical education were investigated by using the sports activity rating scale (PARS-3), social support evaluation scale, exercise self-efficacy scale and Exercise Motivation Scale (mpam-r), including 116 sports majors and 117 non sports majors. The results show that: (1) there is a significant positive correlation between social support, exercise self-efficacy, exercise motivation and exercise behavior (2) The direct and indirect effects of College Students' social support on exercise behavior are significant. The effect amount of direct effect is 0.07. The indirect effect includes three paths: through the mediating effect of exercise self-efficacy, the effect amount is 0.80, through the mediating effect of exercise motivation, the effect amount is 0.07, and through the chain mediating effect of exercise self-efficacy, the effect amount is 0.06. Conclusion: when giving social support to college students from the outside, it will improve the internal exercise self-efficacy and exercise motivation, so as to strengthen exercise behavior, which is a means to promote the transformation of external causes into internal causes with high feasibility of exercise behavior. At the same time, when discussing the impact of College Students' social support on exercise behavior, we should not only pay attention to the separate role of exercise self-efficacy and exercise motivation, but also pay attention to the dual role of exercise self-efficacy and exercise motivation, and there is a certain order between exercise self-efficacy and exercise motivation. The role of motivation needs to be stimulated by improving self-efficacy, Can have an important impact on College Students' exercise behavior. The research verifies and explains the close relationship between College Students' social support, exercise self-efficacy, exercise motivation and exercise behavior, and reveals the mechanism of exercise self-efficacy and exercise motivation in the influence process of social support on exercise behavior, which is helpful to deeply understand college students' exercise behavior and enrich and develop the existing exercise theory, It provides a theoretical basis for the follow-up to better promote college students' exercise behavior.

开放式运动和封闭式运动大学生视觉空间工作记忆的特征研究-来自 fNIRS 的证据

陶成¹ 史慧¹ 许昭²

¹ 山东体育学院, 山东, 250102

² 山东体育学院研究生教育学院, 济南, 250102, Psy31@126.com

摘要 研究目的: 视觉空间工作记忆 (VSWM) 是工作记忆的重要组成部分之一, 对工作记忆具有非常重要的影响。已有证据表明运动能够促进工作记忆的发展, 但有研究发现开放式和封闭式运动会对工作记忆产生不同程度的影响。而 VSWM 作为另一种重要的认知功能, 是否也会受到不同运动类别的影响, 其结论尚不一致。因此本研究将结合 fNIRS 技术, 探究开放式和封闭式运动项目大学生 VSWM 的特征差异。

研究方法: 为探究长期进行开放式和封闭式专项运动的大学生 VSWM 的特征及内在脑神经生理机制, 采用组间实验设计, 因变量: 正确率、反应时指标和含氧血红蛋白浓度变化值, 自变量: 不同组别。在校园内选取 81 名被试参与本实验, 使用《PAQ-A》和《锻炼方式问卷》对他们的运动项目和运动强度进行调查和筛选, 将他们分为三组: 开放式运动组 27 名 (入选标准: 在校进行羽毛球、乒乓球等专项运动, 并且在过去 6 个月中, 每周进行三次、每次 90 分钟相关专项运动训练的被试); 封闭式运动组 27 名 (入选标准: 在校进行 100 米、200 米等专项运动, 并且在过去 6 个月中, 每周进行三次、每次 90 分钟相关专项运动训练的被试); 无运动组 27 名 (入选标准为非体育专业学生, 并且在过去的 6 个月中, 无固定的运动锻炼习惯, 并且排除开放式专项运动和封闭式专项运动的被试)。本研究采用视觉空间工作记忆任务 (VWMT) 对被试的视觉空间工作记忆进行测量, 运用 E-prime3.0 软件编制实验程序, 收集被试视 VWMT 的正确率和反应时数据, 同时利用 fNIRS 设备实时监测被试脑区不同通道的神经生理活动。采用单因素方差分析分别对行为学数据和近红外数据进行处理。

研究结果:

(1) 在 VWMT 任务的反应时上, 不同运动类别主效应显著 ($F=58.49, p=0.000<0.05$), 其中开放式运动组的反应时显著快于封闭式运动组和无运动组。在 VWMT 任务的正确率上, 不同运动类别主效应不显著 ($F=0.22, p=0.802>0.05$)。

(2) 在 fNIRS 测量含氧血红蛋白浓度的 β 值结果显示, 开放式运动组和封闭式运动组在进行 VWMT 任务时背外侧前额叶和额极区得到明显激活, 在 Ch2、Ch3、Ch5、Ch6、Ch9、Ch10、Ch13、Ch18、Ch21 中不同运动类别的主效应均显著, 在 Ch5、Ch6、Ch9、Ch13、Ch18、Ch21 中封闭式运动组的激活水平显著高于无运动组; 在 Ch2、Ch3、Ch10 中开放式运动组的激活水平显著高于封闭式运动组和无运动组。

研究结论:

进行开放式和封闭式运动的大学生在视觉空间工作记忆能力上比不运动的大学生表现更好, 并且进行开放式运动大学生在视觉空间工作记忆能力的可塑性上表现出更多的优势。

Characterization of visuospatial working memory in open- and closed-motion college students-evidence from fNIRS

Cheng Tao¹, Hui Shi¹, Zhao Xu²

¹ Shandong Sport University, Shandong, 250102

² Graduate school of Shandong Sport University, Jinan, 250102, Psy31@126.com

Abstract: Objective: Visuospatial working memory (VSWM) is one of the critical components of working memory and significantly impacts working memory. Exercise has been shown to promote the development of working memory, but some studies have found that open-, and closed-motion exercises can affect working memory to different degrees. The findings on whether VSWM, another crucial cognitive function, is also influenced by different

exercise categories are inconsistent. Therefore, this study will investigate the differences in the characteristics of VSWM between college students in open and closed sports programs in conjunction with the fNIRS.

Methods: To investigate the characteristics and intrinsic brain neurophysiological mechanisms of VSWM in college students who performed open and closed specific sports for a long time, a between-groups experimental design was used with dependent variables: correct rate, reaction time index, and oxygenated hemoglobin concentration change values, and independent variables: different groups. Eighty-one subjects were selected on campus to participate in this experiment, and their exercise programs and exercise intensities were investigated and screened using the PAQ-A and the Exercise Pattern Questionnaire. They were divided into three groups: 27 in the open exercise group (inclusion criteria: subjects who performed particular sports such as badminton and table tennis at school, and who performed relevant special sports training three times a week for 90 minutes each time in the past 6 months (27 subjects who played 100m, 200m, etc. at school, and had been training for 90 minutes three times a week for the past 6 months); 27 subjects in the no-sport group (27 subjects who were not majoring in physical education and had no regular exercise habits in the past 6 months, and who were excluded from the open and closed sports groups). (subjects with open and closed sports were excluded). In this study, the visuospatial working memory task (VWMT) was used to measure the subjects' visuospatial working memory. E-prime 3.0 software was used to prepare the experimental program and collect the correct rate and reaction time data of the subjects' visual VWMT, while the fNIRS device was used to monitor the neurophysiological activities of different channels in the subjects' brain regions in real-time. One-way ANOVA was used to process the behavioral and NIR data separately.

Results:

(1) On the reaction time of the VWMT task, the main effect of different motor categories was significant ($F=58.49, p=0.000<0.05$), with the open motor group having a significantly faster reaction time than the closed motor and no motor groups. On the correctness of the VWMT task, the main effect of different motor categories was not significant ($F=0.22, p=0.802>0.05$).

(2) The results of β -values of oxygenated hemoglobin concentration measured at fNIRS showed that the open and closed motor groups were significantly activated in the dorsolateral prefrontal and frontopolar regions during the VWMT task. The main effects of different motor categories were significant in Ch2, Ch3, Ch5, Ch6, Ch9, Ch10, Ch13, Ch18, and Ch21, and in Ch5, Ch6, Ch9, Ch13, Ch18, Ch21 in the closed exercise group were significantly more activated than the no-exercise group; in Ch2, Ch3, Ch10 in the open exercise group were significantly more activated than the closed exercise and no-exercise groups.

Conclusions:

College students who performed open and closed exercises performed better than those who did not exercise in visuospatial working memory capacity, and college students who performed open exercises showed more plasticity in visuospatial working memory capacity.

5.9“学校心理专业委员会”分组展贴报告

课程思政与大学生心理健康：文化自信的中介作用

李千蔚¹ 利振华¹ 刘庆奇¹ 聂衍刚¹（通讯作者） 何晓清¹ 彭小燕¹

¹ 广州大学教育学院青少年心理与行为研究中心，广州，510006，nie-yangang@gzhu.edu.cn

摘 要 一直以来，国家高度重视大学生心理健康工作。研究表明，高校德育在提升大学生文化认同、维护大学生心理健康方面起着重要作用。因此，从德育开展的视角出发，探索提升大学生心理健康水平的德育路径显得尤为重要。课程思政是高校德育落实“立德树人”根本任务，以社会主义核心价值观教育为核心内容，构建全员全过程全方位的大学生思想政治教育体系的综合性教育理念。本研究以大学生为研究对象，研究一

探索了课程思政的内涵与结构,并编制了用以测评课程思政开展情况的问卷,研究二以 578 名大学生为被试,采用自编问卷,探讨了课程思政开展情况与大学生心理健康的关系,以及文化自信的中介作用。研究一结果显示:(1)问卷的内部一致性系数为 0.96,在验证性因素分析中, $\chi^2/df=3.44$,RMSEA=0.07,CFI=0.91,NFI=0.87,IFI=0.91,问卷拟合指标良好;(2)女生对课程思政的评价显著高于男生($t=-2.66, p<0.01$),高年级的评价显著高于低年级($F=19.46, p<0.001$),文科生的评价显著高于理科生($F=7.32, p<0.01$),党员的评价显著高于非党员($t=3.47, p<0.01$)。研究二结果显示:(1)课程思政、文化自信和心理健康间两两存在显著相关,大学生对课程思政的评价显著正向预测大学生的幸福感,而且显著负向预测大学生的焦虑和抑郁。文化自信部分中介课程思政与幸福感的关系(effect = 0.20, 95%CI = [0.12, 0.31]),而且文化自信在课程思政与焦虑抑郁之间起部分中介作用(effect = -0.29, 95%CI = [-0.49, -0.15])。据此,得出以下结论:(1)用以测评高校课程思政开展情况的问卷由思政课程、专业课程、通识课程、实践课程及校园文化五个维度构成,具有较好的信效度,可作为测评高校德育开展情况的参考工具。(2)不同性别、年级、专业和政治面貌的大学生在课程思政的评价上存在显著性差异。(3)课程思政的开展能够提高大学生的心理健康水平,这一影响是以文化自信为中介发生的。本研究为测评高校课程思政的开展情况提供了可靠的测量工具,为推进课程思政改革,拓宽大学生文化自信教育路径,提升大学生心理健康水平提供了借鉴。

Curriculum ideology and college students' mental health: the mediating role of cultural confidence

Li Qianwei¹, Li Zhenhua¹, Liu Qingqi¹, Yangang Nie^{1*}, He Xiaoqing¹, Peng Xiaoyan

¹ Research Center of Adolescent Psychology and Behavior, School of Education, Guangzhou University, Guangzhou, 510006

Abstract: For a long time, our country attaches great importance to the mental health of college students. The research shows that moral education plays an important role in enhancing the cultural identity and maintaining the mental health of college students. Therefore, from the perspective of moral education, it is particularly important to explore the path of moral education to improve the mental health of college students. Curriculum ideology is a comprehensive educational concept, which is the fundamental task of moral education in universities. It is an educational concept to construct an all-round ideological and political education system for college students in the whole process with the education of socialist core values as the core content. Taking college students as the research object, the first study explored the connotation and structure of curriculum ideology, and designed a questionnaire to test the development of curriculum ideology. In the second study, 578 college students were selected as subjects, and the self-compiled questionnaire was used to explore the relationship between the development of curriculum ideology and college students' mental health, as well as the mediating effect of cultural confidence. The results of the first study showed that: (1) the internal consistency coefficient of the questionnaire was 0.96. In the confirmative factor analysis, $\chi^2/df=3.44$, RMSEA=0.07, CFI=0.91, NFI=0.87, IFI=0.91, and the fitting index was well. (2) Female students' evaluation of curriculum ideology is significantly higher than that of male students ($t=-2.66, p<0.01$). The evaluation of higher grades on curriculum ideology was significantly higher than that of lower grades ($F=19.46, p<0.001$). The evaluation of liberal arts students on curriculum ideology was significantly higher than that of science students ($F=7.32, p<0.01$). The evaluation of party members on curriculum ideology was significantly higher than that of non-party members ($t=3.47, p<0.01$). The results of the second study showed that: (1) there was a significant correlation between curriculum ideology, cultural confidence and mental health. The development of curriculum ideology significantly positively predicted the happiness of college students, and negatively predicted the anxiety and depression of college students. Cultural confidence partially mediated the relationship between curriculum ideology and happiness (effect = 0.20, 95%CI = [0.12, 0.31]), and cultural confidence played a partial mediating role between curriculum ideology and anxiety and depression (effect = -0.29, 95%CI = [-0.49, -0.15]). Therefore, the following conclusions could be drawn: (1) the curriculum ideology questionnaire is composed of five dimensions: ideological

and political courses, professional courses, general courses, practical courses and campus culture. It has good reliability and validity and can be used as a tool to evaluate the development of moral education in colleges. (2) There are significant differences in the evaluation curriculum ideology among college students of different genders, grades, majors and political status. (3) The development of curriculum ideology can improve the mental health of college students, which is mediated by cultural confidence. This study provides a reliable measuring tool for evaluating the development of curriculum ideology, and provides reference for promoting the reform of curriculum ideology, broadening the educational path of college students' cultural confidence, and improving their mental health.

Keywords: curriculum ideology, cultural confidence, mental health, college students

认知重评能力对大学生主观幸福感的影响：一个有调节的中介模型

白杨

吉林大学珠海学院，珠海，519041，2040453545@qq.com

摘 要 探讨认知重评能力和主观幸福感的关系，以及生命意义感在二者关系间的中介作用和家庭社会经济地位对这一中介作用的调节作用。选取平均年龄为 20.30 岁的 503 名大学生被试，采用情绪调节问卷、主观幸福感受量表、中文生命意义感量表和客观社会经济地位问卷进行检验。结果显示（1）认知重评能力显著正向预测主观幸福感；（2）生命意义感在认知重评能力和主观幸福感之间起到部分中介作用；（3）认知重评能力经由生命意义感影响主观幸福感的中介作用受到家庭社会经济地位的调节。具体而言，生命意义感的中介作用只存在于高家庭社会经济地位的个体中，而在低家庭社会经济地位的个体中不存在上述中介作用。

关键词 认知重评能力，主观幸福感，生命意义感，家庭社会经济地位

The Relationship between Cognitive Reevaluation Ability and Subjective Well-being: A Moderated Mediation Model

BAI Yang

Zhuhai College of Jilin University, Zhuhai, 519041, China

Abstract: To explore the relationship between cognitive reevaluation ability and subjective well-being, the mediating role of the meaning in life and the moderating effect of social economic status on the mediating process, Emotion Regulation Questionnaire (ERQ), the Subjective Well-being (SWB), the Meaning in life Questionnaire of China (C-MLQ) and the Questionnaire of Socioeconomic were completed among 503 college students. The results indicated that: (1) cognitive reevaluation ability predicted subjective well-being; (2) the meaning in life played a partially mediated role in the relationship between cognitive reevaluation ability and subjective well-being; (3) social economic status moderated the mediation effect of the meaning in life on the relationship between cognitive reevaluation ability and subjective well-being. Specifically, the mediation effect of the meaning in life was only found in high social economic status individuals, but not in low self-esteem ones.

Keywords: cognitive reevaluation ability, subjective well-being, the meaning in life, social economic status

青少年欺凌受害与创伤后应激障碍的关系：一个有调节的中介模型

甄瑞（通讯作者） 吴心玥 沈凌雁

杭州师范大学教育学院，杭州，311121，zhenrui1206@126.com

摘 要 校园欺凌是一种特殊类型的攻击行为，欺凌受害者可能会反复和持续性地遭受到身体、言语、关系以及网络等形式的欺凌，从而出现严重的身心损害。受欺凌经历是一种创伤经历，能够引发青少年一系列的消极心理结果，如焦虑不安、易受惊吓、闪回受害情境等，甚至出现睡眠障碍、出汗头晕等生理反应，表现出创伤后应激障碍（PTSD）症状。此外，受欺凌经历也会通过降低青少年的安全感来引发其产生 PTSD。根据破碎世界假设，受欺凌经历可能会破坏青少年原有对于自我、他人和世界的稳定信念，导致其认为自我是没有价值的、他人是不值得信赖的、世界是不可控制的，从而降低了青少年的安全感，进而促发了 PTSD 的

出现。不过,由于男生和女生在认知和应对方式上存在差异,他们对于受欺凌经历的敏感性也可能不同,因而性别可能在上述中介中起调节作用,当前较少有研究对此进行过深入探讨。基于此,本研究采用特拉华欺凌受害量表、修订后的 DSM-5 的 PTSD 核查表、安全感量表等对安徽省 4853 名高中生进行了问卷调查,并利用结构方程模型来检验中介和调节作用。研究发现:欺凌受害可以直接正向预测创伤后应激障碍($\beta = 0.35, p < 0.001$);在加入安全感这一中介变量后,欺凌受害对创伤后应激障碍的直接路径系数仍旧显著($\beta = 0.14, p < 0.001$),且安全感在欺凌受害与 PTSD 之间的中介效应显著 [β (95% CI) = 0.21 (0.18~0.23), $p < 0.001$]。性别调节了欺凌受害与安全感以及欺凌受害与 PTSD 之间的关系;与男生相比,女生的欺凌受害对其安全感和 PTSD 的影响程度更大。这些结果说明了,欺凌受害不仅会直接导致青少年产生 PTSD,也会通过降低其安全感进一步导致 PTSD;女生对于受欺凌经历的敏感性比男生更强,出现低安全感和高 PTSD 的倾向性更高。

The Relation between Bullying Victimization and Posttraumatic Stress Disorder in Adolescents: A Moderated Mediation Model

Rui Zhen, Xinyue Wu, Lingyan Shen

School of Education, Hangzhou Normal University, Hangzhou 311121, China

Abstract: School bullying is a special type of aggressive behavior. The victims of bullying may experience physical, verbal, relational, and cyber bullying repeatedly and continuously, resulting in serious physical and mental harms. The experience of being bullied is a traumatic experience, which may cause a series of negative psychological results of adolescents, such as anxiety, susceptibility to fright, flashback to the injured situation. Adolescents even appear sleep disorder, sweating, dizziness and other physiological reactions, showing the symptoms of post-traumatic stress disorder (PTSD). In addition, the experience of being bullied can also trigger PTSD through reducing their sense of safety. According to the shattered assumptions, the experience of being bullied may destroy the adolescents' original stable beliefs about themselves, others and the world, leading them to feel that the self is worthless, others are not trustworthy, and the world is uncontrollable, thus reducing the sense of safety of adolescents and promoting the emergence of PTSD. However, due to the differences in cognition and coping styles between boys and girls, their sensitivity to bullying victimization may be different. Therefore, gender may play a moderating role in the above mediating effect. However, few studies have conducted in-depth discussions on this, based on this, this study used the Delaware bullying victimization scale, modified DSM-5 PTSD checklist and sense of safety scale to investigate 4853 senior high school students in Anhui Province, and used the structural equation model to test the mediation and moderation effects. The results showed that: bullying victimization had direct and positive effect on PTSD ($\beta = 0.35, p < 0.001$); after adding the variable of sense of safety, the direct path coefficient of bullying victimization to PTSD was still significant ($\beta = 0.14, p < 0.001$), and the mediating effect of sense of safety between bullying victimization and PTSD was significant [β (95% CI) = 0.21 (0.18 ~ 0.23), $p < 0.001$]. Gender moderated the relation between bullying victimization and sense of safety, and the relation between bullying victimization and PTSD; compared with boys, bullying victimization in girls had a greater effect on their sense of safety and PTSD. These results show that bullying victimization can not only lead to PTSD in adolescents directly, but also lead to PTSD through reducing their sense of safety; girls are more sensitive to the experience of being bullied than boys, and are more prone to low level of sense of safety and high level of PTSD.

团体模式下班级心理委员共情能力培训的效果研究

殷琳¹ (通讯作者) 段珊珊¹ 赵凯¹

¹ 安顺学院心理咨询中心, 安顺, 561000, yinlinpsyc@163.com

摘要 班级心理委员是学校危机预警干预中的重要一环,是宣传心理健康知识的得力助手。对班级心理委

员的胜任力培训有助于拓宽心理健康教育的视角。虽然我国高校普遍都设置班级心理委员一职，也有对心理委员有做相应的培训，但缺少具有针对性能力培训。共情能力是心理委员与本班同学建立良好的人际关系的基础，也是心理委员顺利开展心理工作的必备技能。本研究的目的在于探讨团体心理辅导模式下对班级心理委员共情能力培训的效果研究。团体辅导设计方案围绕观点取代、同情关怀、幻想力、身心忧患四个维度进行团辅设计，共分为六个单元。方法：采用方便抽取法抽取 28 位班级心理委员，其中女生 16 名，占比 57.2%；男生 12 名，占比 42.8%。随机分配为对照组 14 名和实验组各 14 名。对照组不接受任何处理；实验组进行为期 12 个课时，共 6 个单元的共情能力团体辅导培训。两组前后均采用杰弗逊的共情量表（IRI-C）进行测量。研究结束后对对照组进行与实验组相同的团辅辅导培训。研究结果：干预前两组共情能力差异无统计学意义（ $p>0.05$ ），具有可比性。对照组前后共情能力差异分数并无明显差异（ $p>0.05$ ）；实验组前后差异性显著（ $p<0.05$ ）；具体而言，在身心忧患维度上差异显著（ $p<0.001$ ），在其他维度上不具有统计学意义。结论：共情能力团体心理辅导培训对班级心理委员的共情能力的提升有一定的积极效果，具有良好的实效性，可以作为提高班级心理委员胜任力的方式之一。

Research on the Effect of Empathy Training for Class Psychological Committed Members in Group Mode

Yin Lin¹, Duan Shanshan¹, Zhao Kai¹

Psychological counseling center of Anshun University, Anshun, 561000, yinlinpsyc@163.com

Abstract: Class psychological committee members are an important part of the school's crisis warning intervention. They are a powerful assistant to promote mental health knowledge for classmates. Competency training for class psychological committee members can help university to broaden the perspective of mental health education. Although colleges and universities in our country generally set up the position of class psychological committee, and has done some corresponding training, but there is a lack of targeted ability training. Empathy is the basis ability for the psychological committee to establish a good interpersonal relationship with the classmates, and it is also an essential skill for the psychological committee to carry out psychological work smoothly. The purpose of this study is to explore the effect of empathy training for class psychological committee members under the group psychological counseling model. The group counseling design is divided into six units based on the four dimensions of viewpoint substitution: sympathy and care, fantasy, and physical and mental distress. A convenient sampling method was used to select 28 class psychological committee members, of which 16 were girls, accounting for 57.2%, and 12 were boys, accounting for 42.8%. They were randomly assigned to 14 in the control group and 14 in the experimental group. The control group did not receive any treatment; the experimental group received 12 class hours and a total of 6 units of empathy group counseling training. Both groups were measured by Jefferson's Empathy Scale (IRI-C). After the study, the control group was given the same group counseling training as the experimental group. Before the intervention, there was no statistically significant difference in empathy between the two groups ($p>0.05$), so they were comparable. There is no significant difference in empathy scores before and after the control group ($p>0.05$). The difference between before and after the experimental group is significant ($p<0.05$); specifically, there is a significant difference in the dimensions of physical and mental distress ($p<0.001$). But in other dimensions, there is not statistically significant. The empathy ability group psychological counseling training has a certain positive effect on the improvement of the empathy ability of the class psychological committee members. It has good practical results and can be used as one of the ways to improve the competence of the class psychological committee members.

家庭社会经济地位和大学生学习倦怠的关系：主观幸福感的中介作用和心理弹性的调节作用

武文志¹, 刘乙霖¹, 余蕾¹, 陈雅棠¹, 龙青¹, 滕兆伟¹, 曾勇¹ (通讯作者)

¹ 昆明医科大学第六附属医院暨玉溪市人民医院, 云南玉溪, 653100, zengyong@kmmu.edu.cn

摘要 **目的** 家庭社会经济地位是影响大学生学习倦怠的重要因素; 本研究旨在探讨家庭社会经济地位和学习倦怠的关系以及主观幸福感在其中的中介作用和心理弹性在其中的调节作用。**方法** 以云南省 550 名大学生为研究对象, 采用问卷法对其家庭社会经济地位、学习倦怠、主观幸福感和心理弹性进行调查。**结果** (1) 在控制性别和年龄后, 家庭社会经济地位能够显著负向预测学习倦怠; (2) 主观幸福感在家庭社会经济地位和学习倦怠的关系中起中介作用; (3) 家庭社会经济地位对学习倦怠的直接作用和主观幸福感在二者关系中的中介作用均会受到心理弹性的调节; 低心理弹性个体的学习倦怠水平随家庭社会经济地位的降低而显著提高, 高心理弹性个体的学习倦怠水平随主观幸福感的提高而显著降低。**结论** 研究结果支持家庭社会经济地位和学习倦怠的关系是一个有调节的中介模型, 这对于制定大学生学习倦怠的干预和预防措施具有重要意义。**关键词** 家庭社会经济地位, 学习倦怠, 主观幸福感, 心理弹性

Relationship between Family Socioeconomic Status and Learning Burnout of College Students: The Mediating Role of Subject Well-being and the Moderating Role of Resilience

Wenzhi Wu¹, Yilin Liu¹, Lei Yu¹, Yatang Chen¹, Qing Long¹, Zhaowei Teng¹, Yong Zeng^{1*}

zengyong@kmmu.edu.cn

Abstract: *jective* Learning burnout affects the positive development of College Students. The present study aimed to investigate the relationship between Family Socioeconomic Status (FSMS) and learning burnout, as well as the mediation effect of subject well-being and the moderation effect of resilience in this relation. **Methods** 550 Chinese college students from Yunnan completed a questionnaire measuring the research variables in this study. **Results** indicated that: (1) after controlling for participants' gender and age, FSMS negatively and significantly predicted learning burnout; (2) subject well-being partially mediated the relationship between FSMS and learning burnout; and (3) the direct effect of FSMS on learning burnout and the mediation effect of subject well-being were moderated by resilience. The level of learning burnout of individuals with low resilience increased significantly with the decrease of FSMS, and the level of learning burnout of individuals with high resilience decreased significantly with the increase of subjective well-being. **Conclusion** The present findings support the moderated mediation model underlying the relationship between FSMS and learning burnout. This also has significant implications for formulating prevention and intervention measures on learning burnout among college students.

Keywords: family socioeconomic status, learning burnout, subject well-being, resilience

青少年校园欺凌与自杀意念的关系：父母关爱和情绪应对方式的中介作用

周娟¹ (通讯作者) 郭玉丹² 闫云帆³ 郝丽娜⁴

¹ 山西师范大学教育科学学院, 临汾, 041000 通讯作者 Email: zhoujuanjuan123@126.com

摘要 校园欺凌是指在校中故意、重复的伤害他人的身体、心理或情感的攻击性行为。情绪应对是指在应激条件下, 个体着重对问题作出情绪反应以减轻焦虑, 个体采取的情绪应对方式直接影响其对刺激情境的处理方式。青少年自杀已经成为社会广泛关注和重视的公共卫生问题, 尤其在受过校园欺凌的青少年中自杀行为更为常见。所以探讨校园欺凌、父母关爱、情绪应对方式和自杀意念之间的关系尤为重要。研究一为实验研究, 被试是 300 名初中学生, 结果表明, 在不同情境 (欺凌/非欺凌) 的启动下, 被试自杀意念存在显著差异, 进一步研究表明父母关爱的中介作用显著。研究二采用父母关爱问卷、中学生应对方式量表和自杀意

量表对来自山西师范大学附近曾受过校园欺凌事件的 150 名初二学生, 结果发现, 校园被欺凌经历直接影响自杀意念, 且存在三条间接路径: 通过父母关爱的单独中介作用影响自杀意念; 通过情绪应对方式的单独中介作用影响自杀意念; 通过父母关爱和情绪应对方式的链式中介作用影响自杀意念。研究结果也表明情绪应对方式确实是导致自杀意念产生的危险预测因子, 可以对青少年进行思想教育, 转变其应对方式, 同时父母应增加对孩子心理和情感层面的关注和接纳, 减少欺凌经历对其的影响。本研究通过了解青少年校园欺凌经历对自杀意念的影响, 有助于预防以及减少青少年自杀行为。

The relationship between adolescent bullying and suicidal ideation: The mediating effect of parental care and emotional coping style

ZhouJuan, GuoYuDan, YanYuFan, HaoLiNa

College of Education Science, Shanxi Normal University LinFen

Abstract: School bullying refers to intentional and repeated aggressive behavior that hurts others physically, psychologically or emotionally on campus. Emotional coping means that under stress condition, an individual focuses on making emotional response to problems to reduce anxiety, and the emotional coping style an individual adopts directly affects the way he or she handles the stimulus situation. Adolescent suicide has become a public health problem which is widely concerned and emphasized by the society, especially among the adolescents who have been bullied at school. Therefore, it is particularly important to explore the relationship between school bullying, parental care, emotional coping styles and suicidal ideation. Study 1 was an experimental study, involving 300 junior high school students. The results showed that under different situations (bullying/non-bullying) initiation, there were significant differences in suicidal ideation among the participants, and further studies showed that parental care had a significant mediating effect. Study with parents care questionnaire, coping style scale for middle school students and suicide ideation scale from shanxi normal university has been bullying near 150 teenager students, found that the campus bullying experience directly affect the suicidal ideation, and three indirect paths: by parents care alone intermediary role influencing suicidal ideation; Influencing suicidal ideation through the separate mediating effect of emotional coping style; Suicidal ideation is influenced by a chain of parental care and emotional coping styles. The research results also show that emotional coping style is indeed a risk predictor of suicidal ideation, and adolescents can be educated to change their coping style. At the same time, parents should pay more attention to and accept their children psychologically and emotionally, and reduce the impact of bullying experience on them. By understanding the impact of bullying experience on suicidal ideation, this study is helpful to prevent and reduce suicidal behaviors among adolescents.

条件性恐惧提取消退的性别差异

陈伟¹ 林小裔¹ 石佩¹ 董媛媛¹ 郑希付¹ (通讯作者)

华南师范大学心理学院, 广州, 510631, zhengxf@scnu.edu.cn

摘要 近半个世纪以来, 记忆再巩固理论不断发展, 认为即便是已经巩固的记忆在检索过程中也会被重新激活, 并暂时地回到不稳定的状态中。基于这一理解, 研究者们提出了条件性恐惧提取消退范式, 即在成功习得条件刺激(CS)和非条件刺激(US)之间的配对规律后, 通过单个 CS 提取使得原有记忆去稳定, 随后进行传统消退训练。这一范式在部分研究中得以验证, 即能够有效地削弱非适应性恐惧记忆表达。然而, 一些研究得出了不同的实验结论, 即该范式未能抑制恐惧复发。对于研究结果不一致的原因, 目前的研究主要聚焦于记忆条件和提取条件等方面的边界条件, 如预期错误、记忆的新旧程度、记忆强度和提取强度等。性别差异作为个体差异性的重要变量, 是边界条件研究中的一个影响因素。研究者在传统消退范式中得出了女性“易习得、难消退”的结论, 但在提取消退范式的研究中仍然比较少见关于性别差异的探索。因此, 本研究将性别作

为关键变量，几何图形作为条件刺激，腕部电击作为非条件刺激，皮肤电反应为恐惧反应指标，探究提取消退范式在恐惧消退效果上是否存在性别差异。结果表明，提取消退范式在恐惧的自发恢复方面无性别差异，所有被试都成功抑制了恐惧的自发恢复。在恐惧重建测试中性别差异显著，其中男性出现恐惧重建效应，女性反之。此外，传统消退范式在恐惧自发恢复和重建测试中均存在性别差异，其中女性出现恐惧的自发恢复和泛化，男性抑制了恐惧的自发恢复但出现了恐惧重建效应。本研究证明了提取消退范式在消退效果上存在性别差异，其中女性的恐惧消退效果最佳；同时证实了提取消退范式的整体消退效果优于传统消退范式。综上，对于女性而言，提取消退范式是一种行之有效的干预方式。这一研究有利于进一步验证提取消退范式的有效性，并有助于澄清其作用对象和范围，为男性和女性患者提供更加个性化的治疗方案，提高临床实用性和治疗有效性。

Gender difference in retrieval-extinction of conditioned fear memory

ChenWei, LinXiaoyi, ShiPei, DongYuanyuan, ZhengXifu

School of Psychology, South China Normal University, Guangzhou, 510631, China

Abstract: For nearly half a century, the memory reconsolidation theory has been continuously developed, which believed that even memories that have been consolidated will be reactivated during the retrieval process and temporarily return to an unstable state. Based on this understanding, the researchers proposed the retrieval-extinction paradigm. That is, after successfully learning the pairing rule between a conditioned stimulus (CS) and unconditioned stimulus (US), the original memory was un-stabilized by presenting a single CS, and then traditional extinction training is performed. This paradigm has been proven in some studies to weaken the expression of non-adaptive fear memory effectively.

However, other studies have reached different results, indicating that this paradigm failed to suppress the recurrence of fear. According to this, current research mainly focused on the boundary conditions of memory conditions and retrieval conditions to explain the difference between studies, such as prediction error, acquisition time, the intensity of acquisition, and individual differences. Gender difference, as an essential variable of individual differences, is an influential factor in the study of boundary conditions. In the standard extinction paradigm, reaches have concluded that women easily acquire fear memory but are difficult to extinct than men. However, it is relatively rare to explore gender differences in the research of the retrieval-extinction paradigm. Therefore, this study considered gender as a variable, using geometric figures as CS, wrist electric shock as the US, and skin conductance response as an indicator of fear response to explore whether there is a gender difference in the effect of the fear extinction.

The results showed no gender difference in the spontaneous fear recovery of the retrieval-extinction paradigm because all subjects successfully suppressed the spontaneous fear recovery. Nevertheless, there was a significant gender difference in the reinstatement test, in which men showed increased SCR, whereas women did not show any increased SCR. Besides, there were gender differences in the spontaneous fear recovery and reinstatement test of the standard extinction paradigm. After training by this paradigm, women showed increased SCR in spontaneously fear recovery and a tendency to fear generalization. In contrast, men show suppressed spontaneous fear recovery but showed increased SCR in the reinstatement test.

Our study proved that there was a gender difference in the extinction effect of the retrieval-extinction paradigm (women showed the best extinction effect), and verified that the extinction effect of the retrieval-extinction paradigm was better than the standard extinction paradigm. According to the results, we could demonstrate that, especially for women, the retrieval-extinction paradigm is an effective intervention method. It will be beneficial to verify further evidence about the effectiveness of the retrieval-extinction paradigm, clarify the object and scope of the retrieval-extinction paradigm in clinical applications. Our study suggests that the retrieval-extinction paradigm in clinical transformation needs to provide more personalized treatment plans for male and female patients, which

improves clinical applicability and treatment effectiveness.

毕业生就业压力与心理健康的关系：有调节的中介效应

涂巍¹ 李媛¹ 聂衍刚²(通信作者)

¹ 湖南科技学院,湖南永州,425199

² 广州大学教育学院青少年心理与行为研究中心,广东广州,510006, niezi66@21cn.com

摘要 当下大学生心理危机事件发生频繁,心理健康素质有待不断强化,对毕业生而言会面临就业、考研等压力,其心理健康状况形势日益严峻。已有研究表明,就业压力能够预测个体的心理健康水平,但两者之间的具体作用机制还需进一步探讨。本研究将考察心理弹性在就业压力和心理健康之间的中介作用及主动性人格对上述中介路径的调节作用。采用就业压力量表、心理弹性量表、主动性人格量表和症状自评量表(SCL-90)对2348名毕业生进行问卷调查。有调节的中介模型检验结果显示:(1)就业压力与心理弹性、主动性人格呈显著负相关($r=-0.280, p<0.01$; $r=0.240, p<0.01$),与SCL-90得分呈显著正相关($r=0.495, p<0.01$)。 (2)就业压力对SCL-90得分具有显著的正向预测作用($\beta=0.32, t=27.58, p<0.001$),且当放入中介变量后,就业压力对SCL-90的预测作用依然显著($\beta=0.29, t=24.54, p<0.001$),其中介效应为0.03,占总效应的9.38%。即心理弹性在就业压力和SCL-90之间起部分中介作用,就业压力不仅直接影响毕业生心理健康,还能够通过心理弹性间接影响心理健康。 (3)主动性人格对“就业压力→心理弹性→SCL-90”的直接路径进行调节。即与低主动性人格相比,高主动性人格下就业压力对SCL-90的正向预测效应减少。研究证明心理弹性和主动性人格能够有效减少就业压力对学生心理健康的作用,这对促进大学生心理健康水平提供了一定的理论指导。

The Relationship between Employment Stress and Mental Health of Graduates: Moderated Mediating Effect

¹ Hunan University of Science and Technology, Yongzhou, Hunan, 425199, China

² Adolescent Psychology and Behavior Research Center, School of Education, Guangzhou University, Guangzhou, Guangdong, 510006, China

Abstract: At present, the psychological crisis of college students occurs frequently, and the mental health quality needs to be continuously strengthened. For graduates, they will face the pressure of employment and postgraduate entrance examination, and their mental health situation is increasingly serious. Existing studies have shown that employment stress can predict individual mental health level, but the specific mechanism between the two needs to be further explored. Employment stress scale, mental resilience Scale, proactive personality Scale and Symptom Self-rating Scale (SCL-90) were used to investigate 2348 graduates. The results of moderated mediation model test showed that: (1) employment stress was negatively correlated with mental resilience and proactive personality ($r=-0.280, p<0.01$; $r=0.240, p<0.01$), was significantly positively correlated with SCL-90 score ($r=0.495, p<0.01$). (2) Employment pressure had a significant positive predictive effect on SCL-90 score ($\beta=0.32, t=27.58, p<0.001$), and employment pressure still had a significant predictive effect on SCL-90 score ($\beta=0.29, t=24.54, p<0.001$). The mediating effect was 0.03, accounting for 9.38% of the total effect. In other words, psychological resilience plays a partial mediating role between employment stress and SCL-90. Employment stress not only directly affects graduates' mental health, but also indirectly affects graduates' mental health through psychological resilience. (3) Proactive personality adjusts the direct path of "employment pressure→mental resilience→SCL-90". That is, compared with low proactive personality, the positive prediction effect of employment pressure on SCL-90 is reduced under high proactive personality. The study proves that mental resilience and proactive personality can effectively reduce the effect of employment pressure on students' mental health, which provides certain theoretical guidance for promoting the mental health level of college students.

寄宿制高中生领悟社会支持对学习投入的影响：自尊的中介作用及感恩的调节效应

代文武¹ 王晓玲¹ 王家华¹ 贾宁²（通讯作者）

1 河北师范大学教育学院，石家庄，050024

2 河北师范大学教育学院，石家庄，050024, jnaih@126.com

摘要 学习投入是学生学习心理积极面的重要指标，是学生获得学业成功的关键。本研究从积极心理学视角出发，旨在考察外部环境（社会支持）与寄宿制高中生的学习投入的关系，及其内在作用机制——自尊的中介作用和感恩的调节效应。本研究采用领悟社会支持量表、自尊量表、感恩量表和学习投入问卷对于 384 名 15-19 岁寄宿制高中生（其中男生 188 名，女生 196 名）进行研究，结果表明：（1）寄宿制高中生的领悟社会支持、自尊、感恩和学习投入之间两两存在显著的正相关；（2）采用 Bootstrap 法进行有调节的中介模型检验，结果表明自尊在寄宿制高中生领悟社会支持与其学习投入之间起着部分中介作用，领悟社会支持对于学习投入既有直接影响，又能通过自尊对于学习投入产生间接影响；（3）感恩对自尊的中介作用存在调节效应，具体为感恩调节了“领悟社会支持→自尊→学习投入”这一中介过程的前半路径。因此，寄宿制高中生对其学习投入的影响存在一个有调节的中介模型。研究对提升寄宿制高中生学习投入程度并指导相关理论研究具有参考价值。

关键词 寄宿制高中生，领悟社会支持，学习投入，自尊，感恩

The Relationship between Perceived Social Support and Learning Engagement in the Boarding High School Students: The Mediating Effect of Self-esteem and The Moderating Effect of Gratitude

Dai Wenwu, Wang Xiaoling, Wang Jiahua, Jia Ning(corresponding author)

College of Education, Hebei Normal University, Shijiazhuang, 050024

Abstract: Learning engagement is an important indicator of students' positive psychology in learning and the key to students' academic success. From the perspective of positive psychology, this research aims to investigate the relationship between social support and boarding high school students' learning engagement, and its internal mechanism—the mediating effect of self-esteem and the moderating effect of gratitude. This study used the Perceived Social Support Scale, Self-esteem Scale, Gratitude Scale, and Learning Engagement Questionnaire to study 384 boarding high school students aged 15-19 (male=188, female=196). The results show that: (1) There is a significant positive correlation between boarding high school students' perceived social support, self-esteem, gratitude, and learning engagement; (2) Bootstrap method is used to conduct a moderated mediation model test, and the results show that self-esteem played a partial mediating role between perceived social support and learning engagement. It is understood that social support has a direct impact on learning engagement, but also has an indirect impact on learning engagement through self-esteem; (3) The mediating role of self-esteem is moderated by gratitude, and the gratitude moderates the first process of perceived social support→ self-esteem→ learning engagement. Therefore, the influence of boarding high school students on their learning engagement has a moderated mediation model. The research has reference value for improving the learning engagement of boarding high school students and guiding relevant theoretical research.

大学新生心理弹性和生活适应的关系研究

马鹏 赵守盈（通讯作者）

贵州师范大学心理学院，贵阳，550025，zhaoshouying@126.com

摘要 高中生脱离原有生活环境，从紧张有序的学习环境进入大学松弛自由的环境后，容易产生适应不良的情况，从而导致长时间不能有效融入新的环境，难以顺利开始新的生活和学习，在这一过程心理弹性是一种应对环境变化的关键因素。心理弹性是个体一系列能力在动态交互作用下，在个体遭遇挫折和不幸时能迅速恢复和良性应对的过程。在对其他群体的研究表明，心理弹性可以显著影响生活适应，但对大学新生群体研究较少，且当前研究多为横向研究。

研究使用生活适应量表和心理弹性量表，对大学新生进行三次追踪，每次追踪间隔两个月，经整理最终收集有效被试 886 人。采用双因子模型检验，发现研究 CFI 和 TLI 分别增加了 0.02 和 0.03，SRMR 减小了 0.01、RMSEA 增加了 0.02，即对加入方法因子后，模型没有显著变好，表明共同方法偏差不明显。相关在 0.46~0.73 之间，且验证性因子分析，信效度均达到可接受标准，随后进行的生活适应量表和心理弹性量表纵向等值性检验表明，均在时间上具有相同的意义和潜在结构关系。交叉滞后模型分析发现，T1 的心理弹性可以显著正向预测 T2 生活适应（ $\beta=0.12$ ， $p<0.001$ ），T2 的心理弹性可以显著正向预测 T3 生活适应（ $\beta=0.13$ ， $p<0.001$ ）；T1 的生活适应可以显著正向预测 T2 心理弹性（ $\beta=0.10$ ， $p<0.001$ ），T2 的生活适应可以显著正向预测 T3 心理弹性（ $\beta=0.09$ ， $p<0.001$ ）。心理弹性的一阶标准化自回归系数为 0.61、0.74，；生活适应的一阶标准化自回归系数为 0.54、0.68，，两量表的自回归系数相差不大。从交叉滞后回归系数来看，两个方向的交叉滞后回归系数均显著，推断心理弹性和生活适应之间存在相互影响关系；高程度的心理弹性可能会使个体有较高的生活适应，而高程度的生活适应可能会使个体有高的心理弹性。研究表明大学新生心理弹性和生活适应存在相互影响的因果关系，因此在后续研究中，可以通过提升大学新生的心理弹性，以促进其生活适应水平。

Study on the Relationship between Resilience and Life Adaptation of College Freshmen

Ma Peng, Zhao Shouying

School of Psychology, Guizhou Normal University, GuiYang, 550025

Abstract: After high school students break away from the original living environment, and enter the relaxed and free atmosphere of college, they are prone to maladaptation. As a result, it is difficult to integrate into the new environment and start a new life and study smoothly. In this process, resilience is a key to cope with environment change. Resilience is a process in which individuals can quickly recover and cope with setbacks and misfortune under the dynamic interaction of a series of ability. Previous studies have shown that resilience can significantly influence life adaptation, but there are few studies on freshmen group, and most of are horizontal studies.

Life Adaptation Scale and Resilience Scale were used to track freshmen for three times, each tracking interval of two months, and finally collected 886 effective questionnaires after sorting. The two-factor model test showed that CFI and TLI increased by 0.02 and 0.03, SRMR decreased by 0.01 and RMSEA increased by 0.02. it indicates that after adding method factors, the model did not significantly better, in other words, the common method bias was not obvious. The correlation between the variables was between 0.46 and 0.73, and confirmatory analysis, reliability and validity reached the accepted standard. The longitudinal equivalence test of life adaptation scale and resilience scale showed that both of them had same significance and potential structure in time. Cross-lag model analysis showed that T2 resilience could significantly positively predict T2 life adaptation ($\beta=0.12$, $P < 0.001$), and T2 resilience could significantly positively predict T3 life adaptation ($\beta=0.13$, $P < 0.001$). Life adaptation in T1 could significantly positively predict resilience in T2 ($\beta=0.10$, $P < 0.001$), and life adaptation in T2 could significantly positively predict resilience in T3 ($\beta=0.09$, $P < 0.001$). The first order normalized autoregressive coefficients of resilience were 0.61 and 0.74. The first-order standardized autoregressive coefficients of life adaptation are 0.54 and 0.68, and there is little

difference in the autoregressive coefficients between the two scales. From the cross-lag regression coefficients, the both directions were significant, it can be inferred that there is an interactive relationship between resilience and life adaptation. In other words, a high degree of resilience may lead to a high level of life adaptation, while a high degree of adaptation may lead to a high level of resilience. This study shows that there is a causal relationship between the resilience of college freshmen and their life adaptation. Therefore, the resilience of college freshmen can be improved to promote their life adaptation in the follow-up research.

乡镇中学心理健康教育工作的现状及对策研究 ——以浙江省 S 镇 T 中学为例

邹宏宇

香港城市大学, 香港特别行政区, 999077

通讯作者 E-mail: zouhongyu2016@163.com

摘 要 为了解当前乡镇地区的心理健康教育工作现状, 做好乡镇地区中学的心理健康教育和心理支持, 推动中国青少年健康成长。本研究对浙江省 S 镇 T 中学的 24 个班随机选取 48 名学生与本校德育处两名教师进行了连续两学期, 每学期一次的个别式访谈研究。发现该中学学生心理健康问题较为严重, 其中一个班 50 名学生就有 11 名学生出现自残现象。通过进一步的晤谈, 发现乡镇心理健康教育工作主要存在如下问题: (一) 成绩为第一绩效评估模式下的学校与教师重视程度不够 (二) 教师专业化水平不够: 主要表现为学校心理咨询师缺乏伦理知识与专业培训, 心理教师缺乏科学体系的青少年教育知识 (三) 家校合作明显脱节, 心理健康理念的共识性薄弱 (四) 心理普查工作存在缺陷 (五) “不健康”的课堂教育以及家长的成绩焦虑 (六) 心理健康教育学科化严重

指出我们应该在以下方面有所改进, 推动乡镇中学儿童的解放与心理健康成长。(一) 加强学校心理普查, 增加普查次数, 建议至少一学期两次, 多使用科学自查量表, 如 SCI-90 等 (二) 加强家园合作, 让家长了解相关心理健康知识, 做到家园一致性, 转变家长的成绩焦虑 (三) 对全体教师先进行心理健康教育培训, 使课堂教育更“健康” (四) 提升教师专业化水平, 对学校心理咨询师提供连续受训和连续督导的机会, 提升其伦理共识或可向校外正规且具有胜任力的相关机构购买学生心理咨询服务。

希望通过本研究能够对我国其他乡镇中学心理健康教育工作起到参考和启发意义。

Study on the Problems and Countermeasures of Psychological Health Education in Township Middle Schools——Take T Middle School in S Town, Zhejiang Province as an example

Zou Hongyu

City University of Hong Kong, Hong Kong, 999077

Abstract: In order to understand the current situation of mental health education in rural areas, we will provide mental health education and psychological support for middle schools in rural areas and promote the healthy growth of Chinese youth. In this study, 48 students from 24 classes of T Middle School in S Town, Zhejiang Province were randomly selected and two teachers from the Moral Education Department of the school conducted an individual interview study for two consecutive semesters, once every semester. It was found that the mental health problems of the students in this middle school were more serious. Among the 50 students in one of the classes, 11 students suffered self-harm. Through further interviews, it was discovered that the mental health education work in towns and villages mainly has the following problems: (1) Schools and teachers under the performance evaluation model under the academic performance first (2) Insufficient professionalism of teachers: mainly manifested as the lack of ethical knowledge and professional training of school counselors, and the lack of scientific system of youth education

knowledge for psychological teachers(3) The home-school cooperation is obviously out of touch, and the consensus on mental health concepts is weak(4) Defects in student psychological assessment(5) "Unhealthy" classroom education and parents' anxiety about their children's academic performance(6) The disciplinaryization of mental health education is serious.

It is pointed out that we should make improvements in the following areas to promote the liberation and mental health of children in township middle schools.(1) Strengthen students' psychological universal assessment, increase the frequency of assessment, it is recommended to use at least twice a semester, and use more scientific self-examination scales, such as SCL-90 and so on(2) Strengthen homeland cooperation, let parents understand relevant mental health knowledge, achieve homeland consistency, and change parents' anxiety about their children's academic performance(3) Conduct mental health education and training for all teachers first to make classroom education more "healthy"(4) Improve the professionalism of teachers, provide continuous training and continuous supervision opportunities for school counselors, and enhance their ethical consensus or we can purchase student psychological counseling services from a formal and competent institution outside the school.

Hope that this research can provide reference and enlightenment for the mental health education of other rural middle schools in our country.

领悟社会支持对留守中学生抑郁的影响：一个条件过程模型

汤彩云 顾皎 吴文峰 卢永彪（通讯作者）

贵州师范大学心理学院，贵阳，550025，lybhsd@sohu.com

摘要 留守儿童是我国一个人数众多的弱势群体，长期与父母处在分离状态会导致留守儿童家庭功能的弱化，进而导致各种情绪和情感问题，尤其是较高的抑郁水平。根据抑郁的人际关系理论，高质量的人际关系能有效降低个体抑郁的风险，如领悟社会支持水平高的中学生会更多地采取积极应对，从而减少负性情绪的产生。然而，也并非所有领悟社会支持水平低或较少采取积极应对的个体都会表现出抑郁症状，二者的关系可能受其他因素，如性别的调节。鉴于以往关于留守中学生领悟社会支持、积极应对与性别之间交互作用的研究相对匮乏，本研究将建立一个条件过程模型，探究领悟社会支持对抑郁的影响以及积极应对的中介作用和性别的调节作用。研究被试为 729 名留守中学生($M=14.95$; $SD=1.58$)，男生占 55.6%。结果表明：领悟社会支持不仅可以直接负向预测抑郁($\beta=-0.32$, 95% $CI=-0.39\sim-0.24$)，也可以通过积极应对负向预测抑郁，同时该中介路径后半段在不同性别条件下 Bootstrap 置信区间的显著性存在差异($\beta_{\text{女}}=-0.09$, 95% $CI=-0.14\sim-0.04$; $\beta_{\text{男}}=-0.03$, 95% $CI=-0.08\sim0.02$)，表明性别可能在积极应对对抑郁的影响中起调节作用。简单斜率检验表明，在女生群体中，随着积极应对的增加，抑郁表现出明显的下降趋势($\beta=-0.34$, $t=-6.42$, $p<0.001$)；而在男生群体中，随着积极应对的增加，抑郁的下降趋势变缓($\beta=-0.21$, $t=-4.28$, $p<0.001$)。研究结果支持并拓展了抑郁的保护性因素及性别差异的理论观点。基于本研究结果，在学校心理健康教育工作中，帮助留守中学生提高对社会支持的领悟能力，制定积极应对培养训练方案并加以实施，尤其对女生而言提高其积极应对能力是减轻留守中学生抑郁情绪的重要途径。

关键词 抑郁，领悟社会支持，积极应对，性别差异，留守中学生

Perceived Social Support and Depression in left-behind middle school Students: A Conditional Process Analysis

TANG Cai-Yun, Gu Jiao, WU Wen-Feng, LU Yong-Biao

Department of Psychology, Guizhou Normal University, Guiyang, 550025, lybhsd@sohu.com

Abstract: Left-behind children are a large number of vulnerable groups in our country. Being separated from their parents for a long time will lead to the weakening of the left-behind children's family functions, which will lead to various emotions and affection problems, especially high levels of depression. According to the theory of depressed

interpersonal relationships, High-quality interpersonal relationships can effectively reduce the risk of individual depression. For example, middle school students with high levels of perceived social support will take more positive coping to reduce the generation of negative emotions. However, not all individuals who have a low level of perceived social support or who take less active responses will show symptoms of depression. The relationship between the two may be moderated by other factors, such as gender. In view of the relative lack of previous studies on the interaction between left-behind middle school students' perception of social support, positive coping, and gender. This study will establish a conditional process model to explore the impact of perceived social support on depression, the mediating role of positive coping, and the moderating role of gender. The study participants were 729 left-behind middle school students ($M = 14.95$; $SD = 1.58$), with male students accounting for 55.6%. The results show that perceived social support can not only directly predict depression negatively ($\beta = -0.32$, 95% $CI = -0.39 \sim -0.24$), but also indirectly predict depression through positive coping. At the same time, the second half of the mediation path has different significance in the Bootstrap confidence interval under different gender conditions ($\beta_{\text{female}} = -0.09$, 95% $CI = -0.14 \sim -0.04$; $\beta_{\text{male}} = -0.03$, 95% $CI = -0.08 \sim 0.02$), indicating that gender may play a moderating role in positive coping with the impact on depression. The simple slope test shows that in the female group, with the increase of positive coping, depression shows a significant downward trend ($\beta = -0.34$, $t = -6.42$, $p < 0.001$). While in the male group, with positive coping increase, the downward trend of depression becomes slower ($\beta = -0.21$, $t = -4.28$, $p < 0.001$). The research results support and expand the theoretical viewpoints of protective factors for depression and gender differences. Based on the present study, to reduce the risk of left-behind middle school students' depression, it is extremely important to improve their ability to perceived social support, formulating and implementing a positive coping style training program. It is useful to help them improve their positive coping ability, especially for girls.

错失恐惧对中学生学业拖延的影响：有调节的中介模型

贺宁 苗振东 柯杰（通讯作者）

山西师范大学，临汾，041000

山西师范大学心理学系，临汾，041000, h162533098@163.com

摘要 青少年的学业拖延现象一直是普遍存在的，这不仅会滋生消极情绪，更严重影响了他们的学业成绩和未来发展。以往有研究发现错失恐惧与拖延呈正相关，由错失恐惧引发的问题行为可能会造成精力分散，从而加剧拖延，但关于错失恐惧对学业拖延的影响机制还未有太多探究。前人依据时间折扣理论认为，人们使用社交媒体时间越长，频率越高，则拖延程度越严重，许多研究也发现自我控制与拖延关系密切，所以推测自我控制会调节社交媒体使用对拖延的影响。同时大量研究表明，基于自我决定理论，个体的错失恐惧水平越高，其问题性社交媒体使用就越严重。因此本研究探讨错失恐惧与学业拖延之间的关系，并提出一个有调节的中介模型，考察问题性移动社交媒体使用的中介效应和自我控制的调节效应。研究采用问卷调查的方式，对 500 名中学生进行施测，测量工具包括错失恐惧量表、问题性移动社交媒体使用量表、自我控制量表、中学生学业拖延量表。结果表明：（1）错失恐惧显著正向预测学业拖延。（2）错失恐惧会增加青少年的问题性移动社交媒体使用，进而增加学业拖延，即问题性移动社交媒体使用在错失恐惧与学业拖延之间起着中介作用。（3）错失恐惧通过问题性移动社交媒体使用对学业拖延行为的间接影响会受自我控制的调节，表现为在自我控制水平低的个体中，这种效应更为显著。综上所述，问题性移动社交媒体使用是错失恐惧与中学生学业拖延的重要中介机制，且对中学生学业拖延的影响受自我控制的调节。因此，本研究不仅有助于揭示青少年学业拖延的潜在作用机制，而且启示我们，在开展针对中学生学业拖延的措施时，我们可以从环境和个体两方面综合考虑，既要降低完成任务与翻阅手机之间即时价值的差距，将翻阅手机的成本提高，比如关机或者将手机放到远离学习地点的地方，使他们不能过度使用移动社交媒体，同时也要从他们个人身上下手，提高自我控制的能力。

关键词 学业拖延，错失恐惧，问题性移动社交媒体使用，自我控制

The Influence of Fear of Missing on Academic Procrastination of Middle School Students: A Moderated Mediation Model

He Ning, Miao Zhendong, Ke Jie

College of Education Science, Shanxi Normal University, Linfen, 041004

Abstract: The phenomenon of adolescents' academic delays has always been widespread, which not only breeds negative emotions, but also seriously affects their academic performance and future development. Previous studies have found that there is a positive correlation between the fear of missing out and procrastination. Problem behaviors caused by the fear of missing out may cause distractions and aggravate procrastination. However, there has not been much research on the mechanism of the impact of the fear of missing out on academic procrastination. Based on the time discount theory, predecessors believed that the longer people use social media and the higher the frequency, the more serious the procrastination. Many studies have also found that self-control is closely related to procrastination, so it is speculated that self-control will regulate the influence of social media use on procrastination. At the same time, a large number of studies have shown that based on the theory of self-determination, the higher the individual's fear of missing out, the more serious their problematic social media use. Therefore, this study explores the relationship between the fear of missing out and academic procrastination, and proposes a moderated mediation model to examine the mediating effect of problematic mobile social media use and the moderating effect of self-control. The study used a questionnaire survey to test 500 middle school students. The measurement tools include the Fear of Missing Scale, the Problematic Mobile Social Media Use Scale, the Self-Control Scale, and the Academic Procrastination Scale for Middle School Students. The results show that: (1) Fear of missing out significantly positively predicts academic procrastination. (2) The fear of missing out will increase the use of problematic mobile social media among young people, which in turn increases academic procrastination. That is, the use of problematic mobile social media plays an intermediary role between the fear of missing out and academic procrastination. (3) The indirect influence of the fear of missing out on academic procrastination through the use of problematic mobile social media will be regulated by self-control, and this effect is more pronounced in individuals with low levels of self-control. To sum up, problematic mobile social media use is an important intermediary mechanism between the fear of missing out and the academic procrastination of middle school students, and the influence of middle school students' academic procrastination is regulated by self-control. Therefore, this research not only helps to reveal the potential mechanism of adolescents' academic procrastination, but also enlightens us that when implementing measures against middle school students' academic procrastination, we can consider both the environment and the individual in a comprehensive manner. The real-time value gap between mobile phones will increase the cost of flipping through mobile phones, such as turning off the phone or placing the phone far away from the place of study, so that they cannot overuse mobile social media. At the same time, they must also start from their own hands to improve self-control ability.

Keywords: academic procrastination, fear of missing out, problematic mobile social media use, self-control

中小学教师非工作时间连通行为对工作重塑的影响： 心理脱离的中介作用

葛文静

贵州师范大学心理学院, 贵阳市, 550001, gewenjing1997@126.com

摘 要 随着新通信技术的发展和普及, 人民的生活和工作发生了巨大变化, 便携式移动办公系统应运而生。因此, 员工可以自由选择何时何地除办公室以外的任何地方工作。非工作时间连通行为(work connectivity behavior after-hour, WCBA)成为各行业中的普遍现象, 即员工在非工作时间使用便携式无线设备工作或与工作相关的同事接触。非工作时间连通行为无形中延长了教师们的工作时间, 探究中小学教师非工作时间连通行为作为前因变量所带来的影响, 具有重要的实践意义。本研究基于个体的能动性视角和努力-恢复模型, 采用

非工作时间的工作性通信工具使用行为量表、工作心理脱离量表和工作重塑量表对贵州省 1164 名中小学教师进行问卷调查,探究非工作时间连通行为带来的积极影响。结果发现中小学教师非工作时间连通行为、心理脱离和工作重塑间两两显著相关;非工作时间连通行为正向预测中小学教师的工作重塑;心理脱离在中小学教师非工作时间连通行为与工作重塑之间起部分中介作用。综上,中小学教师适度的非工作时间连通行为有助于其进行工作重塑,产生积极影响。此外,还应关注中小学教师的心理脱离水平,良好的心理脱离有助于教师们工作重塑。

关键词 中小学教师,非工作时间连通行为,心理脱离,工作重塑

The Influence of Work Connectivity Behavior After-hours on Job Crafting among Elementary and Secondary School Teachers: The Mediating Role of Psychological Detachment

Abstract: With the development and popularization of new communication technology, great changes have taken place in people's life and work, and portable mobile office system arises at the right moment. As a result, employees are free to choose when and where to work anywhere other than the office. Work connectivity behavior after-hours (WCBA), in which employees use portable wireless devices to work or interact with work-related colleagues outside of work hours, has become a common phenomenon in many industries. It is of great practical significance to explore the influence of work connectivity behavior after-hours of primary and secondary school teachers as an antecedent variable. In this study, 1164 primary and secondary school teachers in Guizhou Province were surveyed using the Work Connectivity Behavior After-hours Scale, Psychological Detachment Scale as well as Job Crafting Scale based on the individual initiative perspective and the Effort-Recovery Model to explore the positive effects of work connectivity behavior after-hours. The results showed that there was a significant correlation among the work connectivity behavior after-hours, psychological detachment and job crafting of teachers in primary and secondary schools. The work connectivity behavior after-hours positively predicted the job crafting of primary and secondary school teachers. The psychological detachment had a partial mediating effect on the relationship between work connectivity behavior after-hours and job crafting of primary and secondary school teachers. In conclusion, moderate work connectivity behavior after-hours of primary and secondary school teachers is conducive to their job crafting and has a positive impact. In addition, attention should also be paid to the level of psychological detachment of primary and secondary school teachers, a good psychological detachment will help teachers to improve their level of job crafting.

Keywords: Primary and secondary school teacher, Work connectivity behavior after-hours, Psychological detachment, Job crafting

疫情期间大学生网络学习态度与控制感对学习倦怠的影响: 自我决定动机的中介作用

田丝雨¹, 孙国晓¹ (通讯作者)

¹ 山东大学体育学院, 济南, 250061, 通讯作者 E-mail: sunguoxiao@sdu.edu.cn

摘要 新型冠状病毒肺炎的突然爆发,使得学生无法正常返校,只能通过网络进行线上学习。学习方式的突然改变可能对学生的心理健康产生极大影响。学习倦怠是在大学生群体中普遍存在的现象,也是影响学生心理健康的重要因素。本研究通过对计划行为理论和自我决定理论进行整合,以网络学习态度、主观规范和知觉行为控制为自变量,自我决定动机为中介变量,学习倦怠为因变量,建立结构方程模型,探讨疫情期间大学生网络学习态度、主观规范、知觉行为控制、自我决定动机与学习倦怠的关系。研究采用学习态度量表、主观规范量表、学业控制感量表、大学生学习动机量表、大学生学习倦怠调查量表,在 2020 学年春季学期中对 431 名高校学生以网络问卷形式实施调查。结果显示:(1)大学生网络学习态度、主观规范、知觉行为控制与自我决定动机两两之间均呈显著正相关,四者与学习倦怠均呈显著负相关。(2)网络学习态度($\beta=-0.54$,

$P < 0.001$)、知觉行为控制 ($\beta = -1.03, P < 0.001$) 和自我决定动机 ($\beta = -0.59, P < 0.001$) 均对学习倦怠有直接负向影响作用。(3) 自我决定动机在网络学习态度与学习倦怠(中介效应 10.87%), 以及知觉行为控制与学习倦怠(中介效应 48.53%) 之间均起部分中介作用。研究表明, 大学生网络学习态度和知觉行为控制既可以直接影响学习倦怠, 也可以通过自我决定动机间接影响学习倦怠。说明, 计划行为理论的认知变量与自我决定动机相结合的整合理论可以有效解释网络学习情境下大学生学习倦怠的影响因素。研究提示, 可以通过提高大学生对网络学习态度的积极性、学习控制感以及激发其内在学习动机, 降低大学生在网络学习情境下的学习倦怠水平。

The impact of college students' online learning attitude and sense of control on learning burnout during the epidemic: The mediating effect of the self-determination motivation

TIAN Siyu¹, SUN Guoxiao¹ (Corresponding Author)

Department of physical education, Shandong University, Jinan 250061, China

Abstract: The sudden outbreak of COVID-19 has left students unable to go back to school normally. Students can only study online through the Internet. The abrupt change in the way of study may have a great influence on the students' mental health. Learning burnout is a common phenomenon among college students, and it is also an important variable that affects students' mental health. This study integrating the theory of planned behavior and the self-determination theory to explore the relationship between online learning attitude, subjective norm, perceived behavior control, self-determination motivation and learning burnout of college students in the context of online learning. The structural equation model was established with online learning attitude, subjective norm and perceptual behavior control as independent variables, self-determined motivation as an intermediary variable and learning burnout as a dependent variable. The study using the Learning Attitude Scale, the Subjective Norm Scale, the Academic Control Scale, the Motivation Scale for College Students and the Learning Burnout Inventory of College Students, surveyed 431 college students by online questionnaire in the spring semester of 2020 academic year. The results show that: (1) Online learning attitude, subjective norm, perceived behavior control and self-determination motivation are significantly and positively correlated with each other, and they are all negatively correlated with learning burnout. (2) Online learning attitude ($\beta = -0.54, P < 0.001$), perceived behavior control ($\beta = -1.03, P < 0.001$) and self-determination motivation ($\beta = -0.59, P < 0.001$) all have a direct negative effect on learning burnout. (3) Self-determination motivation plays a partial mediating effect between online learning attitude and learning burnout (the mediating effect is 10.87%) as well as between perceived behavior control and learning burnout (the mediating effect is 48.53%). Studies show that online learning attitude and perceived behavior control have direct effects on learning burnout, and indirect effects through self-determination motivation. It testifies that the integration theory of self-determination motivation and cognitive variables of the theory of planned behavior can effectively explain the factors of college students' learning burnout. The study suggests that the level of learning burnout can be reduced by improving the students' enthusiasm to online learning, the sense of learning control and the intrinsic motivation of study.

Keywords: online learning, theory of planned behavior, self-determination theory, learning burnout

特质性敬畏与大学生环境意识的关系：普遍性自我的中介作用

湛安琪(通讯作者) 曹艺轩 何志欣

河南大学教育科学学院, 开封, 475000, chenanki610@outlook.com

摘要 环境意识是人们对客观存在的生态环境的主观反映, 其核心为对生态环境问题的认识、态度和行为取向(俞继山, 2001)。良好的环境意识能够增进人们的环保行为。随着环境问题日益受到人们的关注, 环

境意识的重要性、影响因素以及如何提高环境意识也成为人们关注和研究的重点。敬畏被定义为一种情感，当人们无法将面临的巨大刺激同化进自己已有的认知结构时，就会产生这种特殊体验。已有研究表明敬畏对增强环境保护主义有积极作用（Huanhuan Zhao et al.,2018）。根据自我建构的相关理论（Shiota et al.,2007）可知，不同的特质性情绪在自我建构的描述中有不同的表现，不同类型的自我建构也会个体的环境意识产生影响，因此，我们尝试以大学生为研究对象，考察特质性敬畏、普遍性自我和环境意识的关系。

采用特质性敬畏量表、中国版环境关心量表（CNEP）和普遍性自我测验对 348 名大学生被试进行调查，旨在探讨特质性敬畏和环境意识的关系以及普遍性自我在两者间的中介作用。结果发现：（1）被试在中国版环境关心量表上的平均得分为 39，标准差为 5.2，处于中上等水平；性别在环境意识上的得分存在显著差异（ $t = -5.56, p < 0.001$ ）， $d = 0.60$ ，处于中等范畴。（2）相关分析结果表明，特质性敬畏与普遍性自我（ $r = 0.36, p < 0.01$ ）、环境意识（ $r = 0.33, p < 0.01$ ）之间均存在显著的正相关，普遍性自我和环境意识之间也存在显著正相关（ $r = 0.36, p < 0.01$ ）；（3）回归分析结果显示，特质性敬畏对环境意识有显著的正向预测作用（ $\beta = 0.31, p < 0.01, R^2 = 0.11$ ），特质性敬畏显著正向预测普遍性自我（ $\beta = 0.29, p < 0.01, R^2 = 0.13$ ），Bootstrap 检验结果发现，普遍性自我能部分中介特质性敬畏和环境意识之间的关系（ $\beta = 0.22, LLCI = 0.12, ULCI = 0.31$ ）。结论：特质性敬畏对环境意识有正向的预测作用，普遍性自我在特质性敬畏与环境意识中起中介作用。

关键词 特质性敬畏，环境意识，普遍性自我，中介效应

Relationship Between Trait Awe and College Students' Environmental Consciousness: Mediating Effect of Universal Self

Chen Anqi, Cao Yixuan, He Zhixin

School of Education, Henan University, Kaifeng

Abstract: With the increasing concern of environmental issues, the importance of environmental awareness, influencing factors and how to improve environmental awareness have become the focus of attention and research (Jishan Yu, 2001). Yu Jishan's scholars define environmental awareness as people's subjective reflection of the objective ecological environment, and its core is the understanding, attitude and behavior orientation of ecological environment problems. As a part of people's cognition, environmental awareness can influence people's behavior, adjust people's understanding of the relationship between man and environment, and guide people to implement environmental protection behavior. Awe is defined as an emotion. When people can't assimilate the great stimulus they face into their existing cognitive structure, this special experience will come into being. Studies have shown that awe has a positive effect on enhancing environmental protectionism (Huanhuan Zhao et al., 2018). In addition, different trait emotions have different performances in the description of self-construction, and different types of self-construction will also have an impact on individual environmental awareness, so we assume that universal self plays a key role in predicting environmental awareness.

348 college students were investigated with trait awe scale, Chinese new environmental paradigm (CNEP) scale and universal self-test, in order to explore the relationship between trait awe and environmental awareness and the intermediary role of universal self between them. Results: (1) the results showed that the average score on the CNEP scale was 39, and the standard deviation was 5.2, at the upper-middle level. There were significant differences in the scores of gender in environmental awareness ($t(348) = -5.56, p < .001$), and the effect size (SE) $d = 0.60$ was in the middle range. (2) The results of correlation analysis showed that there was a significant positive correlation between trait awe and universal self ($r = 0.36, p < 0.01$) and environmental awareness ($r = 0.33, p < .01$). There was also a significant positive correlation between universal self and environmental awareness ($r = 0.36, p < .01$). (3) Regression analysis results showed that trait awe had a significant positive predictive effect on environmental awareness ($\beta = 0.31, p < 0.01, R^2 = 0.11$), and trait awe significantly positively predicted universal self ($\beta = 0.29, p < 0.01, R^2 = 0.13$). Bootstrap test results found that universal self-energy partly mediated the relationship between trait awe and environmental awareness ($\beta = 0.22, LLCI = 0.12, ULCI = 0.31$). Conclusion: Trait awe has a positive predictive effect on environmental awareness, and universal self plays an intermediary role in trait awe and

environmental awareness.

网络社会排斥对青少年社交焦虑的影响： 反刍思维的中介作用和拒绝敏感性的调节作用

滕秀丽¹ 张守臣²

哈尔滨师范大学 教育科学学院, 哈尔滨, 150025, 2273308279@qq.com

摘要 社会排斥是指被个体或群体拒绝接纳或忽视的现象, 是人们社会交往中普遍存在的消极事件。网络社会排斥是现实社会排斥在网络交往环境中的延伸, 是指在非面对面的电子媒介互动中, 个体在可接受的时间范围内未得到预期的交流和认可, 并觉知到自身被忽视或拒绝的现象。根据反应方式理论, 人们在遭遇生活事件时可能会采取不同的应对方式, 反刍思维就是这些应对方式中比较负性的一种, 个体对消极情绪或压力事件的反复思考导致了个体情绪状态的变化。些持续性的反刍思维会造成青少年人际需要缺失, 安全感得不到满足, 最终促使产生社交焦虑。对于拒绝敏感性高个体而言, 在人际关系被拒绝或忽视后, 会加重反刍思维。同样, 拒绝敏感性高的个体, 在面对人际关系缺失时更容易加剧个体社交焦虑。因此, 本研究主要探讨网络社会排斥、反刍思维、拒绝敏感性和社交焦虑四者的关系。选取哈尔滨市 600 名青少年, 使用网络社会排斥量表、反刍思维量表、拒绝敏感性量表和社交焦虑量表进行调查。研究结果显示: (1) 网络社会排斥正向预测青少年社交焦虑; (2) 反刍思维在网络社会排斥与青少年社交焦虑之间起中介作用; (3) 拒绝敏感性在网络社会排斥与青少年社交焦虑间起调节作用; 具体而言, 拒绝敏感性水平高时, 网络社会排斥能显著地正向的预测社交焦虑, 而拒绝敏感性水平低时网络社会排斥对社交焦虑的预测作用不显著。(4) 拒绝敏感性在网络社会排斥与反刍思维间起调节作用; 具体而言, 拒绝敏感性水平高时, 网络社会排斥能显著地正向的预测反刍思维, 而拒绝敏感性水平低时网络社会排斥对反刍思维的预测作用不显著。结论: 网络社会排斥通过反刍思维的中介作用影响青少年社交焦虑, 这一中介作用受到拒绝敏感性的调节。

关键词 网络社会排斥, 反刍思维, 拒绝敏感性, 社交焦虑

The effect of cyber-ostracism on social anxiety in adolescents: The mediating effect of ruminative responses and the moderating effect of rejection sensitivity

Teng Xiuli¹, Zhang Shouchen²

School of Education Science, Harbin Normal University, Harbin, 150025, 2273308279@qq.com

Abstract: Ostracism refers to the phenomenon of being rejected or ignored by individuals or groups. It is a common negative event in people's social interactions. cyber-ostracism is an extension of the actual ostracism in the network communication environment. It refers to the phenomenon that in non-face-to-face electronic media interaction, individuals fail to get the expected communication and recognition within an acceptable time limit and realize that they are ignored or rejected. According to the theory of response style, people may adopt different coping styles when they encounter life events. ruminative responses is one of the negative coping styles. The repeated thinking of individuals on negative emotions or stressful events leads to the change of their emotional state. Persistent rumination can lead to a lack of interpersonal needs, a lack of security, and eventually social anxiety. For individuals with high rejection sensitivity, rumination will be aggravated after interpersonal relationship is rejected or ignored. Similarly, individuals with high rejection sensitivity are more likely to aggravate individual social anxiety in the face of lack of interpersonal relationship. Therefore, this study mainly discusses the relationship between cyber-ostracism, ruminative responses, rejection sensitivity and social anxiety. In this study 600 adolescents in Harbin were investigated with cyber-ostracism Scale, ruminative responses Scale, rejection sensitivity scale and social anxiety Scale. The results show that:(1) Cyber-ostracism positively predicts social anxiety among adolescents;(2) Ruminative responses plays a mediating role between cyber-ostracism and social anxiety of teenagers;(3) Rejection sensitivity

plays a moderating role between cyber-ostracism and social anxiety of adolescents; To be specific, when the rejection sensitivity level is high, the cyber-ostracism can significantly predict social anxiety positively, but not at low levels.(4) Rejection sensitivity plays a moderating role between cyber-ostracism and ruminative responses; To be specific, when the rejection sensitivity level is high, cyber-ostracism can significantly predict ruminative responses, but not at low levels. Conclusion: Cyber-ostracism affects social anxiety in adolescents through the mediating effect of ruminative responses, which is moderated by rejection sensitivity.

Keywords: cyber-ostracism, social anxiety, ruminative responses, rejection sensitivity

摘要 创新是社会发展的动力, 21 世纪的竞争归根到底是人才的竞争。提高创造力, 关键是人才的培养, 为此我国启动了“珠峰计划”, 旨在培养基础学科拔尖人才。为探讨教师创新支持对创造力的影响以及自我建构的中介作用, 基于 Amabile 的创造性构成要素理论, 个体因素在情景因素对创造性的影响中起着中介桥梁的作用。本研究采用问卷法, 使用教师创新支持行为量表、威廉斯创造性倾向量表和独立自我建构量表以及托兰斯创造性思维测验, 以 1145 名拔尖学生和普通学生为被试, 旨在探讨教师创新支持对创造性的影响及其作用机制。结果发现: (1) 女生在创造性思维流畅性上显著优于男生, 在灵活性和独创性上则无显著性别差异。(2) 拔尖学生在创造性思维的三个指标上均显著高于普通学生。(3) 学生类型和年级在创造力流畅性和独创性上交交互作用显著。流畅性表现上, 在拔尖学生中, 大三学生显著高于大一和大二学生, 而在普通学生中, 大一学生显著高于大二和大三学生。独创性表现上, 拔尖学生和普通学生在大一时没有差异, 但在大二和大三上, 拔尖学生得分显著高于普通学生。(4) 独立自我建构和创造性人格在教师创新支持和创造力关系中起完全链式中介作用, 且模型稳定, 不受性别、年级和学生类型的影响。本研究表明, 教师创新支持对创造力有间接作用。

The Relationship Between Teacher Creative Support and Creative Thinking: The Mediating of Independent Self-Constraint and Creative Personality

SU Peng², JIA Xuji^{1,2,3}, HUANG Si-lin⁴

1. Key Research Base of Humanities and Social Sciences of the Ministry of Education, Academy of Psychology and Behavior, Tianjin Normal University;

2. Faculty of Psychology, Tianjin Normal University;

3. Tianjin Social Science Laboratory of Students' Mental Development and Learning, Tianjin;

4. Institute of Developmental Psychology, Beijing Normal University, Beijing, 100875

Abstract: Creativity is the driving force of social development. The competition in the 21st century is ultimately the competition of talents. The key to improving creativity is the cultivation of talents. For this reason, China launched the "Everest Project", which aims to cultivate top-notch personnel in basic disciplines. To explore the effects of teacher creative support on creativity and the mediating effect of independent self-construal, based on Amabile's Componential theory of creativity, individual factors act as an intermediary bridge in the influence of situational factors on creativity. This study uses a questionnaire method, using the Teacher Creativity-Supportive Behavior Scale, the Williams Creative Personality Scale, the Independent Self-Constraint Scale, and the Torrance test of creative

thinking, 1145 top-notch and ordinary students in university were surveyed to explore the effect of teacher creative support on creativity and its mechanism. The results found: (1) Girls scored significantly higher than boys in creative thinking fluency, but there is no significant difference in flexibility and originality. (2) Top-notch students scored significantly higher than ordinary students in the three indicators of creative thinking. (3) There was an interaction effect between different student types and grades in creativity fluency and originality. In terms of fluency, among top-notch students, juniors were significantly higher than freshmen and sophomores, while among ordinary students, freshmen were significantly higher than sophomores and juniors. In terms of originality, there was no difference between top-notch students and ordinary students in the freshman year, but in sophomore and junior year, the top-notch students scored significantly higher than ordinary students. (4) Independent self-construal and creative personality played a complete chain mediating role in the relationship between teacher creative support and creativity, and the model is stable, independent of gender, grade, and student type. This study suggested that teacher creative support had an indirect effect on creativity.

Keywords: teacher creativity support, self-construal, creative personality, creative thinking

特殊教育教师的残疾态度及其情境效应研究

刘彤彤¹ 王莉萍²

陇南师范高等专科学校学前教育学院, 甘肃成县, 742500, 1126979668@qq.com

摘要 基于教育公平和全纳教育理念, 所有儿童都应该进入学校接受高质量、适宜、平等的教育和服务。特殊儿童也不例外, 他们也有进入学校接受适合他们自身特点, 高质量教育的权利, 特殊教育发展与社会文明发展、人权保护以及社会公平的实现紧密相关。特殊教育教师作为特殊教育的中坚力量, 他们对残疾儿童的态度是特殊教育成功的重要条件, 为了解特教教师对其教育对象即残疾儿童的态度以及情境对特教教师残疾态度的影响, 研究采用 AMP 情感错误归因范式, 通过 E-prime 实验来对特教教师的残疾态度和残疾内隐态度的情境效应两方面做了研究。特教教师残疾态度研究选取西北某市 38 名特教教师为研究对象, 其中特教机构 14 名, 特教学校 24 名, 且以前不曾参与过类似实验(根据被试自我报告)。研究发现: 特教教师在外显残疾态度中对残疾儿童和健全儿童持有一致积极的态度($t=1.26, p=0.24$), 但是在内隐残疾态度上却对残疾儿童和健全儿童表现出不一致的态度, 具体表现在对健全儿童的态度要显著积极于残疾儿童($t=-12.292, p<0.001$)。基于情感错误归因基本理论——人们在一定情境中产生的认知或关于事物的思维会随着情境或其他客观条件的变化而变化, 研究设置了道德情境、能力情境和中性情境来探讨残疾内隐态度的情境效应。通过招募具有 1 年以上特教经验且还在职的 51 名特教教师参与实验, 剔除掉 2 名反应完全相同的数据, 最后道德组 16 人, 能力组 18 人, 中性刺激组 15 人; 男性 5 人, 女性 44 人。结果发现残疾内隐态度的情境启动主效应极其显著($F(2,42)=14.123, p<0.000$), 特教教师在道德情境启动下对残疾儿童的态度要比在能力启动下更为积极, 并且道德启动下对残疾儿童态度积极性要显著高于对健全人态度评分; 能力情境对残疾儿童内隐态度有一定影响, 能力启动情境下残疾儿童内隐态度评分显著高于中性启动下的得分。

A study on the disability attitude and situational effects of special education teachers

Liutongtong¹, Wangliping²

Pre-school school of Longnan Teachers College, GanSu

Abstract: Based on the concept of educational equity and inclusive education, all children should attend schools for high-quality, appropriate and equal education and services. Special children are no exception, they also have the right to enter schools to receive their own characteristics, quality education, special education development and social civilization development, human rights protection and the realization of social equity. As the backbone of special education, their attitude towards children with disabilities is an important condition for the success of special

education, in order to understand the attitude of special education teachers towards their educational object, namely, the disabled child and the impact of the situation on the disability attitude of special education teachers, the study of AMP emotional error attribution paradigm, through the E-prime experiment to the special education teachers' disability attitude and the situational effect of the implicit attitude of disability. The study on the disability attitude of special education teachers selected 38 special education teachers in a city in northwest China as the study object, of which 14 were special education institutions and 24 were special education schools, and had not participated in similar experiments before (according to the self-report of the subjects). The study found that special teachers had a consistent and positive attitude towards children and able children in the external attitude of disability ($t=1.26$, $p=0.24$), but showed inconsistent attitude towards children with disabilities and able children in implicit disability, as shown in a significantly positive attitude towards healthy children ($t=-12.292$, $p < 0.001$). Based on the basic theory of attribution of emotional error-- the cognition or thinking about things that people produce in a certain situation will change with the change of the situation or other objective conditions, and the study sets up the moral situation, the ability situation and the neutral situation to explore the situational effect of the implicit attitude of disability. By recruiting 51 special education teachers with more than one year of experience and serving, 2 of the same response data were eliminated, and finally 16 in the ethics group, 18 in the capacity group, 15 in the neutral stimulus group, 5 men and 44 women. The results showed that the main effect of situational initiation of the implicit attitude of disability was extremely significant ($F(2,42)=14.123$, $p < 0.000$), the attitude towards children with disabilities under the initiation of moral situation was more positive than that of the disabled children under the ability to start, and the attitude of disabled children under moral initiation was significantly higher than that of the able-bodied; The ability situation has some influence on the implicit attitude of the disabled child, and the implicit attitude score of the disabled child under the ability start-up situation is significantly higher than that of the neutral start-up.

重大突发事件中青少年心理援助的三阶段 4R 系统模型

成秀梅^{1,2} 张媛³ 武文慧² 李杰² (通讯作者)

1 内蒙古医科大学人文教育学院, 呼和浩特, 010059

2 内蒙古师范大学心理学院, 呼和浩特, 010022, healthj2004@163.com

3 内蒙古医科大学卫生管理学院, 呼和浩特, 010059

摘 要 重大灾难发生后, 青少年易受伤害且心理健康需求易被物质救援所掩盖。系统、全面、专业、动态、联动的心理援助机制, 可满足青少年灾后的心理健康需求, 减轻有害影响并促进心理重建。但我国灾后心理援助尚处初级阶段, 未达到上述要求, 更无针对青少年的系统扶助方案。希斯危急管理的 4R 模型 (Readiness、Response、Recovery、Reduction) 涵盖了危机预防、发生、发展、结束的多阶段、多策略的全面且系统的管理目标和方向, 为解决问题提供了较好的指导原则和具体的实施目标。本文参照该模型, 并结合重大灾难中心身援助的内在要求, 细化青少年心理援助模型各部分要求, 并提出事前预警、事发监测与事后跟踪三阶段相衔接的工作模式。事前预警指学校-心理服务站-精神卫生中心构成的三级预警系统, 以解决不同等级的心理问题。事发监测指围绕心理急救-预防心理障碍-多学科介入心理咨询-开展系统的心理治疗阶段-心理援助跟踪监控等组成的五级分层动态监测系统, 追踪事件当事人 (特别是危机预警人员) 身心状态, 实现对个体与群体心理健康状态精准测量和动态监测, 按需对接心理服务, 及时给予咨询和治疗服务, 必要时给予药物治疗。事后跟踪指由个人-家庭-班级-学校-社会构成的五级心理重建跟踪系统, 可以与动态监测系统中的三、四、五级人群建立有效衔接, 并为一般青少年提供跟踪服务。为有效推动模型以及工作模式的运转, 提出运用信息、智能以及网络技术研发多元服务、协同管理的手机移动心理健康服务信息化云平台。该平台包括标准、专家智库服务以及心理健康自助互助等三个平台。标准平台又包括基础信息、管理服务、测评、大数据分析、危机预警与干预等系统。该平台将教育系统、社会单位、公务员系统以及基层社区纳入同一管理平台, 从而实现学校家庭社会共育, 实现部门间的信息共享, 提高服务的覆盖率、针对性, 提高协同合作的即时性和效能

性, 实现优质心理健康教育资源互融、互通及共享, 保障专业性, 并推进“互联网+健康医疗”服务新模式。

A three-stage 4R system model for adolescent psychological assistance in major emergencies

Xiumei Cheng^{1,2}, Yuan Zhang³, Wenhui Wu², Jie Li²

1 School of Humanities & Education, Inner Mongolia Medical University, Hohhot, 010059

2 School of Psychology, Inner Mongolia Normal University, Hohhot, 010022

3 School of Health Management, Inner Mongolia Medical University, Hohhot, 010059

Abstract: After major disasters, adolescents are vulnerable and their mental health needs are easily covered by material relief. The systematic, comprehensive, professional, dynamic, and linkage psychological assistance mechanism can meet the psychological health needs of adolescents after disasters, reduce the harmful effects and promote psychological reconstruction. However, China's post-disaster psychological assistance is still in its primary stage, which does not meet the above requirements, and there is no systematic assistance program for teenagers. The 4R model (Readiness, Response, Recovery, and Reduction) of health crisis management covers the comprehensive and systematic management goals and directions of crisis prevention, occurrence, development, and end, and provides better guiding principles and specific implementation goals for solving problems. Referring to this model and combining it with the inherent requirements of physical assistance in major disasters, this paper refines the requirements of each part of the psychological assistance model for adolescents and puts forward a working model of linking three stages: pre-warning, incident monitoring, and post-event tracking. Pre-warning refers to a three-level early warning system consisting of schools, psychological service stations, and mental health centers to solve psychological problems of different levels. Incident monitoring refers to a five-level hierarchical dynamic monitoring system consisting of psychological first aid-psychological barrier prevention-multidisciplinary psychological counseling-systematic psychotherapy stage-psychological assistance tracking and monitoring, etc., which tracks the physical and mental state of the parties involved in the incident (especially the crisis early warning personnel), realizes accurate measurement and dynamic monitoring of the mental health state of individuals and groups, and connects psychological services as needed, giving timely consultation and treatment services, and giving medication when necessary. After-the-fact tracking refers to a five-level psychological reconstruction tracking system consisting of individual-family-class-school-society, which can effectively connect with the third, fourth, and fifth-level people in the dynamic monitoring system and provide tracking services for general teenagers. In order to effectively promote the operation of the model and working mode, an information cloud platform for mobile mental health services with multiple services and collaborative management is proposed by using information, intelligence, and network technology. The platform includes three platforms: standard platform, expert service platform, and mental health self-help platform. The standard platform also includes basic information systems, management services systems, evaluation systems, big data analysis systems, crisis early warning systems, and intervention systems. The platform integrates the education system, social units, civil servants, and grass-roots communities into the same management platform, to realize the co-education of school, family, and society, realize the information sharing among departments, improve the coverage and pertinence of services, improve the immediacy and effectiveness of collaborative cooperation, realize the mutual integration, exchange, and sharing of high-quality mental health education resources, guarantee professionalism, and promote the new service model of "Internet + Health Care".

农村隔代抚养留守儿童心理健康影响的质性研究 ——基于焦点团体访谈

何思宜 郑显亮

赣南师范大学教育与科学学院，赣州，341000，727990324@qq.com

摘要 长久以来，我国的家庭教育基本都是由父母承担的，父母拥有家庭教育的责任和义务，掌握家庭教育的主导权，特别是在青春发育期这一心理发展的关键时期，父母对孩子的心理健康成长起着至关重要的作用。然而，近年来随着农村剩余劳动力的不断增多，外出打工或经商的人也越来越多，有的家庭夫妻双双外出打工，他们当中有的将子女带在身边，而更多的是将自己子女留在家里，由孩子的祖父母、外祖父母照管。隔代长辈便成为孩子的抚养人，挑起了教育孙辈的担子，产生了农村留守儿童家庭教育以隔代教育为主的现象。

本研究主要采用质性研究方法，通过与当地农村学校老师沟通，让其推荐班里符合条件（隔代抚养下的留守初中生）且愿意参与访谈的学生作为参与者。在开始正式的焦点团体访谈之前，研究者进行了四次预访谈，确定了以“隔代抚养”和“初中生的心理健康”为焦点的两组访谈提纲。焦点访谈由研究者主持，每次团体小组成员为4-8人，对整个访谈过程进行录音结合手写记录，其后将其全部转成文字资料，借助Nvivo软件进行分析，通过反复的阅读、编码以及归纳直至主题达到饱和后停止访谈数据收集。

本研究共进行了11次焦点团体访谈，抽取了67名学生参与访谈，最终提取4大主题，19个亚主题，将祖辈抚养下孙辈的心理体验提炼出2大主题：积极体验与负性体验，其中包括幸福、自由、情感支持、言语杂碎、缺乏理解、缺少包容和思想固化7个亚主题；将孙辈的心理健康状况提炼出5大主题：学习、自我、人际、适应、情绪，其中包括学习满足感、自我评价、社会评价、人际支持、异性交往、亲社会行为、情绪稳定性等12个亚主题。

A qualitative study on the impact of intergenerational rearing on the mental health of left behind children in rural areas ——Based on focus group interview

Siyi He, Xianliang Zheng

Educational Science School, Gannan Normal College, Ganzhou 341000

Abstract: For a long time, family education in China is basically undertaken by parents. Parents have the responsibility and obligation of family education and master the leading power of family education, especially in the critical period of psychological development, youth, parents play a vital role in the healthy growth of children's psychology. However, in recent years, with the continuous increase of rural surplus labor force, more and more people go out to work or do business. Some couples go out to work. Some of them take their children with them, and more of them leave their children at home under the care of their grandparents. The next generation elders become the caregivers of children and shoulder the burden of educating their grandchildren, resulting in the phenomenon that the family education of rural left behind children is mainly based on the next generation education.

This study mainly uses qualitative research methods, through communication with local rural school teachers, to make them recommend students who meet the conditions in the class (left behind junior middle school students raised by other generations) and are willing to participate in the interview as participants. Before the formal focus group interview, the researcher conducted four pre interviews and determined two groups of interview outlines focusing on "inter generational rearing" and "mental health of junior middle school students". The focus interview was presided over by the researcher, with 4-8 group members each time. The whole interview process was recorded and handwritten, and then all of them were converted into text materials for analysis with the help of NVivo software. The interview data collection was stopped after the theme reached saturation through repeated reading, coding and induction.

In this study, a total of 11 focus group interviews were conducted, and 67 students were selected to participate in the interviews. Finally, four themes and 19 sub themes were extracted to extract the psychological experience of grandchildren raised by grandparents into two themes: positive experience and negative experience, including seven sub themes: happiness, freedom, emotional support, speech clutter, lack of understanding, lack of tolerance and ideological solidification; The mental health status of grandchildren is extracted into five themes: learning, self, interpersonal, adaptation and emotion, including 12 sub themes such as learning satisfaction, self-evaluation, social evaluation, interpersonal support, heterosexual communication, prosocial behavior and emotional stability.

Keywords: intergenerational rearing, left behind children, junior high school students, focus group, qualitative research

父母抑郁与师生关系对青少年受欺负的影响：自尊的中介作用

赵清玲 陈琼 宋乙宁 李彩娜（通讯作者）

陕西师范大学心理学院，陕西省儿童青少年心理与行为健康重点研究中心，

北京师范大学基础教育质量评估协同创新中心陕西师范大学分中心，西安，710062，chinali7371@163.com

摘要 校园欺凌一直是社会和研究者关注的重点，其对儿童青少年的身心健康具有持续的消极影响，探究校园欺凌（尤其是受欺负）的形成机制对于预防和干预政策的制定具有重要意义。已有研究表明，父母抑郁是影响青少年发展的重要因素，但鲜有研究考察其对青少年受欺负的影响。此外，生态系统理论指出，家庭和学校作为影响青少年适应与发展的两个重要微观系统，父母抑郁和师生关系可能会交互影响青少年的受欺负。良好的师生关系可能会缓解父母抑郁对青少年产生的消极影响（压力缓冲模型：The Stress-Buffering Model）；但是，当父母的消极作用较高时，教师可能无法为青少年提供有效的帮助，从而加重父母抑郁的消极影响（反压力缓冲模型：The Reverse Stress-Buffering Model）。此外，远端的环境因素往往通过近端因素（如青少年自尊）对个体产生影响，因此，自尊可能在其中起到中介作用。基于此，本研究主要探讨父母抑郁与师生关系对青少年受欺负的影响，以及青少年自尊的中介作用。

本研究以陕西省 904 名初中生（57%男生； $M_{age} = 12.73$ ， $SD = 0.43$ ）及其父母（62%母亲； $M_{age} = 40.14$ ， $SD = 5.36$ ）为研究对象，通过问卷法进行为期 3 年的 3 次追踪调查。结构方程模型的结果发现：（1）T1 教师支持与冲突均能显著调节 T1 父母抑郁对 T3 青少年受欺负的直接影响，即当教师支持较低、冲突较高时，T1 父母抑郁显著增加 T3 青少年受欺负，而当教师支持较高、冲突较低时，两者之间的预测关系不显著。这说明良好的师生关系起到了一定的保护作用，支持了压力缓冲模型的观点。（2）教师支持可以显著调节 T1 父母抑郁对 T3 青少年受欺负的间接影响，具体而言，当教师支持水平较高时，T1 父母抑郁能降低 T2 青少年自尊进而增加 T3 受欺负，而当教师支持较低时，T1 父母抑郁反而增加 T2 青少年自尊，降低 T3 受欺负。这说明教师支持不但没有起到缓冲作用，反而加重了父母抑郁对自尊的消极影响，支持了反压力缓冲模型的观点。（3）教师冲突对间接路径的调节作用不显著。本研究表明父母抑郁和师生关系均是影响青少年受欺负的重要环境因素，且可以通过青少年自尊产生影响，这为科学认识和有效干预校园欺凌提供了理论依据。

关键词 抑郁，受欺负，压力缓冲，反压力缓冲，青少年

The Effects of Parental Depression and Teacher-student Relationships on Adolescent Victimization: The Mediating Role of Self-esteem

ZHAO Qingling, CHEN Qiong, SONG Yi-ning, LI Caina*

School of Psychology, Shaanxi Normal University,

Shaanxi Provincial Key Research Center of Child Mental and Behavioral Health,

Shaanxi Normal University Branch of Collaborative Innovation Center of Assessment toward Basic

Education Quality at Beijing Normal University, Xi'an, China, 710062, chinali7371@163.com

Abstract: School bullying was always the focus of the societies and researchers, and it has a continuous negative impact on the physical and mental health of children and adolescents. Therefore, it is of great significance to explore

the underlying mechanism of school bullying (especially victimization). Ecosystem Theory points out that parents and teachers are important others that affect adolescent adaptation and development, and may have a significant impact on adolescent victimization. However, few studies have examined the interaction effects of parental depression and teacher-student relationships. The Stress-Buffering Model indicates that good teacher-student relationships may alleviate the negative effects of parental depression on adolescents. However, when parental depression was higher, teachers may not be able to provide effective help to adolescents, thus exacerbating the negative effects of parental depression (The Reverse Stress-Buffering Model). In addition, distal environmental factors tend to influence adolescents through proximal factors (such as adolescent self-esteem), so self-esteem might play a mediating role. Accordingly, this study explored the influence of parental depression and teacher-student relationship on adolescent victimization, as well as the mediating role of adolescent self-esteem.

A total of 904 junior high school students (57% male; $M_{age} = 12.73$, $SD = 0.43$) and their parents (62% of mothers; $M_{age} = 40.14$, $SD = 5.36$) completed questionnaires at three-time points, one year apart. Structural equation model results revealed that: (1) both teacher support and conflict could moderate the direct effect of T1 parents depression on T3 adolescent depression, namely when teacher support was lower or conflict was higher, T1 parents depression would significantly increase T3 adolescent depression, but when the teacher support was higher and conflict is lower, the predict relations was no longer significant. It indicates that good teacher-student relationships play a protective role, which supports the Stress Buffer Model. (2) Teacher support also significantly moderated the indirect effect of T1 parents depression on T3 adolescent victimization via self-esteem, namely when the teacher support level was higher, T1 parental depression could decrease T2 adolescent self-esteem, which further increased T3 victimization, but when teacher support was lower, T1 parents depression could increase T2 adolescent self-esteem, thereby lowering T3 victimization. It suggests that teacher support does not play a buffer role, but aggravates the negative impact of parental depression on self-esteem, which supports the The Reverse stress-buffering Model. (3) The moderating effect of teacher conflict on indirect path was not significant. The results showed that both parental depression and teacher-student relationship were important environmental factors affecting adolescent victimization, and they could be influenced by adolescents' self-esteem, which provided a theoretical basis for scientific understanding and effective intervention in school bullying.

正念与青少年的自我边界的关系及干预研究

陈甜¹, 龙娇娇¹, 宋意霞¹, 黄肖嘉棋¹, 吴文峰¹ (通讯作者)

贵州师范大学心理学院, 贵阳, 550000, 通讯作者 E-mail:wwfhdsd@aliyun.com

摘 要 已有研究证实, 清晰的自我边界有利于个体拥有健康的人际关系, 良好的自尊水平以及安全感; 反之不良的边界会引发个体的抑郁、焦虑、依赖, 甚至产生身体疾病; 同时自我边界与共情、依恋类型、以及自我的觉知等有关。国内目前缺乏对自我边界测量的工具, 故本研究引进并修订国外边界保护量表(the Boundary Protection Scale-14, BPS-14), 在此基础上, 研究从正念对自我边界的影响角度出发, 探究正念水平与自我边界的关系, 并对自我边界较为模糊的青少年进行正念干预, 帮助其形成清晰灵活的边界。研究一从贵州省三所高中随机选取了 2100 名青少年为被试, 填写边界保护量表(BPS-14)和正念注意觉知量表(MAAS)。结果发现: (1)中文版 BPS-14 具有良好的信效度; (2)自我边界程度与正念水平呈显著负相关, 即边界分数越高, 个体的边界越模糊, 其正念水平越低。研究二为帮助个体形成清晰的自我边界, 开展连续 8 周的正念团辅训练。随机选取研究一中自我边界得分在前 10% 中的 32 名同学, 其中 16 名同学为实验组, 即参与正念团辅训练的干预活动, 另外 16 名同学作为控制组接受非正念训练团辅活动。结果发现: 实验组被试的自我边界分数有了显著下降, 即自我边界更加清晰; 而与之进行的对照组, 边界分数没有显著变化。本研究发现: 中文版 BPS-14 可以作为测量青少年边界薄弱程度的适宜工具; 青少年的正念水平对自我边界程度有显著影响; 通过正念团辅训练可以有效提高青少年自我觉知水平, 建立清晰的自我边界, 从而进一步推动青少年积极的发展。

Research on the Relationship between Mindfulness and Adolescents' Self-Boundary and Intervention

Chen tian¹, Long jiaojiao¹, Song yixia¹, Huangxiao jiaqi¹, Wu wenfeng¹

1. School of Psychology Department, Guizhou Normal University, Guiyang 550000

Abstract: Studies have confirmed that a clear self-boundary is conducive to healthy interpersonal relationships, a good level of self-esteem, and a sense of security; on the contrary, a poor boundary can cause depression, anxiety, dependence, and even physical illness; at the same time, self-boundary is related to empathy, attachment type, and self-awareness. There is currently a lack of tools for self-boundary measurement in China, so this study introduces and revises the Boundary Protection Scale-14 (BPS-14) from abroad. On this basis, the research starts from the perspective of the influence of mindfulness on self-boundary. Explore the relationship between the level of mindfulness and self-boundary, and conduct mindfulness interventions for teenagers with fuzzy self-boundaries to help them form a clear and flexible boundary. In the first study, 2100 adolescents were randomly selected from three high schools in Guizhou Province to fill in the Boundary Protection Scale (BPS-14) and the Mindfulness Attention Scale (MAAS). The results showed that: (1) the Chinese version of BPS-14 has good reliability and validity; (2) the degree of self-boundary is significantly negatively correlated with the level of mindfulness, The higher the boundary score, that is, the more blurred the boundaries of individuals, the lower the level of their mindfulness. The second study is to help individuals form a clear self-boundary, and carry out 8 consecutive weeks of mindfulness group training. Randomly select 32 students who scored in the top 10% of self-boundary in Study 1, 16 of them are in the experimental group, that is, they participate in the intervention activities of mindfulness training, and the other 16 students are used as the control group to receive non-mindfulness training. The result found that the self-boundary score of subjects in the experimental group has decreased significantly, that is, the self-boundary is clearer; while for the control group, there is no significant change in the boundary score. This study found that the Chinese version of BPS-14 can be used as a suitable tool to measure the thickness of adolescents' boundaries; the level of mindfulness of adolescents has a significant impact on the degree of self-boundary; through mindfulness group training can effectively improve the self-awareness level of young people, establish a clear self-boundary, and further promote the positive development of young people.

学校联结对初中生生命意义感的影响：有调节的中介效应

谭倚天¹（通讯作者） 温忠麟¹ 沈嘉琦¹ 谢晋艳¹

¹ 华南师范大学心理学院, 广州, 510631, tanyt1213@163.com

摘要 生命意义感是美好生活的重要成分, 与个体的主观幸福感、身心健康密切相关。初中阶段是青少年发展生命意义感的关键时期, 较高水平的生命意义感有助于减少初中生抑郁、焦虑等消极的心理健康问题。因此, 研究生命意义感的影响因素及其内在机制, 对于初中生的身心健康成长具有重要意义。

学校联结能够正向预测生命意义感, 但尚未明确学校联结是“如何”影响生命意义感的。学校联结水平较高的青少年会主动内化社会规范, 更可能表现出亲社会行为。亲社会行为作为一种利他行为, 能够使个体体验到自我效能感和价值感, 获得基本心理需要的满足, 从而提升生命意义感。根据生态系统理论, 环境对个体的影响可能会因为个体特质不同而产生差异。自尊是自我价值的情感体验, 是个体重要的特质。高自尊的人有积极的自我价值, 产生更高的生命意义感。学校联结作为社会支持的一种, 会显著影响中学生的自尊水平。依据自尊的缓冲器假设, 高自尊的缓冲功能可以提升个体的调节能力。由此推测, 亲社会行为可能在学校联结与生命意义感的关系中起中介作用, 自尊则具有调节效应。

本研究旨在探究学校联结与初中生生命意义感的关系, 以及亲社会行为和自尊在其中的作用。采用学校

联结量表、青少年亲社会倾向量表、自尊量表和生命意义感量表对广东省两所中学的 1027 名初中生进行调查。结果显示：（1）生命意义感与学校联结、亲社会行为呈显著正相关（ $r=0.397, 0.369$ ）；（2）学校联结正向预测初中生生命意义感（ $\beta=0.397$ ），且亲社会行为在其中起中介作用；（3）自尊调节了学校联结通过亲社会行为对生命意义感中介模型的前半段路径，即相比于低自尊的初中生（ $\beta=0.334, t=9.039, p<0.001$ ），高自尊的初中生更容易受到学校联结对亲社会行为的积极影响（ $\beta=0.548, t=12.263, p<0.001$ ）。研究结果揭示了学校联结对初中生生命意义感的作用机制，进一步验证了学校联结对初中生发展的重要性，启示学校要重视学校联结的建立，提升学生自尊感，培养学生的亲社会行为，从而提升初中生的生命意义感。

关键词 生命意义感，学校联结，亲社会行为，自尊

The Influence of School Connectedness on Junior High School Students' Meaning in Life: Moderated Mediating Effect

TAN Yitian, WEN Zhonglin, SHEN Jiaqi, XIE Jinyan

School of Psychology, South China Normal University, Guangzhou

Abstract: Meaning in life plays a vital part in a better life, and is closely related to individual's subjective well-being and physical and mental health. It is an important period for adolescents to develop their meaning in life in the junior high school. A higher level of meaning in life helps to reduce the depression, anxiety and other mental health problems of adolescents. Therefore, it is significant for students' physical and mental health to explore the factors and internal mechanisms of meaning in life.

School connectedness can positively predict meaning in life, but it is not yet clear how it works. Adolescents with a higher level of school connectedness will proactively internalize social norms, and they are more likely to show prosocial behavior. As a kind of altruistic behavior, prosocial behavior enables individual to experience self-efficacy and a sense of value, and gains the satisfaction of basic psychological needs, thereby enhancing one's meaning in life. According to the ecosystem theory, the effect of the environment on an individual may be different due to diverse characteristics of the individual. Self-esteem is an emotional experience of self-worth and an essential characteristic of an individual. People with high self-esteem have positive self-worth and higher level of meaning in life. As a kind of social support, school connectedness significantly affects the self-esteem of junior high school students. Based on the buffer hypothesis of self-esteem, the buffer function of high-level self-esteem can improve one's adjusting ability. Thus, it could be known that prosocial behavior would mediate the relationship between school connectedness and meaning in life, while self-esteem plays a moderating role.

The present research aimed to examine the relationship between school connectedness and meaning in life of junior high school students, and the effect of prosocial behavior and self-esteem. A survey of 1027 junior high school students in two middle schools in Guangdong Province was conducted using School Connectedness Scale, Adolescent Prosocial Tendency Scale, Self-esteem Scale and Meaning in Life Scale. The results showed that: (1) School connectedness was positively correlated with meaning in life and prosocial behavior ($r=0.397, 0.369$); (2) School connectedness positively predicted meaning in life of students ($\beta=0.397$), and prosocial behavior played a mediating role in it; (3) Self-esteem moderated the relationship between school connectedness and prosocial behavior. Specifically, compared with low self-esteem students ($\beta=0.334, t=9.039, p<0.001$), students with higher self-esteem were more likely to engage in prosocial behavior affected by school connectedness ($\beta=0.548, t=12.263, p<0.001$). The findings revealed a mechanism of school connectedness on meaning in life of students, and further verified the importance of school connectedness to the development of junior high school students. To enhance meaning in life of junior high school students, school should attach importance to the establishment of school connectedness, enhance students' self-esteem and cultivate students' prosocial behavior.

公办园和民办园幼儿教师职业压力现状调查研究

邹思静¹ 王异芳² (通讯作者)

1 首都师范大学心理学院, 北京, 100048

2 首都师范大学学前教育学院, 北京, 100048, wangyifang6275@126.com

摘要 目的: 近年来, 我国学前教育领域发生着巨大变革, 教师承受的外在与内在压力不断增强, 因此国内对幼儿教师心理健康的关注度也越来越高。有研究表明职业压力会对幼儿教师的职业幸福感产生影响, 且不同性质幼儿园教师的职业压力具有一定的差别。因此, 本研究采用问卷法以探讨不同性质的幼儿园教师职业压力的特点, 为后续的实证研究奠定基础。**方法:** 本研究使用杨廷忠修订的《幼儿教师压力量表》(CPSS), 并在已有研究基础上自编问卷《幼儿教师职业压力调查问卷》, 随机选取 98 名幼儿教师进行预测试, 对自编问卷进行探索性因素分析, 确定施测问卷。随后对北京市海淀区 1623 名幼儿教师进行正式测试, 其中公办园教师 1041 名, 民办园教师 582 名, 分析幼儿教师职业压力的特点。**结果:** 探索性因素分析结果表明, 《幼儿教师职业压力调查问卷》具有较好的信效度, 五个维度分别为幼儿园管理与个人职业发展、家庭生活、人际关系、班级管理和社会评价; T 检验结果表明, 公办园幼儿教师的职业压力分数总体上高于民办园教师, 且公办园教师在五个维度的得分上均高于民办园教师; 方差分析结果显示, 公办园教师在年龄($F(2,1621)=9.06, P<0.001$)、教龄($F(3,1620)=9.41, P<0.001$)和班级角色($F(3, 1620)=3.68, P<0.05$)三个特征变量上的压力分数均显著高于民办园教师。

Investigation and Research on the Occupational Pressure of Preschool Teachers in Public and Private Schools

Sijing Zou¹, Yifang Wang²

1 Department of Psychology, Capital Normal University, Beijing, 100048

2 Department of Preschool Education, Capital Normal University, Beijing, 100048

Abstract: Purpose: Recently, great changes have taken place in the field of preschool education in our country, teachers are under external and internal pressure. Therefore, the government is paying more and more attention to the mental health of kindergarten teachers. Studies have shown that occupational stress will affect the well-being of kindergarten teachers, and the occupational stress of kindergarten teachers in different natures has certain differences. The purpose of this study uses questionnaire to explore the characteristics of occupational stress between different preschool teachers, and lays the foundation for subsequent empirical research. **Methods:** The Preschool Teacher Stress Scale (CPSS) and self-made questionnaire "Preschool Teachers' Occupational Stress Questionnaire" were used to test. 98 preschool teachers were randomly selected for pre-testing. Subsequently, a formal test was conducted on 1623 kindergarten teachers in Haidian District, Beijing, including 1041 public kindergarten teachers and 582 private kindergarten teachers, to analyze the characteristics of the occupational pressure. **Results:** The result of exploratory factor analysis showed that the "Questionnaire of Preschool Teachers' Occupational Stress" had good reliability and validity, and it was divided into five dimensions: kindergarten management and personal professional development, family life, interpersonal relationship, class management and social evaluation; T test analysis showed that the occupational pressure of public kindergarten teachers is generally higher than that of private kindergarten teachers, and the scores of public kindergarten teachers are higher than those of private kindergarten teachers in all five dimensions. Besides, the pressure of public kindergarten teachers was significantly higher than that of private kindergarten teachers on age ($F(2,1620)=9.06, P<0.001$), working years ($F(3,1620)=9.41, P<0.001$) and class role ($F(3,1620)=3.68, P<0.05$).

父母特定生涯行为对大学生职业决策困难的影响： 生涯适应力的作用

李娟¹ 邱小艳²

1 北京师范大学珠海校区教育学院，珠海，519000

2 湖南科技学院教师教育学院，永州，425192

摘要 本研究探讨了父母特定生涯行为、生涯适应力和职业决策困难之间的关系，并在此基础上，探讨生涯适应力在其中发挥的中介作用，为高校生涯辅导提供一定的理论参考。

通过使用父母特定生涯行为量表、大学生生涯适应力量表和职业决策困难量表等测量工具，在珠海某职业决策困难高校选取了有效被试 215 名，考察大学生感知到的父母特定生涯行为、生涯适应力和职业决策困难的现状和特点，并进一步探讨了父母特定生涯行为中的父母支持、父母干涉、父母漠视与生涯适应力、职业决策困难之间的关系，得出以下结论：（1）父母特定生涯行为中的父母支持在家庭所在地、父亲受教育程度和母亲受教育程度中存在显著差异。（2）大学生的职业决策困难与父母支持呈负相关关系，与父母干涉、父母漠视呈正相关关系，与生涯适应力呈负相关关系；大学生的生涯适应力与父母支持呈正相关关系，与父母漠视呈负相关关系，与父母干涉的关系未显著。（3）父母支持负向预测职业决策困难；父母干涉、父母漠视正向预测职业决策困难。（4）生涯适应力在父母支持和职业决策困难中发挥中介效应作用。

The Influence of Career-Specific Parental Behaviors to Decision-Making Difficulties of College Students: the role of Career Adaptability

Li Juan¹, Qiu Xiaoyan²

1 Beijing Normal University Zhuhai Campus Educational College

2 Hunan Science and Technology University Teacher Training College

Abstract: On the basis of discussing the relationship between Career-Specific Parental Behaviors, Career Adaptability and Decision-Making Difficulties, the present study continued to discuss the mediating role played by Career Adaptability, which could provide theoretical reference for career education in colleges. Involving 215 college students in a university in Zhuhai as participants, the present study focused on the investigation of the present situation and characteristics of the Career-Specific Parental Behaviors, Career Adaptability as well as Decision-Making Difficulties among college students, which were based on three questionnaires: Career-Specific Parental Behaviors Scale, Career Decision-Making Difficulties Questionnaire and Career Adaptability Scale. Also, a further discussion of the relationship among the three dimensions of Career-Specific Parental Behaviors (support, interference, lack of engagement), Career Adaptability and Decision-Making Difficulties had been developed. Result suggested that: (1) The Parental Support of Career-Specific Parental Behaviors was significantly differed in the location of the family and in the educational level of the parents. (2) The Decision-Making Difficulties of college students had negative correlation with Parental Support as well as Career Adaptability, but associated positively with Parental Interference and Parental Lack of Engagement; The Career Adaptability of college students associated positively with Parental Support and associated negatively with Parental Lack of Engagement, with no significant correlation with Parental Interference. (3) Parental Support negatively predicted Decision-Making Difficulties; Parental Interference and Parental lack of engagement positively predicted Decision-Making Difficulties. (4) Career Adaptability played an intermediary role between Parental Support and Decision-Making Difficulties.

心理健康教育教师的专业化发展道路

苏洁¹ 谢家树¹ (通讯作者) 李莎¹

¹ 湖南师范大学心理学系, 湖南师范大学认知与人类行为湖南省重点实验室, 长沙 410081

摘要 我国心理健康教育的总目标是提高全体学生的心理素质, 培养他们积极乐观、健康向上的心理品质, 充分开发他们的心理潜能, 促进学生身心和谐可持续发展, 为他们健康成长和幸福生活奠定基础。这个目标的达成, 心理健康教育教师的工作不容忽视, 他们的专业化发展成为当前心理健康工作的重点内容。本研究以访谈的方式了解到我国 H 省在职心理健康教育教师的工作现状, 包括归属部门、工作职责, 和学校老师、学生、家长之间的认知差异和冲突以及个人的职业发展晋升道路等一系列问题, 深刻揭示了广泛背景下心理健康教育教师的尴尬处境和发展困境。将 H 省心理健康教育教师的一般性和普遍性特征进行抽象, 塑造一个具有广泛代表性的中小学心理健康教育教师——J 老师。J 老师以心理健康教育教师的身份招聘进入了 H 省某中等学校任专职心理健康教育教师, 之后接触学校相关行政和管理工作, 看似工作晋升很顺利, 可在工作中时常遇到“老师还是咨询师——怎样坚持心理咨询的伦理原则”、“副科老师还是副科中的副科老师——怎样应对周围人对心理健康教育教师的不了解甚至误解”、“行政类人员还是专业人员——怎样选择职业发展道路”等困扰, 并由此带来角色模糊、定位不明、归属感不强、工作任务繁杂等问题, 在心理健康教育教师的实际工作中, 他们的专业化发展道路走得很艰难。J 老师的经历和困惑, 也为心理健康教育教师这一职业的发展提出了更多的挑战和思考。

The Professional Development of Mental Health Education Teachers

SU Jie¹, XIE Jia-shu¹, LI Sha¹

¹ Cognition & Human Behavior Key Laboratory of Hunan Province, Hunan Normal University, Changsha 410081

Abstract: The overall goal of our country's mental health education is to improve the psychological quality of all students, cultivate their positive and optimistic, healthy and progressive psychological qualities, fully develop their psychological potential, promote the harmonious and sustainable development of students' body and mind, and lay the foundation for their healthy growth and happy life. The importance of mental health education teachers' work is more prominent. Defining the position of mental health education teachers and resolving their role conflicts in the work is a meaningful thing. Ms. J is a full-time mental health education teacher. After two years of employment, she was assigned much more administrative and management work and has been promoted as secretary of the school youth league committee recently. Her job promotion seems going smoothly. Still she often faces role conflict at work, "teacher or psychological consultant-how to adhere to the Ethical principles of Psychological counseling, "minor subject teacher or minor minor subject teacher-how to deal with the misunderstanding of the role of mental health education teacher", "Administrator or Professionals-How to choose a career development path". Those role conflicts rise to a lot of problems. The experience and confusion of Teacher J reminds us that more study should be explored to the career development of mental health education teachers.

青少年离家出走成因分析的质性研究

黄子芹

赣南师范大学, 赣州, 341000, 1017867953@qq.com

摘要 **目的:** 探索青少年离家出走的心理原因, 为采取干预措施提供理论依据。**方法:** 本研究采用质的研究范式, 通过目的性抽样, 在赣州某中学选取了 16 名初中生作为研究对象, 深入个案的家庭和学校进行观察和访谈, 获得了大量的一手资料。将获取的资料进行整理和分析, 并结合相关文献和研究理论对个案心理感受和生活环境进行了描述和分析。**结果:** 研究表明: 青少年选择离家出走, 存在诸多方面的因素, 主要包括

家庭、个人、学校和社会这四个方面。家庭因素包括家庭不良气氛、家庭角色、家庭不当的教养方式和不宜家庭教育观念、不当的亲子互动等。学校因素方面,主要包括人际关系、教材教法、学校管理、学业等方面。社会因素方面则涉及不良帮派、不正当娱乐场所和大众传媒等。个人因素则指青少年个人的情绪感受,研究发现离家出走青少年主要会感受到被拒绝以及被虐待的感受。基于青少年离家出走的成因分析,本研究从离家出走青少年的家庭层面、学校层面、社会层面以及个人层面提出了相应的对策和建议。**结论:** 青少年离家出走行为受到家庭、学校、社会、个人共四个方面因素的影响,结合这些影响因素对青少年离家出走行为进行积极的干预和控制。

关键词 成因分析, 离家出走, 青少年, 质性研究

A qualitative study on the causes of teenagers running away from home

Huangziqin

Gannan Normal College, South Shiyuan Road, Rongjiang New District, Ganzhou

Abstract: Objective: To explore the psychological causes of teenagers running away from home and provide theoretical basis for intervention measures. **Methods:** This study adopts the qualitative research paradigm, selects 16 junior middle school students in a middle school in Ganzhou as the research object through purposeful sampling, goes deep into the family and School of the case, observes and interviews, and obtains a large number of first-hand data. The obtained data are sorted and analyzed, and the psychological feeling and living environment of the case are described and analyzed combined with relevant literature and research theory. **Results:** the research shows that there are many factors for teenagers to choose to run away from home, mainly including family, individual, school and society. Family factors include bad family atmosphere, family role, improper family rearing style, unsuitable family education concept, improper parent-child interaction and so on. School factors mainly include interpersonal relationships, teaching materials and methods, school management, studies and so on. Social factors include bad gangs, improper entertainment places and mass media. Personal factors refer to teenagers' personal emotional feelings. The study found that teenagers who run away from home mainly feel rejected and abused. Based on the analysis of the causes of teenagers running away from home, this study puts forward corresponding countermeasures and suggestions from the family level, school level, social level and personal level. **Conclusion:** adolescent runaway behavior is affected by four factors: family, school, society and individual. Combined with these factors, we can actively intervene and control adolescent runaway behavior.

Keywords: cause analysis, running away from home, teenagers, qualitative research

青少年离家出走问题研究——基于依恋理论视角

黄子芹¹ 甘霖²

1 赣南师范大学, 赣州, 341000, 1017867953@qq.com

2 赣南师范大学, 赣州, 341000

摘要 目的: 开展对青少年离家出走问题研究, 深入了解其现状及原因, 为他们的情感发展和健康成长提供理论支撑。**方法:** 本文采取深度访谈法和观察法等调查与搜集资料的方法, 对赣州市某中学的 16 名离家出走青少年及其家庭等进行无结构式访谈, 了解他们离家出走的现状、家庭相处模式以及童年经历等, 运用依恋理论分析离家出走的青少年的依恋类型以及青少年离家出走是如何造成的。**结果:** 研究得出: 具有离家出走行为的青少年更多地表现为强迫性自立型以及夸大型。父母作为青少年的初级依恋对象, 由于亲子分离过早、亲子沟通不足, 造成父母家庭角色与责任的缺位, 难以建立和维持良好的亲子关系, 影响依恋关系的建立。**结论:** 总结与反思依恋理论微观视角下对青少年离家出走问题研究的不足, 从依恋理论的视角对此问题的解决提出一些建议。

A study on the problem of teenagers running away from home ——from the perspective of attachment theory

HuangZiqin¹, GanLin²

Gannan Normal College, South Shiyuan Road, Rongjiang New District, Ganzhou

Abstract: **Objective:** To study the problem of teenagers running away from home, deeply understand its current situation and causes, and provide theoretical support for their emotional development and healthy growth. **Methods:** using the methods of in-depth interview and observation, this paper conducted unstructured interviews with 16 runaway teenagers and their families in a middle school in Ganzhou to understand their current situation, family relationship mode and childhood experience, The attachment theory is used to analyze the attachment types of teenagers who run away from home and how teenagers run away from home. **Results:** the study showed that adolescents with runaway behavior were more compulsive self-reliance and exaggeration. Parents, as the primary attachment objects of teenagers, due to premature parent-child separation and insufficient parent-child communication, resulting in the absence of parents' family roles and responsibilities, it is difficult to establish and maintain a good parent-child relationship, which affects the establishment of attachment relationship. **Conclusion:** summarize and reflect on the shortcomings of the research on the problem of teenagers running away from home from the micro perspective of attachment theory, and put forward some suggestions to solve this problem from the perspective of attachment theory.

Keywords: running away from home, teenagers, attachment theory

基于广义非线性潜变量模型的民航空乘人员安全绩效建模 ——兼与传统潜变量模型对比分析

刘博¹² 韩越³ 游旭群¹² (通讯作者)

1 陕西师范大学心理学院, 西安, 710062

2 陕西省行为与认知神经科学重点实验室, 西安, 710062, youxuqun@snnu.edu.cn

3 浙江省绍兴市诸暨海亮外国语学校, 绍兴, 311800

摘 要 安全是民航产业发展的重要基础和前提。作为民航安全最直接、最重要的组成部分, 客舱安全是确保飞行安全的重要基础。空乘人员作为客舱执勤的机组人员, 职责主要在于维护飞行安全, 其工作行为和安全绩效水平对于客舱安全的实现具有重要意义。空乘人员的安全绩效不仅具有个体差异, 还会受到情境因素的影响。因此, 本研究旨在以人格特质为研究取向, 探讨主动性人格与空乘人员安全绩效的关系, 并考查安全氛围在其中的作用。目前, 相关研究一般以变量间的线性协方差结构为假定前提, 采用传统潜变量等方法进行数据分析和处理。然而, 现实中各变量间可能存在复杂的非线性相关。因此, 采用传统潜变量分析方法可能会在一定程度上降低模型的可靠性与准确性。而广义潜变量模型是一种比传统潜变量模型更加“灵活”的模型, 其中允许潜变量非线性项的存在。鉴于这一优势, 本研究试图以民航空乘人员安全绩效为例, 对比广义非线性潜变量模型和传统潜变量模型的优劣。本研究以通过主动性人格量表、安全氛围量表和安全绩效量表对中国南方航空公司的 650 名空乘人员进行的调查结果为例, 构建了主动性人格、安全氛围与空乘人员安全绩效之间关系的传统调节潜变量模型。作为对比, 本研究分别使用多项式函数和 logit 函数作为广义潜变量模型的非线性连接函数, 构建了非线性的调节广义潜变量模型。采用对数似然函数值、赤池信息量准则(AIC)、贝叶斯信息量准则(BIC)、似然比检验和二维边际的拟合效果作为模型拟合效果的检验指标。研究结果显示, 模型的拟合效果为三次多项式函数的广义潜变量模型 > logit 广义潜变量模型 > 二次多项式函数的广义潜变量模型 > 传统调节潜变量模型。相信随着非线性潜变量模型的深入研究, 通过对潜变量之间非线性效应的深入分析, 这类模型可为制定提高民航空乘人员安全绩效的干预方案提供更加可靠的数据支撑。

关键词 安全绩效, 广义潜变量模型, 非线性, 空乘人员

Modeling the Safety Performance of Civil Aviation Flight Attendants Based on Generalized Nonlinear Latent Variable Model ——Comparative analysis with traditional latent variable model

Bo Liu^{1,2}, Yue Han³, Xuqun You^{1,2}

¹ School of Psychology, Shaanxi Normal University, Xi'an, Shaanxi 710062, China

² Shaanxi Key Laboratory of Behavior and Cognitive Neuroscience, Xi'an, Shaanxi 710062, China

³ Zhejiang Hailiang Foreign Language School, Shaoxing City, Zhejiang Province, Shaoxing, 311800

Abstract: Safety is an important foundation and prerequisite for the development of the civil aviation industry. As the most direct and important part of civil aviation safety, cabin safety is an important foundation for ensuring flight safety. As the cabin crew on duty, flight attendants are mainly responsible for maintaining flight safety. Their work behavior and safety performance are of great significance to the realization of cabin safety. The safety performance of flight attendants not only has individual differences, but is also affected by situational factors. Therefore, this research aims to take the personality traits as the research orientation, explore the relationship between proactive personality and flight attendant safety performance, and examine the role of safety climate in it. At present, related research generally assumes the linear covariance structure between variables, and uses methods such as traditional latent variables for data analysis and processing. However, in reality, there may be complex nonlinear correlations between variables. Therefore, the use of traditional latent variable analysis methods may reduce the reliability and accuracy of the model. In contrast, the generalized latent variable model is a more "flexible" model than the traditional latent variable model, which allows the existence of non-linear terms of the latent variable. In view of this advantage, this research attempts to take the safety performance of flight attendant as an example to compare the advantages and disadvantages of the generalized nonlinear latent variable model and the traditional latent variable model. This study takes the survey results of 650 flight attendants of China Southern Airlines through the Proactive Personality Scale, Safety Climate Scale and Safety Performance Scale as examples, and constructs a relationship between the proactive personality, safety atmosphere and flight attendant safety performance using the traditional moderating latent variable model. As a comparison, this study used polynomial function and logit function as the nonlinear connection function of the generalized latent variable model, and constructed a nonlinear adjusted generalized latent variable model. The log-likelihood function value, Akaike information criterion (AIC), Bayesian information criterion (BIC), likelihood ratio test and two-dimensional marginal fitting effect are used as the test indicators of model fitting effect. The research results show that the fitting effect of the model is generalized latent variable model of cubic polynomial function> generalized latent variable model of logit> generalized latent variable model of quadratic polynomial function> traditional regulated latent variable model. It is believed that with the in-depth study of nonlinear latent variable models and the in-depth analysis of nonlinear effects between latent variables, such models can provide more reliable data support for the formulation of intervention programs to improve the safety performance of civil aviation flight attendants.

结构方程模型在心理学研究中的应用(2000-2020) ——基于 CiteSpace 的可视化分析

谢晋艳 温忠麟

华南师范大学心理学院, jinyanxie@m.scnu.edu.cn

摘要 本文以 Web of Science 核心合集数据库为数据源, 采用 CiteSpace 软件, 对 2000 年-2020 年之间将结构方程模型用于心理学研究中的 12268 篇文献进行了信息可视化分析, 绘制了相应的知识图谱。结果表明:

(1) 将结构方程模型应用于心理学研究中的文献数量随着年份变化呈现快速增长的趋势,大量文献出现于2005年之后。(2) Morin、Marsh 和 Neumann 是统计范围内发文数量最多的三位作者,但从整体来看大多数研究者之间的合作较少。(3) 该领域的发文量排名前5的国家是美国(4941)、中国(1153)、英国(1003)、澳大利亚(900)和加拿大(791),而中国的发文量与美国相比还有较大的差距;并且中国的中心性与其余四个国家相比也较低。(4) 在结构方程模型应用于心理学研究的知识演进过程中,有11篇文献起到了关键作用,是重要的知识基础;被引量高的文献基本都是结构方程模型方法的专著和期刊文章,Principles and practice of structural equation modelling(3rd ed.) (即结构方程建模的原理与实践·第三版)是其中最为重要的著作。另外,有5篇有较高中心性的文献是关键节点,在该领域的发展中起到了纽带的作用。(5) 从研究内容来看,structural equation modeling 出现频次最高,depression、validity、mental health、fit index 等词汇也出现次数较多。该领域的研究热点主要包括结构方程模型及相关内容的研究、结构方程模型在异常心理学中的应用和结构方程模型在其他心理学研究中的应用。结构方程模型在心理学研究中的应用越来越广泛,本文的研究结果对于深入了解结构方程模型应用于心理学研究中的知识基础和演化关系具有一定价值,也期望能为相应的研究与实践提供更多参考。

Application of Structural Equation Modeling in Psychological Research (2000-2020)——Visual analysis based on CiteSpace

Xie Jinyan, Wen Zhonglin

School of Psychology, South China Normal University, jinyanxie@m.scnu.edu.cn

Abstract: Using the core collection database of Web of Science as the data source and CiteSpace software, the study utilized information visualization analysis on 12,268 articles that applied structural equation modeling to psychological research between 2000 and 2020, and drew corresponding knowledge atlas. Results: (1) The number of literatures that adapted structural equation modeling to psychological research showed a trend of rapid increase with the change of years, and a multitude of literatures appeared after 2005. (2) Morin, Marsh, and Neumann were the three authors with the largest number of articles, but overall, there was less collaboration among most researchers. (3) The United States (4941), China (1153), The United Kingdom (1003), Australia (900) and Canada (791) ranked the top 5 countries in terms of the number of published papers in this field, while there was still a large gap between China and the United States in terms of the number of published articles; the centrality of China was low compared with the other four countries at the same time. (4) In the process of knowledge evolution of the application of structural equation model that applied in psychological research, 11 articles played a key role, and these were an important knowledge foundation. The literatures with high citation frequency were mainly monographs and journal articles on structural equation modeling, and Principles and practice of structural equation modeling (3rd Ed.) was the most important work. In addition, there were five literatures with high centrality, which were the key nodes and played a well-functioning role in the development of this field. (5) From the perspective of research content, structural equation modeling had the highest frequency, while depression, validity, mental health, and fit index were also higher frequency words. The research hotspots in this field mainly included the study of structural equation model and related contents, the application of structural equation model in abnormal psychology and the application of structural equation model in other psychology research. The application of structural equation modeling in psychological research is more and more extensive, and the results of this study are of certain value for further understanding of the knowledge base and evolutionary relationship of structural equation modeling in psychological research. Furthermore, it is also expected to provide more references for the corresponding research and practice.

摘要 统计功效是指某检验能够正确地拒绝一个错误的虚无假设的能力，常用 $1-\beta$ 表示。在实际测量中，研究者往往会通过扩大样本量来提高统计检验力，以求获得更可靠的结果。研究表明，在使用 ML 估计时，容易产生较高的不收敛和不适当解比率，参数估计存在边际偏差，衰减标准误，虚假卡方值及基于卡方的 I 型错误比率，以及非正态进一步提高基于卡方的 I 型错误的比率。尽管小样本会出现诸多问题，但过度追求样本的绝对数量意义并不大，从时间和物质成本角度出发，有必要从统计功效角度入手，考察适宜样本量。当前实验中通过统计功效考察样本量较多，已成为必不可少的一步，但在测量中还考虑较少，因此研究拟从因子模型入手，通过统计功效来考察样本量，以期能从统计功效角度进一步找到适宜样本量，节省人力物力。研究采用认知失败量表，并根据作者问卷编制的因子载荷值为依据，进行蒙特卡洛模拟。根据前人研究，统计功效达到 0.8 的标准为：参数及标准误偏差不得超过 10%，对于所要分析参数的标准估计偏差不得超过 5%，覆盖率在 0.91~0.98 之间。研究考察样本量分别设置为 50、100、300、600、900、1200，模拟样本量设置为 10000，重点检验因子载荷和一阶因子间相关是否达到统计功效标准。结果表明，当样本量为 50 时，因子载荷估计偏差均 d 于 5%，一阶因子间相关估计偏差比例达到 6.09%，超过 5% 的标准，且覆盖率低于 0.91，因此未达到 0.8 的统计功效；当样本量为 100 时，因子载荷估计偏差均低于 5%，一阶因子间相关估计偏差比例在 0.25%~4.42% 之间，均小于 5%，且覆盖率在 0.93~0.95 之间，均高于 0.91。而其余样本量均达到标准。综上所述，在使用认知失败量表进行施测时，样本量达到 100 即达到了统计功效，可以进行有效分析。后续研究可以考察多个变量时的样本量，以及进一步扩展到结构方程模型中，统计功效和样本量的应用。

Application of Statistical Power in Factor Model

Ma Peng, Zhao Shouying

School of Psychology, Guizhou Normal University, Guiyang, 550025

Abstract: Statistical power is the ability which can test to correctly reject a false null hypothesis, often expressed as $1-\beta$. In the actual statistical measurement, researchers often improve statistical power by expanding the simple size in order to obtain more reliable results. Studies shows that when ML estimation is used, it is easy to generate many problems, such as: high rates of nonconvergence and inappropriate solution, marginal bias of parameter estimation, attenuation error, false chi-square value and type I error rate based on chi-square, and non-normal conditions further increase the rate of type I error based on chi-square. Although there are many problems in small sample, it is not significant to over-pursue the absolute number of samples. From the perspective of time and material cost, it's necessary to investigate the appropriate sample size from statistical power. In current experience, it has become an essential step to investigate the statistical power, but it is still less considered in measurement. Therefore, the study intends to start from the factor model and investigate the sample size through the statistical power, in order to further find the appropriate sample size and save manpower and material resources. The cognitive failure scale was used in this study, and Monte Carlo simulation was conducted based on the factor loading values developed by author's questionnaire. According to previous study, the criteria for statistical power to reach 0.8: the deviation of parameters and standard error is no more than 10%; the deviation of standard estimation of the parameters to be analyzed is no more than 5%; and then the coverage rate is between 0.91 and 0.98. The study investigated the sample size of 50, 100, 300, 600, 900, 1200, and the simulated sample size of 10000, and focus on testing whether the factor loading and the correlation between the first-factor reached the statistical power standard. The results show that when sample size is 50, the error of factor loading estimation is less than 5%, and the error ratio of correlation estimation among first-order factors reached 6.09%, importantly, the coverage rate was less than 0.91. Therefore, it didn't reach the statistical power of 0.8. When sample size is 100, the error of factor loading estimation was all lower than 5%, the error ratio of correlation among first-order factors ranged from 0.25% to 4.42%, and the coverage rate ranged from

0.93 to 0.95. In the same way, the rest of samples were up to standard. In conclusion, the statistical power is achieved when the sample size reaches 100, which indicates that the cognitive failure scale can be used for effective analysis. Subsequent studies can examine the sample size in the case of multiple variables, and future extend to structural equation models, and the application of statistical power.

正念注意意识量表在中国吸毒人群中的心理测量学特征

蒙秋芬¹ 陈维² (通讯作者)

1 贵州师范大学心理学院, 贵阳, 550025

2 贵州师范大学心理大数据研究中心, 贵阳, 550025, chenweipsy@yeah.net

摘要 目的: 检验正念注意意识量表 (Mindful Attention Awareness Scale, MAAS) 在中国吸毒人群中的适用性和推广性。该量表由 Brown 等人于 2003 年研发, 可用于评估无冥想经验个体的正念水平。MAAS 在各个国家和地区的使用中表现出了混乱的心理测量学结果, 且在国内针对吸毒群体的研究中应用并不广泛, 因而有必要对其中文译本的测量学性能进行验证, 扩展关于原版及其简化 MAAS 的现有结构认识。**方法:** 采用正念注意意识量表 (MAAS)、罗森伯格自尊量表 (RSES) 和 10 项反刍思维量表 (RRS-10) 对贵州省某戒毒中心 437 名吸毒人员进行调查。其中 203 名在 3 个月后再次填写 MAAS 量表, 以评估量表的重测信度。运用验证性因子分析 (CFA) 考察以往研究中提出的九个有争议的模式以确定 MAAS 的最佳因子结构。**结果:** CFA 的各项拟合指标结果表明 MAAS-5 的单因子结构表现最好 ($\chi^2/df=1.32<3$, CFI=0.997, TLI=0.995, RMSEA=0.027, SRMR=0.015; 且每个题项因子负荷均大于 0.4)。信度检验结果表明, 内部一致性系数, 平均项目相关值及重测信度均令人满意 (Cronbach's $\alpha=0.79$, MIC=0.43, $r>0.3$, $p<0.001$)。对于效度, 本研究计算了 MAAS-5 与两个外部构念 (自尊、反刍) 之间的相关性 (均 $r>0.3$, $p<0.001$), 表明该量表具有良好的收敛和区分效度。**结论:** 目前的研究结果证实, 5 项正念注意意识量表 (MAAS-5) 在中国吸毒人员中具有良好的信度和效度, 可以有效测量他们的正念水平。

What about the Mindful Attention Awareness Scale and the shortened versions among Chinese who use drug

Meng qiufen¹, Chen wei²

1 School of Psychology Department, Guizhou Normal University, Guiyang 550025

2 Psychology Big Data Research Center, Guizhou Normal University, Guiyang, 550025

Abstract: Considering that different versions of the Mindful Attention Awareness Scale (MAAS) show confused results in psychometric characteristics. Based on the clinical importance of mindfulness to Chinese who use drug (CWUD), the purpose of this study is to investigate the reliability and validity of MAAS in CWUD, and to expand the existing understanding of the original and simplified scales. The MAAS, Rosenberg Self-esteem Scale (RSES) and 10-Item Ruminative Response Scale (RRS-10) were used to investigate 437 CWUD (57.0% female, mean age 39.81, SD = 9.05) in a drug treatment center in Guizhou Province, China. Among them, 203 students received the MAAS assessment again after 3 months to evaluate the test-retest reliability of the scale. Confirmatory factor analysis (CFA) was used to investigate nine the controversial models proposed in previous studies to determine the best factor structure of MAAS. The results of each fitting index showed that the single factor structure of MAAS-5 was the best ($\chi^2/df = 1.32 < 3$, CFI = .997, TLI = .995, RMSEA = .027, SRMR = .015; And the factor load of each item is greater than .4). The reliability coefficient was also satisfactory (Cronbach's $\alpha = .79$, MIC = .43, $r > .3$, $p < .001$). For validity, this study calculated the correlation between MAAS-5 and two external constructs (self-esteem, rumination), which showed that the scale had good convergence and discriminant validity (all $r > .3$, $ps < .001$). The results confirm that the five item MAAS (MAAS-5) has good reliability and validity in CWUD, and can effectively measure their

mindfulness level.

Keywords: Mindfulness, MAAS, CWUD, reliability, validity

不同文化背景下的人群对社会期待的心理差异 ——基于 ISSP 环境关心量表在台湾地区和英国的调查数据

罗 伟^{1,2} 胡利安²

1 湖南大学学工部, 长沙, 410082, 通讯作者 E-mail: luowei1994@hnu.edu.cn

2 南京大学社会学院心理系, 南京, 210046

摘 要 背景: 国际社会调查项目 (International Social Survey Programme, ISSP) 是一个跨国合作调查项目, 它通过问卷的形式, 调查各个地区居民对社会公平、健康、环境等主题的态度。在全球环境治理的大背景下, 社会各界都在倡导环保观念, 加强人们对环境问题的意识程度。而不同文化导向下的群体对于社会期待的应答是存在差异的^[1]。以往研究从 ISSP 中提取了相应条目作为环境关心量表 (EC)^[2,3], 一般来说, EC 包含两个子量表 (见表 1): 人们对环保观点的一般性支持程度 (共 6 个条目); 人们对特定环境问题的意识程度 (共 5 个条目)。以往研究表明, 在个人主义和较宽松的文化背景下, 环境关心和环保行为的关系较强^[3], 即环境关心在个人主义文化背景下才能较好的预估环境保护行为^[4]。本研究旨在探讨集体与个人主义背景下, 在紧密与宽松的文化氛围中的人群对社会期待的心理反应。方法: 选取英国 (个人主义, 宽松氛围) 和台湾 (集体主义, 紧密氛围) 两个地区的调查结果作为研究对象。依据项目反应理论 (IRT), 对环境关心量表中的 11 个条目得分情况进行项目功能差异检验。其中, 对意识程度部分的 5 个条目进行反向计分, 处理后, 得分越高, 说明应答者对环境问题的意识程度更强。采用等级反应模型, 分析环境关心量表在两个地区中的测量是否具有恒等性。结果: (1) 环保观念的六个条目 (图 1): 每个条目在台湾地区样本中的区分度均小于英国, 其中 5 个条目的区分度在 0.65 以下, 且选项集中于 2 和 4, 各条目反映的信息量都低于 0.5。而在英国样本中, 除了 9c 这一条目的信息量和区分度较低, 其余条目信息量均在 0.5 及以上, 区分度在 1.2 以上。(2) 环境危险意识的五个条目 (图 2): 在台湾地区的样本中, 等级反应模型的第一阈值极低 (小于-3), 即只有意识非常低的台湾居民才可能选“根本没有危险”这一选项。结论: 总体而言, 该量表在英国有更好的区分度, 能够反应更多的信息量。在台湾地区, 问卷选项的设置没有能够涵盖环保观念和环境危险意识特质极低 (在正态分布曲线-3 以外) 的人群, 导致“根本没有危险”这一选项形同虚设。这一分析再次说明集体主义文化背景下的人, 更倾向于选择符合社会期待的选项。因此, 在全球性的研究中, 在跨文化的比较中, 我们不仅需要关注统计结果, 还应思考同一量表在不同地区的应用是否具有测量恒等性, 并依据不同地区的人群心理特质制定合适的调查问卷。

Psychological differences towards social expectations among people from different cultural backgrounds——Survey data from Taiwan and the UK on an ISSP-based measure of environmental concern

LuoWei^{1,2}, Julian Rodriguez-Casallas²

1 Hunan university, Changsha, 410082, E-mail: luowei1994@hnu.edu.cn

2 Nanjing university, Nanjing, 210046

Abstract: Background: The International Social Survey Programme (ISSP) is a cross-national cooperative survey project. It surveys people's attitudes towards social equity, health, environment and other topics through questionnaire research. In the context of global environmental governance, all areas of society are advocating for environmental protection and strengthening people's awareness of environmental issues. People with different cultural orientations show differences regarding socially desirable responding in self-report measures [1]. Scholars have adopted items from the ISSP Environment module's questionnaire to develop measures of environmental concern [2,3]. A distinction has been made between two dimensions of EC and measured employing two subscales (see Table 1):

People's general support for environmental protection (pro-environmental views [PEV], six items) and people's awareness of specific environmental issues (environmental awareness [EA], five items). Previous studies have shown that relationship between environmental attitudes and pro-environmental behavior is stronger in individualist and loose cultures [3], that is, environmental concern is a better predictor of pro-environmental behavior in these cultural contexts [4]. Under the distinction of cultural individualism-collectivism and tightness-looseness, this study aimed to explore the psychological response to social expectations of individuals from different cultural contexts. Methods: The survey results in the UK (an individualist and loose culture) and Taiwan (a collectivist and tight culture) were selected as the research objects. An analysis of the 11 items of both subscales to measure EC (PEV and EA) was carried out using item response theory (IRT). The five items of EA were originally reverse-coded, and thus they were recoded so that higher scores indicated stronger awareness of the environmental problems. The IRT graded response model was used to study the extent to which the functioning of the measurement of EC was identical in the two regions. Results: (1) PEV (Figure 1): In Taiwan, the level of discrimination of all items was less than that in the UK, the discrimination of five items was less than 0.65, the participants' responses focused on 2 and 4, and the information of each item was less than 0.5. In Britain, except for item 9c, the information of the other items were 0.5 and above, and the discrimination was above 1.2. (2) EA (Figure 2): In Taiwan, the first threshold of the graded response model was very low (less than -3), that is, only those with very low awareness may choose the option of "not dangerous at all". Conclusion: In general, the scale had better discrimination and provided more information for the UK. In Taiwan, the questionnaire options did not cover the respondents with very low environmental attitudes and risk awareness (outside the normal distribution curve -3), and respondents were very unlikely to endorse the option "not dangerous at all". Thus, this may indicate that people from collectivist cultures would choose response options that meet social expectations. Consequently, when conducting global research and making cross-cultural comparisons, we should not only pay attention to the statistical results but also consider whether the same measure performs similarly across different regions, and also formulate appropriate questionnaires for the different regions under investigation.

我国职业兴趣测验的开发与应用

李嘉雯¹ 张逸斐¹ 陈海平¹ (通讯作者)

¹ 北京师范大学心理学部, 北京, 100875, E-mail: chenhaiping@bnu.edu.cn

摘要 职业兴趣是兴趣在职业选择活动中的表现, 职业兴趣测验是一种对职业兴趣进行理性分析和应用探讨的有效方式, 讨论职业兴趣测验不仅对个人学习工作和事业发展具有积极意义, 而且对高校人才培养和社会人力资源管理有着显著的应用价值。本文从主要应用场景与需求、国内常见测评工具、现有工具存在的问题、开发需求与未来应用趋势四个方面讨论了我国职业兴趣测验的开发与应用。在应用场景与需求方面, 职业兴趣测验主要应用于高中自主选科、高考志愿填报、职业生涯规划、入岗就职和人力资源管理等多种场景。在国内常见测评工具方面, 本文以职业兴趣测验的发展进程为线索, 从心理测量角度对国内常见测量工具进行整理和概括。国内职业兴趣测验的研究开始较晚, 20 世纪 90 年代前以引进和修订国外 Holland 等人的职业兴趣测验为主, 意识到文化适应性问题后, 后期以研发本土化测验工具为主。现有工具存在的问题方面, 本文提出了信效度检验问题、测验编制问题、测验对象与用途问题、质与量的权衡问题。在开发需求与未来应用趋势方面, 本文独创性地提出职业兴趣测验的开发与应用需顺应革新趋势、细分趋势、综合趋势与毕生发展趋势。革新趋势是指以适应时代变化为目的而进行职业兴趣种类的横向拓展, 如结合人力资源社会保障部于 2020 年发布的 9 个新职业, 以更迭职业兴趣的维度; 细分趋势是指为已有特定职业兴趣的个体进一步提供更细致的职业内分类; 综合趋势是指将职业兴趣量表与职业价值观、职业性向、职业性格、职业自我效能感等其他职业量表结合, 以形成完整的、综合的职业评估体系; 毕生发展趋势是指构建出一套纵向职业兴趣测评工具, 包含中学生版、大学生版、求职版等纵向系列, 使用连贯性较强且统一的术语进行描述与预测, 以满足随年龄变化前后一致的测量需求。

The Development and Application of Vocational Interest Assessment in China

Jiawen Li¹, Yifei Zhang¹, and Haiping Chen^{1*}

¹ Faculty of Psychology Beijing Normal University, Beijing, China

Abstract: Vocational interest is the expression of interest in vocational choice, and vocational interest assessment is an effective way to rationally analyze and apply vocational interest. Vocational interest assessment not only has the positive significance to the individual study and career development, but also has the remarkable application values to the talent cultivation and the social management. This paper discusses the development and application of vocational interest assessment in China from four aspects: main application scenarios, common assessment tools, problems of current tools, and future trends of assessment. Vocational interest assessment is applied in many scenarios, such as independent subject selection in high school, college major selection, career planning, and human resource management. Based on the development process of vocational interest assessment, this paper summarizes the common assessment tools in China from the perspective of psychological measurement. The original research on vocational interest assessment in China started late. Before the 1990s, Chinese researchers mainly introduced and revised the vocational interest scales of Holland. After realizing the problem of cultural adaptability, in the later stage, Chinese researchers developed domestic vocational interest scales. With regard to the problems of existing instruments, this paper puts forward the problems of reliability and validity tests, test construction, test objects and usage, and the tradeoff between quality and quantity. In terms of future trends, this paper proposes that the development and application of vocational interest assessment should follow the trends of innovation, subdivision, integration and lifelong development. The innovation trend refers to the horizontal expansion of vocational interest categories for the purpose of adapting to the changes of times. For example, utilizing from the nine new occupations released by the Ministry of Human Resources and Social Security in 2020, the dimension of vocational interest should be changed. The trend of subdivision refers to the further provision of more detailed intra-vocational classification for individuals with specific vocational interests. Integration trend represents the combination of vocational interest assessment with other vocational assessments like vocational values, vocational aptitudes, vocational personality and vocational self-efficacy to form a comprehensive vocational assessment system. Lifelong development trend refers to the establishment of a set of vocational interest assessment tools, including time longitudinal series such as middle school student edition, college student edition, job application edition and other longitudinal editions. All editions should use consistent and unified terms to describe and predict vocational interest, in order to meet the needs of consistent assessment with age.

简式父母教养方式量表（PS-7）在中国幼儿父母群体的信效度检验和测量不变性

梁雨心^{1,2} 高荣芬^{1,2} 陈维^{1,2}（通讯作者）

¹ 贵州师范大学心理学院，贵阳，550025

² 贵州师范大学心理大数据研究中心，贵阳，550025, chenweihb@yeah.net

摘要 目的:检验简式父母教养方式量表（The Brief Parenting Scale, PS-7）在中国幼儿父母群体中的适用性。PS-7 是由 Sai-fu Fung 等人在原版 30 题量表的基础上，进行简化研发的一种用于测量父母教养方式的自我报告工具，分为松懈和过度反应两个维度，共 7 个条目。量表采用 Likert7 级计分，得分越高表明家长越倾向于采用消极的教养方式。该量表在香港青少年父母群体中开发施测，与现有各种版本的父母教养方式量表相比，具有更好的因子结构和心理测量学特性。但该研究的结果目前是否能在中国各地得到复制仍不清楚，因此很有必要探讨该量表在中国其他群体的测量学特性。**方法:**用简式父母教养方式量表（PS-7）、父母自我效能感量表（PASEC-6）和焦虑抑郁压力量表（DASS-21）对 567 名来自贵州省的幼儿父母进行调查，用验证性因

素分析、信度分析、相关分析和测量不变性等方法探讨 PS-7 在中国幼儿父母群体中的适用性。**结果：**（1）依据验证性因素分析的模型检验指数，PS-7 具有稳定的双因子结构（CFI=0.97；TLI=0.95，RMSEA=0.05）。（2）PS-7 被证明具有良好的信度（Cronbach $\alpha > 0.70$ ）。（3）另外 PS-7 与 PASEC-6 和 DASS-21 有着较好的效标关联效度，其中与父母自我效能感呈显著负相关（ $r = 0.21, p < 0.001$ ），与焦虑抑郁压力呈显著正相关（ $r = 0.39, p < 0.001$ ）。（4）多组验证性因素分析结果显示，相邻嵌套模型的 Δ CFI、 Δ TLI 和 Δ RMSEA 均小于 0.01，证明严格的测量不变性在父亲和母亲之间成立。**结论：**简式父母教养方式量表在中国幼儿父母群体中具有良好的信效度和性别测量不变性，可以有效测量个体的教养方式水平。

Reliability and validity test and measurement invariance of brief Parenting Scale (PS-7) for the parents of children

LIANG Yuxin^{1,2}, GAO Rongfen^{1,2}, CHEN Wei^{1,2}

1 School of Psychology, Guizhou Normal University, Guiyang, 550025

2 Psychology Big Research Center, Guizhou Normal University, Guiyang, 550025

Abstract: Objective: To test the applicability of brief parenting scale (PS-7) for the Chinese parents of children. PS-7 is a self-report tool developed by Sai-Fu Fung et al. on the basis of the original 30-item scale, which can be divided into two dimensions of laxness and overreactivity, with a total of 7 items. Responses are rated on a 7-point Likert-type scale, and the higher the score is, the more inclined parents are to adopt negative parenting styles. This scale has been developed and tested in parents of Hong Kong adolescents and has better factor structure and psychometric characteristics compared with existing versions of parental rearing style scales. However, it is not clear whether the results of this study can be replicated in China, so it is necessary to explore the measurement characteristics of this scale in other groups in China. **Methods:** The brief Parenting Scale (PS-7), Parental Self-Efficacy Scale (PASEC-6) and Depression Anxiety Stress Scale (DASS-21) were used to investigate 567 parents of children from Guizhou province. The applicability of PS-7 for the parents of children was investigated by confirmatory factor analysis, reliability analysis, correlation analysis and measurement invariance. **Results:** (1) According to the model test index of confirmatory factor analysis, the PS-7 have a stable two-factor structure (CFI=0.970; TLI=0.951, RMSEA=0.052). (2) PS-7 was proved to have good reliability (Cronbach $\alpha > 0.70$). (3) In addition, the PS-7 have better criterion correlation validity with PASEC-6 and DASS-21, was significantly negatively correlated with parental self-efficacy ($r = 0.211, p < 0.01$), significantly positive correlation with depression anxiety stress ($r = 0.386, p < 0.01$). (4) The results of multi-group confirmatory factor analysis showed that the values of Δ CFI, Δ TLI and Δ RMSEA in adjacent nested models were all less than 0.01, which proved that the strict measurement invariance was established between the father and the mother. **Conclusion:** The PS-7 has good reliability and validity and gender measurement invariance among Chinese parents of children, which can effectively measure the level of individual parenting style.

基于 CESD 纵向等值性检验的应激与抑郁交叉滞后研究

刘锦钰¹ 杨楷翎² 钟明天¹（通讯作者）

1 华南师范大学心理学院，心理应用研究中心，心理健康与认知科学广东重点实验室，广东 2 省突发事件心理援助应急技术研究中心，广州 510631，ztomorrow@126.com

摘要 目的：考察流调中心抑郁量表（Center for Epidemiologic Studies Depression, CESD）在不同时间下的测量等值性，并探究应激与抑郁的因果关系。**方法：**854 名大学生（236 名男性；618 名女性）完成评估抑郁水平的 CESD 和应激水平的日常社会和学业事件量表（General Social and Academic Hassles Scale, GSAHS），其中有 412 名大学生（97 名男性；315 名女性）间隔 4 周后第二次完成 CESD 和 GSAHS。采用验证性因素分

析检验两个时间点（T1、T2）的 CESD 四因子模型与数据的匹配程度以及纵向等值性。对 T1、T2 纵向数据采用交叉滞后分析，探究应激与抑郁之间的相互作用。**结果：**单组验证性因素分析结果表明，CESD 四因子结构在大学生样本中与数据拟合良好[初测 T1 样本：卡方与自由度比值（ χ^2/df ）=3.68、相对拟合指数（Comparative Fit Index, CFI）=0.92、塔克尔勒威斯指数(Tucker-Lewis index,TLI)=0.91、近似均方根误差(Root Mean Square Error of Approximation, RSMEA)=0.06、标准化均方根残差(Standardized Root Mean-square Residual, SRMR)=0.04；再测 T2 样本： χ^2/df =2.39、CFI=0.92、TLI=0.91、RSMEA=0.06、SRMR=0.05]。多组验证性因素分析结果显示，在形态等值检验中， χ^2/df =2.79、CFI=0.93、TLI=0.92、RSMEA=0.04、SRMR=0.05，每一步等值检验之间结果比较 ΔCFI 、 ΔTLI 均小于 0.01，且四个等值模型的 CFI、TLI 均大于 0.9，RMSEA 在 0.036~0.038 之间，SRMR 在 0.040~0.042 之间，即各模型的拟合指数均达到良好标准。交叉滞后结果显示，抑郁与应激在横向水平上具有一定的稳定性(T1: $r=0.35, p<0.001$, T2: $r=0.44, p<0.001$)，T1 的应激对 T2 的抑郁 ($\beta=0.93, p<0.001$) 和 T2 的应激 ($\beta=0.99, p<0.001$) 均有正向显著的预测作用，T1 的抑郁对 T2 的抑郁有显著的预测作用 ($\beta=0.13, p<0.05$)，但 T1 的抑郁对 T2 的应激无显著的预测作用。**结论：**流调中心抑郁量表具有跨时间的测量等值性，可用其得分变化来反映个体的抑郁水平变化情况。应激与抑郁之间存在单向预测关系，应激水平是导致抑郁的原因之一。

Cross-lagged analysis of stress and depression based on longitudinal measurement invariance of CESD

Liu Jinyu¹, Yang Kailing², Zhong Mingtian¹(correspondence)

¹Center for Studies of Psychological Application, School of Psychology, South China Normal University, Guangdong Key Laboratory of Mental Health and Cognitive Science, Guangzhou Center of Mental Assistance and Contingency Technique for Emergency, Guangzhou 510631, PR China, ztomorrow@126.com

Abstract: Objective: To examine the Longitudinal measurement invariance of the Center for Epidemiologic Studies Depression(CESD) and the casual relationship between stress and depression. **Methods:** A total of 854 college students (Men=236, Women=618) completed the CESD and General Social and Academic Hassles Scale (GSAHS), among which 412 students (Men=97,Women=315) completed the CESD and GSAHS twice with 4-week interval.The confirmatory factor analyses were conducted to validate the four-factor structure of CESD and test its longitudinal measurement invariance. Cross-lagged analysis was used for T1 and T2 longitudinal data to explore the interaction between stress and depression. **Results:** The results of single group confirmatory factor analysis demonstrated that the four-factor model of CESD fit the data reasonably[Time 1: χ^2/df =3.68, Comparative Fit Index(CFI)=0.92,Tucker-Lewis index(TLI)=0.91,Root Mean Square Error of Approximation (RSMEA) =0.06, Standardized Root Mean-square Residual (RMR)=0.04. Time 2: χ^2/df =2.39、CFI=0.92、TLI=0.91、RSMEA=0.06、SRMR=0.05].The multi-group confirmatory factor analyses showed that the configural model provided evidence for configural invariance (χ^2/df =2.79, CFI=0.93, TLI=0.92, RSMEA=0.04, SRMR=0.05). Furthermore, the changes in CFI and TLI ($\Delta CFI, \Delta TLI < 0.01$) supported weak, strong and strict invariance of the CESD. The CESD demonstrated good measurement equivalence across time ,with all CFI and TLI greater than 0.9, RMSEA ranging from 0.036 to 0.038 and SRMR ranging from 0.040 to 0.042. The Cross-lagged analysis results showed that stress and depression were stable across time (T1: $r=0.35, p<0.001$, T2: $r=0.44, p<0.001$). Stress at T1 positively predicted depression ($\beta=0.93, p<0.001$) and stress($\beta=0.99, p<0.001$) at T2. Depression at T1 had a significant effect on depression at T2 ($\beta=0.13, p<0.05$), but couldn't predict stress at T2 significantly. **Conclusion:** The Center for Epidemiologic Studies Depression has longitudinal measurement invariance. There is a causal relationship between stress and depression, with stress predicting depression unidirectionally.

摘要 变点分析法(Change Point Analysis, CPA)是检测过程数据中异常数据的常用方法,近年来引入心理与教育测量领域,为测验人员了解考生的作答行为提供了一个新的视角。和其他方法相比,CPA可分别从考生水平和项目水平出发,准确地检测和标记出考生的异常反应行为和异常试题。反应时数据是测验数据的其中一种,由于它同时包含考生能力信息和项目信息,对于提高考生能力估计的精度与测验设计的优质性有很大的帮助。随着计算机测验与在线评估的普及,反应时数据的可用性也逐渐提升。因此,本研究以加速作答反应为例,阐述如何基于反应时数据、使用CPA检测测验中的异常反应行为。为模拟考生出现加速作答行为时的反应时数据,研究者构建了对数正态混合模型。使用似然比检验法与Wald检验法检测异常反应行为,通过蒙特卡洛模拟获得统计量的临界值。模拟和实证研究结果显示,两种检验方法的临界值几乎相同,不同测验长度上临界值也很接近;无论测试长短、变点的分布情况以及异常考生的比例如何,CPA方法不但能够很好的控制I类错误率,而且各条件下的检验力都在0.93以上;和基于作答数据的同类研究相比,检验力有了较大的提升,说明了反应时数据在检测异常反应研究上的优势。未来研究可结合作答数据与反应时数据共同进行检测,进一步提升CPA方法的效力。另外,CPA还可运用于其他异常反应行为和测验类型的检测。

Application of Change Point Analysis of Response Time Data to Detect Aberrant Response Behavior

Xiaoyuan Zhong, Xiaofeng Yu

School of Psychology, Jiangxi Normal University, Nanchang, Jiangxi, China

Abstract: Change Point Analysis (CPA) is a common method to detect abnormal data in the process data and introduced to psychological and educational measurement in recent years. It provides a new perspective for the test staff to understand the examinee's response behavior. Compared with other methods, CPA can accurately detect and mark the examinee's abnormal behavior and abnormal items based on the examinee's level and item level respectively. Response time data is one of the test data. Because the data contains both the information of the examinee's ability and item, it is of great help to improve the accuracy of the candidate's ability estimation and the quality of the test design. And the popularity of computer based testing (CBT) for educational tests and online data collection for psychological assessments has dramatically expanded the availability of response time data. In this paper, we propose to use CPA to detect aberrant response behavior using response time data. And take test speededness as an example to illustrate how the CPA method can be used to detect aberrant behavior using item response time data. Response time under speededness was simulated using the log-normal mixed model for response time. Two test statistics, the Likelihood Ratio Test and Wald Test, were used to detect aberrant response behaviors. The critical values of the statistics were obtained by Monte Carlo simulation. Results of simulation and empirical study show that the critical values of statistics are almost the same, and don't differ much across different test lengths. The power is above 0.93 for every condition, regardless of the length of the test, the distribution of the change point, and the percentage of test takers affected by speededness, while keeping the type-I error rate well-controlled. The power is much higher than those reported in similar studies that were based on item response data. It therefore indicates that using response time information did improve power. Future researchers can combine response data with response time data to enhance its applicability and power. The CPA can also be applied to detect other aberrant behaviors on tests with polytomous items, as well as mixed-format tests which contain both dichotomous items and polytomous items.

中文版心理需求与平衡量表在青少年群体中的信效度检验

陈甜¹ 宋意霞¹ 黄肖嘉祺¹ 吴文峰¹ (通讯作者)

贵州师范大学心理学院, 贵阳, 550000, 通讯作者 E-mail:wwfhsd@aliyun.com

摘要 以主观幸福感为框架的自我决定理论指出, 个体健康发展须满足基本心理需求: 即关系(relatedness)、能力(competence)以及自主(autonomy)三种需求。有研究发现心理需求的满足程度, 与个体的主观幸福感、孤独感、依恋类型以及自尊水平等有着密切关系。那么修订中文版心理需求与平衡量表, 一方面可以了解青少年这三种基本需求的发展现状, 另一方面可以为今后研究心理需求满足程度提供统一度量尺度。**目的:** 对中文版修订心理需求平衡测量量表(Balanced measure of psychological needs scale, BMPN)的信效度进行检验。**方法:** 采用方便取样的方式, 用中文版修订的心理需求量表(BMPN)测量 1800 名青少年, 回收有效问卷 1560 份; 以生活满意度量表(SWLS)、孤独感量表(ULS-8)和成人依恋量表(AAS)为校标, 计算校标关联效度; 并在 1 个月后进行其中 140 名进行重测。**结果:** 通过因子分析验证发现支持量表的三因素结构模型($\chi^2=346.61$ 、 $df=92$ 、 $CFI=0.90$ 、 $TLI=0.94$ 、 $RMSEA=0.06$ 、 $SRMR=0.04$); BMPN 中文版的关系、能力与自主的三个分量表的内部一致性信度分别为 0.68、0.70 和 0.70, 分半信度分别为 0.56、0.63、0.55, 重测信度分别为 0.67、0.71、0.64。BMPN 中文版的关系、能力、自主与青少年的生活满意度、亲近依赖维度之间存在显著性正相关, 而与青少年的孤独感、依恋焦虑维度存在显著性负相关。**结论:** 中文版 BMPN 具有良好的信效度, 可以作为测量我国青少年心理需求平衡程度的有效工具。

Reliability and Validity of Balanced Measure of Psychological Needs Scale in Adolescents (Chinese Version)

Chen tian¹, Song yixia¹, Huangxiao jiaqi¹, Wu wenfeng¹

1.School of Psychology Department, Guizhou Normal University, Guiyang 550000

Abstract: Self-determination theory based on subjective well-being points out that the healthy development of an individual must satisfy three basic psychological needs: relatedness, competence and autonomy. Studies have found that the degree of satisfaction of psychological needs is closely related to the individual's subjective well-being, loneliness, attachment type, and self-esteem level. Then the revision of the Chinese version of the psychological needs and balance scale can understand the development status of these three basic needs of adolescents on the one hand, and on the other hand it can provide a unified measurement scale for future research on the satisfaction degree of psychological needs. **Objective:** To test the reliability and validity of the Chinese version of the balanced measure of psychological needs scale (BMPN). **Methods:** A convenient sampling method was used to measure 1,800 adolescents with the revised Chinese version of the Psychological Needs Scale (BMPN), and 1,560 valid questionnaires were collected; Life Satisfaction Scale (SWLS), Loneliness Scale (ULS-8) and Adult Attachment Scale (AAS) served as the criteria-related validity instrument; 140 of them were retested one month later. **Results:** The three-factor structure model supporting the scale was found through factor analysis ($\chi^2=346.61$, $df=92$, $CFI=0.90$, $TLI=0.94$, $RMSEA=0.06$, $SRMR=0.04$); The internal consistency reliability of the three subscales of relatedness, competence, and autonomy of the Chinese version of BMPN are 0.68, 0.70, and 0.70 respectively, and the split-half reliability is 0.56, 0.63, and 0.55 respectively. The test reliability is 0.67, 0.71, 0.64 respectively. The relatedness, competence, and autonomy of the Chinese version of BMPN are significantly positively correlated with adolescents' life satisfaction and closeness dependence dimensions, while there are significant negative correlations with adolescents' loneliness and attachment anxiety dimensions. **Conclusion:** The Chinese version of BMPN has good reliability and validity, and can be used as an effective tool to measure the balance of the psychological needs of adolescents in China.

空间关系判断情景交互测试的有效性：行为和 fNIRS 证据

邱燕¹ 姬鸣²（通讯作者）

¹ 陕西师范大学心理学院，西安，710062

² 陕西省行为与认知科学重点实验室，西安，710062, jiming@snnu.edu.cn

摘要 空间关系判断是一种典型的视觉空间认知加工能力，它在辨认物体、引导行为以及进行空间巡航过程中发挥着重要作用。过去空间关系判断实验材料多以坐标、点和线条构成，内容单一且无空间情境。本研究旨在构建具有一定情境性和交互性的空间关系判断测试，从而提升空间关系判断测试的有效性。研究一基于传统研究范式和测试工具构建情景交互式空间关系判断测试，包括类别关系和数量关系，共 24 个试次。招募 43 名被试（男性 17 名，女性 26 名，18-25 岁），完成空间关系判断传统测试、圣巴巴拉方向感量表测试以及变形物体识别测试，以检验情景交互式测试的可靠性和有效性。研究二招募 44 名民航飞行员、17 名飞行学员以及 56 名大学生被试，采用功能性近红外光谱技术（fNIRS）揭示了空间关系判断情景交互测试激活的脑区以及在空间关系判断能力上高低能力组的脑区激活程度差异。结果表明：（1）空间关系判断情景交互测试反应时与传统测试反应时、变形物体识别反应时呈显著正相关，与方向感测试得分呈显著负相关。说明情境测试具有较好的效标关联效度、结构效度与实证效度；（2）情景测试高分组在类别任务上显著激活了顶叶，在数量任务上显著激活了顶叶与颞叶，而低分组未显著激活相关脑区；飞行员、飞行学员与大学生被试在情景测试中的类别和数量任务激活脑区均存在显著差异，说明情景交互测试具有较好的区分效度。上述结果表明，空间关系判断情景交互测试具有较好的可靠性和有效性，可以作为空间关系判断能力的评估工具。

The Effectiveness of Situational Interactive Test of Spatial Relationship Judgment: Behavioral and fNIRS Evidence

Yan Qiu¹, Ming Ji²

¹ School of Psychology, Shaanxi Normal University, Xi'an 710062, China

² Shaanxi Key Laboratory of Behavior and Cognitive Neuroscience, Xi'an, Shaanxi, 710062, China

Abstract: Spatial relationship judgment is a typical visual spatial cognitive processing ability, which plays an important role in identifying objects, guiding behaviors and space cruising. In the past, the experimental materials used to judge spatial relations were composed of coordinates, points and lines, and the content was single and there was no spatial context. The purpose of this study is to construct a situational and interactive spatial relationship judgment test to improve the effectiveness of the test. The first study was based on the traditional research paradigm and testing tools to construct situational interactive spatial relationship judgment test, including category relationship and quantity relationship. 43 subjects (17 males, 26 females, 18-25 years old) were recruited to complete the traditional test of spatial relationship judgment, the Santa Barbara Sense of Direction Scale, and the Deformation Object Identification Test to test the reliability and validity of the situational interactive test. Study 2 recruited 44 pilot, 17 pilot students and 56 college students. Functional near-infrared spectroscopy (fNIRS) was used to reveal the differences in the activation of brain regions in spatial relationship judgment scenarios and in the ability of spatial relation judgment between high and low ability groups. The results show that: (1) There is a significant positive correlation between reaction time and traditional reaction time, and response time of deformation object recognition, and a significant negative correlation with direction sense test scores. The results indicate that the situational test has good correlation validity, construct validity and empirical validity. (2) High-score group significantly activated parietal lobe on category tasks, and parietal and temporal lobes on quantity tasks, while low-score group did not activate related brain regions. There were significant differences among pilots, pilots and college students in category and quantity of task activation areas, which indicated that the situational interactive test had good discriminative validity. The above results show that the situational interactive test of spatial relationship judgment has good reliability and validity, and can be used as an evaluation tool for spatial relation judgment ability.

12 项一般健康问卷在社区老年人群中的适用性研究

宋倩^{1,2}, 刘朝霞^{1,2}, 蚁金瑶^{1,2} (通讯作者)

1 中南大学湘雅二医院医学心理研究中心, 长沙, 410011

2 中南大学医学心理研究所, 长沙, 410011, jinyaoyi@csu.edu.cn

摘要 目的: 检验 12 项一般健康问卷 (12-Item General Health Questionnaire, GHQ-12) 在社区老年人群中的适用性。**方法:** 377 名社区老年人完成了 GHQ-12、老年抑郁量表 (Geriatric Depression Scale, GDS)、状态特质焦虑问卷 (State-Trait Anxiety Inventory, STAI)、心理弹性量表 (Connor-Davidson Resilience Scale, CD-RISC) 和认知情绪调节问卷 (Cognitive Emotion Regulation Scale, CERQ) 等系列量表。采用验证性因子分析考察 GHQ-12 单因子、两因子 (社会功能不足; 抑郁/焦虑) 和三因子 (社会功能不足; 抑郁/焦虑; 丧失自信) 模型与数据的拟合程度, 采用的拟合指标为相对拟合指数 (Comparative Fit Index, CFI); 塔克-刘易斯指数 (Tucker-Lewis Index, TLI); 近似均方根误差 (Root Mean Square Error of Approximation, RMSEA); 标准化残差均方根 (Standardized Root Mean Square Residual, SRMR)。基于拟合最佳的因子模型, 采用 Cronbach's α 和条目间平均相关系数 (Mean Inter-Item Correlation, M_{IC}) 检验 GHQ-12 及各因子的内部一致性信度, 计算 GHQ-12 与 GDS、SAI、TAI、CD-RISC 得分之间的皮尔逊相关系数评估 GHQ-12 聚合效度。以 GHQ-12 得分为因变量、CERQ 得分为自变量, 采用层次线性回归分析探究在控制人口统计学变量的影响后, 认知情绪调节策略对社区老年个体心理健康水平的预测作用进一步考察 GHQ-12 的适用性。**结果:** GHQ-12 的单因子模型未达到拟合标准 (CFI=0.664, TLI=0.589, RMSEA=0.130, SRMR=0.111), 两因子 (CFI=0.934, TLI=0.918, RMSEA=0.058, SRMR=0.049) 和三因子模型 (CFI=0.949, TLI=0.933, RMSEA=0.052, SRMR=0.047) 则均拟合良好, 且相比二因子模型, 三因子模型表现更优 ($\Delta\chi^2=16.605$, $\Delta df=2$, $p<0.001$)。在三因子结构中, 社会功能不足因子条目的负荷系数为 0.45~0.62, 抑郁/焦虑因子条目的负荷系数为 0.53~0.77, 丧失自信因子条目的负荷系数为 0.63~0.76。GHQ-12 的 Cronbach's α 系数为 0.77, 各因子的 Cronbach's α 系数为 0.65~0.74, GHQ-12 的 M_{IC} 系数为 0.22, 各因子的 M_{IC} 系数为 0.31~0.48。GHQ-12 与 GDS、SAI、TAI 得分均呈显著正相关 ($r=0.57\sim0.71$), 与 CD-RISC 得分则呈显著负相关 ($r=-0.60$)。回归分析结果显示, 适应性认知情绪调节策略 ($\beta=-0.38$) 与非适应性认知情绪调节策略 ($\beta=0.48$) 均能显著预测老年个体的心理健康。灾难化 ($\beta=0.41$)、积极重评 ($\beta=-0.24$) 和接受 ($\beta=-0.15$) 三种认知情绪调节策略预测作用显著。**结论:** GHQ-12 具有良好的信效度, 适用于社区老年人群的心理评估; GHQ-12 的三因子结构可较好反映老年人群的健康状态。

2 Medical Psychological Institute, Central South University, Changsha, 410011, jinyaoyi@csu.edu.cn

Abstract: Objective: To examine the applicability of the 12-Item General Health Questionnaire (GHQ-12) in Chinese community-dwelling elderly. **Method:** A total of 377 participants completed a series of questionnaires including GHQ-12, Geriatric Depression Scale (GDS), State-Trait Anxiety Inventory (STAI), Connor-Davidson Resilience Scale (CD-RISC), and Cognitive Emotion Regulation Scale (CERQ). The Confirmatory Factor Analysis was conducted to evaluate the goodness of fit of three models of GHQ-12: one-factor, two-factor (social dysfunction, depression/anxiety), and three-factor (social dysfunction, depression/anxiety, loss of confidence), with the Comparative Fit Index (CFI), the Tucker-Lewis Index (TLI), the Root Mean Square Error of Approximation

(RMSEA), and the Standardized Root Mean Squared Residual (SRMR). Then based on the best-fitted model, Cronbach's α and M_{IC} were adopted to assess the internal consistency of GHQ-12, and the Pearson correlation coefficients between the scores of GHQ-12 and other variables (GDS, SAI, TAI, CD-RISC) were calculated to examine the convergent validity. To further test the applicability of GHQ-12, the hierarchical linear regression was applied to explore the predictive capability of cognitive emotion regulation on mental health status in the elderly. **Results:** The one-factor model failed to meet the psychometric standard (CFI=0.664, TLI=0.589, RMSEA=0.130, SRMR=0.111), while both the two-factor (CFI=0.934, TLI=0.918, RMSEA=0.058, SRMR=0.049) and three-factor (CFI=0.949, TLI=0.933, RMSEA=0.052, SRMR=0.047) models fitted the data well. Meanwhile, the three-factor model had better fit than the two-factor model ($\Delta\chi^2=16.605$, $\Delta df=2$, $p<0.001$). The factor loadings of all items of social dysfunction, depression/anxiety, and loss of confidence ranged from 0.45 to 0.62, 0.53 to 0.77, and 0.63 to 0.76, respectively. Cronbach's α was 0.77 for GHQ-12, and ranged from 0.65 to 0.74 for three factors. Meanwhile, M_{IC} was 0.22 for GHQ-12, and ranged from 0.31 to 0.48. Significantly positive correlations were observed among GHQ-12 and GDS/SAI/TAI ($r=0.57\sim0.71$), while a significantly negative correlation was found between GHQ-12 and CD-RISC ($r=-0.60$). The result of regression showed that adaptive ($\beta=-0.38$) and maladaptive ($\beta=0.48$) cognitive emotion regulation strategies significantly predicted the mental health status in elderly. There were significant predictive effects of three cognitive emotion regulation strategies on mental health status, namely catastrophizing ($\beta=0.41$), positive reappraisal ($\beta=-0.24$), and acceptance ($\beta=-0.15$). **Conclusion:** With good reliability and validity, the three-factor GHQ-12 has good applicability in assessing the mental health status in Chinese community-dwelling elderly.

节律类型与倒班工人抑郁的关系： 睡眠障碍的中介作用和感知社会支持的调节作用

李志鹏¹ 石绪亮¹（通讯作者）

¹ 河北大学教育学院，保定，071002，通讯作者 shixl163@163.com

摘要 目的：先前研究表明，倒班工人的节律类型与抑郁之间存在明显关联，但其中的内在机制尚不清晰。本研究以纺织厂倒班工人为研究对象，考察其节律类型与抑郁的关系，并在此基础上探讨睡眠障碍在二者间的中介作用和感知社会支持在其中的调节作用。方法：本研究采用复合清晨型问卷（CMQ）、流调中心抑郁量表（CES-D）、睡眠障碍问卷（SDQ）和多维感知社会支持量表（MPSS）对 3902 名工人进行问卷调查，回收有效问卷 3833 份，有效率为 98.23%，剔除不存在倒班的工人后，共有 2924 名倒班工人的数据纳入数据分析。数据主要采用 SPSS 中 PROCESS 插件进行分析。结果：相关分析显示清晨-夜晚型、睡眠障碍、感知社会支持和抑郁均两两显著相关，有调节的中介分析表明：睡眠障碍在清晨-夜晚型和抑郁之前起部分中介作用，间接效应量为-0.04，95%的置信区间为[-0.05, -0.03]，中介效应占比 12.9%；睡眠障碍对抑郁的影响受到感知社会支持的调节（睡眠障碍*感知社会支持： $\beta=0.03$, $P<0.05$ ）。对于感知社会支持水平较低的个体，睡眠障碍对抑郁症状的预测作用更强（ $\beta_{\text{simple}}=0.28$, $p<0.01$ ），而较高的感知社会支持水平则能够缓冲睡眠障碍对抑郁的影响（ $\beta_{\text{simple}}=0.23$, $p<0.01$ ）。结论：节律类型与倒班工人的抑郁症状显著相关；睡眠障碍在节律类型与抑郁之间起到了部分中介作用；感知社会支持调节了睡眠障碍对抑郁的影响。因此，当倒班工人面临睡眠障碍时，较高的感知社会支持能缓解其抑郁症状。

Relationship between Rhythm type and Depression of Shift Workers: Mediating Effect of Sleep Disorder and Moderating Effect of perceived Social Support

Zhipeng Li, Xuliang Shi

School of Education, Hebei University, Hebei, Baoding 071000

Abstract: Objective: Previous studies have shown that there is a significant association between shift workers' rhythm type and depression, but the underlying mechanism is not clear. In this study, shift workers in textile mills were used as subjects to investigate the relationship between rhythm types and depression, and to explore the mediating role of sleep disorders and the moderating role of perceived social support in the relationship. Methods: In this study, the Compound Morning Questionnaire (CMQ), the CES-D, the Sleep Disorders Questionnaire (SDQ) and the Multidimensional Perceived Social Support Questionnaire (MPSS) were used to investigate 3902 workers. 3833 valid questionnaires were collected, and the effective rate was 98.23%. Data on a total of 2,924 shift workers were included in the data analysis. The data is mainly analyzed by the Process plugin in SPSS. Results: Correlation analysis showed that morning-night type, sleep disorder, social support and depression were significantly correlated with each other. Moderated mediation analysis showed that sleep disorder played a partial mediating role before morning-night type and depression. The indirect effect size was -0.04, 95% confidence interval was [-0.05, -0.03], and the mediating effect accounted for 12.9%. The effect of sleep disorder on depression was moderated by perceived social support (sleep disorder * perceived social support: $\beta=0.03$, $P<0.05$). For individuals with lower perceived social support, sleep disturbance was a stronger predictor of depressive symptoms ($\beta_{\text{simple}}=0.28$, $p<0.01$), and higher perceived social support buffers the effect of sleep disturbance on depression ($\beta_{\text{simple}}=0.23$, $p<0.01$). Conclusion: Rhythm type is significantly related to depression symptoms in shift workers. Sleep disorders played a partial mediating role in the relationship between rhythm type and depression. Perceived social support moderated the effect of sleep disorders on depression. Thus, when shift workers faced with sleep disorders, higher perceived social support was associated with reduced depressive symptoms.

基于题组模型的 CD-CAT 选题方法研究

夏林坡¹ 高旭亮¹ (通讯作者)

1 贵州师范大学心理学院, 贵阳, 550025, gaolx19817@foxmail.com

摘要 基于项目反应理论 (IRT) 开发的计算机自适应测验 (CAT) 能够大大地缩短答题者的作答时间, 并保有较高的测验精度。与传统的 CAT 相比, 认知诊断下的 CAT (CD-CAT) 能够提供答题者的更加丰富的诊断信息, 有利于开展针对性的补救教学设计。题组是指一组题目共享一个共同的刺激, 例如, 一篇阅读理解、一个图形、一个表格下包含了几个题目。题组任务更接近真实情况, 完成题组任务需要知识、技能、能力的整合, 因而, 能够提供更真实、丰富的信息。当前, 关于 CD-CAT 的研究大多假设题目之间是独立存在的, 即并未考虑题组设计的题目。本研究拟基于题组认知诊断模型探讨 CD-CAT 的实现技术, 一方面比较传统选题方法在题组 CD-CAT 的效果; 另一方面, 将曝光率控制方法和传统选题方法相结合, 进一步探讨了题组 CD-CAT 的题库曝光控制方法。模拟实验一考察了 5 个属性, 模拟被试 5000 人, 被试的属性模式服从均匀分布, 自变量包括: (1) 题组的大小设置为 3 和 6; (2) 选题方法包括 KL, PWKL, SHE, MPWKL; (3) 测验的长度设置为 8, 16 和 32。因变量为属性判准率和模式判准率。实验二在实验一的基础上比较了不同曝光率控制方法的效果, 因变量有属性判准率、模式判准率和题库安全性指标。总之, 本研究基于题组认知诊断模型探索题组 CD-CAT 的实现结果并进一步研究其题库曝光控制方法, 以期能够丰富题组 CD-CAT 的相关研究, 并寻找到存在题组的情况下同时兼顾测验精度和题库安全性的选题方法。

WAIC 和 LOO 方法在认知诊断模型拟合检验的应用研究

侯敏敏¹ 高旭亮¹ (通讯作者)

¹ 贵州师范大学心理学院, 贵阳, 550025, gaoxl9817@foxmail.com

摘要 认知诊断评估 (cognitive diagnostic assessment, CDA) 是用于测量或评价个体特定的知识结构和加工技能。而需要实现认知诊断评估, 需要借助一定的心理测量模型, 即认知诊断模型 (cognitive diagnosis model, CDM)。CDM 的有效应用依赖于所选模型是否拟合实际的数据, 这也直接决定诊断结果的准确性。在实际工作中, 测验相对拟合检验可以帮助实践者从已有模型中选择一个相对拟合最佳的模型, 从而保证数据分析结果的合理性与科学性。目前, 模型-资料拟合检验的研究多集中在 IRT 领域, 针对 CDM 的模型拟合研究仍不多。本文拟将 2 种完全贝叶斯方法 WAIC 和 LOO 应用于 CDM 模型拟合检验中, 并将这两个统计量与-2LL、AIC、BIC、DIC 进行比较, 探讨其在 CDM 拟合检验中的可行性及其效果, 为应用者在 CDM 的拟合检验方法上提供参考和方法学支持。本文采用 Monte Carlo 模拟实验方法进行研究, 研究 1 考察在不同样本容量 (三个水平, 分别是 500 人、1000 人和 2000 人)、生成模型 (DINA、DINO、RRUM、G-DINA)、测验长度 (两个水平, 分别是 30 题和 60 题)、及不同认知属性个数 (两个水平, 分别是 6 个和 8 个) 下各统计量的一类错误率和统计检验力; 研究 2 进一步比较了-2LL、AIC、BIC、DIC、WAIC 和 LOO 在不同错误类型 Q 矩阵实验条件下的效果。最后, 通过一个实证数据分析, 探讨了这些拟合统计量在实际数据分析的应用步骤和效果。本研究旨在探讨 WAIC 和 LOO 在 CDM 拟合检验中的可行性及其效果, 为实际工作中测验拟合检验统计量的选择提供借鉴。

Research on the Application of WAIC and LOO Methods in Cognitive Diagnosis Model Fit Test

HOU Minmin, GAO Xuliang

College of Psychology, Guizhou Normal University, Guiyang 550025, China

Abstract: Cognitive Diagnostic Assessment (CDA) is used to measure or evaluate an individual's specific knowledge structure and processing skills. To achieve cognitive diagnosis assessment, a certain psychometric model is needed, namely the cognitive diagnosis model (CDM). The effective application of CDM depends on whether the selected model fits the real data, which directly determines the accuracy of the diagnosis result. In actual work, the relative fit test of testing can help practitioners choose a relatively best-fitting model from the existing models, so as to ensure the rationality and scientificity of the data analysis results. At present, the research of model-data fitting test is mostly concentrated in the field of IRT, and there are still not many researches on model fitting for CDM. This article intends to apply two complete Bayesian methods, WAIC and LOO, to the CDM model fit test, and compare these two statistics with -2LL, AIC, BIC, and DIC. To study the feasibility and effect of these two statistics in the CDM fit test, and provide reference and methodological support for the users in the CDM fit test method. In this paper, Monte Carlo simulation experiment method is used for research. Study 1 examines the Type I error rate and statistical test power of each statistic with different sample sizes (three levels, 500 people, 1000 people, and 2000 people), generative models (DINA, DINO, RRUM, G-DINA), Test length (two levels, 30 questions and 60 questions), and the number of different cognitive attributes (two levels, 6 and 8, respectively). Study 2 further compares the effects of -2LL, AIC, BIC, DIC, WAIC and LOO under different error type Q matrix experimental conditions. Finally, through an empirical data analysis, the application steps and effects of these fitting statistics in actual data analysis are discussed. This study aims to explore the feasibility and effect of WAIC and LOO in CDM fit test, and provide a reference for the selection of test fit test statistics in actual work.

摘要 研究从非参数诊断方法可能更适于小样本课堂评估且相对于参数模型方法省略了复杂的参数估计过程的角度出发, 利用了 20 种常见的距离判别函数对多分属性进行诊断分类。通过模拟的两个分研究设置的五个自变量条件(样本量、测验质量、测验长度、属性水平数和属性个数)分别考察了影响非参数诊断方法判别多分属性判准率的情况以便对方法进行横向比较, 并且对同时达最高判准率的部分方法之间的内在联系进行了探讨, 未来也可以尝试对他们在实际中的应用场景进行跟进, 以探索他们之间更多细微的区别, 从而为后续研究者们或教育工作者们提供更加细致化的选择以及提高诊断分类的效率。整体来看, 结果表现为所有距离判别法在所有设置条件下判准率的变化趋势一致, 说明了多分属性的非参诊断分类稳健性较好。具体结果如下: (1) 多分属性的非参诊断分类几乎不受样本量的影响, 可用于小型诊断评估; (2) 随着测验质量的提高或降低, 非参诊断分类多分属性的判准率随之同方向的上升或下降; (3) 随着测验长度的提高或降低, 非参诊断分类多分属性的判准率也随之同方向的上升或下降; (4) 非参诊断分类多分属性的判准率却随着属性水平数的增加或减少而反方向的下降或上升; (5) 非参诊断分类多分属性的判准率同样随着属性个数的增加或减少而反方向的下降或上升; (6) 处于内在息息相关或不断完善关系的五种距离判别方法在所有设置条件下多分属性进行诊断分类的表现不相上下, 并同时达最高判准率。

Nonparametric diagnosis of multiple attributes: Comparison of 20 kinds of distance discrimination methods

Huiying Xu¹, Qipeng Chen¹, Yaohui Liu¹, Peida Zhan¹

¹ Department of Psychology, College of Teacher Education, Zhejiang Normal University, Jinhua, 321004, China

Abstract: From the point of view that non-parametric diagnostic methods may be more suitable for classroom assessment with small samples and that complex parameter estimation process is omitted compared with parametric model methods, several common distance discrimination functions are used to classify multiple attributes. By setting the conditions of the five independent variables in the two independent simulation studies (sample size attribute level, the quality of test and test length, and the number of attributes), the circumstances that affect the accuracy of nonparametric diagnostic methods in discriminating multiple attributes are investigated for horizontal comparison between the methods, and the intrinsic relationships between part of the methods who reach the highest accuracy are discussed in this paper at the same time. We can also try to follow up their application scenarios in order to explore more subtle differences between them in the future, so as to provide more elaborate choices and improve the efficiency of diagnostic classification for subsequent researchers or educators. On the whole, the results show that the accuracy of all distance discriminants has the consistent trend under all setting conditions, which indicated that the non-parameter diagnostic classification with multiple attributes had superior robustness. The specific results are as follows: (1) The non-reference diagnostic classification with multiple attribute is almost not affected by the sample size, and can be used for small diagnostic evaluation; (2) With the improvement or decrease of test quality, the accuracy rate of multiple attribute of non-reference diagnostic classification increased or decreased in the same direction; (3) With the increase or decrease of test length, the accuracy rate of multiple attribute of non-reference diagnostic classification also increased or decreased in the same direction; (4) The accuracy of multi-score attributes of non-parametric diagnostic classification decreased or increased with the increase or decrease of attribute levels in the adverse direction; (5) The accuracy rate of multi-score attributes of non-parametric diagnostic classification also decreases or increases with the increase or decrease of the number of attributes in the adverse direction; (6) The five distance discrimination methods which were in interrelated or continuous improvement relationships had similar

performance under all setting conditions, and reached the highest accuracy at the same time.

Keywords: multiple attributes, non-parametric diagnostic methods, distance discrimination functions, classroom assessment

中文版网络游戏障碍量表的项目反应理论分析

鲁杏姿¹, 刘可智^{1,2}, 陈晶^{1,2}, 雷威^{1,2}

1 西南医科大学附属医院心身医学科, 泸州, 646000

摘要 本研究采用项目反应理论 (Item Response Theory; IRT) 对中文版网络游戏障碍量表 (Internet Gaming Disorder Scale; IGDS) 各项目进行分析评估, 为我国评估网络游戏障碍提供评价工具。采用现场问卷及电子问卷 (问卷星) 两种调查形式收集数据, 通过便利抽样法, 选取四川省泸州市、西昌市青少年及成人共 1555 名完成中文版 IGDS, 其中平均年龄为 18.18 ± 3.63 岁, 年龄范围为 11-30 岁。利用 R 语言对收集数据进行项目反应理论分析, 使用 Lavaan 工具包进行验证性因子分析检验单维性假设及局部独立性假设, 使用 Mokken 工具包检验单调性假设, 满足三假设后使用 Mirt 工具包对数据进行项目反应理论分析, 估计各项目的区分度参数 (a) 及难度参数 (b)。结果显示: 验证性因子分析显示 $RMSEA=0.023$; $CFI=0.997$; $NFI=0.993$; $IFI=0.997$; $Chi-Square/df=49.196/27$, 残差相关均小于 0.1, 满足单维性及局部独立性假设, 从 Moakken 工具包得出 rest-score graphs 显示单调递增, 满足单调性假设, 中文版 IGDS 可以应用项目反应理论进行项目分析。中文版 IGDS 各项目区分度参数 a 值介于 (1.37~2.999), 均大于 1.35, 满足中等到较好的区分度参数值; 难度参数 b 值介于 1.285~1.887 之间, 均在合理取值范围 (-4~4) 之间。其中, 项目 5“逃避”相对 IGDS 其他项目, 区分度及难度参数均为最低 (a=1.37, b=0.372)。研究结果表明, 中文版 IGDS 具有良好的区分度, 可有效区分和鉴别网络游戏障碍人群, 而其中“逃避”项目区分度参数及难度参数均相对较低, 可能降低量表的特异性。

2 Laboratory of Neurological Diseases and Brain Function, The Affiliated Hospital of Southwest Medical University, Luzhou, China. Kezhi Liu, Email: kingzliu@163.com

Abstract: This research used Item Response Theory (IRT) to analyze and evaluate each item of the Chinese version of the Internet Gaming Disorder Scale (IGDS), and provide an evaluation tool for my country to assess Internet Gaming Disorder. Two survey forms of on-site questionnaire and electronic questionnaire (wenjuanxing) were used to collect data. By convenience sampling method, a total of 1,555 teenagers and adults from Luzhou City and Xichang City, Sichuan Province were selected to complete the Chinese version of IGDS. The average age was 18.18 years old ($SD=3.63$), the age range was 11-30 years old. R was used to analyze the collected data, Lavaan package was used to test the unidimensionality hypothesis and local independence hypothesis by confirmatory factor analysis, Moakken package was used to test the monotonicity hypothesis. When the three hypotheses were met, Mirt package was used to analyze the data by item response theory, and the discrimination parameter (a) and difficulty parameter (b) of each item were estimated. The results showed that: confirmatory factor analysis showed that $RMSEA=0.023$; $CFI=0.997$; $NFI=0.993$; $IFI=0.997$; $Chi-Square/df=49.196/27$, residual correlations < 0.1, satisfying the assumptions of unidimensionality and local independence. The rest-score graphs from the Mokken package showed a monotonic increase and met the monotonic assumption. The Chinese version of IGDS could analyze data by Item Response

Theory. The discrimination parameter (a) of the Chinese IGDS for each item ranged from 1.37 to 2.999 and were all greater than 1.35, meeting the medium-good values. The difficulty parameter (b) ranged from 1.285 to 1.887, and all of them were in the reasonable range -4 to 4 . Compared with other IGDS items, item 5 "escape" has the lowest discrimination and difficulty parameters ($a=1.37$, $b=0.372$). The results showed that the Chinese version of IGDS has a good ability in distinction, which could effectively distinguish and identify the people with Internet Gaming Disorder. However, the item of "escape" has a relatively low values of discrimination parameter and difficulty parameter, which may reduce the specificity of the scale.

摘要 人格测量广泛应用于识别和描述个体的人格特征,接受心理治疗患者的异常人格评估以及进行员工选拔中。大多数人格测量是以自我报告形式进行,因此,社会称许效应可能是许多神经心理学、临床心理学、法医心理学和工业组织心理学领域的研究人员和实践者关注的问题。社会称许效应是一种倾向于给出让被试看起来不错的答案的反应偏差。目前,大多数研究者依旧采用传统的项目反应模型(IRT)模型(即单参数、双参数和三参数逻辑斯蒂模型)分析01计分的人格测量量表。传统IRT模型的一个问题是它们忽略了社会称许效应。因此,使用传统的IRT模型可能会低估位置参数,并且估计的被试参数是有偏的。为了解决这一问题,本研究提出了一种新的考虑社会称许效应的项目反应理论模型用于人格测量中,该模型基于社会称许效应的双加工机制:有偏检索过程和迁移过程。我们进行了蒙特卡洛模拟研究,将所提出的模型与忽略社会称许效应的传统IRT模型进行比较。模拟结果表明,该模型优于传统IRT模型。我们进行了实证研究,以说明所提出的模型的应用。最后,我们进行了实证研究,在实证研究中说明了新模型的应用,结果表明新模型更适合于实际数据。

An Item Response Theory Model for Social Desirability Behavior in Personality assessments

Kangjun Liang¹, Wenjing Guo², Dongbo Tu¹, Yan Cai¹

¹ School of Psychology, Jiangxi normal university, Nanchang, China.

² Department of Educational Studies in Psychology, Research Methodology and Counseling, The University of Alabama, Tuscaloosa, AL, USA.

Abstract: Personality measures have been widely used in recognizing and describing individuals' personality features (Hojat, Erdmann, & Gonnella, 2013; Hampson, Goldberg, Vogt, & Dubanoski, 2006), assessing abnormal personality in patients who receive psychotherapy services (Morey, & Quigley, 2002; Lopez-Castroman, Galfalvy, Currier, Stanley, Blasco-Fontecilla, et al, 2012), and making a personnel selection (Ones, Dilchert, Viswesvaran, & Judge, 2007; Fisher, Milane, Sullivan, Tett, 2021). One characteristic of most personality assessments is that they require self-report, and thus social desirability (SD) may be a concern of many researchers and practitioners in the field of neuropsychology, medical psychology forensic psychology and industrial-organizational psychology. Socially desirable responding (SDR), a type of response bias, is a "tendency to give answers that make the respondent look good" (Delroy L. Paulhus, 1991). To investigate the quality of self-reported personality assessments with a binary scale, most researchers apply traditional item response model (IRT) models (i.e., the one-, the two- and three-parameter logistic models) (Chernyshenko, Stark, Chan, Drasgow, & Williams, 2001; Steven P. Reise & Waller,

1990; S. P. Reise & Waller, 2003; Waller, Thompson, & Wenk, 2000). One issue with the traditional IRT models is that they ignore SD. Therefore, these analyses may underestimate location parameters and generate biased estimates of person parameters (Leng, Huang, & Yao, 2020). To address this issue, this article develops a novel item response theory model considering social desirability for measuring personality traits, based on a dual-process mechanism of responses: biased retrieval process and transfer process. We conducted Monte Carlo simulation studies to compare the proposed model with the traditional IRT model that ignores social desirability. Simulation results showed the proposed model outperformed the conventional IRT models. Finally, an empirical study was used as an example to illustrate the application of the proposed model, which also indicated that the proposed model is more suitable for the real data.

Key words: personality assessments, socially desirable (SD), item response theory (IRT) model

基于 Rasch 模型的项目真分数估计：特质参数估计视角

潘世权

贵州师范大学心理学院，贵阳，550025, panshiquan13@163.com

摘要 项目反应理论不仅得到了广泛的应用，而且还成为心理测量学的主流理论之一。近年来，一些研究将项目反应理论和经典测量理论的核心概念——项目真分数和项目反应函数联系起来，探讨了项目真分数点估计和区间估计的项目反应建模过程。若项目参数已知，只需估计特质参数便可获得项目真分数估计值。不同的估计方法在不同的测试条件下有不同的偏差和准确性，若选择了错误的估计方法，则会造成严重后果。因此，无偏估计对项目真分数估计非常重要。然而，以往研究并未从特质参数估计的角度来探讨项目真分数估计的性能。本文通过两个模拟研究，比较了加权似然估计 θ_WLE 和期望后验估计 θ_EAP 对项目真分数估计的影响。根据前人研究的推荐，本文采用的模型为 Rasch 模型。研究 1：特质水平的真值 θ 设定在 $[-3,3]$ 之间，每间隔 0.5 个步长模拟 1000 个被试，共计 13 个特质水平；测验长度分别为 5、10、15、20，每个测验长度下的项目难度 b 服从标准正态分布。根据上述条件生成 4 套测验和 13 个特质水平后，估计每个水平的被试在 4 套测验中的特质参数。之后，分别将特质参数估计值以及真值代入 Rasch 模型，求出相应的项目真分数估计值 $\hat{t}$ 与真值 t 。研究 2：测验长度分别为 5、10，每种测验长度下的项目难度 b 被固定为 0, ± 1 , ± 2 。其余条件与研究 1 一致。平均误差 (ME) 和均方根误差 (RMSE) 分别用于评价 $\hat{t}$ 的偏差和准确性。结果表明：(1) 与 θ_EAP 相比， θ_WLE 在大多数情况下减小了 $\hat{t}$ 的偏差，同时还让 $\hat{t}$ 的 RMSE 保持在可接受的范围内；(2) 项目难度 b 影响了两种估计方法的偏差水平。当 $b < 0$ 时，两者在低特质水平的偏差大于在高特质水平的偏差。当 $b > 0$ 时，则与 $b < 0$ 的情况相反；(3) 若特质水平离平均特质水平越远， θ_WLE 让 $\hat{t}$ RMSE 更小；否则， θ_EAP 让 $\hat{t}$ 的 RMSE 更小。(4) 与 θ_EAP 相比， θ_WLE 让 $\hat{t}$ 的性能更稳定，使 $\hat{t}$ 受测验条件的影响较小，总之， θ_WLE 更适合用于 Rasch 模型的项目真分数估计。

基于残差统计量的多级计分测验异常反应模式检测研究

童昊¹ 喻晓锋¹

江西师范大学心理学院，南昌，330022, tonghao@jxnu.edu.cn

摘要 测验被广泛应用于教育和心理测量领域，测验中被试存在的异常作答行为会影响对其能力的评估。这部分异常的被试无法使用常规的方法进行分析，当务之急就是准确地将他们从正常群体中筛选出来。为了实现这一目标，研究者们通常会构建个人拟合统计量来检测被试的能力和作答反应模式之间是否拟合。本文提出了一种基于残差的个人拟合统计量 R ，该统计量既可适用于二分模型，也适用于多分模型。 R 统计量的构造基于实际作答和期望作答之间的加权残差。通过对加权残差进行累加，可以计算拟合优度，并将累加和与特定的临界值进行比较，以确定被试是否异常。考虑到多级计分项目的测验可以提供更多的信息，多分模型也在教育和心理测量学中得到更多的使用。本文主要讨论的是 R 统计量在多级 IRT 模型下对被试异常反应模式的检测能力。本文还详细介绍了一种现有的多级计分下个人拟合统计量 I_{zp} ，它具有出色的标准化形态和良好的检测性能。在研究一中，使用模拟实验来产生 R 统计量和 I_{zp} 的经验分布。 R 统计量是加权残差的累加，呈现

正偏态分布；当测验长度少于 80 个项目时， l_{zp} 则呈现负偏态分布。二者均不同于标准正态分布，所以需要根据一类错误率来设定临界值，用以区分被试的作答模式是否异常。在研究二中，模拟产生了不同测验长度条件下，具有不同异常行为类型（如作弊、幸运猜测、随机作答、粗心、创造性作答和混合型）的被试，并且使用检测率和曲线下面积来比较评价两种个人拟合统计量的性能。结果表明，当异常行为覆盖的项目数量较少或者异常行为类型为作弊或幸运猜测时， R 统计量相较于 l_{zp} 拥有更高的检测率。而当异常行为影响了较多项目时， l_{zp} 略好于 R 统计量。接着，我们分析了全国青少年健康纵向研究（1994-1995）的数据，来展现 R 统计量的检测能力。 R 统计量和 l_{zp} 的优势区间不同，因此在未来的个人拟合研究中可以将 R 统计量和 l_{zp} 相结合。在一定条件下， R 统计量拥有更高的检测率，特别是在作弊和幸运猜测行为发生时。考虑到低能力被试的作弊和猜测行为更受到相关研究的重视， R 统计量在今后的研究应用中具有一定的价值。

Detection of aberrant response patterns using a residual-based statistic in testing with polytomous items

Hao Tong, Xiao Feng Yu

Jiangxi Normal University, No. 99, Ziyang Avenue, Nanchang City, Jiangxi Province

Abstract: Tests are widely used in educational measurement and psychometrics, and the examinee's aberrant response will affect the estimation of their ability. These examinees with aberrant response should not be treated with conventional methods, the important thing is to accurately screen them out of the normal group. To achieve this, a common method is to construct person-fit statistics to detect whether the response pattern fits their estimation ability. In this study, a residual-based person-fit statistic R was proposed, which can be applied to both dichotomous or polytomous IRT models. The construction of R is based on the weighted residual between the actual response and the expected response. By accumulating the weighted residuals, the goodness of fit can be calculated and compared with a specific critical value to determine whether an examinee is aberrant or not. Given that tests with the polytomous item can provide more information, polytomous models are being increasingly popular in educational measurement and psychometrics. The ability to detect aberrant response patterns under the polytomous IRT model of R statistic was mainly discussed in this article. An existing polytomous person-fit statistic l_{zp} was also introduced for its outstanding standardized form and superior power. In the first study, a simulation experiment is used to generate the empirical distribution of R statistic and l_{zp} . R statistic is an accumulation of weighted residuals, showing a positive skew distribution; l_{zp} shows a negative skew distribution when the test is less than 80 items. Both of them differ from the standard normal distribution, it is necessary to set critical value according to the type 1 error, using it to distinguish whether the respondent's response pattern is fitted. In the second study, examinees with different aberrant behaviors (e.g., Cheaters, Lucky guessers, Random respondents, Careless respondents, Creative respondents and Mixed) under different test length conditions were simulated, and the detection rate as well as area under curve (AUC) were used to compare the effectiveness of the two person-fit statistics. The results show that the R statistic has a better detection rate than l_{zp} when the aberrant behavior affects only a few items or the aberrant behavior is cheating or guessing. When the aberrant behavior covers plenty of items, l_{zp} is slightly better than R statistic. Then, in order to show the power of R statistic, an empirical study was also conducted by analyzing the data from the National Longitudinal Study of Adolescent Health (1994-1995). The optimize-range of R statistic and l_{zp} are different, so we may combine R statistic and l_{zp} in future person-fit studies. R statistic has a better detection rate under certain conditions compared to l_{zp} , especially when cheating and lucky guessing happened. Considering that cheating and guessing behaviors of low-ability examinees are more valued in many aberrant test behaviors, R statistics still have a certain value in research applications.

摘要 COVID 压力量表 (CSS) 是西方环境下评估与新冠肺炎 (COVID-19) 有关的压力和焦虑症状的有效工具, CSS 自开发以来, 作为一种综合性的测量工具, 已被广泛使用。但它并没有被应用到中国文化的语境中。因此, 本研究拟对 CSS 量表进行修订, 为我国研究与 COVID-19 有关的压力提供有效的测量工具。目的: 修订 CSS 中文版 (CSS-C), 探讨其在中国文化背景下的因子结构, 并检验其在中国青少年群体中的信效度。方法: 选取 2500 名在校中小學生进行初测, 回收有效问卷 2277 份用于探索性因子分析、验证性因子分析和信效度检验。两个月后随机抽取 1000 名学生进行重测。结果: 修订后的 CSS-C 由 31 个项目和 6 个因子构成, 在原量表的基础上, 对危险和污染的担忧维度进行了进一步划分, 分为了危险担忧维度和污染担忧维度两个维度。验证性因子分析表明模型拟合良好 ($\chi^2 = 1843.095^*$, $df = 419$, $CFI = .909$, $TLI = .900$, $RMSEA = .055$, $SRMR = .057$)。总量表及 6 个分量表内部一致性信度在 0.81-0.96 之间; 总量表及 6 个分量表与校标量表一般健康问卷 (GHQ-12; $p < .01$) 和焦虑量表 (GAD-7; $p < .01$) 均呈显著正相关, 该量表具有较好的校标关联效度; 最后纵向测量的不变性检验表明, 该量表 (CSS-C) 具有跨时间的测量不变性 ($\Delta TLI < 0.01$, $\Delta CFI < 0.01$)。结论: 修订后的 CSS-C 具有良好的心理学测量特性, 可以作为研究我国青少年群体在新冠肺炎疫情期间压力感知的有效工具。

Abstract: The COVID Stress Scale (CSS) is an efficient instrument to assess COVID-19-related stress and anxiety symptoms in Western contexts. Ever since its development, the CSS has been widely adopted as a comprehensive measurement. But it has not been applied in the context of Chinese culture. Therefore, this study intends to revise the CSS scale to provide an effective measurement tool for the study of stress related to COVID-19 in China. Objective: To revise the Chinese version of CSS (CSS-C) and explore its factor structure in the context of Chinese culture, as well as test its reliability and validity in Chinese adolescents. Methods: A total of 2500 primary and secondary school students were selected for the preliminary test, and 2277 valid questionnaires were collected for exploratory factor analysis, confirmatory factor analysis and reliability and validity test. Two months later, 1000 students were randomly selected for retest. Results: The revised CSS-C was composed of 31 items and 6 factors. Based on the original scale, the danger and contamination worry dimensions were further divided into two dimensions: danger fear dimension and contamination fear dimension. Confirmatory factor analysis showed that the model fitted well ($\chi^2 = 1843.095^*$, $df = 419$, $CFI = .909$, $TLI = .900$, $RMSEA = .055$, $SRMR = .057$). The internal consistency reliability of the total scale and six subscales ranged from 0.81 to 0.96; The total scale, six subscales and the General Health Questionnaire (GHQ-12; $p < 0.01$) and the Generalized Anxiety Disorder (GAD-7; $p < 0.01$) were significantly correlated. The scale has good calibration related validity; Finally, the invariance test of longitudinal measurement shows that CSS-C has the invariance of measurement across time ($\Delta TLI < 0.01$, $\Delta CFI < 0.01$). Conclusion: The revised CSS-C is a good tool for studying the stress perception of Chinese adolescence in the period of COVID-19. The revised CSS-C has good psychological measurement characteristics.

信息量曲线双峰分布条件下基于 IRT 最小距离组卷方法比较

郑慧婧 康春花 曾平飞 (通讯作者)

浙江师范大学, 浙江省智能教育技术与应用重点实验室, 浙江 金华, 321004, zpf@zjnu.cn

摘要 在教育测量中, 探索能够生成多份高质量的平行测验的组卷方法成为了一个研究热点。当测试的信息量曲线相似时, 这些测试就被认为是平行测验。但是, 目前对组卷的研究主要针对题库与样卷的信息量曲线为正态分布或偏态分布开展, 但在测验实践中, 信息量的分布是多种多样的, 除了正态分布、偏态分布等单峰分布, 还有多峰分布。多峰分布中最常见的一种是双峰分布, 双峰分布由两个分布混合而成。据此, 本研究采用模拟研究, 探究在不同题库与样卷的信息量曲线分布(单峰, 双峰)下, 2种经典的基于 IRT 的组卷方法(参数最小距离法、信息量最小距离法)的表现。在模拟研究中, 设置两个分布的混合比例为 1:1, 难度参数的平均值互为相反数, 其他参数保持一致。通过操纵两个分布难度参数(0; 正负 0.5; 正负 1; 正负 1.5; 正负 2; 正负 2.5)改变题库与样卷的信息量曲线的分布, 探讨不同分布对常见的衡量组卷方法效果的参数距离(MD)、测验特征曲线(TCC)、测验信息曲线(TIC)三个指标的影响。主要研究结果如下: 对于 MD 指标, 在不同分布条件下, 参数最小距离法的偏差数值都较小; 两种方法的效果都随着题库与样卷的信息量曲线双峰特征的增强而减弱, 参数最小距离法受影响较小。对于 TCC 指标, 信息量最小距离法在题库与样卷的信息量曲线为单峰时效果优于参数最小距离法; 在题库与样卷的信息量曲线双峰特征明显时效果劣于参数最小距离法。两种方法的效果都随着题库与样卷的信息量曲线双峰特征的增强而减弱, 参数最小距离法受影响较小。对于 TIC 指标, 在不同分布条件下, 信息量最小距离法偏差数值都较小, 但其效果都随着题库与样卷的信息量曲线双峰特征的增强而减弱; 参数最小距离法受分布影响较小。

Comparison of IRT minimum distance test assembly methods based on bimodal distribution of information curve

ZHENG Huijing, KANG Chunhua, ZENG Pingfei

Key Laboratory of Intelligent Education Technology and Application of Zhejiang Province, Zhejiang Normal University, Jinhua Zhejiang, 321004

Abstract: In educational measurement, exploring the method of generating multiple high-quality parallel tests has become a research hotspot. When the information curve of the tests are similar, these tests are considered to be parallel tests. However, the current research on test assembly mainly focuses on the normal or skewed distribution of the information curve of item pool and sample test. However, in test practice, the distribution of information is diverse, except for the normal distribution and the skewed distribution. There are multimodal distributions. The most common type of multimodal distribution is the bimodal distribution, which is a mixture of two distributions. Based on this, this research adopts simulation research to explore the two classic IRT-based test assembly methods' performance (parameter minimum distance method, information minimum distance) under different information curve distributions of item pool and sample test (single peak, double peak). In the simulation study, the mixing ratio of the two distributions is set to 1:1, the average value of the difficulty parameter is opposite to each other, and the other parameters remain the same. By manipulating two distribution difficulty parameters (0; plus-minus 0.5; plus-minus 1; plus-minus 1.5; plus-minus 2; plus-minus 2.5) to change the distribution of the information curve of item pool and sample test, and explore the influence of different distributions on parameter distance (MD), test characteristic curve (TCC), test information curve (TIC) three indicators. The main findings are as follows: For MD index, under different distribution conditions, the deviation value of the parameter minimum distance method is small; the effects of the two methods are weakened with the increase of the bimodal characteristic of the information curve of item pool and sample test. The parameter minimum distance method is subject to less affected. For the TCC index, the information minimum distance method is better than the parameter minimum distance method when the information curve of item pool and sample test is single-peak; the effect is worse than the parameter minimum

distance when the information curve of item pool and sample test has two peaks. The effects of the two methods are weakened with the enhancement of the bimodal characteristic of the information curve of item pool and sample test, and the parameter minimum distance method is less affected. For the TIC index, under different distribution conditions, the deviation value of the information minimum distance method is small, but its effect is weakened with the enhancement of the bimodal characteristic of the information curve of item pool and sample test; the parameter minimum distance method is less affected by the distribution.

摘要 关于认知诊断模型(CDMs)的研究受到国内外研究者和应用者的广泛关注, 因为认知诊断模型有助于实现对个体认知发展实况(含优点与缺陷)的诊断评估, 以促进个体全面发展。确保 CDMs 正确使用和解释的一个重要步骤是了解项目功能差异(DIF)的影响。虽然在 CDMs 中检测 DIF 的方法已经确定, 但对 DIF 在多大程度上影响分类准确性的了解仍然是有限的。此前有研究基于 DINA 模型进行了探索, 以了解 DIF 如何影响分类准确性。CDMs 的好坏直接决定着诊断结果的可解释性、准确性及诊断的效率。为此, 国际上心理测量学者们开发了 60 多种认知诊断模型。因此, 基于其它模型, 探索 DIF 对分类准确性的影响也是十分必要的。CDMs 各具特点, 其中 rRUM 是目前被研究较多的认知诊断模型之一。与 DINA 模型相比, rRUM 能更深入细致探讨被试问题解决的加工过程; 同时有研究表明该模型具有较高的诊断正确率。当前, rRUM 模型被大多学者和实践运用者所推崇。本文在此基础上进行了拓展研究, 基于 rRUM, 了解不同量级和类型的 DIF 如何与 CDM 项目类型, 含有 DIF 项目的数量和样本大小相互作用, 从而影响属性和属性掌握模式级别的分类准确性。结果表明, 在大多数情况下, DIF 的量级对于属性级别的分类准确性影响较小, 对于属性掌握模式级别的分类准确性则有较大的负面影响。在简单结构项上存在 DIF 的条件对降低分类准确性具有最大的影响。

Examining the Impact of Differential Item Functioning on Classification Accuracy in rRUM

Daoxuan Fu¹, Xiaofeng Yu¹

School of Psychology, Jiangxi Normal University, Nanchang

Abstract: The research on cognitive diagnostic model (CDMs) has attracted extensive attention from researchers and users at home and abroad, because the cognitive diagnostic model helps to realize the diagnostic evaluation of individual cognitive development (including advantages and disadvantages), so as to promote the overall development of individuals. An important step to ensure appropriate uses and interpretations from CDMs is to understand the impact of differential item functioning (DIF). While methods of detecting DIF in CDMs have been identified, there is a limited understanding of the extent to which DIF affects classification accuracy. Previous studies have explored how DIF affects classification accuracy based on the DINA model. The quality of CDMs directly determines the interpretability, accuracy and efficiency of diagnostic results. To this end, more than 60 cognitive diagnostic models have been developed by international psychometric scholars. Therefore, it is necessary to explore the influence of DIF on classification accuracy based on other models. CDMs have their own characteristics, among which rRUM is one of the most studied cognitive diagnostic models. Compared with DINA model, rRUM can explore the processing process of problem solving in a more in-depth and detailed way. At the same time, studies show that this model has a high diagnostic accuracy. At present, rRUM model is highly respected by most scholars and practitioners. In this paper, an extended study is carried out based on rRUM to understand how different magnitudes and types of DIF interact with CDM item types and sample sizes to influence attribute- and profile-level

classification accuracy. The results suggest that attribute-level classification accuracy is robust to DIF of large magnitudes in most conditions, while profile-level classification accuracy is negatively influenced by the inclusion of DIF. Conditions of unequal group distributions and DIF located on simple structure items had the greatest effect in decreasing classification accuracy.

Keywords: rRUM, DIF, Classification Accuracy

攻击规范信念量表在中学生群体中的修订及应用

张琳¹ 陈亮² 施长君¹ (通讯作者)

1 哈尔滨师范大学教育科学学院, 哈尔滨, 150025, hsd.scj@126.com

2 山东师范大学心理学院, 济南, 250014

摘要 攻击规范信念是个体对攻击行为可接受性的一种评价, 即攻击行为在多大程度上是可以接受的, 已有研究表明其能够显著预测攻击行为。青少年的攻击问题向来是心理学界和教育学界关注的焦点, 探究青少年攻击规范信念有利于深化公众对青少年攻击行为的认识, 为青少年心理健康教育工作提供理论依据, 降低攻击行为的产生频率。然而我国目前对攻击规范信念这一领域的关注较少, 且现有工具的测量范围不够全面。本研究采用整体取样的方法, 以 462 名中学生为被试, 对 Huesmann 等人编制的攻击规范信念量表 (NOBAGS) 进行本土化修订和初步应用, 旨在为攻击规范信念的研究提供有效的中文测评工具。研究首先对 NOBAGS 进行翻译, 编制了中文版初始量表, 然后对其进行项目分析、相关分析、因子分析、高阶因子分析和信效度检验, 并评估了正反向表述项目对效度的影响, 结果表明二阶两因子模型可以更好地解释量表的结构 ($\chi^2=392.623$, $df=183$, $\chi^2/df=2.145$, $RMSEA=0.071$, $TLI=0.933$, $CFI=0.941$), 最终形成了由 21 道题目组成的攻击规范信念量表, 可测量青少年对身体攻击、言语攻击和关系攻击行为的可接受程度。因素分析表明中文版规范信念量表具有良好的结构效度, 相关分析表明该量表具有良好的效标关联效度; 经检验, 该量表各维度及总量表的 Cronbach's α 系数介于 0.69~0.89 之间, Split-Half 系数均介于 0.60~0.81 之间, 具有良好的信度。与原 NOBAGS 量表相比, 中文版攻击规范信念量表增加了测量关系攻击规范信念的项目, 在内容上更加全面; 另外修订后的量表在原先的两因子之下又探索出五个一阶因子, 细化了攻击规范信念的类别结构。在对结果分析后发现, 我国中学生普遍较不认可攻击行为且对主动性攻击的认可程度较低, 男生的攻击规范信念水平普遍高于女生。本研究在量表修订的过程中做到了理论驱动与数据驱动并重, 最终建立了比较稳定且完整的量表结构模型, 但在取样、效标选取和应用等方面仍存在问题, 需要进一步探讨。

The Revision and Application of Normative Beliefs about Aggression Scale Among Middle School Students

ZHANG Lin¹, CHEN Liang², SHI Changjun^{1*}

1 Harbin Normal University, Harbin, 150000

2 Shandong Normal University, Jinan, 250014

(Corresponding author: SHI Changjun hsd.scj@126.com)

Abstract: Normative beliefs are the evaluation of the acceptability of aggression, that is, the extent to which aggressive behavior is acceptable, studies had examined that it can significantly predict aggressive behavior. The problem of adolescent aggression has always been the focus of psychological and educational circles. Exploring the normative beliefs about aggression of adolescent is beneficial to deepen the public's understanding of adolescent aggression, provide theoretical basis for adolescent mental health education, and reduce the incidence of aggressive behavior. However, less attention has been paid to the field of normative beliefs about aggression in China, and the measurement range of existing tools is not comprehensive enough. The purpose of this study is to localize and preliminarily apply the Chinese version of Normative Beliefs about Aggression Scale (NOBAGS), which was compiled by Huesmann et al., among 462 Chinese students randomly selected from a middle school, so as to provide

an Chinese effective measuring tool for further research of normative beliefs about aggression. Firstly, the NOBAGS scale was translated and the Chinese version of the initial scale was compiled. Then, through item analysis, correlation analysis, factor analysis, high-order factor analysis, reliability and validity test, and item wording effect evaluation, one second-order two-factor model was proved to better explain the structure of the scale($\chi^2=392.623$, $df=183$, $\chi^2/df=2.145$, $RMSEA=0.071$, $TLI=0.933$, $CFI=0.941$). Finally, a 21-item normative beliefs about aggression scale was formed to measure the acceptability to physical aggression, verbal aggression and relational aggression. Factor analysis showed that the Chinese version of the Normative Beliefs about Aggression Scale had good structural validity; correlation analysis suggested that the scale had good criterion-related validity; the Cronbach's alpha coefficients of seven dimensions and the total scale range from 0.69 to 0.89, and the Split-Half coefficients range from 0.60 to 0.81, which shows that the scale has good reliability. Compared with the NOBAGS, the Chinese version of Normative Beliefs about Aggression Scale has more items to measure relational aggression normative beliefs, which is more comprehensive in content. In addition, five new first-order factors were explored based on the original two factors to refine the category structure of normative beliefs about aggression. The results showed that Chinese middle school students generally disapprove of aggressive behavior and have a low acceptability of proactive aggression. Besides, the level of normative beliefs about aggression of boys was generally higher than that of girls. In the process of the scale revision, equal attention to both theory and data driving was paid to establish a relatively stable and complete structure model of the scale. However, there are still problems in sampling, criterion selection and application, which need to be further discussed.

青少年自杀意念问卷在不同性别中的测量等值性

宋意霞¹ 陈甜¹ 黄肖嘉祺¹ 尹莹¹ 吴文峰² (通讯作者)

¹ 贵州师范大学心理学院, 贵阳, 550025, wwfhsd@yahoo.com.cn

摘要 自杀是世界范围内一个重大的公共卫生问题, 也是 15-19 岁青少年的第三大死因, 一直备受国内外研究者的关注。目前国内许多学者关注了青少年自杀意念的性别差异, 也比较了不同性别个体在 PANSI 得分上的差异。关于对农村初中生自杀意念的研究中发现女生自杀意念总分显著高于男生自杀意念总分; 也有研究者发现在非留守儿童中, 女生的消极自杀意念和积极自杀意念水平显著高于男生, 而在留守儿童中没有发现显著的性别差异(陆润豪等人, 2017)。而另有研究者发现小学高年级生自杀意念、大学生新生自杀意念在总分上不存在显著的性别差异。但是, 想要证明这些性别差异比较的结果是否有效, 在此之前应确定在青少年男生和女生群体中应用 PANSI 的测量等值性, 甄别研究结果显示的组间差异是实际存在的差异还是由于测量工具不等值而造成的虚假差异。因此, 本研究选取了 1004 名高中生 (包括 512 名女生、492 名男生) 进行施测, 对有效数据进行单组验证性因素分析和性别测量等值性检验。结果显示 PANSI 双因子结构模型在总体样本、女生样本与男生样本中拟合均良好, 同时跨性别的形态等值、弱等值、强等值及严格等值模型均成立。说明中文版自杀意念问卷的双因子结构在不同性别组间中具有测量等值性。本研究对 PANSI 中文版在青少年样本中进行了不同性别的测量等值性研究, 增加了中文版青少年自杀意念问卷的普遍适用性

Measurement Invariance of the Chinese Revision of Positive and Negative Suicide Ideation in Different Genders

SongYixia¹, ChenTian¹, HuangXiaoJiaqi¹, YinYin¹, WuWenfeng²

(School of Psychology, GuiZhou Normal University, Guiyang 550025)

Abstract: Suicide is a major public health problem worldwide and the third leading cause of death among 15-19 year olds. It has always attracted the attention of domestic and foreign researchers. At present, many domestic scholars have paid attention to the gender differences in suicidal ideation among young people and compared the differences

in PANSI scores of individuals of different genders. A study on the suicidal ideation of rural junior high school students found that the total score of suicide ideation of girls was significantly higher than that of boys; some researchers also found that among non-left-behind children, the level of negative suicide ideation and active suicide ideation of girls was significantly higher than that of boys. However, no significant gender differences were found among left-behind children. Another researcher found that there was no significant gender difference in the total scores of suicidal ideation between the upper grades of primary school students and the suicidal ideation of freshmen. However, in order to prove whether the results of the comparison of these gender differences are valid, before that, it is necessary to determine the equivalence of the measurement of PANSI in adolescent boys and girls, and to determine whether the differences between the groups shown by the screening study results are actual differences or due to measurements. False differences caused by unequal value of tools. Therefore, this study selected 1,004 high school students (including 512 girls and 492 boys) for the test, and performed a single-group confirmatory factor analysis and gender measurement equivalence test on the valid data. The results show that the PANSI two-factor structure model fits well in the overall sample, the female sample and the male sample, and the transgender morphological equivalent, weak equivalent, strong equivalent and strict equivalent models are all established. It shows that the two-factor structure of the Chinese version of the suicide ideation questionnaire has measurement equivalence among different gender groups. This study conducted a measurement equivalence study of different genders in the Chinese version of PANSI in a sample of adolescents, and increased the general applicability of the Chinese version of the Youth Suicide Ideation Questionnaire.

新冠肺炎疫情期间普通民众社会支持的质性研究

邓靖丰 郭英（通讯作者）

四川师范大学心理学院，成都，610066，492640233@qq.com

摘要 鼠年春节前后，新型冠状病毒肺炎（下称新冠肺炎）疫情席卷全国，让原本欢天喜地迎接春节的人们猝不及防，正常生活受到严重影响，心理受到重大挑战，对此，个体的社会支持系统显得极为重要。**目的：**为考察新冠肺炎疫情期间普通民众社会支持的来源、种类、影响和阻碍个体获得社会支持的因素，为实践中如何有效地在疫情期间帮助普通民众度过难关提供一定参考和启发。**方法：**运用质性研究方法，按照目的性抽样原则招募访谈对象，采用面对面半结构式访谈收集资料，通过扎根理论对资料进行开放式编码、轴心编码和核心编码三个级别的归纳分析。**结果：**疫情期间，普通民众的社会支持主要来源于朋友、亲人和政府，同时，不同职业的个体还会受到其职业相关领域的支持和帮助；在种类方面，有物资、服务等工具性支持，有关心、慰问等情感性支持，有交流、新闻等信息性支持，还有娱乐、游戏等陪伴性支持；影响方面，人们通过获得社会支持，积极情绪和信念增加，消极情绪减少，提升了与他人的关系亲密度，快速适应疫情带来的变化，帮助个体恢复生活状态；但是，由于外部环境、社会管理情况、负面消极言论、信息可信度、前期物资供应不足和一些自身因素等，会阻碍个体去获得社会支持。**结论：**在此次新冠肺炎疫情期间，普通民众社会支持的来源广泛、种类齐全、影响积极，但在获得上依然存在一些困难。如何高效利用社会支持资源、改善社会支持的提供方式、优化社会支持的结构、加强社会管理，为人民群众构建优质的社会支持网络是今后需要关注和思考的问题。

A qualitative study on the Social support of ordinary people during the epidemic of COVID-19

Deng Jingfeng, Guo Ying (corresponding author)

College of Psychology, Sichuan Normal University, Chengdu, 610066, 492640233@qq.com

Abstract: Around the Spring Festival of the Year of the Rat, the epidemic of COVID-19 (hereinafter referred to as COVID-19) swept the country, so that people who were originally happy to welcome the Spring Festival were caught off guard, seriously affected their normal life, and suffered major psychological challenges. Individual social support system is extremely important. **Objective:** The purpose of this study is to investigate the sources, types, influences and factors that hinder individuals' access to social support during the COVID-19 epidemic, and to provide some reference and inspiration for how to effectively help ordinary people tide over the difficulties during the epidemic. **Methods:** the qualitative research method was used, the interview subjects were recruited according to the purposeful sampling principle, and the data were collected by face-to-face semi-structured interview. through the rooted theory, the data were summarized and analyzed at three levels: Open coding, Axial coding and Selective coding. **Results:** during the epidemic, the social support of ordinary people mainly came from friends, relatives and the government. At the same time, individuals of different occupations also received support and help from their occupation-related fields; in terms of types, there were instrumental support such as materials and services, emotional support such as care and sympathy, information support such as communication and news, and accompanying support such as entertainment and games. In terms of impact, through social support, positive emotions and beliefs increase, negative emotions decrease, enhance the intimacy of relations with others, quickly adapt to the changes brought about by the epidemic, and help individuals restore their living conditions; however, due to the external environment, social management, negative comments, information credibility, insufficient early material supply and some self-factors, individuals will be prevented from obtaining social support. **Conclusion:** during the COVID-19 epidemic, the social support of ordinary people has a wide range of sources, variety and positive influence, but there are still some difficulties in obtaining it. How to make efficient use of social support resources, improve the way of providing social support, optimize the structure of social support, strengthen social management, and build a high-quality social support network for the broad masses of people is the issues that we need to pay attention to and think about in the future.

动作视频游戏玩家的认知灵活性：被动消散还是主动准备

周玉红¹ 高雪梅² (通讯作者)

1 西南大学心理学部, 重庆, 400715

2 西南大学心理学部, 重庆, 400715, zhenggao@swu.edu.cn

摘要 现有关于动作视频游戏玩家认知灵活性的研究有限且没有得出一致的结果。这可能与研究中所使用的任务转换范式本身的不同有关, 任何会影响转换代价的因素, 如影响先前任务的被动消散过程以及当前任务的主动准备过程等因素, 可能是导致研究结果不一致的原因。目前为止, 尚未有研究同时考察被动消散因素和主动准备因素对玩家认知灵活性的影响。此外, 现有关于游戏成瘾玩家, 特别是动作游戏成瘾玩家(Internet gaming disorder, IGD) 认知灵活性的研究较少, 相较于动作视频游戏娱乐使用玩家(recreational game users, RGU), 成瘾玩家在认知灵活性上的表现会有何不同, 这一问题还有待进一步地探讨。基于此, 本研究设计了3个实验, 通过操纵任务间的干扰水平、任务内的线索提示有效性、反应-线索时间间隔(Response-Cue Interval, RCI)、线索-刺激时间间隔(Cue-Stimuli Interval, CSI)以及反应-刺激时间间隔(Response-Stimuli Interval, RSI), 比较了成瘾玩家、娱乐玩家和非玩家(non-gamers, NG), 系统考察了三组玩家的认知灵活性差异以及被动消散和主动准备在其中所起的作用。结果显示: (1) 实验1发现, 在低干扰的条件下, 任务类型、RCI以及CSI共同影响转换代价的组间差异, 具体表现为: 执行劣势任务时, 组间差异仅存在于只能进行被动消散且

消散时间较短的条件下（线索无效，CSI=100ms, RCI=100ms），此时 IGD 的转换代价显著小于 NG；执行优势任务时，IGD 和 RGU 比 NG 更小的转换代价出现在只能进行充足的主动准备条件下（线索有效，CSI=1000ms, RCI=100ms）；（2）实验 2 发现，在有线索提示的高干扰条件下，被动消散和主动准备时间不足的情况下（CSI=100ms, RCI=100ms），IGD 的转换代价显著大于 RGU，但延长主动准备时间后（CSI=1000ms, RCI=100ms），IGD 与 RGU 的组间差异消失，出现了 RGU 的转换代价小于 NG 的情况；（3）实验 3 发现，在无线索提示的高干扰条件下，当被动消散的时间足够长时（RSI=3000ms），IGD 的转换代价显著小于 RGU 和 NG。结论：IGD 更好的认知灵活性可能得益于转换代价的被动消散成分，RGU 更好的认知灵活性则可能得益于转换代价的主动准备成分。

The Cognitive Flexibility of Action Video Game Players: Passive Dissipation or Active Preparation

Zhou Yuhong¹, Gao Xuemei² (Corresponding author)

1 Faculty of Psychology, Southwest University, Chongqing, 400715

2 Faculty of Psychology, Southwest University, Chongqing, 400715, zhenggao@swu.edu.cn

Abstract: A limited number of studies have examined the cognitive flexibility of action video game (AVG) players, however, results of AVG usage and cognitive flexibility did not reach a consensus. Factors that influenced the process of passive dissipation and active preparation may impact switching cost in AVG users; however, few studies have systematically examined the potential effects of these factors on switching costs among AVG users simultaneously. In addition, no research has investigated the cognitive flexibility of those with Internet gaming disorder (IGD) exclusively for AVG usage. In order to address these questions, we conducted three experiments by manipulating levels of cross-task interference, the validity of prompts, response–cue interval (RCI), cue–stimuli interval (CSI), and response–stimuli interval (RSI) to compare the group differences in cognitive flexibility among IGD users, recreational game users (RGU) and non-gamers (NG) and to investigate the roles of the process of passive dissipation and active preparation in group differences among these three groups. Results showed: (1) in Experiment 1, type of tasks, RCI and CSI were found to influence the group differences in switching cost among IGD, RGU, and NG under low cross-task interference condition. Specifically, when performing the inferior task, group difference only existed under short passive dissipation time condition (CSI=100ms, RCI=100ms, cue=invalid) and switching cost in IGD was smaller than in NG; when performing the superior task, IGD and RGU displayed smaller switching cost than NG when the active preparation time was long (CSI=1000ms, RCI=100ms, cue=valid); (2) in Experiment 2, under cued high cross-task interference condition, IGD displayed larger switching cost than RGU when the time of passive dissipation and time of active preparation were both short (CSI=100ms, RCI=100ms), however, when extend the active preparation time (CSI=1000ms, RCI=100ms), the group difference in switching cost between IGD and RGU was disappeared, meanwhile, a smaller switching cost in RGU than in NG was found; (3) in Experiment 3, under no cued high cross-task interference condition, IGD displayed smaller switching cost than RGU and NG when the passive dissipation was long enough (RSI=3000ms). Conclusion: the better ability in cognitive flexibility in IGD may benefit from the process of passive dissipation, and the better ability in cognitive flexibility in RGU may benefit from the process of active preparation.

元刻板印象激活机制：自动化还是控制性加工？

徐璐璐^{1,2}, 贺雯² (通讯作者)

¹ 上海交通大学医学院, 上海, 200025

² 上海师范大学, 上海, 200234, hewen@shnu.edu.cn

摘要 元刻板印象是指个体关于外群体成员对其所属群体所持刻板印象的信念或看法。以往研究发现消极元刻板印象的激活会产生一系列的消极情绪和认知效应, 但关于消极元刻板印象激活的认知神经机制尚缺乏探索。本研究将以高校中的弱势群体——贫困大学生为被试, 首次借助 ERPs 技术, 采用经典 Stroop 颜色命名任务, 对消极元刻板印象激活的时间进程及其认知机制进行了探讨。实验通过让被试根据不同指导语写形容词的方式, 操纵了“消极元刻板印象激活组”和“控制组”两种条件, 以红绿颜色词为靶子, 字体颜色和字义关系构成一致和冲突两类靶子词, 记录了 37 名贫困大学生被试对靶子词进行颜色判别的行为反应和脑电 (ERPs)。结果发现: (1) 消极元刻板印象激活组比控制组诱发出更大的 P2、N2 和 EFP (early frontal positivity) 波幅, 表明在第一个阶段, 即 P2 和 N2 阶段, 消极元刻板印象激活表现出一种自动化加工特征; 在第二个阶段, 即 EFP 阶段, 表现出一种控制性加工特征。 (2) 相比控制组, 消极元刻板印象激活组在 300ms 左右的脑电波更正, 说明消极元刻板印象激活有自我加工优势效应。研究表明消极元刻板印象激活是一种双阶段加工模型, 且具有自我加工优势。

关键词 元刻板印象激活, 双阶段加工模型, 自动化加工, 控制性加工, ERPs

The Mechanism of MetaStereotype Activation: Automatic Process or Controlled Process?

Xu Lulu^{1,2}, He Wen²

¹Shanghai Jiao Tong University School of Medicine, Shanghai 200025, China

²Shanghai Normal University, Shanghai 200234, China

Abstract: Metastereotype refers to a person's beliefs regarding the stereotype that out-group members hold about their own group. The model of intergroup anxiety argues that negative metastereotype generates threat by creating negative expectations on the behavior of out-group members. Adopting priming Stroop paradigm, the present study aimed to investigate the pattern and the neural correlates of metastereotype activation by recording both behavioral and ERP data.

Thirty-seven young participants (20 female) were recruited in this study. All participants were asked to write some negative descriptive adjectives to evoke negative metastereotype or not based on different instructions. Afterwards, participants were randomly assigned to either the negative metastereotype activation condition or the controlled condition. This study was organized into a 2×2 design. The first factor was the group type, consisting of 2 levels, the second factor was the target type. In the experimental program, the target stimuli were color-words generally attributed to red or green, font-color and font-meaning words constituted congruent and incongruent situations. Each trial began with the presentation of a fixation cross presented for 500 ms and then the target word appeared for 200 ms until participants responded; randomly selected inter-trial intervals (ITI) between 600 and 800 ms separated next trial from the response. Participants had to indicate by pressing one of two buttons whether the targeted words' color and they were instructed to response as quickly as possible but avoid mistakes.

ERPs results indicated that the P2, N2 and EFP (early frontal positivity) amplitudes were significantly affected by the group types, that is to say, compared with the control group, the P2, N2 and EFP amplitudes in the negative metastereotype activation group were significantly more greater, which showed that negative metastereotype activation was a two-stage processing model. In the first stage, the P2 and N2 stage, is the preliminary processing of negative metastereotypes activation, showing the characteristics of an automatic process. In the second stage, the EFP stage, is the deep processing of negative metastereotypes activation, showing the characteristics of a controlled process. In addition, compared with the control group, the brain amplitudes around 300ms in the negative

metastereotype activation group were more positive, indicating that the negative metastereotype activation has a self-processing advantage effect.

These results suggest that the negative metastereotype activation is a two-stage process, and has the self-processing advantage effect. The two-stage processing model has important theoretical and social significance for further exploring the processing process of metastereotype activation.

Keywords: metastereotype activation, two-stage processing model, automatic process, controlled process, ERPs

矛盾性别歧视对亲密伴侣暴力容忍度和实施的影响： 关系因果定向的调节作用

杨淳惠 刘婉兰 王怡欢 胥爽 徐羽茜 杨璐嘉 周琦 李俊一（通讯作者）

四川师范大学心理学院，成都，610068，junyili@sicnu.edu.cn

摘 要 近年来，多起家庭暴力事件在网络上被曝光，引发了社会对男女之间暴力行为的关注，这种暴力受到诸多因素的影响，国外研究指出矛盾性别歧视和亲密伴侣暴力之间是存在关系的，但国内并未有清晰的研究，我们的研究注重施暴者的个体差异，基于关系因果定向理论和个体不同的性别歧视类型对亲密伴侣暴力进行了探索，力图从可能影响暴力的内在因素来对亲密伴侣暴力的容忍和实施做出解释。本研究采用了矛盾性别歧视量表、相关情境刺激下对亲密伴侣间的身体、情绪暴力容忍度评分和实施倾向的测量、关系因果定向量表对 299 名被试进行了调查，通过题目筛选留下了曾经或现在有恋爱经历的 196 名有效被试，并通过数据分析考察了变量间的相关性，并建立了 4 个分层线性回归模型来考察关系因果定向在矛盾性别歧视和亲密伴侣暴力间的调节作用，结果发现：(1)矛盾性别歧视（包括敌意性别歧视和善意性别歧视）均正向预测亲密伴侣暴力容忍度及实施可能性。具体地，敌意性别歧视与亲密伴侣暴力（身体暴力和情绪暴力）容忍度($r = 0.21, p < 0.01$)和实施可能性($r = 0.24, p < 0.01$)显著正相关；善意性别歧视与亲密伴侣暴力实施可能性显著正相关($r = 0.20, p < 0.01$)，但与亲密伴侣暴力容忍度相关并不显著。(2)善意性别歧视和亲密伴侣暴力实施之间的关系受到关系因果定向的调节作用。自主取向的善意性别歧视个体实施亲密伴侣暴力的可能性更高($b = 0.003, t = 2.670, p < 0.01$)，控制取向的善意性别歧视个体实施亲密伴侣暴力的可能性更低($b = -0.002, t = -2.319, p < 0.05$)。这些研究结果对亲密伴侣暴力有了更好的解释，对建立积极的两性关系具有重要的意义，为建立一个性别平等、零暴力的社会提供了方向。

Effects of ambivalent sexism on tolerance and perpetration of intimate partner violence: The moderating effect of relationship causality orientation

Yang Chunhui, Liu Wanlan, Wang Yihuan, Xu Shuang, Xu Yuxi, Yang Lujia, Zhou Qi, Li Junyi

School of Psychology, Sichuan Normal University, Chengdu 610068, China

Abstract: In recent years, many domestic violence incidents were exposed on the internet, sparked concerns about violence between men and women. This violence influenced by many factors. The foreign research points out that there is a relationship between ambivalent sexism and intimate partner violence, but did not have a clear study in China. Our study focuses on the individual differences of violent. Based on the theory of relationship causality orientation and different types of gender discrimination, we carried on the exploration to intimate partner violence. We tried to use internal factors of violence to explain for the tolerance and perpetration of intimate partner violence. This study adopted the Ambivalent Sexism Scale, the scene stimulation to measure the physical and emotional violence tolerance and tendency of perpetration, the Relationship Causality Orientation Scale to investigate 299 subjects. Our study left 196 valid participants who passed attention checks and had been in a relationship or marriage. We examined the correlation between the variables through the data analysis, and conducted four hierarchical regression models to examine the moderating effects, the results showed that: (1) Ambivalent sexism (including

hostile sexism and benevolent sexism) positively predicted the tolerance and possibility of perpetrating intimate partner violence. Specifically, hostile sexism was significantly positively correlated with the tolerance of intimate partner violence ($r = 0.21, p < 0.01$) and the likelihood of perpetration ($r = 0.24, p < 0.01$). There was a significant positive correlation between benevolent sexism and the perpetration of intimate partner violence ($r = 0.20, p < 0.01$), but no significant correlation with intimate partner violence tolerance. (2) The relationship between benevolent sexism and intimate partner violence is moderated by relationship causality orientation. Benevolent sexism individuals with autonomous orientation were more likely to perpetrate intimate partner violence ($b = 0.003, t = 2.670, p < 0.01$), while benevolent sexists with controlled orientation were less likely to perpetrate intimate partner violence ($b = -0.002, t = 2.319, p < 0.05$). These conclusions provide a better explanation for intimate partner violence and have important implications for building positive gender relationships and providing a direction for building a gender-equal, non-violent society.

Keywords: Hostile sexism, benevolent sexism, relationship causality orientation, intimate partner violence

强硬怼对还是自贬幽默：从差序格局看名人回应网络恶搞的效果

摘要 名人遭遇网络恶搞后的不同回应方式能够影响公众对他们的喜欢。然而与名人不同人际关系距离的公众却可能由于对名人持不同的道德期望而进一步表现出对名人有差异的喜欢度。根据中国人的差序格局理论, 本研究通过三个递进式的子研究对比了在公众与名人的不同人际关系中, 当名人选择强硬式与自贬幽默式回应后, 公众对他们的喜欢度差异。研究1首先对比了两种回应方式的效果, 发现自贬幽默式回应更有利于名人获得公众的喜欢。研究2通过加入喜欢/不喜欢这一人际关系指标, 发现结果与研究1一致。研究3以情感距离更近的粉丝关系为界进一步收缩公众与名人之间的人际关系, 发现在粉丝关系中, 公众对名人的喜欢不受回应方式的影响, 但在非粉丝关系中, 自贬幽默式回应仍然更有效。这些结果对人们在互联网时代如何更好地应对网络暴力和维护自我形象具有重要意义。

关键词 网络恶搞, 网络暴力, 差序格局, 强硬式回应, 自贬幽默式回应

Tough Response or Self-Defeating Humor Responses: How celebrities respond to Online E'gao From the Perspective of Chaxugeju

Cao Yi, Hou YuBo, Zhou Keqiucheng

School of psychological and Cognitive Sciences and Beijing Key Laboratory of Behavior and Mental Health, Peking University

Abstract: The different response ways of celebrities after encountering online e'gao can influence individuals' preference for them. Yet individuals with different interpersonal relationship distance from celebrities may further show different preference for celebrities due to their different moral expectations for them. Based on the Chinese theory of Chaxugeju, present study compared the individuals' preference for celebrities in different interpersonal relationships between them after celebrities choose tough response and self-defeating humor response. Study 1 first compared the effect of two response ways on individuals' preference for celebrities and found that self-defeating humor response was more conducive. Study 2 added the like/dislike interpersonal relationship distance indicator and found that the relationship between response way and individuals' preference was consistent with study1. Study 3 further shrined interpersonal relationship distance between individuals and celebrities by using fan relationship as the boundary indicator, which is a closer emotional distance. It was found that in fans relationship, individuals' preference for celebrities was not affected by response way, but in non-fans relationship, self-defeating humor response was still more effective. These results are of great significance for people to better cope with cyber violence and maintain their self-image in the internet era.

Keywords: Chaxugeju, Cyber violence, Online E'gao, Self-defeating humor response, Tough response

“被社会排斥者的抱团取暖”—— 相似经历改变助人倾向，提升对相似经历者的助人意愿

李舒欣 郭晶晶（通讯作者）

陕西师范大学心理学院，西安，710048, guojjok@snnu.edu.cn

摘 要 人是社会性动物，有强烈的归属需要。被社会排斥或看到他人被排斥，个体会感受到心理痛苦。然而，当目睹他人遭受社会排斥时，并不是所有人都会伸出援手。在生活中，我们更容易见到“被社会排斥群体的抱团取暖”。因此，为探究相似社会排斥经历对助人行为的影响，本研究在实验室中操纵社会排斥情景，探究被社会排斥者的助人对象偏好，以及其助人行为强度。实验招募了 32 名大学生被试（ $M_{age}=20.77$ ， $SD_{age}=1.05$ ），将他们随机分配到排斥组或接纳组；并通过 Java 编制的网络抛球范式创设社会接纳与排斥情景：在抛球游戏中，排斥组被试仅在开始接到球；而接纳组被试接球几率与其他玩家相同。在一局游戏结束后，他们将观看另外九名玩家进行 3 局游戏，（每局游戏中玩家都被编为一至三号）并为他们分配参与费。三局游戏的社会情境分别是：（1）排斥情景：2 号玩家被 1、3 号玩家排斥，仅在游戏开始接到球（2）接纳情景：2 号玩家被 1、3 号玩家接纳，接球机会与另外两人一样多（3）接纳但有其他帮助需要：2 号玩家被 1、3 号玩家接纳，但有其他帮助需要。我们用分配给 3 个情景中 2 号玩家的金钱数衡量助人行为强度，结果发现：（1）相似经历的主效应显著：社会排斥组被试分给被排斥情景中 2 号玩家的钱数显著多于其他两个情景中的 2 号玩家；同时，相比于接纳组被试，排斥组被试分给被排斥的 2 号玩家更多的钱（2）社会排斥组被试分给两个接纳情景中 2 号玩家的钱数差异不显著，而接纳组分给情景三的钱数显著多余情景二。以上结果由两点原因造成：（1）相似经历会引发个体的自发共情反应，并激活相关情绪和心理痛苦，而帮助相似经历者可以减小个体的心理痛苦，因此他们更倾向于帮助相似经历者（2）接纳组由于缺乏相似经历和相关表征，难以正确感知被排斥者的情绪，尤其是排斥信息较模糊时，他们并未意识到他人遭受了社会排斥，也未感知到其心理痛苦。由此可见，相似经历会改变个体助人倾向，使个体更倾向于帮助相似经历者。

关键词 社会排斥，相似经历，心理痛苦，助人行为

"The social outcast huddled together"——Similar experiences change the propensity of helping behaviors and enhance the willingness to help others with similar experiences

Li Shuxin, Guo Jingjing

Shaanxi Normal University, Xi'an

Abstract: People are social animals with a strong need to belong. Psychological distress occurs when an individual is socially excluded or sees others excluded. However, not everyone is willing to help others when they witness them being excluded. In daily life, it's prone to see the "social outcast bonding". Therefore, in order to explore the influence of similar social excluded experiences on helping behavior, social exclusion conditions were manipulated in the laboratory to explore the preference for helping others and the influence of their helping behavior on psychological distress. Thirty-two undergraduates were recruited ($M_{age}=20.77$, $SD_{age}=1.05$) and randomly assigned to either the excluded group or the accepted group. And through the network throwing paradigm compiled by Java to create the social exclusion situation: in the throwing game, the exclusion group only receive the ball in the beginning; while The accepted group had the same catch rate as the other players. After the game, they watched nine other players play three games (players in each game were numbered one to three) and allot fee for them. The three conditions are: (1) excluded condition: player 2 is excluded by player1 and player 3, only receive the ball at the beginning of the game (2) acceptance condition: player 2 is accepted by players a and 3, with the same opportunity to catch the ball (3) accepted but with other help need: player 2 is accepted, but has other help needed. We measured the intensity of helping behavior by the amount of money assigned to player 2 in the three conditions. The results showed

that: (1) The main effect of similar experiences was significant: the amount of money given to player 2 in the excluded condition by participants the social exclusion group was significantly higher than in the other two conditions; At the same time, compared with the accepted group, the rejected group gave more money to the excluded number 2 player. (2) There was no significant difference in the amount of money the social excluded group gave to the non-social excluded players, while the accepted group gave significantly more money to condition 3 than condition 2. These results caused by two reasons: (1) the similar experience will lead to individual responses of spontaneous empathy, and activate the related emotional and psychological pain, and help similar experience can reduce the individual psychological pain, bring positive emotional experience to the individual, so they are more inclined to help similar experience (2) acceptance group due to lack of experience and relevant similar characterization, difficult to correct perceptions are excluded, especially exclusive information is fuzzy, to suffer social exclusion, they did not realize that others did not perceive their psychological distress, so they didn't offer help. Therefore, It can be seen that similar experiences will change the individual's propensity to help others, making individuals more inclined to help others with similar experiences.

Keywords: social exclusion, similar experience, psychological pain, helping behavior

信念纠正中逆火效应的验证及其影响因素

王伊明¹ 陈清莲¹ 邱林波¹ (通讯作者)

¹ 北京师范大学心理学部, 北京, 100875

¹ 北京师范大学心理学部, 北京, 100875, 201711061155@mail.bnu.edu.cn

摘 要 态度改变是指个体在对事物已有态度的基础上发生一定的变化。态度的改变分为方向的变化和强度的改变: 方向的变化是指从赞成变为反对或者从反对变为赞成, 属于质的改变; 强度的改变则是指态度在原来的方向上变强或者变弱, 属于量的改变。逆火效应是指公众在接受信念纠正时, 原有的态度不仅没有被改变, 反而变得更坚定。逆火效应中, 态度的强度发生改变, 但态度的方向并没有发生改变。本研究关注中国大学生对不同类别、不同呈现方式的信息的态度改变过程中是否会出现逆火效应。实验一向 38 名被试呈现科学类、社会类和综合类三类不同的信息, 并且通过文字和视频两种方式对于被试原本的信念进行纠正。结果发现, 被试在接受与原态度相反的信念纠正信息后, 对于科学类、社会类、综合类三种类型的信息态度方向和强度都发生了改变, 视频和文字两种纠正方式的效果没有显著差异。实验二为了增加生态效度, 向 98 名被试依旧呈现三类信息, 然后以随机的顺序先后向被试呈现支持其信念的材料和不支持其信念的材料。结果发现, 被试在阅读两种材料后, 对于原有信息的态度方向和强度都发生了改变。两个实验结果都证明中国大学生群体在接受信念纠正后态度的强度和方向均发生了变化, 逆火效应没有出现。但是相较于科学类与综合类信息, 人们对于社会类信息会更倾向于坚持自己原有的态度 ($F(2,72) = 8.302, p = .001, \eta^2 = .199$; $F(2,186) = 3.835, p = .023, \eta^2 = .040$), 这可能是由于社会类信息与被试的生活联系更紧密, 被试会有更多自己的思考。

Abstract: Attitude change refers to a change of individuals' attitude based on their existing attitude towards certain things. The change of attitude involves the change of direction and the change of intensity. The change of direction refers to the change from agree to disagree or from disagree to agree, which is a qualitative change. The change of intensity refers to the change of attitude intensity in the original direction, which is a change of quantity. The backfire

effect means that when the public accepts the correction of beliefs, the original attitude is not changed, but becomes firmer. Therefore, for backfire effect, the intensity of attitude changes while the direction doesn't. This project focuses on whether there will be backfire effect in the process of changing the attitude of Chinese college students towards different types of information which is presented in different ways. In the first experiment, 38 participants were presented with three different kinds of information which are scientific, social and synthetical information, and their original beliefs were changed through both text and video. The results showed that after receiving the information contrary to the original attitude, the direction and intensity of the three types of information attitudes were all changed, and there was no significant difference in the effect of video and text. To increase ecological validity, the second experiment presented 98 participants three types of information. Then participants were presented with materials supporting their beliefs and materials not supporting their beliefs in a random order. The results showed that both attitude direction and attitude intensity towards the original information changed after reading the two kinds of materials. Both results indicate that the intensity and direction of Chinese college students' attitude changed after they accepted the correction of beliefs, and the backfire effect did not appear. However, compared with scientific and synthetical information, people tend to stick to their original attitude towards social information ($F(2,72) = 8.302, p = .001, \eta^2 = .199$; $F(2,186) = 3.835, p = .023, \eta^2 = .040$). This conclusion may be since social information is more closely related to the participants' lives, so the participants have more thoughts of their own.

身体意象对整形行为的影响—— 自我效能感和状态焦虑的链式中介作用

卢笑笑 李莹（通讯作者）

郑州大学教育学院心理学系，郑州，450001，通讯作者 E-mail: liying@zzu.edu.cn

摘要 目的：本研究旨在对比整形个体和非整形个体的焦虑，自我效能感以及身体意象方面的差异，并探讨自我效能感和状态焦虑在整形患者身体意象和整形行为间的链式中介效应，进而更深一步探讨个体选择整形行为的内部作用机制，为整形患者心理护理提供理论指导。方法：筛选出郑州市某整形医院 190 例整形个体为实验组，另外，在年龄、文化程度、婚姻状况、职业等人口学变量进行匹配选取非整形个体 190 名为对照组，采用多维自我体像关系调查问卷(MBSRQ)、状态焦虑量表(S-AI)和一般自我效能感量表(GSES)分别对两组进行调查。结果显示：实验组和对照组在身体意象、状态焦虑和自我效能感上差异显著，实验组的焦虑得分显著高于对照组，身体意象和自我效能感得分显著低于对照组($t = -5.56, 6.61, -3.12, P_s < 0.01$)；身体意象、状态焦虑、自我效能感和整形行为两两之间均呈显著相关，相关系数分别为：-0.19、0.17、-0.28、-0.64、0.32、-0.16, ($P_s < 0.01$)；身体意象显著负向预测个体整形行为($OR = 0.57, P < 0.01$)；身体意象可以通过状态焦虑的中介作用间接影响个体的整形行为，中介效应值为-0.07；也可以通过自我效能感和状态焦虑的链式中介作用间接影响个体的整形行为，中介效应值为-0.09。结论：身体意象通过状态焦虑的单独中介作用以及自我效能感和状态焦虑的链式中介作用两条路径影响个体整形行为。

The effect of body image on plastic surgery behavior: The chain mediating role of self-efficacy and state anxiety

Lu xiaoxiao, Li Ying(corresponding author)

Department of Psychology, Zhengzhou University, Zhengzhou, 450001, liying@zzu.edu.cn

Abstract: Objective: The purpose of this study was to compare the differences in anxiety, self-efficacy and body image between plastic surgery and non-plastic surgery individuals, and to investigate the mediating effect of self-efficacy and state anxiety between body image and plastic surgery behavior in plastic surgery individuals, then further explore the internal mechanism of individual selection of plastic behavior, to provide theoretical guidance for

psychological nursing of plastic surgery patients. Methods: Select 190 plastic individuals one orthopedic hospital of zhengzhou city as the experimental group, in addition, in the age, culture level, marital status, occupation and other demographic variables and the experimental group matching, to select the non-plastic individual 190 as the control group, using the multidimensional self body sample relationship questionnaire, and state anxiety inventory and general self-efficacy scale investigation into two groups, respectively. The results showed that: (1) there were significant differences in body image, state anxiety and self-efficacy between the experimental group and the control group. The anxiety scores of the experimental group were significantly higher than that of the control group, and the body image and self-efficacy scores of the control group were significantly lower than that of the control group ($t = -5.56, 6.61, -3.12, PS < 0.01$). (2) Body image, state anxiety, self-efficacy and plastic surgery behavior were significantly correlated with the correlation coefficients of $-0.19, 0.17, -0.28, -0.64, 0.32, -0.16$, respectively ($PS < 0.01$). (3) Body image significantly negatively predicted individual plastic surgery behavior ($OR = 0.57, P < 0.01$); Body image can indirectly affect individuals' plastic behavior through the mediating effect of state anxiety, and the mediating effect value is -0.07 . It can also indirectly affect individuals' plastic behavior through the chain mediating effect of self-efficacy and state anxiety, and the mediating effect value is -0.09 . Conclusion: Body image affects individual plastic surgery behavior through the single mediating effect of state anxiety and the chain mediating effect of self-efficacy and state anxiety.

核电企业履行社会责任对公众接受度的影响

徐中¹ 马剑虹²

1 中核核电运行管理有限公司, 浙江海盐, 314300, xvzhongsf@126.com

2 浙江大学心理与行为科学系, 浙江杭州, 310028

摘要 核能是一种广受重视的清洁能源, 然而福岛核事故之后公众接受度低限制行业发展, 国内多个涉核项目搁浅。我国在核电建设方面非常强调核电企业的公众接受度, 并把它作为核电项目审批的重要指标。因此如何改善核电企业的公众接受度成为我国核电发展的一个重要环节。本研究从核电企业履行社会责任的角度探讨公众对核电的接受度, 首先以文献研究归纳公众接受度影响因素: 信任、公众认知、风险感知和收益感知, 提出假设: 公众对核电企业社会责任感知能够提升核电公众接受度。然后以秦山核电周边 211 名居民为研究对象, 整合并修正企业社会责任感知、信任、公众认知、风险感知、收益感知等已有量表, 分析企业社会责任感知对公众接受度的影响及作用路径。结果表明: (1) 我国公众对核电企业社会责任感知分为两个维度, 分别是法律责任感知、经济与道德责任感知; (2) 法律责任感知对核电公众接受度存在正向影响; 公众认知、恐慌风险感知和收益感知起部分中介作用。最后, 以嘉兴市周边(排除海盐县) 195 名居民为研究对象, 分三组观看核电企业不同社会责任的宣传视频或不观看视频, 以 ANOVA 分析比较了不同宣传内容对企业社会责任感知、公众接受度的影响, 结果表明: (1) 核电企业宣传其履行社会责任能够提升公众接受度 (2) 宣传企业社会责任的不同方面对提升公众接受度的效果并无显著差异。

Influence of Social Responsibility of Nuclear Power Companies on Public Acceptance

Xu Zhong¹, Ma Jianhong²

1 CNNP Nuclear Power Operation Management Co. Ltd, Haiyan Zhejiang, 314300

2 Department of Psychology and Behavioral Science, Zhejiang University, Hangzhou, 310028

Abstract: Nuclear energy is a kind of clean energy which is widely valued. However, after the Fukushima nuclear accident, low public acceptance limited the development of the industry, and several nuclear related projects in China were suspended. It's an important index of nuclear power project approval. This study explores the public's

acceptance of nuclear power from the perspective of social responsibility(CSR) of nuclear power corporates, firstly the influencing factors of public acceptance were summarized through literature research: trust, knowledge, risk perception and benefit perception, and the hypothesis was put forward: the perceivedCSR can improve public acceptance. Then, 211 residents around Qinshan Nuclear Power Station were taken as the research object, and existing scales such as CSR, trust, knowledge, risk perception and benefit perception were integrated and modified to analyze the influence and action path of perceivedCSR on public acceptance. The results show that : (1) The perceivedCSR of nuclear power companies in China is divided into two dimensions, legal responsibility, economic and moral responsibility, (2) The perceived legal responsibility has a positive effect on the public acceptance,, and this effect is realized through the partial mediating effect of knowledge, dread risk perception and benefit perception. Finally, 195 residents around Jiaxing were taken as the research object, who were divided to 3 groups and watch different videothat show CSR of nuclear companies, the comparison showed that: (1) publicity of nuclear companiesCSR can promote perceivedCSR and public acceptance, (2) There is no significant difference in the effect of promoting different aspects of CSR on public acceptance.

趋近还是回避？羞耻情绪的社会功能

潘越 刘鹏（通讯作者）

山西师范大学教育科学学院，临汾，041000，18435222119@163.com

摘 要 羞耻是一种道德情绪，对个体的身心健康和社会性发展具有重要影响。目前关于羞耻情绪的结果有两类发现，多数学者认为羞耻是一种消极情绪，激发人们产生社交回避行为，例如躲藏、抑制社交或与他人疏离等；近年来研究发现羞耻情绪能够促进社交趋近行为，例如捐赠、合作等。以往研究多使用实验或问卷单独测量趋近或回避的一种，却忽视了被试自己对情境的选择。生活中个体在体验到某种情绪时，通常会自主选择合适的社交情境。除此之外，这些研究多是在西方文化背景下进行的，但羞耻情绪在中西方的表现及接纳程度并不相同。最后，西方学者的研究只涉及到能力不足羞耻，未考虑道德失范羞耻。基于此，本研究设计三个实验来探讨中国文化背景下羞耻情绪的社会功能。首先启动羞耻情绪，随后要求被试自主选择社交回避（独自进行货币分配决策）或社交趋近（与另一个人进行货币分配决策）情境。实验1采用自传回忆法考察启动羞耻情绪的个体对社交情境的选择。实验2采用 de Hooge 的“任务表现失败范式”诱导羞耻情绪，采用 2（情绪状态：羞耻、控制）× 2（他人知晓与否：知晓、不知晓）的被试间设计，探讨能力不足羞耻在他人知晓与否的情况下对社交情境的选择。实验3采用高学德的典型羞耻事件诱发羞耻情绪，研究设计同实验2，考察道德失范羞耻在他人知晓与否的情况下对社交情境的选择。实验结果均发现，无论是能力不足羞耻还是道德失范羞耻，也无论他人知晓与否，相比于社交回避，体验到羞耻情绪的个体更容易产生社交趋近行为。这一发现可能引导人们进一步认识羞耻情绪的社会功能，不再把羞耻看作是完全的消极情绪，而是作为一种自我意识的情感来调节个体与周围环境中其他人的关系。

Approaching or withdrawing? The social function of shame emotion

Pan Yue, Liu Peng (Corresponding Author)

College of Education Science, Shanxi Normal University, Linfen, 041000

Abstract: Shame is a kind of moral emotion, which has an important influence on individual's physical and mental health and social development. At present, there are two kinds of findings about the results of shame. Most scholars think that shame is a negative emotion, which stimulates people to produce social avoidance behaviors, such as hiding, suppressing social interaction or alienating others; In recent years, it has been found that shame can promote social approaching behaviors, such as donation and cooperation. Previous studies used experiments or questionnaires to measure approach or avoidance alone, but ignored the subjects' choice of situations. In life, when individuals experience certain emotions, they usually choose suitable social situations independently. In addition, most of these

studies are conducted under the western cultural background, but the expression and acceptance of shame are different between China and the West. Finally, the research of western scholars only involves the shame of lack of ability, without considering the shame of moral anomie. Based on this, this study designed three experiments to explore the social function of shame in Chinese cultural background. First, the shame was primed, and then the subjects were asked to choose social withdraw (making money distribution decision alone) or social approach (making money distribution decision with another person). In experiment 1, autobiographical recall method was used to investigate the choice of social situations of individuals who started shame. In Experiment 2, de Hooze's "Task Performance Failure Paradigm" was used to induce shame, and a design of 2 (emotional state: shame and control) $\times$ 2 (whether others know or not: know or not) was adopted to explore the choice of social situations by shame of lack of ability when others know or not. Experiment 3 used Gao Xuede's typical shame events to induce shame, and the research design was the same as experiment 2, to investigate the choice of social situation by moral anomie shame whether others knew it or not. The experimental results show that, compared with social withdraw, individuals who experience shame are more likely to have social approaching behavior, whether they are ashamed of lack of ability or moral anomie, and whether others know it or not. This discovery may lead people to further understand the social function of shame, and no longer regard shame as a completely negative emotion, but as a self-conscious emotion to regulate the relationship between individuals and other people in the surrounding environment.

Keywords: shame, social approach, social withdraw

消极完美主义与大学生拖延：损耗敏感性的调节作用

柯杰¹ 贺宁¹ 苗振东¹ (通讯作者)

¹ 山西师范大学教育科学学院, 临汾, 041004, 通讯作者 E-mail: 617278705@qq.com

摘 要 拖延导致大量时间的浪费, 人们的工作学习效率为此遭受了许多不必要的损失。消极完美主义作为一种较为稳定的人格特质, 与拖延有着十分紧密的联系。研究表明, 消极完美主义与拖延显著正相关。前人研究表明, 消极完美主义对拖延的影响大部分都是通过中介或者调节方式进行, 自我控制与拖延的关系十分密切, 已有研究者探讨了自我控制在消极完美主义和拖延之间所起的作用。自我控制的力量模型认为, 自我控制是一种有限资源, 在消耗到一定程度后个体会进入自我损耗状态, 有研究者指出自我控制失败的根源在于自我损耗。传统的自我控制量表测量的是特质自我控制, 即自我控制资源总量, 而损耗敏感性这一概念旨在反映个体自我控制资源的消耗速度, 两者存在概念上的差异。为完善自我控制视角下, 消极完美主义对拖延的影响, 本研究从自我控制资源消耗速度方面入手, 假设消极完美主义对拖延的影响会受到损耗敏感性的调节。本研究采用 Frost 多维完美主义量表中的消极完美主义部分、损耗敏感性量表、非理性拖延量表, 对 411 名大学生进行调查。结果发现: (1) 消极完美主义与拖延呈显著正相关 ($r=0.28$, $p<0.01$), 损耗敏感性与拖延呈显著正相关 ($r=0.18$, $p<0.05$)。 (2) 损耗敏感性会对消极完美主义与拖延的关系中起到正调节作用。简单斜率检验表明, 损耗敏感性低时, 消极完美主义对拖延的影响不显著; 损耗敏感性高时, 消极完美主义对拖延有显著正向影响 ($B=0.36$, $p<0.001$)。本研究为前人研究做了补充, 说明不仅仅是自我控制资源的总量, 自我控制资源消耗速度也会影响消极完美主义对拖延的影响效果。

Negative perfectionism and Procrastination in College Students: The moderating effect of loss sensitivity

Jie Ke¹, Ning He¹, Zhendong Miao¹

¹ College of Education Science, Shanxi Normal University, Linfen, 041004

Abstract: Procrastination leads to the waste of a lot of time, and people's work and study efficiency suffers a lot of unnecessary losses. As a relatively stable personality trait, negative perfectionism is closely related to procrastination. Studies have shown a significant positive correlation between negative perfectionism and procrastination. Previous

studies have shown that most of the influences of negative perfectionism on procrastination are mediated or regulated, and Some researchers have discussed the role of self-control in the relationship between negative perfectionism and procrastination. According to the strength model of self-control, self-control is a kind of limited resource. After a certain degree of consumption, individuals will enter into a state of ego-depletion. Some researchers have pointed out that the root cause of self-control failure lies in ego-depletion. The traditional self-control scale measures idiosyncrasies self-control, that is, the total amount of self-control resources, while the concept of loss sensitivity aims to reflect the consumption rate of individual self-control resources, and there is a conceptual difference between the two. In order to improve the influence of negative perfectionism on procrastination from the perspective of self-control, this study started from the aspect of self-control resource consumption speed and assumed that the influence of negative perfectionism on procrastination would be adjusted by loss sensitivity. In this study, the negative perfectionism, loss sensitivity and irrational procrastination scales of Frost Multidimensional Perfectionism Scale were used to investigate 411 college students. The results showed that :(1) negative perfectionism was positively correlated with procrastination ($r=0.28$, $p < 0.01$), while loss sensitivity was positively correlated with procrastination ($r=0.18$, $p < 0.05$). (2) Loss sensitivity plays a positive regulating role in the relationship between negative perfectionism and procrastination. The simple slope test shows that negative perfectionism has no significant effect on procrastination when loss sensitivity is low. When loss sensitivity is high, negative perfectionism has a significant positive effect on procrastination ($B=0.36$, $P < 0.001$). This study is a supplement to previous studies, indicating that self-control is not only about the total amount of resources, but also about the rate of resource consumption that affects the effect of negative perfectionism on procrastination.

Keywords: negative perfectionism, irrational procrastination, loss sensitivity, regulation

分析性认知风格对道德体感图谱的影响——基于随机森林算法

刘煜^{1,2} 游旭群^{1,2} (通讯作者)

1 陕西师范大学心理学院, 西安, 710062

2 陕西省行为与认知重点实验室, 西安, 710062, 通讯作者 E-mail: youxun@snnu.edu.cn

摘要 体感图谱 (bodily sensation maps, BSMs) 被用来表达情绪体验的躯体感受。已有研究根据道德基础理论 (moral-foundations theory, MFT) 提出的五个道德问题 (关爱、公平、忠诚、权威和洁净), 绘制了不同道德问题相应的体感图谱, 证明了不同道德问题与特定身体区域的激活或失活有关, 与道德问题相应的体感图谱在政治倾向 (自由派和保守派) 方面存在显著差异。现有研究发现, 分析性认知风格 (Analytic cognitive style, ACS)、道德基础信念以及对政治和宗教团体的认同三者之间会相互影响, 低 ACS 的人在政治上倾向保守, 对具有约束力的道德基础 (洁净, 忠诚和权威) 更为认可。然而, 尚不清楚 ACS 对道德体感图谱的影响。本研究旨在探索不同 ACS 的被试在面对由道德基础理论提出的五个道德问题时, 体感图谱是否有区别, 以及使用随机森林 (random forest, RF) 分类器是否可以根据体感图谱数据区分不同 ACS 的群体。研究采用认知反应测试 (Cognitive Reflection Test, CRT) 将被试分为高、低 ACS 组, 再将各组被试随机分配到道德基础理论的 5 个道德问题条件下。通过向被试呈现相应违背道德场景的短视频, 要求被试报告其情绪体验强烈程度和感知到行为的错误严重程度, 并使用 emBODY 工具在两个 48954 像素轮廓上分别绘制其主观身体感觉激活和失活的体感图谱。研究基于体感图谱的特征变量, 分别对 5 种道德问题和不同 ACS 采用随机森林分类器进行分类数据建模。研究结果表明: 与道德问题相应的体感图谱在高、低 ACS 组之间存在显著差异, 不同道德问题条件下, 高、低 ACS 组的平均分类准确率均显著高于随机水平, 说明不同 ACS 的被试在不同道德问题条件下, 有着不同的躯体感受。因此, 本研究结论指出基于道德体感图谱建立的 ACS 预测模型具有良好的预测效果。

The Influence of Analytical Cognitive Style on Moral Bodily Sensation Maps: Based on Random Forest Algorithm

Liu Yu^{1,2}, You Xuqun^{1,2}(corresponding author)

1 Department of Psychology, Shaanxi Normal University, Xi' an, 710062

2 Key Laboratory for Behavior and Cognitive Neuroscience of Shaanxi Province, Xi' an, 710062

Abstract: Bodily sensation maps (BSMs) are used to express the somatic feelings of emotional experience. Based on the five moral issues (care, fairness, loyalty, authority, and purity) raised by moral-foundations theory (MFT), existing study has drawn up the corresponding bodily sensation maps of different moral issues. It proves that different moral issues are related to the activation or deactivation of specific body areas, and the bodily sensations maps corresponding to moral issues have significant differences in political tendencies (liberals and conservatives). Existing research has found that analytic cognitive style (ACS), fundamental moral beliefs, and identification with political and religious groups can influence each other. People with low ACS tend to be conservative in politics and have more recognized of binding moral foundations (purity, loyalty, and authority). However, it is not clear how ACS affects the moral bodily sensation maps. This study aimed to explore whether there were differences in the bodily sensation maps among the subjects of different ACS when facing the five moral issues raised by the moral foundation theory, and whether the random forest (RF) classifier could distinguish different levels of ACS groups based on bodily sensation maps' data. The study used the cognitive reflection test (CRT) to divide the subjects into two ACS groups (high and low), and then randomly assigned each group to the five moral issues conditions of the moral-foundations theory. Participants were asked to report the intensity of their emotional experience and their perceiving severity of wrong behaviors by watching short videos of violation moral scenes. Also they were asked to use the emBODY tool to draw the bodily sensation maps of the subjective body sensation activation and deactivation on the two 48954 pixel contours. Based on the characteristic variables of the bodily sensation maps, the research used random forest classifiers to model the classification data of 5 kinds of moral issues and different ACS groups. The results showed that: the bodily sensation maps corresponding to moral issues were significantly different between the high and low ACS groups. Under different moral issues, the average classification accuracy of the high and low ACS groups was significantly higher than the random level. It showed that the subjects of different ACS had different physical feelings under different moral issues conditions. Therefore, the conclusion of this study pointed out that the ACS prediction model based on the bodily sensation maps had a good prediction effect.

Keywords: moral-foundations theory, bodily sensation maps, cognitive style, random forest

敬畏感对助人行为的影响

李双双

安徽理工大学经济与管理学院, 淮南, 232001, 通讯作者 E-mail: liss2008@126.com

摘要 敬畏感是一种自我超越情绪,是在面对广阔、浩大或者超越我们认知范围的事物时所产生的一种情感体验。助人行为是人们自愿地关心他人并为他人提供帮助的行为,是社会所期待的一种良好道德行为。在情绪领域的研究中,情绪对个体认知和行为的影响越来越受到研究者的关注。作为一种由来已久的重要情绪体验,已有研究发现敬畏感能激发人的亲社会性行为,因而推测敬畏感在助人行为上也将存在积极的作用。本文通过问卷调查和情境启动实验,考察敬畏感对个体助人行为的影响。实验一以情绪为自变量,助人行为为因变量,以中性情绪为参照,考察敬畏感对助人行为的影响。实验二从个体的性格倾向出发探究敬畏感对助人行为的影响。实验三从受助者的特征角度展开,探究敬畏感对不同性别、不同年龄和不同经济状况的受助者的助人行为的影响。本研究得出以下几个结论:(1)敬畏感与助人行为存在正相关,且可以有效预测助人行为;(2)那些会经常感受到敬畏感的个体会表现出更多的助人行为;(3)受助者的性别、年龄和经济状况影响个体的助人行为,个体更倾向于帮助女性、年龄较大和较小及经济状况差的受助者;不同敬畏感水平的个体对不同性别、年龄和经济状况的受助者助人行为存在差异,敬畏感水平高的个体对不同性别、年龄和

经济状况的受助者助人行为不存在差异；而敬畏感水平低的个体更倾向于帮助女性、年龄较大和较小及经济状况差的受助者。

The Effect of Awe on Helping Behavior

Li Shuangshuang

School of Economics and Management, Anhui University of Science and Technology, Huainan

Abstract: Awe is a self-transcendence emotion, and awe is an emotional experience in the face of things that are vast, or beyond the scope of our cognition. As an expected good moral behavior, helping behavior refers to caring for others and providing help voluntarily. In the field of emotion research, people have a stronger interest in how emotion impact on individual cognition and behavior. The concept of awe has a long history and awe has been proved to benefit pro-social behavior. We think the positive effects of awe also exist in the field of helping behavior. The questionnaires and context-initiated experiments were conducted to explore the effect of awe on helping behavior. In Experiment 1, used emotion as independent variable, helping behavior as dependent variable and neutral emotion as reference to investigate the effect of awe on helping behavior. In Experiment 2, explores the effect of awe on helping behavior from the personality tendency of individuals. In Experiment 3, focused on the perspective of recipient characteristic aiming to explore the awe on helping behavior to the recipients with different gender, different ages and different economic conditions.

The conclusions are as follows:(1) The awe were significant positive correlation with helping behavior, and awe for helping behavior have positive prediction function. (2) People who easily feel awe in life will show more helping behavior. (3) The helping behavior is effected by the gender, ages and economic conditions of recipients. People are more inclined to help women, the elderly and children, the poor. With different levels of awe are different in helping recipients with d different gender, different ages and different economic conditions. The helping behavior has no difference for people with high awe, but people with low awe are more inclined to help women, the elderly and children, the poor.

Keywords: awe, helping behavior, effect

双重道德标准？权力感对道德判断的影响

叶琴¹ 朱璐瑶¹ 段霜¹ 袁方舟¹（通讯作者）

¹ 贵州师范大学心理学院，贵阳，550025，通讯作者 E-mail: yfangzhou@126.com

摘 要 权力作为社会结构的一种特征，会影响人们的心理权力感，从而以多种方式塑造行为结果。一般观点认为权力会腐蚀人们的道德观念。然而，从社会心理学理论的角度来看，权力可以增强或削弱道德行为，现有权力对道德判断的研究主要围绕道德判断主体权力感对其道德判断的影响。但是当他人被作为道德判断的目标时，目标他人的权力水平对被试道德判断是否产生影响，是否是人们道德“双标”的原因呢？一些研究发现人们对于高权力目标他人的违法行为的道德判断比对低权力者更加严苛。但也有研究发现，当目标个体在组织内有一般越轨行为时，如果目标个体是领导者，道德判断更加宽容。因此本研究旨在探究目标他人的权力水平对自然权力状态下被试道德判断的影响，以及操纵被试的权力水平后，目标他人权力水平对高低权利状态下个体道德判断的影响。实验一初步设置高低两个权力水平的目标他人，通过对道德两难和美德两种情景下他们的道德行为进行判断，考察被试感知到的行为主体的权力水平对其道德判断的影响方向。以中学生为被试，采用 MacArthur 量表和权力水平的描述材料，操纵被试间自变量（权力水平：高权力、低权力），设置高低权力水平行为主体的道德判断材料，以道德认知量表（MFT）得分高低作为被试道德判断差异的测量指标。预期结果：人们对高低权力行为主体的道德判断标准存在差异，在道德行为上，被试对高权力行为主体的道德判断更宽松；而在不道德行为上，被试对权力行为主体的道德判断更严厉。实验二在实验一的基础上进一步探索道德判断主体的权力水平对高低权力行为者道德判断的影响机制，采用 2（目标他人权力：高低）×2（被试权力：高低）被试间设计。自变量因变量的测量同实验一，被试权力状态的操纵采用情景回忆任务。

预期结果：不同权力水平个体对行为主体的道德判断标准存在差异，个体权力感在目标他人的权力水平对被试道德判断中起中介作用。

关键词 权力，权力感，道德判断，中学生

Double moral standards? The impact of the sense of power on moral judgment

Ye Qin¹, Zhu Luyao¹, Duan Shuang¹, Yuan Fangzhou¹ (Corresponding author)

¹ Guizhou Normal University, institute of psychology, Guiyang, 550025, yfangzhou@126.com

Abstract: As a feature of social structure, power can affect people's psychological sense of power, thus shaping the result of behavior in many ways. The conventional wisdom is that power corrupts people's moral values. However, from the perspective of social psychological theory, power can enhance or weaken moral behavior. The research of the existing power on the moral judgment mainly focuses on the influence of the moral judgment subject's sense of power on his moral judgment. But when others are regarded as the target of moral judgment, does the power level of the target others have an impact on the moral judgment of the subjects, and is it the reason for people's moral "double standard"? Some studies have found that people's moral judgments about the transgressions of high-power targets are more critical than those of low-power targets. However, other studies have found that when the target individual has general deviant behaviors in the organization, if the target individual is the leader, moral judgment is more tolerant. Therefore, this study aims to explore the influence of the power level of the target others on the moral judgment of the subjects in the state of natural power, as well as the influence of the power level of the target others on the moral judgment of the subjects in the state of high or low power after manipulating the power level of the subjects. In experiment 1, we set the target others with high and low power levels. By judging their moral behaviors under two situations of moral dilemma and virtue, we investigated the influence direction of the power level of the behavior subject perceived by the subjects on their moral judgments. Taking middle school students as the subjects, MacArthur scale and power level description materials were used to manipulate independent variables (power level: high power, low power) among the subjects, and moral judgment materials were set for subjects at high and low power levels. The score of moral cognition scale (MFT) was used as the measurement index for the difference in moral judgment of the subjects. Expected results: People's moral judgment standards of high and low power behavior subjects are different. In terms of moral behavior, subjects' moral judgment of high power behavior subjects is more relaxed. In the aspect of immoral behavior, the subjects' moral judgment on the subject of power behavior is more severe. On the basis of experiment 1, experiment 2 further explores the influence mechanism of the power level of moral judgment subjects on the moral judgment of high and low power actors. It adopts the design of 2 (power of target others: high and low) × 2 (power of subjects: high and low) among the subjects. The independent variable and dependent variable were measured in the same way as in experiment 1. The participants' power state was manipulated by recall a personally relevant event involving either high or low power. Expected results: There are differences in the moral judgment standards of individuals at different levels of power, and the sense of individual power plays an intermediary role in the moral judgment of the subjects at the level of power of the target others.

² 北京体育大学心理学院，北京，100084

摘要 民众社会心态是一段时间内弥散在整个社会或群体中一种宏观的社会心境状态，是党和国家在社会心理服务体系建设中重点关注的问题。心理健康是指个体心理活动过程内容完整、协调统一，个体具有良好

的社会功能, 它的提升有利于整体国民心理素质的提高, 进而助力实现“健康中国”目标。已有研究发现, 社会心态会影响人们的心理健康状况, 且希望感能增强积极社会心态的影响, 缓解消极社会心态, 促进个体的心理健康水平。但社会心态如何影响心理健康, 即二者间的内在机制还未厘清。为明确民众社会心态与心理健康间关系的内在机制, 本研究采用民众社会心态量表、心理健康量表、人际交往倾向量表及成人特质希望感量表, 调查了全国不同地区、年龄段和行业民众 605 份。结果表明: (1) 民众的社会心态对心理健康具有直接预测作用; (2) 人际交往倾向在民众社会心态与心理健康的关系间起中介作用; 希望感在民众社会心态与心理健康的关系间起中介作用; (3) “社会心态→心理健康”这一直接路径, 受到希望感的调节, 与低希望感被试相比, 社会心态对高希望感被试的心理健康水平正向预测作用更强。研究结果进一步揭示民众社会心态对心理健康的作用机制, 为提升国民心理健康水平, 提供理论依据。

Social psychology and mental health: the role of interpersonal tendency and sense of hope

Meng Li¹, Yuan Jiang², ping Fang¹ (corresponding author)

1 School of Psychology, Capital Normal University, Beijing, 100048, pfang2007@126.com

2 School of Psychology, Beijing Sport University, Beijing 100084

Abstract: People's social mentality is a macroscopic social state of mind which disperses in the whole society or group in a period of time. It is a key concern of the party and the state in the construction of social psychological service system. Mental health means that the contents of individual psychological activities are complete, coordinated and unified, and individuals have good social functions. Its promotion is conducive to the improvement of the overall national psychological quality, and then help to achieve the goal of "healthy China". Existing studies have found that social mentality can affect people's mental health, and the sense of hope can enhance the impact of positive social mentality, alleviate negative social mentality, and promote individual's mental health. However, how social mentality affects mental health, namely, the internal mechanism between the two has not been clarified. In order to clarify the internal mechanism of the relationship between people's social mentality and mental health, this study used people's social mentality scale, mental health scale, interpersonal tendency scale and adult trait sense of hope scale to investigate 605 people from different regions, age groups and industries. The results showed that : (1) people's social mentality had a direct predictive effect on mental health; (2) Interpersonal communication tendency plays a mediating role in the relationship between social mentality and mental health; The sense of hope plays a mediating role in the relationship between social mentality and mental health; (3) The direct path of "social mentality → mental health" was moderated by the sense of hope. Compared with the participants with low sense of hope, the social mentality had a stronger positive effect on the mental health of the participants with high sense of hope. The results further reveal the mechanism of social mentality on mental health, and provide theoretical basis for improving national mental health.

助推绿色行为

朱璐瑶¹ 叶琴¹ 段霜¹ 袁方舟¹ (通讯作者)

1 贵州师范大学心理学院, 贵阳, 550025, yfangzhou@126.com

摘要 随着工业化的进程, 我国环境和资源形势日益严峻。绿色行为指组织或个体开展符合节能、环保和可持续发展理念的活动, 能有效缓解环境破坏和资源紧缺的现状, 比如绿色消费。绿色消费指消费者尽量减小其消费行为对环境造成的危害和破坏, 属于交易领域的道德选择。做出不同消费类型选择后的个体会有怎样的行为, 有两种不同的观点: 根据道德一致性理论, 当个体过去做了一件道德的事, 未来则更可能做出多的道德行为和少的不道德行为; 而绿色消费许可效应认为, 个体过去的绿色消费行为会允许自己在将来减少绿色选择, 甚至变得更自私, 根据道德自我调节理论, 非绿色消费也应该适用于这两种理论。是什么因素导

致了完全相反的行为？根据感知价值理论，感知价值是在交易过程中消费者对结果的主观感知，个体会通过感知到的得与失调整自己的后续行为。因此，本研究旨在考察消费过程中，产品环保价值感知如何影响个体消费后的行为选择，以及怎样助推消费后的绿色行为。研究一采用 2（消费类型：绿色/非绿色）×2（产品环保价值感知：高/低）组间设计。通过回忆任务操纵消费类型，采用 Longoni 等人的研究范式，在试完成剪纸游戏后，记录其垃圾分类处理情况。最后用 7 点李克特量表（“1 特别不环保”到“7 特别环保”）测量产品环保价值感知。预期结果：高产品价值感知下，绿色消费组绿色行为更多，非绿色消费组绿色行为更少；低产品价值感知下则相反。研究二采用现场实验。产品环保价值感知主观性强，易出现认知偏差，因此本实验结合生命周期成本,采用信息标签助推方法，客观量化产品环保价值。实验场所初步定在电器商店，为期两月，一月为一个周期（助推前/助推后），观察信息标签展示前后绿色产品消费情况（以绿色产品消费数量与总消费数量的比值作为衡量标准）。预期结果：使用信息标签后，绿色产品消费数量比例明显增加。

Nudge Green Behavior

Zhu Luyao, Ye Qin, Duan Shuang, Yuan Fangzhou (Corresponding author)

Guizhou Normal University, Guiyang

Abstract: As the process of industrialization, the situation of environment and resources in China increasingly severe. Green behavior refers to the activities carried out by organizations or individuals in line with the concepts of energy conservation, environmental protection and sustainable development, which can effectively alleviate the current situation of environmental damage and resource shortage, such as green consumption. Green consumption refers to the moral choice of consumers to minimize the harm and damage caused to the environment by their consumption behavior. How do individuals behave after making choices about different consumption types? There are two different views: according to the moral consistency theory, when an individual has done a moral thing in the past, he is more likely to do more moral things and less immoral things in the future; the licensing effect of green consumption suggests that individuals' past green consumption will allow them to make fewer green choices and even become more selfish in the future, according to the theory of moral self-regulation, non-green consumption should also apply to both theories. What causes the opposite behavior? According to the perceptive value theory, the perceptive value is the consumer's subjective perception of the result in the transaction process, and the individual will adjust his/her subsequent behavior through the perceived gain and loss. Therefore, the purpose of this study is to investigate how the perception of product environmental value affects the individual's behavior choice after consumption, and how to promote green behavior after consumption. Study 1 is going to adopt a 2(Consumption type: green/non-green)×2(Product environmental value perception: high/low) intergroup design. Manipulate consumption types through recall tasks, adopt the research paradigm of Longoni et al., after the participants finished the paper-cut game, the garbage classification and disposal was recorded. Finally, a 7-point Likert scale was used to measure the product's environmental value perception (from 1 'Extremely environmental unfriendly' to 7 'Extremely environmental friendly'). Expected results: With high product value perception, green consumption group had more green behaviors and non-green consumption group had less green behaviors; low product value perception is the opposite. Study 2 is going to adopt field experiment. Product environmental value perception is highly subjective and prone to cognitive bias, therefore, this study combines life cycle cost and adopts information label nudging method to objectively quantify the environmental value of products. The experimental place is initially set in the electrical appliance store for a period of two months, with a cycle of one month (before/after nudge). Observe the consumption of green products before and after the information label display (the ratio of the consumption of green products to the total consumption is taken as the measurement standard). Expected results: After the use of information labels, the proportion of green product consumption increased significantly.

更好的控制更少的损耗：促进聚焦通过增强目标信息加工 提高自我控制

欧阳益（通讯作者）

湖南科技大学教育学院 湘潭 411201 通讯作者 E-mail:ouyangyipsy@163.com

摘要 自我控制是冲突情境下的自我调节能力，即个体根据目标和任务的需要对自己的认知、情绪和行为做出适应性的调整与改变的能力，其同时包含着抑制自我控制（inhibitory self-control，即抑制目标无关的反应）和激发自我控制（initiatory self-control，即激发与目标相关的反应）。动机是影响自我控制的重要因素，然而人们在执行自我控制时存在着预防聚焦与促进聚焦两种相对独立的动机导向。已有研究发现，促进聚焦较预防聚焦下表现出自我控制的优势，即更好的自我控制效果却有更少的自我损耗。本研究将通过两个实验比较预防与促进聚焦下的抑制与激发自我控制的差异，以揭示调节聚焦影响自我控制的机制。实验1采用被试内 Block 随机设计，其中每个 Block 为一种调节聚焦。58 名被试均在预防与促进聚焦情境下根据颜色 Stroop 材料的任务线索执行颜色或词义识别的随机混合任务，结果发现促进聚焦较预防聚焦下有更好的任务成绩，表现在反应时更短，准确率更高；但同一任务类型下，预防与促进聚焦下的抑制干扰效应并无显著差异。实验2记录了20名被试在随机安排的预防聚焦、促进聚焦以及中性情境下执行颜色识别 go/no-go 任务的行为与脑电数据。结果发现：（1）预防与促进动机状态下，go 刺激的反应时、准确率以及脑电指标 N2 与 P3 的平均波幅上均无显著差异；（2）no-go 刺激的准确率也无显著差异，但与预防聚焦与中性条件相比，促进聚焦下的 N2 平均波幅更小，P3 平均波幅更大。因此本研究认为，与预防聚焦相比，促进聚焦下自我控制优势主要源于通过增强目标信息加工提升自我控制，而促进聚焦下的低认知冲突很可能是低自我损耗的原因。

Better performance with less ego depletion: Promotion focus enhanced self-control by increasing goal related information process

Yi Ouyang

School of education, Hunan University of Science and Technology, Xiangtan, China

Abstract: Self-control is the mental capacity that people adaptively change and adjust their cognition, affection and behaviors according to the needs of goals and tasks, which contained inhibitory self-control and initiatory self-control. Motivation is an important factor affecting self-control. However, there are two relatively independent motivation orientations: prevention focus and promotion focus. Studies have found that people often had much better self-control performance in promotion focus than prevention focus. This study proposed that the variation in self-control between prevention and promotion focus was mainly due to initiatory self-control rather than inhibitory control, and then two experiments were conducted to test this hypothesis. Experiment 1 adopted the random design of the Block in the subject, in which each Block was a regulatory focus. All 58 subjects performed a randomly mixed task of color or word recognition according to the task cues of color Stroop material under the condition of prevention and promotion focus. The results showed that the task performance was better in promotion focus than prevention focus situation, presenting in shorter response time and higher accuracy. However, under the same task type, there was no significant difference in the inhibitory effect between prevention and promotion focus. Experiment 2 recorded the behavior and EEG data of 20 subjects who performed colour recognition in go/no-go tasks under randomly arranged prevention focus, promotion focus and neutral situation. The results showed that: (1) under prevention and promotion foci states, there were no significant difference in reaction time, accuracy rate and average amplitude in N2 and P3; (2) There were no significant difference in accuracy rate of no-go stimulus, but compared with the prevention focus and neutral condition, the average amplitude of N2 was smaller, and average amplitude of P3 was larger. Therefore, compared with prevention focus, this study proposed that the advantage of promotion focus is mainly due to the enhancement of self-control through the enhancement of target information processing, and the low cognitive conflict in promoting focusing is likely to be the reason for the low ego depletion.

Keywords: self-control, promotion focus, prevention focus

相对剥夺感对自我工具化的影响——一个有调节的中介模型

程琬容¹ 黄倩颖¹ 滕飞² (通讯作者)

¹ 华南师范大学心理学院, 广州, 510631

² 华南师范大学心理学院, 广州, 510631, tengfei.scnu@gmail.com

摘要 社会不平等对人们的认知、行为有一定的影响, 本研究从客体化角度出发, 探究社会不平等对个体自我认知的影响, 关注个体相对剥夺感、自我工具化与地位关注之间的关系。自我工具化是个体内化第三方视角, 将自己看作对别人有用、能够帮助别人达到某种目的的工具和手段。本文提出, 当个体通过与参照群体进行比较, 感知到自身处于不利地位进而体验到愤怒和不满, 即个体感知到相对剥夺时, 个体的自我工具化水平会提高, 即相对剥夺感会增加个体对自身工具性价值的关注; 同时, 个体对地位的关注在相对剥夺感对自我工具化的影响中起中介作用。本文通过三个研究来验证假设: 研究1 (6787名被试) 表明个体相对剥夺感水平与自我工具化水平显著正相关; 研究2 (262名被试) 采用因果研究证明个体感知到相对剥夺会提高自我工具化水平; 研究3 (280名被试) 证明相对剥夺感对自我工具化的影响是通过地位关注实现的, 即个体的相对剥夺感越高, 对地位的关注提高, 进而提高自我工具化水平, 同时地位关注对自我工具化的影响受外在动机的调节, 具体表现为, 与外在动机水平低的个体相比, 外在动机水平高的个体高地位关注对高自我工具化倾向的预测作用更加显著。本研究旨在探究自我工具化的前因变量及其影响机制, 对于理解不平等的社会背景中个体对自我的认知与人际关系具有一定的理论和实践意义。

The Effect of Relative Deprivation on Self-instrumentality: A Moderated Mediation Model

Wanrong Cheng¹, Qianying Huang¹, Fei Teng²

School of School of Psychology, South China Normal University, Guangzhou

Abstract: Social inequality has various impact on individuals' cognition and behavior. The present research aimed to examine the impact of social inequality on self-cognition from the perspective of objectification, and concerned the relations among individual relative deprivation (IRD), self-instrumentality, and status concern. Individuals internalize third-person perspective which they should be useful for achieving others goals and focus on their instrumentality for others is called self-instrumentality. We assumed that individuals who perceive higher relative deprivation would focus more on their instrumental values and status concern mediated the effect of relative deprivation on self-instrumentality. We conducted three studies to verify our hypotheses: (1) IRD was positively related to self-instrumentality (Study 1, N=6787); (2) IRD can positively predicted self-instrumentality (Study 2, N=262); (3) higher IRD increased self-instrumentality through increased status concern and the impact of status concern on self-instrumentality was moderated by external motivation, such that the association was especially prominent for individuals high in external motivation (Study 3, N=280). These findings explored the antecedents and influence mechanism of self-instrumentality and added to a better understanding of individuals' self-cognition and interpersonal relationship in the context of inequality.

外表的社会规范对女性职业抱负的影响： 自我真实性和感知到的机会的序列中介作用

黄倩颖¹ 程琬容¹ 滕飞² (通讯作者)

¹ 华南师范大学心理学院, 广州, 510631

² 华南师范大学心理学院, 广州, 510631, tengfei.scnu@gmail.com

摘要 女性的职业抱负对其个人的职业发展以及促进职场中性别平等的实现有重要作用。已有研究表明, 女性所处于的工作和家庭环境是影响其职业抱负水平的重要因素, 但目前尚未有研究探讨宏观环境 (例如社

会规范)对女性职业抱负的影响及其机制。外表的社会规范强调,在当今社会,外表吸引力是一个人的价值的体现和成功的必备条件,且与男性相比,社会对女性的外貌要求更加苛刻,女性本身也更易受到这一社会规范的影响,进而会倾向于把时间和精力放在提升外表吸引力上,并减少在职场上的追求和抱负。本研究旨在考察外表的社会规范和女性职业抱负的关系,并探讨自我真实性和感知到的机会在其中的中介作用。采用对外表的社会文化态度问卷、自我真实性量表、感知到的机会量表和职业抱负问卷,对349名大学生(227名女性,122名男性)进行调查。结果表明:(1)在女性被试中,外表的社会规范认同度、自我真实性以及感知到的机会与职业抱负呈显著负相关,自我真实性与感知到的机会呈显著正相关,而在男性被试中,外表的社会规范认同度与其职业抱负相关不显著;(2)在女性被试中,外表的社会规范能通过自我真实性和感知到的机会的序列中介作用间接负向预测职业抱负水平($\chi^2/df = 2.65, p = .10, CFI = .99, TLI = .93, RMSEA = .09$),而这一模型在男性被试中不成立。本研究结果揭示了外表的社会规范对女性职业抱负的影响及其作用机制,对理解女性的职业选择和个人发展有一定的启示意义。

The impact of social ideology on appearance on women's career aspiration: The serial mediating roles of self-authenticity and perceived opportunity

Qianying Huang, Wanrong Cheng, Fei Teng

School of Psychology, South China Normal University, Guangzhou, 510631

Abstract: Women's career aspiration plays an important role in promoting their occupational development and achieving gender equality in the workplace. Previous literature has suggested that organizational and family environments are predictive of women's career aspiration. However, prior research has largely neglected the influences of the macro-level environment (i.e., socio-cultural environment) on women's career aspiration. Social ideology on appearance highlights that attractiveness is vital for getting ahead in today's culture, and if women fail to comply with this culturally prescription, they would experience more stigmatization than men. Consequentially, women are more concerned about their appearance than are men and thus decrease their career-related motivation. The present study aimed to examine the role of the societal ideology on appearance might play in influencing women's career aspiration. We predicted that perceived societal emphasis on physical appearance will decrease women's career aspiration through decreased authenticity and perceived opportunity. A total of 349 college students (227 females, 122 males) participated in the study. The results revealed that perceived societal emphasis on attractiveness negatively predicted women's authenticity, and authenticity positively predicted perception of opportunity, which in turn undermined their career aspiration ($\chi^2/df = 2.65, p = .10, CFI = .99, TLI = .93, RMSEA = .09$). However, this serial mediational model was not found in men. These findings suggest that socially prioritization of attractiveness can undermine women's strive for occupational prospects and add to a better understanding of women's growth and development.

摘要 目的: 本研究基于依恋理论和人格发展八阶段理论, 探讨异性偶像崇拜对浪漫关系的影响, 提出一个有调节的中介模型, 考察自我同一性的中介作用和依恋风格的调节作用。这种整合模型的研究有助于更全面地揭示偶像崇拜对浪漫关系的影响机制, 为促进浪漫关系质量提供建设性的建议。方法: 采用问卷法对277名崇拜异性流量明星且处于恋爱状况的青少年女生进行调查。研究工具包括偶像崇拜量表、亲密关系经

历量表、自我同一性量表和关系质量指数量表,各量表均具有良好的信度。采用 SPSS 24.0 和 SPSS 宏程序 PROCESS 3.4 进行数据分析。结果:理性偶像崇拜显著正向预测浪漫关系质量;理性偶像崇拜与依恋回避的交互项显著预测自我同一性中将来自我投入的愿望,自我同一性中将来自我投入的愿望显著正向预测浪漫关系质量。结论:(1)理性偶像崇拜显著正向预测浪漫关系质量;(2)自我同一性中对将来自我投入的愿望在理性偶像崇拜与浪漫关系质量之间起部分中介作用;(3)理性偶像崇拜经由将来自我投入愿望影响浪漫关系质量的中介作用受依恋回避的调节,上述中介效应只体现在低依恋回避的个体中。具体而言,对依恋回避水平较高的个体来说,将来自我投入的愿望在理性偶像崇拜和浪漫关系质量之间的中介效应不显著,理性偶像崇拜对将来自我投入的愿望的预测关系不显著;对依恋回避水平较低的个体来说,将来自我投入的愿望在理性偶像崇拜和浪漫关系质量之间起部分中介效应,理性偶像崇拜的提升伴随着自我同一性中将来自我投入愿望的降低,进而降低其浪漫关系质量。

关键词 偶像崇拜,浪漫关系质量,自我同一性,依恋回避

The Relationship between the Heterosexual Idolatry and the Quality of Romantic Relationship: A Moderated Mediation Model

He Youyin, Wu Yongtao, Liu Xuelan

Key Laboratory of Brain, Cognition and Education Sciences, Ministry of Education, China; School of Psychology, Center for Studies of Psychological Application, and Guangdong Key Laboratory of Mental Health and Cognitive Science, South China Normal University, China

Abstract: Purpose: According to attachment theory and eight-stage theory of personality development, the present study constructed a moderated mediation model to investigate whether the desire for future self-devotion in self-identity mediated the relationship between rational idolatry and the quality of romantic relationship, and whether attachment avoidance moderated this mediation effect. The study of this integrated model is helpful to reveal the influence mechanism of idolatry on romantic relationship. Moreover, it can also provide constructive suggestions for promoting the quality of romantic relationships. Methods: 277 teenage girls were recruited to participate in this study. They completed the Scale of Celebrity Worship, Chinese Adaptation of the Experiences in Close Relationships Inventory Scale, the Self-identity Scale, and the Quality of Relationship Index. All the scales have good reliability. Data were analyzed using SPSS 24.0 and the SPSS macro PROCESS. Results: Rational idolatry significantly positively predicted the quality of romantic relationship; the interaction between rational idolatry and attachment avoidance significantly predicted the desire for future self-devotion in self-identity, and the desire for future self-devotion in self-identity positively predicted the quality of romantic relationship. Conclusion: (1) Rational idolatry significantly and positively predicted the quality of romantic relationship. (2) The desire for future self-devotion in self-identity played a partial mediating role between rational idolatry and the quality of romantic relationship. (3) Attachment avoidance moderated the first path of the mediated effect of the desire for future self-devotion in self-identity. To be more specific, the relationship between rational idolatry and the desire for future self-devotion in self-identity was marginally significant for teenage girls with low attachment avoidance. The promotion of rational idolatry is accompanied by the decrease of the desire for future self-devotion in self-identity, which in turn reduces the quality of romantic relationship. However, it became insignificant for those with high attachment avoidance.

Keywords: idolatry, romantic relationship quality, self-identity, attachment avoidance

心理距离对大学生二手商品购买意愿的影响：感知风险的调节作用

彭雪映 曹军胜 岳汝怡 郭晨阳 尹忠泽（通讯作者）

山西师范大学教育科学学院，临汾，041004，1059328061@qq.com

摘要 近年来随着经济快速发展，资源浪费和环境问题变得日益突出，这对可持续发展提出了迫切的要求。而共享经济正是解决资源困境的有效方式，能够逐步改变人们随着收入增加而产生的铺张浪费行为，能够引导人们理性消费。从社会经济学角度来看，现在人们的闲置物品越来越多，不论是出售自己手里的闲置物品，还是用较低的价格买一些需要的二手商品，对交易双方来说都是一件有益的事情。二手商品尤其是图书等一些不易损耗的产品，在社会上不断的流通和反复的利用，极大地减少了资源的浪费，能最大限度的流通闲置物品，促进绿色循环发展。因此，本研究试图探讨心理距离对大学生二手商品购买意愿的影响，以及感知风险对二者关系的影响，尝试从心理距离的角度出发，考虑消费者感知风险的因素，讨论如何能有效地增加消费者对二手商品的购买意愿。在此基础上，本研究设计了三个情境实验，分别从心理距离的三个不同维度（时间距离、空间距离、社会距离）来研究其对大学生二手商品购买意愿的影响，以及感知风险在其中的调节作用。实验中使用《大学生感知风险调查问卷》对某高校 358 名学生进行施测：实验一 120 人、实验二 120 人、实验三 118 人，每组分别筛选出高低感知风险者各 30 人参加对应实验。结果表明：时间距离、空间距离以及社会距离三个维度均可显著正向预测二手商品购买意愿，而感知风险则可显著负向预测二手商品购买意愿；感知风险在远时间距离、远空间距离和远社会距离条件下均对二手商品购买意愿有显著的负向调节作用，而相反条件下则无显著影响。本研究结果说明了心理距离能显著正向预测大学生二手商品购买意愿；感知风险在心理距离对大学生二手商品购买意愿的影响中发挥调节作用，在远心理距离条件下，感知风险越低，大学生二手商品购买意愿越高。

关键词 心理距离，购买意愿，二手商品，感知风险

The influence of psychological distance on college students' second-hand goods purchase intention: the moderating effect of perceived risk

Peng Xueying, Cao Junsheng, Yue Ruyi, Guo Chenyang, Yin Zhongze

School of education science, Shanxi Normal University, LinFen, 041004, 1059328061@qq.com

Abstract: In recent years, with the rapid development of economy, resource waste and environmental problems have become increasingly prominent, which puts forward urgent requirements for sustainable development. The sharing economy is an effective way to solve the resource dilemma, which can gradually change people's extravagant and wasteful behavior with the increase of income and guide people to consume rationally. From the perspective of social economics, people now have more and more idle goods, whether it is selling idle goods in their own hands, or buying some needed second-hand goods at lower prices, which is a beneficial thing for both sides of the transaction. Second-hand goods, especially books and other products that are not easy to wear out, are constantly circulated and repeatedly used in the society, which greatly reduce the waste of resources, maximize the circulation of idle goods, and promote the development of green circulation. Therefore, this study attempts to explore the psychological distance influence on college students' second-hand goods purchase intention, and the influence of perceived risk on their relationship. It attempts to consider the factors of consumers' perceived risk from the perspective of psychological distance and discuss how to effectively increase consumers' willingness to buy second-hand goods. On this basis, this study designed three situational experiments to study the influence of psychological distance from three different dimensions (time distance, space distance and social distance) on college students' second-hand goods purchase intention and the moderating role of perceived risk. In the experiment, the questionnaire of perceived risk of College students was used to test 358 students in a university: 120 in experiment 1, 120 in experiment 2 and 118 in experiment 3. Each group selected 30 people with high perceived risk and 30 students with low perceived risk to participate in the corresponding experiment. The results show that time distance, space distance and social distance

can positively predict the purchase intention of second-hand goods, while perceived risk can negatively predict the purchase intention of second-hand goods. Perceived risk has a significant negative moderating effect on the purchase intention of second-hand goods under the conditions of long-time distance, long-space distance and long-distance society, but has no significant effect under the opposite conditions. The results of this study show that psychological distance can positively predict college students' second-hand goods purchase intention, and perceived risk plays a moderating role in the influence of psychological distance on college students' second-hand goods purchase intention. Under the condition of long psychological distance, the lower the perceived risk, the higher the college students' willingness to buy second-hand goods.

Keywords: psychological distance, purchase intention, second-hand goods, perceived risk

道德概念的净脏隐喻表征对道德判断的影响：自我与他人视角

宋秀萍 丁凤琴（通讯作者） 孙逸舒 张蓉

宁夏大学教育学院，银川，750021, dingfqin@nxu.edu.cn

摘要 道德概念净脏隐喻是指人们借助具体的、有形的净脏始源域概念来表征抽象的、无形的道德目标域概念。生活中常见的“洁净近乎美德”，就是用洁净表达道德概念，“某人手脚不干净”，就是用肮脏来表征此人有偷窃类的不道德行为。研究表明，道德概念净脏隐喻具有心理现实性，即人们倾向于将道德与干净联结，不道德与肮脏联结，且道德概念的净脏隐喻表征会对道德判断产生一定的影响。综合以往文献发现，道德概念净脏隐喻对道德判断的影响主要是由净脏启动方式(想象、行为)不同以及自我与他人视角差异引起。基于此，本研究采用想象和行为两种不同的启动方式，考察自我与他人两种视角下的道德概念净脏隐喻对道德判断的影响。结果表明：(1) 想象启动下自我净脏和他人净脏均对道德两难故事判断有影响，且与他人洁净启动相比，自我洁净启动下被试对道德两难故事判断更为严苛；与他人肮脏启动相比，自我肮脏启动下被试对道德两难故事判断更为宽松；(2) 行为启动下自我净脏和他人净脏均对道德两难故事判断有影响，与他人洁净行为启动相比，自我洁净行为启动下被试对道德两难故事判断更为严苛；与他人肮脏行为相比，自我肮脏行为下被试对道德两难故事判断更为宽松。(3) 综合实验一和实验二发现，道德概念净脏隐喻对道德两难故事判断的影响存在自我想象与自我行为的差异，相比于想象自我洁净启动，行为自我洁净启动后道德两难故事判断更严苛；相比于想象自我肮脏启动，行为自我肮脏启动后道德两难故事判断更宽松。以上研究表明，想象启动与行为启动下自我净脏与道德概念均存在隐喻联结，道德概念净脏隐喻会影响道德判断且存在自我与他人视角差异。本研究有助于学校开展道德教育干预，减少或防止个体由于自我或他人差异视角带来的道德判断的偏颇。

关键词 概念隐喻，净脏，道德判断，自我，他人

The influence of metaphorical representation of moral concept on moral judgment: from the perspective of self and others

Song Xiuping, Ding Fengqin, Sun Yi Shu, Zhang Rong

College of education, Ningxia University, Yinchuan, 750021, dingfqin@nxu.edu.cn

Abstract: The clean and dirty metaphors of the moral concepts refers to the process that individuals can express abstract and intangible moral concepts with the help of a specific body clean and dirty source domain concept. In life, "cleanliness is close to virtue", which is using cleanliness to express moral concept, and "someone's hands and feet are not clean", which is using dirty to represent that person's immoral behavior of stealing. The research have also shown that the clean and dirty metaphors of the moral concepts not only have psychological reality, which is individuals tend to associate morality with clean, immorality with dirty, but also affects people's moral judgments. Previous research found that clean and dirty metaphors of the moral concepts would be influence on moral judgment, which is mainly caused by the different start-up ways of clean and dirty(imagination, behavior) and the different perspectives of self and others. Based on this, this study uses different priming of imagination and behavior to examine the influence of moral conceptual metaphor on moral judgment from the perspective of self and others. The

results show that: (1) the moral judgment is affected by both self-cleansing and others-cleansing metaphors under the imagination. Compared with imagining the clean of others, the self clean was more severe in judging moral dilemma stories, and compared with imagining the dirty of others, the self dirty was more relaxed in judging moral dilemma stories. (2) the moral judgment is affected by both self-cleansing and others-cleansing metaphors under the behavior. Compared with the initiation of cleansing behavior by others, the participants have more severe judgments on moral dilemmas under the initiation of self-cleansing behavior; compared with the dirty behavior of others, the self-dirty behavior is more relaxed on moral dilemmas; (3) a comprehensive comparison between experiment 1 and Experiment 2 found that the self-imaginary net initiation and self-behavioral net initiation are significant differences in moral dilemma. Compared with the self-clean imaginary priming, the moral judgment is more severe under the self-clean behavioral priming; compared with the self-dirty imaginary priming, the moral judgment is more relaxed under the self-clean behavioral priming.

In short, the metaphor of self-cleansing and other-cleansing have different effects on moral judgment. It supplements and enriches the theoretical research of the net viscera metaphor of moral concept, which helps to carry out activities such as physical cleansing experience and perception to improve individual moral judgment ability, and provides a basis for decision-making.

情绪智力与大学生亲社会行为：有调节的中介效应

王蔚晨¹ 王静¹ 王海英² (通讯作者)

¹ 东北师范大学心理学院, 长春, 130024

¹ 东北师范大学心理学院, 长春, 130024, wanghy178@nenu.edu.cn

摘 要 亲社会行为是个体在社会交往过程中表现出来的帮助、合作、分享、安慰等一切有利于他人和社会和谐的行为趋向。外在的社会因素以及内在个体因素是影响亲社会行为的两大方面。情绪智力作为内在个体因素是监控自己及他人的情绪和情感, 识别利用这些信息指导自己的思想和行为的能力。已有研究表明, 情绪智力影响亲社会行为的产生, 但其影响的潜在机制并不明确。因此, 本研究采用《情绪智力量表》《亲社会行为倾向量表》《领悟社会支持量表》和《自尊量表》对 742 名大学生进行调查, 探讨情绪智力与亲社会行为之间的关系, 在此基础上构建一个有调节的中介效应模型, 检验社会支持在情绪智力与亲社会行为之间的中介作用, 以及自尊对上述中介路径的调节作用。结果发现: (1) 情绪智力对大学生亲社会行为具有显著的正向预测作用。(2) 中介效应检验表明, 社会支持在情绪智力与大学生亲社会行为之间具有部分中介作用。(3) 有调节的中介效应检验进一步表明, 情绪智力对亲社会行为的直接效应受到自尊的调节, 并且自尊调节了“情绪智力→社会支持→亲社会行为”的后半段, 即当大学生的自尊较高时, 社会支持对亲社会行为的促进作用增强。本研究依据亲社会行为理论、社会链连接理论和情绪智力理论, 考察了内外部因素对亲社会行为的联合作用, 补充了情绪智力促进亲社会行为的方式和条件, 有助于激发大学生亲社会行为, 构建和谐稳定社会。

Emotional Intelligence and Prosocial Behavior in College Students: A Moderated Mediation Analysis

Wang Weichen, Wang Jing, Wang Haiying

Department of Psychology, Northeast Normal University, Changchun, Jilin

Abstract: Prosocial behavior (PSB) refers to all behaviors that are favorable to others and conducive to social harmony, such as helping, cooperating, sharing, and comforting. External social factors and internal individual factors are two major aspects affecting prosocial behavior. Emotional intelligence (EI), as an internal individual factor, is the ability of individuals to monitor their own and others' emotions, and to identify and use this information to guide

their thoughts and behaviors. Previous studies have shown that emotional intelligence affects prosocial behavior, but the underlying mechanism is not clear. This study examines the relationship between emotional intelligence (EI) and prosocial behavior (PSB) and constructs a model for their interaction by examining the mediating effect of social support (SS) and the moderating effect of self-esteem (SE) in this relationship. A total of 742 college students completed a survey measuring the Emotional Intelligence Scale, Prosocial Tendencies Measurement Scale—Chinese Version, Perceived Social Support Scale, and Self-Esteem Scale. The results indicated that: (1) EI positively predicts PSB; (2) SS partially mediates the relationship between EI and PSB; and (3) SE moderates the direct effect of EI on PSB and the relationship between SS and PSB. That is, when the SE of college students is higher, the effect of SS in promoting PSB is enhanced. Based on the prosocial behavior theory, emotional intelligence theory, and social exchange theory, this study examines the combined effects of internal and external factors on prosocial behavior and supplements our understanding of the ways in and conditions under which emotional intelligence promotes prosocial behavior, which helps to stimulate the prosocial behavior of college students and therefore contributes to the building of a harmonious and stable society.

社会等级对 McGurk 效应的影响

王可昕 康冠兰(通讯作者)

北京体育大学心理学院,北京,100048,kangguanlan_33@163.com

摘 要 视听整合(audio-visual integration)是多感觉整合的一部分,是指将来自听觉通道和视觉通道的信息知觉为一个整体的能力。McGurk 效应是一种典型的视听语音整合现象,反映了视觉信息对听觉信息的影响。社会等级是一种重要的社会信息,影响着社会生活的方方面面,已有研究发现,人们对社会等级的加工是自动的,且社会等级影响注意分配。本研究从面孔社会信息角度出发,试图探究社会等级对 McGurk 效应的影响。研究采用 McGurk 整合范式,通过操纵个体的社会等级,考察社会等级信息对视听语音整合的影响。实验中使用的视频语音材料包括填充试次(视听一致)ga、ba、ka 和 pa 四个组合,和 McGurk 试次(视听不一致)的两种组合(组合 1:视觉 ga、听觉 ba;组合 2:视觉 pa、听觉 ka),共六种刺激组合。视频材料中说话者的社会等级通过高考成绩信息来操纵。告知被试,说话者可能具有高(成绩达到清华大学录取线)或低(成绩北京城市学院录取线)两种社会等级信息。所选被试高考分数介于两者之间(即中等等级)。被试的任务是进行语音识别并做相应的按键反应。任务结束后,被试需要对自我感知到的相对于他人的社会等级进行 7 点评分(1 代表处于劣势,7 代表处于优势)。因变量是不同条件下的 McGurk 效应发生率,即在 McGurk 试次上发生 McGurk 效应的比率,对严格(仅计算发生特定融合的试次)和宽松(计算所有语音刺激的错误识别次数)两种界定方式所得的结果均进行数据处理。结果显示:高、低社会等级组之间 McGurk 效应的发生率无显著差异,但随后的个体差异分析发现,在面对低社会等级的个体时,McGurk 效应的发生率和自我感知到的社会等级存在显著的负性相关,即自我感知到的社会等级越高,McGurk 效应发生率越低,面孔的视觉信息对听觉信息的影响更小。本研究结果可能反映了,个体在面对低社会等级时,自我感知到的社会等级越具有优势,越倾向于不关注他人面孔的视觉信息,使得其面孔信息的权重更低,而出现较小的 McGurk 效应。由于本研究缺乏直接测量的注意相关指标以明晰背后的机制,后续研究中可加入眼动追踪进一步探讨可能的心理机制。

Influence of Social Status on McGurk Effect

WANG kexin, KANG guanlan*

School of Psychology, Beijing Sport University, 100048, kangguanlan_33@163.com

Abstract: Audio-visual integration is a part of multi-sensory integration, which refers to the ability to perceive auditory and visual information into an event. The McGurk effect is one of the most typical phenomenon reflecting the interaction between visual and auditory modalities. Social status is an important social information that affects all aspects of social life. Previous studies have found that social status can be automatically processed, and it also affects

the way of attention distribution. The aim of the present study was to explore the influence of social status on the audiovisual speech integration by using McGurk integration paradigm. There were six different audio-visual materials: four congruent videos acting as fillers(both visual and auditory syllables are “ga”, “ba”, “ka”, “pa”), two incongruent videos combinations(combination 1: visual “ga”, auditory “ba”; combination 2: visual “pa”, auditory “ka”) as McGurk trials. The social status of the audiovisual stimuli is manipulated by the score of College Entrance Examination. There were two different social information about the talker in the video given to the participants. Two talkers (a male and a female) who had high scores enough to get into Tsinghua University were presented as high status talkers, the other two talkers who had scores to get into Beijing City University were presented as low status talkers. All participants were in the middle status with a intermediate score between the talkers. Their task was to identify the syllable by pressing the button on the keyboard. In the end of the experiment, they needed to rate the social level they perceived relative to the others in a 7 Likert Scale (1 for disadvantage, 7 for advantage). The dependent variable was the McGurk effect, i.e., the proportion of McGurk responses occurring on the McGurk trials. The results from conservative definition (that is, only McGurk response is calculated) and liberal definition (including all type of wrong response) were both used in the data analysis. The results showed that there was no significant difference between high and low social status conditions. But the followed analysis of individual differences showed that, when facing low social status talkers, the McGurk effect and self-perceived social status had a significant negative correlation, suggesting that the higher the social level you think you are, the less likely it is to have the McGurk effect, the less influence of visual information on the auditory information processing. This study may reflect that when talking to lower position people, individuals tend to pay less attention to their facial information, which makes the facial information less weighted and leads to lower McGurk effect. However, the current study lack of direct measurement of attention-related indicators to clarify the underlying mechanism, eye tracking can be adopted to follow-up studies to further explore possible psychological mechanisms.

Keywords: social status, McGurk effect, audio-visual integration, self-perceived social status

网络游戏成瘾对睡眠的影响：焦虑、抑郁的中介机制

万溪祠¹

1 四川师范大学心理学院，成都，610000，wanxici@sina.com

摘要 网络游戏成瘾威胁着人们的身心健康，而良好的睡眠是一种维持身心健康的重要因素。睡眠可能因为网络游戏成瘾而受到影响，包括失眠，睡眠时间短和睡眠质量差等。而网络游戏成瘾也有可能因为引起焦虑和抑郁，进而影响到睡眠。由于网络游戏成瘾的个体长期使用电子产品，可能对脑机制造成损伤，另外，由于长期沉溺于非现实世界，可能对他们在现实中的人际关系起到负面作用，如亲密关系的疏离、人际冲突等，这样，他们就缺少了与其他人真实地交流的机会，缺少了现实社会的支持，这可能是导致他们焦虑与抑郁的原因之一。本研究的目的在于探寻焦虑、抑郁是否在网络游戏成瘾对睡眠的影响中扮演中介的角色。本研究采用 POGQ-SF 网络游戏成瘾量表、GA1D-7 广泛性焦虑障碍量表、PHQ-9 抑郁症筛查量表和匹兹堡睡眠质量指数量表和自编人口学问题对 339 名成年个体进行网络问卷调查，以此检验在网络游戏成瘾对睡眠的影响中，焦虑、抑郁的中介机制。研究结果表明，抑郁作为中介存在于网络游戏成瘾对睡眠的影响中，且在网络游戏成瘾对睡眠的影响中，焦虑和抑郁作为中介，最终以链式的形态对睡眠造成影响。

社会排斥对大学生人际交往意愿的影响： 情绪和自我控制的链式中介作用

方庆园¹（通讯作者） 叶金辉² 李静¹

1 华中师范大学心理学院暨青少年网络心理与行为教育部重点实验室，人的发展与心理健康湖北省重点实验室，武汉，430079，1014549584@qq.com

2 江西师范大学心理学院，南昌，330022

摘 要 大量研究指出社会排斥会对个体的认知、情绪和行为等方面带来消极影响，但是社会排斥对人际交往意愿的影响却没有得到一致的结论。有研究者认为，被排斥者由于具有较高的威胁敏感性，在人际交往中常表现出社交退缩行为；另一些研究者认为，被排斥者为了弥补归属感会更渴望与他人建立联结。根据自我控制力量模型的观点，当过多的活动或消极情绪损耗了有限的自我控制资源时，个体在接下来需要自我控制的任務中会受到干扰。因此，本研究基于自我控制的力量模型，以 370 名大学生为研究对象，考察了社会排斥对人际交往意愿的影响，以及情绪和自我控制在其中的链式中介作用。其中，情绪采用积极情绪得分减去消极情绪得分计算得出。研究一的调查结果表明，社会排斥与情绪、自我控制和人际交往意愿均呈显著负相关，情绪与自我控制和人际交往意愿、自我控制和人际交往意愿呈显著正相关；社会排斥不仅对人际交往意愿有直接的负向预测作用，还能通过两种间接效应对人际交往意愿产生影响，即自我控制的单独中介作用以及情绪、自我控制的链式中介作用。研究二的实验结果表明，状态社会排斥与情绪和人际交往意愿呈显著负相关、与自我控制呈负相关但不显著，情绪与自我控制和人际交往意愿、自我控制和人际交往意愿呈显著正相关；状态社会排斥不仅对人际交往意愿有直接的负向预测作用，还能通过两种间接效应对人际交往意愿产生影响，即情绪的单独中介作用以及情绪、自我控制的链式中介作用。我们的研究发现，社会排斥可以负向预测大学生的人际交往意愿，同时，社会排斥可以通过自我控制的单独中介作用以及情绪、自我控制的链式中介起作用。但是在暂时启动的社会排斥条件下，状态社会排斥是通过情绪的单独中介作用以及情绪、自我控制的链式中介起作用的。

Social Exclusion's effect on college students' Interpersonal Willingness: The chain mediating effect of Emotion and Self-control

Fang Qingyuan¹, Ye Jinhui², Lee Jing¹

1 School of Psychology, Central China Normal University: Key Laboratory of Adolescent Cyberpsychology and Behavior, Ministry of Education, and Hubei Human Development and Mental Health Key Laboratory, Wuhan

2 School of Psychology, Jiangxi Normal University, Nanchang

Abstract: Many studies have pointed out that social exclusion has negative effects on the individuals' cognitive, emotional, and behavioral aspects, but there are few consistent findings on the effects of social exclusion on interpersonal willingness. Some researchers argue that excluded individuals often exhibit social withdrawal behaviors during interpersonal interactions due to their high threat sensitivity. Others argue that excluded individuals may be more eager to connect with others in order to compensate for their sense of belonging. According to self-control strength model, when activities or negative affects deplete limited self-control resources, individuals are disturbed in the next tasks that require self-control. Therefore, based on the self-control strength model, we recruited 370 college students and examined the effects of social exclusion on interpersonal willingness and the mediating role of emotion and self-control. Where the emotion was calculated using the positive emotion score minus the negative emotion score. The findings of Study 1 indicated that social exclusion was significantly negatively related to emotion, self-control, and interpersonal willingness. Emotion was significantly positively related to self-control and interpersonal willingness. And self-control was significantly positively related to interpersonal willingness. Social exclusion not only had a direct negative predictive effect on interpersonal willingness, but also had an effect on

interpersonal willingness through two indirect effects, namely the separate mediating effect of self-control and the chain-mediated effect of emotion and self-control. The experimental results of Study 2 showed that state social exclusion was significantly negatively related to emotion and interpersonal willingness, negatively but not significantly related to self-control. Emotion was significantly positively related to self-control and interpersonal willingness, and self-control was significantly positively related to interpersonal willingness. State social exclusion not only had a direct negative predictive effect on interpersonal willingness, but also had an effect on interpersonal willingness through two indirect effects, namely the separate mediating effect of emotion and the chain mediating effect of emotion and self-control. Our findings suggest that social exclusion can not only directly negatively predict college students' interpersonal willingness, but also can work through the separate mediating effect of self-control and the chain-mediating effect of emotion and self-control. However, in the condition of temporarily social exclusion, state social exclusion works through the separate mediating role of emotion and the chain mediating role of emotion and self-control.

你愿意“晒”爱心吗？炫耀性捐赠的影响因素及后效

于心怡¹, 陈泓宇¹, 胡梦琪¹, 王芳¹ (通讯作者)

1 北京师范大学心理学部, 北京, 100875, fwang@bnu.edu.cn

摘要 炫耀性捐赠由炫耀性消费的概念演化而来, 指个人通过购买慈善商品并进行可见展示来表示对慈善事业的支持, 从而提升自我社会地位或获得公众认可的行为。在反消费主义盛行的当下, 存在利他性的炫耀性捐赠或可代替炫耀性消费成为更多人塑造良好社会形象的选择, 但目前缺少对其影响因素和作用后效的研究。基于高成本价值信号理论、自我补偿理论和自我验证理论, 本研究通过3个实验探究了与炫耀性捐赠相关的个体特质、影响炫耀性捐赠的情境因素以及旁观者对炫耀性捐赠行为的评价。研究1通过线上问卷探究什么样的个体更倾向于做出炫耀性捐赠行为, 结果发现: 诚实-谦逊水平更低, 自尊、自我监控和面子需要水平更高的个体更愿意进行炫耀性捐赠。研究2旨在探索不同自尊、收入水平的个体在不同社会比较情境下的炫耀性捐赠意愿, 采用回忆法让被试经历向上社会比较(vs. 无社会比较), 结果发现: 当个体有较高收入时, 高自尊者(vs. 低自尊者)更倾向于做出炫耀性捐赠, 以抵御向上社会比较带来的自我威胁并维护自尊, 符合自我补偿理论及自我验证理论。研究3旨在探究炫耀性捐赠行为的社会评价后效, 实验要求被试在浏览包含炫耀性捐赠动态/炫耀性消费动态/普通动态的朋友圈后对行为发出者进行评价, 结果发现: 相对于炫耀性消费, 炫耀性捐赠可以提升旁观者对行为主体热情特质的评价, 但对能力的评价没有显著差异, 该结果与炫耀性捐赠行为主体的预期不一致, 在高成本价值信号理论的基础上彰显了炫耀性捐赠的特殊后效。本研究从行为主体与旁观者两个视角、以本土化、情境化的实验设计探索了炫耀性捐赠的矛盾内涵及其心理动因, 丰富了对炫耀性捐赠这一现象的理解, 研究结果也有助于公益慈善机构采用更有效的宣传策略鼓励捐赠, 推动慈善事业良性发展。

Are you willing to flaunt your compassion? Influencing factors and aftereffects of conspicuous donation behavior

Yu Xinyi, Chen Hongyu, Hu Mengqi, Wang Fang

Department of Psychology, Beijing Normal University, Beijing, 100875, China

Abstract: Conspicuous donation behavior (CDB), which evolved from the concept of conspicuous consumption behavior (CCB), refers to individuals' behaviors of purchasing charitable goods and displaying them visibly to show their support for charities, in order to enhance their social status or gain public recognition. In the era of anti-consumerism, the altruistic attribute of CDB may make it a better choice over conspicuous consumption for individuals to establish a good social image. However, there was a lack of research on the influencing factors and

after-effects of CDB. Based on the costly signaling theory, self-compensation theory and self-verification theory, this study, consisting of three experiments, explored the relevant personal traits, situational factors of CDB and observers' evaluation of it. In Study 1, an online questionnaire was used to explore what kind of persons are more inclined to perform conspicuous donations. The results showed that individuals with lower level of honesty and humility were more willing to perform CDBs, as well as those with higher levels of self-esteem, self-monitoring and need of face. The purpose of study 2 was to explore the willingness to make CDBs under social comparison of individuals with different levels of self-esteem and income. Study 2 found that individuals with high (vs. low) income and self-esteem were more apt to perform CDBs after upward social comparison, which was consistent with self-compensation theory and self-verification theory. Study 3 mainly explored the after-effects of social evaluation of CDB. After browsing other's WeChat Moments containing CDB/CCB/ordinary contents (between-subject design), participants were asked to rate that person's warmth and competence. The results indicated that compared with CCB, CDB could improve observers' evaluation of warmth but not competence of the performer, which was inconsistent with the performers' expectation of CDB, and demonstrated a special after-effect of CDB on the basis of the costly signaling theory. In summary, this study explored the ambivalent connotation of CDB and its psychological motivation contextually from two perspectives (performers and observers). It had enriched the understanding of CDB, and could also helped the charities to utilize more effective strategies to encourage donations, promoting the benign development of the charitable cause.

摘要 社会比较几乎无处不在，特定条件下的社会比较信息可能会威胁到自我，进而导致一系列消极后果。本文通过两个研究，从社会比较理论出发，探讨在消费情境中的社会比较信息对消费者欺骗行为的影响，并探究了自我威胁起到的中介作用。研究一检验比较对象的相关性和价格的差异性对消费者说谎意愿的影响，使用2（相关性：相关[朋友]、不相关[陌生人]）×2（差异性：大、小）的被试间设计，实验采用向上方向的社会比较。因变量通过问卷测量被试的撒谎动机，并测量被试感知到的自我威胁程度。研究一表明，在向上社会比较的情形下，当与比较对象相关且价格差异小时，被试感知到更多的自我威胁，进而表现出更多的撒谎意愿。相比之下，当价格差异大时，不管与朋友还是陌生人互动，被试的自我威胁感知和撒谎意愿均无显著差异。在研究一的基础上，研究二继续探索比较对象的相关性和信息性质对消费者说谎行为的影响。研究二采用差异性小的向上比较的客体为比较对象，采用2（比较对象的相关性：相关[朋友]、不相关[陌生人]）×2（信息性质：社会信息、客观信息）的被试间设计。因变量采用问卷测量被试撒谎的动机，并测量被试感知到的自我威胁程度。研究二表明，在比较方向为向上且价格差异较小的情况下，信息性质为社会性、比较对象为相关时，被试感知到的自我威胁越高，进而表现出更多的撒谎意愿；自我威胁起到了中介作用。综合以上结果，消费者似乎更愿意对他们认识的人撒谎，并且消费者倾向于将欺骗作为一种保护机制，以应对其构成自我威胁的社会信息。

The impact of social comparison on consumer deception: the mediating role of self-threat

Yue RuYi, Peng XueYing, Cao JunSheng, Yin ZhongZe

School of education science, Shanxi Normal University, LinFen, 041004, 1059328061@qq.com

Abstract: Social comparison is almost everywhere. Social comparison information under specific conditions may threaten self, and then lead to a series of negative consequences. Through two studies, starting from the social

comparison theory, this paper discusses the impact of social comparison information on consumer deception in the consumption situation, and explores the intermediary role of self-threat. In Study 1, the influence of correlation and price difference of comparison objects on consumers' willingness to lie were tested using a 2 (relevance: relevant[friend] vs. irrelevant[stranger]) $\times$ 2 (discrepancy: small vs. large) between-subjects experimental design. The experiment adopts upward social comparison. The dependent variable measures the subjects' lying motivation through the questionnaire and the degree of self-threat they perceive. Study 1 shows that in the condition of upward social comparison, when it is related to the comparison object and the price difference is small, the subjects perceive more self-threats and show more willingness to lie. In contrast, when the price difference is large, no matter interacting with friends or strangers, the subjects' self-threat perception and lying intention have no significant difference. On the basis of study 1, study 2 continued to explore the impact of the relevance of the comparison object and the nature of information on consumers' lying behavior. In Study 2, the comparison object are small difference and upward comparison, using a 2 (relevance: relevant[friend] vs. irrelevant[stranger]) $\times$ 2 (information nature: social vs. objective) between-subjects experimental design. The dependent variable measures the subjects' lying motivation through the questionnaire and the degree of self-threat they perceive. Study 2 shows that when the comparison direction is upward and the price difference is small, when the nature of information is social and the comparison object is relevant, the subjects perceive higher self-threat and show more willingness to lie; Self threat plays a mediating role. Based on the above results, consumers seem to be more willing to lie to people they know, and consumers tend to take deception as a protective mechanism to deal with social information that poses a self-threat.

新冠疫情的两难困境下个体社会合作行为研究

梁倩仪¹ 杨洋¹

¹ 广东金融学院, 公共管理学院, 广州, 510521

摘要 公共两难困境指社会利益跟个人利益发生冲突时, 个人需要在二者之间进行权衡取舍。2020 年新冠疫情初期, 我国口罩资源紧缺, 多地政府用一次性口罩向群众交换 N95 口罩以支援医疗前线, 人们的合作对抗击新冠有着重大意义。由于疫情带来的社会损失现象, 本研究从损失与收益情境出发, 探讨人们的合作行为在不同的公共两难困境中的差异, 相比于收益情境, 个体在损失情境的合作水平更低, 并且在两种公共两难困境中, 个体的合作水平有所差异。进一步地, 本研究通过权变价值观与合作倾向在死亡焦虑和合作水平中的中介作用解释个体的合作心理机制。实验采用 2 (情境类型: 收益情境, 损失情境) $\times$ 2 (社会困境类型: 公共资源两难, 公共物品两难) 的混合设计。其中, 情境类型为被试间变量, 公共两难类型为被试内变量。因变量为合作水平。合作水平用被试捐赠的 N95 口罩数量或个人保留的无用一次性口罩数量作为衡量指标。实验将以问卷形式呈现给 277 名被试。在损失情境中, 个人在公共物品两难中将个人损失 (无用一次性口罩) 投放给集体承担, 从而为个人带来利益; 而个人在公共资源中, 个人需要承担集体损失 (无用一次性口罩), 个人利益也因此受到损失。在收益情境中, 个人在公共物品两难中将个人利益 (N95 口罩) 捐赠一部分给集体, 个人利益将受到损失; 而在公共资源两难中, 个人可以从集体利益 (N95 口罩) 中拿走一部分, 为个人带来利益。另外研究采用量表测量被试的死亡焦虑、权变价值观与合作水平。结果发现: 损失-收益情境与公共两难的交互作用显著, 在损失情境下, 被试在公共资源困境中的合作水平显著高于在公共物品困境中的合作水平。在收益情境下, 被试在公共资源困境中的合作水平显著低于在公共物品困境中的合作水平。另外, 权变价值观与合作倾向对死亡焦虑和合作水平之间的影响起到中介作用。

A study on individual social cooperation behavior under the dilemma of COVID-19

LIANG Qianyi¹, YANG Yang¹

¹ School of Public Administration, Guangdong University of Finance, Guangdong 510521

Abstract: Public dilemmas refer to when social interests and personal interests conflict, the individual needs to make a trade-off between the two. In the early stage of COVID-19 in 2020, China faced a shortage of mask resources. Many local governments exchanged disposable masks for N95 masks with the public to support the medical front line. People's cooperation is of great significance to the fight against COVID-19. Due to the social loss caused by the epidemic, this study explores the differences of people's cooperative behaviors in various kinds of public dilemmas from the perspectives of loss and gain situations. Compared with gain situation, individuals in the loss situation have a lower level of cooperation, and individuals in the two kinds of public dilemmas have different levels of cooperation. Furthermore, the mediating effects of contingent values and cooperative tendency on death anxiety and cooperation level were explored to explain the mechanism of individual cooperative psychology. A mixed design of 2 (situation types: gain situation, loss situation) $\times$ 2 (social dilemma types: dilemma of public resources, dilemma of public goods) was adopted in the experiment. Among them, the situation type is the within-subject factor, and the common dilemma type is the between-subject factor. The dependent variable is the level of cooperation. Cooperation was measured by the number of N95 masks donated by participants or the number of disposable masks kept by individuals. The experiment was presented to 277 subjects in the form of a questionnaire. In the loss scenario, individuals in the public goods dilemma put personal loss (useless disposable masks) to the collective to bear, so they can gain benefits from group; In the public resources, individuals need to bear the collective loss (useless disposable masks), and their personal interests are also lost. In the income situation, when individuals donate part of their personal interests (N95 masks) to the collective in the public goods dilemma, their personal interests will be lost. In the dilemma of public resources, individuals can take a part from the collective interest (N95 masks) to bring personal benefit. In addition, a scale was used to measure death anxiety, contingent of self-worth and cooperation level. The results showed that the interaction between the loss-gain situation and the public dilemmas was significant. In the loss situation, the participants' cooperation level in the public resource dilemma was significantly higher than that in the public goods dilemma. In the reward situation, the participants' cooperation level in the public resource dilemma was significantly lower than that in the public goods dilemma. In addition, Contingency values and cooperation tendency played a mediating role in the relationship between death anxiety and cooperation level.

同伴在场和自尊对大学生亲社会冒险行为的影响

罗浩诚¹ 卓智灏¹ 利振华¹ 聂衍刚¹ (通讯作者)

¹ 广州大学教育学院青少年心理与行为研究中心, 广州, 510006, nie-yangang@gzhu.edu.cn

摘要 亲社会冒险行为是大学生社会能力发展的重要方面, 指个体在亲社会情境下的冒险行为。不同于传统单一的亲社会行为或冒险行为, 亲社会冒险行为同时结合了亲社会性和冒险性的特点, 即在帮助他人的同时自身可能要承担一定风险, 其在日常生活中的典型表现为“舍己为人”。目前, 亲社会冒险行为的影响机制还有待深入探讨。本研究基于社会计量器理论和认知—情感理论, 通过两个行为实验探究同伴在场和自尊对大学生亲社会冒险行为的影响。实验 1 共收集了 66 份有效数据, 采用改编的赌博任务并模拟亲社会情境考察同伴在场对亲社会冒险行为的作用; 实验 2 共收集了 120 份有效数据, 首先采用 Rosenberg 的自尊量表对被试进行筛选和高低分组, 分为同伴在场—低自尊、同伴在场—高自尊、无同伴在场—低自尊和无同伴在场—高自尊 4 组, 并模拟亲社会情境, 使用改编的气球模拟风险任务同时考察同伴在场和自尊对亲社会冒险行为的作用。结果发现: (1) 实验 1 中, 在控制了性别、年龄、情绪状态和道德同一性后, 同伴在场组的亲社会冒险行为显著多于无同伴在场组($t(64) = -2.54, p < 0.05$, Cohen's $d = 0.62$)。 (2) 实验 2 中, 在控制了性别、年

龄、情绪状态和道德同一性后，自尊的主效应显著($F(1, 116) = 4.32, p < 0.05, \eta^2 = 0.04$)，二者的交互作用不显著。这些结果发现：同伴在场作为一种积极的社会线索，能够促使大学生做出更多的亲社会冒险行为，以获得同伴的赞许和接纳，提升自己的社会地位；此外，自尊对亲社会冒险行为的作用要强于同伴的作用，低自尊的大学生会做出更多的亲社会冒险行为以获得同伴的认可，从而提升自我价值感。本研究验证了同伴系统和个人系统对大学生亲社会冒险行为的作用，对于揭示大学生亲社会冒险行为的产生机制具有重要意义。

Effects of Peer Presence and Self-esteem on College Student Prosocial Risk-taking Behavior

Haocheng Luo¹, Zhihao Zhuo¹, Zhenhua Li¹, Yangang Nie^{1*}

¹ Research Center of Adolescent Psychology and Behavior, School of Education, Guangzhou University, 510006, Guangzhou

Abstract: Prosocial risk-taking behavior is an important aspect of the development of College Students' social ability, which refers to the risk-taking behavior of individuals in the prosocial situation. Different from the traditional single prosocial behavior or risk-taking behavior, prosocial risk-taking behavior combines the characteristics of prosocial and risk-taking at the same time, that is, it may have to take some risks while helping others. Its typical performance in daily life is "sacrificing oneself for others". At present, the influence mechanism of prosocial risk-taking behavior needs to be further discussed and explored. Based on social econometric theory and cognitive affective theory, this study explores the effects of peer presence and self-esteem on College Students' prosocial risk-taking behavior through two behavioral experiments. In Experiment 1, 66 valid data were collected, and the effect of peer presence on prosocial risk-taking behavior was investigated by using the adapted gambling task and simulating the prosocial situation; In Experiment 2, 120 valid data were collected. Firstly, Rosenberg's self-esteem scale was used to screen and group the subjects into four groups: peer presence low self-esteem group, peer presence high self-esteem group, no peer presence low self-esteem group and no peer presence high self-esteem group. Based on the simulated prosocial situation, the modified Balloon Analogue Risk Task was used to investigate the effects of peer presence and self-esteem on prosocial risk-taking behavior. The results showed that: (1) In Experiment 1, after controlling gender, age, emotional state and moral identity, the prosocial risk-taking behavior of the peer presence group was significantly more than that of the non peer presence group ($t(64) = -2.54, p < 0.05$, Cohen's $d = 0.62$). (2) In Experiment 2, after controlling gender, age, emotional state and moral identity, the main effect of self-esteem was significant ($F(1, 116) = 4.32, p < 0.05, \eta^2 = 0.04$), but the interaction between them was not significant. These results show that peer presence, as a positive social clue, can promote college students' prosocial risk-taking behavior, so as to obtain the praise and acceptance of peers and improve their social status; In addition, the effect of self-esteem on prosocial risk-taking behavior is stronger than that of peers. College students with low self-esteem show more prosocial risk-taking behavior to obtain the recognition of peers, so as to improve their sense of self-worth. This study verifies the effects of peer system and personal system on College Students' prosocial risk-taking behavior, which is of great significance to reveal the generation mechanism of College Students' prosocial risk-taking behavior.

摘要 Asch 建立了一个基于简单的视知觉任务（从三条线段中选择一条和目标线段一样长的线段）的团体实验范式，用于检验当个体处在高度同质化的群体中时，能否保持判断的独立性。以往对 Asch 从众实验范式的检验通常使用人类构建团体情境，考虑到现实生活中人类与人工智能之间的信息共享和交互逐渐增加，人工智能将在提供重要的社会交互信息方面扮演重要角色。人工智能是否能够引发从众效应则涉及导致从众效应产生的机制问题。导致从众效应的机制有信息影响和规范影响两种，前者指个体出于获取完善信息的动机，倾向于认为群体提供的信息的可靠性高于个体提供的；而后者指个体出于防止被群体排斥、维持与群体成员正常互动的动机，倾向于按照群体的行为方式改变自己的行为。为验证当前时代背景下 Asch 从众实验范式引发的从众行为程度是否有所变化，以及在非人类的智能个体与人类混合的群体情境下，从众行为中信息影响和规范影响二者是否会产生竞争，本实验通过 4 名实验者同谋和 1 个由 python3.7 编写的虚假 AI 构建混合群体情境，以大学学生作为被试，验证其在线段长度识别任务中的从众表现。AI 可以按照预先设置好的材料展示顺序，对线段长度进行与人类实验者同谋一样效度的判断。实验试次按照主试同谋的答案被分为 4 个对照试次与 12 个关键试次。实验结果表明，从众效应显著 ($p < 0.001$)，即人们在 AI 背景下仍展现出明显的从众倾向。但可能由于时代背景和文化背景不同，从众行为的发生总数低于 Asch 的原实验。但至少发生一次从众行为的被试比例较 Asch 原实验显著上升，达到 94.44%；同时由于 AI 的表面效度不足和实验任务本身难度较低，AI 的存在可能未能显著独立引发对从众行为的信息影响，反对者数量越多所形成的规范影响仍显著地引起从众行为，人类群体主导的规范影响是导致本实验中被试从众行为的主要因素。

Could AI lie? Introducing AI for Chinese conformity psychological research: a paradigm based on the Asch conformity study.

Yifei Zhang¹, Wenxiang Sun², Yifu Chen¹, Chunyang Yang¹, Jia Liu^{3,4*}

1 Faculty of Psychology Beijing Normal University, Beijing, China

2 Faculty of Education Beijing Normal University, Beijing, China

3 Department of Psychology Tsinghua University, Beijing, China

4 Tsinghua Laboratory of Brain and Intelligence, Beijing, China, liujiathu@tsinghua.edu.cn

Abstract: Asch established a group experimental paradigm based on a simple visual perception task (selecting the line segment which was as long as the target line from three given lines) for testing whether individuals could maintain independence of judgment when they were in a highly homogeneous group. Previous replications of the Asch conformity paradigm have typically used humans to create group contexts. Given that the gradual increase in information sharing and interaction between humans and AI emerges in real life, AI will play an important role in providing important information about social interactions. Whether AI can trigger the conformity effect involves the mechanisms behind the conformity effect. There are two types of the mechanisms which are the information influence and the normative influence. The former refers to the tendency of individuals to perceive information provided by the highest reliable individuals in the group for the motive of obtaining perfect information, while the latter refers to the tendency of individuals to change their behavior in accordance with the group's behavior for the motive of preventing rejection by the group and maintaining normal interaction with group members. In order to verify whether the degree of conformity behaviors triggered by the Asch conformity paradigm changes in the current

era and whether the information influence and the normative influence in conformity behavior compete in the group context where non-human intelligent individuals are mixed with humans, we designed an experiment where a mixed group situation was created with four conspirators and a fake AI written in python 3.7 and university students were participating to verify their conformity performance in a line-segment length recognition task. The AI could judge the line-segment length with the same validity as human conspirators according to a pre-set order of material presentation. The experimental trials were divided into 4 control trials and 12 critical trials according to the answers of the conspirators. The results showed a significant conformity effect ($p < 0.001$) and there was still a significant phenomenon of conformity in the AI context. However, the total of conformity behaviors was lower than that of Asch's original study, probably due to the different times and cultural contexts. However, the proportion of subjects with at least one occurrence of conformity was significantly higher than Asch's original research, reaching 94.44%. Meanwhile, due to the possible lack of apparent validity of AI and the low difficulty of the experimental task itself, the presence of AI might have failed to significantly and independently trigger the informational influence on conformity behavior, and the normative influence caused by the higher number of opponents still significantly resulted conformity. And the human group-dominated normative influence was the main factor contributing to the conformity behavior in this experiment.

主、客观社会经济地位对情绪调节策略的影响：自尊的中介作用

平宇婷 郑雯 张曼华

首都医科大学医学人文学院医学心理学系，北京，100069, zhangmanhua99@163.com

摘要 近年来社会经济地位对情绪调节的影响受到学界的广泛关注，而不同的社会经济地位对情绪调节策略使用的影响尚不明晰。本研究分别从客观社会经济地位和主观社会经济地位两个角度，探讨社会经济地位对情绪调节策略的影响，以及自尊在二者关系中的中介作用。972 名被试参与了本研究，他们完成了客观和主观的社会经济地位调查、情绪调节策略以及自尊的调查。本研究采用结构方程模型探讨了主、客观社会经济地位对情绪调节策略的影响。结果发现：（1）客观社会经济地位越高的人，越可能采用正性情绪重视调节和正性情绪宣泄调节；（2）主观社会经济地位越高的人也越可能采用正性情绪重视调节和正性情绪宣泄调节策略；（3）主、客观社会经济地位越高的人自尊越强；（4）自尊在客观社会经济地位与正性情绪重视调节和正性情绪宣泄调节的关系中起部分中介作用；（5）自尊在主观社会经济地位对正性情绪重视调节的作用中起部分中介作用，在主观社会经济地位对正性情绪宣泄调节的作用中起完全中介作用。本研究发现了主、客观社会经济地位对情绪调节策略方式选取的影响的一致性，自尊解释了这一关系的机制，这一发现拓展了对主、客观社会经济地位与情绪调节之间关系的理解。

关键词 主观社会经济地位，客观社会经济地位，情绪调节策略，自尊

The Relationship Between Objective and Subjective Socioeconomic Status and Emotion Regulation Strategies: The Role of Self-esteem

Ping Yuting, Zheng Wen, Zhang Manhua

Department of Medical Psychology, Capital Medical University, Beijing 100069, China

Abstract: The effects of socioeconomic status on the emotion regulation have attracted widespread attention in recent years. However, the relationship between socioeconomic status and the emotion regulation strategy remains unclear. In the present study, we explored the effects of objective socioeconomic status (SES) and subjective socioeconomic status (SSS) on the emotion regulation strategy, and the mediation of self-esteem, respectively. 972 participants completed the questionnaire of SES, the MacArthur Scale of subjective socioeconomic status, Rosenberg Self-Esteem Scale and Emotion Regulation Scale. Structural equation modeling was used to explore the relation between SES, SSS and emotion regulation strategy. The findings show that (1) SES was positively associated with the positive

emotion catharsis regulation and the positive emotion appreciate regulation; (2) SSS was also positively associated with the positive emotion catharsis regulation and the positive emotion appreciate regulation; (3) People with low socioeconomic status were associated with lower self-esteem; (4) The relation between SES and the positive emotion catharsis regulation and the positive emotion appreciate regulation were partially mediated by self-esteem; (5) The relation between SSS and the positive emotion appreciate regulation was partially mediated by self-esteem, while on the positive emotion catharsis regulation was fully mediated by self-esteem. The present study investigated the relation between SES and SSS on emotion regulation strategy, so as to compare their effects on emotion regulation strategy. This result developed the understanding of the relation between SES, SSS and emotion regulation strategies.

在沪大学生对于沪籍的内隐地域偏见及其改善方法研究

夏聪¹ 丁思怡¹ 张亚² (通讯作者)

1 华东师范大学心理与认知科学学院, 上海, 200062

2 华东师范大学心理与认知科学学院, 上海, 200062, yzhang@psy.ecnu.edu.cn

摘要 内隐地域偏见隐性地影响着个体的就业、交友等日常生活, 甚至引发地域攻击等暴力行为。本研究对 54 名在沪大学生 (沪籍 18 名, 非沪籍 36 名) 的内隐地域偏见现象进行研究, 并使用文字情境启动和图片刺激启动来探索改善个体内隐偏见的方法。研究结果表明: (1) 非沪籍被试对沪籍角色面孔启动条件下的符号优美程度评分比非沪籍角色面孔启动条件下显著更高 ($p < 0.001$), 沪籍被试的评分则无显著差异; (2) 将沪籍和非沪籍学生面孔分别与正性、负性图片刺激联结后, 非沪籍被试对于沪籍角色面孔启动的符号优美程度评分与联结前相比显著提升 ($p < 0.001$), 同时发现, 沪籍被试在这一实验条件下首次产生了对沪籍角色与非沪籍角色的显著给分差异 ($p < 0.05$); (3) 在歧视文字材料启动后, 非沪籍被试对沪籍角色的打分较图片联结实验中的给分显著下降; (4) 在所有的实验条件下, 非沪籍被试对沪籍角色面孔启动下的符号优美程度评分都比非沪籍角色面孔启动条件下显著更高 ($p < 0.05$)。据此得出结论: (1) 非沪籍被试有着明显的外群体偏好, 这可能是由于他们已经在一定程度上融入了上海; (2) 在正/负性图片刺激启动的干预下, 被试对沪籍角色的偏好加深了, 证明了其有效性; (3) 在“上海人歧视外地人”文字材料启动的干预下, 非沪籍被试降低了对沪籍角色的偏好; (4) 内隐地域偏见确实存在跨情境的一致性。本研究首次对在沪大学生的内隐沪籍偏见进行研究, 展现了这一群体的内隐群体偏好, 以及刺激联结和情境启动改变内隐地域偏好的可能性。

Implicit regional prejudice of college students in Shanghai towards Shanghai nationality and the improvement methods

Xia Cong¹, Ding Siyi¹, Zhang Ya² (corresponding author)

1 School of psychological and cognitive sciences, East China Normal University, Shanghai, 200062

2 School of psychological and cognitive sciences, East China Normal University, Shanghai, 200062, yzhang@psy.ecnu.edu.cn

Abstract: Implicit regional prejudice can affect individuals' daily life including employment and making friends, and can even lead to 'regional blackening' and other violent acts. Current study tested the implicit regional bias of 54 college students in Shanghai (18 Shanghaiese and 36 non-Shanghaiese), and used text context priming and picture stimulus priming to explore ways of improving implicit bias. The results show that: (1) the scores of non-Shanghaiese subjects give based on how beautiful they think the symbols primed by the face of a Shanghai character are significantly higher than those primed by faces of non-Shanghai character, but there is no significant difference among Shanghai subjects ($p < 0.001$); (2) after connecting the faces of Shanghai and non-Shanghai characters with positive and negative picture stimuli respectively, the scores that non-Shanghaiese subjects give to the level of

beauty of symbols primed by the Shanghai character's face was significantly higher than that before the connection ($p < 0.001$) ; Meanwhile, it is found that Shanghainese subjects give a significantly higher score to Shanghai character bound symbol for the first time in the current research ($p < 0.05$) ; (3) after the discrimination text priming materials are given, the score that non-Shanghainese subjects gave to Shanghai characters primed symbols is significantly lower than that in the picture connection experiment ($p < 0.05$) ; (4) the significant difference between the scores non-Shanghainese subjects giving to Shanghai and non-Shanghai character primed symbols exists among all the experiments. Here come the conclusions: (1) non-Shanghainese subjects have obvious external group preference, which may be because their long staying in Shanghai for study and have integrated into Shanghai to a certain extent; (2) under the intervention of positive / negative picture stimulation, the subjects' preference for the Shanghai character deepened; (3) under the intervention condition of "Shanghai people discriminating against outlanders", non-Shanghainese subjects reduced their preference to the Shanghai character and showed their aversion to regional discriminators; (4) there exists the consistency of implicit prejudice. This study is the first that taking Shanghai as an example to study the implicit regional bias of college students, showing the implicit region preference of such a group and the possible usage of stimulating connection and situational priming in changing the implicit preference.

Keywords: implicit social cognition, regional bias, positive and negative connection, priming effect

农村父母应对方式与亲子关系:心理弹性与年龄的调节中介模型

谢亚伟 侯田雅 邓光辉 (通讯作者)

海军军医大学 (第二军医大学) 心理系, 上海 200433

摘 要 亲子关系是父母与子女以血缘和共同生活为基础的关系, 是家庭生态系统的重要组成部分, 是影响儿童发育的重要因素之一, 近年来引起了人们的广泛关注。有问题的亲子关系可能会导致儿童成长发展的不良后果, 如自我效能感低下, 在学校适应不良, 发生欺凌和被欺凌的情况。在以往的研究中发现应对方式对亲子关系有显著影响, 这些研究大多是以孩子为研究视角, 并没有探讨应对方式影响亲子关系背后的机制, 并且已有研究发现与城市地区相比, 农村地区的亲子关系更脆弱、更容易产生问题, 特别是农村留守家庭, 因为大量留守儿童的父亲、母亲或两者缺位。因此, 探究农村地区亲子关系的保护因素及相关机制具有重要意义。本研究的主要目的是通过一个有调节的中介模型, 在中国农村父母人群中探讨应对方式、心理弹性、年龄与亲子关系之间的关系。本研究招募了安徽省农村地区的 1224 名家长作为被试, 采用简易应对方式问卷 (CSCQ)、心理弹性量表 (CD-RISC) 和亲子关系自评量表进行数据收集。使用 Mackinnon (2008) 的四步程序检验中介效应, 并采用 Hayes PROCESS 宏程序分析有调节的中介模型。结果表明, 心理弹性在应对方式与亲子关系的关系中起部分中介作用。心理弹性的中介效应受年龄的调节。具体而言, 应对方式通过心理弹性影响亲子关系的路径会随着年龄的增长而增强。研究结果强调了应对方式对亲子关系的影响, 并通过揭示农村地区应对方式对亲子关系的影响机制, 丰富了以往文献的研究。本研究结果为农村亲子关系维护与改善的干预提供了理论依据。

Coping style and parent-child relationship among Chinese parents from rural areas: A moderated mediation model of resilience and age

Yawei Xie, Tianya Hou, Guanghui Deng

Department of Psychology, Naval Medical University (Second Military Medical University),
Shanghai 200433, China

Abstract: Parent-child relationship is the relationship between parents and children based on blood and common life. It is an important part of the family ecosystem and one of the important factors affecting the development of children. In recent years, it has attracted widespread attention. Problematic parent-child relationships can lead to adverse developmental outcomes for children, such as low self-efficacy, maladjustment in school, and bullying and being

bullied. Previous literature found that coping style significantly affects parent-child relationship. Most of the studies explored issue from the angle of children, and did not investigate the potential mechanisms underlying the association between coping style and parent-child relationship. Previous literature found parent-child relationship in rural areas, especially the rural left-behind family, are more fragile and prone to problems than those in urban areas due to a large number of left-behind children father, mother or both absence. Therefore, it is of great significance to explore the protective factors and related mechanisms of parent-child relationship in rural areas. The main purpose of this study was to explore the complex relationship between coping style, mental resilience, age and parent-child relationships in rural Chinese parents through a moderated mediation model. The present study employed a sample of 1224 parents from rural areas in Anhui province, China. The Simplified Coping Style Questionnaire (CSCQ), Connor-Davidson Resilience scale (CD-RISC) and Parent-child Relationship Self-rating scale were administrated to collect data. Mackinnon's (2008) four-step procedure was used to examine the mediation effect, and Hayes PROCESS macro was executed to analyze the moderated mediation model. The results indicated that resilience partially mediated the association between coping style and parent-child relationship among parents from rural areas. The mediating effect of resilience was moderated by age. Specifically, the relation between coping style and parent-child relationship via resilience would be strengthened with getting older. The results highlight the effect of coping style on parent-child relationship and extend the previous literature by uncovering the underlying mechanism in rural areas. The findings shed light on the interventions regarding the maintenance and improvement of parent-child relationship in rural areas.

Keywords: Parent-child relationships, coping styles, resilience, moderated mediation model, rural parents

信任违背对情绪灵活性的损害作用

摘要 信任是个体基于对他人意图或行为的积极期望而自愿将自己重要资源交给对方处置的心理状态。当受托人没有满足委托人的积极期望时, 就会发生信任违背, 使委托人受到一系列的负面影响, 降低对对方信任度的评估。根据双加工模型, 自动加工和控制加工是个体决策, 健康行为和社会行为的基础。之前研究发现信任违背促进了对威胁刺激的自动加工, 表现为对威胁刺激的过度警觉和难以脱离的注意偏向特点; 并且研究也发现信任违背损害了控制加工, 表现为工作记忆刷新能力的受损。前人研究只是分别探讨了信任违背对两种加工过程的影响, 我们并不清楚是否信任违背同时增强了对负性刺激的自动加工和削弱了控制加工。情绪灵活性是执行功能的另一个关键组成部分, 相对积极情绪刺激, 焦虑或抑郁个体更难从负性刺激中转移出来。它与情绪调节密切相关, 对心理健康和可持续幸福至关重要。因此, 本研究的目的是探讨信任违背如何影响情绪灵活性, 它会帮助我们了解信任违背对自动加工和控制加工两者平衡的影响。其中信任游戏用于诱发信任违背, 情绪转换任务用于测量情感灵活性的能力。结果表明, 违背组的转换代价高于控制组, 但是转换代价在负性刺激和积极刺激之间没有显著差异。这些结果表明, 在加工情绪刺激时, 经历信任违背个体难以在该情绪刺激的情绪方面和非情绪方面进行灵活切换,而这种情绪灵活性的受损并不仅限于负性刺激。研究结果支持违反信任会损害执行功能, 这为信任修复提供了新的方向。在实践层面, 这项研究可以让我们更好地理解信任难以修复的机制。受损的情绪灵活性阻止了信任者改变他们的观点并使他们陷入恶性循环。因此, 信任修复可以提高个体处理情绪刺激的灵活性, 从而更好地从信任违背的痛苦中转移。在理论层面, 自动和控制过程两个系统之间的不平衡导致抑郁、焦虑以及冲动和成瘾行为, 信任违反阻碍了控制过程的情绪灵活性。这有助于我们更好地理解为什么那些经历信任违背的人会做出非理性的社会决策。

The trust violation impairs the affective flexibility

Yuan Shuge, Yang Dong

Key Laboratory of Cognition and Personality of Ministry of Education, School of Psychology,
Southwest University, Chongqing, 400715

Corresponding author: Yang Dong, yangd@swu.edu.cn

Abstract: Trust is a psychological state comprising the intention to accept vulnerability based upon positive expectations of the intentions or behaviors of another. When the trustee does not meet the positive expectations of the trustor, the trust violation occurs, causing the injured party to experience a range of negative affect and lower the level of trust between parties. Few research has explored the relationship between trust violation and executive functions, and has reported that trust violation harmed working memory updating. However, research about the impact of trust violation on affective flexibility, another key component of executive functions, is still lacking. Affective flexibility is closely related with emotion regulation, and crucial for mental health and sustainable well-being. Therefore, the examination of how trust violations impacts affective flexibility may provide insights into the psychological unhealthy caused by trust violation. Valence-specific in affective flexibility often refers to negative bias, which is the difficulty shifting from emotional aspects of negative material compared to emotional aspects of positive material. Research also suggest that trust violation promote negative attention bias. Thus, the present study aimed to investigate how trust violations influence affective flexibility, and whether this influence is valence-specific. The trust game was used to induced trust violation, and affective switching task was used to measure the ability of affective flexibility. The results showed that the switching cost was higher in the violation group than in the control group in processing affective material. However, these was no valence-specific shifting difficulties. Those results suggested that trust violations impaired the ability to flexibly switch between processing affective and non-affective qualities of affective stimuli. The findings support that trust violations impaired executive functions, which provide new directions for trust repair. At the practical level, the study can make us better understand the mechanisms why trust is hard to repair. The damaged affective flexibility prevents the trustors from changing their perspectives and traps them in a vicious circle. Therefore, trust repair can improve the flexibility of individuals to process emotional stimuli, so as to better transfer from the pain of trust violation. At the theoretical level, this study broadens ours understand of the influence of trust on cognition. From dual-process model, automatic and control processes the basis of social behavior. The imbalance between two systems contribute to the depression, anxiety and impulsive and addictive behaviors. Combined with the impaired working memory updating, the deficit in affective flexibility support that trust violation hindered the control process. This help us better understand why those people experiencing trust violation make irrational social decision. However, the influence of trust breach on automatic processing needs to be further explored and verified.

Keywords: Trust violations, Affective flexibility, dual-process

君子人格与网络不良行为：一个带调节的中介模型

徐晨媛 韩昭 侯玉波（通讯作者）

北京大学心理与认知科学系，北京，100871, houyubo@pku.edu.cn

摘 要 君子型人格作为更适合中国人群特质的本土化人格理论，在很多领域都产生了广泛的积极影响。本研究从君子人格出发，尝试探讨其与人们在网络中不良行为的关系。网络不良行为是人们在一定匿名性质的网络中，进行的侵犯、欺凌和欺骗相关的行为。本研究在探讨君子人格和网络不良行为关系的基础上，研究了批判性思维在其中的中介作用，同时也分析了行为抑制在君子人格与批判性思维之间的调节作用。

本研究以互联网人群为研究对象，采用在线问卷调查的方法进行数据收集，为避免共同方法偏差分两次施测，施测时间间隔在 10 天以上。两次施测分别收集了被试的行为抑制、君子人格、批判性思维和网络行为情况数据。共收集有效样本数据 387 份，样本覆盖了省级市、地级市、乡镇、农村等各级城市，覆盖了 18 至 69 岁的各年龄段、各职业及收入水平的人群。

研究结果发现：（1）君子人格与个体的网络不良行为表现呈显著负相关，君子人格特质展现越明显，网络不良行为越少；（2）批判性思维在君子人格和网络不良行为之间起部分中介作用，即君子人格通过批判性思维，与网络不良行为呈现出负向相关；（3）行为抑制水平会调节君子人格与批判性思维之间的关系，具体表现为，当行为抑制水平较低时，君子人格与批判性思维呈显著的正相关关系；当行为抑制水平较高时，君子人格与批判性思维的无显著相关。本研究拓展了基于君子人格理论的实证研究，证实了君子人格对人们在具匿名性的网络上的行为，特别是不良行为也有影响，为互联网提升用户体验、优化网络环境提供了新的视角和实证支持。

关键词 网络不良行为，君子型人格，行为抑制水平，批判性思维

Junzi Personality and Problem Behavior on the Internet: A Moderated Mediation Model

Xu Chenyuan, Han Zhao, Hou Yubo

School of Psychological and Cognition Sciences, Peking University, Beijing

Abstract: As a localized personality theory which is more suitable for the characteristics of Chinese people, Junzi personality has exerted a wide range of positive influence in many fields. The purpose of this research is to explore the relationship between the Junzi personality and problem behavior on the Internet, which is defined as a kind of behavior related to aggression, bullying and deception in anonymous situation, and establish a mechanism model consisting of Junzi personality, problem behavior on the Internet, critical thinking and behavioral inhibition. In this research, 387 valid sample data were collected by online questionnaire survey. The test was carried out twice with an interval of 10 days or more. The data of Junzi personality, problem behavior on the Internet, critical thinking and behavioral inhibition were collected in the two tests. The results show that: (1) There is a significant negative correlation between the Junzi personality and problem behavior on the Internet. The more obvious the Junzi personality, the less problem behavior on the Internet. (2) Junzi personality is positively correlated with critical thinking, and critical thinking is negatively correlated with problem behavior on the Internet. Critical thinking plays an intermediary role between Junzi personality and problem behavior on Internet. (3) Behavior inhibition enhance the effect of Junzi personality on critical thinking. When the level of behavioral inhibition is low, there is a significant positive correlation between Junzi personality and critical thinking, while when the level of behavioral inhibition is high, there is no significant correlation. This study expands the empirical research based on the theory of Junzi personality, and proves that the Junzi personality also has an influence on problem behavior on the Internet. It provides a new perspective and empirical support for improving user experience and optimizing the Internet environment.

Keywords: Behavioral Inhibition, Critical Thinking, Junzi Personality, Problem Behavior on the Internet

压力知觉和消极应对方式对不公平感相关的道德决策的影响： 基于中国 COVID-19 疫情早期背景的网络调查

袁家静

2901547651@qq.com

摘要 COVID-19 大流行对人民生活造成巨大影响，受到医疗物资等资源短缺的限制，人们需要不断在不同群体的权利和需求之间做出判断和选择。突如其来的重大公共卫生事件往往会增加人们的焦虑感和压力水平，也会让人们更加关注热点问题并受其影响，进而改变很多决策行为。本研究旨在探讨 COVID-19 大流行期间，国内群众压力知觉和压力应对方式的总体情况，及其对道德两难困境的决策影响，尤其关注疫情相关的热点信息如何影响人们作出决策。2020 年 2 月 13 日至 2 月 23 日，777 名中国被试完成了在线问卷调查，包括 10 个项目的压力知觉量表（PSS-10）、特质应对方式问卷（TCSQ，分为积极应对和消极应对两个维度）和 8 个情境的道德决策问卷（基于本实验室前期研究）。为了检测热点话题对决策的影响，我们加入了道德

两难情境中被牺牲者的道德污点信息（包括疫情相关和疫情无关的因素）。采用皮尔逊相关分析和多层次模型分析数据，结果显示，女性和年轻人的压力知觉水平显著较高，且压力知觉高的个体积极应对方式水平较低，消极应对方式水平较高。仅在压力知觉较低时，消极应对方式仍能够正向预测经典道德困境中的功利主义倾向。此外，疫情相关的道德污点信息显著影响人们的道德判断，会使人们从道义性选择转向功利主义选择，或更快地选择功利主义。我们的结果验证了之前在实验室的发现，即消极应对方式越高的人越容易作出功利性道德选择，但较高的压力知觉消除了应对方式对道德两难判断的影响，说明社会压力所激发的“照料和结盟”模型同样可能会让人们更在意道义性选择的可能性。此外，在疫情突然暴发的社会背景下，人们往往更容易受到热点新闻的影响，在进行判断时更加容易受到主观情绪影响，更难保持理性思考，尤其是在涉及到社会公正相关的决策时。这个结果也提示我们，在突发重大公共卫生事件的早期，政府应该意识到社会舆情对群体情绪和决策的重要影响，尽量避免违反社会公平性的事件发生；此外也要相信大多数群众在应对压力时会采取更加积极和亲社会的方式。

疫情之下集体主义对个体心理健康状态的影响： 一个有调节的中介模型

高艺璇¹ 姚汶杰¹ 廖宗卿^{1*}

¹ 四川师范大学，心理学院，成都，610000

² 四川师范大学心理学系，成都，610000, zongqing.liao@sicnu.edu.cn

摘 要 近几个月以来，国内新冠肺炎疫情新增病例的反复出现为民众造成了较大的心理压力与情绪困扰，对民众的心理健康产生了威胁。同时，在疫情期间我国人民展现出了强大的集体主义精神，为抗击疫情做出了卓越的贡献。集体主义是指一切从集体出发，个人是集体的份子，集体利益高于个人利益，强调个人对集体的忠诚和强烈的归属感。本研究拟构建一个有调节的中介模型，以检验当前疫情背景下情绪调节策略在集体主义与个体心理健康状态之间的中介作用以及自我同一性对上述中介路径的调节作用。采用疫情心理健康自评表、集体主义量表、Gross 情绪调节问卷、自我同一性地位量表进行研究，共回收 459 份有效问卷。在控制年龄后，采用条件过程分析探讨了集体主义、情绪调节策略与自我同一性对疫情个体心理健康状态的影响。结果显示：（1）情绪调节策略中的表达抑制手段在集体主义与疫情个体心理健康状态中抑郁之间起显著的完全中介作用（中介效应值为 0.0199, 95%CI=[0.0051, 0.0391]）；（2）表达抑制的中介作用受到自我同一性的调节，且自我同一性调节了中介过程的后半路径（调节效应值为-0.003, 95%CI=[-0.0060, -0.0003]），即自我同一性可以降低表达抑制对抑郁的影响。本研究与我国国情紧密结合，进一步验证了自我同一性的发展对公共卫生事件下民众心理健康的重要性，对当前疫情之下我国的疫情相关心理健康教育有着较好的启发意义。

The effect of collectivism on individual mental health status under epidemic conditions: A moderated mediation model

Gao Yi xuan, Yao Wen jie, Liao Zong qing

Sichuan Normal university, Cheng du, Si chuan

Abstract: In recent months, the repeated emergence of new cases of COVID-19 in China has caused great psychological stress and emotional distress to the public which has threatened the public's mental health. At the same time, during the epidemic, the Chinese people showed a strong spirit of collectivism and have made outstanding contributions to the fight against the epidemic. Collectivism means that everything starts from the collective, the individual is a member of the collective, and the collective interest is higher than the individual interest. It emphasizes the loyalty and strong sense of belonging of the individual to the collective. This study intends to construct a moderated mediation model to examine the mediating role of emotion regulation strategies between collectivism and individual mental health status and the moderating role of self-identity on the above mediating

pathways under the current epidemic situation. A total of 459 valid questionnaires were collected by using Epidemic Mental Health Self-Rating Scale, Collectivism Scale, Gross Emotional Regulation Questionnaire and Self-Identity Status Scale. After controlling for age, the effects of collectivism, emotion regulation strategies and self-identity on mental health status of epidemic individuals were investigated by using conditional process analysis. The results showed that: (1) Expression inhibition in emotion regulation strategy played a significant complete mediating role in the relationship between collectivism and depression (mediating effect value was 0.0199, 95%CI=[0.0051, 0.0391]); (2) The mediating effect of expression inhibition was moderated by self-identity, and self-identity moderated the second half pathway of the mediating process (moderating effect value was -0.003, 95%CI=[-0.0060, -0.0003], that is, self-identity could reduce the influence of expression inhibition on depression. This study is closely related to China's national conditions, further verifies the importance of the development of self-identity to the public's mental health under public health events, and has a good inspiration significance for China's epidemic related mental health education under the current epidemic situation.

2 贵州师范大学心理大数据研究中心, 贵阳, 550025, chenweihb@yeah.net

摘要 目的: 冠状恐怖症是一种由新型冠状病毒引起的过度恐惧症。为防止新冠疫情的蔓延, 学校复学后仍然采取封闭管理的形式, 社会活动的减少给学生的身心健康带来了巨大的挑战。COVID-19 恐怖症量表(C19P-S)是 Arpacı 等人于 2020 年研发的用于测量个体新冠恐怖症程度的工具, 由 20 个条目、四个维度组成, 目前 C19P-S 已在土耳其、美国、韩国和伊朗等进行验证。为丰富 C19P-S 在中国背景下的应用, 本研究旨在对中文版 COVID-19 恐怖症量表(C19P-S-C)的信度和因子结构进行检验, 并考察其跨性别、跨时间的测量等值性。**方法:** 在疫情封校期间, 对贵州省的初、高中学生进行问卷调查, 包括中文版 COVID-19 恐怖症量表(C19P-S-C)、一般健康问卷(GHQ-12)和广泛性焦虑障碍量表(GAD-7)。**结果:** 探索性因素分析的结果显示, 有 4 个条目跨负荷或负荷较低(<0.3), 因此排除这 4 个条目。验证性因素分析表明, 16 个条目的 C19P-S-C 四因素模型拟合数据较好($\chi^2=680.19$, $df=98$, $p<0.01$; $TLI=0.93$; $CFI=0.94$; $SRMR=0.05$; $RMSEA=0.07$), 表明排除 4 个条目之后的因子结构更加稳定。测量等值性的结果表明 C19P-S-C 的四因素结构在性别上是成立的, 且达到了因子协方差等值($\Delta CFI/\Delta TLI<0.01$)。此外, 测量等值性还表明 C19P-S-C 在 3 个月的时间间隔内的强等值成立($\Delta CFI/\Delta TLI<0.01$)。C19P-S-C 分别与 GHQ-12 和 GAD-7 显著相关($p<0.001$)。内部一致性的结果显示 Cronbach' α 系数为 0.88。**结论:** 支持 C19P-S-C 在中国青少年中的实用性。

Reliability and validity of the Chinese version of COVID-19 Phobia Scale (C19P-S-C) during the period of COVID-19 school closure

YANG Tao¹², CHEN Wei¹²

1 School of Psychology, Guizhou Normal University, Guiyang, 550025

2 Psychology Big Data Research Center, Guizhou Normal University, Guiyang, 550025

Abstract: During the Period of COVID-19 Closure School, a questionnaire survey was conducted among students in Guizhou Province, including the Chinese version of the COVID-19 Phobia Scale (C19P-S-C), General Health Questionnaire (GHQ-12) and Generalized anxiety disorder scale (GAD-7). Based on the exploratory factor analysis,

four items were excluded. The confirmatory factor analysis showed that the four-factor model fit data was well ($\chi^2=680.199$, $df=98$, $p<0.01$; TLI=0.93; CFI =0.94; SRMR=0.05; RMSEA=0.07). The measurement invariance showed that factorial Invariance is tenable across the gender (ΔCFI and ΔTLI both less than .01). Additionally, the C19P-S-C has strong longitudinal invariance over a 3-month interval. The C19P-S-C was significantly correlated with the GHQ-12 and the GAD-7 ($p<.001$), respectively. The Cronbach's alpha coefficients of the C19P-S-C was 0.88. The C19P-S-C is relatively reliable and effective in gender, supporting its practicability in Chinese adolescents.

Keywords: COVID-19 phobia, measurement invariance, longitudinal invariance, Chinese adolescents

抑郁症患者的绝望相关的脑白质基础

伊国瑞¹ 邱江² 王康程¹ (通讯作者)

1 山东师范大学心理学院, 济南, 250358

2 西南大学心理学部, 重庆, 400715, 邮箱: wangkangcheng@sdnu.edu.cn

摘要 绝望是导致抑郁患者产生持久心境低落以及较大自杀风险的重要影响因素。然而, 尚不清楚抑郁症患者绝望感相关的脑白质基础。本研究纳入 143 名经精神疾病诊断与统计手册诊断为抑郁症的患者 (其中, 男性: $N=46$, 年龄 = 38.28 ± 14.07 岁, 女性: $N=97$; 年龄 = 39.51 ± 12.39 岁) 作为病人组。为测量患者的脑白质体积, 我们扫描了所有被试的 T1 加权像并通过 VBM 处理, 获得了大脑白质体积。此外, 我们使用贝克绝望量表获得了抑郁患者的绝望感程度, 使用汉密尔顿焦虑量表获得了患者的焦虑程度, 以及使用汉密尔顿抑郁量表获得了患者的抑郁程度。基于体素水平的一般线性模型分析发现, 患者绝望感与大脑的楔前叶 (MNI 坐标: $x=14$, $y=-70$, $z=44$; 团块大小 = 207voxels)、角回 (MNI 坐标: $x=46$, $y=-32$, $z=14$; 团块大小 = 1009voxels)、颞上回处 (MNI 坐标: $x=50$, $y=-14$, $z=2$; 团块大小 = 333voxels) 的白质体积呈显著的负相关关系 (FDR 校正, $p<0.05$)。随后, 将患者的抑郁严重程度纳入到协变量中, 发现这些区域没有显著的改变。但是, 将患者伴随的焦虑严重程度纳入到协变量时, 颞上回白质与绝望感不存在显著关系。这说明, 颞上回区域对患者焦虑情绪影响绝望感起到重要作用。最后, 逻辑分析结果揭示, 患者的年龄以及角回和颞上回的脑白质体积可以显著预测患者首发和复发状态。综合以上结果, 抑郁症患者的绝望感存在显著且稳健的脑白质基础。同时, 这些脑白质区域可以作为稳健的生物学标志物对患者未来复发的风险进行预测, 为临床进行提前干预提供支持。

Abstract: Hopelessness is a crucial factor that causes persistent depressive mood and high risk of suicide in patients with depression. However, it is unclear the white matter basis of hopelessness in patients with depression. The present study enrolled 143 depressive patients diagnosed by The Diagnostic and Statistical Manual of Mental Disorders (male: $N=46$, age = 38.28 ± 14.07 years, female: $N=97$; age = 39.51 ± 12.39 years). In order to measure the white matter volume of the patient, we acquired the T1-weighted images for all subjects. Then, VBM was used in the segmentation of images and generated the white matter volume. In addition, we assessed the individual level of hopelessness by the Beck Hopelessness Scale (BHS), the level of depression by the Hamilton Depression Rating Scale (HAMD) and the level of anxiety by Hamilton Anxiety Rating Scale (HAMA). Voxel based general linear model analysis found that individual level of hopelessness was negatively correlated with the volume of white matter in regions of precuneus (MNI coordinates: $x=14$, $y=-70$, $z=44$; cluster size = 207voxels), angular gyrus (MNI coordinates: $x=46$, $y=-32$,

z = 14; cluster size = 1009 voxels), and superior temporal gyrus (MNI coordinates: x = 50, y = -14, z = 2; cluster size = 333voxels) (FDR correction, $p < 0.05$). Subsequently, we included the severity of the depression as the covariate, and found no significant changes of results. However, after including the anxiety level, results showed no significant association between the superior temporal gyrus white matter and hopelessness, which indicated that superior temporal gyrus might act an important role in relation between anxiety and hopelessness. Finally, logical regression analysis revealed that age, white matter volume in the angular gyrus and superior temporal gyrus can significantly predict the status of first episode and relapse. These results revealed a robust underlying white matter volume of hopelessness in patients of adult depression. Increasingly, these regions might be the potential biomarkers for predicting the risk of relapse, which would provide the direction for clinical intervention.

摘要 注意缺陷多动障碍(ADHD)患者不仅表现出持续性的注意力不集中、活动过度等症状, 而且表现出严重的攻击性行为。家庭环境对儿童罹患注意缺陷多动障碍有重要影响, 但尚不清楚父母的攻击性行为是否影响患儿罹患疾病以及产生异常的攻击性行为。为探讨 ADHD 儿童的父母攻击性行为对 ADHD 患者患病及攻击行为的影响, 本研究纳入 108 名经精神障碍诊断与统计手册诊断的 ADHD 儿童(男性: N = 97, 女性: N = 11; 年龄 = 9.277 ± 0.41 岁)。同时, 纳入 110 名正常儿童(男性: N = 89, 女性: N = 21; 年龄 = 10.186 ± 0.38 岁)作为对照组。两组被试在年龄($t = 0.130, p = 0.89$)及性别($\chi^2 = 3.451, p = 0.06$)上无统计学差异。所有儿童都完成注意缺陷多动障碍的评定和攻击行为的测试。攻击行为测试含总分和 4 个分维度, 身体攻击、言语攻击、敌意和愤怒。此外, 所有父母都完成攻击行为的测试。结果表明, ADHD 儿童的攻击总分显著高于对照组($t = 4.910, p < 0.01$), 且 ADHD 儿童父母的攻击总分也显著高于对照组父母(母亲: $t = 2.607, p < 0.01$; 父亲: $t = 3.122, p < 0.01$)。为了进一步探讨父母攻击性是否影响儿童罹患疾病, 逻辑回归分析表明, 父亲身体攻击($p = 0.022, Exp(B) = 0.449$)、父亲的敌意($p = 0.049, Exp(B) = 0.564$)、母亲身体攻击($p < 0.001, Exp(B) = 4.512$)与母亲愤怒($p < 0.001, Exp(B) = 0.132$)都对儿童患病起显著预测作用。相比于父亲, 母亲的攻击性行为更显著预测了儿童患病以及儿童的攻击性行为。为探索父母影响 ADHD 儿童攻击行为的通路, 结构方程模型分析发现, 父母的攻击性对 ADHD 儿童的攻击性不是单独产生影响的。最后, 本研究纳入父母的惩罚敏感性到结构方程模型中, 结果发现, 父母攻击性对儿童的影响呈显著降低趋势。这些研究结果表明母亲攻击行为相对于父亲更显著影响了儿童罹患注意缺陷多动障碍以及伴随的攻击行为。但是, 通过干预父母的惩罚敏感性可以降低父母对儿童攻击行为的影响程度。这为临床干预 ADHD 儿童提供了新的思路 and 方向。

The influence of parents on aggression of children with ADHD

Wang Peixin¹, Cao Aihua², Wang Kangcheng¹

1 School of Psychology, Shandong Normal University, Jinan, 250358

2 Department of Pediatrics, Qilu Hospital of Shandong University, Jinan, 250012

Email: wangkangcheng@sdu.edu.cn

Abstract: Patients with ADHD (attention-deficit/hyperactivity disorder) are characterized by the impairment of sustained attention, hyperactivity and other symptoms. In addition, it's common for children with ADHD to be more aggressive. Prior studies showed that family environment was associated with the risk and development of ADHD. However, it is not clear whether aggressive parents could increase the risk of ADHD and the related aggression for children. In order to examine the influence of parental aggression on the risk and aggressive behavior of ADHD, 108

children diagnosed by DSM-5 were included as the ADHD group (male: $N = 97$, female: $N = 11$; age = 9.277 ± 0.41 years). We also enrolled another 110 normal children (male: $N = 89$, female: $N = 21$; age = 10.186 ± 0.38 years) as the control group. There were no significant differences between two groups in age ($t = 0.130$, $p = 0.89$) and gender ($\chi^2 = 3.451$, $p = 0.06$). All children were assessed by the attentional deficit, hyperactivity and aggression. The aggressive questionnaire we used included the total score and four dimensions, that were physical aggression, verbal aggression, hostility and anger. In addition, all parents of ADHD and control group completed the aggressive questionnaire. Our results showed that children with ADHD had significantly higher aggressive score than that of the control group ($t = 4.910$, $p < 0.01$). The parents of children with ADHD also demonstrated significantly higher score than that of the control group (mother: $t = 2.607$, $p < 0.01$; father: $t = 3.122$, $p < 0.01$). To further explore the influence of parental aggression on the risk of ADHD, logistic regression analysis indicated that father's physical aggression ($p = 0.022$, $Exp(B) = 0.449$), father's hostility ($p = 0.049$, $Exp(B) = 0.564$), maternal physical aggression ($p < 0.001$, $Exp(B) = 4.512$) and maternal anger ($p < 0.001$, $Exp(B) = 0.132$) were the significant predictors of the disorder. Compared to fathers, mothers' aggressive behavior was a more significant predictor for the disorder and aggressive behavior after the model comparison. Further, we performed structural equation model analysis to explore the pathways of parental influence on the aggression of patients with ADHD. Results found that parental aggression did not affect the aggression of ADHD children alone. Finally, we included the sensitivity of parental punishment into the structural equation models, and found that the influence of parental aggression on children's aggression significantly reduced. These findings suggested that maternal aggression significantly influenced the development of ADHD and the related aggression in children, compared to father's. Fortunately, however, the influence from parents on children's aggressive behavior can be reduced by interfering with parents' sensitivity to punishment. These provided a new direction and solution for clinical intervention of children with ADHD.

Keywords: ADHD, aggression, structural equation model, sensitivity to punishment

摘要 目的: 过往研究发现, 结果预期思考能影响行为意图形成。在自杀研究领域, 目前尚无研究从结果预期思考的角度同时考察自杀理由和生存理由之间, 或自杀/不自杀的积极/消极结果之间如何共同影响个体自杀意图的形成。本研究旨在探讨个体有关自杀的各种结果预期对自杀意图的影响及合理性评估在其中的中介作用, 并且, 由于不同结果预期模式 (如只考虑死, 不考虑生) 对自杀意图的影响可能不同, 故进一步探索自杀结果预期思考的潜在类别, 从个体层面考察不同结果预期模式对自杀意图的影响。方法: 通过问卷筛查, 选取过去一年内至少有一次自杀意念的大学生为被试, 共 510 人。采用自编自杀结果预期思考量表 (编制过程为另一研究, 量表具有良好的信效度)、Zung 氏抑郁自评量表、自杀情况量表、自杀意图测量、自杀合理性量表进行施测, 对共同方法偏差进行控制。采用多元层级回归分析和潜在剖面分析 (LPA) 分别对数据进行分析。结果和结论: (1) 自杀结果预期的负强化、正强化通过合理性评估的完全中介作用正向预测自杀意图; 负面结果和自杀损失负向预测自杀意图, 合理性评估分别起到完全和部分中介作用。(2) 根据个体在自杀结果预期四个维度上的得分模式, 可将其分为低冲突型、中等冲突型、满怀顾虑型、高冲突型、一心向死型。其中, 满怀顾虑型和低冲突型通过合理性评估影响自杀意图的中介效应最低, 一心向死型最高; 高冲突型比中等冲突型和一心向死型低, 比满怀顾虑型高, 但和低冲突型无明显差异。

Impact of Prefactual Thinking about Suicide Outcomes on Suicide Intent

YING Mengting¹, JIANG Guangrong²

1 Department of Psychology, College of Health Science, Wuhan Sports University, Wuhan 430079, ymt108@hotmail.com

2 Key Laboratory of Adolescent Cyberpsychology and Behavior (CCNU), Ministry of Education; School of Psychology, Central China Normal University; Key Laboratory of Human Development and Mental Health of Hubei Province, Wuhan 430079

Abstract: This study aims to explore the impact of prefactual thinking about suicide outcomes on suicide intent and its mechanisms. We used a questionnaire survey, 510 college students with suicidal ideation were selected from six regions of the country. Hierarchical multiple regression analysis was conducted. In addition, from the perspective of 'person-centered', we used latent profile analysis (LPA) to further explore the potential patterns of prefactuals regarding suicide outcomes and the impacts of different kinds of prefactual thinking on suicide intent. Results show that: (1) Both negative reinforcement of suicide and positive reinforcement of suicide have a positive predictive effect on suicide intent. And this effect is fully mediated by the evaluative rationality of suicide. In addition, negative outcomes and loss of suicide have negative effect on suicide intent. Specifically, the influence of negative outcomes is completely mediated by the rationality of suicide, while the influence of the loss of suicide is partly mediated by the rationality of suicide. (2) By using LPA, students who have suicidal ideation usually have five latent types of prefactual thinking: 'low-conflict', 'moderate-conflict', 'full of concerns', 'high-conflict', and 'determined about death'. These five latent types of prefactuals have different effects on suicide intent. Among them, the rationality of suicide has the strongest mediating effect on suicide intent for the type of 'determined about death', followed by 'moderate-conflict' type, then 'high-conflict' type, 'low-conflict' type, and last 'full of concerns' type.

Keywords: Prefactual Thinking about Suicide Outcomes, Suicide Intent, Mediation Model, Latent Profile Analysis

自杀相关想象对自杀意念者与自杀尝试者的区分作用

应梦婷¹ (通讯作者) 江光荣²

1 武汉体育学院健康科学学院心理学系, 武汉, 430079, ymt108@hotmail.com

2 青少年网络心理与行为教育部重点实验室, 华中师范大学心理学院, 湖北省人的发展与心理健康重点实验室, 武汉, 430079

摘要 目的: 探讨自杀意念者与自杀尝试者在自杀相关心理意象上的差异及其对自杀意念者与自杀尝试者的区分作用。方法: 从某市1家综合医院精神科及2家精神专科医院筛查近一年内有自杀意念或自杀尝试的住院大学生共143人。参考Holmes等人(2007)和Crane等人(2012)的研究, 用8个条目测量被试近一年内有自杀想法时的自杀想象频率、内容及其相关特征, 用3个条目分别测量被试在进行自杀相关想象时体验到的关联痛苦感、舒适感、麻木感, 并采用自杀情况量表、Zung氏抑郁自评量表、Marlowe-Crowne社会称许性量表进行施测。采用独立样本t检验、二分类及有序多分类Logistic回归对数据进行分析。结果: (1) 自杀意念组与自杀尝试组在自杀相关想象的频率上差异显著($t=5.11, p<0.001$); 在自杀想象的内容上, 自杀尝试组对过去自杀行为($t=7.43, p<0.001$)和未来自杀过程($t=7.49, p<0.001$)的想象显著高于自杀意念组, 但在死后世界和他人反应上, 两组的想象水平无差异; 在进行自杀相关想象时, 自杀尝试组的真实感更高($t=5.29, p<0.001$), 且伴随的舒适情绪更高($t=5.81, p<0.001$)。 (2) 在控制抑郁和自杀意图的影响后, 自杀想象频率、自杀想象内容、自杀想象相关联的情绪均对自杀行动与否则有显著的区分作用, OR值提示自杀想象频率每增加一个单位, 自杀尝试发生的风险提高1.57倍; 对过去行为的想象每增加一个单位, 自杀尝试的风险提高3.48倍, 而对未来自杀过程的想象每增加一个单位, 自杀尝试风险提高3.20倍; 自杀想象时的舒适情绪每增加一个单位, 自杀尝试的风险提高1.86倍, 而麻木感每增加一个单位, 自杀尝试风险提高1.34倍。 (3) 这些差异变量还对自杀行为次数有正向预测作用, 自杀想象频率越高、对过去自杀行为和未来自杀过程

的想象越多、自杀想象时的情绪体验越舒适, 自杀尝试的次数越多。结论: 与自杀意念者相比, 自杀尝试者有更频繁的自杀相关想象, 想象内容上更多涉及自杀过程, 想象时的真实感更强, 并伴随更多的舒适情绪, 这些差异变量能对自杀意念者与自杀尝试者进行区分。

关键词 自杀相关想象, 自杀意念者, 自杀尝试者, 区分作用

Effects of Suicide-Related Imagery on Differentiating Suicide Attempters from Suicide Ideators

YING Mengting¹, JIANG Guangrong²

1 Department of Psychology, College of Health Science, Wuhan Sports University, Wuhan 430079, ymt108@hotmail.com

2 Key Laboratory of Adolescent Cyberpsychology and Behavior (CCNU), Ministry of Education; School of Psychology, Central China Normal University; Key Laboratory of Human Development and Mental Health of Hubei Province, Wuhan 430079

Abstract: This study aims to explore the effects of mental imagery about suicide on differentiating suicide attempters from suicide ideators. We explored the differences in suicide-related imagery between suicide ideators and suicide attempters, as well as how these differences distinguish suicide attempters from suicide ideators. A total of 143 psychiatric inpatients from a general hospital psychiatric department and two psychiatric hospitals were invited to complete the questionnaire. All of the participants are college students and had suicidal ideation or attempts in the past year. The results show that: (1) There are differences in suicidal imagery frequency, content, and related characteristics between suicide ideators and suicide attempters. Compared with suicide ideators, suicide attempters have more mental imagery about the implementation process of past and future suicide attempt, with higher level of sense of realness and related comfort feelings. (2) Logistic regression analysis shows that, differences in suicidal imagery frequency, content, and related emotions can distinguish suicide attempters from suicide ideators, even after controlling the effects of depression and suicide intent. (3) These differences are also significantly related to the frequency of suicide attempts. Higher level of suicidal imagery frequency, content, especially mental imagery about suicide process, with more related comfort feelings predict higher frequency of suicide attempts.

PTSD 的认知偏向特征和矫正

张帆 严雯婕 刘伟志 (通讯作者)

海军军医大学心理系, 上海, 200433, 通讯作者 E-mail: liuweizhi@smmu.edu.cn

摘要 创伤后应激障碍 (Posttraumatic Stress Disorder, PTSD) 是经历重大创伤事件后, 个体常见的心理障碍, 以侵入性症状、回避、警觉性提高和认知与情绪改变为主要临床表现。越来越多的研究发现, PTSD 个体的信息加工在注意、解释和记忆等环节出现对负性信息的加工异常, 即认知偏向 (cognitive bias)。PTSD 的认知偏向可表现为: 注意阶段对威胁刺激的注意脱离困难; 刺激的解释阶段, 对模糊情景更倾向于做出负性解释; 在记忆阶段, PTSD 人群表现出自传体记忆的过分概括化和对负性刺激的记忆优势。认知偏向矫正 (Cognitive Bias Modification, CBM) 训练程序旨在利用计算机程序, 通过改善反复训练改善个体的认知偏向。研究者发现, CBM 不仅有助于改善 PTSD 人群的认知偏向, 还能对症状的改善起到一定作用。当前, 研究者尝试使用注意偏向矫正 (Attentional Bias Modification, ABM) 和解释偏向矫正 (Cognitive Bias Modification for Interpretation, CBM-I) 等训练程序改善 PTSD 患者的注意和解释偏向及 PTSD 症状。部分研究取得了积极成果, 但研究者对 CBM 在 PTSD 症状干预的有效性方面还存在较大争议, 有待更多研究探讨。未来研究者还可以从 PTSD 症状的高异质性角度出发, 探讨具体 PTSD 症状, 如侵入性症状、回避、警觉性提高与不同认知偏向表现的关系; 基于不同认知偏向的联合作用假设探讨不同的认知过程的加工异常对 PTSD 发生发展的作用; 最后, 通过进一步验证 CBM 的训练效果、结合 CBM 和传统心理治疗等方式为 CBM 对 PTSD 干预的有效性提

供依据也是未来该领域研究的重要方向。总之,探讨 PTSD 的认知偏向特点和 CBM 的有效性有助于理解 PTSD 的认知加工异常,同时可以为计算机化的心理治疗提供新的视角。

Characteristics of Cognitive Bias and Its Modification In PTSD

Zhang Fan, Yan Wenjie, Liu Weizhi (corresponding author)

Department of Basic Psychology, Faculty of Psychology, Naval Medical University, Shanghai

200433, E-mail: liuweizhi@smmu.edu.cn

Abstract: Posttraumatic Stress Disorder (PTSD) is a common psychological Disorder after a major traumatic event. Main clinical symptoms of PTSD are intrusive symptoms, avoidance, increased alertness, and cognitive and emotional changes. Growing numbers of studies have found that individuals with PTSD showed processing advantage to negative information in attention, interpretation and memory process, showing Cognitive Bias. Cognitive bias of PTSD could be illustrated as: difficulty in attentional disengagement from threatening stimuli; the tendency of negatively interpret ambiguous situations; PTSD also showed the overgeneralized autobiographical memory and the advantage in memory of negative stimuli. Cognitive Bias Modification (CBM) training program aims to improve an individual's cognitive bias by using computer programs and repeated training. Researchers have found that CBM could not only improve the cognitive bias of PTSD, but also played a role in the improvement of symptoms. At present, researchers have tried to use Attentional Bias Modification (ABM) and Cognitive Bias Modification for Interpretation (Attentional Bias Modification, CBM-I) to improve attentional and interpretative bias as well as PTSD symptoms in PTSD patients. Some studies have achieved positive results, but the effectiveness of CBM in the intervention of PTSD symptoms is still controversial, and more studies are needed. From the perspective of high heterogeneity in PTSD patients, future researchers could explore the relationship between specific PTSD symptoms, such as invasive symptoms, avoidance, increased alertness and different cognitive biases. Based on the hypothesis of combined effects of different cognitive biases, the role of processing abnormalities in different cognitive processes on the occurrence and development of PTSD could be further investigated. Finally, exploring the training effect of CBM and the training effect of combination of CBM and traditional psychotherapy in PTSD might also be an important direction in this field. In conclusion, exploring the cognitive bias characteristics of PTSD and the efficacy of CBM can help to understand the cognitive processing abnormalities of PTSD and provide a new perspective for computerized psychotherapy.

基于机器学习预测新冠疫情中汶川地震幸存者的急性应激

——一项 12 年的追踪研究

陈子豪 蒋佳琪 马紫娟 王童 范方 (通讯作者)

华南师范大学心理学院 / 华南师范大学心理应用研究中心, 广州, 510631

通讯作者 E-mail: fangfan@scnu.edu.cn

摘要 目的: 本研究旨在探讨汶川地震幸存者在新型冠状病毒肺炎 (COVID-19) 期间急性应激反应以及影响急性应激的预测因素。**方法:** 本研究采用汶川地震后当地幸存青少年的 12 年追踪数据, 调查了 316 名地震幸存者在人口学特征 (性别、年龄、教育程度、婚姻状况)、健康习惯 (吸烟、喝酒)、地震暴露、疫情期间的社会支持 (感知社会支持量表, PSSS)、应对方式 (简单应对方式量表, SCSQ)、心理弹性 (心理弹性量表)、地震十年后的焦虑 (焦虑问卷成人版, SCAARED)、抑郁 (抑郁症状筛查量表, PHQ-9)、创伤后应激水平 (创伤后应激障碍核查表第五版, PCL-5) 以及 COVID-19 大流行期间的急性应激 (事件影响量表-6, IES-6)。采用极端梯度提升的机器学习算法 (XGBoost) 对亚临床个案进行纵向预测。将 316 名被试按 7:3 的比例随机分为训练集和测试集, 建立模型并得到预测结果。模型的评估指标包括预测准确率和 AUC 等。**结**

果: XGBoost 预测模型的主要评估指标均表明预测模型良好, 具体指标如下: 正确率为 0.87, AUC 为 0.74, 召回率为 0.99, 精确率为 0.88。特征重要性分析结果显示: 地震暴露($F = 31$), 年龄($F = 20$), 当前每月收入($F = 19$)、创伤后成长($F = 13$)和对社会支持的感知($F = 13$)等因素是新冠疫情中的急性应激重要的前五个预测因素。

结论: 基于 XGBoost 机器学习模型可以准确预测疫情期间汶川幸存者的应激反应, 地震暴露经历、年龄、月收入、创伤后成长和社会支持是疫情期间汶川幸存者急性应激的重要预测因子。通过这些预测因子可以有效筛查疫情期间高应激水平个案, 并及时对其进行针对性干预。

Predictors of the Acute Stress among the Wenchuan Earthquake Survivors during the COVID-19 Pandemic: A 12-Year Longitudinal Study Based on Machine Learning

Zihao Chen, Jiaqi Jiang, Zijuan Ma, Tong Wang, Fang Fan

School of Psychology and Center for Studies of Psychological Application, South China Normal University, Guangzhou 510631, China

Abstract: Objective: This study aimed to explore the acute stress and its predictors among Wenchuan earthquake survivors during the Corona Virus Disease 2019 (COVID-19) pandemic. **Methods:** A total of 316 survivors were followed-up 12 years after the Wenchuan earthquake. In this longitudinal study, we assessed socio-demographic characteristics (sex, age, education level and marital status), life style (smoking and drinking), earthquake exposure, social support during the pandemic (Perceived Social Support Scale, PSSS), coping style (Simplified Coping Style Questionnaire, SCSQ), psychological resilience (Psychological Resilience Scale), anxiety (The Screen for Adult Anxiety Related Disorders, SCAARED), Depression (Patient Health Questionnaire, PHQ-9), and Post-Traumatic Stress Level (The PTSD Checklist for DSM-5, PCL-5), and acute stress during the COVID-19 pandemic (Impact of Event Scale-6, IES-6). Using eXtreme Gradient Boosting machine learning algorithm (XGBoost) to predict the factors of acute stress. The 316 subjects were randomly divided into training and testing samples by the ratio of 7:3. Evaluation metrics included accuracy, AUC, recall, and precision. **Results:** The XGBoost model is good in the current study. Specific indicators are as follows: Accuracy = 0.87, AUC = 0.74, Recall = 0.99, Precision = 0.88. The variable importance shows that, earthquake exposure ($F = 31$), age ($F = 20$), current monthly income ($F = 19$), post-traumatic growth ($F = 13$) and perception of social support ($F = 13$) are the top 5 predictors of acute stress during the COVID-19 pandemic. **Conclusions:** Based on the machine learning with XGBoost algorithm, earthquake exposure, age, monthly income, post-traumatic growth and social support are important predictors for acute stress during the COVID-19 pandemic. These factors can effectively screen high-stress cases during the pandemic and conduct interventions on target population in time.

大学生成人依恋与恋爱满意度： 自我表露和感知伴侣回应性的链式中介

陈毓卿¹ 王美音¹ (通讯作者)

¹ 赣南师范大学大学教育科学学院, 赣州, 341000, 1045893871@qq.com

摘要 大学时期的恋爱关系对大学生自身的生涯发展有着非常重要的促进作用, 但是恋爱关系也收到一些个体因素的阻碍。其中大学生成人依恋是其主要影响因素。良好的依恋关系, 有助于个体社会性的发展, 而当依恋关系被破坏时, 个体更易产生心理行为问题。因此, 对于大学生成人依恋关系质量的评估吸引了越来越多的研究者的兴趣。为了探究大学生不安全依恋与恋爱满意度的及其关系作用机制, 本研究采用亲密关系经历量表、感知伴侣回应性量表、自我表露量表、恋爱满意度量表对 845 名大学生和研究生进行测量, 初始问卷 900 份, 有效问卷 845 份。本研究构建了一个链式中介模型, 重点考察自我表露和感知伴侣回应性的中

介效应把有效数据录入 SPSS24.0 采用各种统计方法对数据进行统计分析, 得出以下结论: (1) 依恋焦虑和依恋回避均对恋爱满意度有显著的负向预测作用; (2) 自我表露和感知伴侣回应性分别在依恋回避和依恋焦虑对关系满意度的影响中呈链式中介作用。针对大学生的恋爱满意度低以及出现的人际交往问题, 本研究从一定层面进行了讨论, 这对相关研究与实践的开展提供了理论参考及干预依据。目的在于提高大学生的恋爱满意度, 减轻其孤独感程度, 改善他们的人际关系, 促进他们的身心发展。

关键词 成人依恋, 自我表露, 感知伴侣回应性, 恋爱满意度

Adult attachment and love satisfaction of college students: the chain intermediary between self-disclosure and perceived partner responsiveness

Chen Yuqing¹ Wang Meiyin¹ (correspondent author)

¹ Gannan Normal University, Ganzhou, 341000, 1045893871@qq.com

Abstract: The love relationship in college plays a very important role in promoting college students' career development, but it is also hindered by some individual factors. Adult attachment of college students is the main influencing factor. Good attachment is helpful to the development of individual sociality, and when attachment is destroyed, individuals are more likely to have psychological and behavioral problems. Therefore, the evaluation of the quality of college students' adult attachment relationship has attracted more and more researchers' interest. In order to explore the relationship between unsafe attachment and love satisfaction of college students, 845 college students and graduate students were measured with intimate relationship experience scale, perceived partner responsiveness scale, self-disclosure scale and love satisfaction scale, with 900 initial questionnaires and 845 valid questionnaires. In this study, a chain mediation model was constructed, focusing on the mediation effect of self-disclosure and perceived partner responsiveness. The effective data were entered into SPSS24.0 and analyzed statistically by various statistical methods. The following conclusions were drawn: (1) Attachment anxiety and attachment avoidance have significant negative predictive effects on love satisfaction; (2) Self-disclosure and perceived partner responsiveness play a chain mediating role in the influence of attachment avoidance and attachment anxiety on relationship satisfaction. In view of the low love satisfaction and interpersonal problems of college students, this study has been discussed from a certain level, which provides theoretical reference and intervention basis for the development of related research and practice. The purpose is to improve college students' love satisfaction, reduce their loneliness, improve their interpersonal relationship and promote their physical and mental development.

Keywords: adult attachment, self-disclosure, perceived partner responsiveness, relationship satisfaction

基于数字概念特征的条件性恐惧泛化规律研究

杨子凡 岳洁如 赵绍晨 戎牧心 孟令怡 皇甫梦媛 李茹婷 郑希付 (通讯作者)

华南师范大学心理学院, 广州, 510631, zhengxf@scnu.edu.cn

摘要 恐惧泛化对人类有重要的进化意义, 但过度泛化在一定程度上会给个体带来严重的心理困扰和精神痛苦。临床研究发现过度的恐惧泛化是多种焦虑障碍的核心症状之一, 因此研究恐惧泛化对于分析焦虑障碍患者的病因和认知特点具有重要意义。目前恐惧泛化的研究大多集中在恐惧知觉泛化, 关于恐惧的概念泛化的研究较少。但该方向的研究对理解恐惧特征的过度泛化具有重要意义。目前已有的概念泛化的研究主要在探究恐惧的概念泛化影响因素, 很少涉及恐惧的概念泛化规律。本研究将整体和局部加工与条件性恐惧结合, 通过操纵阿拉伯数字(控制知识经验的影响)的整体和局部加工特性对恐惧的概念泛化规律进行深入地分析, 深度分析恐惧习得和泛化的原因, 完善恐惧泛化的理论框架。本研究采用辨别性条件恐惧范式, 以 US 主观预期值(行为指标)和 SCR(生理指标)为测量指标进行实验研究, 逐步探究基于数字概念和基于数字特征的条件性恐惧泛化的规律。研究假设认为: 在恐惧情绪下个体会对概念意义的部分特征进行优先加工, 且条件

刺激中数字概念特征的变化会影响条件性恐惧的泛化规律。结果发现,在对两位数字习得条件性恐惧后,个体会对数字的部分特征产生更大程度的泛化;而当条件刺激中的非强化刺激是强化刺激的部分特征时,个体对数字的整体特征产生更大程度的泛化。本研究发现在条件性恐惧的概念泛化中存在向数字局部特征泛化的泛化规律,且该规律会受到条件刺激中非强化刺激特征的影响。本研究对条件性恐惧的习得和泛化具有一定程度的启发意义,可进一步探索暴露疗法中刺激材料呈现方式以达到更好的暴露效果,应用于焦虑障碍的临床研究。

Research on the generalization law of conditional fear based on digital concept features

Zifan Yang, Jieru Yue, Shaochen Zhao, Muxin Rong, Lingyi Meng, Mengyuan Huangfu, Ruting Li, Xifu Zheng*

School of Psychology, South China Normal University, Guangzhou, China, 510631

Abstract: Fear generalization is of great evolutionary significance to human beings, but to a certain extent, it will bring severe psychological distress and mental pain to individuals. Clinical studies have found that excessive fear generalization is one of the core symptoms of various anxiety disorders, so the study of fear generalization is of great significance for analyzing the etiology and cognitive characteristics of patients with anxiety disorders. At present, most of the research on fear generalization focuses on fear perception generalization, and there are few researches on the conceptual generalization of fear. However, the research in this direction is of great significance for understanding the overgeneralization of fear characteristics. At present, the existing research on the conceptual generalization mainly focuses on the influential factors of the conceptual generalization of fear, and rarely involves the law of the conceptual generalization of fear. This study combines global and local processing with conditioned fear, and deeply analyzes the law of conceptual generalization of fear by manipulating the overall and local processing characteristics of Arabic Numbers (controlling the influence of knowledge and experience), deeply analyzes the causes of fear acquisition and generalization, and improves the theoretical framework of fear generalization. In this study, the discriminative conditional fear paradigm was adopted, and the US subjective expected value (behavioral indicator) and SCR(physiological indicator) were used as measurement indicators to conduct experimental research, and the law of the generalization of conditional fear based on number concept and number characteristics was gradually explored. The research hypothesis holds that under the fear emotion, individuals will preferentially process some features of conceptual meaning, and the change of digital conceptual features in the conditioned stimulus will affect the generalization law of conditional fear. The results showed that after the conditioned fear of two-digit acquisition, individuals had a greater degree of generalization of the partial characteristics of Numbers. However, when the non-reinforcing-stimulus in the conditioned stimulus is part of the reinforcing-stimulus, the individual generalizes the overall character of the number to a greater extent. In this study, it is found that there is a generalization law to the digital local feature generalization in the conceptual generalization of conditional fear, and this law is affected by the non-reinforcing feature of the conditioned stimulus. This study has some enlightening significance for the acquisition and generalization of conditioned fear, and can further explore the presentation mode of stimulus materials in exposure therapy to achieve better exposure effect, and be applied to the clinical study of anxiety disorders.

新兵认知功能相关因素分析及正念干预的初步研究

詹靖烨¹ (通讯作者) 邢辰琦¹ 刘伟志¹

¹ 中国人民解放军海军军医大学, 上海, 200433, zjymindy@163.com

摘要 武警部队是国家武装力量的重要组成部分之一, 主要担负处突、反恐和维稳任务。新兵是部队力量

的源头，认知功能是影响单兵心理健康和完成各项任务的保证，新兵的认知功能是决定部队战斗力的关键因素之一。认知功能受许多因素影响，一般心理健康水平、人格及情绪状态又是影响个体日常行为的重要因素。越来越多的实证研究发现，以冥想为代表的正念练习可以改善心理健康。以往有研究对军人认知功能影响因素有所探讨，但对新兵认知功能的研究及认知心理对军事活动影响的研究稀缺。可见，分析新兵认知功能相关因素，探寻一种可行、有效、可接受且基于实证的方法从而快速改善新兵认知功能，为提升部队整体战斗力稳固基础。本研究的目的在于探讨新兵认知功能的相关影响因素及正念干预效果，为科学施训提供参考。研究采用随机抽样法，利用认知连线测验（TMT）、一般健康问卷（GHQ-12）、大五人格问卷（GBFS）和心境状态量表（POMS）对武警某部新训大队 304 名新兵进行问卷调查并对 45 名新兵进行为期八周的正念减压（MBSR）随机对照干预和问卷调查。结果显示武警新兵认知功能显著优于普通人群，加强情绪稳定训练、培养积极情绪、改善一般心理健康、开展正念减压练习能有效提升新兵认知功能，为提高部队整体战斗力打下基础。

Analysis of Factors Relate to Cognitive Function and Mindfulness Intervention in Chinese Recruits: A Pilot Study

Jingye Zhan¹, Chenqi Xing¹, Weizhi Liu¹

¹ Lab for Post-traumatic Stress Disorder, Faculty of Psychology and Mental Health, Naval Medical University, Shanghai 200433, E-mail: 13024141970@163.com

Abstract: The Chinese Armed Police Force (CAPF) is one of the important components of the national armed forces which is mainly responsible for the tasks of dealing with the emergencies, counter-terrorism and maintaining social stability. New recruits are the source of strength in military. Thus, cognitive function of new recruits plays a pivotal role in the combat effectiveness of troops. Cognitive function affects the mental health of individual soldiers and is influenced by many factors. Level of general mental health and personality are the important factors that affect individual daily behavior. Previous studies have found that mindfulness exercises which are represented by meditation can improve mental health, but the research on cognitive function of recruits and the influence of cognitive psychology on military activities is scarce. The aim of this study is to investigate the related factors of cognitive function in Chinese military recruits and find out whether mindfulness-based stress reduction (MBSR) will improve cognitive function. We explored the feasibility, efficacy and authentic proof of MBSR in a group of newly recruits. Participants (n=410) were recruited from a primary army unit of the CAPF. They were first invited to a baseline cognitive function check-up. Inclusion criteria for the intervention were: 1) recruits enlisted within the past week; and 2) two recruits were randomly selected in each 29 formed classes; and 3) Randomized allocation was assigned to experimental or control groups. Exclusion criteria were: 1) having meditative experience; and 2) currently receiving mental health care or was a mental patient. Participants were informed of voluntary participation and withdrawal, as well as confidentiality. Informed consent was obtained before participation. After screening, 49 qualified participants were randomized into a MBSR and a waitlist group and took part in this 12-week study. MBSR is one of the most popular forms of physical and mental therapy today. It integrates mindfulness into daily behavioral training and reduces stress effectively. Mindfulness is a non-judgmental awareness and acceptance of the present. Its core lies in two points: One is to focus on the present; The other is not to evaluate all the ideas of the present. MBSR includes 8-week courses, 2-hour classes weekly. In addition, participants need to finish 45-minute homework exercises, which are the key component of the course. The main techniques of MBSR include sitting meditation, body scanning, voice meditation, mindfulness breathing, mindfulness eating etc. Both formal and informal exercises should be conducted daily. Previously validated questionnaires were administered to both groups at four time points: baseline, 5, 8, and 12 weeks after participation. General health was measured by the Chinese version of the Goldberg's General Health Questionnaire. The Chinese version of the General Big Five Scale is used to measure personality. And cognitive function was measured by the Trail Making Test. Cognitive function of recruits was significantly better

than that of the general population. Emotional stability and general mental health related with cognitive function. Compared to the waitlist group, the MBSR group showed more improvements in cognitive function at 12-week follow-up. These results suggested that cognitive function interact with mindfulness. Our findings suggested that MBSR could be a promising health intervention for improving cognitive function in Chinese military recruits.

摘要 目的：本研究旨在探讨抑郁症患者儿童期情感虐待对自杀意念的影响，以及反刍思维在这两者间的中介作用。方法：使用反刍思维量表（RRS）、儿童期情感虐待量表（EM）、贝克自杀意念量表（BSI-CV）对福建某三所精神专科医院的230名抑郁症患者进行问卷调查。结果：研究结果显示，曾经遭受儿童期情感虐待者有190人，阳性检出率为82.6%，非受虐组情感虐待得分为（1.695±0.275），受虐组情感虐待得分为（2.924±0.613）；抑郁症患者自杀意念结果显示，70.9%的抑郁症患者有自杀意念（量表筛选条件成立）。症状反刍维度在性别上有差异（ $p<0.05$ ），反刍思维及各维度在文化程度、职业情况、家庭情况上有显著性差异（ $P<0.01$ ）；自杀意念在性别（ $P<0.05$ ）、职业情况（ $P<0.01$ ）、家庭情况（ $P<0.01$ ）上有显著性差异。结果显示，情感虐待可以显著正向预测自杀意念（ $r=0.288$ ， $p<0.01$ ），情感虐待与反刍思维（ $r=0.220$ ， $p<0.01$ ）显著相关，反刍思维与自杀意念（ $r=0.539$ ， $p<0.001$ ）显著相关；情感虐待（ $r=0.245$ ， $p=0.001$ ），反刍思维（ $r=0.241$ ， $p<0.001$ ）抑郁程度显著相关；抑郁程度（ $r=0.289$ ， $p<0.001$ ）也显著影响自杀意念。反刍思维在情感虐待和自杀意念中起中介作用，中介效应38.89%。结论：（1）抑郁症患者的情感虐待经历水平越高，其反刍思维，自杀意念与抑郁严重程度也越高。（2）抑郁症患者的反刍思维越高，其自杀意念也越高。（3）在自杀意念和症状反刍上，女性显著高于男性。（4）单亲留守家庭群体在反刍思维、自杀意念的得分上显著高于其他被试群体。（5）女性，学生及单亲家庭群体的自杀意念程度高于其他被试。（6）抑郁症患者的情感虐待与自杀意念之间，反刍思维起中介作用。

关键词 抑郁症，儿童期情感虐待，反刍思维，自杀意念

Effect of childhood emotional abuse on suicidal ideation in patients with depression: mediating role of rumination

Abstract: Objective: The purpose of this study was to investigate the effect of childhood emotional abuse on suicidal ideation in patients with depression, and the mediating role of rumination between the two. Methods: The ruminant thinking Scale (RRS), childhood emotional abuse Scale (EM) and Baker Suicidal ideation Scale (BSI-CV) were used to investigate 230 patients with depression in three psychiatric hospitals in Fujian. Results: The results showed that 190 people had been subjected to childhood emotional abuse, and the positive detection rate was 82.6%. The score of emotional abuse in the non-abused group was (1.695±0.275), and that in the abused group was (2.924±0.613). The results of suicidal ideation in patients with depression showed that 70.9% of the patients had suicidal ideation (the screening conditions of the scale were established). Symptom rumination dimension had significant differences in

gender ($P < 0.05$), rumination and other dimensions had significant differences in educational level, occupational situation and family situation ($P < 0.01$); There were significant differences in gender ($P < 0.05$), occupational status ($P < 0.01$) and family status ($P < 0.01$). The results showed that emotional abuse positively predicted suicidal ideation ($R = 0.288$, $P < 0.01$), emotional abuse was significantly correlated with rumination ($r = 0.220$, $P < 0.01$), and rumination was significantly correlated with suicidal ideation ($r = 0.539$, $P < 0.001$). Emotional abuse ($r = 0.245$, $P = 0.001$) and rumination ($r = 0.241$, $P < 0.001$) were significantly correlated with depression. The degree of depression ($r = 0.289$, $P < 0.001$) also significantly affected suicidal ideation. Rumination played a mediating role in emotional abuse and suicidal ideation, with a mediating effect of 38.89%. Conclusions : (1) the higher the level of emotional abuse experience, the higher the severity of rumination, suicidal ideation and depression. (2) The higher the rumination, the higher the suicidal ideation. (3) Suicidal ideation and symptom regurgitation were significantly higher in females than in males. (4) The scores of rumination and suicidal ideation in single parent left-behind family group were significantly higher than other subjects. (5) Women, students and single-parent families had higher levels of suicidal ideation than other participants. (6) Rumination mediated the relationship between emotional abuse and suicidal ideation in patients with depression.

Keywords: depression, childhood emotional abuse, rumination, suicidal ideation

新型冠状病毒肺炎疫情下武汉社区工作者 心理健康水平及影响因素分析

摘要 背景 新型冠状病毒疫情(COVID-19)期间, 社区是疫情防控的第一线, 广大社区工作者承担了大量的工作, 包括转送患者前往医院、实行地毯式排查、强化社区网格化管理、保障居民的日常生活等。在疫情第一线的压力和剧增的工作量使得社区工作者心理压力剧增, 本研究将关注这个群体的心理健康状态, 与同期医护人员进行对比, 并探究心理健康的影响因素。**方法** 2020年5月采用滚雪球式抽样方法对武汉市武昌区11个社区内共115位社区工作者进行了问卷调查, 样本年龄为 35.35 ± 9.04 岁, 其中女性为104人(90.4%)。研究工具包括自编的人口学调查、抑郁症状群量表(PHQ-9)、广泛性焦虑量表(GAD-7)、失眠严重程度指数量表(ISI)。将同期收取的武汉市某重点医院的医护人员按照性别、年龄比例与社会工作者群体匹配115人, 年龄为 34 ± 1.63 岁, 对比两个群体的心理健康状况。研究使用逐步回归法探究社区工作者心理健康的影响因素。**结果** 在社区工作者的样本中, 抑郁的检出率为20.8% (中度抑郁占13%, 重度抑郁占7.8%), 焦虑的检出率为11.3% (中度焦虑占7.8%, 重度焦虑占3.5%), 失眠的检出率为11.3% (中度失眠占9.6%, 重度失眠占1.7%)。在和医护人员的群体的心理健康状况对比中, 两个群体的抑郁、焦虑和失眠状况均无显著差别。年龄($\beta = 0.19$, $p = 0.017$)、疫情期间受到新闻报道的消极影响程度($\beta = 0.28$, $p = 0.001$)、疲劳程度($\beta = 0.36$, $p < 0.001$)、工作满意度($\beta = -0.25$, $p = 0.003$)可以显著地预测社区工作者的抑郁水平。疫情期间受到新闻报道的消极影响程度($\beta = 0.34$, $p < 0.001$)、疲劳程度($\beta = 0.20$, $p = 0.031$)、每日工作时长($\beta = 0.24$, $p = 0.011$)可以显著地预测社区工作者的焦虑水平。疫情期间受到新闻报道的消极影响程度($\beta = 0.28$, $p = 0.002$)、疲劳程度($\beta = 0.19$, $p = 0.029$)、在工作中的掌控感($\beta = -0.30$, $p = 0.001$)可以显著预测社区工作者的失眠情况。**结论** 本研究发现疫情期间社区工作者的心理健康状况较为严重, 与医护人员没有显著差异, 这意味着他们的心理健康值得更多的关注。被新闻报道影响较多、工作强度较大的社区工作者心理健康水平较低, 需要更多的心理支持和疏导。

Analysis of mental health and influencing factors of Wuhan community workers during the COVID-19 epidemic

Jingyi Wang^{1,2}, Yue Fan^{1,2}, Xin Huang^{1,2}, Ru Han^{1,2}, Zhengkui Liu^{1,2}

1 CAS Key Laboratory of Mental Health, Institute of Psychology, Beijing, 100101

2 Department of Psychology, University of Chinese Academy of Sciences, Beijing, 100049

Abstract: Background: During the coronavirus epidemic (COVID-19), the community is the first line of epidemic prevention and control. The majority of community workers have undertaken a lot of work, including transferring patients to the hospital, implementing carpet inspections, strengthening community grid management, and providing supplies for residents, etc. The pressure on the front line of the epidemic and the sharp increase in workload have caused a sharp increase in the psychological pressure of community workers. This study will focus on the mental health of this group, compare it with medical staff in the same period, and explore the factors affecting mental health. **Method:** A total of 115 community workers in 11 communities in Wuchang District, Wuhan City were surveyed with the snowball sampling method in May 2020. The age of the sample was 35.35 ± 9.04 , of which 104 were female (90.4%). Data collection tools include self-compiled demographic questionnaires, the Patient Health Questionnaire (PHQ-9), the Generalized Anxiety Disorder (GAD-7), and the Insomnia Severity Index (ISI). The medical staff from a key hospital in Wuhan collected during the same period were matched with 115 social workers according to gender and age ratios, with an average age of 34 (± 1.63). And compared the mental health status of the two groups. The research uses the stepwise regression method to explore the influencing factors of the mental health of community workers. **Results:** In the sample of community workers, the prevalence of depression was 20.8% (13% for moderate depression, 7.8% for severe depression), 11.3% for anxiety (7.8% for moderate anxiety and 7.8% for severe depression). 3.5%), and 11.3% for insomnia (moderate insomnia accounted for 9.6%, severe insomnia accounted for 1.7%). In comparison with the mental health status of the group of medical staff, there is no significant difference in the depression, anxiety, and insomnia status of the two groups. Age ($\beta=0.19, p=0.017$), degree of negative influence from news during the epidemic period ($\beta=0.28, p=0.001$), work fatigue ($\beta=0.36, p<0.001$), job satisfaction ($\beta=-0.25, p=0.003$) can significantly predict the depression level. The degree of negative influence from news reports during the epidemic ($\beta=0.34, p<0.001$), work fatigue ($\beta=0.20, p=0.031$), and daily working hours ($\beta=0.24, p=0.011$) can significantly predict the anxiety level of community workers. The degree of negative influence from news reports during the epidemic period ($\beta=0.28, p=0.002$), work fatigue ($\beta=0.19, p=0.029$), and the sense of control at work ($\beta=-0.30, p=0.001$) can be significantly predicted insomnia in community workers. **Conclusions:** This study found that the mental health of community workers during the epidemic was more serious, and there was no significant difference from that of medical staff, which means that their mental health also deserves more attention. Community workers who are more affected by news reports and work harder have lower levels of mental health and need more psychological support and counseling.

自控策略的问卷编制和概念结构探讨

王丹妮¹ 侯志瑾¹ (通讯作者) 蔡若容²

1 北京师范大学心理学部, 北京, 100875, 通讯作者 E-mail zhijinhou@163.com

2 北京师范大学附属实验中学, 北京, 100875

摘要 近年来, 自我控制机制的研究重点从关注抑制功能和意志资源, 转为关注省力 (effortless) 的机制, 比如自控策略。自我控制的 PI 模型 (Preventive and interventive model; PI-Model; Hofmann & Kotabe, 2012) 区分了预防性策略和干预性策略, 并提出预防性策略比干预性策略更有效的假设。但是到目前为止, 还没有工具能测量人们日常生活中自控策略的使用情况, 因此相关假设也未有充分的实证研究。本研究通过对大学生自控经历的质性数据进行编码分析, 结合 PI 模型的概念定义, 编制了自控策略问卷, 并在 3 个独立的大学

生样本（样本 1 考察一般性目标的自控，样本 2 考察金钱相关的目标，样本 3 考察学业目标）中检验该问卷的因素结构、内部一致性、校标关联效度（以预防性应对和行为冲动性为校标）和增值效度（控制良好习惯和费力抑制后自控策略与自控能力的偏相关）。同时，本研究也揭示了自控策略的分类，以及各类策略与自控能力的关联。结果得到了信效度良好的 19 题自控策略问卷，区分了四类策略：针对诱惑的预防性策略，针对目标的预防性策略，人际相关的预防性策略和干预性策略，拓展了 PI 模型的策略分类。针对诱惑和针对目标的策略划分，呼应了自控的经典理论，如 Carver 和 Scheier (1982) 的控制论和双系统理论（如 Metcalfe & Mischel, 1999），对趋近目标和回避诱惑的心理机制的区分。人际相关策略则呼应了自我调节领域的一个新视角，即以交互目标动力学（transactive goal dynamics; Fitzsimons & Finkel, 2015）为代表的关注自我调节人际交互过程的视角。另外，研究结果还推翻了 PI 模型的假设：预防性策略不一定是良好自控的机制，自控能力低的人更倾向于使用人际相关的预防性策略；而自控能力高的人比自控能力低的人更多地使用干预性策略。这可能是因为，省力性和有效性不是自控策略的本质特征，对于自控能力不同的人而言，或是对于不同类型的目标而言，策略的省力性和有效性是不同的。今后，采用该问卷可以进一步探讨哪类策略对哪类目标和哪类人群更省力、更有效，以及，是否可以通过干预自控策略帮助人们提升自控表现。

Scale Development and Conceptual Structure Investigation for Self-Control Strategies

Danni Wang¹, Zhi-Jin Hou¹, Ruo-Rong Qi²

1 Faculty of Psychology, Beijing Normal University, Beijing, 100875

2 The Experimental High School Attached to Beijing Normal University, Beijing, 100875

Abstract: In recent years, the focus of research on self-control mechanisms has shifted from inhibition function and volitional resources to effortless mechanisms, such as self-control strategies. The Preventive and interventive model (PI-Model; Hofmann & Kotabe, 2012) distinguished between preventive and interventive strategies and hypothesized that preventive strategies are more effective than interventive strategies. However, there are no tools to measure people's use of self-control strategies in daily life, so there is no sufficient empirical support for the relevant hypotheses. Therefore, this study developed the items of the scale for self-control strategies by analyzing the qualitative data of college students' self-control experience and combining with the conceptual definitions in PI-model, investigated the psychometric properties of the scale in three independent samples of college students (sample 1 was for self-control on general goals, sample 2 was for financial goals, and sample 3 was for academic goals) for factor structure, internal consistency, criterion-related validity (proactive coping and behavioral impulsiveness as criteria), and incremental validity (the partial correlation between strategies and self-control ability when controlling the effect of good habits and effortful inhibition). This study also revealed the classification of self-control strategies and the relationship between self-control strategies and self-control ability. As a result, a 19-item scale for self-control strategies with strong psychometric properties was developed and four strategy types were identified as temptation-oriented preventive strategies, goal-oriented preventive strategies, interpersonal preventive strategies, and interventive strategies, which extending the classification in PI-model. The distinction between temptation-oriented and goal-oriented preventive strategies echoes the dual-process descriptions of pursuing goals and avoiding temptations in traditional theories of self-control, such as Carver and Scheier's (1982) control theory and the dual-system theories (e.g. Metcalfe & Mischel, 1999). The interpersonal strategies echo a new perspective in the field of self-regulation that focuses on the interpersonal interaction process of self-regulation, which could be represented by the transactive goal dynamics (Fitzsimons & Finkel, 2015). In addition, the results also overturned the hypothesis of PI-model. The preventive strategies were not necessarily the mechanism of good self-control, as people with low self-control are more inclined to use interpersonal preventive strategy; And interventive strategies were not ineffective, as people with high self-control used interventive strategies more than those with low self-control. This may be because the effortlessness and effectiveness were not essential

characteristics of the self-control strategies and differ for different goals or for people with different levels of self-control ability. In the future, this scale can be used to further explore which kinds of strategies are more efficient and effective for which kinds of goals and which kinds of people, and whether the interventions for self-control strategies can help people improve their self-control performance.

Keywords: self-control, self-control strategies, college students, PI-model

青春期性成熟同步性对青少年抑郁的影响

贺筱煌 徐之韵 李晓茹（通讯作者）

复旦大学心理学系，上海，200433，lixiaoru@fudan.edu.cn

摘要 青春期性成熟是个体毕生发展中最重要、影响最为深远的转变之一，其生理和心理上的变化可以通过多种机制影响青少年抑郁。本研究通过分层抽样抽取了 S 市 3628 名初中生（2016 年时处于 6-8 年级，平均年龄为 12.26 ± 1.00 岁，52.6% 为女生）为样本，连续两年用简版青春期发育量表追踪其性成熟发育情况。该量表包含两个发育指征，询问男生是否长胡子或变声，女生是否经历过月经初潮和乳房发育，“是”计 1 分，“否”计 0 分。青春期性成熟发育同步性可以由多个指标来衡量：青春期性成熟发育阶段指青春期性成熟实际进展程度，由当年量表的总得分表示；青春期性成熟发育速度由 17 年总得分减去 16 年总得分的结果表示；青春期性成熟发育共时性指个体内不同发育指征是否同时发育，当年两个指征得分相同为共时，不同为不共时。本研究首次在中国样本中统合青春期性成熟发育阶段、速度、共时性这三个指标综合考察青春期性成熟同步性对青少年抑郁的影响，并检验其中存在的性别差异。本研究进行了一系列 ANCOVA 分析，结果发现：（1）完成青春期性成熟发育的青少年抑郁倾向较高，另外综合前人文献和本研究结果可以推测，青春期性成熟发育阶段对女生抑郁倾向影响较大，完成青春期性成熟发育的女生面临着最高的抑郁风险。（2）青春期性成熟发育速度对女生抑郁倾向无显著影响而对男生抑郁倾向影响显著，在短时间内迅速完成青春期性成熟发育的男生抑郁倾向高。（3）2016 年时共时发育的女生抑郁倾向高于不共时发育的女生和共时发育的男生，而 2017 年时共时发育组整体抑郁倾向高于不共时发育组，总体而言共时发育是一种潜在的青少年抑郁风险因素，这可能与共时发育和更高的抑郁阶段以及更快的发育速度联系在一起有关。本研究为理清青春期性成熟发育同步性各指标相互缠结又具有相对独立性的关系、理解青春期性成熟发育同步性对青少年抑郁的影响做出了贡献，同时亦可帮助家长、教师及青少年自身建立对青春期性成熟同步性更准确的认识，提示家长和教师需关注特定群体的心理健康状况，为处于性成熟发育中的青少年提供更具包容性与支持性的社会环境。

关键词 青少年抑郁，性成熟发育同步性，性成熟发育阶段，性成熟发育速度，性成熟发育共时性

The Effects of Variations in Pubertal Development on Adolescent Depression

Xiaohuang He, Zhiyun Xu, Xiaoru Li

Department of Psychology, Fudan University, Shanghai

Abstract: Puberty is one of the most important and influential changes in human being's lifelong development. The physical and psychological changes brought by puberty can affect adolescent depression through various pathways. This study selected 3628 middle school students in S city (studying in grade 6 to 8 in 2016, with an average age of 12.26 ± 1.00 years, 52.6% of which were girls) through stratified sampling, and used the Simplified Pubertal Development Scale (Simplified-PDS) to track their pubertal development for two years in a roll. The scale contains two items, asking whether boys have grown beard or their voice has changed, and whether girls have experienced menarche and breast development ("Yes" for 1 point and "No" for 0 points). To capture the variations in multiple aspects of puberty, different dimensions of puberty related to health and well-being have been measured. Pubertal status refers to the actual stages of pubertal development, which is represented by the total scores of Simplified-PDS that year. The total score of Simplified-PDS in 2017 minus the score in 2016 is pubertal tempo, which represents how fast this individual experiences pubertal development. Pubertal synchrony refers to whether different signs of pubertal

development of an individual occur at the same time. The pubertal development of this individual is synchronous if the scores of the two items in Simplified-PDS in the same year is the same and asynchronous if not. This study is the first to integrate the three dimensions of pubertal development, which are pubertal status, tempo, and synchrony, in a Chinese sample to comprehensively investigate the impact of puberty on adolescent depression, while examining gender differences. A series of ANCOVA analysis found that: (1) Adolescents who completed pubertal development have a higher tendency to be depressed. In addition, combining previous literature and the results of this study, it can be inferred that pubertal status has a greater impact on girls' depression tendency than on boys'. Girls who have completed pubertal development may face the highest risk of depression. (2) Pubertal tempo had no significant effect on girls' depression tendency, but was positively related to boys' depression tendency. Boys who quickly went through puberty in a short period of time had a high tendency to be depressed. (3) In 2016, girls with synchronous pubertal development had higher depression tendency than girls with asynchronous development and boys with synchronous development. In 2017, the overall depression tendency of synchronous group was higher than that of asynchronous group. In general, pubertal synchrony is a potential risk factor for adolescent depression, which may be due to the close relation between synchronous development and more mature pubertal status and faster pubertal tempo. This research contributes to clarifying the intertwined and yet still relatively independent relationship between the various indicators of puberty and to understanding the influence of puberty on adolescent depression. It can also help parents, teachers and adolescents to build a more accurate understanding of puberty while remind parents and teachers to pay more attention to the mental health of certain groups of adolescents and to provide a more inclusive and supportive social environment for adolescents going through puberty.

Keywords: adolescent depression, puberty, pubertal status, pubertal tempo, pubertal synchrony

军人抑郁症状的潜在类别及其影响因素分析

黄晨玮¹, 张帆² (通讯作者)

¹ 海军军医大学基础医学院, 上海 200433

² 海军军医大学心理系基础心理学教研室, 上海 200433, zhangfansmmu@163.com

摘要 目的: 探讨中国军人抑郁症状发生的个体差异, 分析造成个体抑郁水平差异的影响因素, 为改善军人抑郁症状提供科学依据。方法: 通过整群抽样的方法对某部官兵进行调查, 采用贝克抑郁自评量表 (Beck Depression Inventory, BDI-II)、儿童期创伤问卷 (Childhood Trauma Questionnaire, CTQ)、反刍思维量表 (Ruminative Responses Scale, RRS) 和匹兹堡睡眠质量量表 (Pittsburgh sleep quality index, PSQI) 的部分题目调查了官兵的抑郁症状、儿童期创伤水平、反刍思维水平和睡眠质量, 并调查了官兵基本人口学信息。运用 Mplus 软件进行潜在类别分析(latent class analysis, LCA), 并以潜在类别为因变量, 采用 SPSS 软件进行有序 logistics 回归分析。结果: 共调查基层官兵 473 人, 均为男性, 平均年龄为 (22.18±4.51)。军人抑郁症状状况可分为低症状 (N=306, 64.7%)、中症状 (N=137, 29.0%)、高症状 (N=30, 6.3%) 三个类型。回归分析结果表明: 儿童期创伤水平 (OR=1.11, $p<0.05$, 95%CI: 1.07~1.16)、反刍思维 (OR=1.09, $p<0.05$, 95%CI: 1.06~1.11)、独生子女 (OR=3.22, $p<0.05$, 95%CI: 2.05~5.04) 和战士 (OR=2.96, $p<0.05$, 95%CI: 1.23~7.12) 为抑郁水平的危险性因素, 低入睡困难水平为抑郁水平的保护性因素 (OR=0.44, $p<0.05$, 95%CI: 0.26~0.71)。结论: 军人抑郁症状状态存在明显的群体异质性, 应重点关注独生子女和基层战士, 对官兵入睡困难、反刍水平、儿童期创伤等情况也许予以关注。

2. Department of Basic Psychology, Faculty of Psychology, Naval Medical University, Shanghai 200433, zhangfansmmu@163.com

Abstract: Objective: To explore the individual differences of depression symptoms among Chinese soldiers, and to analyze the influencing factors of individual differences, so as to provide a scientific basis for improving the depression symptoms of soldiers. Methods: The cluster sampling method was used to investigate officers and soldiers of a certain unit. Beck Depression Inventory (BDI-II), Childhood Trauma Questionnaire (CTQ), Ruminative Responses Scale (RRS) and items from Pittsburgh sleep quality index (PSQI) were used to investigate depression symptoms, childhood trauma, rumination and sleep quality. Mplus software was used for latent class analysis (LCA), and SPSS software was used for multiple ordinal logistic regression analysis. Results: A total of 473 soldiers were investigated, all of them were male, with an average age of (22.18 ± 4.51) . The depressive symptoms of soldiers could be divided into three types: low symptoms group ($N = 306, 64.7\%$), moderate symptoms group ($N = 137, 29.0\%$) and high symptoms group ($N = 30, 6.3\%$). The results of regression analysis showed that childhood trauma ($OR=1.11, p<0.05, 95\%CI: 1.07\sim 1.16$), rumination ($OR=1.09, p<0.05, 95\%CI: 1.06\sim 1.11$), being the only child in the family ($OR=3.22, p<0.05, 95\%CI: 2.05\sim 5.04$) and being soldiers ($OR=2.96, p<0.05, 95\%CI: 1.23\sim 7.12$) were risk factors for depression levels; low level of difficulty falling asleep was a protective factor for depression ($OR=0.44, p<0.05, 95\%CI: 0.26\sim 0.71$). Conclusion: There was obvious group heterogeneity in the state of depression symptoms in soldiers. Therefore, attention should be paid to the soldiers who were the only child in the family and soldiers in non-command posts. Military personnel with difficulties in falling sleeping, ruminant and childhood trauma might require special attention.

摘要 目的 职业倦怠是一种由长期压力所导致的生理、心理综合征, 以情感衰竭、人格解体和个人成就感降低为主要表现。大量行为学研究表明, 倦怠个体表现出认知、行为等方面的障碍。本实验旨在从神经电生理角度探究倦怠陆军官兵认知神经功能的变化特点, 寻找能够反映其认知神经功能下降的有效指标, 为早期监测倦怠官兵认知神经功能变化提供有效方法, 从而提高官兵心理健康水平和部队战斗力服务。 **方法** 经《军人职业倦怠量表》筛选出总分 ≥ 1 分的20名陆军官兵作为倦怠组, 通过随机数表法随机选取未达到阳性标准的20名官兵作为无倦怠对照组分别进行认知神经功能监测。采用Go/Nogo和Oddball范式进行任务态ERP实验, 选取头部中线前额叶和顶叶电极点分别测量N200和P300 (P3a、P3b)的平均波幅。应用SPSS22.0软件对所得数据进行统计分析, 采用重复测量方差分析分别探究组间效应、电极效应及任务效应。 **结果** 在Go/Nogo实验中, 倦怠组N200波幅较对照组升高, 但组间无显著差异, 组间主效应不显著; 前额区可以诱发更加显著的N200 ($FCz>Fz>Cz, P<0.001$), 电极主效应显著; Nogo任务在各电极点均可诱发更大的N200

成分 (Nogo-N200 效应, $P < 0.001$), 任务主效应显著。倦怠组 P300 波幅显著降低 ($p < 0.001$), 在 Fz、FCz、Cz 三个电极位点上较为显著, 组间主效应显著; P300 在前额叶和顶叶的 5 个电极点上较对照组未发现显著差异, 电极主效应不显著; 与 Go 任务相比, Nogo 任务在倦怠组诱发更大的 P300 成分 (Nogo-P300 效应, $P < 0.01$), 任务主效应显著。在 Oddball 实验中, 倦怠组 P3a 波幅显著小于对照组 ($P < 0.05$), 组间主效应显著; 中央顶区电极位点可诱发更大的 P3a ($CPz > Pz > Cz > FCz > Fz$, $P < 0.001$), 电极主效应显著。倦怠组 P3b 波幅显著小于对照组 ($P < 0.05$), 组间主效应显著; 中央顶区电极位点所诱发的 P3b 平均波幅显著大于前额区 ($Pz > CPz > Cz > FCz > Fz$, $P < 0.001$), 电极主效应显著。 **结论** 一般认为, N200 可以反映个体冲突觉察和监测能力, 而 P300 被认为主要与反应抑制相关。P300 的亚成分 P3a 反映个体被动注意或朝向反应, 即代表非随意注意的能力, P3b 则代表随意注意的能力, 反映个体可通过意志努力进行选择注意的过程。结果表明, 倦怠官兵在早期阶段对冲突的识别和监测能力较常人未发生显著变化, 而其反应抑制能力则发生损害; 另一方面, 倦怠官兵随意注意和非随意注意能力均发生损害, 对于突发新异刺激的识别能力和对目标刺激的注意资源投入、分配和保持能力不足, 成为影响官兵心理健康和导致战斗力下降的重要因素。本实验从神经电生理学角度阐明倦怠陆军官兵认知功能下降的特点, 为以往的行为学研究提供有力的证据补充, 同时说明 ERP 可以作为研究认知等高级神经活动的重要方法, N200 和 P300 (P3a、P3b) 成为监测个体认知神经功能是否发生损害的有效指标。

自我控制影响青少年生活满意度的纵向研究：心理韧性的中介作用

利振华¹ 刘庆奇¹ 彭小燕¹ 何晓清¹ 丘彩霞¹ 陈偲霏¹ 罗浩诚¹ 聂衍刚¹ (通讯作者)

¹ 广州大学教育学院青少年心理与行为研究中心, 广州, 510006, nie-yangang@gzhu.edu.cn

摘要 生活满意度是心理幸福感的重要组成部分, 是个人依照自己选择的标准对自己生活状况的总体性认知评估, 对青少年的身心健康发展具有重要作用。以往研究表明, 自我控制能够促使个体过上更健康、幸福的生活, 表现出更高的学术成就、更少的暴饮暴食以及更好的人际关系。然而, 目前探究自我控制影响青少年生活满意度的内在心理机制较为欠缺。心理韧性是个体应对困难经历的反弹能力, 是良好社会适应行为发展的重要指标。本研究采用自我控制量表、心理韧性量表、生活满意度量表对广州市五所中小学 788 名学生进行为期一年三个时间点 (T1、T2、T3) 的纵向追踪测试, 时间间隔为六个月, 旨在考察自我控制对青少年生活满意度的影响, 以及心理韧性在两者中的中介效应。结果发现: (1) T1 自我控制、T2 心理韧性、T3 生活满意度呈两两显著正相关; (2) 在控制性别和年龄后, T1 自我控制显著正向预测 T3 生活满意度 ($\beta = 0.17$, $SE = 0.03$, $p < 0.001$), 即自我控制水平越高, 生活满意度也越高; (3) 中介效应分析显示, T2 心理韧性在 T1 自我控制和 T3 生活满意度之间起中介作用 (effect = 0.06, $SE = 0.02$, 95% CI = [0.03, 0.10])。研究表明, 自我控制能够通过增强心理韧性, 进而提高青少年的生活满意度。本研究揭示了自我控制影响生活满意度的作用机制, 对于学校、家庭及教育工作者提高青少年的心理韧性和生活满意度具有一定的指导作用。

A Longitudinal Study of the Influence of Self-control on Adolescents' Life Satisfaction: The Mediating Role of Resilience

Li Zhenhua¹, Liu Qingqi¹, Peng Xiaoyan¹, He Xiaoqing¹, Qiu Caixia¹, Chen Siai¹, Luo Haocheng¹, Nie Yangang^{1*}

¹ Research Center of Adolescent Psychology and Behavior, School of Education, Guangzhou University, Guangzhou, 510006

Abstract: As an important part of psychological well-being, life satisfaction is an overall cognitive assessment of

one's own life according to the criteria chosen by oneself, which is of great significance to the development of adolescents' physical and mental health. Previous research has shown that self-control leads to healthier, happier lives, higher academic achievement, less overeating and better relationships. However, the research on the inner psychological mechanism of the influence of self-control on adolescents' life satisfaction is still lacking. Resilience is the bounce to cope with difficult experiences and is an important indicator of the development of good social adaptation behavior. This study adopts the self-control scale, resilience scale, life satisfaction scale to measure 788 students from five middle schools and primary schools in Guangzhou. This investigation lasted one year including three time points (T1, T2, T3) and the time interval was six months. The purpose of this study was to explore the effect of self-control on adolescent life satisfaction, and the mediating effect of resilience. The results showed that : (1) there was a significant positive correlation between T1 self control, T2 resilience and T3 life satisfaction; (2) after controlling for gender and age, T1 self-control significantly positively predicted T3 life satisfaction ($\beta = 0.17$, $SE = 0.03$, $p < 0.001$), namely, the higher the level of self-control, the higher the life satisfaction; (3) The mediating effect analysis showed that T2 resilience played a mediating role between T1 self-control and T3 life satisfaction (effect = 0.06, $SE = 0.02$, 95%CI = [0.03, 0.10]). This study indicated that self-control can increase life satisfaction in adolescents by increasing resilience. This study reveals the mechanism by which self-control affects life satisfaction, which may provide guidance for schools, families and educators to improve adolescents' resilience and life satisfaction.

Keywords: adolescent, self-control, resilience, life satisfaction

高中生未来时间洞察力与学习投入的关系： 学业自我效能感的中介作用

冯喜珍 郭玉丹(通讯作者) 姚玉婷 刘小康 吴娇

山西师范大学教育科学学院，临汾，041000，gydd16@foxmail.com

摘 要 学习投入是指学生在学习活动过程中表现出的一种持续的、充满积极情感的状态。它是影响学生学习的一个重要情感因素，是衡量高中生学习情况、心理素质的重要指标。高中生学习投入的提升有利于学生自身的成长与发展。未来时间洞察力是一个人对自身未来发展和发展的认识、情感和行为倾向。学业自我效能感则是个体对自己学习能力或技能的评价，是个体控制自己学习行为和学习成绩能力的主观判断。本研究从高中生学习投入的影响因素出发，采用学习投入量表、未来时间洞察力量表和学业自我效能感量表对400名高中生进行调查，旨在探讨未来时间洞察力、学业自我效能感和学习投入的关系。研究结果表明：（1）高中生学习投入总体处于中等偏上水平，但在年级上存在显著差异，高二学生在学习投入总分及各维度上的得分均高于高一、高三学生，而未来时间洞察力、学业自我效能感在年级上的差异不显著。（2）高中生未来时间洞察力、学业自我效能感和学习投入三者密切相关，高中生未来时间洞察力对学业自我效能感和学习投入均有显著的正向预测作用。（3）高中生未来时间洞察力不仅可以直接作用于学习投入，还可以通过学业自我效能感这一中介变量对学习投入产生影响，即学业自我效能感在未来时间洞察力对学习投入的影响中发挥部分中介效应。作为教师，可通过引导学生对自身和未来发展的认识，让学生多些成功的体验，增强自我学业效能感，从而提高他们的学习投入。

The Relationship between Senior High School Students' Future Time Perspective and Academic Engagement: The Mediating Role of Academic Self-Efficacy

Feng Xizhen, Guo Yudan, Yao Yuting, Liu Xiaokang, Wu Jiao

Institute of Education Science, Shanxi Normal University, LinFen, 041000

Abstract: Academic engagement refers to students' continuous and positive emotional state in the process of learning

activities. It is an important emotional factor that affects students' learning and an important index to measure the learning situation and psychological quality of high school students. The improvement of high school students' academic engagement is conducive to their own growth and development. Future time perspective is a person's knowledge, emotion and behavioral tendency towards his own future development and social development. Academic self-efficacy is an individual's evaluation of his learning ability or skills, and a subjective judgment of his ability to control his learning behavior and academic performance. Starting from the influencing factors of high school students' academic engagement, this study investigated 400 high school students with academic engagement scale, future time perspective scale and academic self-efficacy scale, aiming to explore the relationship between future time perspective, academic self-efficacy and academic engagement. The results show that : (1) Senior high school students' academic engagement is generally above the average level, but there is a significant difference in grade level. The total score of academic engagement and all dimensions of high school students in grade two are higher than those in grade one and grade three, while there is no significant difference in future time insight and academic self-efficacy. (2) Senior high school students' future time perspective, academic self-efficacy and academic engagement are closely related. The future time perspective of high school students has a significant positive prediction effect on academic self-efficacy and academic engagement. (3) Senior high school students' future time perspective can not only directly affect their academic engagement, but also influence their academic engagement through the mediating variable of academic self-efficacy, that is, academic self-efficacy plays a part in the mediating effect of future time perspective on their academic engagement. As teachers, they can guide students to understand themselves and their future development, so that students can have more successful experiences and enhance their sense of academic efficacy, so as to improve their academic engagement.

不同重要等级价值观在内隐自我和情感偏向上的差异

岳童

西南大学心理学部, 重庆市, 400715, yue.suhong@163.com

摘要 采用单类内隐联想测验, 考察了高 vs 低重要等级价值观与内隐自我和内隐情感偏向之间的关系。研究发现: 高重要等级价值观词与自我属性词和积极情感属性词进行配对任务的反应时更快, 正确率更高, 说明其表现出自动的自我和积极情感偏向, 且这两种内隐偏向之间存在着显著的相关关系; 而低重要等级价值观不仅没有明显的自动情感偏向, 还在内隐水平上表现出与自我属性词不相容的趋势。该结果为价值观系统的等级结构特性提供了内隐加工层面的证据, 同时也为价值观认同的教育实践提供了理论依据。

Differences of Implicit Self and Emotional Preferences Among Values with Different Importance Hierarchies

Abstract: Values are belief systems through which people tell right from wrong, good from evil, and gain from loss. On the one hand, it's found from previous studies that values are closely related to people's self-concept and are accompanied by positive emotional tendency; on the other hand, it's found that values have a hierarchical structure, and that the values with different importance hierarchies show differences in mental representation and processing characteristics. Then, are there any differences among the values with different importance hierarchies in self and emotional preferences in terms of the level of implicit processing? Additionally is there a close relationship between the degrees of self and emotional preferences of the values with different importance hierarchies? To settle the above problems, two hypotheses are proposed in this study: (1) There are automatic self preference and positive emotional preference in high importance hierarchies of values, the correlation between the two implicit processing biases is significant, and the former is weaker than the latter; (2) These implicit processing biases only exist in the values with

high importance hierarchies, but for the values with low importance hierarchies, both implicit self and positive emotional preferences no longer exist. To test the above two hypotheses, firstly in this study, eight values with high/low importance hierarchies were determined through 231 college students' scores on SVS of Chinese version. Then, through the pattern of Single Category Implicit Association (SC-IAT), as subject, 78 college students were asked to accomplish tasks of quickly classifying the values with high/low importance hierarchies and the words of self attributes vs words of others' attributes and words of positive emotions vs words of negative emotions. According to research objectives, there are four types of tasks, named self SC-IAT tasks and emotional SC-IAT tasks on values with high/low importance hierarchies, respectively. Latin square equilibrium was carried out in the order in which each subject accomplished the four tasks. According to the research findings, the tasks of matching the words of values with high importance hierarchies with the words of self attributes and those of positive emotional attributes showed shorter reaction time and a higher accuracy rate (all $p \leq 0.001$). This indicated that they showed automatic self and positive emotional preferences and that the two kinds of implicit tendencies showed significant correlations ($r=0.42$, $p < 0.05$); while values with low importance hierarchies not only showed no obvious automatic emotional tendencies, but also showed a tendency of being incompatible with words of self attributes in terms of implicit level (it was manifested as the case that the speed and accuracy rate of its automatic connection with the words of others' attributes are higher than that with the words of self attributes, $p < 0.001$). In addition, the relationship between the two implicit biases in the values with high importance hierarchies no longer exists in the values with low importance hierarchies. The above results provide evidence on the implicit processing level for the hierarchical structure of the values system. It not only expands people's understanding of the internal organization construction mode of the values system, but also provides a theoretical reference for the educational practice of value identification.

多子未必多福：社会支持的助益及与子女同住的代价

涂阳军 颜剑辉 杨智（通讯作者）

湖南大学工商管理学院，长沙，410082, tuyangjun@hnu.edu.cn

摘要 随着老龄化进程的加速，在中国孝道文化背景下，家庭成员（尤其是子女）支持在促进老年人幸福感方面显现出了十分重要的作用，但 20 世纪中期出生者大多育有多个子女，相较于单个子女赡养，多个子女赡养到底促进还是阻碍了老年父母幸福感的提升？也即子女数量影响老年人幸福感的内在机制如何？本研究旨在考查社会支持在子女数量影响老年人幸福感之间的中介作用，以及与子女同住的调节作用机制。对湖南省 10 个县的 459 名老年人进行问卷调查。受试者完成生活满意度量表、PANAS、领悟社会支持多维度量表和儿童数量及与儿童生活有关的条目。结果发现：儿童数对 PA 和 SWLS 有正向预测作用，对 NA 有负向预测作用。社会支持在子女数量对老年人幸福感的影响中起正向中介作用，而子女数量对社会支持的影响因与子女生活在一起而显著减弱。对于与孩子住在一起的老年人来说，有更多孩子的人从孩子那里感受到的社会支持较低，而只有一个孩子的老年人从孩子那里获得的社会支持更高。对于没有和孩子住在一起的老年人来说，情况正好相反。本研究对中国家庭子女赡养模式如何促进或阻碍中国老年人幸福感的潜在机制提供了初步的解释。此外，研究结果还为比较社会支持、政府支持和社区支持三种养老模式下有效提高老年人幸福感的机制提供了参考。

More Children, More Well-being for Chinese Elderly People: The Benefit of Social Support and the Price of Living with Children

Yangjun TU, Jianfei YAN, and Zhi YANG (Corresponding author)

Business School, Hunan University, Changsha, People's Republic of China

Abstract: This study evaluated the mediating role of social support between the number of children and the

well-being of Chinese elderly people and explored the moderating effect of living with children on the influence of the number of children on social support, which acted on the well-being of older Chinese people. A total of 459 older adults from ten counties located in central China were surveyed. The participants completed the Satisfaction With Life Scale, PANAS, and the Multidimensional Scale of Perceived Social Support and items about the number of children and living with children. The number of children positively predicted PA and SWLS and negatively predicted NA. Social support positively mediated the effect of the number of children on the well-being of elderly adults, and the influence of the number of children on social support was significantly moderated by living with children. For older adults who lived with their children, those with more children had lower perceived social support from their children, whereas respondents with only one child had higher social support from their child. For older adults who did not live with their children, the opposite was true. Our study provides a preliminary explanation of the underlying mechanism by which the Chinese children's support model of the family promotes or hinders the well-being of Chinese elderly people. Moreover, the findings provide a reference for the comparison of mechanisms to effectively improve the well-being of elderly adults under social support, government support, and community support pension models.

大学生无聊倾向结构验证

马鹏¹ 何必凯^{1,2} 赵守盈¹ (通讯作者)

1 贵州师范大学心理学院, 贵阳, 550025, zhaoshouying@126.com

2 贵阳信息科技学院, 贵阳, 550025

摘要 无聊是指个体面对贫乏的外部刺激和内部刺激时, 知觉到生活的无意义而产生的负性情绪体验。无聊倾向和认知失败、负性情绪以及手机成瘾、进食问题等行为问题有显著正相关关系。大学生自我掌控的时间增多, 缺乏合理引导容易感知到短暂的无聊, 而反复发生的状态型无聊会促使个体形成潜在的特质型无聊。目前无聊倾向的测量工具将无聊倾向划分为外部倾向和内部倾向, 是一种特质观, 这种观点强调无聊在个体间量的差异, 以变量为中心, 采取加总和的方式, 只能笼统的得到一个无聊倾向高或低的结论。类型观通过划分类别来表征不同心理类型, 仅仅考虑到群体间无聊倾向质的差异, 容易出现强制将大学生划分到不同类别的情况, 出现虚假分类的情形。对此研究者提出可以采用因子混合模型加以解决, 因子混合模型(Factor Mixture Model, FMM)通过同时抽取两种潜变量来解释观测指标间的关联, 既具备因子分析的优势, 也具有潜剖面分析的优点。研究使用中文版无聊倾向量表对大学生进行调查, 共收回有效问卷 596 份。结果表明: 因子模型的最佳模型为两因子模型, BIC=19106.20; 潜剖面模型的最佳模型为三类别模型, 分别命名为混乱型(17.45%)、外倾型(15.94%)、平衡型(66.61%), BIC=19987.02; 潜类别因子模型的最佳模型为三类别两因子模型, BIC=19008.03; 因子混合模型的最佳模型为限定因子负荷等值, 方差和协方差等值, 各类别因子均值自由估计的模型, BIC=19035.80。根据研究建议, 可以通过 BIC 比较最优模型, 因此三类别两因子模型为最佳模型, 各类别情况如下: 混乱型(15.18%)、外倾型(10.35%)、平衡型(74.47%)。这表明, 大学生无聊倾向的差异可以从维度和类型框架出发, 即大学生无聊倾向不仅在潜在结构上是连续的, 同时在不同类别上也是存在差异的, 也就是说, 大学生无聊倾向既存在质的差异, 也存在量的差异。这为后续对大学生无聊的研究提供了另一种视角, 同时也可以为大学生无聊的干预提供一定依据。

Study on the Structure of College Students' Boredom Proneness

Ma Peng¹ He Bikai^{1,2} Zhao Shouying¹

1 School of Psychology, Guizhou Normal University, Guiyang, 550025

2 Guiyang Institute of information technology, Guiyang, 550025

Abstract: Boredom refers to the negative emotional when individuals experience meaninglessness in face of poor external and internal stimuli. Boredom was positively correlated with cognitive failure, negative emotion, and

behavioral problems, such as mobile-phone addiction and eating problems. College students have more time to control themselves, and lack of reasonable guidance, they are easy to perceive transient boredom, while the repeated state-type boredom will promote the formation of potential trait boredom. At present, the measurement tool of boredom divided it into external tendency and internal tendency, which is a kind of trait theory. This point of theory emphasizes the difference in degree, so researchers by taking variables as the center and adopting the way of sum. By this way, researchers can only draw a general conclusion that boredom is high or low. For type theory, it can represent different psychological types by classifying classes. It considers only the difference in kind, so it is easy to force college students to be divided into different classes and false classification occurs. In order to solve this problem, the Factor Mixture Model (FMM) proposed by researchers. This model explains the correlation between observation indexes by simultaneously extracting two latent variables, which has the advantages of both factor model and latent profile model. Boredom Tendency Inventory was used to investigate college students, and totally 596 valid questionnaires were collected in this study. The results show that the best factor model is two-factor model, $BIC=19106.20$; The optimal latent profile model is three-class model which were named as chaotic (17.45%), extroverted (15.94%) and balanced (66.61%), respectively, $BIC=19987.02$. Then, the best model of latent class factor model is three-class two-factor model, and $BIC=19008.03$. Finally, the optimal factor mixture model is the model which limited factor loading equivalence, variance and covariance equivalence, and free estimation of the mean value of all kinds of factors, the BIC is 19035.80. According to the suggestion, the optimal model can be compared by BIC, so the best model in this study is three-class of two-factor model, and importantly, the classes are as follows: chaotic class (15.18%), extroverted class (10.35%) and balanced class (74.47%). It indicates that the difference of boredom can be set out from the dimension and class framework, that is, boredom is not only continuous in the potential structure, but also different in class. That is to say, there are qualitative and quantitative difference in boredom of college students. The study suggests that results provide another perspective for follow-up research on college students' boredom, and also provide a certain basis for the intervention of college students' boredom.

摘要 评价自我和评价非自我是个体对自身或他人能力和社会适应能力的主观判断, 对身心健康具有特殊意义。本研究通过事件相关电位来考察个体在进行自我-非自我褒贬评价时的脑电活动变化, 从而探讨评价过程中的认知特点。本研究采用 2 (评价目标: 评价自我、评价非自我) $\times 3$ (情绪效价: 正性、中性、负性) 的被试内设计。实验分为评价自我阶段和评价非自我(实验主试)阶段, 通过改编自我参照判断任务, 要求被试判断不同情绪效价的人格特质词汇(选自汉语情感词汇系统)是否符合自我或非自我。行为结果表明, 在对不同情绪效价的词汇评价中, 中性词汇所用的反应时更长 [$F(2, 43)=88.5, p<0.001$], 相比于评价非自我, 个体评价自我的反应时更长 [$F(1, 43)=73.3, p<0.001$]。脑电结果表明, 情绪效价的主效应显著, 消极词汇评价诱发一个更大的 $P600$ [$F(2, 86)=8.1, p<0.01$], 而中性词汇评价下的 $P600$ 潜伏期更长 [$F(2, 86)=7.3, p<0.01$]。评价目标的主效应也显著, 个体在评价自我时诱发出一个更大的 $N400$ [$F(1, 43)=15.8, p<0.001$], 在评价非自我时诱发出一个更大的 $P600$ [$F(1, 43)=8.4, p<0.01$]。此外, 两因素间的交互作用显著, 简单效应分析结果表明, 在评价自我过程中, 个体进行消极评价时会诱发出更大的 $P600$ [$F(2, 42)=3.21, p<0.01$]。根据提取整合模型, $N400$ 反映了多种信息从长时记忆中的提取困难, $P600$ 反映了各种词汇信息整合的困难。综上所述, 在评价过程中, 个体会优先加工具有情感色彩的词汇(尤其是负性词汇)。此外, 个体评价自我和评价非自我是分离的, 该过程会受到情绪效价的影响, 具体地说, 人们更倾向于积极地评价自己。

Shenzhen, 518067, China

Abstract: Self-evaluation is an individual's subjective judgment of his/her own ability which has special significance for physical and mental health. This study wanted to examine the changes in brain electrical activity undergoing in self-evaluation and other-evaluation of individuals. Subjects were asked to judge whether the emotional vocabulary (selected from the Chinese affective words system) matched themselves and the other. The behavioral results showed that the response time of neutral words was longer than that of the positive and negative words, and the response time for individuals to evaluate themselves was longer than for the other. The EEG results revealed that self-evaluation induced the more negative N400 amplitudes than other-evaluation, while other-evaluation evoked the more positive P600 amplitudes. Furthermore, self-negative condition induced the larger P600 amplitudes than self-positive and self-neutral condition. In addition, neutral words induced the longer P600 latency than positive and negative words. According to Retrieval-Integration model, the N400 component reflects the difficulty in retrieving a variety of information such as semantic, syntactic and pragmatic from long-term memory, and the P600 component indexes the difficulty of integrating various information. In conclusion, in the process of evaluation, individuals will give priority to processing emotional vocabulary (especially negative vocabulary). In addition, individual self-evaluation and other-evaluation are separated in neuroelectrophysiological, and emotion affects this process, specifically, people tend to evaluate themselves positively.

摘要 目的: 当个体对当前环境所提供的信息和自己过去的知识经验相结合时, 若采用不适当的情绪调节策略, 则容易产生攻击性行为, 且个体的人格特质具有独特性和稳定性, 表现出来的行为具有跨时间和跨情境的一致性。本研究主要探讨大学生人格特质、情绪调节策略与攻击性行为之间的关系, 从而为降低大学生的负性行为提供思路和解决办法。**方法:** 采用《简版大五人格测验》、《情绪调节问卷》以及《攻击性问卷》对 388 名被试进行问卷调查, 其中剔除无效数据 34 份, 得到 354 份有效数据, 通过 SPSS21.0 进行相关分析及中介效应分析。**结果:** (1) 性别差异显著, 女生更多使用认知重评策略, 而男生大多选择表达抑制策略, 女大学生的身体攻击性行为少于男大学生。(2) 认知重评与攻击性行为呈显著负相关 ($r=-0.167, p=0.002$), 与人格特质的适应性 ($r=0.189, p=0.000$)、开放性 ($r=0.212, p=0.000$)、利他性 ($r=0.144, p=0.007$) 和道德感 ($r=0.150, p=0.005$) 四个维度呈显著正相关, 表达抑制与攻击性行为的言语攻击性 ($r=-0.106, p=0.047$) 和愤怒 ($r=-0.119, p=0.000$) 两个分维度呈显著负相关。(3) 人格特质的适应性 ($\beta=0.015, p=0.006$)、利他性 ($\beta=0.010, p=0.003$)、道德性 ($\beta=0.017, p=0.001$) 三个维度通过认知重评的中介作用对攻击性行为产生影响。(4) “适应性—认知重评—攻击性行为”、“利他性—认知重评—攻击性行为”、“道德性—认知重评—攻击性行为”这三个中介效应的后半段均受到性别的影响, 相较于男性, 认知重评对女生的攻击性行为的影响更大。结论: 适应性、开放性、利他性和道德感较高的大学生倾向于采用认知重评策略, 表现出较少的攻击性行为, 并且女生使用该策略的频率要高于男生。

关键词 人格特质, 情绪调节, 认知重评, 表达抑制, 攻击性行为

The relationship between personality traits, emotion regulation strategies and aggressive behaviors in college students

Qian YUE¹, Jie LI², Yu ZHANG¹

1. College of Psychology, Beijing Sport University, Beijing 100084

2. Institutes of Psychological Sciences, Hangzhou Normal University, Hangzhou 311121

Abstract: Purpose: When an individual combines the information provided by the current environment with his/her past knowledge and experience, if he/she adopts inappropriate emotional regulation strategies, it is easy to produce aggressive behaviors. Moreover, the personality traits of the individual are unique and stable, and the behaviors displayed are consistent across time and context. This study mainly discussed the relationship between personality traits, emotional regulation strategies and aggressive behaviors of college students, so as to provide ideas and solutions for reducing negative behaviors of college students. **Methods:** A questionnaire survey was conducted on 388 subjects using the Simple Version of big Five Personality Test, Emotion Regulation Questionnaire and Aggression Questionnaire. Among them, 34 invalid data were removed and 354 valid data were obtained. Correlation analysis and mediating effect analysis were conducted by SPSS21.0. **Results:**(1) gender difference was significant. Female students used more cognitive reappraisal strategies, while male students mostly chose expression inhibition strategies. Female students had less physical aggressive behaviors than male students. (2) Cognitive reappraisal was negatively correlated with aggressive behavior ($r=-0.167, p=0.002$), and positively correlated with adaptability ($r=0.189, p=0.000$), openness ($r=0.212, p=0.000$), altruism ($r=0.144, p=0.007$) and moral sense ($r=0.150, p=0.005$) of personality traits. Expression inhibition was negatively correlated with verbal aggression and anger of aggressive behavior. (3) The adaptability ($\beta=0.015, p=0.006$), altruism ($\beta=0.010, p=0.003$) and morality ($\beta=0.017, p=0.001$) of personality traits influence aggressive behaviors through the mediating effect of cognitive reappraisal. (4) The latter half of the three mediating effects of "adaptability -- cognitive reappraisal -- aggressive behavior", "altruism -- cognitive reappraisal -- aggressive behavior" and "morality-Cognitive reappraisal -- aggressive behavior" are all affected by gender. Compared with men, cognitive reappraisal has a greater impact on girls' aggressive behavior. **Conclusion:** College students with higher adaptability, openness, altruism and moral sense tended to adopt cognitive reappraisal strategy and showed less aggressive behavior. Female students used this strategy more frequently than male students.

物质主义对关系自尊的影响：领悟社会支持和关系需要满足的链式中介作用

岳磊¹ 吴佳珂¹ 吴幸哲¹ 许心阳¹ 邓慧颖¹ 李静¹ (通讯作者)

¹ 华中师范大学心理学院, 武汉, 430079, jinglee@ccnu.edu.cn

摘要 关系自尊是个体对其在重要他人的关系中所感知到的自我价值。以往研究揭示了关系自尊在心理幸福感和恐惧管理中的独特作用。中国人重视关系, 并且将重要他人纳入自我概念之中。因此, 对于中国人而言, 关系自尊可能是影响个体心理极为重要的变量。物质主义是强调个体对物质财富重视程度的一种价值观。前人研究发现了物质主义对个体人际关系及其满意度的负面影响, 但还未有研究探讨过物质主义对关系自尊的影响。本研究探讨了物质主义对关系自尊的负面影响, 以及领悟社会支持和关系需要满足的链式中介作用。采用物质主义量表、领悟社会支持量表、关系需要分量表以及关系自尊量表, 通过在线平台对 419 名大学生进行调查, 使用 SPSS25.0 和 Process 插件对数据进行处理和分析。相关分析表明: (1) 物质主义与关系自尊、领悟社会支持、关系需要满足均为显著负相关; (2) 领悟社会支持、关系需要满足和关系自尊两两之间显著

正相关。中介分析表明：（1）领悟社会支持在物质主义和关系自尊之间起中介作用；（2）关系需要满足在物质主义和关系自尊之间起中介作用；（3）领悟社会支持→关系需要满足的链式中介作用成立。本研究一方面首次探讨了物质主义对关系自尊的影响及其内在机制，丰富了相关变量的研究内容，另一方面启示学校心理健康教育中既要重视引导学生形成良好的价值观，也要重视良好人际关系对关系自尊的积极影响。

The Effect of Materialism on Relational Self-esteem: The Chain Mediating Effects of Perceived Social Support and Relatedness Need Satisfaction

Lei Yue¹, Jiake Wu¹, Xingzhe Wu¹, Xinyang Xu¹, Huiying Deng¹, Jing Li¹

¹ School of Psychology, Central China Normal University, Wuhan

Abstract: Relational self-esteem is individual's perceived self-worth in their relationships with important others. Previous studies have revealed the unique role of relational self-esteem in psychological well-being and terror management. China stresses relationships and Chinese people include important others in their self-concept, this suggests that relational self-esteem may be a more important psychological variable for the Chinese. Materialism is a value that emphasizes the importance individuals attach to material wealth. Previous scholars have found the negative impact of materialism on individual interpersonal relationships and satisfaction, but no research has explored the impact of materialism on relational self-esteem. This study explored the negative effect of materialism on relational self-esteem, and the chain mediating roles of perceived social support and relatedness need satisfaction. Totally 419 university students completed online survey and they were assessed with materialism value scale, perceived social support, relatedness need subscale and relational self-esteem scale. SPSS 25.0 and Process macro were used to analyze data. Correlation analysis showed that: (1) Materialism was negatively correlated with relational self-esteem, perceived social support, and relatedness need satisfaction; (2) The relationship between social support, relatedness need satisfaction and relational self-esteem are all significantly positive. Mediation analysis showed that : (1) perceived social support mediated the relationship between materialism and relational self-esteem; (2) Relatedness need satisfaction mediated the relationship between materialism and relational self-esteem; (3) The chain mediating effect of perceived social support and relatedness need satisfaction was supported. On the one hand, this study first discusses materialism's influence on relational self-esteem and explores its internal mechanism, enriches the research contents of relevant variables. On the other hand, this study suggests school mental health education should not only attach importance to guide students to form good values, but also pay attention to good interpersonal relationships that have positively influenced on relational self-esteem.

Keywords: materialism, relational self-esteem, perceived social support, relatedness need satisfaction

羞怯的认知神经机制

张思敏¹ 王允宏¹ 赛李阳² 丁雪辰¹（通讯作者）

¹ 上海师范大学心理学系，上海，200234，dingxuechen_psy@163.com

² 杭州师范大学心理科学研究院，杭州，311121

摘要 羞怯是个体在陌生社会情境或感知社会评价条件下会表现出恐惧和抑制的一种特质，其与诸多适应问题相关，会影响个体的日常生活。因此，探讨羞怯的认知神经机制可以为其更易产生适应问题提供神经生理解释，并能为之对应的干预措施提供科学依据，具有重要的理论与实践意义。本研究通过梳理羞怯领域采用认知神经科学技术的相关成果，如脑电图、功能性磁共振成像、弥散张量成像等，发现羞怯个体在注意、情绪体验、情绪调节上均与非羞怯个体存在差异。具体而言，羞怯的认知神经机制涉及的脑区包含额叶、顶叶、颞叶、边缘系统等脑区，在结构、功能连接、不同任务的激活状态中表现出不同：面对社会评价时，羞怯个体额叶和顶叶表现出注意警觉；在面对情绪威胁时，羞怯个体各脑区既存在对于情绪威胁的过度注意，

也存在警觉过后对于威胁的回避；羞怯个体对负向情绪体验更敏感，且拥有更强的情绪体验，表现为静息态右额脑电偏侧化，脑区更高的灰质密度和任务态时脑区更明显的激活程度；羞怯个体的情绪调节能力较差，表现为边缘系统白质纤维术结构损伤、脑区不适应的功能连接。未来研究仍需从羞怯亚类型、羞怯的个体差异与文化差异，增加多模态数据分析方法进一步深入全面揭示羞怯的认知神经机制。

The Cognitive and Neural Mechanisms of Shyness

ZHANG Simin¹, WANG Yunhong¹, SAI Liyang², DING Xuechen¹

1.Department of Psychology, Shanghai Normal University, Shanghai, 200233

2.Institute of Psychological Sciences, Hangzhou Normal University, Hangzhou, 311121

Abstract: Shyness is a trait that individuals will show fear and inhibition in unfamiliar social situations or perceived social evaluation conditions, which may bring about many adjustment problems and affect individual's normal life. Therefore, exploring the cognitive and neural mechanisms of shyness has important theoretical and practical significance, which can help explain the reason why shy individuals generate adjustment problems more easily and provide scientific basis for corresponding interventions. This study sorts out the related achievements of cognitive neuroscience technology in the field of shyness, such as electroencephalogram, functional magnetic resonance imaging, diffusion tensor imaging, and finds that there are differences between shy individuals and non-shy individuals in attention, emotional experience, and emotional regulation. Specifically, the brain areas involved in the cognitive and neural mechanism of shyness include the frontal lobe, parietal lobe, temporal lobe, limbic system and other brain areas, which show differences in structure, functional connection, and activation of different tasks: When faced with social evaluation, the frontal and parietal lobe of the shy individuals showed attentional alertness. When faced with emotional threats, brain areas of the shy individuals showed either excessive attention or avoidance of threats after being alert; the shy individuals are inclined to negative Emotional experience and have stronger emotional experience, manifested as the lateralization of the right frontal in the resting state, higher gray matter density in the brain area and more obvious activation of the brain area in the task state; The emotional adjustment ability of shy individuals is poor, which is manifested by the structural damage of the limbic system white matter fibers and the unsuitable functional connection of the brain area. Future researches need to use multi-modal data analysis methods to further reveal the cognitive and neural mechanism of shyness from the subtypes of shyness, individual differences and cultural differences.

特质敬畏与群际亲社会行为的关系：自我超越和全人类认同的作用

王梦云 何宁（通讯作者）

陕西师范大学心理学院，西安，710062，通讯作者 E-mail: hening@snnu.edu.cn

摘要 目的：近年来，敬畏作为一种关于道德和审美的情绪体验正受到心理学界的广泛关注。敬畏是指当我们面对那些广阔的、浩大的以及超越我们当前理解范围的事物时产生的混合了困惑、惊奇、钦佩、服从等多种感觉的复杂情绪体验。它通常被划分为状态性和特质性两类，其中特质敬畏强调敬畏的个体差异性，指个体易于产生和体验敬畏的一种总体倾向。以往研究已经从人际层面广泛探讨了特质敬畏的亲社会后果，如更高的捐助意愿、更多的合作行为及亲环境倾向等。然而，考虑到当今全球化进程的加快和群际交互作用的日益增强，从群际亲社会行为角度去探讨其与特质敬畏之间的关系则相对匮乏，因此，有必要考察高特质敬畏者是否对外群体成员也表现出同样的亲社会行为，及其潜在的作用机制。本研究拟基于修正后的“小我”假设，旨在考察特质敬畏对大学生群际亲社会行为的影响，以及自我超越和全人类认同在其中的作用。**方法：**采用问卷法，方便选取 648 名在校大学生，使其完成有关人口学变量、特质敬畏、自我超越、全人类认同及群际亲社会行为的调查。**结果：**在控制个体的性别、年龄和家庭社会经济地位之后：（1）特质敬畏能够正向预测群际亲社会行为；（2）自我超越和全人类认同在特质敬畏和群际亲社会行为之间分别发挥中介作用；（3）

自我超越和全人类认同能够在特质敬畏和群际亲社会行为之间起链式中介作用。**结论：**敬畏的亲社会效应除注意力转移（从自我关注转向他人）外，还包含一个人对自我及自我动机更深层次的理解。常怀敬畏之心能促进个体自我转变（如自我超越），并可能认同自己是全人类群体中的一员，这有助于对外群体成员表现出更多的亲社会行为。这些发现不仅丰富了特质敬畏的亲社会效应的解释视角，而且有益于群际关系的和谐。

Dispositional Awe and Intergroup prosocial behavior among Chinese Adolescents: The Mediating Roles of Self-transcendence and Identity with All Humanity

Mengyun Wang, Ning He

School of Psychology, Shaanxi Normal University, Xian, 710062

Abstract: Objective: Recently, awe as a kind of moral and aesthetic emotional experience has been gradually concerned by psychological researchers. Awe is defined as a complex emotional experience of confusion, surprise, admiration, and obedience that arises when we are faced with something vast, vast and beyond our current understanding. Awe is usually classified as either a state or a trait. Among them, dispositional awe emphasizes the individual difference of awe, which refers to a general tendency of individuals to produce and experience awe. Previous studies have widely examined the prosocial consequences of dispositional awe at the interpersonal level, such as higher donate inclination, more cooperative behavior, and pro-environment tendencies. However, considering the accelerated process of globalization and the increasing interaction of intergroup, the relationship between dispositional awe and intergroup prosocial behavior is relatively lacking. Therefore, it is necessary to investigate whether people with high dispositional awe show the same prosocial behavior for outgroup members, as well as potential mechanisms. Based on the modified “small-self hypothesis”, we aim to test the influence of dispositional awe on intergroup prosocial behavior among college students, and the role of self-transcendence and identity with all humanity. **Methods:** A total of 648 college students were recruited randomly to participate this survey voluntarily. They provided self-reported data on demographic variables, dispositional awe, self-transcendence, identity with all humanity, and intergroup prosocial behavior scale. **Results:** After controlling for gender, age, and family socioeconomic status, (1) dispositional awe was positively predicted intergroup prosocial behavior; (2) Self-transcendence and identity with all humanity mediated the relation between dispositional awe and intergroup prosocial behavior, respectively; (3) Self-transcendence and identity with all humanity sequential mediated this association between dispositional awe and intergroup prosocial behavior. **Conclusion:** The prosocial effects of awe include not only a shift in attention (from focusing on myself to others), but also a deeper understanding of one's self and self-motivation. Constant awe can promote one's self-transformation (e.g., self-transcendence), and may identify themselves as a member of all humanity, which induces more prosocial behavior for outgroup members. These findings not only enrich the explanatory perspectives of the prosocial effects of awe, but also benefit the harmony of intergroup relations.

Keywords: Dispositional awe, Intergroup prosocial behavior, Self-transcendence, Identity with All Humanity, College students

向死而生——死亡反省对存在幸福感的影响：一个链式中介模型

岳磊¹ 谢信捷¹ 李静¹（通讯作者） 胡祥恩¹²

1 华中师范大学心理学院，中国武汉，430079, jinglee@ccnu.edu.cn

2 孟菲斯大学心理学系，美国孟菲斯，38152

摘要 新冠肺炎爆发以来，全世界都正在经历一场生死考验。疫情对个体生命的威胁除了引发个体强烈的死亡焦虑之外，随着时间的推移，也会引发个体对于死亡的反省。死亡反省是个体对于死亡进行思考的认知

过程，它侧重于死亡的积极方面并且包含了实现其积极方面的具体行为意图。已有少量研究揭示了死亡反省的积极效应，这其中包括幸福感。但是以往研究并未探讨与死亡和生命密切相关的存在幸福感与死亡反省的关系。存在幸福感是个体对生命、生活所产生的意义感、价值感和满意度。本研究拟探讨死亡反省对存在幸福感的影响以及敬畏和关系自尊的链式中介作用。使用死亡反省量表、敬畏情绪量表、关系自尊量表和存在幸福感分量表、对 675 名大学生进行调查，使用 SPSS25.0 和 Process 插件对数据进行处理和分析。相关分析表明：死亡反省、敬畏、关系自尊、存在幸福感两两之间显著正相关。中介分析表明：（1）敬畏在死亡反省和存在幸福感之间起中介作用，中介效应占总效应的 32%；（2）关系自尊在死亡反省和存在幸福感之间起中介作用，中介占总效应的 19%；（3）敬畏和关系自尊的链式中介作用成立，中介效应占总效应的 29%。本研究不仅在理论上丰富了死亡反省积极效应的研究内容，对于后疫情时期引导民众心理重建和恢复也具有重要的实践价值。

关键词 死亡反省，敬畏，关系自尊，存在幸福感

Being towards Death——The Influence of Death Reflection on Existential Well-being: A Chain Mediating Model

Lei Yue¹, Xinjie Xie¹, Jing Li¹, Xiangen Hu^{1,2}

1 School of Psychology, Central China Normal University, Wuhan, China

2 Department of Psychology, The University of Memphis, Memphis, American

Abstract: Since the outbreak of COVID-19, the world has been going through a test of life and death. The threat of COVID-19 outbreak to individuals not only caused intense death anxiety, but also caused reflection on death over time. Death reflection refers to an individual's deliberate cognitive processing of mortality. It focuses on the positive aspects of death and encompasses concrete behavioral intentions to realize such positive aspects. A few studies have shown the positive effects of death reflection, including well-being. However, previous studies have not explored the relationship between death reflection and existential well-being which is closely related to death and life. Existential well-being is the sense of meaning, value and satisfaction of individual life. The purpose of this study was to explore the effects of death reflection on existential well-being and the chain mediating role of awe and relational self-esteem. A total of 675 university students completed death reflection scale, awe scale, relational self-esteem scale and existential well-being subscale. SPSS 25.0 and Process macro were used to process and analyze the data. Correlation analysis showed that death reflection, awe, relational self-esteem and existential well-being were positively correlated with each other. Mediation analysis showed that: (1) Awe mediated the relationship between death reflection and existential well-being, accounting for 32% of the total effect; (2) Relational self-esteem played a mediating role between death reflection and existential well-being, accounting for 19% of the total effect; (3) The chain mediating effect of awe and relational self-esteem was supported, and the mediating effect accounted for 29% of the total effect. This study not only enriches the research content of the positive effects of death reflection in theory, but also has important practical value for guiding people's psychological reconstruction and recovery in the post-epidemic period.

Keywords: death reflection, awe, relational self-esteem, existential well-being

刷新训练对自动化飞行过程中认知锁定的改善

朱荣娟^{1,2} 游旭群^{1,2} (通讯作者)

1 陕西师范大学心理学院，西安，710062

2 陕西省行为与认知重点实验室，西安，710062, youxuqun@snnu.edu.cn

摘要 认知锁定是指在连续性自动化故障过程中，由于第一个故障出现后寻找线索对其进行判断与处理，

导致对第二个和后续若干个连续性自动化故障的反应延迟现象。认知锁定导致飞行员不能及时对连续性自动化故障进行分析与处理，从而对飞行安全构成威胁。在自动化飞行过程中，飞行员需要监控仪表状态、警报声音以及注意空管指令等，这种多任务状态容易导致认知狭窄。研究表明，具有较高工作记忆能力的飞行员能够最大限度避免认知狭窄。那么，飞行员的工作记忆能力提升能否避免认知锁定？刷新是工作记忆执行功能的重要成分之一，能够实现信息的不断更新与处理，且与高级认知功能之间的联系最为紧密。刷新训练不仅能够提高工作记忆能力，其提升效果还能够迁移到其它认知功能之中。因此，本研究旨在探讨工作记忆刷新功能对自动化飞行过程中认知锁定的影响以及刷新训练能否改善认知锁定。实验一探讨刷新能力高低能否预测认知锁定。被试在实验过程中分别执行 n-back 任务和自动化仪表故障监测任务。实验呈现动态的主仪表显示和飞机引擎仪表显示，要求被试判断主仪表显示和引擎仪表显示是否出现故障、按下出现故障的仪表编号以及按键做出故障处理。结果表明，与刷新能力较低的个体相比，刷新能力较高的个体对连续性自动化故障监测和处理的准确性较高和速度较快，且出现认知锁定的频次较少。实验二探讨刷新训练能否改善认知锁定。训练组进行为期 2 周的自适应视听双 n-back，控制组进行非自适应单 n-back 任务，采集两组被试训练前后的刷新能力和自动化故障反应处理能力。预测实验结果为，刷新训练提升了工作记忆能力，其提升效果能够迁移到自动化故障处理能力之中，从而减少认知锁定现象的出现。

关键词 认知锁定，连续性自动化故障，工作记忆，刷新功能，训练

Updating training reduce cognitive lock-up during the automated flying

Rongjuan Zhu, Xuqun You

Key laboratory for Behavior and Cognitive Neuroscience of Shaanxi Province, School of
Psychology, Shaanxi Normal University, Xi'an, 710062, China

Abstract: Cognitive lock-up refers to human sometimes continue thinking about the first automation failure and delays response to the second and consecutive failures. Pilots cannot analyze and deal with consecutive automation failures in time because of cognitive lock-up, which poses a threat to flight safety. Pilots always need monitor instrument, alert and pay attention to air-traffic controllers' command, which induce cognitive tunneling. Studies indicated that pilots with higher working memory capacity can minimize cognitive tunneling. Thus, it is unknown whether improving working memory can avoid cognitive lock-up. Updating is an important part of executive function, which is associated with higher cognitive ability and have a key role in constant updating and processing of information. Updating training not only improve working memory, but also transfer to other cognitive functions. Therefore, the current study aimed to investigate whether updating ability influence cognitive lock-up and updating training can reduce cognitive lock-up. Experiment 1 explored whether updating ability can predict cognitive lock-up. Participants were required to perform n-back task and consecutive automation failures monitoring task. The dynamic primary flight display and engine warning display were presented on the computer, participants need to identify failures, press the number of failures and deal with failures as soon as possible. The results showed that the accuracy of identifying consecutive automation failures was higher and the speed of deal with consecutive automation failures was faster in participants with higher updating ability relative to lower performers. The frequency of cognitive lock-up was reduced in higher performers. Experiment 2 explored whether updating training can reduce cognitive lock-up. Participants were divided into adaptive training group and control group, respectively. The training group performed dual n-back tasks lasted for two weeks and control group performed non-adaptive single n-back tasks. The updating capacity and ability of identifying consecutive automation failures were measured before and after updating training. The results predict that updating training can not only improve working memory, but also enhance the ability of identifying and deal with consecutive automation failures. Besides, updating training can reduce cognitive lock-up.

Keywords: cognitive lock-up, consecutive automation failures, working memory, updating function, training

疫情下影响航空安全的飞行员心理因素——基于 ASRS 的文本分析

林靖康¹ 唐睿翼¹ 游旭群¹ (通讯作者)

¹ 陕西师范大学心理学院, 西安, 710062, linjingkang07@163.com

摘要 新冠疫情持续所带来的不确定性和低预测性, 不仅让全球航空业在经济上遭受打击, 还有可能对航空安全造成严重的负面影响。航空安全是一个复杂的系统, 飞行员的心理因素正在其中扮演越来越重要的角色, 而疫情给航空业带来的限制和变数, 如相关政策多变、疫情处置方式不统一、飞行员飞行频率不确定等, 在一定程度上加剧了飞行员的心理波动, 导致飞行员的心理因素进一步威胁到航空安全, 增加了航空不安全事件的发生概率。因此, 深入分析与疫情相关的航空不安全事件, 挖掘与飞行员相关且影响事件发生概率的心理因素, 探讨飞行员心理因素与不安全事件严重程度的关系, 对在重大公共卫生事件背景下提升我国航空安全水平、减少航空领域的不安全事件有重大意义。本研究对美国航空安全报告系统 (ASRS) 中关于“COVID-19”的报告进行文本分析, 报告的时间选取范围为 2020 年 3 月 1 日-2020 年 12 月 31 日, 采用人因分析和分类系统 (HFACS) 对事件原因进行定性分析。结果发现: (1) 共筛选出与新冠疫情明显相关的不安全事件 199 起, 其中, 6 月发生的不安全事件最多, 占总数的 19%, 6 月后的事件发生数呈波动下降趋势并与美国确诊趋势呈大致负相关; (2) 199 起事件中, 183 起与飞行员心理因素相关 (91.96%), 发生率排前五的心理因素为: 过度自信 (48.74%)、困惑 (23.12%)、分心 (16.68%)、期望偏差 (14.07%) 与注意力不集中 (10.55%); (3) “精神疲惫 (倦怠)、任务过饱和/欠饱和、生活压力过大”这三种心理因素倾向于诱发更严重的不安全事件; (4) “任务过饱和/欠饱和”发生在通用航空飞行员上的概率显著高于其他类型飞行员, 而民航航线客机和大型货机的飞行员更容易产生精神疲惫 (倦怠)。基于此, 本研究认为及时调整飞行员在后疫情时期的心理稳态对减少飞行员的不安全行为、降低事故发生率具有重要意义, 未来研究可以进一步探讨社会公共因素对飞行员的安全态度及安全行为产生的影响, 以及飞行情境、工作特征和任务特性影响飞行人员人格特征的内部机制。

关键词 航空安全, 疫情, 飞行员心理因素

Psychological factors of pilots affecting aviation safety under COVID-19: text analysis based on ASRS

Tang Ruiyi¹, Lin Jingkang¹, You xuqun¹

Shaanxi Normal University, Xi'an

Abstract: The uncertainty and low predictability brought by the COVID-19 continue to not only cause economic damage to the global aviation industry, but also have a serious negative impact on aviation safety. Aviation safety is a complex system, in which the psychological factors of pilots are playing a more and more important role. The restrictions and variables brought by the epidemic to the aviation industry, such as changeable relevant policies, inconsistent treatment methods of the epidemic and uncertain flight frequency of pilots, have exacerbated the psychological fluctuations of pilots to a certain extent. The psychological factors of pilots further threaten aviation safety and increase the probability of aviation unsafe events. Therefore, in-depth analysis of aviation unsafe events related to the epidemic situation, mining the psychological factors related to pilots and affecting the probability of events, and exploring the relationship between pilots' psychological factors and the severity of unsafe events are of great significance to improve China's aviation safety level and reduce unsafe events in the aviation field under the background of major public health events. This study analyzes the text of the report on "COVID-19" in American aviation safety reporting system (ASRS). The time range of the report is from March 1, 2020 to December 31, 2020. The human factor analysis and classification system (HFACS) is used to qualitatively analyze the cause of the event. The results were as follows: (1) 199 unsafe incidents which were significantly associated with COVID-19 were screened out. Among them, the most unsafe incidents occurred in June, accounting for 19% of the total, and the number of events after June showed a downward trend and was negatively correlated with the trend of diagnosis in the United States. (2) Among the 199 incidents, 183 were related to pilots' psychological factors (91.96%). The top

five psychological factors were Overconfidence (48.74%), Confusion (23.12%), Distraction (16.68%), Inaccurate expectation (14.07%) and Not paying attention (10.55%). (3) "Mental exhausted (burnout), Task over-saturation / under-saturation and Life stress" tend to induce more serious unsafe events. (4) The probability of "Task over-saturation / under-saturation" in general aviation pilots is significantly higher than that in other types of pilots, while pilots of civil aviation airliners and large cargo aircraft are more prone to Mental exhausted (burnout). Based on this, this study believes that timely adjustment of pilots' psychological homeostasis in the post epidemic period is of great significance to reduce pilots' unsafe behavior and reduce the incidence of accidents. Future research can further explore the impact of social public factors on pilots' safety attitude and safety behavior, as well as the internal mechanism of flight situation, work characteristics and task characteristics affecting pilots' personality characteristics.

摘要 态势感知是人机环境系统中最为核心的概念之一, 对个体或群体的决策与行动具有重要价值。在航空航天心理学领域, 态势感知是维护安全的主要因素, 长期受到国内外的广泛关注。因此, 为了进一步了解态势感知在国外的最新进展, 以探讨未来的研究方向, 追溯了 1953 年至今于 ISI Web of Science 数据库中收录的 19001 篇文献, 通过描述性分析发现国外态势感知的文章数量截至 2020 年为止, 呈逐年递增的趋势, 研究方向主要涉及工程学、计算机科学和心理学, 而教育学、经济学、环境学、社会学等内容在态势感知的总体分布中平均低于 10% 的覆盖率。基于此, 以“Psychology”为筛选标准, 对态势感知的文献进行优化细分, 得到 1980 篇原始数据, 通过 CiteSpace 绘制态势感知心理学研究的结构框架图与发展进程谱能够获得与态势感知相关的高学术影响力期刊、被引作者、作者、机构与经典文献, 此外, 还描绘了不同时期的热点问题、研究前沿和发展趋势。研究发现, 在期刊共被引分析中, Human Factors 是被引频次最高的期刊, Behavioral Sciences 是中心性最高的期刊, 而被引频次与中心性均较高的是 Journal of Personality and Social Psychology 和 Psychological Review, 其期刊定位涵盖了神经科学、认知科学、行为生物学、行为遗传学、人因学、人格社会心理学和理论心理学等诸多领域; 在作者共被引分析中, Endsley MR 的被引频次最高, Bassili JN 的中心性最高, 而 Bandura A 和 Norman DA 的两个指标均位于前列; 此外, 在作者与机构合作分析中, 未发现作者群的存在, 虽有一部分的合作团队, 但都仅限于两人交流, 且不存在具有中心性的作者, 合作力量十分薄弱, 同样, 在机构合作情况中仅有 Radboud University Nijmegen 与 University of Twente 的合作最为紧密, 是中心性最高的机构, 许多机构节点只具有两两合作的关系; 在文献共被引分析中缺乏具有显著影响力的文献; 而在关键词共现和聚类分析中, 聚类结构显著且令人信服, 该领域围绕 Consciousness、Mindfulness、Interoception、Accuracy、Attention、Vehicle automation、Driving、Self-regulation、Situation awareness、Teamwork、Anxiety 等 11 个主题展开, 其中, awareness 和 attention 是研究热点, adolescent 和 perception 的中心性显著。因此, 未来研究需要进一步夯实理论, 加强合作, 提高文献影响力并关注行为研究与其他重要主题。

关键词 态势感知, CiteSpace, 信息可视化, 知识图谱, 文献计量分析

Current situation and development trend of situation awareness in psychology abroad: knowledge graph analysis based on CiteSpace

Tang Ruiyi¹, Lin Jing kang¹, You xuqun¹

Shaanxi Normal University, Xi'an.

Abstract: Situational awareness is one of the core concepts in man-machine environment system. It is of great value to individual or group decision-making and action. In the field of aerospace psychology, situational awareness is the main factor to maintain security, which has been widely concerned at home and abroad for a long time. Therefore, in

order to further analyze the latest research progress of situational awareness abroad, so as to explore the future research direction. This study traces 19001 literatures collected in ISI Web of Science database from 1953 to now. Through descriptive analysis, it is found that the number of foreign situational awareness articles is increasing year by year until 2020. The research direction of situational awareness mainly involves engineering, computer science and psychology, while the coverage of pedagogy, economics, environmental science, sociology and so on in the overall distribution of situational awareness is less than 10%. Based on this, the literature of situational awareness is optimized and subdivided with "psychology" as the screening standard. Finally, 1980 original data were obtained. By drawing the structural framework map and development process spectrum of situational awareness in the field of psychological research through CiteSpace, we can obtain high academic influence journals, cited authors, authors, institutions and classic literature related to situational awareness. In addition, it also describes the hot issues, research frontiers and development trends in different periods. It is found that in the analysis of journal co-citation, "Human Factors" is the journal with the highest citation frequency, "Behavioral Sciences" is the journal with the highest centrality, and "Journal of Personality and Social Psychology" and "Psychological Review" have high citation frequency and centrality. The orientation of these journals covers many fields, such as neuroscience, cognitive science, behavioral biology, behavioral genetics, human factors, personality social psychology, theoretical psychology and so on. In the analysis of author co-citation, Endsley MR has the highest citation frequency, Bassili JN has the highest centrality, and Bandura A and Norman DA have the highest citation frequency and centrality. In addition, in the analysis of author cooperation network, no author group is found. Although there are some cooperation teams, they are only limited to the communication between two people, and there are no central authors, so the cooperation force is very weak. In the analysis of institutional cooperation network, only Radboud University Nijmegen cooperates most closely with the University of Twente. Radboud University Nijmegen is the most central organization, and many institutional nodes only have two-way cooperation relationship. In the analysis of literature co-citation, there is a lack of literature with significant influence. Finally, in the analysis of keyword co-occurrence and cluster analysis, the cluster structure is significant, and the result is convincing. According to the analysis of keyword co-occurrence and cluster analysis, this field focuses on 11 topics, such as consciousness, mindfulness, interaction, accuracy, attention, vehicle automation, driving, self regulation, situation awareness, teamwork and anxiety. Among them, awareness and attention are research hotspots, and the centrality of adolescence and perception is significant. Therefore, future research needs to further consolidate the theory, strengthen cooperation, improve the influence of literature and authors, and pay more attention to behavioral research and other important topics.

Keywords: Situation awareness, CiteSpace, Information visualization, knowledge graph, Bibliometric analysis

进度条中的锚定信息与加载动画对于等待时间知觉与满意度的影响

樊雯沁¹ 李瑛¹ (通讯作者)

¹ 陕西师范大学心理学院, 西安, 710062, liying@snnu.edu.cn

摘要 目的: 对于用户来说, 时间是宝贵资源, 研究表明用户在网络中的等待时间与他们的满意度呈反比, 而在等待过程中提供进度条能让等待过程更加合理化。因此, 本研究通过两个实验探索进度条中的锚定信息与加载动画对用户时间知觉与满意度的影响。方法: 实验一考察进度条中加入的等待时间信息对 30 名被试的等待时间估计与用户满意度的影响。其中等待时间信息有两个水平, 低锚: 比实际加载时间短 2 秒, 高锚: 比实际加载时间长 2 秒。要求被试通过按两次空格键复制等待时间, 并评估对网页加载的满意度 (7 点评分量表)。实验二根据注意闸门理论: 等待中的填充物内容越丰富越吸引用户注意力, 在进度条中引入加载动画, 考察加载动画及动画与网页的相关性对 30 名被试的时间估计、用户满意度及用户偏好的影响。加载动画有三个水平, 无动画, 无关动画和相关动画。预期结果: 在低锚信息下, 被试会低估他们的等待时间, 且满意度更高; 在高锚信息下, 被试会高估他们的等待时间, 且满意度更低。与单纯进度条相比, 有加载动画的进度条带来更低的时间知觉与更高的满意度。且相关性动画导致估计等待时间较短, 满意度较高。用户对加载界面的喜爱顺序从高到低为: 相关性动画、无关性动画、无动画。意义: 加载界面中适当提供低锚信息会

使用户低估进度条的加载时间，而界面中的加载动画不仅可以吸引用户注意力还能优化等待体验、改善对网站与品牌的态度。

关键词 时间知觉，用户体验，进度条，锚定效应

Influence of anchoring information and loading animation in progress bar on waiting time perception and satisfaction

Wenqin Fan¹, Ying Li¹

1 School of Psychology, Shaanxi Normal University, Xi'an, 710062, China

Abstract: Objective: For users, time is a precious resource. Research shows that the waiting time of users in the network is inversely proportional to their satisfaction, and providing a progress bar in the waiting process can make the waiting process more reasonable. Therefore, this study explores the influence of anchoring information in progress bar and loading animation on users' time perception and satisfaction through two experiments. Methods: In Experiment 1, the influence of waiting time information added in progress bar on waiting time estimation and user satisfaction of 30 participants was investigated. There are two levels of waiting time information, low anchor: 2 seconds shorter than the actual loading time, and high anchor: 2 seconds longer than the actual loading time. The participants were asked to copy the waiting time by pressing the space bar twice, and to evaluate their satisfaction with the web page loading (7 comments subscale). According to the attention gate theory: the richer the filler content in waiting, the more attractive the user's attention. The loading animation was introduced into the progress bar, and the influence of loading animation and the correlation between animation and web page on the time estimation, user satisfaction and user preference of 30 participants was investigated. There are three levels of loading animation: no animation, irrelevant animation and related animation. Expected results: under low anchor information, participants will underestimate their waiting time and have higher satisfaction; Under high anchor information, participants overestimate their waiting time, and their satisfaction is lower. Compared with the simple progress bar, the progress bar loaded with animation brings lower time perception and higher satisfaction. And correlation animation leads to short estimated waiting time and high satisfaction. The user's favorite order of loading interface from high to low is: correlation animation, irrelevant animation and no animation. Meaning: Providing low anchor information in the loading interface will make users underestimate the loading time of the progress bar, while loading animation in the interface can not only attract users' attention, but also optimize the waiting experience and improve their attitude towards websites and brands.

Keywords: time perception, user experience, progress bar, anchoring effect

航线飞行员的风险倾向对事故卷入的影响：飞行经验的调节作用

曾筱昱^{1,2} 崔佳雨^{1,2} 秦奎元^{1,2} 游旭群^{1,2} 李苑^{1,2}（通讯作者）

1 陕西师范大学心理学院，西安，710062

通讯作者：李苑 E-mail: liyuan001@snnu.edu.cn

摘要 风险心理是航线飞行员进行风险管理的基础，能显著影响其安全驾驶行为。风险倾向是个体风险心理水平高低的程度，是个体对冒险行为的意愿或倾向，包括风险偏好倾向（容易冒险或倾向于采取冒险行动）和风险回避倾向（习惯于保守或倾向于采取保守行为）。本研究要探究航线飞行员的风险倾向及其对事故卷入的影响，以及飞行经验的调节作用。风险容忍是一种心理特质，指个体为了实现某种特定目标而情愿接受风险的数量和程度。风险知觉是情境风险意识的一种，是指个体对外部环境潜在危险的主观认知和评价，以及相应的准备状态，受个体特征和情境特征的影响。危险态度是个体对与危险相关的他人、情境及事件反应的一种特定倾向，无论是否表现出来都会影响个体的行为和思维方式。基于此，本研究抽取210名某航空公司飞行员，从风险容忍、风险知觉和危险态度3个方面来探究航线飞行员的风险心理倾向，本研究同时测量其飞

行经验和事故卷入程度。结果表明：航线飞行员的风险心理包括风险回避、合理冒险、风险偏好三种倾向。另外，研究发现航线飞行员的风险倾向与事故卷入之间存在相关，风险回避型的飞行员事故卷入较低；风险偏好型的飞行员事故卷入较高，即心理风险倾向越高，事故卷入越高，而飞行经验在其中起到调节作用。

The effect of airline pilots' risk propensity on accident involvement: the moderating role of flight experience

Xiaoyu, Zeng^{1,2}, Jiayu, Cui^{1,2}, Kuiyuan, Qin^{1,2}, Xuqun, You^{1,2}, Yuan, Li^{1,2}

1 Department of Psychology, Shaanxi Normal University, Xi'an, 710062

2 Key Laboratory for Behavior and Cognitive Neuroscience of Shaanxi Province, Xi'an, 710062

Abstract: Risk psychology is the basis of airline pilots' risk management, which can significantly affect their safe driving behavior. Risk propensity refers to the level of individual risk psychology and the willingness or inclination of individuals to take risks, including risk preference propensity (easy to take risks or tend to take risks) and risk avoidance propensity (used to conservative or tend to take conservative behaviors). This study aims to explore the risk propensity of airline pilots and its impact on accident involvement, as well as the moderating role of flight experience. Risk tolerance is a psychological trait that refers to the amount and degree of risk an individual is willing to accept in order to achieve a specific goal. Risk perception is a kind of situational risk awareness, which refers to an individual's subjective cognition and evaluation of potential dangers in the external environment, as well as the corresponding preparation state, which is affected by individual characteristics and situational characteristics. Dangerous attitude is a specific tendency of individuals to react to other people, situations and events related to danger. Whether it is displayed or not, it will affect individuals' behavior and way of thinking. Based on this, this study selected 210 pilots of an airline company to explore the risk psychological propensity of airline pilots from three aspects of risk tolerance, risk perception and danger attitude. Meanwhile, this study measured their flight experience and accident involvement. The results show that the risk psychology of airline pilots includes risk avoidance, reasonable risk taking and risk preference. In addition, the study found that there is a correlation between the risk propensity of airline pilots and accident involvement. The pilots with risk aversion are less involved in accidents. The pilots with risk preference have higher accident involvement, that is, the higher the risk tendency, the higher the accident involvement, and the flight experience plays a moderating role.

Keywords: risk propensity, accident involvement, flight experience

工作记忆和飞行技能对飞行员情境意识和心理负荷的影响

崔佳雨¹ 曾筱昱¹ 秦奎元¹ 李苑¹ (通讯作者)

1 陕西师范大学心理学院，西安，710062, liyuan001@snnu.edu.cn

摘要 情境意识 (Situation Awareness, SA) 是指对环境要素和事件在时间或空间上的感知，对其意义的理解，以及对其未来状态的预测。对于飞行员而言，情境意识意味着对于飞机位置、飞行姿态、飞行条件等可能影响飞行安全的其他因素（如地形等）之间关系的心理印象，该能力直接影响着飞行安全。本研究探讨了飞行员个体差异对其情境意识和心理负荷的影响。研究目的有以下两个：首先检验工作记忆、飞行技能在预测飞行员情境意识及心理负荷中的作用，其次探讨心理负荷的增加是否会影响其情境意识能力。方法：选取30名航线飞行员在飞行模拟机中完成了一个带有分心任务的飞行场景任务，并分别使用自动操作广度任务 (Automated Operation Span tasks, AOSpan)、飞行时间等指标来测量工作记忆广度和飞行技能；通过情境意识全面评估法 (situation awareness global assessment, SAGAT) 来测量情境意识水平；在任务后采用美国航空航天局任务负荷指数 (NASA-TLX)，从6个维度测量其心理负荷。结果表明，飞行员情境意识水平可以通过工作记忆和飞行技能水平来预测，且工作记忆广度与飞行技能与心理负荷呈负相关，同时心理负荷对于不同技能水平飞行员情境意识有显著影响。上述发现对于飞行员选拔与训练，包括人机系统中自动化的交互

设计以减少飞行事故，提高飞行效率都有一定启示。

Effects of working memory and flight skill on situational awareness and psychological load of pilots

Jiayu Cui¹, Xiaoyu Zeng¹, Kuiyuan Qin¹, Yuan Li¹

Shaanxi Normal University, Yanta District, Xi 'an, Shaanxi

Abstract: Situation Awareness (SA) refers to the perception of environmental elements and events in time or space, the understanding of their meaning, and the prediction of their future state. For pilots, situational awareness means the psychological impression of the relationship between aircraft position, flight attitude, flight conditions and other factors (such as terrain) that may affect flight safety. This ability directly affects flight safety. This study investigated the effects of individual differences on situational awareness and psychological load of pilots. The purpose of this study was to examine the role of working memory and flight skill in predicting pilots' situational awareness and mental load, and to explore whether the increase of mental load would affect pilots' situational awareness. Methods: 30 airline pilots were selected to complete a flight scene task with distraction in a flight simulator, and Automated Operation Span tasks (AOSPAN) and flight time were used to measure the working memory Span and flight skill respectively. Situation Awareness Global Assessment (SAGAT) was used to measure the level of situation awareness. After the mission, NASA Task Load Index (NASA-TLX) was used to measure the mental load from 6 dimensions. Results show that the pilot situational awareness level by working memory and flight skill levels to predict, and working memory span and negatively correlated with flying skills and mental load, mental load for different skill levels at the same time the pilot situational awareness has significant effect. These findings have some implications for pilot selection and training, including the automated interaction design in man-machine system to reduce flight accidents and improve flight efficiency.

车载信息系统控件显示位置对驾驶员分心程度的影响

孙洪力^{1,2} 刘馨泽^{1,2} 张伟斌^{1,2} 瞿炜娜^{1,2} (通讯作者)

1 中国科学院心理研究所，北京，100101

2 中国科学院大学心理学系，北京，10010，quwn@psych.ac.cn

摘 要 车载信息系统 (In-Vehicle Information System) 在为人们带来方便与快捷的同时，也带来了潜在的安全隐患。当驾驶员的注意力被车载信息系统显示的信息所吸引时，驾驶员的视线从路面偏离，增加了驾驶过程中发生事故的可能性。虽然很多车载信息系统增加了听觉输入输出的通道，但是显示屏的视觉显示依然是驾驶员获得信息的最重要方式。因此，有必要探究如何设计使驾驶员分心程度降低的车载信息系统显示屏，其中控件显示位置可能是一个重要的影响因素。实验分为竖屏和横屏两部分。在竖屏实验中，车载信息显示屏宽 26cm，高 51cm，安装在室内的实车模拟器中，采用 SCANeR™ 驾驶模拟系统。19 名被试 (10 男 9 女) 参加了实验，平均年龄为 32.65 岁，平均驾龄 5.47 年。被试在保持 60km/h 的速度行驶的同时，在显示屏上完成图标搜索任务。整个屏幕被分为 9 行 4 列，共 36 个区域，共有 36 个不同的图标随机出现在不同的区域中，被试需要根据语音指示，尽快找到目标图标，并做出反应。实验记录了被试的反应时和眼动指标。研究结果表明，被试首先从显示屏的左上角开始搜索，越往下方和右方被试搜索所需时间越长，同时搜索时间也会受到手臂遮挡的影响。在横屏实验中，显示屏宽 78cm，高 17cm，整个屏幕被分为 3 行 12 列，共 36 个区域，实验流程与竖屏实验相同。研究结果表明，被试优先搜索左侧半屏，在除去被方向盘遮挡的区域后，被试习惯于从上向下搜索。本实验的主要贡献是描述了驾驶员在较大车载显示屏上的视觉规律，为车载显示屏控件摆放位置的设计提供了依据。对驾驶员较为重要的信息应该放置于驾驶员优先搜索的位置，而相对而言重要性较低的信息应该放置于驾驶员较难搜索的位置。

Effects of in-vehicle display positioning on driver distraction

Hongli Sun^{1,2}, Xinze Liu^{1,2}, Weibin Zhang^{1,2}, Weina Qu^{*1,2}

1 Key Laboratory of Behavioral Science, Institute of Psychology, Chinese Academy of Sciences,
Beijing, China

2 Department of Psychology, University of Chinese Academy of Sciences, Beijing, China

Abstract: In-vehicle information systems (IVIS) is a double-edged sword. It provides drivers with abundant functions, such as car navigation and music player while increases the possibility of driver distraction at the same time. A visual-friendly IVIS interface should pay attention to the positioning of the elements and take drivers least time to search for information. The current study investigates the effects of positioning on driver distraction over large range of screens. A vertical screen was investigated in Experiment 1 and a horizontal screen in Experiment 2. In Experiment 1, nineteen drivers (10 men and 9 women) between the ages of 23 and 41 (mean=32.65, SD=5.41) participated in the study. All of them had possessed a driving license for at least one year (mean=5.47, SD=3.73) and drove a car regularly. The experiment was carried out in an in-door driving simulator consisting of a real car, computers, screens, and audio equipment, using the SCANeR™ Driving Simulator system (Figure 1). Three pads (HUAWEI M5, 26cm×17cm) were installed at the position of center console to make up an in-vehicle screen. A mouse that was connected to the pad over the bluetooth link was attached on the steer wheel in order to collect participants responses. Participants were requested to maintain the speed at approximately 60 km/h on highway while at the same time completed a searching task on the screen. There were 36 different icons on all of the screens. Each icon had a word “left” or “right” on it for response after locating the target icon. After hearing the instruct, participants started to search the target icon on the screens. The target icons varied in rows and columns and resulted in a 9×4 (9 rows, 4 columns) design. Response time, the length of time that participants take to fix at the target (Time-to-first-frame, TTFF) and fixation time on the target (Time-spentF) were recorded. A repeated measures MANOVA (9×4) showed that the response time, in line with TTFF, shows that it takes more effort to locate the targets in upper rows than in lower rows, more effort in right side of the screen than in the left. Blocking of driver’s arm or the gear lever can also affect the searching sequential order (see Figure 2). Fixation time spent on the target follow different rules that driver gaze at targets in Row 1 longer than other rows below. Experiment 2 was carried out in the same environment and procedure except changing the screen to a horizontal one. The target icons were placed randomly in 3 rows and 12 columns. Twenty-one drivers (14 men and 7 women) between the ages of 23 and 41 (mean=33.89, SD=4.85) participated in the study. The results show that the eccentricity from the normal line of sight and the block of steering wheel are two important factors. Drivers started searching from the first two rows and took longer time to gaze at the target icon at these rows. Besides, positions blocked by the steering wheel were more difficult to be seen. The main contribution of the current study is describing drivers’ visual behavior on large in-vehicle screens, which provides supplementary results about how display positions affect drivers’ visual demand. The results can be useful reference for IVIS interface design. To alleviate distraction of IVIS, those used most commonly during driving should be placed closest to the line of sight and those used infrequently can be placed further from the sight. Ergonomic tests should be conducted in advance to avoid blind spots. Besides, after comparing results with previous researches, it can be assumed that the expansion of the screen area didn’t change drivers’ visual behavior on the original area. The new added area may become the front rank or low rank of the searching sequence, but the searching sequential order of the original area do not change.

摘要 危险感知是驾驶员对交通情境中危险的识别、预测和反应的认知过程, 是与事故率密切相关的危险驾驶行为的重要预测指标。随着外卖服务行业的兴起, 与电动车相关的交通事故频发, 电动车驾驶员的行车速度对其危险感知的影响值得关注。方法: 本研究以电动车驾驶员为研究对象, 结合行为实验和近红外功能成像 (functional near-infrared spectroscopy, fNIRS) 技术, 探究不同行车速度对电动车驾驶员危险感知影响的行为表现和脑机制。研究选取 67 名经验电动车驾驶员, 采用单因素被试内设计, 被试要求完成一系列随机的危险感知任务。结果: 高速行驶时, 电动车驾驶员对危险的反应时显著缩短, 反应正确率显著下降, 同时漏报率显著升高; 在激活脑区上, 研究发现视觉联合皮层 (BA18、BA19) 和前额叶皮层 (BA9、BA10) 是危险感知任务的核心区域, 高速行驶时, 电动车驾驶员的视觉联合皮层激活度下降, 而前额叶皮层则表现出持续性的显著激活。结论: 在高速行驶时, 电动车驾驶员视野变窄, 对危险的关注度和敏感度降低, 危险识别能力下降; 紧急制动时间缩短, 大脑虽处于高度警惕状态, 但更易出现危险驾驶行为。电动车驾驶员危险感知的影响因素复杂, 研究将进一步分析人格特征、驾驶场景和速度对电动车驾驶员危险感知的交互影响及其潜在机制。

Abstract: Introduction: Hazard perception is a cognitive process of drivers' identification, prediction and response to hazards in traffic situations, and is an important predictor of risky driving behavior that is closely related to accident rates. With the rise of takeout service industry and frequent traffic accidents related to electric bicycles, the impact of electric bicycle drivers' driving speed on their hazard perception deserves attention. Methods: The study took electric bicycle drivers as research objects, combined with behavioral experiments and functional near-infrared spectroscopy (fNIRS) technology, to explore the behavioral performance and brain mechanism of the impact of different driving speed on electric bicycle drivers' hazard perception. In a within-subjects experimental design study, 67 experienced electric bicycle drivers completed a series of random hazard perception tasks. Results: When driving at high speed, the electric bicycle drivers' reaction time to hazard was significantly shortened, the accuracy rate of response decreased significantly, and the missing report rate increased significantly; Then it was found that the visual association cortex (BA18, ba19) and prefrontal cortex (BA9, BA10) were the core areas of hazard perception tasks, the activation of the visual association cortex of electric bicycle drivers decreased, while the prefrontal cortex showed continuous significant activation in condition of a high speed. Conclusions: When driving at high speed, the vision of electric bicycle drivers becomes narrow, their attention and sensitivity to hazard were reduced, ability to identify hazard was declined, the emergency braking time was shortened; Although their brain was in a high alert state, they were more prone to dangerous driving behavior. The influencing factors of electric bicycle driver's hazard perception are complex, the study will further analyze the interactive effects and potential mechanism of electric bicycle drivers' personality characteristics, driving scene and speed on hazard perception.

摘要 我们有时候需要激励他人冒险(如:为祖国独立而奋战),有时候又需要劝说他人不要冒险(如:参加恐怖活动)。有一种独特的说服方式——强调最坏可能的结果来说服他人冒险,曾在历史上被成功运用于鼓励他人拿生命去冒险,为什么这种说服方式能够成功?为了探究这一问题,我们基于齐当别决策理论做了三个实验,结果发现:(1)被试越容易相信强调最坏结果的说服性语言,就越倾向于认为最坏结果维度差异小于最好结果维度差异,进而更愿意选择不确定选项;(2)相比那些没有接触到说服性语言的被试,那些阅读或者想象并写出强调最坏结果的说服性语句的被试,更倾向于认为最坏结果维度差异小于最好结果维度差异,因此相比确定选项,被试更倾向于选择不确定选项。3)研究三进一步发现,说服性语言并没有影响被试对不确定性事件发生概率的感知,在控制额外变量的影响后,说服性语言对不确定选项的预测作用依然存在。本研究提示我们,面对恐怖主义时,呈现或者强调冒险带来的最坏结果并不能起到说服他们不要参加恐怖主义的作用,甚至可能适得其反。

Abstract: Historically, an unusual persuasion highlighting the worst possible outcome of an uncertain option has successfully persuaded people to risk death. To explore the effectiveness of this persuasion, guided by an “equate-to-differentiate” account, we conducted three studies and found that 1) participants who agreed more with the persuasion highlighting the worst possible outcome of the uncertain option reported a smaller relative difference between options on the worst-possible-outcome dimension and thus were more uncertainty seeking; 2) participants exposed to the persuasion highlighting the worst possible outcome estimated a smaller relative difference on the worst-possible-outcome dimension and thus were more uncertainty seeking than those who did not experience the persuasion; 3) exposing to the persuasion highlighting the worst possible outcome did not increase participants’ perceived winning probability for the uncertain option, and if participants agreed with the persuasion, they reported a smaller relative difference on the worst-possible-outcome dimension which predicted their uncertainty preference.

摘要 最优化决策是指个体在决策过程中精益求精，力求找到最佳的选择，获得最优的决策结果。已有研究表明，最优化决策可以视为一种类似特质的建构，也可以视为决策情境中的决策策略，这种决策风格的个体或采用此策略的个体会持续性地追求“最优解”，耗费更多的认知资源做出决策，但即使如此，他们对决策的满意度相对于满意型决策个体来说会更低，且更倾向于后悔自己的决策，体验到更多的决策后认知不协调。最优化决策还会影响到个体不同领域的决策，比如婚恋与择偶领域。目前国内对最优化决策研究起步不久，少有研究探讨最优化决策和青年单身的关系。因此，本研究旨在考察最优化决策与青年单身状态的关系，以及社会比较和羞怯在其中所起的作用，丰富相关领域内容。采用人口学资料问卷、Schwartz等人（2002）编制的最优化决策量表、王明姬（2006）修订的社会比较量表与Cheek和Buss编制的羞怯量表对402名青年进行了施测。研究结果表明：（1）在控制了性别、年龄后，最优化决策与青年单身状态呈显著负相关，与社会比较、羞怯呈显著正相关，社会比较、羞怯与青年单身状态呈显著负相关。（2）社会比较在最优化决策与青年单身状态之间具有部分中介作用。（3）羞怯在最优化决策与青年单身状态之间具有部分中介作用。（4）社会比较和羞怯在最优化决策与青年单身状态之间具有并行中介作用。上述发现证实了最优化决策在青年单身状态中的重要作用，显示了其发挥作用的多重中介路径，为渴望摆脱单身和处于恋爱婚姻困扰中的青年个体提供一些启示。

Optimal decision-making and youth single status: the mediating role of social comparison and shyness

XiaoLi Fu, YanLing Bi, Jia Wang

School of Psychology, Shaanxi Normal University, Xi'an, 710000

Abstract: Optimal decision-making refers to the individual striving for excellence in the decision-making process, striving to find the best choice and obtain the best decision result. Existing studies have shown that optimal decision-making can be regarded as a construction of similar characteristics, or as a decision-making strategy in a decision-making situation. Individuals with this decision-making style or individuals who adopt this strategy will continue to pursue the "optimal solution". They spend more cognitive resources to make decisions, but even so, their satisfaction with decision-making is lower than that of satisfied decision-making individuals, and they are more inclined to regret their decisions and experience more decisions. Later cognitive dissonance. Optimal decision-making will also affect individual decisions in different areas, such as marriage and mate selection. At present, domestic research on optimization decision-making has just started, and few studies have explored the relationship between optimization decision-making and single youth. Therefore, this research aims to examine the relationship between optimal decision-making and youth single status, as well as the role of social comparison and shyness in it, and to enrich related fields. The results of the study showed that: (a) After controlling for gender and age, the optimal decision-making was significantly negatively correlated with youth single status, and significantly positively correlated with social comparison and shyness, and social comparison and shyness were significantly negatively correlated with youth single status; (b) Social comparison has a partial mediating effect between optimal decision-making and youth single status; (c) Shyness has a partial mediating effect between optimal decision-making and youth single status; (d) Social comparison and shyness have a parallel mediating effect between optimal decision-making and youth single status. The above findings confirm the important role of optimal decision-making in the single state of young people, show the multiple intermediary paths in which it plays a role, and provide some enlightenment for young individuals who desire to get rid of being single and in love and marriage.

Keywords: Optimal decision-making, singleness, social comparison, shyness

时间压力，不确定性忍受度，建议成本对建议采纳的影响

王超凡¹ 刘丽红²

1,2 哈尔滨师范大学教育科学学院, 哈尔滨, 150025, 1mf133@126.com

摘要 建议是针对决策困难者的一种特定推荐, 它可以帮助决策者从新的角度思考问题, 而决策者是否采纳建议则受到多种因素的影响。实验一采用 2 (时间压力: 高时间压力和低时间压力) × 2 (不确定性容忍度: 高不确定容忍度和低不确定性容忍度) 被试间实验设计, 探究时间压力和不确定性容忍度对建议采纳的影响。实验二在实验一的基础上, 采用 2 (不确定性容忍度: 高不确定性容忍度和低不确定性容忍度) × 2 (建议成本: 高建议成本和低建议成本) 被试间实验设计, 探究高时间压力条件下, 建议成本和不确定性容忍度对建议采纳的影响。研究结果: 实验一时间压力主效应显著 ($F=28.94$, $P<0.001$), 不确定性容忍度主效应显著 ($F=17.789$, $P<0.001$), 两者交互作用边缘性显著 ($F=4.112$, $P=0.049$)。实验二不确定性容忍度主效应显著 ($F=36.080$, $P<0.001$), 建议成本主效应显著 ($F=32.668$, $P<0.001$), 两者交互作用边缘性显著 ($F=3.919$, $P=0.054$)。结论: 实验一表明高时间压力条件下个体的建议采纳值高于低时间压力条件下, 低不确定性容忍度的个体建议采纳值高于高不确定性容忍度的个体, 高时间压力下低不确定容忍度的个体建议采纳值最高, 低时间压力高不确定性容忍度的个体建议采纳值最低。实验二表明高建议成本条件下建议采纳值高于低建议成本条件下, 低不确定性容忍度的个体建议采纳者高于高不确定性容忍度的个体, 高建议成本下低不确定容忍度的个体建议采纳值最高, 低建议成本高不确定性容忍度的个体建议采纳值最低。

The Effect of Time Pressure, Intolerance of uncertainty, And Advice Cost On Advice taking

Wangchaofan¹, Liulihong²

1,2 Harbin Normal University Education Science College, Harbin, Heilongjiang Province, China

Abstract: Suggestion is a specific recommendation for people with difficulties in decision-making, which can help decision-makers to think from a new perspective, and whether decision-makers adopt suggestions or not is affected by a variety of factors. In experiment 1, a between subjects design of 2 (ime pressure: high time pressure and low time pressure) × 2 (Intolerance of uncertainty: high Intolerance of uncertainty and low Intolerance of uncertainty) was used to explore the influence of time pressure and Intolerance of uncertainty on the advice taking. On the basis of experiment 1, a between subjects design of 2 (Intolerance of uncertainty: high Intolerance of uncertainty and low Intolerance of uncertainty) × 2 (advice cost: high advice cost and low advice cost) was used to explore the influence of advice cost and Intolerance of uncertainty on advice taking under high time pressure. The results showed that in the first experiment, the main effect of time pressure was significant ($F=28.94$, $P<0.001$), the main effect of Intolerance of uncertainty was significant ($F=17.789$, $P<0.001$). There is a certain interaction between the two factors ($F=4.112$, $P=0.049$). In experiment 2, the main effect of Intolerance of uncertainty was significant ($F=36.080$, $P<0.001$), the main effect of cost was significant ($F=32.668$, $P<0.001$), and the interaction between them was marginal ($F=3.919$, $P=0.054$). Conclusion:(1) Decision makers took more advice under high time pressure. (2) The individuals with low Intolerance of uncertainty took more advice than the highs. (3) Under high time pressure, the individuals with low Intolerance took the most advice; and the individuals with high Intolerance under low time pressure took the lowest advice. (4) Under high time pressure, decision-makers of the low Intolerance of the uncertainty took more advice than the highs. (5) High advice cost made subjects take more advice. (6) Under high time pressure and high advice cost, the individuals with low Intolerance took the most advice; and the individuals with high Intolerance under low advice cost took the lowest advice.

Key words: Time Pressure, Intolerance of uncertainty, Advice Cost, Advice taking

时间压力下无意识自我控制目标启动对冲动性购买意愿的影响

陈慧娟¹ 马佳欣¹ 吕承颖¹ 解颂悦¹ 鲍安¹ 郑玮琦¹ (通讯作者)

通讯作者 E-mail weiqi71@126.com

摘要 无意识目标启动作为一种影响个体动机的方式, 具体指通过启动技术无意识地激活个体头脑中与目标相关的心理表征, 在干预性研究中可用于启动自我控制行为。目前关于冲动性购买意愿的干预研究主要是从减少自我控制资源损耗或提升自我控制能力角度出发的。本研究旨在从自我控制的动机启动角度探究无意识自我控制目标启动对高低时间压力下冲动性购买意愿的影响。本研究采用 Luo(2005)的冲动性购买研究范式, 以消费者冲动性购买意愿为因变量, 时间压力和无意识自我控制目标启动为自变量, 选取某体育大学 60 名在校大学生 (男生 41 名, 年龄 20 ± 1.88 岁) 作为实验参与者, 采用 2 (高时间压力 10min vs. 低时间压力 6h) $\times$ 2 (目标启动组 vs. 控制组) 的组间设计。采用句子拼接任务启动实验参与者的自我控制, 其中目标启动组启动材料为 12 个与自我控制相关句子、8 个中性句子, 而控制组的材料则为 20 个中性句子。之后给实验参与者呈现特定高、低时间压力购买情境并对实验参与者冲动性购买意愿、句子拼接任务的自我损耗程度进行测量。研究结果表明时间压力主效应显著 ($F(1,56) = 12.15, p = .010, \eta_p^2 = .11$), 高时间压力下的冲动性购买意愿显著高于低时间压力下的冲动性购买意愿。无意识自我控制目标启动主效应不显著。时间压力和无意识自我控制目标启动交互作用显著 ($F(1,56) = 5.09, p = .028, \eta_p^2 = .08$), 高时间压力下, 目标启动组的冲动性购买意愿显著低于控制组的冲动性购买意愿 ($F(1,56) = 4.93, p = .030, \eta_p^2 = .08$), 低时间压力下, 有无意识目标启动组间的冲动性购买意愿差异不显著。有无目标启动组间自我损耗问卷得分差异不显著, ($F(3,56) = 0.38, p = .768, \eta_p^2 = .02$), 说明无意识目标启动组没有产生比控制组更多的自我损耗。结论: 个体处于高时间压力情境下, 无意识目标启动抑制了消费者的购买冲动, 使其高、低时间压力下的冲动性购买意愿维持在一个稳定水平并且避免了个体自我损耗发生。因此无意识目标启动可作为降低高时间压力下冲动性购买行为发生的有效手段。这对于控制网络限时促销中的冲动性购买有一定启示。

The Effect of Unconscious Self-Control Goal Priming under Time Pressure on Impulsive Purchasing Intention

Huijuan Chen¹, Jiabin Ma¹, Chengying Lv¹, Songyue Xie¹, An Bao¹, Weiqi Zheng¹

School of Psychology, Beijing Sport University, Beijing, 100084, weiqi71@126.com

Abstract: Unconscious Goal Priming (UGP) refers to activate individuals' mental representation related to the goals in an unconscious way, which can be used to prime self-control behaviors in intervention research. Current intervention research on impulsive purchasing intention has focused on reducing the depletion of self-control resources or enhancing self-control ability. The purpose of this study was to investigate the effect of unconscious self-control goal priming on impulsive purchasing intention under high and low time pressure from the motivation of self-control. This experiment adopted Luo's (2005) paradigm of impulsive purchasing intention research. The dependent variable is consumers' impulsive purchasing intention and the independent variables are time pressure and unconscious self-control goal priming. 60 college students (41 males, $M_{age} = 20 \pm 1.88$ years) from a Beijing sport university participated. The experiment was designed by a two-factor between-subject design of 2 (high time pressure 10 min vs. low time pressure 6h) $\times$ 2 (goal priming group vs. control group). A scrambled sentence task was used to activate self-control, with 12 self-control-related sentences and eight neutral sentences for the goal priming group and 20 neutral sentences for the control group. Then, the participants completed an impulsive purchasing task under high and low time pressure. Finally, impulsive purchasing intention and ego depletion of scrambled sentence task were measured. The results showed that the main effect of time pressure was significant, $F(1,56) = 12.15, p = .010, \eta_p^2 = .11$, with impulsive purchasing intention under high time pressure being significantly higher than impulsive purchasing intention under low time pressure. The main effect of unconscious self-control goal priming was not

found. There was an interaction between time pressure and unconscious self-control goal priming, $F(1,56) = 5.09, p = .028, \eta_p^2 = .08$. Under high time pressure, impulsive purchasing intention was lower in the goal priming group than in the control group, $F(1,56) = 4.93, p = .030, \eta_p^2 = .08$, and the difference in impulsive purchasing intention between goal priming group and control group was not significant under low time pressure. There was no significant difference in the scores of the ego depletion questionnaire, $F(3,56) = 0.38, p = .768, \eta_p^2 = .02$, indicating that the unconscious goal priming group did not produce more than the control group. Conclusion: When the individual is in a high time pressure situation, unconscious goal priming inhibited consumers' impulsive purchasing, kept the impulsive purchasing intention under high and low time pressure at a stable level, and avoided individual ego depletion. Therefore, unconscious goal priming can be an effective means to reduce impulsive purchasing behavior under high time pressure. This has some enlightenment for controlling impulsive purchasing in online time-limited promotions.

死亡意识对成年人时间知觉和跨期决策的影响

李嘉雯¹ 刘力嘉¹ 石佳霖¹ 张学民¹ (通讯作者)

¹ 北京师范大学心理学部, 北京, 100875, Email: xmzhang@bnu.edu.cn

摘要 死亡意识在时间管理上具有适应性价值, 启动死亡意识会加强人们对时间有限性的关注, 影响人们在远近时间点的成本与收益之间进行权衡, 但目前关于死亡意识与时间知觉及跨期决策的研究中没有涉及到年龄差异。本研究引入年龄因素, 探究死亡意识对青年人和中年人时间知觉和跨期决策的影响。实验招募青年人被试 80 名 (平均年龄为 21.11 ± 2.46 岁), 中年人被试 81 名 (平均年龄 47.53 ± 3.53 岁), 所有被试被随机分配到死亡意识启动组或非死亡意识启动控制组。死亡意识启动任务要求被试想象并写下死亡场景, 控制任务要求被试想象并写下牙痛场景。在启动任务和分心任务之后, 被试需在一条横线上标注十年时间对其来说是短还是长。接下来的跨期决策任务要求被试在小而近和大而远的奖励中选择一个, 14 道题的结果能够反映出被试的跨期决策折扣率。结果显示: (1) 年龄、死亡意识对时距评估的影响: 中年人比青年人将 10 年时间知觉得更短 ($F(1, 157) = 64.96, p < 0.001$), 死亡意识启动组被试比控制组被试将 10 年时间知觉得更短 ($F(1, 157) = 7.58, p = 0.007$)。 (2) 年龄、死亡意识对跨期决策的影响: 年龄组和启动组别的交互作用显著 ($F(1, 157) = 4.57, p = 0.034$), 对于中年人, 死亡意识启动组被试的跨期决策延迟折扣率显著高于控制组被试的延迟折扣率 ($F(1, 157) = 4.76, p = 0.031$); 而对于青年人, 死亡意识启动组被试与控制组被试的跨期决策结果没有显著差异 ($F(1, 157) = 0.71, p = 0.400$)。跨期决策结果表明, 中年人更易受到死亡意识启动的影响, 这可能是中年人正在经历的“中年危机”现象导致其产生更多的死亡焦虑, 进而将时间段知觉为更短、将时间流速知觉为更快, 从而更加导向现在、选择及时行乐。在理论方面, 本研究从年龄视角探讨死亡启动效应, 为时间知觉和跨期决策提供更多维的研究角度。在实践方面, 本研究在我国死亡教育、生命教育以及中年心理咨询方面具有借鉴价值, 有助于引导人们树立健康的死亡观。

The effects of death awareness on adults' time perception and intertemporal choice

LI Jiawen¹, LIU Lijia¹, SHI Jialin¹, ZHANG Xuemin^{1*}

¹ Faculty of Psychology Beijing Normal University, Beijing 100875, China

Abstract: Death awareness serves adaptive functions in time management. Activating death awareness can raise attention over the limitation of time and affect tradeoffs between costs and rewards across different time points. Previous studies on death awareness, time perception and intertemporal choice have hardly involved the age difference. In this research, the age (young group or middle-aged group) is introduced to investigate the effects of death awareness on time perception and intertemporal choice. The experiment recruited eighty young participants (age: 21.11 ± 2.46 years old) and eighty-one middle-aged participants (age: 47.53 ± 3.53 years old). All participants

were randomly assigned to either a death awareness activation group where mortality was made salient or a control group where the participants imagined their toothache experience. After the activation task and distracted task, the participants were asked to indicate how long ten years was to them by making on a line with the statement “10 years is very short” on the left end of the line and “10 years is very long” on the right end of the line. The participants then completed fourteen intertemporal choices between a smaller-and-sooner reward and a larger-and-later reward to indicate their delay discounting rate. The results showed that (1) The effects of age and death awareness on time perception: the middle-aged participants marked the line closer to the left end than the young participants ($F(1, 157) = 64.96, p < 0.001$). The participants in the death-awareness activation group marked the line closer to the left end than those in the control group ($F(1, 157) = 7.58, p = 0.007$). (2) The effects of age and death awareness on intertemporal choice: interaction between age and activation condition was significant ($F(1, 157) = 4.57, p = 0.034$). In middle-aged group, the participants in the death-awareness activation group had a higher discounting rate and were more future-oriented in making choices than participants in control group ($F(1,157) = 4.76, p = 0.031$). In young group, there was no significant difference in delay discounting rate between two activation groups ($F(1, 157) = 0.71, p = 0.400$). The results of intertemporal choice indicate that the middle-aged are more easily affected by the salience of death awareness. This phenomenon can be the consequence of "midlife crisis", which causes the middle-aged to have more death anxiety and to perceive time flying quickly, thus leading them to be present-oriented. The research reveals the effect of death awareness from the perspective of age, expanding the literature of time perception and intertemporal choice. Moreover, practical implications in death education, life education and midlife counseling can guide people to develop an active attitude towards death.

电子支付对消费行为的影响

刘媛¹ 刘欢² (通讯作者)

¹ 南昌大学公共管理学院心理系, 南昌, 330000

² 南昌大学公共管理学院心理系, 南昌, 330000, liuhuan452@126.com

摘要 电子账户已日渐成为当前年轻消费者心目中的主要账户, 其对个体的消费行为的影响既不同于信用卡支付, 也不同于现金支付。以往的研究主要从记忆过程, 心理账户, 经典条件理论等方面解释了现金支付和信用卡支付的支出效应, 但还未深入电子支付方面。本研究通过 4 个研究比较使用电子账户和现金账户时个体消费行为的差异。研究 1, 通过问卷调查的方式了解不同支付方式的使用现状, 结果发现, 相比现金账户, 电子账户作为人们心理的主账户, 其使用频率, 账户内保有的金额, 支付比重, 心理成本, 心理所有权, 使用倾向都更高。研究 2, 通过实验探讨不同支付方式的损失规避程度, 发现电子账户的损失规避感比现金账户的更强。研究 3, 设置了 2 (效价: 得, 失) × 3 (金额大小: 25, 200, 1000) 的实验比较了不同情景下消费者支付方式的选择倾向, 结果发现, 得失主效应显著, 金额大小主效应显著, 交互作用不显著。即, 在损失情况下, 人们更倾向选择现金账户进行支付; 在获益情况下, 人们更倾向选择电子账户收款; 随着金额数得增大, 个体越倾向选择电子账户。研究 4, 通过 2 (商品属性: 享乐/实用) × 3 (金额大小: 25, 200, 1000) 的实验发现, 在日常消费中相比实用消费, 享乐消费时人们更倾向于使用现金账户, 金额大小主效应不显著。总而言之, 电子支付使用非常广泛, 成为了年轻消费者的心理主账户 (研究 1), 人们对不同的支付方式的损失规避感 (研究 2) 和选择倾向 (研究 3, 4) 是不同的。

The Effect of Electronic Payment on Spending Behavior

Liu Yuan, Liu Huan (Corresponding author)

Department of Psychology, 公共管理学院 Nanchang University, Nanchang, 330000, China

Contact: Liu Huan, liuhuan452@126.com

Abstract: Electronic account has gradually become the main mental account among young consumers, the effect of

electronic account on consumers' behavior may be different from credit card and cash payments. Prior researches had explained the difference between credit card and cash payments by attributing them to memory processes, mental accounting and classical conditioning, however it is still uncovered as to electronic payment. The present study compared the difference effect between electronic account and cash account in the consumer behaviors. Study 1 demonstrates that electronic account is the main mental account of consumers by a survey. The propensity to use, the amount held in the account, the proportion of payment, the psychological cost and the psychological ownership were significantly greater in the cash account condition as compared with the electronic account condition. Study 2 showed that higher loss aversion was associated with electronic payment. Study 3 employed a 2 (Valence: Losses vs. Gains) $\times$ 3 (amount of money: 25 vs. 200 vs. 1000) within-subjects design demonstrates that people preferred paying by cash in the losses condition and receiving money through electronic account in the gains condition. Otherwise, as the amount of money increases, individuals were more inclined to use electronic accounts. Study 4 shows that people preferred using cash accounts during hedonic consumption compared with practical consumption and the main effect of the amount of money is not significant. In sum, electronic account is widely used and has become the main psychological account of young consumers (Research 1); People exhibited different degrees of loss aversion when using electronic payment and cash payment (Research 2) and there is a domain-specific preference for electronic payment (Research 3, 4).

睡眠对风险决策的影响及其神经机制

毛天欣（通讯作者），饶恒毅

1 上海外国语大学国际工商管理学院脑与认知科学应用重点实验室，上海，201620

通讯作者 E-mail: maotianxin@shisu.edu.cn

摘要 睡眠是一种基本的生理现象。作为人类生活中不可缺少的一部分，它对个人的身体健康、认知水平和情绪功能至关重要。然而，随着科技的发展和人类生活节奏的加快，睡眠缺失或睡眠质量较差的问题在現代人群中越来越普遍，对人们的认知、情绪甚至健康造成了很多不良影响。最初关于睡眠的研究一致发现，睡眠剥夺会损害个体基本的认知过程，例如警觉性注意、工作记忆等。随后，有研究人员开始探讨睡眠剥夺对高级认知过程的影响。风险决策作为一种不确定决策，小到个人理财，大到国家政策，在生活中无处不在又不可避免。它除了受到个体对风险的感知、风险承受能力、决策策略、情境特征和决策者等多种因素的影响之外，也受到睡眠的影响。近来，越来越多的研究者开始关注睡眠与风险决策的关系，也取得了一定的研究进展。但目前为止，还没有文章对两者之间的关系作系统和深入的梳理。基于此，本文根据最新研究进展，（1）总结了睡眠和风险决策的测量工具；（2）从行为学角度和认知神经角度分别归纳了睡眠剥夺，睡眠质量，睡眠模式等对风险决策的影响；（3）提出了未来要关注睡眠对风险决策影响的差异研究等方向。这对未来进一步拓宽睡眠与风险决策的关系研究，以及充分了解不同类型的睡眠不足在风险决策及冒险行为上的作用等都有一定的借鉴意义。

The Effects of Sleep on Risk-taking and Its Neural Mechanisms

Mao Tianxin¹, Rao Hengyi¹

1 Key Laboratory of Applied Brain and Cognitive Sciences, School of Business and Management, Shanghai International Studies University, Shanghai, China

Abstract: Sleep is a basic physiological phenomenon. As an indispensable part of human life, it is vital to an individual's physical health, cognitive level, and emotional functioning. However, with the development of science and technology and the acceleration of the pace of human life, the problem of sleep loss or poor sleep quality has become more and more common among modern people, which has caused a lot of adverse effects on people's

cognition, mood, and even health. Initial research on sleep has consistently found that sleep deprivation could damage basic cognitive processes such as vigilant attention and working memory. Subsequently, researchers began to explore the effects of sleep deprivation on higher cognitive processes. As an uncertain decision, the risk-taking decision is ubiquitous and inevitable in our life, ranging from personal finance to national policy. It is not only affected by the individual's perception of risk, risk tolerance, decision-making strategies, situational characteristics, and decision-makers but also affected by sleep. Recently, more and more researchers have begun to pay attention to the relationship between sleep and risk decision-making, and some research progress has been made. But up to now, there has been no systematic and in-depth analysis of the relationship between sleep and risk-taking. Based on this, this paper (1) Summarizes the measurement tools of sleep and the risk-taking decision based on the latest research progress; (2) Concluded the influence of sleep deprivation, sleep quality, and sleep pattern on risk decision-making respectively from the perspective of behavioral and cognitive neuroscience; (3) proposed that we should pay more attention to the differences of sleep influence on the risk-taking decision in the future. This study will be useful for further research on the relationship between sleep and risk decision-making, as well as to fully understand the role of different types of sleep deprivation in risk decision-making and risk-taking behaviors.

不同水平羽毛球运动员知觉预测的眼动及神经机制研究

邹德卿¹

1 沈阳体育学院研究生部, 沈阳市, 110000, 1597262426@qq.com

摘要 知觉预测是指运动员比赛过程中在决策时间紧迫的条件下利用部分信息对完整信息做出相应预期的信息加工过程。知觉预测水平的高低直接关系到比赛的胜负, 揭示高水平运动员知觉预测优势所在是十分必要的, 特别是在快速多变的羽毛球运动中良好的知觉预测是决定比赛胜利天平走向的重要因素。因此, 本研究运用眼动记录技术与 ERP 记录技术, 研究羽毛球比赛过程中的“相持阶段”, 分析不同水平羽毛球运动员在知觉预测中的行为特征及神经机制, 旨在完善羽毛球运动知觉预测的认知加工过程, 对羽毛球运动选材及训练提供一定的理论指导。实验采用视频处理软件对视频进行时间(击球前 100ms、击球瞬间、击球后 100ms)阻断的处理, 3 个时间阻断节点分别为羽毛球比赛第三拍后的“相持阶段”视频的 2200ms、2300ms、2400ms 并运用 E-Prime2.0 软件播放, 被试在观看过程中全程佩戴电极帽。以研究不同水平羽毛球运动员在“相持阶段”对击球线路预判的行为学特征及相应的神经机制。研究表明: 1) 专家组在预判时的准确率与反应时均优于新手组, 且对斜线球的预判效绩优于直线球, 新手组在直线球与斜线球上的预判效绩无差异。2) 专家组在击球前 100ms 时能做出有效的预判, 其反应时与准确率均优于新手组, 随着信息量的增加预判时的反应时缩短且准确率提高, 而新手组无差异。3) 时间点主效应显著, 击球瞬间的准确率显著高于击球前 100ms。ERPs 结果显示, 新手组在预判时诱发出 N1、N2 波幅大于专家组, 在击球瞬间的时间节点上新手组比专家组诱发出了更大的 N2 波幅。在击球前 100ms 与击球瞬间的时间节点上, 专家组诱发的 P2、P3 波幅显著大于新手组。结果表明, 高水平运动员认知资源分配合理, 主要将认知资源投入到了对关键信息的识别、处理与加工阶段, 在任务的感知阶段动用的心理资源少。随着任务难度的增大其动用的心理资源也会相应增多。

Eye movement and neural mechanism of perceptual prediction in badminton players of different levels

Zou Deqing¹

1 Graduate Department of Shenyang Institute of physical education, Shenyang, 110000, 1597262426@qq.com

Abstract: Perceptual prediction refers to the information processing process in which athletes use part of the information to make corresponding expectations of the complete information under the condition of tight

decision-making time. The level of perceptual prediction is directly related to the outcome of the game. It is very necessary to reveal the advantages of perceptual prediction of high-level athletes, especially in the fast changing badminton, good perceptual prediction is an important factor to determine the direction of victory. Therefore, this study uses eye movement recording technology and ERP recording technology to study the "Stalemate Stage" in the process of badminton competition, and analyzes the behavioral characteristics and neural mechanism of different levels of badminton players in perceptual prediction, so as to improve the cognitive processing process of perceptual prediction of badminton, and provide some theoretical guidance for badminton sports selection and training. In the experiment, video processing software was used to block the video time (100 ms before hitting, at the moment of hitting and 100 ms after hitting). The three time blocking nodes were 2200 MS, 2300 MS and 2400 ms of the "Stalemate Stage" video after the third shot of badminton game. The e-prime2.0 software was used to play the video. The subjects wore electrode caps during the whole watching process. The purpose of this study is to study the behavioral characteristics and neural mechanism of different level badminton players in the "Stalemate Stage" to predict the hitting line. The results show that: 1) the accuracy and reaction time of the expert group are better than the novice group, and the predictive performance of the diagonal ball is better than that of the straight ball, and the novice group has no difference in the predictive performance of the straight ball and the diagonal ball. 2) The response time and accuracy of the expert group were better than those of the novice group. With the increase of the amount of information, the response time of the expert group was shortened and the accuracy was improved, while the novice group had no difference. 3) The main effect of time point is significant, and the accuracy of hitting instant is significantly higher than that of 100 ms before hitting. ERPs results showed that the N1 and N2 amplitudes induced by the novice group were larger than those of the expert group in the prediction, and the N2 amplitudes induced by the novice group were larger than those of the expert group at the moment of hitting. At the time node of 100 ms before hitting and the instant of hitting, the P2 and P3 amplitudes induced by the expert group were significantly larger than those of the novice group. The results show that the allocation of cognitive resources of high-level athletes is reasonable. The cognitive resources are mainly put into the identification, processing and processing stage of key information, and less mental resources are used in the perception stage of task. With the increase of the difficulty of the task, the psychological resources will be increased accordingly.

最后通牒博弈中的双系统：来自加工分离程序的证据

李秋月¹ 梁慈鹃¹ 李泽霖¹ 刘洪志² (通讯作者)

1 南开大学周恩来政府管理学院, 天津, 300350

2 南开大学社会心理学系, 天津, 300350, liuhz@nankai.edu.cn

摘 要 最后通牒博弈作为测量公平偏好的经典范式, 受到研究者的广泛关注。在最后通牒博弈中, 由两人对共有的一笔固定数额的金钱(或某种资源)进行分配, 其中一人作为提议者提出分配数目, 另一人作为响应者决定接受或拒绝该提议。根据决策的双系统理论, 个体在最后通牒博弈中受到自动加工的系统 1 与控制加工的系统 2 的双重作用。研究意图操纵影响个体在最后通牒博弈中系统 1 和系统 2 的因素, 采用加工分离程序范式估计两个决策系统贡献率, 并且构建相容(inclusion)题目和不相容(exclusion)题目来量化自动加工的系统 1 和控制加工的系统 2 的贡献率。加工分离程序范式的研究逻辑是: 如果操纵理论上能够影响某决策系统策略的因素确实导致了该系统贡献率的改变, 则说明该系统策略在决策过程中确实起作用。研究通过 2 个实验, 分别操纵了认知负荷因素与理性信念启动因素, 以考察公平偏好中两决策系统的作用。实验 1 操纵了可影响自动加工的系统 1 的认知负荷因素, 发现高认知负荷会提高系统 1 的贡献率, 但不影响系统 2 的贡献率; 实验 2 操纵了可影响控制加工的系统 2 的理性信念启动因素, 发现启动理性信念会提高系统 2 的贡献率, 但不影响系统 1 的贡献率。结果表明, 公平偏好可能存在于这两个独立的决策系统共同起作用。研究或能加深人们对公平偏好行为心理机制的理解。

Dual-system in Ultimatum Game: Evidence from Process Dissociation Procedure

Qiu-Yue Li¹, Ci-Juan Liang¹, Ze-Lin Li¹, Hong-Zhi Liu¹

¹ Department of Social Psychology Zhou Enlai School of Government Nankai University Tianjin, China

Abstract: As a classic paradigm in measuring fairness preference, the ultimatum game paradigm has been drawn much attention in recent decades. In the ultimatum game, a fixed amount of money (or a resource) is shared between two persons, one of whom as proposer proposes the amount to be allocated and the other as responder decides to accept or reject the offer. From the point of view of dual-system theory, individuals' preference in ultimatum game is the result of the combined effect of automatic System 1 and controlled System 2. In this study, we attempted to manipulate the factors affecting individuals in System 1 and System 2 in the ultimatum game, and the process dissociation procedure was used to estimate the contribution of the two decision systems. The contribution of automatic processing System 1 and controlled processing System 2 were quantized by constructing inclusion questions and exclusion questions. The research logic of the process dissociation procedure is as follows: if manipulating the factors that theoretically influence the strategy of a decision system does lead to the change of the contribution rate of the system, then the strategy of the system does play a role in the decision process. In this study, cognitive load and rational belief priming were manipulated in two experiments to test the role of the two decision-making systems in fairness preference. In Experiment 1, we manipulated the cognitive load to affect the automatic processing in System 1, and found that the higher cognitive load enhanced the contribution of System 1 but did not affect the contribution of System 2. In Experiment 2, we manipulated the rational belief which could influence the processing of System 2, and found that priming the rational belief enhanced the contribution of system 2 but did not affect the contribution of System 1. The findings indicated that there are two independent systems underlying the process of ultimatum game and could deepen understanding of the mechanisms of fairness preference.

奖赏幅度对个体风险偏好水平的影响：基于 BART 范式的探讨

卢玥辰

中国人民大学心理学系，北京，100872，luyuechen@ruc.edu.cn

摘要 在现实生活中，风险无处不在。长期以来，人们在风险情境下如何做出决策一直是行为经济学与心理学的研究领域中的一个重要问题。在以往的多数研究中，研究者通常在探索风险决策行为的过程中采用真实或虚拟金钱作为奖赏强化物，但对金钱奖赏的幅度大小对决策中风险偏好水平的影响做出的研究较少。据此，本研究应用仿真气球冒险任务（即 BART 任务：Balloon Analogue Risk Task，仿真气球冒险任务广泛应用于各类风险决策实验，其有效性已在以往研究中得到证实，可以在实验室条件下有效评估个体在真实社会中的风险行为），在实验中对真实金钱奖赏幅度的大小对风险偏好水平的影响进行了比较和初步探讨。根据实验结果数据分析，可以得出以下结论：与小额奖赏幅度相比，被试在大额奖赏幅度条件下的 BART 参数更小，未爆气球被吹的平均次数、吹爆气球的个数以及面临正负反馈（前次决策成功/失败）时的未爆气球被吹的平均次数均显著降低，表明大额奖赏幅度条件下的风险偏好水平更低。此外，在两种奖赏幅度条件下，被试的感觉寻求量表得分和 BART 任务的各项分数之间均未发现显著相关关系，感觉寻求量表的各分量表（TAS, ES, DIS, BS）得分与 BART 任务的各项分数之间也不存在显著相关。上述发现表明奖赏幅度对风险偏好水平有着不同的影响，在真实金钱奖赏条件下，个体的风险决策行为受到奖赏幅度的调控。随着奖赏幅度的增加，个体的风险偏好水平显著降低。

关键词 仿真气球冒险任务，风险决策，风险偏好水平，真实金钱奖赏幅度

The Effect of Reward Magnitude on Individual Risk Appetite: Based on BART Paradigm

LU Yuechen

Department of Psychology, Renmin University of China, Beijing 100872

Abstract: In real life, risk is everywhere. For a long time, how people make decisions in risky situations has been an important issue in the field of behavioral economics and psychology. In most of the previous studies, researchers usually used real or virtual money as a reward reinforcer in the process of exploring risky decision making behavior, but there were few studies on the impact of the magnitude of monetary reward on the level of risk appetite in decision making. Therefore, this study applies Balloon Analogue Risk Task which is widely used in various Risk decision experiments. Its effectiveness has been confirmed in previous studies, and it can effectively assess individuals' Risk behaviors in real society under laboratory conditions. In the experiment, the effect of real money reward on risk appetite was compared and preliminarily discussed. According to the analysis of the experimental results and data, the following conclusions can be drawn: Compared with the small reward rate, the participants in a large reward by BART parameters under the condition of smaller, unexploded balloon blown the average frequency, the number of blowing up the balloon and the positive and negative feedback (previous decision success/failure) of the unexploded balloon blown the average frequency were significantly lower, shows that a large reward amplitude under the condition of lower level of risk appetite. In addition, there was no significant correlation between sensory seeking scale score and BART task score, and there was no significant correlation between sensory seeking scale score (TAS, ES, DIS, BS) and BART task score under the two reward scale conditions. These findings suggest that reward magnitude has different effects on risk appetite. In the case of real money reward, individuals' risk decision behavior is regulated by reward magnitude. With the increase of reward amplitude, the level of individual risk appetite decreased significantly.

损失规避是否无处不在：一项元分析

汪江东¹ 刘媛² 刘欢³ (通讯作者)

^{1, 2, 3} 南昌大学公共管理学院心理学系, 南昌, 330000

通讯作者: 刘欢, E-mail: liuhuan452@126.com

摘要 损失规避是指在决策中损失对人们的影响更大,是预期理论的核心概念之一。众多研究表明,损失规避是较为稳定的现象,被认为是人们行为决策中较为普遍的行为偏差。但新近的研究对损失规避的普遍性提出了质疑,并开始研究损失规避的例外状况。本文通过元分析的方法旨在探究影响损失规避的因素。本研究检索并筛选后获得 32 篇文献(共包含 103 个效应值),被试总数达到 11158 名,根据异质性检验结果,使用随机效应模型进行元分析,并使用亚组分析和元回归分析做调节效应的检验,探究异质性的原因。结果发现,当个体在面临“得失概率相同,得失金额相等”的对称混合赌博任务时,会表现出显著的损失规避倾向,证实了损失规避的普遍性。其次,损失规避行为受到赌注的数值大小、赌注的金额、赌博任务中是否具有安全选项、赌博任务是否为滴定类型、是否有激励措施等因素的调节。具体而言,当赌注在数值上较大时,损失规避程度越大;当任务中具有激励措施时,损失规避程度更低;赌博任务为滴定形式时损失规避程度更大;当赌博任务存在一个“现状”选项时,损失规避程度更低。最后,发现赌博任务呈现的次数和赌注是否使用真钱对损失规避程度无显著影响。从本文的结果来看,未来应加强对损失规避机制解释方面的研究。

Is loss aversion a ubiquitous effect: A meta-analysis

WANG jiangdong¹, LIU yuan², LIU huan³

^{1, 2, 3}Department of Psychology, School of Public Administration, Nanchang University, Nanchang, 330000, China

Abstract: Loss aversion, which means that the effect caused by loss is greater than the same amount of gains, is one of the core concepts of Prospect Theory. Many studies have confirmed that loss aversion is a robust effect, and it is considered as a prominent behavioral bias in people's decision-making. However, recent studies have doubt the universality of loss aversion and try to find situations where there isn't a loss aversion. The present research aims to verify the robustness of loss aversion and explore the variables moderating loss aversion by a meta-analysis. 33 literatures (103 effect size) were retrieved and screened, and a total number of 11158 subjects were included in this study. According to the heterogeneity test, the meta-analysis was carried out by using random effect model. The subgroup analysis and meta-regression analysis were used to identify possible sources of heterogeneity. The results showed that when individuals face the fair gamble in which the size of the gain and loss are the same and the rate of gain and loss are the same, they will show a significant tendency of loss aversion. This result verified the robustness of loss aversion. Secondly, loss aversion was moderated by the value of bets, the magnitudes of bets, whether there were safety options in gambling tasks, whether gambling tasks were titration types, whether there were incentive. Specifically, the large value of the bets, the higher degree of loss aversion; When there are incentives in the task, the degree of loss aversion is lower; When the task is in titration experiments, the degree of loss aversion is greater; When there is a "status quo" option for gambling tasks, the degree of loss aversion is lower. Finally, it is found that the number of gambling tasks presented and whether the bet uses real money has no significant influence on the degree of loss aversion. From the results of this paper, the future research on the explanation of loss aversion mechanism should be strengthened.

摘要 跨期决策是人们对发生在不同时间点的备选方案进行权衡后做出的决定, 与人类生存发展密切相关。人们在进行跨期决策时, 易受到伴随其发生但与任务无关的情绪, 即偶然情绪的影响, 而情绪对即刻奖励/损失的偏好影响较大。本研究认为, 偶然积极情绪可能通过影响时间知觉改变个体的跨期决策偏好, 且在决策包含/不包含即刻时间信息的条件下, 该作用存在分离效应。通过三个实验进行验证, 利用视频启动情绪(研究1-3), 运用滴定法(研究1)和多重阶梯法(研究2)任务测量被试在包含(研究1、2)或不包含(研究2)即刻时间选项时的跨期决策偏好, 同时测量个体时间知觉(研究1、2), 以及在决策前个体对跨期选项中时间和结果维度的关注度是否存在差异(研究3)。综合三个研究的结果发现: 偶然积极情绪导致个体的时间知觉变长(研究1、2), 对时间维度比对结果维度具有更多的注意(研究3), 并由此导致个体在跨期决策中更偏好即刻选项(研究1-3); 但该作用具有分离效应, 即当包含即刻时间选项时个体更偏好即刻选项, 而不包含即刻选项时个体的跨期决策偏好无差异(研究2、3)。本研究从理论层面上可增进学界对跨期决策中认知和情绪系统相互作用的了解, 同时在应用层面上为如何改进相关决策提供了新视角。

5 Department of Psychology, University of Chinese Academy of Sciences, Beijing 100049, China;

Abstract: This research aimed to test how positive incidental affect (i.e., affect that is unrelated to a decision) influences intertemporal choice (IC) and its underlying mechanisms. We considered the prominent explanation for the effect of emotions on IC related to time perception and the hypothesis of the hot/cool system. The hypothesis posits that the motivational appeal of immediately available rewards drives “hot” affective processes. We assumed that positive incidental affect may have a disjunction effect on intertemporal choice, i.e., only impact IC with immediate options through affecting time perception. This research hypothesized that incidental affect leads to impatient behavior in IC through a distortion in time perception and has no impact when the immediate factor is removed. In Study 1 ($N = 66$), we examined whether time perception is the mechanism of positive incidental affect on IC. A 2×2 mixed designed paradigm was used, with induced affect (positive versus neutral) as the between-subject factor and the intervals (long versus short) of IC as the within-subject factors. The participants were induced by positive/neutral incidental affect and made IC through the titration paradigm between immediate and future options. Lastly, the time perception of participants was tested through a non-numerable line scale. In Study 2 ($N = 62$), we tested the boundary effect of positive incidental affect. A 2×2 mixed designed paradigm was used, with induced affect (positive versus neutral) as the between-subject factor and the construct of decision option (inclusion versus exclusion of the immediate factor) as the within-subject factor. The procedure and paradigm of the affect induction and the time perception measurement were slightly modified from Study 1, except for IC. A multiple staircase paradigm was used, and the experimental stimuli were modified by subdividing them into those included and excluded under immediate conditions: half of the smaller-sooner option times were “immediate,” and the other half were not. As supplementary research, we used an attention task in Study 3 ($N = 115$) to determine which attributes (outcome or time) of the IC participants allocated more attention in different affect conditions. The results of the three studies consistently indicated that positive incidental affect leads to (1) distortion in the time perception (Studies 1 and 2) and more attention to the time attribute of IC (Study 3). Participants judged future durations to be longer under positive affect than under neutral affect (Studies 1 and 2). They paid more attention to time rather than the outcome attribute before the decision (Study 3). (2) The discount rate increased in the IC task, including immediate options (Studies 1 to 3). Participants exhibited a higher level of immediacy effect after being induced by positive affect. (3) However, the subjective discount rate does not change if the objective time perception is substituted with the subjective time perception in the discounting models (Studies 1 and 2). This finding suggested that changes in future time perception influence the propensity of the immediacy effect without altering temporal discounting. In conclusion, the three studies combined demonstrated that positive incidental affect has a disjunction effect on IC through affecting subjective time perception. That is, when making an IC, including immediate choice, people judge future durations to be longer, and they pay more attention to the time attribute when induced by positive affect than by neutral affect. Consequently, the value of the future option appears less appealing, thus leading to preference for immediate reward and reflecting the immediacy effect. Incidental affect did not have any impact on intertemporal choice without immediate options. This research improves the understanding of the mechanism and boundary effect of positive incidental affect on IC and provides a new perspective on how related decision-making can be improved.

你会对谁将心比心？决策者角色对生命风险偏好的影响

李嘉雯¹ 石佳霖¹ 刘力嘉¹ 彭华茂¹（通讯作者）

¹ 北京师范大学心理学部，北京，100875，penghuamao@bnu.edu.cn

摘要 在决策研究领域，先前研究者们发现个体在为自己和为他人进行决策时的风险偏好存在差异，这一差异可能是由于心理距离所导致。基于此，本研究进一步依据亲密关系和代际关系将“他人”角色进行细分，探究在生命风险情境中个体为不同决策者角色决策时风险偏好的差异，以及其中的内在机制和边界条件。54名被试（ $M = 22.52$, $SD = 2.03$, 64.8%为女性）通过线上实验平台 Credamo 参与本研究。被试为随机排序的五种决策者角色（包括自我、同辈亲密他人、同辈陌生他人、异辈亲密他人、异辈陌生他人）进行生命风险决策任务，每个任务后即刻评估其与该决策者角色的心理距离，完成分心任务后继续为下一个角色进行决策，以及完成标准人口学量表。结果表明（1）将“自我”与“他人”两种决策者角色进行比较：总体来说，为他人做决策比为自己做决策更冒险；具体来看，为同辈陌生他人、异辈亲密他人和同辈陌生他人决策均比为自我决策更冒险，而为同辈亲密他人决策与为自我决策风险偏好无显著差异。（2）将多种“他人”决策者角色进行比较：亲密关系影响生命风险偏好，即为陌生他人决策比为亲密他人决策更冒险；代际关系调节亲密关系对风险偏好的影响，具体而言，为同辈决策时，为同辈陌生他人决策比为同辈亲密他人决策更冒险；为异辈决策时，为异辈陌生他人和异辈亲密他人决策结果无显著差异。（3）心理距离在亲密关系与风险偏好之间起到完全中介作用，且代际关系能够调节心理距离的中介作用，对于同辈，心理距离的中介效应得到增强；对于异辈，心理距离的中介效应则被削弱。本研究从亲密关系和代际关系两种决策者角色属性出发，将以往研究中的他人角色具体化，并且进一步扩了解释水平理论视角下的心理距离假设；此外，本研究将自我-他人决策相关研究从经济风险领域拓宽至生命风险领域，对于理解日常生活中为不同他人决策的差异和选择寻求决策建议的请教对象具有启发意义。

The Effect of Decision Makers' Roles on Life-risk Preference

LI Jiawen, SHI Jialin, LIU Lijia, PENG Huamao*

Faculty of Psychology, Beijing Normal University, Beijing, 100875, China

Abstract: In the field of decision-making research, previous researchers have found that people have different risk preferences when making decisions for themselves and others, which probably due to psychological distance. Based on this, this study subdivides "others" according to intimate relationship and intergeneration, also explores the influence of decision makers' roles on life-risk preference, and examines psychological mechanism and boundary condition. Fifty-four participants ($M=22.52$, $SD=2.03$, 64.8% female) were recruited in the study through the online experimental platform Credamo. They were required to make life-risk decisions for five randomly ordered decision makers' roles in sequence. After each life-risk decision task, the psychological distance between them and the decision makers' roles was assessed immediately. After completing the distracted task, participants continued to make decisions for the next role, and finally completed the standard Demographic scale. The results show that: (1) Compare the two decision makers' roles of "self" and "others": people prefer more risks when making decisions for others than to making decisions for themselves in general. Specifically, making decisions for peer strangers, different generation's intimate others and different generation's strangers are all more risk-seeking than making decisions for self, but there was no significant difference in risk preference between making decisions for peer intimate others and making decisions for self. (2) Compared the decision makers' roles of different "others": we found that intimate relationships affect life risk preference, which is, people prefer more risks when making decisions for strangers compares to making decisions for close people. Intergenerational relationship can moderate the effect of intimate relationship on life risk preference. Specifically, when making decisions for peers, people are more risk-seeking when making decisions for peer strangers compares to making decisions for close peers. There was no significant difference in the decision results between strangers and close people when making decisions for different generations. (3) Psychological distance fully mediates the relationship between intimate relationship and risk preference, and

intergenerational relationship can moderate the mediating effect of psychological distance. For peers, the mediating effect of psychological distance is strengthened. For different generations, the mediating effect of psychological distance was weakened. This study based on two decision makers' roles, concretized the role of others in previous studies by intimate relationship and intergenerational relationship, and further expanded the psychological distance hypothesis from the perspective of interpretative level theory. Besides, this study expands the psychological distance hypothesis from the perspective of construal level theory. From the perspective of intimate relationship and intergenerational relationship, the roles of others in previous studies are concretized. In addition, this study expanded the research on self-other decision-making from the field of economic risk to the field of life risk is instructive for understanding the differences in decision-making of different others in daily life and choosing people to consult for decision-making advice.

摘要 尽管女性在许多领域都容易受到压力影响, 但女性在应对压力方面有无或有何种优势仍存在争议。本研究在 COVID-19 爆发两个月后, 采用心理复原量表(CD-RISC)、简明症状量表(BSI-18)、应对方式量表(SCSQ)以及灵性评估量表(SSS)调查新冠肺炎疫情爆发地武汉市 227 位武汉老年人抑郁症状和心理韧性的性别差异, 并探讨积极应对方式(如重评、问题解决和社会支持)和意义感的中介作用。结果表明, 武汉老年人心理应对性别差异显著, 与老年男性相比, 老年女性心理复原得分较高($t = -2.21, p < .05$), 抑郁症状较少($t = 2.21, p < .05$), 采用更多积极应对方式($t = -3.07, p < .05$)。链式中介效应分析结果表明, 积极应对方式与意义感在性别和心理韧性之间(Boot SE = 0.05, $p < .001$)以及性别和抑郁症状之间(Boot SE = -0.38, $p < .001$)起显著中介作用。可能受社会和历史原因影响, 男女两性生活阅历不同。疫情期间老年男性社会责任感更高, 感知压力和无助更大; 男性不善于情感表达也容易导致不佳心理健康状态。本研究结果表明老年女性在压力应对早具有情绪调节优势。这暗示突发公共卫生事件的老年心理服务应关注性别差异, 并根据老年人心理性别差异和人群特点制定相关心理健康援助措施。

Abstract: Although women are vulnerable to stress in many domains, it remains arguable whether and how women hold the advantage in coping with stress, especially in the testosterone-consumed contexts, such as pathogenic threat and economic restrictions. The present research was an attempt to test the gender difference in depression symptom

and psychological resilience among Wuhan elders two months later after the COVID-19 outbreak. Spiritual Assessment Scale for the elderly (SSS), Simplified Coping Style Questionnaire (SCSQ), Connor-Davidson Resilience Scale (CD-RISC) and Brief Symptom Scale (BSI-18) were applied to investigate 227 elders in Wuhan. The results show that there was gender differences in the psychological coping of elderly in Wuhan. Compare with elderly men, elderly women adopted more positive coping styles ($t = -3.07, p < .05$), with higher psychological resilience ($t = -2.21, p < .05$), and less depression symptom ($t = 2.21, p < .05$). The mediating effects of positive coping and meaning sense between gender and resilience are significant (Boot SE=0.05, $p < .001$), and the mediating effects of positive coping and meaning sense between gender and depression symptom are also significant (Boot SE= -0.38, $p < .001$) as well. Men and women have different life experiences by social and historical reasons. During the COVID-19 pandemic, elderly men have higher sense of social responsibility, greater pressure and helplessness, and men who are not good at expressing emotions can easily lead to poor mental health. The results found that elderly women have advantage in emotional regulation in the early stage of stress response. which implies that mental health services for the elderly in public health emergencies should pay attention to gender differences and formulate relevant mental health assistances based on such differences.

负性情绪与轻度认知障碍的关系：基于焦虑和抑郁的视角

路美玉¹ 何晓丽¹（通讯作者） 冯茹钰² 马红杰³

¹ 宁夏大学心理系，银川，750000，h1016632877@qq.com

摘 要 轻度认知障碍是正常老龄化群体和痴呆之间的过渡阶段，并且具有极高的可能性发展为痴呆。轻度认知障碍和轻度认知障碍亚型群体表现出了多方面的神经精神症状，尤其该群体与情绪有关的神经精神症状异常显著，比如焦虑、抑郁。这两种负性情绪是轻度认知障碍个体早期识别和干预的一个重要指标。本文梳理了轻度认知障碍及其亚型群体的神经精神症状以及焦虑和抑郁与轻度认知障碍及痴呆之间关系的研究进展，分析了轻度认知障碍个体的早期发现和情绪与认知干预的最新手段。发现焦虑和抑郁与轻度认知障碍之间是相互作用的关系，在轻度认知障碍亚型领域中，焦虑和抑郁的负性情绪症状会表现的更为明显，并且二者均会加速轻度认知障碍向痴呆转化的进程。就干预方式而言，直接的认知干预和情绪干预都是提高和改善轻度认知障碍个体认知功能的有效方法，但是多种干预手段相结合更有利于改善轻度认知障碍个体的认知功能和负性情绪。未来研究还需探讨更加标准化和情景化的评估方法，采用更多可推广，易操作的干预范式改善轻度认知障碍个体的负性情绪状态和认知功能，从而延缓老年痴呆的进程。

关键词 轻度认知障碍，痴呆，焦虑，抑郁，干预

The Relationship between Negative Emotions and Mild Cognitive Impairment.A Perspective From Anxiety and Depression

Lu Meiyu¹, He Xiaoli¹, Feng Ruyu², Ma Hongjie³

Psychology Department of Ningxia university, Yinchuan

Abstract: Mild cognitive impairment (MCI) is a transitional stage between normal aging and dementia, and it has a high risk of developing dementia. MCI and MCI subtypes are characterized by a series of neuropsychiatric symptoms. Anxiety and depression are two of the core features of neuropsychiatric symptoms related to mood in MCI and MCI subtypes. Neuropsychiatric symptoms related to negative emotions, such as anxiety and depression, are a key indicator of early identification and early intervention for elderly people with mild cognitive impairment. In this paper, the neuropsychiatric symptoms related to mood in MCI and MCI subtypes, and the relationship between anxiety, depression, MCI and dementia are reviewed. The methods of early identification and early intervention for elderly people with MCI are summarized. It is believed that anxiety and depression have an interactive relationship with MCI, and both of them can accelerate the process of MCI to dementia. The combination of different methods are

more conducive to early intervention. Future studies can explore more standardized, contextualized evaluation methods and plausible and easy-to-operate intervention methods to improve MCI individuals' negative emotional status and cognitive, which delay the progression of dementia.

Key words: Mild cognitive impairment, Dementia, Anxiety, Depression, Intervention

摘要 工作记忆是一个容量有限的短时存储系统, 会影响认知表现。工作记忆刷新能力是中央执行功能的重要组成部分, 刷新功能出现衰退对个体的认知老化产生重要影响。空间-数字反应编码联合效应 (Spatial-Numerical Association of Response Codes effect, 即 SNARC 效应) 是数字认知研究的重要问题, 以往研究发现认知老化与 SNARC 效应的关系会受到工作记忆抑制控制能力的影响, 但工作记忆不同广度及刷新能力对老年群体的 SNARC 效应的影响缺乏相应的研究证实。本研究以老年人作为被试, 结合 n-back 任务和相对大小比较任务设计了双任务范式, 不仅考察了言语和空间回路工作记忆广度的高低对 SNARC 效应的影响, 也同时通过 n 的变化来考察不同负荷水平 (0-back、1-back) 对 SNARC 效应的影响。实验开始前先进行言语和空间工作记忆广度的测试并分成高、低两组, 之后每组被试均完成 0-、1-back 任务。本研究结果显示, 在 0-back 条件下, 言语及空间回路广度高、低组的 SNARC 效应强度均无差异; 在 1-back 条件下, 随着言语和空间回路广度增加, SNARC 效应强度逐渐减弱。随着负荷增加, SNARC 效应有减弱的趋势。因此, 本研究发现老年人工作记忆广度和刷新能力对 SNARC 效应具有不同的影响。随着负荷增加, 执行需要增加, 老年人可分配的认知资源减少, 认知资源可得性降低, 使得 SNARC 效应减弱; 工作记忆广度较大的个体可加工的信息量增加, 更好地处理冲突信息, 从而导致 SNARC 效应较弱。

关键词 SNARC 效应, 工作记忆广度, 工作记忆刷新; 老年人

The Effect of Working Memory Span on Spatial Number Association in the Elderly

Shuwei Ji¹, Fuhong Li¹, Bihua Cao²

School of Psychology, Jiangxi Normal University, Nanchang

Abstract: Working memory is a short-term storage system with limited capacity, which affects cognitive performance. Working memory updating plays an essential role in central executive function, and the decline of the updating has a significant impact on the cognitive aging of individuals. The Spatial-Numerical Association of Response Codes effect (SNARC effect) is an important field in the study of number cognition. Previous studies have found that the relationship between cognitive aging and the SNARC effect is affected by inhibition control abilities. However, the influence of different span and updating capacity on the SNARC effect of the elderly group is lack of corresponding research confirmation. In the current study, the elderly was used as participants, and a dual-task paradigm was designed by combining N-back task and relative magnitude comparison task. The effects of verbal and spatial working memory span circuits on the SNARC effect were investigated, and the effects of different load levels (0-back and 1-back) on the SNARC effect were also investigated through the change of N. Verbal and spatial working memory span tests were performed before the experiment, and participants were divided into two groups: high- and low-performance groups. Afterwards, participants in each group completed the 0-back and 1-back tasks. The results showed that under the 0-back condition, there was no difference in the SNARC effect size between the groups with high and low verbal and spatial loop span. In the 1-back condition, the SNARC effect size gradually decreased with the increase of the span of verbal and spatial loop. With the increase of load, the SNARC effect tends to weaken. Therefore, the current study found that the working memory span and updating ability of the elderly have different influences on the SNARC effect. With the increase of load and the increase of executive needs, the cognitive

resources available to the elderly decrease and the availability of cognitive resources decreases, which weakens the SNARC effect. Individuals with larger working memory span can process more information and better process conflict information, which leads to the weaker SNARC effect.

Keywords: SNARC effect, working memory span, working memory updating, the elderly

亲社会行为和社会支持对老年人主观幸福感和孤独感的影响： 自尊的中介作用

钟浩 王艳红 冯琳琳(通讯作者)

山东理工大学马克思主义学院, 山东淄博, 255000, fenglinlin@sdut.edu.cn

摘要 我国目前已步入人口老龄化社会, 老年人口占比持续上升。近年来, 老年人生活质量与健康状况备受研究者关注。主观幸福感是反映老年人心理健康与生活质量的重要指标, 关系到老年人能否幸福地安度晚年; 孤独感作为一种负向情绪情感体验普遍存在于老年人群体之中, 对老年人的身心健康有较大的影响。亲社会行为与社会支持贯穿于个体日常生活之中, 能够显著提升个体幸福水平, 消除其不良情绪, 是影响老年人健康状况的重要切入点。因此, 探讨亲社会行为与社会支持对老年人主观幸福感与孤独感的影响及影响机制, 对于提升老年人身心健康有着重要意义。本研究采用亲社会行为量表、领悟社会支持量表、自尊量表、纽芬兰纪念大学幸福感受量表和UCLA孤独量表对504名老年人进行测试, 所得数据使用SPSS 19.0和Amos 23.0软件进行统计分析, 探讨亲社会行为和社会支持对老年人主观幸福感和孤独感的影响, 以及自尊的中介作用。研究结果如下: (1) 相关分析显示, 亲社会行为、领悟社会支持、自尊与幸福感呈显著正相关, 与孤独感呈显著负相关。亲社会行为、领悟社会支持与自尊呈显著正相关。(2) 回归分析显示, 在预测老年人幸福感时, 亲社会行为、领悟社会支持显著正向预测自尊、幸福感; 自尊显著正向预测幸福感。在预测老年人孤独感时, 亲社会行为、领悟社会支持显著正向预测自尊、负向预测孤独感; 自尊显著负向预测孤独感。(3) 中介效应分析显示, 自尊在亲社会行为、领悟社会支持与幸福感之间起中介作用, 在亲社会行为、领悟社会支持与孤独感之间起中介作用。研究结果表明, 亲社会行为与社会支持不仅对老年人主观幸福感和孤独感有着直接影响, 而且还通过自尊的中介作用对老年人主观幸福感和孤独感产生间接影响。具有高水平亲社会行为与良好社会支持的老年人其主观幸福感水平越高, 反之则会产生更高水平的孤独感。另外, 通过提高老年人的自尊水平, 有助于提升老年人的幸福感、缓解老年人的孤独感。

Effects of Prosocial Behavior and Social Support on Subjective Well-Being and Loneliness of the Elderly: The Mediating Role of Self-Esteem

Zhong Hao, Wang Yanhong, Feng Linlin (Correspondence)

School of Marxism, Shandong University of Technology, Zibo Shandong, 255000,
fenglinlin@sdut.edu.cn

Abstract: At present, China has entered an aging society, and the proportion of the elderly population continues to rise. In recent years, the quality of life and health of the elderly have attracted much attention of researchers. Subjective well-being is an important index reflecting the mental health and quality of life of the elderly, which is related to whether the elderly can spend their old age happily; Loneliness, as a negative emotional experience, generally exists in the elderly, which has a great impact on their physical and mental health. Prosocial behavior and social support run through the daily life of the individual, which can significantly improve the level of individual's happiness and eliminate their bad emotions. It is an important entry point to affect the health status of the elderly. Therefore, it is of great significance to explore the influence and mechanism of prosocial behavior and social support on the subjective well-being and loneliness of the elderly. In this study, 504 elderly people were tested by Prosocial Behavior Scale, Perceived Social Support Scale, Self-esteem Scale, Memorial University of Newfoundland

Well-being Scale and UCLA Loneliness Scale. The data were statistically analyzed by SPSS 19.0 and Amos 23.0 software to explore the effects of prosocial behavior and social support on subjective well-being and loneliness of the elderly, and the mediating role of self-esteem. The results are as follows: (1) Correlation analysis shows that prosocial behavior, perceived social support, self-esteem are positively correlated with well-being, and negatively correlated with loneliness. Prosocial behavior, perceived social support and self-esteem are positively correlated. (2) Regression analysis showed that prosocial behavior and perceived social support positively predicted self-esteem and well-being; Self-esteem significantly positively predicted well-being. When predicting loneliness, prosocial behavior and perceived social support significantly positively predict self-esteem and negatively predict loneliness; Self-esteem significantly negatively predicted loneliness. (3) The mediating effect analysis shows that self-esteem plays a mediating role between prosocial behavior, perceived social support and well-being, and plays a mediating role between prosocial behavior, perceived social support and loneliness. The results show that prosocial behavior and social support not only have a direct impact on the subjective well-being and loneliness of the elderly, but also have an indirect impact on the subjective well-being and loneliness of the elderly through the mediating role of self-esteem. The higher the level of subjective well-being of the elderly with high level of prosocial behavior and good social support, the higher the level of loneliness. In addition, by improving the level of self-esteem of the elderly, it is helpful to improve their happiness and alleviate their loneliness.

Keywords: prosocial behavior, social support, self-esteem, subjective well-being, loneliness

现实利他和网络利他对老年人主观幸福感和孤独感的影响： 依恋的中介作用

王艳红 钟浩 冯琳琳(通讯作者)

山东理工大学马克思主义学院，山东淄博，255000，fenglinlin@sdut.edu.cn

摘要 随着我国人口老龄化程度的不断加深，人口老龄化的问题也日益显著，老年人群体面临着严重的身心健康问题，越来越多的学者开始对老年人的心理健康状况进行研究。主观幸福感是个体对自身生活状态和质量的总体评价，是衡量老年人心理状况的重要指标；孤独感是一种不良的情绪体验，是存在于老年人群中较为严重的心理问题之一。现实利他和网络利他是指现实和网络环境中，个体不要求回报而做出的有利于社会和他人的行为，它能够帮助个体缓解消极情绪，提升自我幸福感。因此，探讨现实利他和网络利他对老年人幸福感和孤独感的影响，以及依恋在其中的中介作用，对于提升老年人心理健康水平具有重要意义。本研究采用现实利他量表、网络利他量表、依恋量表、纽芬兰纪念大学幸福感量表和 UCLA 孤独表对 504 名老年人进行测量，所得数据通过 SPSS 19.0 和 Amos 23.0 软件进行统计分析。研究结果如下：（1）相关分析显示，现实利他、网络利他与依恋、幸福感均呈显著正相关，与孤独感均呈显著负相关；依恋与幸福感呈显著正相关，与孤独感呈显著负相关。（2）回归分析显示，在预测老年人幸福感时，现实利他显著正向预测依恋、幸福感，网络利他显著正向预测依恋、幸福感，依恋显著正向预测幸福感；在预测老年人孤独感时，现实利他显著正向预测依恋、负向预测孤独感，网络利他显著正向预测依恋、负向预测孤独感，依恋显著负向预测孤独感。（3）中介效应分析显示，依恋在现实利他与幸福感、孤独感及现实利他与幸福感、孤独感之间均起中介作用。研究结果表明，现实利他和网络利他是影响老年人主观幸福感和孤独感的重要因素，并且依恋在现实利他和老年人主观幸福感、孤独感之间起着中介作用，现实利他和网络利他还会通过依恋间接影响老年人的主观幸福感和孤独感。老年人从事的现实利他和网络利他行为越多，其获得的主观幸福感水平越高，反之则会产生较高水平的孤独感。此外，通过提升老年人的依恋水平，有利于增强老年人的主观幸福感、降低孤独感。

The Influence of Reality Altruism and Internet Altruism on Subjective Well-Being and Loneliness of the Elderly: The Mediating Role of Attachment

Yanhong Wang, Hao Zhong, Linlin Feng (Correspondence)

School of Marxism, Shandong University of Technology, Zibo, 255000, fenglinlin@sdut.edu.cn

Abstract: With the deepening of the degree of population aging in China, the problem of population aging is becoming increasingly significant. The elderly are facing serious physical and mental health problems. More and more scholars begin to study the mental health of the elderly. Subjective well-being is an individual's overall evaluation of their own living conditions and quality. It's also an important indicator to measure the psychological status of the elderly. Loneliness is a kind of bad emotional experience, which is one of the more serious psychological problems existing in the elderly group. Reality altruism and network altruism refers to the behavior that individuals do not ask for return in the reality and network environment, which is beneficial to society and others. It can help individuals alleviate negative emotions and improve their self-happiness. Therefore, it is of great significance to explore the influence of reality altruism and network altruism on the well-being and loneliness of the elderly, as well as the mediating role of attachment in them, so as to improve the level of mental health of the elderly. In this study, 504 elderly people were measured by reality altruism scale, Internet altruism scale, attachment scale, Memorial University of Newfoundland happiness scale and UCLA Loneliness Scale. The data were analyzed by SPSS 19.0 and Amos 23.0 software. The results are as follows: (1) Correlation analysis shows that reality altruism and network altruism are positively correlated with attachment and well-being, and negatively correlated with loneliness. Attachment is positively correlated with well-being and negatively correlated with loneliness. (2) Regression analysis shows that in predicting the well-being of the elderly, reality altruism significantly positively predicts attachment and well-being, network altruism significantly positively predicts attachment and well-being, and attachment significantly positively predicts well-being. In the prediction of loneliness of the elderly, reality altruism significantly positively predicted attachment and negative predicted loneliness, network altruism significantly positively predicted attachment and negative predicted loneliness, and attachment significantly negative predicted loneliness. (3) The analysis of mediating effect shows that attachment plays a mediating role between realistic altruism and well-being, loneliness, and between realistic altruism and well-being, loneliness. The results show that reality altruism and network altruism are important factors affecting the subjective well-being and loneliness of the elderly. Attachment plays a mediating role between reality altruism and subjective well-being and loneliness of the elderly. Reality altruism and network altruism also indirectly affect the subjective well-being and loneliness of the elderly through attachment. The more real altruistic and network altruistic behaviors the elderly engage in, the higher their subjective well-being level will be. On the contrary, they will have a higher level of loneliness. In addition, improving the attachment level of the elderly is conducive to enhancing their subjective well-being and reducing loneliness.

社区老人生活方式与睡眠质量、焦虑及抑郁的关系

陈娟¹ 何昊¹ 关青¹ (通讯作者)

¹ 深圳大学脑疾病与认知科学研究中心, 深圳, 518060, guanqing@szu.edu.cn

摘要 生活方式中的体育锻炼、社交活动与个体焦虑、抑郁情绪具有一定的相关, 不健康的生活方式可能是导致个体产生焦虑与抑郁情绪的危险因素。有研究发现个体的生活方式与睡眠质量密切相关。睡眠质量差易产生焦虑、抑郁等不良情绪, 影响个体的身心健康。焦虑、抑郁是社区老人常见的情绪问题, 本研究主要探讨社区老人的生活方式与睡眠质量、焦虑及抑郁情绪之间的关系。研究招募 383 名深圳市社区老人, 采用生活习惯量表(DLQ)、匹兹堡睡眠质量量表(PSQI)、焦虑自评量表(SAS)、老年抑郁量表(GDS)分别对其生活方式、睡眠质量、焦虑和抑郁状况进行测量。结果显示, 患有睡眠障碍的有 131 例, 检出率为 34.2%; 焦虑症状 39

例,检出率为 10.18%;抑郁症状 96 例,检出率为 25.07%。生活方式与睡眠质量($r = -0.15, p < 0.01$)、焦虑($r = -0.19, p < 0.01$)、抑郁($r = -0.25, p < 0.01$)均呈显著负相关。睡眠质量与焦虑($r = 0.46, p < 0.001$)、抑郁($r = 0.52, p < 0.001$)显著正相关。生活方式中脑力活动得分与睡眠质量($r = -0.18, p < 0.05$)、焦虑($r = -0.13, p < 0.05$)、抑郁($r = -0.21, p < 0.05$)显著负相关;体育活动得分与焦虑显著负相关($r = -0.14, p < 0.01$);社交活动得分与焦虑($r = -0.11, p < 0.05$)、抑郁($r = -0.12, p < 0.05$)显著负相关;不良习惯得分与焦虑($r = 0.12, p < 0.05$)、抑郁($r = 0.15, p < 0.05$)显著正相关。中介效应分析结果显示睡眠质量在生活方式影响焦虑($\beta = -0.29, 95\%CI: [-0.5346, -0.1101]$)与抑郁($\beta = -0.03, 95\%CI: [-0.0629, -0.0110]$)的过程中起部分中介作用。形成健康的生活方式、减少不良生活习惯有助于提高社区老人的睡眠质量,减轻其焦虑和抑郁症状。

Relationship between lifestyle with sleep quality, anxiety, and depression among community elderly.

CHEN Juan¹, HE Hao¹, GUAN Qing¹

¹ Center for Brain Diseases and Cognitive Sciences, Shenzhen University, Shenzhen 518060

Abstract: Physical exercise and social activities are related to anxiety and depression, unhealthy lifestyle may be a risk factor for anxiety and depression. Lots of investigations showed that lifestyle is closely related to sleep quality. Poor sleep quality could cause adverse emotions which affect an individual's physical and mental health, such as anxiety and depression. Anxiety and depression are common in the community elderly. To explore the relationship between lifestyle with sleep quality, anxiety, and depression among community elderly. A total of 383 participants who live in Shenzhen completed the Daily Living Questionnaire, Pittsburgh Sleep Quality Index, Self-rating Anxiety Scale, and Geriatric Depression Scale. Results showed that participants who reported poor sleep quality, anxiety, depression respectively accounting for 34.2%, 10.18%, and 25.07% ($n = 131, 39, 96$). The total score of lifestyle was negatively correlated with sleep quality ($r = -0.15, p < 0.01$), anxiety ($r = -0.19, p < 0.01$) and depression ($r = -0.25, p < 0.01$). Sleep quality was significant positively correlated with anxiety($r = 0.46, p < 0.001$) and depression($r = 0.52, p < 0.001$). The brain activity was significant negatively correlated with sleep quality($r = -0.18, p < 0.05$), anxiety($r = -0.13, p < 0.05$) and depression($r = -0.21, p < 0.05$). The exercise activity was negatively correlated with anxiety($r = -0.14, p < 0.01$). The social activity score was significant negatively correlated with anxiety($r = -0.11, p < 0.05$) and depression($r = -0.12, p < 0.05$). Bad habits was positively correlated with anxiety($r = 0.12, p < 0.05$) and depression($r = 0.15, p < 0.05$). Sleep quality mediated the effect of lifestyle on community elderly's anxiety($\beta = -0.29, 95\%CI: [-0.5346, -0.1101]$) and depression($\beta = -0.03, 95\%CI: [-0.0629, -0.0110]$). Form a healthy lifestyle and reduce poor habits is beneficial for improving sleep quality and decreasing anxiety and depression in the elderly.

文化自信背景下少数民族语言认同研究现状

陈梦一¹ 祝大鹏² (通讯作者)

¹ 武汉体育学院研究生院, 武汉, 430079

² 武汉体育学院健康科学学院, 武汉, 430079, zdpwl@126.com

摘 要 文化自信是一个民族、一个国家以及一个政党对自身文化价值的充分肯定和积极践行, 以及对其文化的生命力持有的坚定信心。民族语言作为民族存在的象征,是构成民族的最基本要素之一。在社会整合过程中,民族语言以及民族语言认同发挥着沟通和身份建构的作用。语言认同是一种复杂的文化心理趋同现象,是其它认同的基础,深刻地影响着人们的语言行为。中华民族共同体的建构离不开对汉语和少数民族语言的

认同。然而，随着新时代社会的多元化发展，我国各少数民族也趋向城市化融合发展。在这种发展大潮的影响下，无论是对本地的少数民族还是外来人口的语言认同情况都会产生强烈的冲击，同时还会对各自民族的母语产生一定的影响。研究主要采取文献资料法，通过中国知网及万方等数据库，选取“文化自信”、“少数民族”、“语言认同”等关键词进行搜索，选择 20 篇文献进行研读对比，对现有的关于少数民族语言认同的研究进行系统梳理，对促进文化自信背景下的少数民族语言认同研究具有积极借鉴与启示。已有研究中部分研究探讨了不同背景下少数民族语言认同的发展变化情况，其余大都为相关研究或调查研究。有关少数民族大学生的语言生活及认同状况的调查研究表明，少数民族大学生对汉语方言和普通话的掌握及认同水平均高于本族语。少数民族大学生“汉化”程度高，对本族语掌握不佳，语言转用的情况较为普遍。少有研究对少数民族语言认同的影响因素进行探索，以及少有从实践层面探讨如何促进对少数民族语言的认同与保护的研究。在语言生态巨变的环境下，我国少数民族语言逐渐退出日常生活的交流，作为珍贵的历史文化遗产，应采取有针对性的措施促进对少数民族语言的认同，并对其进行有效保护和传承。

关键词 语言认同，文化自信，少数民族

Research status of ethnic minority language identity in the context of cultural confidence

Chen Mengyi¹, Zhu Dapeng²

1Graduate School of Wuhan Sports University, Wuhan,430079

2School of Health Science, Wuhan Sports University, Wuhan,430079

Abstract: Cultural confidence is a nation, a country and a political party's full affirmation and active practice of its own cultural value, as well as a firm confidence in the vitality of its culture. National language is a symbol of national existence and one of the most basic elements that constitute a nation. In the process of social integration, national language and national language identity play a role in communication and identity construction. Language identity is a complex phenomenon of cultural psychological convergence, which is the basis of other identities and has a profound impact on people's language behavior. The construction of the Chinese national community is inseparable from the identification of the Chinese language and minority languages. However, with the diversified development of society in the new era, China's ethnic minorities also tended to urbanization and integration development. In such a development tide, the language identity of both the local ethnic minorities and the foreign population had a strong impact, and at the same time, it had a certain impact on the mother tongue of their respective nationalities. This research mainly adopted the literature method. Through the database of CNKI and Wanfang, keywords such as "cultural confidence", "ethnic minority" and "language identity" were selected to search, and 20 literatures were selected for study and comparison. The existing researches on ethnic minority language identity were systematically summarized, which had positive reference and inspiration for the research on ethnic minority language identity under the background of cultural confidence. Some of the existing studies had explored the development and changes of ethnic minority language identity under different backgrounds, while the rest were mostly related studies or investigation studies. Some investigations on the language life and identity of minority college students showed that the minority college students had a higher level of mastery and identity of Chinese dialects and Putonghua than their native language. Ethnic minority college students had a high degree of "Sinicization" and a poor grasp of their native languages, and the situation of language conversion was more common. Few studies had explored the influencing factors of minority languages, and few had explored how to promote the recognition and protection of minority languages from the practical level. In the context of great changes in language ecology, ethnic minority languages in China are gradually withdrawing from daily communication. As a precious historical and cultural heritage, targeted measures should be taken to promote the recognition of ethnic minority languages and effectively protect and inherit them.

不同学历护士对人流女性外显和内隐态度研究

周娟¹（通讯作者） 郭玉丹² 闫云帆³ 郝丽娜⁴

¹ 山西师范大学教育科学学院，临汾，041000 通讯作者 Email:zhoujuanjuan123@126.com

摘要 人工流产是全世界普遍存在的公共卫生问题。性观念的开放，首次性交日益低龄化，由于严重缺乏生殖相关健康常识和避孕知识，人工流产数增加。未婚女性除承受生理的伤害外，还受到传统文化价值观和禁忌带来的心理压力。随着医学模式的转变，护士的工作不再局限于打针、发药等技能性操作，更包括心理护理等创造性活动。所以探讨护士作为医务人员在护理过程中对流产女性的态度尤为重要。本研究分别从外显和内隐两个态度层面来探究护士对流产女性的态度。实验一是外显层面态度，采用 2（学历：本科、专科）×2（流产性质：未婚流产、已婚流产）两因素混合设计，因变量是被试在《人工流产态度问卷》上的评定分数。实验二是内隐层面上的态度，采用 2（学历：本科、专科）×2（流产性质：未婚流产、已婚流产）×2（IAT 阶段属性词：积极印象、消极印象）三因素混合设计，因变量为被试执行 IAT 不相容任务与相容任务反应时的差值，即 IAT 效应值。结果表明：（1）在外显层面上，本科和专科两种学历的护士都没有对人流女性表现更为消极的态度。（2）在内隐层面上，IAT 效应值随学历提升而减少，即积极印象增加，消极印象减少，表现出学历的差异。

A Study on the Explicit and implicit Attitudes of nurses with different educational backgrounds towards abortion

ZhouJuan, GuoYuDan, YanYuFan, HaoLiNa

College of Education Science, Shanxi Normal University LinFen

Abstract: Induced abortion is a widespread public health problem in the world. With the opening of sexual concepts, the first sexual intercourse is becoming younger and younger, and the number of induced abortions is increasing due to the serious lack of reproductive health knowledge and contraceptive knowledge. In addition to the physical harm, unmarried women also suffer from the psychological pressure brought by traditional cultural values and taboos. With the change of medical model, nurses' work is no longer limited to skilled operations such as injection and medicine dispensing, but also includes creative activities such as psychological nursing. Therefore, it is particularly important to explore the attitude of nurses as medical personnel towards women who have abortions in the nursing process. In this study, the attitudes of nurses towards women with abortion were investigated from two aspects: explicit and implicit attitudes. In the first experiment, explicit attitude was adopted. A mixed design of 2 (education: undergraduate, junior college) ×2 (nature of abortion: unmarried abortion, married abortion) was adopted. The dependent variable was the evaluation score of the subjects in the Questionnaire on attitudes to Induced Abortion. Experiment two is the attitude of the implicit level, using 2 (qualification: bachelor degree, specialized subject) × 2 (abortion properties: unmarried abortion, married abortion) × 2 (IAT stage attribute words: positive impression, negative impression) three factors mixed design, the dependent variable for the participants perform IAT incompatible tasks and compatible task reaction time difference, namely the IAT effect value. The results showed that : (1) at the external level, nurses with bachelor degree and junior college degree did not show more negative attitude towards abortion women. (2) At the implicit level, the IAT effect value decreases with the improvement of educational background, that is, the positive impression increases and the negative impression decreases, showing the difference of educational background.

Keywords: nurses with different educational backgrounds; Abortion of women; Explicit and implicit attitudes; Implicit association test

新型冠状病毒肺炎疫情暴露与非湖北一线医务人员心理健康的关系

韩静¹ 王娟¹ 陈擎仪¹ 崔乃雪¹ (通讯作者) 曹枫林¹

¹ 山东大学齐鲁医学院护理学院, 山东, 250012, cnx@sdu.edu.cn

摘要 目的: 探究在非湖北一线医务工作者中新型冠状病毒肺炎疫情暴露与其心理健康(包括焦虑、抑郁、创伤后应激反应和睡眠)的关系。**方法:** 采用网络问卷调查法对山东省医务人员进行调查, 共 1,608 名医务人员有效应答。疫情暴露参考文献中 SARS 疫情暴露测量方法进行测量, 焦虑、抑郁、创伤后应激反应分别使用广泛性焦虑量表(GAD-7)、患者健康问卷抑郁症状群量表(PHQ-9)、事件影响量表修订版(IES-R)进行测量, 睡眠时长、失眠症状和睡眠质量通过修改的匹兹堡睡眠质量指数量表相应条目进行测量。使用一般线性回归分析疫情暴露与心理健康的关系。**结果:** 317 (19.71%) 名医务人员报告存在疫情暴露, 一般线性回归分析显示, 在控制社会人口学资料后, 工作暴露、隔离暴露和周围人感染均能够影响非湖北一线医务人员的心理健康, 在控制社会人口学资料和其他类型暴露后, 工作暴露与隔离暴露对医务人员心理健康影响有限, 而周围人感染这一暴露类型与医务人员的焦虑、抑郁、创伤后应激反应水平和失眠症状呈正相关, 与睡眠时长和睡眠质量呈负相关。**结论:** 周围人感染能够影响非湖北一线医务人员的心理健康水平(包括焦虑、抑郁、创伤后应激反应和睡眠), 需要着重关注存在周围人感染的医务人员并及时给予心理指导和心理干预。**关键词** 新型冠状病毒肺炎疫情, 医务人员, 疫情暴露, 心理健康, 横断面研究

The relationship between COVID-19 exposure and mental health of medical staff not working in Hubei during the outbreak

Han Jing, Wang Juan, Chen Qingyi, Cui Naixue, Cao Fenglin

School of Nursing, Cheeloo College of Medicine, Shandong University

No. 44 Wenhuxi Road, Jinan, Shandong, 250012 China

Abstract: Objective: To explore the relationship between COVID-19 exposure and mental health (i.e. anxiety, depression, posttraumatic stress, and sleep) of medical staff not working in Hubei during the outbreak. **Methods:** An online survey link was shared to the medical staff in Shandong Province during the COVID-19 outbreak and a total of 1,608 medical staff responded validly. The COVID-19 exposure was measured using items developed according to the measurement of exposure to the SARS outbreak in the literature. Generalized Anxiety Disorder-7, Patient Health Questionnaire-9 and the Impact of Event Scale - Revised were used to assess anxiety, depression and post-traumatic stress symptoms, respectively. Questions adopted from the Pittsburgh Sleep Quality Index were used to measure nocturnal sleep length, insomnia, and sleep quality. The relationship between COVID-19 exposure and mental health was analyzed using general linear regression model. **Results:** A total of 317 (19.71%) medical staff reported exposure to the COVID-19 outbreak. General linear regression model analysis showed that after controlling for sociodemographic factors, work exposure, quarantining and having infected people around can affect the mental health of medical staff not working in Hubei during the outbreak. After controlling for sociodemographic factors and other types of exposure, work exposure and quarantining had limited effects on the mental health of medical staff, while having infected people around was positively associated with anxiety, depression, post-traumatic stress and insomnia symptoms, and negatively associated with sleep duration and sleep quality. **Conclusion:** Having infected people around can affect the mental health of medical staff who were not working in Hubei Province during the COVID-19 outbreak (i.e. anxiety, depression, posttraumatic stress, and sleep). Therefore, more attention needs to be paid to those medical staff who have infected people around and they should be given psychological guidance and intervention timely.

摘要 目的: 调查妊娠早期和妊娠晚期孕妇多种心身症状的发生情况(如发生频率、严重程度和困扰程度), 并识别不同妊娠阶段症状群特征。**方法:** 采用便利抽样的方法, 从2019年3月至10月选取山东省某两所三级甲等医院产科门诊的557名妊娠期女性为研究对象, 其中妊娠早期249名, 妊娠晚期308名。使用记忆症状评估量表调查研究对象在妊娠早期和妊娠晚期的症状体验, 使用研究者自行设计的一般资料调查表收集研究对象的社会人口学和临床学信息。采用SPSS 25.0和R 4.0.2软件进行数据的整理和分析。采用独立样本t检验和卡方检验以比较不同妊娠阶段孕妇的社会人口学信息是否存在差异, 采用独立样本t检验比较症状评分在不同妊娠阶段的差异; 采用Spearman相关分析、偏相关网络分析和聚类分析来确定症状群的最佳数量。**结果:** 妊娠早期孕妇症状得分排在前五位的分别为恶心、食欲不振、昏昏欲睡、精力不足、呕吐; 妊娠晚期孕妇症状得分排在前五位的分别为体重增加、难以入睡、出汗、精力不足和口干。在妊娠早期识别出4个症状群, 分别命名为妊娠反应症状群、情绪-疲乏症状群、性欲-食物味道改变症状群和口干-腹胀症状群; 在妊娠晚期识别出3个症状群, 分别为情绪-疲乏症状群、睡眠-腹胀症状群、体液缺乏症状群。**结论:** 妊娠期女性在怀孕过程中会出现多个心身症状, 且在不同妊娠阶段症状表现不同。本研究为妊娠期孕妇的症状群提供了新的见解, 有利于临床医务人员从症状群的角度较为全面地评估和管理妊娠期孕妇中多种同时发生的症状。**关键词** 症状群, 症状管理, 孕妇, 网络分析, 聚类分析

Identifying symptom clusters among pregnant women during early and late pregnancy

Abstract: Objectives: To investigate the status of multiple psychosomatic symptoms (e.g., frequency, severity and distress) among women in early and late pregnancy and to identify symptom clusters in different gestational stages. **Methods:** A convenience sample were recruited at the obstetrics clinic of two tertiary hospitals in Shandong Province, from March 2019 to October 2019. A total of 557 pregnant women were investigated, of which 249 were in the early pregnancy stage, and 308 were in the late pregnancy stage. Participants' symptom experience in early and late pregnancy was measured by the Memorial Symptom Assessment Scale, and sociodemographic and clinical characteristics were also collected, using a questionnaire designed by the researchers. All analyses were conducted using SPSS (version 25) and R statistical software (version 4.0.2). Independent Student's t-test and the Chi-squared test were performed to compare the differences in sociodemographic information and symptom scores at different stages of pregnancy. Spearman correlation analysis, partial correlation networks, and hierarchical cluster analysis were carried out to identify optimal number of symptom clusters. **Results:** Top five scores for symptoms in early pregnancy were nausea, lack of appetite, feeling drowsy, lack of energy, and vomiting; and weight gain, difficulty sleeping, sweating, lack of energy, and dry mouth scored highly in late pregnancy. Four clusters (pregnancy reaction symptom cluster, mood-fatigue symptom cluster, change in libido and food taste symptom cluster, and dry

mouth-bloating symptom cluster) were identified in early pregnancy, and three clusters (mood-fatigue symptom cluster, sleep-bloating symptom cluster, and fluid deficiency symptom cluster) were determined in late pregnancy.

Conclusions: Women experience multiple psychosomatic symptoms during pregnancy, and the manifestation of symptoms varies, and our study provides new insights into symptom clusters of pregnant women. These results might support the development of assessment and management of multiple co-occurring symptoms in this population.

中文版抑郁敏感性莱顿指数量表在孕产妇人群中应用的效度和信度

扶燕青¹ 黄菲菲² (通讯作者)

1 福建医科大学附属协和医院, 福建福州, 350001

2 福建医科大学护理学院, 福建福州, 350122, pt860315@163.com

摘要 目的 综合应用经典测量理论(CTT)与项目反应理论(IRT)方法评价中文修订版抑郁敏感性莱顿指数量表(LEIDS-RR-CV)在孕产妇人群中应用的信度和效度, 确定产后抑郁高危人群的临界值, 以期评价孕产妇抑郁认知反应提供科学、有效的测评工具。**方法** 采用方便抽样方法, 选取2020年9月至2021年3月在福建省福州市、莆田市、泉州市4所三级甲等医院产科门诊及产科住院部就诊的符合纳排标准的344例孕妇作为研究对象。并分别于产后1周和6周进行两次随访。调查工具为自制的孕晚期、产后6周的一般情况调查表、LEIDS-RR-CV和中文版爱丁堡产后抑郁量表(EPDS)。采用问卷星在线调查方法进行资料收集。使用SPSS26.0、AMOS25.0和Stata14.0软件进行数据分析; 其中, 用均数和标准差对计量资料进行统计描述, 用频数和构成比对计数资料进行统计描述; 信度评价指标包括内在一致性、重测信度、边际信度; 效度评价指标包括结构效度、区分效度、聚合效度、校标关联效度、已知族群效度; 其他评价还包括反应度、天花板与地板效应、单维性检验、基于等级反应模型的条目分析、项目特征曲线等。设 $\alpha=0.05$ (双侧), 以 $P<0.05$ 为差异有统计学意义。**结果** LEIDS-RR-CV在孕晚期妇女和产后6周妇女中测量的Cronbach's α 系数分别为0.928、0.982, 各维度的Cronbach's α 系数范围分别为0.874~0.914、0.943~0.972。孕晚期、产后6周前后两次测量LEIDS-RR-CV的组内相关系数分别为0.934、0.862, 各维度的2周重测信度分别为0.652~0.943、0.672~0.867。验证性因子分析结果显示, LEIDS-RR-CV的五因子结构模型拟合良好, 孕晚期妇女的CMIN/DF=2.511、RMSEA=0.066、RMR=0.038、CFI=0.925、TLI=0.915, 产后6周妇女的CMIN/DF=2.586、RMSEA=0.070、RMR=0.035、CFI=0.963、TLI=0.957。在聚合效度方面, 孕晚期和产后6周妇女5个维度26个条目的标准化载荷值范围分别为0.688~0.883、0.859~0.954; 5个维度的组合信度分别为0.877~0.913、0.943~0.972; 5个维度的平均方差萃取量分别为0.588~0.648、0.805~0.870。在区分效度方面, 孕晚期和产后6周妇女的各维度之间的 r_s 值范围分别为0.250~0.805、0.719~0.933。以EPDS为效标, 将58分作为LEIDS-RR-CV筛选出孕晚期妇女抑郁高危人群的截断值(约登指数最大值为0.633, 灵敏度和特异度分别为0.904和0.730); 将60分作为LEIDS-RR-CV筛选出产后6周妇女抑郁高危人群的截断值(约登指数最大值为0.307, 灵敏度和特异度分别为0.767和0.540)。IRT分析结果显示, LEIDS-RR-CV在孕晚期、产后6周的边际信度分别为0.943、0.981; 条目分析结果显示: 在孕晚期时, LEIDS-RR-CV的26个条目中, 有23个条目的参数 α 值大于1(89%), 其余3个条目的 α 值也接近1; 条目的 β 值范围为-1.44~6.22; 有19个条目(73.08%)的最大信息量值大于0.5。在产后6周时, LEIDS-RR-CV的26个条目中, 参数 α 值均大于1; 条目的 β 值范围为-1.22~2.91; 所有条目的最大信息量均大于0.5。且两个时间点在每个项目图形中, 5条曲线具有比较好的区分性, 不存在严重的重叠现象。根据测试特征曲线图可知, 当孕晚期参与者估计认知反应水平在1.0~3.0之间; 产后6周参与者估计认知反应水平分别在-1~0、1~2之间时, LEIDS-RR-CV以最低的标准误差提供了最准确的信息。**结论** LEIDS-RR-CV可用于测评我国孕产妇人群的认知反应水平, 具有较好的信效度。LEIDS-RR-CV筛选出孕晚期、产后6周妇女抑郁高危人群的截断值分别是58分、60分。

Validity and reliability of the Chinese version of the modified Leiden index of depression sensitivity among pregnant and maternal women

FU Yanqing¹, HUANG Feifei²

1 Fujian Medical University Union Hospital, Fuzhou 350001, Fujian, China

2 School of Nursing, Fujian Medical University, Fuzhou 350122, Fujian

Corresponding author: HUANG Feifei, pt860315@163.com

Abstract: Objective: To evaluate the reliability and validity of the Chinese version of the modified Leiden index of depression sensitivity (LEIDS-RR-CV) among pregnant and maternal women by the Classical measurement theory (CTT) and item response theory (IRT), and to determine the cut-off value of high-risk individuals in postpartum depression. Both of which is to provide a reliable and valid tool for evaluating cognitive reactivity (CR) to postpartum depression. **Methods:** From September 2020 to March 2021, a total of 344 pregnant women who met the standard of discharge were recruited by the convenient sampling method, from the obstetrical clinic and obstetrical inpatient department of four Tertiary (level 3) hospitals in Fuzhou, Putian, and Quanzhou, Fujian Province, China. The women were followed up at 1 week and 6 weeks postpartum, respectively. The participants completed the following tools through the Wenjuanxing online platform, including the self-made socio-demographic or clinical characteristic questionnaire (including late pregnancy and 6-week postpartum respectively), the LEIDS-RR-CV, and the Edinburgh Postnatal Depression Scale (EPDS). The SPSS26.0, AMOS25.0, and Stata14.0 software were used to analyze the data. The mean and standard deviation are used to describe the measurement data, and the frequency and constituent ratio are used to describe the counting data. Reliability (e.g., internal consistency, test-retest reliability, composite reliability and marginal reliability), and validity (e.g., construct validity, discriminant validity, convergent validity, criterion-related validity, and known-group validity) were assessed. The responsiveness, ceiling and floor effect, one-dimensional test, item analysis based on Graded Response Model, item characteristic curve were also assessed in this study. Suppose $\alpha = 0.05$ (bilateral), the difference was statistically significant ($P < 0.05$). **Results:** For late pregnancy and 6 weeks postpartum women, the Cronbach's α coefficient of LEIDS-RR-CV was 0.928 and 0.982, respectively. The Cronbach's α coefficients of the five factors were ranged from 0.874~0.914 and 0.943~0.972, respectively. The intra-group correlation coefficients of LEIDS-RR-CV measured in the third trimester and 6 weeks after delivery were 0.934 and 0.862, respectively, and the test-retest reliability of each dimension was 0.652~0.943 and 0.672~0.867, respectively. The results of confirmatory factor analysis showed that the five-factor structure model of LEIDS-RR-CV fitted well. In terms of convergent validity, the standardized load values of 26 items in 5 dimensions among women in late pregnancy and 6 weeks postpartum were 0.688~0.883, 0.859~0.954, and the composite reliability of 5 dimensions were 0.877~0.913 and 0.943~0.972, respectively. The average amount of variance extraction was 0.588~0.648 and 0.805~0.870, respectively. In terms of discriminant validity, the r_s values between late pregnancy and 6 weeks postpartum women were 0.250 to 0.805 and 0.719 to 0.933 respectively. Taking EPDS as the criterion, the optimal cut-off point of LEIDS-RR-CV to screen the high-risk groups of depression in late pregnant women was 58 points, with the maximum value of the Youden index was 0.633, the sensitivity and specificity were 0.904 and 0.730 respectively. The optimal cut-off point of LEIDS-RR-CV to screen the high-risk groups of depression in 6 weeks, postpartum women, with the maximum value of Youden index was 0.307, the sensitivity and specificity were 0.767 and 0.540, respectively. The results of IRT analysis showed that the marginal reliability of LEIDS-RR-CV in the third trimester and 6 weeks after delivery was 0.943 and 0.981, respectively, and the item analysis showed that in the third trimester, the parameter α value of 23 items of LEIDS-RR-CV was greater than 1 (89%), and the β value of the items was ranged from -1.44 to 6.22. The maximum information value of 19 items (73.08%) was greater than 0.5. At 6 weeks after delivery, the parameter α values of all items were all greater than 1, the β values of items were ranged from -1.22 to 2.91, and the maximum information values of all items were greater than 0.5. At both times, the five curves have a good distinction and no serious overlap. According to the test characteristic curve, when the third-trimester participants estimated CR levels between 1.0 and 3.0, and 6 weeks

postpartum participants estimated CR levels between -1: 0 and 1: 2 respectively, the LEIDS-RR-CV provided the most accurate information with the lowest standard error. **Conclusions:** LEIDS-RR-CV can be used to evaluate the CR level of pregnant and maternal women in China, which has good reliability and validity. The cutoff values of high-risk groups of depression in late pregnancy and 6 weeks postpartum selected by LEIDS-RR-CV were 58 and 60, respectively.

巴林特小组对国内医护工作者职业倦怠的影响与进展研究

何子君 韩继明（通讯作者）

延安大学医学院，延安，716000, yadxhjm@163.com

摘要 随着现代社会的发展，人们在追求高质量生活的同时，所面对的社会生活压力不断增大，职业倦怠出现率逐年增多。职业倦怠是指个体在长期工作压力下产生的心身疲劳与耗竭的状态。该名词最早由 FREUDENBERGER 于 1974 年提出，他认为职业倦怠是一种最容易在助人行业中出现的情绪性耗竭的症状，此后也有学者认为职业倦怠是个体对其工作长期的情绪及人际应激源做出反应而产生的心理综合症。各行各业的工作者均会出现职业倦怠。有研究表明，医护人员职业倦怠发生率排名第 2，仅次于教师。临床医护工作者每天在处理大量护理工作的同时要承受来自患者及家属、工作环境、人际关系及业务学习等各方面的压力，持续高强度的工作压力，会影响到个体身心健康，易产生悲观失望的负性情绪，进而出现职业倦怠，产生挫败感，心理资本降低。为克服医护人员自身职业倦怠问题，提高患者满意度，以及充分体现医护人员自身价值，人们尝试了多种方式，巴林特小组活动就是其中一种方式。Meta 分析表明，巴林特小组活动能缓解医务人员职业倦怠，调解医护人员情绪。目前我国开展此活动较为局限，自 2003 年巴林特小组活动引入我国以来，缺乏全国性大样本的研究。本研究旨在通过巴林特小组活动在医院中运用移情、反移情等基本技术，促进医护人员识别自身和患者情绪，使他们更好地帮助和理解患者。通过比较分析巴林特小组活动对医护工作者职业倦怠感的影响，来探究巴林特小组活动在职业倦怠中的理论和实践意义，继以加快巴林特小组活动在国内的推广和深入。

Research on the effects and progress of Balint group activities on job burnout of domestic healthcare workers

He Zijun, Han Jiming

Yan'an University, Yan'an, 716000, yadxhjm@163.com

Abstract: With the development of modern society, people are pursuing a high quality of life, but the pressure of social life is increasing and leading to an increase in the rate of job burnout year by year. The term job burnout refers to the state of mental and physical fatigue and exhaustion of individuals under prolonged work stress. The term was first introduced by FREUDENBERGER in 1974, who believed that job burnout is a symptom of emotional exhaustion that is most likely to occur in the helping professions. It has also been suggested since then that job burnout is a psychological syndrome that occurs when individuals react to the emotional and interpersonal stressors of their jobs over long periods of time. Job burnout occurs in people from all walks of life, and studies have shown that health care workers have the second highest incidence of job burnout, second only to teachers. Clinical health care employees deal with a large amount of nursing work every day, and at the same time, they have to bear the pressure from patients and families, work environment, interpersonal relationships and professional training and other related factors. The continuous high-intensity work pressure will affect the individual's physical and mental health, and is prone to negative emotions of pessimism and disappointment, which will lead to job burnout, frustration, and reduced psychological capital. In order to overcome the job burnout problem, improve patient satisfaction, and fully reflect the value of health care workers themselves, a variety of approaches have been tried. One of these approaches

is Balint group activities. Meta-analysis shows that Balint group activities can alleviate the job burnout of medical staff and regulate the emotions of medical staff. At present, this activity is limited in China, and there is a lack of national studies with large samples since the introduction of Balint group activities in 2003. This study aims to use the basic techniques of empathy and counter-empathy in hospitals through Balint group activities to promote health care workers to identify their own emotions and those of patients, so that they can better help and understand patients. This study explores the theoretical and practical implications of Balint group activities in job burnout by comparing and analyzing the effects of Balint group activities on health care workers' job burnout, and then accelerates the promotion and depth of Balint group activities in China.

后疫情时代医院职工心理资本、组织承诺、职业认同与离职意愿的相关分析

彭逸思¹, 颜如玉², 唐小霁², 彭婷², 资文峰³, 雷雪丽³, 周艳辉^{1*}

南华大学附属第一医院, 衡阳, 421001

摘要 目的 了解后疫情时代医院职工心理资本、组织承诺、职业认同与离职意愿的现状, 探讨心理资本、组织承诺、职业认同对离职意愿的影响。**方法** 采用便利抽样法对衡阳市某三甲医院 914 名职工进行心理资本、组织承诺、职业认同与离职意愿问卷调查。**结果** 后疫情时代医院职工的心理资本处于较高水平 (4.80 ± 0.89), 组织承诺水平处于中等水平 (3.03 ± 0.987), 职业认同感处于中等偏上水平 (4.03 ± 0.69), 离职意愿处于中等偏高水平 (2.78 ± 0.84); 心理资本、组织承诺、职业认同和离职意愿之间均有相关关系 ($P < 0.05$); 回归分析中组织承诺和职业认同对离职意愿可解释 25.40% 的影响; 路径分析中心理资本对离职意愿直接作用弱, 心理资本通过组织承诺、职业认同两个中介变量对离职意愿产生间接效应。**结论** 后疫情时代医院管理者应关注职工的心理资本情况, 为其提供相应的支持以提高组织承诺水平, 增强职业认同感, 从而降低离职意愿。

关键词 后疫情时代, 医院职工, 心理资本, 组织承诺, 职业认同, 离职意愿

国内外肺癌患者心理干预的文献计量学分析

邹洁¹ 张静平¹ (通讯作者)

1 中南大学湘雅护理学院, 长沙, 410013, jpzhang1965@163.com

摘要 目的: 通过系统分析肺癌患者心理干预研究领域的相关文献, 了解研究现状、探讨该领域的研究热点和未来发展趋势。**方法**: 检索 PubMed、Web of Science、中国知网、万方、维普数据库, 应用 Citespace 引文分析软件及文献计量学方法分析建库至 2021 年 5 月肺癌患者心理干预的研究文献, 对有关国内外肺癌患者心理干预的文献从文献数量分布、国家文献数量分布、期刊分布情况等方面进行文献计量学分析。**结果**: 国内外关于肺癌患者心理干预的发文从数量看来美国、英国、澳大利亚在该领域处于领先地位, 正念减压疗法、运动疗法、幽默疗法、尊严疗法等是目前国外的研究热点。国外对于肺癌患者心理的关注和干预都较早且干预模式较为成熟; 国内在近十年对癌症患者心理的关注逐渐增加, 但在肺癌患者心理干预的研究起步相对较晚, 干预性研究较少且存在缺乏理论支撑, 研究设计的科学性和严谨性欠佳等问题。**结论**: 在肺癌患者心理干预研究中, 以美国、英国等为主的发达国家居于领先地位, 我国在这方面研究起步相对较晚且发文数量少, 未来可学习借鉴国外的经验, 增加干预性研究的科学性和可推广性。

Bibliometric analysis of psychological intervention for lung cancer patients

Jie Zou¹, Jinping Zhang¹ (Corresponding author)

1 Xiangya School of Nursing, Central South University, Changsha, 410013, jpzhang1965@163.com

Abstract: Objective: To understand the research status, discuss the research hot spots and the future development

trend of psychological intervention for lung cancer patients through a systematic analysis of the relevant literature. Methods: PubMed, Web of Science, CNKI, Wanfang and VIP databases were retrieved. Citespace citation analysis software and bibliometrics were used to analyze the research literatures on psychological intervention for lung cancer patients from the establishment of the database to March 2021. Literature on psychological intervention for lung cancer patients at home and abroad was analyzed in terms of literature quantity distribution, national literature quantity distribution, journal distribution and so on. Results: In terms of the number of published papers on psychological intervention for lung cancer patients at home and abroad, the United States, The United Kingdom and Australia are in the leading position in this field. MBSR, exercise therapy, humor therapy and dignity therapy are the research hot spots abroad. Overseas psychological attention and intervention for lung cancer patients are earlier and the intervention mode is more mature. In recent ten years, domestic attention to the psychology of cancer patients has gradually increased, but the research in this field started relatively late, with few intervention studies, lack of theoretical support, and poor science and rigor. Conclusions: In the research of psychological intervention for lung cancer patients, developed countries, mainly the United States and The United Kingdom, take the leading position. China started relatively late in this field and published few papers. In the future, we can learn from foreign experience to increase the scientific of intervention research.

Keywords: Lung cancer, Psychological intervention, Research hot spots, Bibliometrics

中文阅读中汉字身份信息和位置信息加工受词频调节 ——来自眼动的证据

张妍萃^{1,2} 常敏² 王敬欣² Kevin B. Paterson³

1 天津农学院人文学院, 天津, 300392

2 天津师范大学心理学部, 天津, 300387, wjxpsy@126.com

3 英国莱斯特大学神经科学、心理与行为系, 莱斯特, LE1 9HN, kbp3@le.ac.uk

摘要 普遍认为, 英文阅读中字母的身份信息和位置信息加工非常重要, 且存在明显的转化字母效应(transposed letter effect), 也就是说字母的位置信息加工比身份信息加工更加灵活。同时, 转化字母效应受到词频的调节。本研究主要探究中文阅读中是否真正存在转化字符效应以及该效应是否受词频调节。由于当前中文转化字符效应研究存在的问题, 实验1进行了更严格的设计, 采用边界范式和含有双字目标词的句子, 并对目标词设置4个条件(基词、转换非词、相似替换非词和完全不同替换非词), 进一步考察中文阅读中是否存在转化字符效应。实验2在实验1的基础上加入了词频变量(高频、低频)。实验1结果显示, 预视效应在所有眼动指标上都具有显著性, 这表明汉字的身份信息和位置信息加工非常重要, 且存在非常明显的转化字符效应。实验2结果显示, 汉字位置信息加工和转换字符效应在早期指标上都受到词频调节, 但身份信息加工在所有指标上都不受词频的调节。交互作用结果表明, 低频词汉字位置信息加工更严格。低频词不存在转化字符效应或是存在比高频词更小的转化字符效应。本研究结果与英文相关研究有一致性, 但也体现了中文的特点。这将为中文阅读模型提供汉字身份信息和位置信息加工的基本数据支撑。

The identity and position processing of Chinese characters are modulated by word frequency in Chinese reading: Evidence from eye movements

Zhang Yancui^{1,2}, Chang Min², Wang Jingxin², Kevin B. Paterson³

1 College of Humanities, Tianjin Agricultural University, Tianjin, China

2 Faculty of Psychology, Tianjin Normal University, Tianjin, China

3 Department of Neuroscience, Psychology and Behaviour, University of Leicester, Leicester, UK

Abstract: It is well-established that the identity and position information of letters are important in sentence reading and there was Transposed letter effect (TL effect, the processing of position information of letters is more flexible than processing of identity information), which was modulated by word frequency. However, given language differences, it is important to establish the identity and position processing of Chinese characters and whether it is modulated by word frequency. Experiment 1 was designed more rigorous to further investigate the existence of transposed-character effect in Chinese reading, using boundary paradigm and sentences containing two-character target words with four conditions for target words (eg. base words, TC nonwords, similar SC nonwords, and SC nonwords). In experiment 2, word frequency variable was added on the basis of experiment 1. The results of experiment 1 showed that the preview effect was significant across all measures, meaning the importance of identity and position information of characters and the obvious existence of transposed-character effect. The results of experiment 2 showed that position processing of Chinese characters and the transposed-character effect were modulated by word frequency on early measures, while the identity processing was not modulated by word frequency on all the measures. The interaction results showed that the position processing of characters of low frequency words was more rigorous and low frequency words did not have transposed-character effect or had smaller transposed-character effect than high frequency words. These findings are consistent with the relevant studies in English and also reflect features of Chinese. This will provide basic data support for the processing of Chinese character identity and position information for Chinese reading model.

摘要 语言熟悉性效应是指听者在语音知觉过程中, 加工自己母语语音的能力好于加工不熟悉语言的语音。这种效应得到了大量研究的一致证明, 但是以颞叶听觉和语音加工脑区为主的大脑皮层是否以及如何表征这种语言熟悉性差异则尚未可知。为此本研究采用 Block 设计, 让被试躺在 MRI 中执行被动语音知觉任务。任务采用了三种不同熟悉度的语言作为实验材料, 即汉语(母语)、英语(L2)和韩语(不熟悉的语言), 并通过声学编辑软件对每一种语言语音进行处理, 产生无语义语音材料, 从而保证每种语言包含有语义语音和无语义语音两种实验材料。分析结果发现双侧前部颞中回(aMTG), 右侧后部颞中回(pMTG), 右侧缘上回及角回(rAG)均得到了显著的激活。右侧 AG 和缘上回能表征出有语义信息语言间的差异; 除了右侧缘上回脑区外, 这些脑区均能表征无语义信息情境下不同语言间的差异。为进一步考察颞叶听觉脑区的作用机制, 基于以往研究选取了颞横沟(HG)、颞平面(PT)和颞叶语音加工概率图包含的脑区为感兴趣区, 并抽取对

应的% Signal Change 进行条件间的对比。分析发现, 在 HG 和 PT 上并没有显著的交互效应, 左侧颞上回/沟等脑区表现出显著的语言间的熟悉性差异; 而右侧颞上回/沟等脑区在无语义语音条件下不存在语言间的显著性差异, 但神经信号变化均有体现出语音熟悉性的梯度变化。因此, 本研究认为相对于无语义信息的听觉加工, 颞叶听觉皮层对含有语义信息且可以理解的声音刺激能产生较强的神经响应, 并能表征语言熟悉性的差异。

Abstract: The language familiarity effect (LFE) refers that the listeners' behavior performance was well better in the same speaker than different speaker conditions. It has been confirmed by numbers of behavior researches, but it is still unknown whether and how temporal auditory and voice brain regions represent the LFE. This study employed the block design and asked participants who lied on the MRI scanner to passive listen to auditory stimuli. The auditory stimuli of the current study included three languages, the Mandarin Chinese (the native language), English (the second language, L2), and the Korean (an unfamiliar language). All stimuli were edited by the acoustic software and formed time-reversed auditory stimuli that have no semantic information, so each language included semantic and no semantic auditory stimuli. The analysis showed significant activation in the bilateral anterior parts of middle temporal gyrus (aMTG), right posterior parts of middle temporal gyrus (pMTG), right supramarginal gyrus and angular gyrus (rAG). A number of clusters in the right supramarginal gyrus and rAG indicated a significant language familiarity effect under the condition of semantic information. Besides the right supramarginal gyrus, the rest activation regions were all represented language familiarity difference without semantic information. For further investigation the function mechanism of temporal auditory cortex in the current study, we extracted the % Signal Change of those regions that were been selected as ROI, included the bilateral heschl's gyrus (HG), planum temporale (PT) and brain regions in the voice probabilistic maps. Beyond the HG and PT, the results showed significant familiarity differences among languages with semantic information, which was observed in the left superior temporal gyrus/ sulcus (STG/S). Moreover, although there was a non-significant language familiarity difference in the right STG/S under the condition of no semantic information, the neural signal value still showed a gradient change among them. Therefore, compared with no semantic information auditory processing, the present study unravels the temporal auditory cortex could generate a stronger neural response for those semantic and comprehensible auditory stimuli, and represents the language familiarity difference in the early stages of processing (Supported by NSFC: 31900750, 31771254 and 6143101).

Keywords: Semantic information, language familiarity effect, voice perception, temporal cortex

汉语三字词惯用语的储存激活机制研究

马利军（通讯作者）黄琳 卢梓棚

广州中医药大学心理系，广州，511400，malj@gzucm.edu.cn

摘要 为研究三字词汉语惯用语的储存激活机制，采用 DRM 范式通过汉语三字词惯用语、等价词诱发错误记忆，从而将记忆过程中汉语惯用语字面义和比喻义的处理过程进行分离，以探测汉语惯用语字面义和比喻义的关联性。实验一和实验二的等价词分别为惯用语中间字和尾字替换，数据显示等价词和惯用语配对作为材料时，两个方向上的错认率都显著高于其它材料组，而先学习等价词的错认率又显著高于先学习惯用语。实验一、二结果相似，表明实验可以有效诱发错误记忆，且错误记忆在替换字位置不同的情况下仍出现一样的效果。研究结果支持惯用语理解的建构观点，同时涉及到激活扩散理论：即汉语惯用语的信息激活是自下而上的，学习惯用语后会因语义/词汇激活扩散导致对应的等价词被激活而产生错误记忆。学习等价词后惯用语的错认率显著更高则表明惯用语的理解过程应是字面义和比喻义同时加工，且比喻义会通过字面义相同的等价词间接激活，自动发生。位置效应的不显著也揭示了惯用语比喻义的激活不单纯依赖固定词组。惯用语作为一种特殊的汉语语汇，以其比喻义作为本质，更多需要结合文化、习俗才能进行理解。本研究材料均未采用被试不熟悉的惯用语，因此无法对更多的惯用语理解理论进行探讨，这也是本研究未来努力的方向。

关键词 惯用语，DRM 范式，错误记忆，储存激活

The Storage and Activation Mechanism of Three-Character Chinese Idioms

Lijun Ma, Lin Huang, Zipeng Lu

Guangzhou University of Chinese Medicine's Department of Psychology, Guangzhou

Abstract: In order to study the storage and activation mechanism of Three-character Chinese idioms, DRM paradigm is adopted to induce false memory through Three-character Chinese idioms and equivalent words, so as to separate the processing process of literal meaning and figurative meaning of Chinese idioms in the process of memory, so as to detect the correlation between literal meaning and figurative meaning of Chinese idioms. In experiment 1 and Experiment 2, the equivalent words were replaced by idiomatic middle words and tail words respectively. The data showed that when the equivalent words and idiomatic expressions were paired as materials, the misrecognition rate in both directions was significantly higher than that in other material groups, while the misrecognition rate of the equivalent words learned first was significantly higher than that of the idiomatic expressions learned first. The results of experiment 1 and 2 are similar, indicating that the experiment can effectively induce false memory, and the false memory still has the same effect under different substitution word positions. The results support the view of constructing idiomatic understanding, and involve the activation diffusion theory: that is, the information activation of Chinese idiomatic expressions is bottom-up, and after learning idiomatic expressions, the semantic/lexical activation diffusion will lead to the activation of corresponding equivalent words, resulting in false memory. The significantly higher misrecognition rate of idioms after learning equivalent words indicates that the process of understanding idioms should be processed simultaneously with literal meaning and figurative meaning, and metaphorical meaning can be activated indirectly and automatically by equivalent words with the same literal meaning. The insignificance of positional effect also reveals that the activation of figurative meaning in idiomatic expressions does not depend solely on fixed phrases. As a special Chinese vocabulary, idioms are more important to be understood by combining culture and custom than metaphorical meaning. The materials in this study did not adopt the familiar idioms of the subjects, so it is impossible to discuss more theories of idiom understanding, which is also the future direction of this study.

摘要 为什么人们听到“白色”会联想到干净、纯洁, 听到“黑色”会联想到冷酷、恐惧? 这种颜色隐喻认知包含复杂的认知加工机制, 但目前我们对其了解还比较有限。本研究采用事件相关电位技术, 探讨颜色隐喻的认知加工过程及其神经生理机制。有 30 名大学生被试参与本研究, 每人需要完成两项任务: 其一为颜色联想任务, 包含相关联想关系(比如/白色/-/纯洁/)和无关联想关系(比如/黑色/-/幸运/)两种实验条件, 在被试进行颜色词联想关系判断时, 同时记录其行为反应和脑神经电位(N400 反应)变化; 其二为颜色知识任务, 设置颜色关系匹配(比如/白色/-/雪花/)和颜色关系不匹配(比如/黑色/-/菠萝/)两种实验条件, 该任务中只记录被试在进行颜色匹配关系判断时的行为反应。结果发现: (1) 无关联想关系比相关联想关系所诱发的 N400 反应的波幅更大, 说明颜色联想关系对 N400 反应具有调节作用, 这为颜色隐喻认知加工提供了神经生理依据。(2) 被试左右两半球均产生了由颜色联想关系不匹配所诱发的 N400 效应, 但左半球的 N400 效应更强, 说明大脑左右两侧半球均参与颜色隐喻加工, 但具有左半球优势。(3) 被试颜色知识任务的行为表现与颜色词联想任务的行为表现存在显著的相关关系, 根据扎根认知理论, 该结果说明颜色知识可能是建立颜色联想关系的基础, 其对颜色隐喻加工具有重要作用。

The cognitive neuropsychological processing mechanism of color metaphors: An ERP study

Jie Feng¹, Juan Xu², Xinchun Wu³

1 Beijing Electronic Science and Technology Institute, Beijing, 100070

2 Special Education College, Beijing Union University, Beijing, 100075

3 Faculty of Psychology, Beijing Normal University, Beijing, 100875

Abstract: How could people associate “white” with “clean” or “pure”, associate “black” with “cold-blooded” or “horrible”, etc. Color metaphor cognition includes complex processing mechanisms, while we don’t know much about it at the moment. The current study employed the event-related potential (ERP) techniques to explore the processing mechanism and the neuropsychological basis of color metaphor cognition. Thirty college students participated in this study, and they had to accomplish two tasks, one is the color association task, which included two experimental conditions, i.e., the related color association (e.g., /white/-/pure/) and the unrelated color association (e.g., /black/-/lucky/). Participants’ behavioral and neuropsychological responses were recorded simultaneously during this task. The other is the color knowledge task, and it included the matched color relationship (e.g., /white/-/snow/) and the mismatched color relationship (e.g., /black/-/pineapple/). Only behavioral performances were recorded in this task. The results showed that: (1) the unrelated color association elicited larger amplitude of the N400 response compared with the related color association, it suggests that color association modulates the N400 response, providing a neurophysiological evidence for the color metaphor cognition. (2) The N400 effect elicited by unrelated color associations was observed in both hemispheres, while, the N400 effect was stronger in the left than in the right, indicating that both hemispheres participated in the processing of color associations, but with a left hemisphere asymmetry. (3) Participants’ behavioral performance in the color knowledge task was correlated with their behavioral performance in the color association task. According to the Grounded cognition theory, the results indicates that color knowledge is the basis to acquire color associations, and it plays an important role in color metaphor cognition.

Keywords: color association; color knowledge; N400, the Grounded cognition theory

汉语盲文阅读经验对盲人听觉词汇加工的影响

冯杰¹ 徐娟² 伍新春³

1 北京电子科技学院, 北京, 100070

2 北京联合大学特殊教育学院, 北京, 100075

摘要 阅读和书写经验会影响个体的口语加工。明眼人使用以视觉为主导的文字阅读体系, 而盲人使用以触摸觉为主导的盲文阅读体系。汉字是一种象形文字, 而汉语盲文与汉语拼音相对应, 其更像一种字母文字。本研究旨在探讨汉语盲文阅读经验对个体听觉词汇加工的影响。参与本研究的有 15 位先天盲大学生和 15 位明眼大学生, 两组被试年龄和智力匹配。本研究采用启动范式, 通过操纵启动词和目标词之间的字形和语义关系, 共形成三类实验材料: (1) 语义相关, 并且启动词与目标词首音节所对应的汉字表征和盲文表征均相同, 比如/bao4zhi3/ (报纸, ㄆㄠˋ ㄓㄧˇ) - /bao4she4/ (报社, ㄆㄠˋ ㄕㄜˋ); (2) 语义无关, 启动词与目标词首音节所对应的汉字表征和盲文表征均相同, 比如/bao4zhi3/ (报纸, ㄆㄠˋ ㄓㄧˇ) - /bao4xiao1/ (报销, ㄆㄠˋ ㄒㄠㄠ); (3) 语义无关, 启动词与目标词首音节所对应的盲文表征相同但汉字表征不同, 比如/bao4zhi3/ (报纸, ㄆㄠˋ ㄓㄧˇ) - /bao4yu3/ (暴雨, ㄆㄠˋ ㄩˇ)。被试需要判断所听到的目标词和前面出现的启动词之间的语义是否相关。研究结果发现, 明眼被试中, 字形相同条件所诱发的 N400 效应小于字形不同条件所诱发的 N400 效应; 而盲人被试中, 这两种实验条件所诱发的 N400 效应差异不显著。该研究结果说明, 盲人和明眼人在汉语听觉词汇加工中可能有不同的字形信息的激活, 明眼人激活的是汉字字形表征, 而盲人激活的是汉语盲文字形表征, 揭示了阅读经验对个体听觉词汇加工的影响。

Effects of Mandarin Braille reading experience on auditory word processing in blind people

Jie Feng¹, Juan Xu², Xinchun Wu³

1 Beijing Electronic Science and Technology Institute, Beijing, 100070

2 Special Education College, Beijing Union University, Beijing, 100075

3 Faculty of Psychology, Beijing Normal University, Beijing, 100875

Abstract: Learning to read and write alters the way people process spoken language. Mandarin Chinese is a logography writing system, however, Mandarin Braille is an alphabetic representation of Chinese Characters. To explore the influence of Braille reading experience on auditory word processing, the current study employed the ERP techniques and examined the N400 responses in blind versus sighted participants during Chinese auditory word processing. Three sets of Chinese prime-target word pairs were used as auditory stimuli: (1) semantic-related word pair, with the same pronunciation and the same orthography of the first syllable for both Mandarin Chinese and Mandarin Braille, e.g., /bao4zhi3/ (报纸, ㄆㄠˋ ㄓㄧˇ, newspaper) - /bao4she4/ (报社, ㄆㄠˋ ㄕㄜˋ, news office). (2) Semantic-unrelated word pair, with the same pronunciation and the same orthography of the first syllable for both Mandarin Chinese and Mandarin Braille, e.g., /bao4zhi3/ (报纸, ㄆㄠˋ ㄓㄧˇ, newspaper) - /bao4xiao1/ (报销, ㄆㄠˋ ㄒㄠㄠ, reimbursement). (3) Semantic-unrelated word pair, with the same pronunciation and the same orthography of the first syllable for Mandarin Braille, but with different orthographies for Mandarin Chinese, e.g., /bao4zhi3/ (报纸, ㄆㄠˋ ㄓㄧˇ, newspaper) - /bao4yu3/ (暴雨, ㄆㄠˋ ㄩˇ, rainstorm). Participants were instructed to identify whether the target word they heard was semantically related to the preceding prime word or not. The results suggest that different orthographic information have been activated between the two groups during Chinese auditory word processing, that is, Mandarin Chinese for sighted participants, while Mandarin Braille for blind participants, revealing the influence of reading experience on auditory word processing.

选择自由和认知控制对概念产生的影响

李朋¹ 宣宾¹ (通讯作者)

1 安徽师范大学教育科学学院, 芜湖, 241000, 93696247@qq.com

摘要 在说话者计划并决定传递信息的言语产生阶段中, 最初始的阶段是概念产生。已有研究表明, 概念产生直接受可选概念数量的影响, 认知控制等因素也会影响概念产生过程。备选概念的数量由选择自由度决定, 而选择自由度包括目标概念负载、目标选择自由和特征选择自由的影响。然而先前的研究无法预测来自不同选择自由的影响和来自认知控制的调节。本研究采用一项修订的概念产生任务来考察个体从多个概念中选择并产生一个概念时的表现。选择自由分为目标负载、目标选择自由和特征选择自由, 任务要求被试根据刺激反应规则选择刺激物的颜色或形状, 尽快和尽可能准确地大声报告相应的概念。从备选概念中选择一个概念需要打破概念之间的平衡, 抑制不相关的概念, 这依赖于认知控制能力。使用 Stroop 任务、N-back 任务和颜色-形状转换任务来测量认知控制的三个主要成分: 抑制、更新和转换。31 名 19-29 岁的成年人参与了这项研究。被试的平均反应时随着目标负载和特征选择自由的增加而增加, 且当被试根据指定的特征产生概念时, 目标选择自由引起显著差异。虽然目标负载的增加通常会减慢概念产生的速度, 但在可以自由选择任何目标的情况下提高了概念产生的准确性。此外, 抑制和更新的表现可以预测概念产生的准确性, 抑制和更新较好的个体在概念产生任务中表现也更好。更新和转换与概念产生的直接影响因素相互作用, 较好的更新减少了由目标自由和目标负载引起的准确性差异, 同时也减少了目标自由和特征自由所引起的反应时差异, 而更好的转换能力则扩大了特征自由引发的变异性。因此, 更多的选择通常会增加概念产生的成本, 但不同来源的选择自由在概念产生中影响不同。当个体需要从多个概念中选择一个时, 选择自由的增加并不一定会降低成绩, 高目标负载下个体可能会改变概念产生策略。认知控制的三个部分以不同的方式参与概念产生。抑制和更新直接影响概念产生, 更新和转换通过概念产生中的直接影响因素以相反方向影响概念产生。

The influence of freedom of selection and cognitive control on concept production

Peng Li, Bin Xuan (corresponding author)

School of Educational Science, Anhui Normal University, Wuhu, 241000

xuanbin@ahnu.edu.cn

Abstract: The conceptualization is the initial stage of speech production when a speaker plan and decide what information to convey. Previous studies have shown that conceptualization is influenced by the number of alternative concepts directly, and cognitive control abilities also contribute to the process of conceptualization. The number of alternative concepts is determined by the freedom of selection, which was influenced by the load of target concepts, the freedom of target selection and the freedom of feature selection. However, the influence of selection freedom and the moderation of cognitive control on the influence could not be predicted by previous studies. Here, a revised concept selection task was used to explore the performance when individuals select and produce one concept from several alternatives in current study. The freedom of selection was separated into the load of target, the freedom of target selection and the freedom of feature selection by a varying number of colored shape stimuli and different stimulus-response rules. During the concept selection task, participants were instructed to select the color or the shape of the stimulus according to the stimulus-response rules and say the word aloud as fast and accurately as possible. At the same time, choosing one concept from alternatives needs to break the balance between concepts and inhibit the unrelated concepts, which depends on cognitive control. The Stroop task, N-back task, and Color-Shape Switching task were used to measure the three main components of cognitive control: inhibition, updating and shifting. Thirty-one adults aged 19-29 years participated in this study. Participants' mean RT increased in the load of target and the freedom of feature selection, and the significant difference caused by the freedom of target selection was found when participants produce a concept according to specified feature. Although the increasing load of target would slow

the speed of concept selection generally, it could improve the accuracy of concept selection when one could select any target freely. In addition, the performance of inhibition and updating could predict the accuracy of concept selection, and the individuals with better inhibition or updating performed better in the concept selection task. The updating and shifting of cognitive control were also interacted with the direct influencing factors. Better updating reduced the accuracy difference, which was caused by the freedom of target and the target load. It also reduced the RT differences which was caused by the freedom of target and the freedom of feature, while better shifting enlarged the variability of the freedom of feature. Therefore, more alternatives could increase the cost of concept selection generally, but different sources of variability in conceptualization process have different effects. The increase of freedom of choice does not always reduce the performance when individuals need to select one concept among more alternatives, and individuals might change the strategy of concept selection in high target load. The components of cognitive control contribute to the concept selection with different ways. Inhibition and updating influence the concept selection directly, while updating and shifting influence the concept selection in opposite direction via the effect of direct sources of variability in conceptualization process.

个体差异对语言转换的作用：基于新学习语言的证据

段晓婷¹ 焦鲁¹ (通讯作者)

¹ 青岛大学心理学系, 青岛, 266071, jiaolu@qdu.edu.cn

摘要 在双语领域的相关文献中, 自适应控制假说和相关的实证研究证据揭示了在熟练语言中, 双语语言控制的适应性本质, 而新语言学习初始阶段的语言控制过程尚未得到检验。本研究使用事件相关电位(ERP)技术研究抑制能力和语言转换经验的个体差异如何影响新学习语言的言语控制过程。我们首先在第1天评估了汉-英双语者的语言转换频率和抑制能力。然后, 所有双语者在接下来的6天内从新语言(即德语和日语)中学习单词。在第8天, 被试完成了新学习语言之间基于理解的语言转换任务。混合效应模型对行为数据分析的结果表明, 在对比转换式次与重复式次时, 没有显著的转换代价, 并且个体差异对新学习语言之间的语言转换没有预测作用。然而, 对 ERPs 数据分析的结果表明, 在 N2 和 LPC 指标上, 发现了转换代价的存在和个体差异的效应。具体而言, 语言转换频率显著预测了 N2 和 LPC 的波幅变化。抑制能力调节了日语中的转换效应, 这一效应通过 LPC 所反映。这些发现表明, 个体差异预测了新学习语言之间基于理解的语言控制, 从语言理解的角度为语言控制的适应性提供了新的实证研究证据。此外, 本研究基于自适应控制假说, 探讨了新学习语言之间的语言控制过程, 从而通过关注语言学习的初始阶段, 丰富了相关领域的研究。

Comprehension-based Language Switching between Newly Learned Languages: The Role of Individual Differences

Xiaoting Duan¹, Lu Jiao¹(corresponding author)

¹ Department of Psychology, Qingdao University, Qingdao, 266071

Abstract: Adaptive Control hypothesis and relevant empirical evidence in bilingualism literature have revealed the adaptive nature of bilingual language control in skilled languages, while the language control processes at the very initial stage of new language learning have not been examined. The present study investigated how the individual differences in inhibition ability and language switching experience influence the controlling process of newly learned languages, using event related potentials (ERPs) technology. We first assessed the language switching frequency and inhibition ability of Chinese-English bilinguals on Day 1. Then, all bilinguals learned words from new languages (namely German and Japanese words) during the next six days and completed a comprehension-based language switching task between the newly learned languages on Day 8. Results of mixed-effects models on the behavioral data showed that there was no switching costs in contrasting switch trials with repeat trials and no predictive effect of

individual difference on the language switching between newly learned languages. However, the ERPs results revealed the switching costs and the individual difference effects in N2 and LPC. The language switching frequency significantly predicted the variability of the N2 and LPC, and the inhibition ability modulated the switch effect in Japanese as showed in the LPC. These findings suggest that individual differences predict comprehension-based language control between the newly learned languages, providing new evidence for the adaptability of language control from a language comprehension perspective.

疫情期间小学生父母的期望与教养压力的关系： 家庭-工作冲突和配偶支持的中介作用

柴彩霞（通讯作者），冯喜珍，杨媛，连培琴

山西师范大学教育科学学院，临汾，041000，896133828@qq.com

摘要 疫情期间，学生参加云课堂，家长进行云办公，亲子、夫妻共处时间大大增加，父母的家庭-工作冲突增多，导致小学生父母的教养压力问题格外突出。根据家庭系统理论，探索小学生父母的家庭-工作冲突和配偶支持在期望与教养压力之间的内在作用，对维护疫情中的小学生父母的心理健康具有独特的现实意义。本研究采用父母期望、家庭-工作冲突、配偶支持、父母教养压力等问卷，对 625 名小学生父母进行调查。结果显示：（1）期望与教养压力、家庭-工作冲突两两间呈显著正相关；配偶支持与期望、家庭-工作冲突、教养压力都存在显著的负相关。（2）使用 Bootstrap 进行中介效应检验发现，家庭-工作冲突在期望和教养压力之间的中介作用显著($\beta=0.06$, 95%CI[0.08,0.17])；配偶支持在期望和教养压力之间的中介作用显著($\beta=0.05$, 95%CI[0.03,0.08])；家庭-工作冲突和配偶支持在期望和教养压力之间的链式中介作用显著($\beta=0.01$, 95%CI[0.002,0.012])。结论：小学生父母的期望、家庭-工作冲突、配偶支持和教养压力关系密切，期望不仅直接影响其教养压力，还会通过家庭-工作冲突和配偶支持的链式中介间接影响其教养压力。

关键词 期望，家庭-工作冲突，配偶支持，教养压力，链式中介

Influences of Expectation on Parenting Stress in Primary School Students' Parents during the Pandemic: Mediating Effect of Family-work Conflicts and Spousal Support

Chai Caixia, Feng Xizhen, Yang Yuan, Lian Peiqin

School of Education Science, Shanxi Normal University, Linfen, 041000

Abstract: Due to the impact of the COVID-19 Pandemic, students participated in cloud classes and parents did cloud offices. The more time they spent on parent-child and husband-wife relations, the more parental family-work conflicts they would have, which made their parenting stress more prominent. According to the family system theory, it had an unique practical significance to explore the inner role of family-work conflicts and spousal support in primary school students' parents between expectation and parenting stress, which was helpful to maintain the mental health of parents in the pandemic. This study investigated 625 parents of primary school students by using the parental expectation questionnaire, the family-work conflict scale, Support in Intimate Relationships Rating Scale and the Parenting Stress Index Short Form. The results were as follows: (1) Expectation was positively correlated with parenting stress and family-work conflicts; spousal support was negatively correlated with expectation, family-work conflicts and parenting stress. (2) Using Bootstrap to examine the mediating effect, it showed that family-work conflicts had a significant mediating effect between expectation and parenting stress ($\beta=0.06$, 95%CI[0.08,0.17]); spousal support had a significant mediating effect between expectation and parenting stress ($\beta=0.05$,

95%CI[0.03,0.08]); family-work conflicts and spousal support had a chain mediating effect between expectation and parenting stress ($\beta=0.01$, 95%CI[0.002,0.012]). Conclusion: Parental expectation, family-work conflicts, spousal support and parenting stress are closely related. Parental expectation not only affects their parenting stress directly, but also affects their parenting stress through the chain mediating role in family-work conflicts and spousal support indirectly.

Keywords: expectation, family-work conflicts, spousal support, parenting stress, chain mediating effect

城市困难群众的心理特点与心理帮扶建议

肖俊艳¹ 王卫红²

1 西南大学, 重庆, 100101

2 西南大学心理学部, 重庆, 400700, 461821725@qq.com

摘 要 当前, 心理学领域对贫困群众的研究主要集中在主观幸福感、心理健康和行为决策三大部分。本研究为了促进社会救助制度体系的健全完善, 帮助城市困难群众解决基本生活困难, 更好地实现对城市困难群众的救助保障, 打赢“脱贫攻坚战”, 从心理健康的角度出发, 对重庆市 10 个地区的城市困难群众进行了抽样调查, 共有 259 位群众参与, 并对 196 位城市困难群众进行访谈调研。通过症状自评量表 (SCL-90) 对其进行心理测评, 获得 171 份有效问卷, 对此分析城市困难群众的心理特点, 结果发现: ①大部分群众的心理健康水平正常, 但在躯体化症状上有问题和有严重问题的达到了 22.2%、抑郁症状 (17%)、强迫症 (15.2%), 相比全国健康成人躯体化, 显著高于全国常模, 人际关系敏感和偏执显著低于全国常模; ②不同性别的城市困难群众在心理健康各因子得分上无显著差异; ③不同年龄段的困难群众, 在人际关系敏感和偏执上有明显差异, 成年初期 (18-25 岁) 的群众在人际关系敏感和偏执的得分上显著高于其他年龄段; ④不同婚姻状况在阳性指标、躯体化、人际关系敏感、抑郁、焦虑和恐怖的因子上都存在差异显著, 离异和丧偶显著高于未婚和已婚的因子分; ⑤不同文化程度在躯体化上有显著差异; ⑥除了阳性平均分、躯体化、偏执外, 其余各因子得分在残疾状况上都有显著差异。智力残疾与精神残疾显著高于其他各因子得分; ⑦不同劳释情况的城市困难群众在心理健康各因子上无显著差异。对此提出心理帮扶建议: ①建立对城市困难群众心理健康数据库; ②在社区开展心理健康知识宣传讲座; ③完善社区心理帮扶体系建设; ④建设社区心理服务专业人才队伍。

基于双加工理论探索网络游戏障碍玩家的决策行为：一项 ERP 研究

周玉红¹ 姚梦云² 高雪梅³ (通讯作者)

1 西南大学心理学部, 重庆, 400715

2 郑州经济技术开发区第六中学, 郑州, 450000

3 西南大学心理学部, 重庆, 400715, zhenggao@swu.edu.cn

摘 要 现有关于网络游戏障碍 (Internet gaming disorder, IGD) 的研究主要分别基于冲动系统和控制系统来展开, 成瘾的双加工模型也认为成瘾行为是冲动系统和控制系统交互作用的结果。但是, 目前为止, 很少有研究真正从双加工系统这一综合性的观点来同时考察 IGD 玩家的冲动系统和控制系统是否存在异常, 关于其的电生理证据则更少。为了解决这一问题, 本研究选取决策行为——一种典型的依赖于冲动系统和控制系统交互作用的人类行为, 来考察 IGD 玩家的双系统加工。研究选取了 24 名 IGD 玩家, 以及 26 名娱乐游戏使用玩家 (recreational gaming users, RGU) 作为对照组, 采用事件相关脑电位 (event-related potentials) 记录了这 50 名被试在执行跨期决策 (即: 金钱折扣任务) 和风险决策 (即: 杯子任务) 任务时的电生理活动。结果显示: (1) 在行为水平上, IGD 和 RGU 玩家在跨期决策和风险决策的表现不存在显著差异; (2) 在电生理水平上, 对于跨期决策任务, RGU 玩家比 IGD 玩家表现出了更大的 P2 振幅; 此外, RGU 玩家在短期延迟和长期延迟中的 P3 振幅大于中期延迟, 但 IGD 玩家并没有表现出显著的延迟时间主效应; (3) 在电生理水平上,

对于风险决策任务不存在 IGD 和 RGU 的组间差异,但是,对于风险不利条件,RGU 玩家在损失情境下的 N2 波幅显著大于收益情境,而 IGD 玩家则不存在显著的期望价值主效应。结论:IGD 玩家和 RGU 玩家在冲动加工和控制加工上不存在显著差异,但考虑到 IGD 玩家对于延迟时间和期望价值的不敏感性,推测网络游戏障碍可能与奖赏偏好和风险觉知的改变、以及决策过程中较少的意志努力存在相关。

A Dual Process Perspective to Explore Decision Making in Internet Gaming Disorder: An ERP Study

Zhou Yuhong¹, Yao Mengyun², Gao Xuemei³ (Corresponding author)

¹ Faculty of Psychology, Southwest University, Chongqing, 400715

² Jingkai No.6 Middle School, Zhengzhou, Zhengzhou, 450000

³ Faculty of Psychology, Southwest University, Chongqing, 400715, zhenggao@swu.edu.cn

Abstract: The existing IGD-related research is mainly basing on the impulsive and control systems of the dual process models separately, and the dual process models of addiction posit that addictive behaviors arises from the joint outcome of two different modes of thinking: impulsive and control processes. However, minimal research has been conducted to explicitly explore these two systems simultaneously in individuals with IGD from the comprehensive perspective—the dual process models. To address this question, the current study used the event-related potentials (ERP) technique to record brain electrical activities when 50 participants divided into 24 IGD subjects and 26 RGU subjects during decision making processing (i.e., the cups task and the monetary discounting task). The results showed: (1) at the behavioral level, there were not any between-groups differences; (2) at the neural level, as for the intertemporal decision-making, larger P2 amplitudes were found in RGU rather than in IGD subjects; and RGU displayed the larger P3 amplitudes in short-term and long-term delays than in middle-term delay whereas no delay main effect was found in IGD subjects. (3) at the neural level, as for the risky decision-making, RGU showed the larger N2 amplitudes for risk-disadvantageous in the loss domain than the gain domain whereas the IGD group did not appear any difference across expected values. These suggested that the present IGD subjects did not differ in impulsive and control systems from RGU, nevertheless, the neural differences between IGD subjects and RGU under different condition of decision-making processing, suggesting that IGD may be related to altered preference to realistic rewards and perception of risks, as well as to less effortful assessment to decision choices.

错失恐惧还是社交回避? 同伴排斥对粤澳青少年问题性社交媒体使用的影响

黎彦余¹ 窦凯¹ (通讯作者) 程丹俐¹ 黎建斌² 王林欣¹

¹ 广州大学教育学院心理学系&青少年心理与行为研究中心, 广州, 510006, psydk@gzhu.edu.cn

² 香港教育大学幼儿教育学系, 香港, 中国

摘要 随着现代网络技术和智能手机的普及,社交媒体给人类交流互动带来了极大地便利,但同时也会因过度依赖社交媒体产生问题性社交媒体使用,从而影响青少年身心健康。研究发现,同伴排斥是加剧青少年问题性社交媒体使用的重要风险因素,它可能通过促使青少年担忧错过社交信息或机会(即错失恐惧)这一“趋近路径”,或促使青少年回避现实社交情境(即社交回避)这一“回避路径”间接发挥作用。由于错失恐惧和社交回避在不同的文化间可能存在差异,如大湾区中的粤澳差异。因此,本研究尝试构建一个“趋近-回避”的双路径模型来解释同伴排斥对青少年问题性社交媒体使用的影响机制,并检验这一影响是否存在粤澳差异。采用同伴排斥量表、修订版错失恐惧量表、社交回避与苦恼量表、问题性社交媒体使用量表对粤澳两地共 965 名青少年($N_{\text{广州}}=749$ 名, $N_{\text{澳门}}=216$ 名; $M_{\text{age}}=12.78$, $SD=2.45$; 52.3%为男性)进行问卷调查。结果发现: (1) 同伴排斥越高的青少年出现问题性社交媒体使用 ($\beta=0.19, p<0.001$) 的水平也越高; (2) 中介效

应检验证实，同伴排斥显著通过错失恐惧 ($\beta = 0.11, p < 0.001$) 和社交回避 ($\beta = 0.02, p < 0.05$) 两条路径间接影响粤澳青少年问题性社交媒体使用；(3) 进一步检验粤澳区域的调节效应发现，错失恐惧在同伴排斥与问题性社交媒体使用间的中介效应不存在粤澳区域差异；但是社交回避在同伴排斥与青少年问题性社交媒体使用间发挥的中介效应存在粤澳差异，且仅在广州青少年中成立。因此，同伴排斥会较为稳定的通过错失恐惧这一趋近路径影响粤澳青少年的问题性社交媒体使用，而社交回避的中介效应表现出一定的粤澳文化差异，这一发现更有助于理解同伴排斥影响粤澳青少年问题性社交媒体使用的心理机制及文化差异，对学校和家庭从同伴环境的视角预防和干预青少年问题性社交媒体使用提供了理论参考。

关键词 同伴排斥，错失恐惧，社交回避，问题性社交媒体使用，青少年，粤港澳大湾区

Fear of missing out or social avoidance? The relationship between peer exclusion and problematic social media use among adolescents in Guangdong and Macao

Yan-yu Li¹, Kai Dou¹, Dan-li Cheng¹, Jian-bin Li², Lin-xin Wang¹

¹ Department of Psychology and Research Center of Adolescent Psychology and Behavior, School of Education, Guangzhou University, Guangzhou 510006, psydk@gzhu.edu.cn

² Department of Early Childhood Education, The Education University of Hong Kong, Hong Kong

Abstract: With the development of modern network technology and the popularity of smartphones, social media exceedingly facilitates daily communication and interaction. But it may cause problematic social media use due to over relying on social media, which has negative impact on adolescents' mental and physical health. Previous studies found that peer exclusion was a core predictor of problematic social media use. It may lead to fear of missing social information or social opportunities (i.e., fear of missing out, FoMO), which influences social media use via a social approaching path. It may also lead to adolescents' avoidance of social situation (i.e., social avoidance), which influences social media use via a social avoiding path. Meanwhile, FoMO and social avoidance among adolescents may vary across culture. Therefore, the current study attempts to establish a "approaching – avoiding" double-path model to explain the influence mechanism of peer exclusion on adolescents' problematic social media use, and examine whether there are differences between Guangdong province and Macao. Adopting peer exclusion scale, the revised version of fear of missing out scale, social avoidance scale, and problematic social media use scale, we investigated 965 adolescents ($M_{age}=12.78, SD=2.45$; Male = 52.3%) in Guangzhou ($N=747$) and Macao ($N=216$). Result showed that (1) adolescents reported higher peer exclusion have higher level of problematic social media use ($\beta = 0.19, p < 0.001$); (2) mediation effect analysis showed that peer exclusion influenced adolescents' problematic social media use via FoMO ($\beta = 0.11, p < 0.001$) and social avoidance ($\beta = 0.02, p < 0.05$), respectively; (3) further moderation effect analysis of Guangzhou and Macao showed that there is no Guangzhou-Macao region difference in the mediating effect of FoMO between peer exclusion and problematic social media use, however, the mediating effect of social avoidance between peer exclusion and problematic social media use among adolescents was only found among adolescents in Guangzhou. Therefore, peer exclusion influences problematic social media use relatively stable via the social approaching path of FoMO, but there is certain Guangzhou-Macao difference in the mediating effect of social avoidance between peer exclusion and problematic social media use. The findings help to establish a further understanding of the psychological mechanism and cultural differences of how peer exclusion influences problematic social media use, which provide schools and families a theoretical reference of prevention and intervention of teenagers' problematic social media use from the perspective of peer environment.

大学生责任感与网络易怒行为的关系：网络道德情感和性别的作用

解登峰 谢章明

皖西学院心理健康教育中心, 安徽 六安, 237012, xiedengfeng@163.com

摘要 网络易怒行为与冲动性人格特质具有正相关, 网络易怒行为的消减可通过人格干预进行, 但具体发生机制还有待进一步探讨。责任感是人格特征中重要的动力系统, 是个体认真负责完成符合个体要求或群体利益的道德任务后, 所持有的积极体验和肯定情感积淀, 对网络易怒行为具有显著的反向预测效果。对于易怒行为的预测路径, 除触发性愤怒刺激直接导致易怒行为外, 个体可能会从易怒倾向转变为愤怒情绪体验, 从而导致攻击行为。此外, 根据情绪调节的性别差异理论, 本研究假设性别在责任感与网络易怒行为之间可能起影响作用。本研究考察大学生责任感与网络易怒行为的关系、网络道德情感在上述关系中的中介效应以及性别对上述中介效应的调节, 采用自评大学生责任感问卷、网络易怒行为问卷和网络道德情感问卷对 592 名大学生进行调查。结果发现: (1) 网络易怒行为与网络道德情感、责任感呈现显著负相关, 网络道德情感与责任感呈正相关, 责任感能够负向预测大学生网络易怒行为; (2) 大学生责任感对网络易怒行为的预测效应受性别的调节, 对男大学生的预测效应更高 ($\beta=-0.460$, $t=-12.506$, $p<0.001$); (3) 大学生责任感经由网络道德情感影响网络易怒行为的中介效应受性别的调节, 大学生责任感对网络易怒行为的总效应为-0.217; 男性和女性大学生责任感经由网络道德情感对网络易怒行为的中介效应分别为-0.107、-0.031, 分别占总效应的比例为 49.3%, 14.3%; 男女大学生的中介效应之差的 95%置信区间为[-0.145,-0.038], 表明差异显著, 上述中介效应仅出现在男大学生。可见, 大学生责任感能够减弱网络易怒行为, 男大学生还可以通过网络道德情感的提升减少网络易怒行为的发生。

The relationship between College Students' sense of responsibility and Internet irritability: the role of network moral emotion and gender

Xie Dengfeng, Xie Zhangming,

Mental health education center, Wanxi University, Anhui, 237012, corresponding author

xiedengfeng@163.com

Abstract: There is a positive correlation between Internet irritability and impulsive personality traits, which can be reduced by personality intervention, but the specific mechanism remains to be explored. The sense of responsibility is an important dynamic system in personality characteristics. It is the positive experience and positive emotional accumulation held by individuals after conscientiously completing the moral tasks in line with individual requirements or group interests, which has a significant reverse prediction effect on Internet irritability. For the prediction path of irritability, except for the triggering anger stimulation which directly leads to irritability behavior, individuals may change from irritability to anger emotion experience, which leads to aggressive behavior. In addition, according to the gender difference theory of emotion regulation, this study hypothesized that gender may play an important role in the relationship between responsibility and Internet irritability. This study investigated the relationship between College Students' sense of responsibility and Internet irritability, the mediating effect of network moral emotion in the above relationship, and the moderating effect of gender on the mediating effect. 592 college students were investigated with the self-rated college students' sense of Responsibility Questionnaire, Internet irritable behavior questionnaire and network moral emotion questionnaire. The results showed that: (1) Internet irritability was significantly negatively correlated with network moral emotion and responsibility, and network moral emotion was positively correlated with sense of responsibility, which could negatively predict college students' Internet irritability behavior; (2) the predictive effect of College Students' sense of responsibility on Internet irritability was adjusted by gender, and the prediction effect for male college students was higher ($\beta = -0.460$, $t = -12.506$, $P = 0.460$, $t = -12.506$), (3) the mediating effect of College Students' sense of responsibility on Internet irritable behavior was adjusted by gender, and the mediating effect of College Students' sense of responsibility on

Internet irritability was -0.217; the mediating effect of male and female college students' sense of responsibility on Internet irritability via network moral emotion was -0.107, -0.031, accounting for 49.3% and 14.3% respectively; The 95% confidence interval of the difference of mediating effect between male and female college students is [-0.145, -0.038], indicating that the difference is significant. The above-mentioned mediating effect only appears in male college students. It can be seen that college students' sense of responsibility can reduce the network irritability behavior, and male college students can also reduce the occurrence of network irritability through the promotion of network moral emotion.

Keywords: sense of responsibility, network moral emotion, network irritability, moderating mediating effect

虚拟社区大学生虚拟人格与网络亲社会行为的关系

唐佳丽 郭英

四川师范大学心理学院, 成都, 610068, tangjiali.tori@gmail.com

摘要 虚拟社区是指线上网络社群, 大学生群体长期在虚拟社区中进行交流互动表现出与现实世界不一致的人格特征, 又叫虚拟人格。相比于现实生活中的亲社会行为, 网络环境中的网络亲社会行为有其普遍性更有其特殊性, 大学生群体作为网络主要活跃用户, 其网络行为呈现出不同于其他年龄段网络用户的独特性。基于行为受人格、认知和环境共同影响的理论判断, 一定程度上, 大学生群体在虚拟社区中这种独特的亲社会行为受到其虚拟人格影响, 但是这种影响之间的内在联系如何, 又有着怎样的发生与发展机制呢? 文章以发掘虚拟社区大学生虚拟人格与网络亲社会行为之间的内在联系作为主线, 结合问卷调查法和半结构式访谈, 基于扎根理论与内容分析法, 深入挖掘虚拟社区大学生虚拟人格与网络亲社会行为之间的关系机制, 并最终构建出以“感受—动力—行为”为主线的关系模型, 为这种机制的发生与发展提供了理论解释。研究结果发现, 由于虚拟社区的公开性及匿名性, 大学生的虚拟人格有显著的隐藏面, 而这种隐藏面之下又存在引发行为的动力系统, 在这个动力系统之中有着趋近与规避两种人格倾向, 虚拟网络社区活动引发这两种人格倾向的内感受性变化, 进而作用于其网络亲社会行为。至此, 未来将着重加强对大学生具体虚拟人格特质与其网络亲社会行为之间的关系探讨、发生神经机制探索以及促进策略相关研究。

Relationship between Virtual Personality and Online Prosocial Behavior of University Students in Virtual Communities

Tang Jiali, Guo ying

College of Psychology, Sichuan Normal University, Chengdu, 610011, tangjiali.tori@gmail.com

Abstract: Virtual community refers to online social aggregation. University students who interact with people mainly via internet show inconsistent personality characteristics with the real world, and this sort of personality is also known as virtual personality. Compared with the prosocial behavior in real life, the online prosocial behavior has its common threads, but more significantly, also has its particularity. As the main active users of the internet, college students expose distinct online behavior from those of other age groups. On the basis of the theoretical judgement, human's behavior is related to personality, cognition and environment, and to some certain degree, the unique prosocial behavior of the students in virtual community is affected by their virtual personality. However, what is the internal relation between this correlation and the mechanism of the occurrence and development? This article takes the inner link of college students' virtual personality and their online prosocial behavior in virtual community as the core line, combined with the methods of questionnaire and semi-structured interview, and based on grounded theory and content analysis to dig in the relationship mechanism between university students' virtual personality and their online prosocial behavior. Eventually, a model under the main line of “emotions—driven forces—behavior” is constructed, which in the meantime, provides a theoretical explanation to the happening and advancing mechanism of this correlation. According to the study results, due to the openness and anonymity of virtual community, a special

characteristic of students' virtual personality called hidden under the surface is found out, and so is the driven force system, which can lead the individual's behavior change. What's more, two kind of personality tendency is covered in this force system. The activities in virtual internet communities can exert a role on the changes of this two personality tendencies by influencing individual's inner feeling, and therefore, this change can affect these youngster's online prosocial behavior. At this point, more and more attention should be attached on the areas of the relationship between college students' specific virtual personalities and their online prosocial behavior, the occurrence of neural mechanism and the strategies to promote relevant research in the future.

2 广州大学教育学院青少年心理与行为研究中心, 广东广州, 510006

通信作者 E-mail: niezi66@21cn.com

摘要 目的: 探讨网络态度对网络成瘾的影响及自我控制和人际关系的链式中介作用。**方法:** 采用网络态度量表、自我控制量表、人际关系综合诊断量表和网络成瘾量表对 869 名大学生进行调查。**结果:** ①自我控制在网络焦虑、网络行为倾向性和网络成瘾之间起部分中介作用, 中介效应占比分别为 14.29%、19.70%; ②人际关系在网络焦虑、网络行为倾向性和网络成瘾之间起部分中介作用, 中介效应占比分别为 5.06%、3.49%; ③自我控制、人际关系在网络焦虑、网络行为倾向性和网络成瘾之间起链式中介作用, 中介效应占比分别为 1.19%、2.00%。**结论:** 网络焦虑、网络行为倾向性通过自我控制和人际关系链式中介作用间接影响网络成瘾。**关键词** 网络态度, 网络成瘾, 大学生, 自我控制, 人际关系

The Relationship between internet attitude and internet addiction: a chain mediating effect*

Tu Wei¹, Li Yuan¹, Nie Yangang^{2△}

1 Hunan University of Science and Technology, Yongzhou, Hunan, 425199, China

2 Adolescent Psychology and Behavior Research Center, School of Education, Guangzhou University, Guangzhou, Guangdong, 510006, China

Abstract: Objective: To explore the influence of Internet attitude on Internet addiction and the chain mediating role of self-control and interpersonal relationship. **Methods:** 869 college students were investigated by using Internet Attitude Scale, Self-control Scale, Interpersonal Comprehensive Diagnostic Scale and Internet Addiction Scale. **Results:** ①Self-control played a partial mediating role in the relationship between Internet anxiety, Internet behavior orientation and Internet addiction, with the mediating effects accounting for 14.29% and 19.70%, respectively. ②Interpersonal relationship plays a partial mediating role among Internet anxiety, Internet behavior tendency and Internet addiction, with the mediating effect accounting for 5.06% and 3.49%, respectively. ③Self-control and interpersonal relationship played a chain mediating role among Internet anxiety, Internet behavior tendency and Internet addiction, and the mediating effect accounted for 1.19% and 2.00%, respectively. **Conclusion:** Internet anxiety and Internet behavior propensity indirectly influence Internet addiction through the chain mediating effects of self-control and interpersonal relationship.

道德推脱和网络欺负关系的元分析

于君剑 赵立军

聊城大学教育科学学院, 聊城, 252000, zhaolijunpsy@139.com

摘要 随着科学技术的发展,手机、电脑等网络通讯设备成为了人们日常社交中不可缺少的一部分。据 2020 互联网世界统计 (Internet World Stats, 简称 IWS) 报告显示,截至 2020 年 6 月 30 日,全球网民数量已达 48.33 亿,其中亚洲网民数量为 25.25 亿排在第一,欧洲网民数量为 7.27 亿排在第二。我国第 45 次《中国互联网络发展状况统计报告》也显示,截至 2020 年 3 月,我国网民数量已高达 9.04 亿,且呈现逐年递增趋势。网民数量日益递增的同时,依托网络媒介而实施的网络欺负 (cyberbullying) 也逐年呈递增的趋势,并已成为世界范围内共同关注的问题。网络欺负行为是指个体以网络为社交平台,对个体或群体进行有目的性和针对性的伤害行为。网络环境相对具有匿名性、虚拟性和隐蔽性的特点,缺乏足够的监管。在这样的环境下,道德推脱机制很容易被激活,个体更容易进行责任分散和责任转移,并增加个体在网络上的欺负行为。本研究采用元分析的方法,旨在探究道德推脱与网络欺负之间的关系问题及影响二者之间关系的调节变量。通过对国内外的中英文文献进行检索、筛选与编码,共纳入 47 篇文献,共 52 个样本,被试共计 31316 人。结果显示:(1)道德推脱与网络欺负之间呈中等程度的正相关关系 ($r = 0.337$, $95\% CI = [0.296, 0.376]$); (2)被试年龄对道德推脱与网络欺负的关系起到了显著的调节作用($Q_b = 8.987$, $p < 0.05$),成年群体($r = 0.444$)显著高于青少年群体($r = 0.312$)高于儿童群体($r = 0.266$); (3)性别在道德推脱与网络欺负的关系中起到了显著的调节作用($Q_b = 99.931$, $p < 0.001$)。随着样本中女性比例的增加,道德推脱与网络欺负之间的关系增加; (3)文化背景对道德推脱与网络欺负的关系的调节作用显著($Q_b = 4.441$, $p < 0.05$),东方文化背景下的相关关系($r = 0.360$)高于西方文化背景下的相关关系($r = 0.270$)。本研究基于社会认知的中道德推脱理论,首次以元分析的视角全面探究了道德推脱和网络欺负之间的关系,以及两者关系中可能存在的调节变量,可以为寻找解决网络欺负的对策和减少网络欺负行为提供理论依据与研究思路。

A meta-analysis of the relationship between moral disengagement and cyberbullying

Yu junjian, Zhao lijun

College of Education Science, Liaocheng University, Liaocheng, 252000

Abstract: With the development of science and technology, mobile phones, computers and other network communication devices have become an indispensable part of people's daily social contact. According to the report of Internet world stats (IWS) in 2020, as of June 30, 2020, the number of Internet users in the world has reached 4.833 billion, of which the number of Internet users in Asia is 2.525 billion, ranking first. The number of Internet users in Europe is 0.727 billion, ranking second. According to the 45th statistical report on the development of China's Internet, as of March 2020, the number of Internet users in China has reached 904 million, with an increasing trend year by year. While the number of Internet users is increasing, cyberbullying relying on Internet media is also increasing year by year, and has become a common concern in the world. Cyberbullying refers to the purposeful and targeted harm behavior of individuals or groups based on the network as a social platform. Network environment has the characteristics of anonymity, virtuality and concealment, and lacks sufficient supervision. In such an environment, moral disengagement mechanism is easy to be activated, which makes it easier for individuals to disperse and transfer responsibilities, and increases their bullying behaviors on the Internet. The purpose of this study is to explore the relationship between moral disengagement and cyberbullying and the moderating variables that affect the relationship between them. Through searching, screening and coding of Chinese and English literatures from home and abroad, 47 articles were included, with 31316 subjects. The results showed that: (1) There was a moderate positive correlation between moral disengagement and cyberbullying ($r = 0.337$, $95\% CI = [0.296, 0.376]$); (2) The age of the subjects had a significant moderating effect on the relationship between

moral disengagement and cyberbullying, and the adult group was significantly higher than the adolescent group;(3)Gender played a significant moderating role in the relationship between moral disengagement and cyberbullying. As the proportion of women in the sample increased, the relationship between moral disengagement and cyberbullying increased; (3) Cultural background had a significant moderating effect on the relationship between moral disengagement and cyberbullying, and the correlation in eastern cultural background is higher than that in the West. Based on the theory of moral disengagement in social cognition, this study explores the relationship between moral disengagement and cyberbullying from the perspective of meta-analysis for the first time, as well as the possible moderating variables in the relationship. It can provide theoretical basis and research ideas for reducing cyberbullying and finding solutions to cyberbullying.

Keywords: Moral Disengagement, Cyberbullying, Moderating Effect, Meta-analysis

大学生核心自我评价对认知失败的影响：基于条件过程模型

马鹏¹ 何必凯^{1,2} 赵守盈¹ (通讯作者)

1 贵州师范大学心理学院, 贵阳, 550025, zhaoshouying@126.com

2 贵阳信息科技学院, 贵阳, 550025

摘 要 核心自我评价是指个体对自身所持有的基准的评价, 是相对稳定且基础的、涉及对自我的一种认知与评价。当大学生对自我的评价趋于负向, 会转向其他媒介以寻求支持, 而使用手机是大学生极易用来转移的方式, 久而久之容易形成手机成瘾。手机成瘾不仅是一种人际关系的补偿, 也是人格-情感-认知-执行在环境下交互作用的结果, 手机成瘾要经过这四个因素, 产生满足感才导致补偿效应的出现。手机过度使用后产生疲劳感, 往往精力分散, 容易心不在焉; 也有可能长时间注意力集中在手机提供的刺激中, 无法迁移到当前的活动, 使大学生在完成那些平日中能够胜任的简单任务时出现的错误, 尤其是容易被当前无关刺激所产生的想法或行为分散, 从而忽略正在进行的活动, 过度的认知资源消耗, 导致无法全身心投入学习和任务中, 精力损耗、身心耗竭。综上所述, 核心自我评价和手机成瘾、认知失败存在一定的关系。焦虑情绪作为一种负向情绪, 会有有效的影响对资源的合理分配以及对周围世界的认知, 因此可以探讨焦虑在上述三者间的关系。研究使用核心自我评价量表、手机成瘾量表、认知失败量表和焦虑量表, 共收回 596 份有效大学生数据。采用 Harman 单因子检验, 首因子解释率为 36.10%, 低于 40%, 共同方法不严重。各变量间相关在 -0.55~0.60 之间 (均 $p < 0.01$)。采用 process3.0 进行条件过程模型分析, 结果表明, 手机成瘾在核心自我评价和认知失败间其中介作用, 中介作用占总效应的 37.96%; 焦虑在中介模型中的直接路径上起调节效应显著 ($\beta = 0.26$, $p < 0.001$), 研究采用 J-N 检验更精确刻画调节变量对中介模型的影响, 结果发现, 当调节变量的取值在 0.7994~2.7325 个标准差之间时, 调节效应不显著, 也就是说当焦虑水平处于中等偏上时, 对中介模型不具备调节作用。

The Influence of College Students' Core Self-Evaluation on Cognitive Failure: Based on Conditional Process Model

Ma Peng¹ He Bikai^{1,2} Zhao Shouying¹

1 School of Psychology, Guizhou Normal University, Guiyang, 550025

2 Guiyang Institute of information technology, Guiyang, 550025

Abstract: Core self-evaluation refers to an individual's evaluation of the benchmark held by himself. It is a relatively stable and basic cognitive and evaluation. When college students' self-evaluation tends to negative, they will turn to media to seek support. It is easy for students to form phone addiction as time passes. Mobile phone addiction is not only a kind of compensation of interpersonal interaction, but also the result of the interaction-emotion-cognitive-execution in the environment. Overuse of mobile phone will cause fatigue, often scattered energy and easy to absent-minded. In addition, college students may focus their attention on the stimulus

provided by the mobile phone for a long time, and unable to transform to the current activity, which eventually leads to college students mistakes in completing simple tasks, especially being easily distracted by thoughts or behaviors generated by irrelevant stimuli at the moment. This further leads to excessive cognitive resource consumption, and college students are unable to devote themselves to study and tasks, resulting in energy loss and physical exhaustion. In conclusion, core self-evaluation has a certain relationship with mobile phone addiction and cognitive failure. Especially, as a negative emotion, anxiety can effectively affect the reasonable allocation of resources, and the cognition of the world. Therefore, it's necessary to explore the relationship between anxiety and the above three factors. Totally 596 valid data of college students were collected by using the Score Self-Evaluation Scale, the Mobile Phone Addiction Scale, the Cognitive Failure Scale and Anxiety Scale. Harman single factor has been used to test common method bias. And result showed that the explanatory rate of the first factor was 36.10%, that is to say, the common method bias was not serious. The correlation among the variables ranged from -0.55 to 0.60 (all $p < 0.01$). process 3.0 was used to analyze the conditional process model. The results showed that mobile phone addiction mediated the relationship between core self-evaluation and cognitive failure, which accounted for 37.96% of the total effect. Anxiety had a significant moderating effect on the direct path of the mediation model ($\beta = 0.26$, $P < 0.001$). J-N test was further used to accurately describe the influence of moderating variable on the mediation model. The results indicated that when the value of the moderating variable is between 0.7994 and 2.7325 standard deviation, the moderation effect is not significant. That is to say, when the anxiety is above the level of average, it didn't have a moderating effect on the mediation model.

Keywords: Core self-evaluation, Cognitive failure, Conditional process model, J-N analysis

网络语言影响不同类型产品的广告感知及注意

解颂悦¹ 文子亦² 林梦琦³ 蒋小玲³ 杨璐³ 周驰³ 由鑫³ 张禹³ 郑玮琦³ (通讯作者)

1 首都师范大学心理学院, 北京, 100048

摘要 广告是企业与消费者互动的重要方式, 因此促进消费者对于广告的积极感知可以提升营销效果。信号理论和情感迁移理论认为, 除了传播内容之外, 受众对于传播载体的感知也会影响传播效果。近年来广告营销行业中形成了风格独特鲜明的网络语言广告。已有学者在广告效果阶段模型的框架下证实了网络语言对广告感知与注意的影响。然而, 广告的传播内容与形式通常服务于产品的属性, 消费者面对享乐型产品和实用型产品时的心理活动有所差异。本研究考察了不同属性的两类产品和标准/网络语言文案对广告感知与广告注意的影响: 实验一在限制广告观看时间的条件下, 探讨语言类型和产品类型对广告评价的影响; 实验二在不限制广告观看时间的条件下, 探讨两者对广告注意的影响。两实验均采用 2×2 混合设计, 其中组间变量为语言文案类型(网络语言文案或标准语言文案), 组内变量为产品类型(实用型产品或享乐型产品), 因变量分别为对产品广告的评价(有趣性、严谨性、信任程度和产品评价四个维度)(实验一)、眼动仪记录的广告文案注视时间占总注视时间的百分比(实验二)。实验一的结果表明, 语言类型和产品类型在严谨性上的主效应显著, 产品类型在有趣性上的主效应显著, 而语言类型和产品类型在信任程度与产品评价上的交互作用显著。网络语言文案会显著降低受众对广告的严谨性感知; 在使用网络语言文案的情况下, 受众对享乐型产品广告的信任度与产品评价均显著高于实用型产品广告。实验二的结果表明, 在广告文案注视时间占总注视时间的百分比上, 语言类型和产品类型的交互作用边缘显著。网络语言文案下个体对享乐型产品广告文案的注视时长显著高于实用型产品。该发现填补了相关研究领域的空白, 并且在实践方面, 商家在设计实用型产品广告时可以考虑更多地使用标准语言文案, 而在设计享乐型产品广告时使用网络语言文案, 这样可以提升受众对于不同类型产品的信任度、产品评价及注意。

Abstract: Advertising is an important way for companies to interact with consumers, so promoting consumers' positive perception of advertisement can improve marketing effects. Signaling Theory and Affect Transfer Model believe that in addition to the content of communication, the consumers' perception of the communication carrier will also influence the communication effects. Some researchers have confirmed the impact of the Internet language on consumers' perception and attention of the advertisement under the framework of Advertising Effect Stage Model. However, the content and form of advertisements usually serve the characteristics of products, and consumers have different psychological activities when facing hedonic products and practical products. We examined the impact of two types of products and languages on advertising perception and attention: study 1 explored the effect of language types and product types on advertising perception when time is limited; study 2 explored the effect of language types and product types on advertising attention when time is free. Both experiments used a 2×2 mixed design, in which the inter-group variable is the language type (Internet language or standard language), the intra-group variable was the product type (practical product or hedonic product). The dependent variables were the evaluation of advertisement (four dimensions: interestingness, rigorousness, credibility and product evaluation) (study 1), attention time of advertising recorded by eye tracker (study 2). In study1, ANOVA showed that language type and product type have main effect on rigorousness, and product type also have main effects on interestingness. And language type and product type have a significant interaction in the two dimensions of credibility and product evaluation. Network language copy significantly reduce the rigorousness of products, and improve the credibility and evaluation of hedonic products. In study 2, the result demonstrated that the interaction between language type and product type is marginal significant in the percentage of advertising copy watch time in total watch time. When using Internet language copy, watch time of hedonic products' advertising copy is significantly higher than practical products'. The discovery fills the gaps in the research of advertising. In practice, businesses can use more standard language when designing practical product's advertisements, and use Internet language when designing hedonic product's advertisements, which can improve customers' credibility, product evaluation and attention of different types of products.

Keywords: Internet language, practical products, hedonic products, eye movements

错失恐惧与问题性手机使用：抑制控制的作用

范文敏 张国礼（通讯作者）

北京体育大学 心理学院, 北京 100084, guoli_zhang@126.com

摘要 大学生作为最有活力、最爱追求新鲜事物的群体, 随着全球互联网络的发展, 手机已是他们不可或缺的社交工具。错失恐惧是指因担忧错过他人有益的经历而导致的一种弥散性焦虑状态, 错失恐惧通过影响个体社交媒体或智能手机的使用, 进而影响个体的行为、身心健康。根据注意控制的理论, 焦虑会削弱个体的抑制控制功能。错失恐惧作为焦虑的一个亚类, 焦虑障碍会影响到个体的执行功能。因此本研究将考察抑制控制在大学生错失恐惧与问题性手机使用之间的中介作用以及探讨不同水平的错失恐惧个体在不同刺激线索下的冲突抑制的特点。方法: 研究一通过网络发放特质—状态错失恐惧量表、问题性手机使用量表、Barratt冲动性量表收集数据, 因为问题性手机的使用可以看作是对冲动控制的失败, 所以本研究采用 Barratt 冲动性量表来测量调查者的抑制控制能力。本研究共收回有效问卷 220 份, 各量表的信度分别为 0.822、0.899、0.899。

研究二采用数字 Stroop 任务,实验设计为 2 被试分组(高错失恐惧组;低错失恐惧组)×3 抑制控制任务类型(无干扰;微信消息声音和纯音干扰)的组间实验设计。利用 SPSS 26.0 进行数据分析,结果发现:(1)相关分析表明,错失恐惧与问题性手机使用、抑制控制存在正相关;(2)抑制控制在错失恐惧与问题性手机使用中起中介作用($\beta=.625, p<0.001$);(3)手机依赖与否对错失恐惧和问题性手机使用的直接效应起调节作用。(4)高水平的错失恐惧个体更容易被手机相关的刺激线索影响从而影响冲突抑制的能力。本研究进一步丰富了错失恐惧的理论研究,探讨了抑制控制、手机依赖者在错失恐惧与问题性手机使用之间的作用机制以及错失恐惧者的冲突抑制特点,有利于学校和教育工作者调整和改进教育思路,积极指导大学生的网络使用,充分发挥网络的积极作用,促进大学生群体的身心健康发展。

Fear of missing out and problematic cell phone use: the role of inhibitory control

FanWenmin, Zhang Guoli

School of Psychology, Beijing Sport University, Beijing, China

Abstract: College students, as the most energetic group, love to pursue new things, with the development of the global Internet, mobile phone has become an indispensable social tool for them. Fomo is a diffuse state of anxiety caused by the fear of missing out on other people's beneficial experiences. Fomo affects individuals' behavior, physical and mental health by affecting their use of social media or smartphones. According to the theory of attentional control, anxiety weakens the individual's inhibitory control function. Fomo, as a subclass of anxiety, can affect individual executive function. Therefore, this study will investigate the mediating role of inhibitory control between fOMO and problematic mobile phone use in college students, and explore the characteristics of conflicting inhibition in different levels of fOMO individuals under different stimulus cues. Methods: Study 1 collected data from the Trait State Miss Fear Scale, problematic mobile phone use Scale, and Barratt Impulsiveness Scale. Since problematic mobile phone use can be regarded as a failure of impulse control, Barratt impulsiveness Scale was used to measure the inhibitory control ability of the respondents. A total of 220 valid questionnaires were collected in this study, and the reliability of each scale was 0.822, 0.899 and 0.899, respectively. In study 2, a digital Stroop task was used. Two subjects were divided into two groups (high FOMO group; Low FOMO group)×3 inhibitory control task types (no interference; Wechat message sound and pure tone interference). SPSS 26.0 was used for data analysis, and the results showed that: (1) Correlation analysis showed that fOMO was positively correlated with problematic mobile phone use and inhibitory control; (2) Inhibitory control mediated fOMO and problematic mobile phone use ($\beta=.625, p<0.001$); (3) Mobile phone dependence moderated the direct effects of miss fear and problematic mobile phone use. (4) Individuals with high level of FOMO are more likely to be affected by cell-phone-related stimulus cues, which affects the ability of conflict inhibition. This study further enrich the theoretical research of miss fear, discusses the inhibitory control, mobile phone dependent on miss fear and problematic mechanism between mobile phone use and miss fear conflict suppression characteristics, beneficial to schools and education workers to adjust and improve the education idea, actively guide college students' Internet use, give full play to the positive role of network, Promote the physical and mental health development of college students.

Key words: fOMO, problematic mobile phone use, inhibitory control, college students

神经质对大学生问题性移动社交网络使用的影响： 错失恐惧的中介作用和意志控制的调节作用

滕秀丽¹ 张守臣²

哈尔滨师范大学教育科学学院, 哈尔滨, 150025, 2273308279@qq.com

摘要 问题性移动社交网络使用是指个体因长时间和高强度使用社交网站,导致不可控制地延长使用时间,

并因此带来心理困扰和生理不适的现象。近年来,随着移动网络 4G 技术的发展,社交网络越来越受到全球的青睐,其发展速度之已成为一种不可阻挡的潮流。然而,过度地使用社交网络对个体心理健康(如抑郁、焦虑)将会产生很大的影响。以往的研究发现,人格是引发问题性社交网络使用的重要因素。由于高神经质者往往表现为情绪的不稳定性(如,抑郁、敏感、焦虑)以及对人际关系的焦虑,导致他们不愿意错过社交网络中的重要信息和社交事件。这种犹豫不决使得他们频繁的查看社交网络以满足个体心理需要。然而,高意志控制水平者能较好察觉自己的想法和感受,主动将自己的注意力从焦虑情绪中转移出去,继而减少社交网络的使用。因此,本研究主要探讨神经质、错失恐惧、意志控制和问题性移动社交网络使用四者的关系。采用神经质量表、错失恐惧量表、意志控制量表和问题性移动社交网络使用量表对哈尔滨市 500 名大学生进行调查。研究结果显示:(1)神经质正向预测大学生问题性移动社交网络使用;(2)错失恐惧在神经质与大学生问题性移动社交网络使用之间起中介作用,神经质正向预测错失恐惧,错失恐惧正向预测大学生问题性移动社交网络使用;(3)意志控制在错失恐惧与问题性移动社交网络使用间起调节作用。具体而言,当意志控制水平低时,错失恐惧能显著的正向预测大学生问题性移动社交网络使用,而意志控制水平高时,错失恐惧对大学生问题性移动社交网络使用的预测作用不显著。结论:神经质通过错失恐惧的中介作用影响大学生问题性移动社交网络使用,这一中介作用受到意志控制的调节。

关键词 神经质, 错失恐惧, 意志控制, 问题性移动社交网络使用

The effect of neuroticism on the use of problem mobile social networks in college students: The mediating effect of fear of missing out and the moderating effect of effortful control

Teng Xiuli¹, Zhang Shouchen²

School of Education Science, Harbin Normal University, Harbin, 150025, 2273308279@qq.com

Abstract: The use of problem mobile social networks refers to the phenomenon that individuals use social networking sites for a long time and with high intensity, which leads to the uncontrollable extension of use time and thus brings psychological distress and physical discomfort. In recent years, with the development of 4G technology of mobile network, social network has been more and more favored by the world, and its development speed has become an irresistible trend. However, excessive use of social networks will have a great impact on individual mental health (such as depression, anxiety). Previous studies have found that personality is an important factor in the use of problematic social networks. As highly neurotic people tend to show emotional instability such as depression, sensitivity and anxiety, as well as anxiety about interpersonal relationships, they are reluctant to miss important information and social events in social networks. This indecision leads them to frequently check social networks to meet individual psychological needs. However, those with high levels of effortful control were better able to detect their own thoughts and feelings, actively divert their attention from their anxiety, and thus reduce their use of social networks. Therefore, this study mainly discusses the relationship between neuroticism, fear of missing out, effortful control and the use of problem mobile social networks. In this study 500 college students in Harbin were investigated with neuroticism scale, fear of missing out scale, effortful control scale and the use of problem mobile social networks scale. The results showed that : (1) Neuroticism positively predicted the use of problem mobile social networks among college students; (2) Fear of missing out plays a mediating role between neuroticism and the use of problem mobile social networks among college students. Neuroticism positively predicted fear of missing out, while fear of missing out positively predicted the use of problem mobile social networks among college students. (3) Effortful control plays a moderating role between fear of missing out and the use of problem mobile social networks. Specifically, fear of missing out significantly predicted the use of problem mobile social networks at low levels of effortful control, but not at high levels. Conclusion: Neuroticism affects the use of problem mobile social networks in college students through the mediating effect of fear of missing out, which is moderated by effortful control.

Keywords: neuroticism, the use of problem mobile social networks, fear of missing out, effortful control

亲子关系对儿童青少年手机成瘾的影响： 希望的中介与生活满意度的调节作用

丘彩霞¹ 李瑞菁¹ 罗浩诚¹ 丁宁¹ 陈偲嵩¹ 何晓清¹ 聂衍刚¹ (通讯作者)

¹ 广州大学教育学院青少年心理与行为研究中心, 广州, 510006, nie-yangang@gzhu.edu.cn

摘要 随着移动互联网的迅速发展,手机已经成为日常生活中必不可少的媒介工具。儿童青少年处在特殊的发展阶段,好奇心重、自控力差等使其更容易沉迷于手机,甚至形成手机成瘾问题。手机成瘾是一个潜在的公共健康问题,它对个体的睡眠质量、抑郁、焦虑、学业成绩等产生消极影响。为揭示亲子关系对儿童青少年手机成瘾的影响,以及希望的中介效应和生活满意度的调节效应,本研究采用亲子关系量表、手机成瘾量表、希望量表和生活满意度量表对广州市五所中小学四年级至初二年级的学生进行为期一年的纵向追踪调查。结果发现:(1) T1 亲子关系与 T3 手机成瘾呈显著负相关,与 T2 希望和 T1 生活满意度呈显著正相关;T2 希望与 T3 手机成瘾呈显著负相关,与 T1 生活满意度呈显著正相关;T1 生活满意度与 T3 手机成瘾呈显著负相关;(2) 在控制了年龄、性别后,T1 亲子关系显著负向预测 T3 手机成瘾($\beta = -0.12, SE = 0.04, p < 0.01$),即儿童青少年与父母关系越好,其出现手机成瘾的可能性越小;(3) T2 希望完全中介 T1 亲子关系与儿童青少年 T3 手机成瘾的关系(indirect effect = $-0.07, SE = 0.02, 95\%CI = [-0.12, -0.03]$),亲子关系通过促进希望间接降低了儿童青少年的手机成瘾行为;(4) T1 生活满意度显著调节“T1 亲子关系→T2 希望→T3 手机成瘾”这一中介路径的前半段($\beta = 0.08, SE = 0.03, p < 0.05$),该中介效应在高生活满意度的儿童青少年中显著(indirect effect = $-0.07, SE = 0.02, 95\%CI = [-0.12, -0.03]$),而在低生活满意度的儿童青少年中不显著(indirect effect = $-0.02, SE = 0.02, 95\%CI = [-0.06, 0.01]$)。具体而言,当儿童青少年生活满意度处于高水平时,亲子关系对其希望的促进作用更强,而当生活满意度处于低水平时,亲子关系对希望的促进作用不显著。该结果揭示了希望与生活满意度在亲子关系影响儿童青少年手机成瘾行为中的作用机制,启示相关教育者可以从改善亲子关系、提高希望感和生活满意度这三个角度进行预防和干预儿童青少年的手机成瘾行为。

The effect of parent-child relationship on mobile phone addiction among children and adolescents: The mediating role of hope and the moderating role of life satisfaction

Caixia Qiu¹, Ruijing Li¹, Haocheng Luo¹, Ning Ding¹, Siai Chen¹, Xiaoqing He¹, Yangang Nie^{1*}

¹ Research Center of Adolescent Psychology and Behavior, School of Education, Guangzhou University, Guangzhou, 510006, China

Abstract: Mobile phones have become a widely used medium among children and adolescents as they are at critical developmental stages. Their strong curiosity and limited self-control pose potential risks to mobile phone addiction. Mobile phone addiction is a potential public health problem and evidence has revealed that it can lead to problems such as poor sleep quality, depression, anxiety, and poor academic achievement. This study aims to explore the relationship between parent-child relationship and mobile phone addiction and its internal mechanism. Students from Grade 4 to Grade 8 were recruited in a one-year longitudinal study to complete the Parent-child Relationship Scale, the Mobile Phone Addiction Scale, the Hope Scale and the Life Satisfaction Scale. The results showed that: (1) T1 parent-child relationship was negatively correlated with T3 mobile phone addiction, and positively correlated with T2 hope and T1 life satisfaction; T2 hope was negatively correlated with T3 mobile phone addiction, and positively correlated with T1 life satisfaction; T1 life satisfaction was negatively correlated with T3 mobile phone addiction; (2) After controlling for age and gender, T1 parent-child relationship significantly negatively predicted T3 mobile phone addiction ($\beta = -0.12, SE = 0.04, p < 0.01$), that is, the better the relationship between children and adolescents with their parents, the less likely they are to overuse mobile phone; (3) T2 hope significantly mediated the relationship between T1 parent-child relationship and T3 mobile phone addiction in children and adolescents (indirect effect = $-0.07, SE = 0.02, 95\%CI = [-0.12, -0.03]$), in other words, T1 parent-child relationship indirectly affected T3 mobile

phone addiction through the mediating roles of T2 hope; (4) T1 life satisfaction significantly moderated the effect of T1 parent-child relationship on T3 mobile phone addiction ($\beta = 0.08$, $SE = 0.03$, $p < 0.05$), and the mediating effect was significant in children and adolescents with high life satisfaction (indirect effect = -0.07 , $SE = 0.02$, $95\%CI = [-0.12, -0.03]$), but not significant in children and adolescents with low life satisfaction (indirect effect = -0.02 , $SE = 0.02$, $95\%CI = [-0.06, 0.01]$). Specifically, for children and adolescents with high life satisfaction, the effect of parent-child relationship on hope is stronger, but for children and adolescents with low life satisfaction, the effect of parent-child relationship on hope is not significant. The results reveal the mechanism of hope and life satisfaction in the effect of parent-child relationship on mobile phone addiction in children and adolescents, and indicate that mobile phone addiction among children and adolescents can be weakened through the improvement of parent-child relationship, the rise in hope and the increase in life satisfaction.

Keywords: parent-child relationship, mobile phone addiction, hope, life satisfaction, children and adolescents

生命意义对儿童青少年手机成瘾的影响： 抑郁和自我控制的纵向链式中介作用

丘彩霞¹ 刘庆奇¹ 利振华¹ 李瑞菁¹ 丁宁¹ 陈偲嵩¹ 聂衍刚¹ (通讯作者)

¹ 广州大学教育学院青少年心理与行为研究中心, 广州, 510006, nie-yangang@gzhu.edu.cn

摘要 移动互联网时代,手机在人们的日常生活中占据着越来越重要的位置。儿童青少年处在特殊的发展阶段,好奇心重、自控力差等使其容易沉迷于手机,甚至形成手机成瘾问题。为揭示生命意义不同维度对儿童青少年手机成瘾的影响,以及抑郁、自我控制在二者之间的中介效应,本研究采用生命意义量表、抑郁量表、自我控制力量表和手机成瘾量表对广东省广州市五所四年级至初二年级的学生进行为期一年的纵向追踪调查。结果发现:(1) T1 意义存在与 T1 意义追寻、T2 自我控制显著正相关,与 T2 抑郁、T3 手机成瘾显著负相关;T1 意义追寻与 T2 自我控制显著正相关,与 T2 抑郁、T3 手机成瘾显著负相关;T2 自我控制与 T2 抑郁、T3 手机成瘾显著负相关;T2 抑郁与 T3 手机成瘾显著正相关;(2) 在控制了年龄、性别和 T1 意义追寻后,T1 意义存在通过三条中介路径的间接作用影响 T3 手机成瘾:通过 T2 抑郁的中介作用(indirect effect = -0.07 , $SE = 0.02$, $95\%CI = [-0.12, -0.04]$);通过 T2 自我控制的中介作用(indirect effect = -0.04 , $SE = 0.01$, $95\%CI = [-0.07, -0.02]$);通过 T2 抑郁和 T2 自我控制的链式中介作用(indirect effect = -0.02 , $SE = 0.01$, $95\%CI = [-0.03, -0.01]$);(3) 在控制了年龄、性别和 T1 意义存在后, T1 意义追寻既不能直接影响 T3 手机成瘾,也不能间接影响 T3 手机成瘾。该结果揭示了抑郁与自我控制在生命意义不同维度影响儿童青少年手机成瘾行为中的作用机制,启示相关教育者可以从提高意义存在、缓解抑郁情绪和提高自我控制能力三个角度进行预防和干预儿童青少年的手机成瘾行为。

Meaning in life and mobile phone addiction among children and adolescents: A longitudinal analysis of the mediating effects of depression and self-control

Caixia Qiu¹, Qingqi Liu¹, Zhenhua Li¹, Ruijing Li¹, Ning Ding¹, Siai Chen¹, Yangang Nie^{1*}

¹ Research Center of Adolescent Psychology and Behavior, School of Education, Guangzhou University, Guangzhou, 510006, China

Abstract: Mobile phones have become a widely used medium among children and adolescents as they are at critical developmental stages. Their strong curiosity and limited self-control pose potential risks to mobile phone addiction. This study aims to examine how specific dimensions of meaning in life are linked with mobile phone addiction longitudinally among children and adolescents within a Chinese context. Students from Grade 4 to Grade 8 were recruited to complete measures regarding meaning in life, depression, self-control and mobile phone addiction. The results showed that: (1) T1 presence of meaning was positively correlated with T1 search for meaning and T2

self-control, and negatively correlated with T2 depression; T1 search for meaning was positively correlated with T2 self-control, and negatively correlated with T2 depression and T3 mobile phone addiction; T2 self-control was negatively correlated with T2 depression and T3 mobile phone addiction; and T2 depression was positively correlated with T3 mobile phone addiction; (2) After controlling for age, gender and T1 search for meaning, T1 presence of meaning indirectly affected T3 mobile phone addiction through three mediation pathways: through the mediation of T2 depression (indirect effect = -0.07, $SE = 0.02$, 95%CI = [-0.12, -0.04]); through the mediation of T2 self-control (indirect effect = 0.04, $SE = 0.01$, 95% CI = [0.07, 0.02]); through the chain mediation of T2 depression and T2 self-control (indirect effect = -0.02, $SE = 0.01$, 95%CI = [-0.03, -0.01]); (3) After controlling for age, gender and T1 presence of meaning, T1 search for meaning neither directly nor indirectly affected T3 mobile phone addiction. The results reveal the mechanism of depression and self-control in the effect of meaning in life on mobile phone addiction in children and adolescents, and indicate that mobile phone addiction among children and adolescents can be weakened through the improvement of presence of meaning, relief of depression and the increase in self-control.

摘要 背景: 新冠肺炎疫情自发生以来, 在全球范围内蔓延, 给人们的身心健康造成了巨大威胁。为遏制疫情扩散, 中国政府采取了居家隔离、交通限制等防控措施, 多省启动了重大突发公共卫生事件I级响应。在居家隔离期间, 社交媒体成为疫情信息的主要来源。虽然社交媒体能够帮助公众及时了解疫情, 从而更好地做好防护和应对, 但是过多的通过社交媒体接触疫情信息则可能引起个体消极的心理反应, 如焦虑、恐惧、抑郁, 甚至出现急性应激反应。**目的:** 探究新冠肺炎爆发期间社交媒体使用对急性应激的影响, 以及冗思与主观社会经济地位在其中的作用机制。**方法:** 采用社交媒体使用问卷、冗思反应量表、主观社会经济地位量表和斯坦福急性应激反应问卷, 于2020年2月至3月新冠肺炎在中国爆发期间对1436名居民进行在线问卷调查。**结果:** (1) 社交媒体使用对急性应激具有直接正向预测作用; (2) 冗思在社交媒体使用与急性应激之间起部分中介作用; (3) 主观社会经济地位调节了社交媒体使用对急性应激影响的直接路径以及中介模型的后半段路径。随着主观社会经济地位的提高, 社交媒体使用对急性应激的影响以及冗思对急性应激的影响均逐渐减弱。**结论:** 研究揭示了新冠肺炎疫情下社交媒体使用对急性应激的影响及其作用机制, 对引导人们合理使用社交媒体和创伤后干预具有启示意义。**建议:** 基于突发公共危机事件下社交媒体使用可能造成消极的心理应激反应, 因此, 民众应该合理控制社交媒体使用时间, 有关部门应该加强对疫情信息传播的网络监管, 并采取适当的心理干预措施以减小疫情造成的消极心理影响。

Social Media Use Predicted Acute Stress during the COVID-19 Outbreak in China: A Moderated Mediation Model

Xiangcai He^{1,2}, Yu Zhang¹, Shaofeng Wang¹, Jinjin Li¹, Yu Luo^{1*}

¹ School of Psychology, Guizhou Normal University, Guiyang, China

² School of Clinical Medicine, Chengdu Medical College, Chengdu, China

Abstract: Background: The outbreak of COVID-19 has caused huge numbers of hospitalizations and deaths. The Chinese government executed preventative and control measures to curb the spread of the virus. During the COVID-19 outbreak, the public had a great need for the latest information about COVID-19 from social media to make clear of the situation and protect their health. However, the over-reliance on social media may put the public

under psychological distress. **Objective:** The present study aimed to explore the effects of social media use on acute stress, and the action mechanism of rumination and subjective socioeconomic status. **Methods:** An online survey was conducted on a sample of 1436 Chinese people by using social media use questionnaire, ruminative response scale, subjective socioeconomic status scale and Stanford acute stress reaction questionnaire during the COVID-19 outbreak. **Results:** (1) Social media use was significantly and positively associated with acute stress. (2) Rumination played a partial mediating role between social media use and acute stress. (3) The direct effect of social media use on acute stress, and the relationship between rumination and acute stress, were both moderated by subjective socioeconomic status. The impacts of both social media use and rumination on acute stress were stronger for individuals with low subjective socioeconomic status. **Conclusions:** These findings highlight the impacts of social media use on acute stress during the COVID-19 outbreak, and contribute to better understanding how and when social media use affects acute stress. **Suggestions:** It is important to note the appropriate use of social media following collective trauma for the general public given the negative effects of social media use. Governments and other relevant agencies should strengthen supervision over the spread of pandemic-related information and implement mental health interventions to reduce negative psychological effects.

Development of Wechat negative impact self-rating scale and Test of its validity and Reliability

XIE Weishi, ZUO Xunya, WANG Yu, YAO Benxian

Department of Psychology, Hefei Normal University, Hefei, 230601

Abstract: Objective: to develop the self-rating scale of negative effects of Wechat (WCNIS) and test its reliability and validity. Methods: item analysis and exploratory factor analysis were performed on 582 WCNIS test results from 2 universities in Anhui and Jiangsu. Confirmatory factor analysis, internal consistency validity test and calibration validity test were conducted on 785 WCNIS test results from 3 universities in Anhui, Jiangsu and Henan and 264 from online workers. Results: a total of 34 items and 4 factors were obtained by exploratory factor analysis, and the WCNIS scale was used to explain the total variance of 50.08%. The four dimensions were wechat overuse, intimate relationship alienation, parent-child relationship conflict, work-study laziness. Confirmatory factor analysis verified the four-factor model, the result was $\chi^2/df=1.931$, $P<0.001$, GFI=0.90, CFI=0.96, IFI=0.96, NFI=0.93, TLI=0.96,

RMSEA=0.04. The internal consistency reliability of the questionnaire ($r = 0.83-0.87$), test retest reliability of the scale ($r = 0.95, P < 0.001$), test retest reliability ($r = 0.84-0.90$) and internal consistency validity ($r = 0.43-0.72$) of four dimensions, the criterion validity indexes met the requirements of psychometrics, wechat negative impact self rating scale and four factors were significantly positively correlated with wechat overuse, mobile phone dependence and irrational procrastination. Conclusion: the development process of wechat negative impact self rating scale fully meets the requirements of psychometrics, has good reliability and validity, and can be used as an effective measurement tool for further study of wechat negative impact.

Keywords: Wechat, negative impact, reliability, validity, scale development

媒体多任务对认知控制的影响：一项三水平元分析

孔繁昌^{1,2}（通讯作者） 孟素洁^{1,2}

1 青少年网络心理与行为教育部重点实验室，武汉，430079

2 华中师范大学心理学院，武汉，430079, kfcpsy@mail.ccnu.edu.cn

摘要 媒体多任务是个体同时使用不同媒体的一种现象，比如一边看电视一边使用手机设备发布动态。过去的研究表明媒体多任务会对认知控制产生影响，很多研究基于不同的理论视角探讨了这一影响，但研究结果却存在差异。认知控制是认知功能的重要组成部分，是指当自动的或有赖直觉的加工无法满足任务要求时，需要人们集中并维持注意而进行的一系列自上而下的心理加工过程，它主要包括抑制控制、工作记忆和认知灵活性三个维度。为明确媒体多任务与认知控制两者之间的整体效应，本研究采用元分析的方法检索与整合了国内外已有研究。由于部分研究中存在多个效应量，本研究对检索后获得的 28 项研究(150 个效应量)使用随机效应模型进行了三水平元分析。研究结果显示，媒体多任务与认知控制总效应值显著 ($\text{cohen}'d = 0.221$)，具体而言，与低媒体多任务者相比，高媒体多任务者的认知控制能力更差。这一结论支持了注意分散假设，即频繁进行媒体多任务会使个体注意力分散，无法过滤无关信息，从而对个体的认知控制造成影响。此外，本研究进一步针对认知控制的三个维度、年龄阶段、男性比以及地区进行了调节效应检验，结果发现，高媒体多任务者在抑制控制、工作记忆两个维度上表现更差，而在认知灵活性维度上没有显著差异。而媒体多任务对认知控制的影响不受年龄阶段、男性比和地区的影响。未来，媒体多任务的目的导向、多任务的形式以及认知控制的测量工具等因素效应都有待进一步研究。

The Effect of Media Multitasking on Cognitive Control: A three-level meta-analysis

Fanchang Kong^{1*}, Sujie Meng¹

1 Key Laboratory of Adolescent Cyberpsychology and Behavior (Ministry of Education), School of Psychology, Central China Normal University, Wuhan, 430079, China

Abstract: Media multitasking, which is an ever-increasing phenomenon to use different forms of media simultaneously. Numerous studies have shown that media multitasking can affect an individual's cognitive control, which is the central component of cognitive function. However, existing research is still controversial, making it difficult to draw conclusive answers. Therefore, in order to increase the understanding of the whether frequent media multitasking will affect and how it affects cognitive control, a three-level meta-analysis was performed to obtain reliable estimates of the effect sizes and examine a range of moderators. In total, 28 studies including 150 effect sizes were obtained based on a comprehensive literature search. The result showed a small negative effect of media multitasking on cognitive control. Specifically, heavy media multitaskers were worse at inhibition control and working memory than light media multitaskers, but there was no significant difference at cognitive flexibility. The results support the scattered attention hypothesis that frequent media multi-tasking distracts the individual's attention, making it impossible for the individual to filter the irrelevant information of the environment, thus affecting the

individual's cognitive control. In addition, the moderation analyses showed no effect of age, male ratio and region. In the future, the orientation, the form of media multitasking and the measures of cognitive control need to be further investigated.

Keywords: media multitasking, cognitive control, three-level meta-analysis

手游成瘾倾向大学生工作记忆中注意转换的研究

弓晓伟¹ (通讯作者)

山西师范大学教育科学学院, 临汾, 041000, gxwhrj@163.com

摘要 根据陈淑慧(1999)的《网络成瘾中文量表》编制《手游成瘾倾向问卷》,对377名大学生进行测试,探索性因素分析表明该问卷包含五个因子,经过验证性因素分析最终得出2个因子,信效度检验效果良好。使用《手游成瘾倾向问卷》筛选出成瘾倾向组和对照组各24人,采用2(成瘾倾向者、对照组)×2(言语任务、视觉空间任务)的混合实验设计,分别以反应时和正确率为指标来检验手游成瘾倾向组和对照组被试在工作记忆的注意转换能力上是否存在差异。结果表明:(1)大学生手游成瘾得分在性别上差异显著,具体表现为男生得分高于女生;(2)大学生手游成瘾得分在专业和年级上不存在显著差异;(3)任务类型、被试类型在个体注意转换的正确率上均不存在主效应和交互效应;(4)任务类型、被试类型在个体注意转换的反应时上均存在显著的主效应,具体表现为:在任务类型上,被试在言语任务中的反应时显著短于在视觉空间任务中的反应时;在被试类型上,成瘾倾向组被试的反应时显著长于对照组的反应时;(5)任务类型和被试类型之间不存在交互作用。结论:相比于对照组,手游成瘾倾向大学生的注意转换在两种任务类型中的表现更差,转换代价更高,且随着任务难度的增加会付出更高的转换代价。

A Study of Attention Converting in Working Memory of College Students Addiction Tendency of Mobile Games

Gong Xiao-Wei

School of Education Science, Shanxi Normal University, Lin Fen

Abstract: According to Chen Shuhui (1999) "Internet Addiction Chinese Scale", the "Mobile Game Addiction Tendency Questionnaire" was compiled, and 377 college students were tested. Exploratory factor analysis showed that the questionnaire contained five factors. After confirmatory factor analysis, the final Two factors are obtained, and the reliability and validity test results are good. Use the "Mobile Game Addiction Tendency Questionnaire" to screen out 24 people in the addiction group and the control group, using a mixed experimental design of 2 (addicts, control group) × 2 (verbal tasks, visual spatial tasks), respectively The reaction time and accuracy rate are indicators to test whether there is a difference in the attention conversion ability of working memory between the mobile game addiction tendency group and the control group. The results showed that: (1) The scores of mobile game addiction among college students are significantly different in gender, and the scores of boys are higher than those of girls; (2) There is no significant difference in the scores of mobile game addiction among college students in majors and grades; (3) Tasks There are no main effects and interaction effects on the correct rate of individual attention transition between type and subject type; (4) Task type and subject type have significant main effects on the response time of individual attention transition, and the specific manifestations are as follows: In terms of task types, the response time of subjects in the verbal task was significantly shorter than that in the visual space task; in terms of the type of subjects, the reaction time of the subjects in the addiction-prone group was significantly longer than that of the control group; (5) There is no interaction between task type and subject type. Conclusion: Compared with the control group, college students with mobile game addiction tended to have worse performance in the two task types with higher conversion cost, and higher conversion cost will be paid as the difficulty of the task increases.

父母低头行为与青少年同伴疏离的关系： 父母拒绝的中介作用和性别的调节作用

吴秀娟¹ 张丽锦^{1,2}（通讯作者） 杨蕊¹

1 陕西师范大学心理学院，西安，

2 陕西省儿童心理行为健康重点研究中心，西安，710062, zhanglijin2013@snnu.edu.cn

摘要 父母低头行为指父母在亲子互动过程中被智能手机分心的状况，是亲子互动中一种特殊的社会排斥现象。当父母在亲子互动中被智能手机吸引时，孩子会感知到更多来自父母的拒绝。研究发现，感知到父母拒绝程度高的孩子在未来的社会交往中很难与他人建立安全和信任的关系。因此，经常经历父母低头行为的青少年可能感受到更多来自父母的拒绝，这可能进一步影响青少年在未来社会交往中对同伴疏离的感知。本研究以方便取样法从山东省烟台市两所公立中学选取 1219 名（602 名女生， $M_{age} = 12.19$ 岁， $SD = 0.90$ ）中学生为被试，进行《父母低头行为量表》《简式父母教养方式问卷》和《父母与同伴依恋量表》的问卷调查，考查父母低头行为与青少年同伴疏离的关系，并进一步考查父母拒绝在其中的中介作用以及性别的调节作用。结果表明：（1）父母低头行为与父母拒绝和青少年同伴疏离呈显著正相关关系，父母拒绝与青少年同伴疏离存在显著正相关关系；（2）父母低头行为不仅直接影响青少年的同伴疏离，还通过青少年对父母拒绝的感知间接增加青少年同伴疏离的风险；（3）青少年性别调节了父母低头与青少年同伴疏离的直接路径，父母低头行为对男孩同伴疏离的影响要大于女生。研究提示，父母应有意识地减少亲子互动中的手机使用，为孩子营造一个亲密接纳的家庭环境，帮助孩子更好地适应未来生活。

关键词 父母低头行为，父母拒绝，同伴疏离，儿童性别

Parental Phubbing and Adolescent Peer Alienation: Parental Rejection as Mediator and Child Gender as Moderator

Xiujuan Wu¹, Lijin Zhang^{1, 2}, and Rui Yang¹

1 School of Psychology, Shaanxi Normal University

2 Shaanxi Provincial Key Research Center of Child Mental and Behavioral Health

Abstract: As a special manner of social exclusion, parental phubbing reflects to the degree to which parents are distracted by smartphones in parent-child interactions. When parents are attracted by their smartphones during parent-child interactions, adolescents will experience more rejection and less warmth from their parents. Children who feel ostracized by their parents are less likely to develop secure and trusting relationships with others in future social interactions. Thus, adolescents who are frequently phubbed by parents may perceive more rejection from parents, which may further affect adolescents' perception of peer alienation. A sample of 1219 students from two-parent families (602 girls, $M_{age} = 12.19$ years, $SD = 0.90$) was recruited as participants from two public middle schools in Yantai, Shandong province. Data were drawn from adolescents reporting on their experience with parental phubbing, parental rejection and peer alienation. Results demonstrated that (1) parental phubbing was significantly and positively associated with parental rejection and adolescent peer alienation, parental rejection was significantly and positively associated with adolescent peer alienation; (2) parental phubbing could directly predict adolescent peer alienation, and through the mediating role of parental rejection influence adolescent peer alienation; (3) adolescent gender moderated the direct path of parental phubbing and adolescent peer alienation, and parental phubbing had a stronger effect on peer alienation for boys than for girls. In order to help adolescents better develop peer relationship in future social interactions, parents should consciously reduce the use of smartphones in parent-child interactions and create a close family environment free of the distractions of smartphones.

Keywords: parental phubbing, parental rejection, peer alienation, child gender

亲子技术干扰与青少年问题性手机使用的关系： 亲子关系中介作用与年龄、性别的调节作用

朱成伟¹，江伊茹¹，全晰¹，张彩¹（通讯作者）

¹ 北京师范大学中国基础教育质量监测协同创新中心，北京，100875，

通讯作者 E-mail: caibnu@163.com

摘要 技术干扰指的是在人际互动过程中由于使用技术设备（如手机/电脑/电视/Pad等）而中断社会互动的一种现象。以往研究已经发现，亲子间的技术干扰对于儿童青少年的内外化行为、亲子关系等方面有着不少的负面影响。本研究基于前人研究的基础，试图探讨亲子间技术干扰对青少年问题性手机使用的影响与亲子关系在其中的中介作用，并且分析了年龄差异以及性别差异。本研究使用了技术干扰量表、问题性手机使用量表、社会关系网络量表对 7648 名初中生（M 年龄=14.40, SD=0.96）与 4052 名高中生（M 年龄=16.9, SD=0.49）进行了调查。使用 Mplus 构建了结构方程模型进行分析，并根据年级与性别进行了多组比较。结果发现：（1）亲子间技术干扰对青少年的问题性手机使用有着直接作用；（2）亲子关系在其中有着中介作用，具体来说技术干扰对亲子关系有着负向影响，而亲子关系会对问题性手机使用有着负向影响；（3）年级的调节效应显著，具体来说，亲子技术干扰对问题性手机使用的直接效应在初中生中效应更大，亲子技术干扰对于亲子关系的负面作用在初中生中效应更大，但亲子关系对问题性手机使用的负向影响在高中生中更大；（4）初中生中性别的调节作用显著，具体来说，亲子技术干扰对于亲子关系的负面影响会在女生中更大；（5）高中生中的性别调节作用不显著。本研究结果表明亲子技术干扰除了会直接提高青少年的问题性手机使用之外，也会通过降低亲子关系而间接影响青少年的问题性手机使用，并且这种影响模式存在着年龄差异与性别差异。

关键词 亲子技术干扰，亲子关系，问题性手机使用，年龄差异，性别差异

The Relationship between Parent-Child Technoference and Adolescents' Problematic Smartphone Use: The Mediating Role of Parent-Child Relationship and The Moderating Role of Age and Gender

Zhu Chengwei¹, Jiang Yiru¹, Quan Xi¹, Zhang Cai¹

Collaborative Innovation Center of Assessment for Basic Education Quality, Beijing Normal
University, Beijing, China

Abstract: Technoference refers to the interruption of social interaction due to the use of technical devices (such as mobile phone, computer, TV, Pad, etc.). Previous studies have found that parent-child technoference has a lot of negative effects on children and adolescents' behavior and parent-child relationship. Based on previous studies, this study attempted to explore the influence of parent-child technoference on smartphone dependence and the mediating role of parent-child relationship, and analyzed the age difference and gender difference. In this study, 7648 junior high school students (M age =14.40, SD=0.96) and 4052 senior high school students (M=16.9, SD=0.49) were investigated by using the Technoference Scale, the Mobile Phone Problematic Use Scale and the Network of Relationships Inventory. We used Mplus to construct a structural equation model for analysis, and conducted multiple comparisons of grade and gender. The results showed that : (1) Parent-child technoference had a direct effect on problematic smartphone use; (2) Parent-child relationship had a mediating effect. Specifically, technoference was negative associated with parent-child relationship, and parent-child relationship was negative associated with problematic smartphone use; (3) The moderating effect of grade was significant. Specifically, the direct effect of parent-child technoference on problematic smartphone use was greater in junior high school students, and the negative effect of parent-child technoference on parent-child relationship was greater in junior high school students, but the negative association between parent-child relationship and problematic smartphone use was greater in senior high school students. (4) The moderating effect of gender in junior high school students was significant. Specifically,

the negative effect of parent-child technology interference on parent-child relationship was greater in junior high school girls. (5) The moderating effect of gender was not significant among senior high school students. The results of this study indicated that parent-child technoference can directly improve adolescent's problematic smartphone use, and also affect adolescent's problematic smartphone use by reducing parent-child relationship, and this influence pattern has differences in age and gender.

Keywords: parent-child technoference, parent-child relationship, problematic smartphone use, age difference, gender difference

社交网站中的体像比较对女大学生网络强迫性购买的影响： 一个有中介的调节模型

宋祝晶¹ 郑月丽¹ 周宗奎^{1,2}（通讯作者）

1 青少年网络心理与行为教育部重点实验室，武汉，430079

2 华中师范大学大学心理学院，武汉，430079, zhouzk@mail.ccnu.edu.cn

摘要 网络强迫性购买是个体在网络环境中过度购买且对购买失去控制的消费行为，是一种病理性的购买行为。网络强迫性购买给个体带来许多消极的影响，比如内疚心理、社会冲突以及债务负担等，女大学生更容易受到网络环境的影响，产生更多的强迫性购买，探讨影响女大学生网络强迫性购买的因素变得越来越重要。体像比较是大学生在社交网站使用过程中不可避免的心理活动，是指个体在体貌特征方面与他人或理想化的身体形象进行比较的过程，具有自动性和无意识的特点，社交网站中的体像比较会对个体的情绪和行为产生一定的影响。本研究旨在探讨社交网站中的体像比较对女大学生网络强迫性购买的影响及其作用机制。采用社交网站体像比较、体像满意度、网络强迫性购买和物质主义量表对来自武汉、河南和重庆高校的 521 名女大学生进行测量。结果表明：（1）体像比较和网络强迫性购买之间呈显著正相关，体像比较和体像满意度之间呈显著负相关，体像满意度和网络强迫性购买之间呈显著负相关；（2）体像比较通过体像满意度的部分中介作用影响网络强迫性购买；（3）女大学生体像比较的直接作用和体像满意度的中介作用受到物质主义的调节，随着物质主义水平的提高，女大学生体像比较的直接效应和体像满意度的中介效应增大。进一步简单斜率分析表明：对于物质主义水平较高的女大学生来说，体像比较对网络强迫性购买的预测作用更强，体像满意度对网络强迫性购买的预测作用也更强。研究结果进一步揭示了女大学生社交网站中的体像比较与网络强迫性购买的关系及其作用机制，有助于针对性的干预女大学生网络强迫性购买行为。

Body Image Comparison and Online Compulsive Buying among Female College Students : A Moderated Mediation Model

SONG Zhujing¹, ZHENG Yueli¹, ZHOU Zongkui²

1 Key Laboratory of Adolescent Cyberpsychology and Behavior, Ministry of Education, Wuhan, 430079

2 School of Psychology, Central China Normal University, Wuhan, 430079

Abstract: Online compulsive buying is a consumer behavior in which individuals over-buy in the online environment and lose control of the purchase, and is a pathological buying behavior. Online compulsive buying brings many negative effects to individuals, such as guilt, social conflict, and debt burden. Female college students are more likely to be affected by the online environment and produce more compulsive purchases. Exploring the factors that affect female college students' online compulsive buying has become more and more important. Body image comparison is an inevitable psychological activity of college students in the process of using social networking sites. It refers to the process of comparing an individual's physical characteristics with others or idealized body images. It is characterized by automatization and unconsciousness and it will have a certain impact on the individual's emotions and behavior.

This study aims to explore the influence of body comparison on online compulsive buying of female college students and its underlying mechanism. Participants of the research were 521 female college students from Henan and Chongqing. Appearance Comparison of Social Network Site Use Scale, Body Image Satisfaction Scale, Materialism Scale, and Online Compulsive Buying Scale was used in this study. The results show that: (1) There is a significant positive correlation between body image comparison and online compulsive buying, a significant negative correlation between body image comparison and body image satisfaction, and a significant negative correlation between body image satisfaction and online compulsive buying Related; (2) Body image satisfaction partially mediated this association. (3) However, the direct effect of body image comparison and mediating effect of body image satisfaction was moderated by materialism, in that this direct effect and mediating effect was stronger for girls with higher materialism. Further simple slope analysis shows that for female college students with a higher level of materialism, body image comparison has a stronger predictive effect on online compulsive buying, and body image satisfaction has a stronger predictive effect on online compulsive buying. These findings advance our understanding of how and when body image comparison is related to online compulsive buying among female college students, which is helpful for targeted intervention in female college students' online compulsive buying behavior.

中国网民对新冠疫苗的情感态度研究——基于微博大数据的分析

过智超¹ 马晓¹ 武文志¹ 李淑君¹ 曾勇¹ (通讯作者)

1 昆明医科大学第六附属医院暨玉溪市人民医院, 云南玉溪, 653100, zengyong@kmmu.edu.cn

摘要 目的 本研究旨在调查目前中国网民对 COVID-19 疫苗和疫苗接种的情感与态度, 通过机器学习算法预测其以后的情感走向, 同时利用大数据分析探究一些影响大众接种疫苗的因素, 以期对中国相关部门的疫苗接种工作提供来自大数据的支持, 能够帮助政府制定相关的政策推动国内新冠疫苗的接种进度, 为全民免疫时代的到来做出一定的贡献。**方法** 基于 Python 爬虫技术采集 2021 年 3 月 12 日至 2021 年 5 月 22 日期间新浪微博上有关“新冠疫苗”的热门话题下的微博评论共计 7 万余条, 借助 Python 语言中的 Wordcloud 模块、SnowNLP 情感分析模型以及 TF-IDF 算法, 对“新冠疫苗”的相关微博评论进行文本聚类与情感分析, 生成“每日微博评论情感变化图”展示网民对新冠疫苗的情感趋势, 再利用 pyecharts 绘图模块绘制“中国新冠疫苗情感地图”以及“中国新型冠状病毒疫情地图(累计确诊数)”, 可视化地展现网民对新冠疫苗的情感态度的时空演化过程。**结果** 在时间维度上, 中国网民的情感态度大致经历了四个阶段, 整体的情感值低于 0.5, 倾向于负面、消极的情绪状态; 在空间维度上, 中国内陆地区的情感值要普遍高于边境地区, 除了天津市和台湾省以外, 累计确诊数越高的地区情感值普遍越高。**结论** 中国网民对新冠疫苗的情感整体偏向于负面、消极, 各种因素在综合影响大众的接种意愿, 政府相关机构需要及时做出政策的调整, 关注网络舆论的变化, 同时根据各省市的具体情况因势利导, 才能够有效促进大众对新冠疫苗的认可与接种。

A study on Chinese netizens' emotions and attitudes toward COVID-19 vaccine -- Based on analysis of weibo big data

Zhichao Guo¹, Xiao Ma¹, Wenzhi Wu¹, Shujun Li¹, Yong Zeng^{1*}

1 The Sixth Affiliated Hospital of Kunming Medical University, Yuxi, China (653100)

*zengyong@kmmu.edu.cn

Abstract: Purpose The purpose of this study is to investigate the emotions and attitudes of Chinese netizens towards COVID-19 vaccine and vaccination, predict their future emotional trend through machine learning algorithm, and explore some factors affecting public vaccination by using big data analysis, in order to provide big data support for the vaccination work of relevant departments in China. It can help the government formulate relevant policies to promote the domestic COVID-19 vaccine vaccination schedule, and make a certain contribution to the advent of the

era of universal immunization. **Methods** Based on Python crawler technology, a total of more than 70,000 weibo comments on the hot topic of "COVID-19 vaccine" on Sina Weibo from March 12, 2021 to May 22, 2021 were collected. With the help of Wordcloud module in Python, SnowNLP sentiment analysis model and TF-IDF algorithm, Text clustering and sentiment analysis were carried out on weibo comments related to "COVID-19 vaccine" to generate "sentiment change map of daily weibo comments" to show the emotional trend of netizens towards COVID-19 vaccine. Pyecharts mapping module was used to draw "China's COVID-19 vaccine sentiment map" and "China's COVID-19 epidemic map (cumulative number of confirmed cases)" to visually show the spatio-temporal evolution process of netizens' emotions and attitude towards COVID-19 vaccine. **Results** In the time dimension, the emotional attitude of Chinese netizens has experienced four stages. The overall emotional value is less than 0.5, and they tend to be negative and negative. In the spatial dimension, the emotional value in inland China is generally higher than that in border areas. Except for Tianjin and Taiwan Province, the region with higher cumulative diagnoses generally has higher emotional value. **Conclusion** Chinese netizens' emotions towards COVID-19 vaccine tend to be negative and negative on the whole. Various factors comprehensively affect the public's willingness to be vaccinated. Relevant government agencies need to make timely policy adjustments, pay attention to the changes in online public opinion, and take advantage of the situation according to the specific situation of each province and city, so as to effectively promote public recognition and vaccination of COVID-19 vaccine.

中学生电子游戏心理卷入度问卷编制及其对心理健康的影响

贾作成¹ 张玉柱² (通讯作者)

¹ 海丰县教育局属事业单位, 广东, 516400

² 呼和浩特职业学院, 呼和浩特, 010000, nsdzyz@126.com

摘要 电子游戏正在逐渐取代传统游戏成为中学生娱乐的重要方式。电子游戏的测量工具层出不穷, 但有关电子游戏态度的测量工具集中于玩家消极品质的测量, 目标群体多数是病理性使用游戏的玩家群体, 会导致非病理性玩家群体得分出现地板效应, 进而失去大量数据。本研究目的在于编制一款中立且中性的中学生电子游戏心理卷入度问卷, 用于测量电子游戏心理卷入度状态, 同时考查电子游戏心理卷入度对中学生心理健康的影响。研究使用 SPSS25.0 软件进行探索性因素分析和方差分析、相关分析, 使用 AMOS24.0 进行验证性因素分析和路径分析。研究一以 1741 名中学生样本编制了 35 个题目的《电子游戏心理卷入度问卷(VGIQ)》初始问卷, 因素分析结果为包括游戏积极反馈, 游戏付出倾向, 情绪改变, 虚拟角色带入, 游戏相关关注, 现实观念改变六个维度, 问卷的内部一致性信度为 0.965, 分半信度为 0.926, 重测信度为 0.924, 效标关联度良好。问卷的验证性因素分析中各拟合指数良好 (TLI=0.886, CFI=0.896, RMSEA=0.068)。研究二考查了电子游戏卷入度及网络成瘾对心理健康的影响, 验证了以网络成瘾为中介的关系模型, 拟合指数良好 (TLI=0.956, CFI=0.943, RMSEA=0.077), 网络成瘾中介了电子游戏卷入度对心理健康的影响。研究结果表明, 中学生的电子游戏卷入度问卷共 35 题, 六个维度, 一阶六因子结构, 其信度和效度符合心理测量学要求, 可以用于中学生电子游戏卷入度测量; 电子游戏卷入度可以通过网络成瘾间接影响中学生的心理健康, 电子游戏心理卷入度越高则越可能出现网络成瘾现象并且越易导致心理问题的发生。

关键词 电子游戏卷入度, 电子游戏态度

Video Game Involvement Questionnaire Development of the Middle School Student and the Influence on Mental Health

Jia Zuo-Cheng¹, Zhang Yu-Zhu^{*,2}

¹ Institutions under Haifeng Education Bureau, Guangdong, 516400, China

² Hohhot Vocational College, 010000, Inner Mongolia, China, nsdzyz@126.com

Abstract: Video games are gradually replacing traditional games as an important way of entertainment for middle

school students. Although there are lots of questionnaires for video games, these questionnaires paid more attention to the negative qualities of the players and mainly measured the pathological player group. It will result in a floor effect on normal players' scores and lose large amount of data. This paper intends to develop an impartial and neutral questionnaire to evaluate game playing attitude, quantify player's Video Games Involvement, and measure relationship between Video Game Involvement and mental health of middle school student. SPSS25.0 is used for EFA and ANOVA, AMOS24.0 is for CFA and Path Analysis in this paper. In study one, the Video Game Involvement Questionnaire (VGIQ) is compiled with 1,741 middle school students, in which contains 6 factors: Game positive feedback, Tendency of the pay in the game, Emotional change, Virtual role input, Game derivatives attention, and Attitude change. VGIQ Cronbach's 0.965, Split-half coefficient is 0.926, The test-retest reliability is 0.924, In confirmatory factor analysis, the fitting coefficients were good (TLI = 0.886, CFI = 0.896, RMSEA = 0.068). In study two, investigate the effect of VIGQ on mental health and assuming and verifying the model of the relationship between VGIQ and Mental health, which is totally mediated by Internet Addiction, the fitting coefficient is well (TLI=0.970, CFI=0.978, RMSEA=0.056). The results show that the questionnaire consists of 35 questions, six factors and a first-order six factor structure. Its reliability and validity meet the requirements of psychometrics and can be used to measure the involvement of middle school students in video games; Video game involvement can indirectly affect the mental health of middle school students through Internet addiction. The higher the degree of video game involvement, the more likely it is to appear Internet addiction and lead to psychological problems.

大学生被动性社交网站使用对真实性的影响： 社会比较倾向的中介作用

姚本先¹（通讯作者） 王艺舒²

1 合肥师范学院，合肥，2430601；通讯作者 E-mail:ybx7756@126.com

2 合肥师范学院教师教育学院，合肥，230601

摘 要 能否真实的感知内在自我，不因外界影响而展现真实的自己是每个人都面临的问题。真实性即“个体做真实自己的程度”，是个体心理健康的重要影响因素，与主观幸福感，自我概念，人际交往密切相关。按照社交网站使用方式的不同可以分为：主动性使用和被动性使用。被动性社交网站使用是指个体在社交网站中缺乏交流沟通的信息浏览行为，如浏览他人动态等。相关研究结果指出，被动性社交网站使用不利于个体与他人建立良好的人际关系，对个体的情绪健康产生消极影响。在社交网站环境下，个体的社会比较心理更易被激活，高社会比较倾向的个体更容易受到社交网站的影响。因而在社交网站上被动的浏览其他用户的信息往往会因社会比较心理而导致内在自我与外表特征之间的不一致。本研究在自我差异理论，超人际交流理论和社会比较理论视角下，欲探讨被动性社交网站使用对大学生真实性的影响以及社会比较倾向在其中的中介作用。研究采用被动性社交网站使用量表，真实性量表，社会比较量表对 928 名大学生进行调查，选用 SPSS22.0 和 SPSS 宏程序 Process 进行数据统计分析。结果表明：（1）被动性社交网站使用与大学生真实性呈显著负相关；（2）社会比较倾向在被动性社交网站使用对大学生真实性影响中起中介作用，即被动性社交网站使用通过社会比较倾向负向预测大学生真实性。本研究揭示了大学生被动性社交网站使用与真实性的关系及其作用机制，提示我们应当注意社交网站使用情况，弱化社交网站中的比较情境，从而提高自身真实性水平。

关键词 真实性，被动性社交网站使用，社会比较倾向，大学生

The Effect of College Students' Passive Use of Social networking Sites on Authenticity: the Mediating Role of Social comparison tendency

Yao Benxian (Corresponding author), Wang YiShu

Hefei Normal University, Hefei, 230601

Department of Education and Teaching, Hefei Normal University, Hefei, 230601

Abstract: Whether we can truly perceive our inner self and show our true self without being influenced by the outside world is a problem that everyone faces. Authenticity is "the degree to which an individual is true to himself", which is an important factor affecting individual mental health and is closely related to subjective well-being, self-concept and interpersonal communication. According to the different ways of using social networking sites, they can be divided into proactive use and passive use. Passive use of social networking sites refers to the information browsing behavior of individuals without communication on social networking sites, such as browsing other people's dynamic information. Relevant research results indicate that the use of sexual social networking sites is not conducive to the establishment of a good interpersonal relationship with others, and has a negative impact on the emotional health of individuals. In the context of social networking sites, individuals' social comparison psychology is more likely to be activated, and individuals with high social comparison tendency are more likely to be affected by social networking sites. Therefore, passive browsing of other users' information on social networking sites often leads to the inconsistency between inner self and appearance characteristics due to social comparison psychology. From the perspectives of self-difference theory, superinterpersonal communication theory and social comparison theory, this study aims to explore the influence of passive social networking site use on college students' authenticity and the mediating role of social comparison tendency. The passive social networking website usage scale, authenticity scale and social comparison scale were used to investigate 928 college students. SPSS22.0 and SPSS macro program Process were used for data statistical analysis. The results showed that : (1) there was a significant negative correlation between passive social networking site use and college students' authenticity; (2) Social comparison tendency plays a mediating role in the influence of passive social networking site use on college students' authenticity, that is, passive social networking site use negatively predicts college students' authenticity through social comparison tendency. This study reveals the relation and mechanism of college students' passive use of social networking sites and their authenticity, and suggests that we should pay attention to the use of social networking sites and weaken the comparative situation in social networking sites, so as to improve our own authenticity.

摘 要 青春期面临着来自人际关系、学业成就等各种压力，使青少年产生负面情绪的可能性增加，但当应对方式不同时，个人因情绪而遇到困难的可能性会有所差异。学习压力和应对方式均能影响初中生的情绪稳定程度。鉴于个体在面对压力挑战时，采取的应对方式可能不同，加之不同的应对方式和个体身心健康之间也存在不同关系。为考察初中生的学习压力、应对方式与其情绪不稳定之间的关系机制，选取 801 名初中生（男生 373 名，女生 428 名，平均年龄 13.93±0.98 岁），采用学习压力量表、应对方式问卷和情绪不稳定量表对初中生的学习压力、应对方式及情绪不稳定进行测量，采用 SPSS 25.0 和 Mplus8.3 进行数据分析。相关分析发现，初中生的学习压力、应对方式与情绪不稳定均显著相关（ $P_s < 0.01$ ）。多重中介分析发现，不同

应对方式在学习压力与情绪不稳定之间的多重中介效应模型的总间接效应大小是 0.107 ($SE = 0.016$, $P < 0.001$)。其中, 积极应对的中介作用路径是: 学习压力→积极应对→情绪不稳定($\beta = 0.055$, $SE = 0.010$, $P < 0.001$); 消极应对的中介路径为: 学习压力→消极应对→情绪不稳定($\beta = 0.052$, $SE = 0.012$, $P < 0.001$)。此外, 学习压力对情绪不稳定的直接效应也存在统计学意义($\beta = 0.545$, $SE = 0.032$, $P < 0.001$)。学习压力通过不同应对方式的中介作用能够间接影响初中生的情绪不稳定。本研究提示积极应对方式与消极应对方式在初中生学习压力与情绪不稳定之间起多重中介作用。

The influence of academic pressure on junior high school students' emotional instability: a multiple mediating analysis

YANG Tao^{1,2}, CHEN Wei^{1,2}

1 School of Psychology, Guizhou Normal University, Guiyang, 550025

2 Psychology Big Data Research Center, Guizhou Normal University, Guiyang, 550025

Abstract: A total of 801 junior high school students (373 boys and 428 girls, average age 13.93 ± 0.98) were selected. The academic pressure scale, coping strategy questionnaire and emotional instability scale were used to measure the academic pressure, coping strategy and emotional instability of junior high school students. SPSS 25.0 and Mplus 8.3 software were used for data analysis. Correlation analysis found that junior high school students' academic pressure, coping strategy and emotional instability were significantly correlated ($P_s < 0.01$). Multiple mediating analysis showed that the total indirect effect of the multiple mediating effect model of different coping strategy between academic pressure and emotional instability was 0.107 ($SE = 0.016$, $P < 0.001$). The mediating path of positive coping was: academic pressure → positive coping strategy → emotional instability ($\beta = 0.055$, $SE = 0.010$, $P < 0.001$); the mediating path of negative coping was: academic pressure → negative coping strategy → emotional instability ($\beta = 0.052$, $SE = 0.012$, $P < 0.001$). In addition, the direct effect of academic pressure on emotional instability was also statistically significant ($\beta = 0.545$, $SE = 0.032$, $P < 0.001$). Academic pressure can indirectly affect the emotional instability of junior high school students through the mediation of different coping strategy. This study suggests that positive coping strategy and negative coping strategy play multiple mediating roles between academic pressure and emotional instability of junior high school students.

Keywords: academic pressure, emotion, coping strategy, multiple mediating

自豪与羞愧情绪对认知灵活性影响的一致性：来自 ERP 的证据

毕晓燕^{1,2} 马谐^{1,2} 陶云^{1,2*}

1 云南师范大学教育学部, 昆明 650500

2 民族教育信息化教育部重点实验室, 昆明 650500

摘要 自我意识情绪是一类相比基本情绪更高级的社会情绪, 在我们的日常生活中扮演着重要的角色。以往关于情绪对认知灵活性影响的研究较多, 但均是在基本情绪的基础上进行研究, 对于更高级别的自我意识情绪(如自豪、羞愧)却鲜有研究。此外, 以往大量学者对同一效价的情绪与认知灵活性之间的关系进行研究, 结果却不尽相同, 那么是否是研究中混淆了不同的情绪类型? 比如基本情绪和自我意识情绪。本研究可以通过自我意识情绪的研究来与以往的基本情绪研究进行梳理, 对比两者与认知灵活性的关系。因此, 本研究采用大小-奇偶转换范式考察自我意识情绪对认知灵活性的影响, 选取在校大学生 45 名为被试, 采用 3 自我意识情绪类型(自豪、羞愧、中性)×2 任务类型(重复、转换)的混合实验设计, 探讨了不同自我意识情绪条件下转换任务的反应时和正确率, 并运用事件相关电位(Event-Related Potential, ERP)对转换任务的脑电特点进行探讨。行为结果发现: (1) 转换任务相比重复任务有更长的反应时和更低的正确率; (2) 相比中性情绪, 自豪和羞愧情绪条件下转换代价更大。脑电结果发现: (1) 转换任务比重复任务诱发了更大的 P3 波幅, 表明该任务诱发出了显著的转换效应; (2) 自豪和羞愧情绪下的 P3 差异波显著小于中性情绪下的, 而在 N2

差异波上不存在显著差异。以上行为和脑电结果均表明，自豪情绪和羞愧情绪抑制了转换能力，对认知灵活性的影响具有一致性，且这种一致性可能表现在晚期的决策任务上。该研究探讨了自豪情绪和羞愧情绪对认知灵活性的影响，为进一步管理学生的自豪与羞愧情绪提供了理论基础。

The Consistency of the Influence of Pride and Shame on Cognitive Flexibility: Evidence from ERP

Xiao Yan Bi^{1,2}, Xie Ma^{1,2}, Yao Tao^{1,2,*}

1 Faculty of Education, Yunnan Normal University, Kunming, China

2 Key Laboratory of Educational Information for Nationalities, Yunnan Normal University, Kunming, China

Abstract: Self-conscious emotions are social emotions that are more advanced than basic emotions and play an important role in our daily lives. There are many studies on the influence of emotions on cognitive flexibility in the past, but they are all based on basic emotions. There are few studies on higher-level self-conscious emotions (such as pride and shame). In addition, in the past, a large number of scholars have conducted research on the relationship between emotions of the same valence and cognitive flexibility, but the results are not the same. So is it because the research has confused different types of emotions? Such as basic emotions and self-conscious emotions. This research can use the research of self-conscious emotion to comb with the previous basic emotion research, and compare the relationship between the two and cognitive flexibility. Therefore, this study adopted the size-parity task-switching paradigm to investigate the influence of self-conscious emotions on cognitive flexibility. Experiment used the digit value (more vs. less than 5) and digit parity (odd vs. even) task-switching paradigm to investigate the behavioral and EEG characteristics of the effects of different self-conscious emotions on cognitive flexibility. 45 college students were selected as participants, the mixed design of 3(Self-conscious emotional type: pride, neutral, shame) × 2 (task types: repetition, switching) was adopted. The behavioral results show that switching tasks have longer RTs and lower accuracy rate than repeated tasks. Moreover, the switch costs under conditions of pride and shame is greater. ERP results showed larger P3 amplitude for switching task than repeated task, indicating that the task induced significant switch effect. Additionally, there was smaller P3 difference amplitudes for shame and pride compared to neutral, however, no significant differences were between three groups in the N2 difference amplitudes. The above behavioral and EEG results show that pride and shame inhibit conversion ability, and have a consistent effect on cognitive flexibility, and this consistency is mainly manifested in late decision-making tasks. The study explored the influence of pride and shame on cognitive flexibility, and provided a theoretical basis for further management of students' pride and shame.

Keywords: pride, shame, cognitive flexibility, ERPs

青少年心理资本与抑郁的关系：有调节的中介模型

宋瑞君¹

1 邵阳学院，邵阳，422000, rjsong@sina.cn

摘要 心理资本是个体积极的心理状态，包括自我效能、韧性、希望和乐观四个维度。既有研究表明，心理资本对青少年抑郁具有重要影响，但心理资本“怎样”影响（中介机制）以及“何时”影响（调节机制）青少年的抑郁仍有待深入探讨。本研究基于“积极青少年发展理论”、“拓展—建构理论”和“压力—缓冲模型”，构建一个有调节的中介模型，旨在检验积极应对方式在心理资本与青少年抑郁之间的中介作用，以及社会支持对上述中介路径的调节作用。采用心理资本问卷、积极应对方式问卷、社会支持问卷以及抑郁症自评量表对临床上已经确诊的209名抑郁症青少年（平均年龄13.28岁， $SD = 4.19$ ）进行测查。结果表明：（1）在控制了性别、年龄、家庭社会经济地位后，心理资本对抑郁具有显著的负向预测作用。（2）中介效应检验表明，积

极应对方式在心理资本与抑郁之间具有中介作用。(3)有调节的中介效应检验进一步表明,社会支持调节了“心理资本→积极应对方式→抑郁”的后半段,即当青少年的社会支持较高时,积极应对方式对抑郁的抑制作用增强。本研究从积极心理学的视角揭示了心理资本“怎样”及“何时”影响青少年抑郁,为抑郁症的预防和干预提供了新思路。研究结果启示我们在抑郁症的预防和干预中,要关注青少年自身优势资源的开发。

The Relationship between Psychological Capital and Adolescents' Depression: A Moderated Mediation Model

Ruijun Song

Shaoyang University, Shaoyang, 422000

Abstract: Psychological capital has been conceptualized as individual's positive psychological state of development which is characterized by self-efficacy, optimism, hope and resiliency. Although research has documented that adolescents with high psychological capital are more likely to reduce their risk of depression, the mediating mechanism (i.e., how psychological capital impact depression?) and moderating mechanism (i.e., when the impact is more or least potent) underlying this relation remains unclear. Based on “positive youth development theory”, “broaden-and-built theory” and “stress-buffering model”, a moderated mediation model was constructed to examine the mediating role of positive coping in linking psychological capital with depression, and whether this indirect association is moderated by social support. A total of 209 depressed adolescents ($M = 13.28$, $SD = 4.19$) who were interviewed by the experienced doctor according to DSM-IV, completed questionnaires regarding psychological capital, positive coping, social support and depression. The results indicated that: (1) After controlling for gender, age and socioeconomic status, psychological capital had a negative effect on depression; (2) mediation analysis revealed that positive coping mediated the association between psychological capital and depression; (3) tests of moderated mediation further indicated that the mediated path was stronger for adolescents with higher level of social support. These findings not only underscore the importance of identifying the mechanisms that moderated the mediated paths between psychological capital and adolescent depression from the perspective of positive psychology, but also provide new perspective for developing depression prevention and intervention. The prevention and intervention of adolescent should be particularly attentive to target the positive resources development.

Keywords: depression, psychological capital, positive coping, social support, adolescents

自发视觉注意能增强我们感知到的情绪吗？

杨阳¹ 刘玉霞¹ 莫雷¹

¹ 华南师范大学心理学院, 广州市, 510631, molei@scnu.edu.cn

摘要 注意和情绪是两大基本的心理系统,两者之间相互影响这一问题受到研究者的高度关注。以往研究表明,情绪能吸引并维持人们的注意。近期有研究探讨了自发的视觉注意能否增强感知的情绪强度问题,研究者采用空间提示范式,让被试自发地将注意指向目标对象,然后考查他们对目标对象的情绪反应是否增强,结果表明,被试对目标对象的情绪感知显著增强。该研究从探讨自发注意影响情绪感知的角度探讨注意与情绪的关系,是很有启发意义的。然而,该研究的研究任务是要求被试选择或评价情绪强度较大的图片,这个任务可能只是考察出被试对目标图片的记忆印象,而没有真正考察出被试对目标图片的情绪反应是否增强,也没有考察出被试对目标图片的情绪如何增强。据此本研究设计三个实验探讨被试对自发注意的目标图片情绪感知是否增强以及如何增强。实验1采用空间提示范式操纵自发视觉注意,研究任务是让被试选择情绪感受强的图片,并同时进行情绪效价的七点评级,结果发现,图片类型的主效应显著,被标记图片与未被标记的图片的情绪效价的差异不显著。这一结果表明,前人研究得出的结果可能只是表明标记图片会使被试印象更深刻,不能证明标记图片是否增强了情绪感受。实验2同样采用空间标记范式操纵自发注意,图片呈现结束后,由电脑随机呈现被标记图片或者不被标记图片,让被试对呈现图片的情绪效价进行七点评级,结果表

明, 被试对自发注意的消极刺激感知到的情绪往消极方向增强, 对自发注意的积极刺激感知到的情绪往积极方向增强, 不是表现为“单向增强”, 而是一种双向的“离中增强”。实验 3 运用脑电技术, 采用空间标记范式操纵自发注意, 图片呈现结束后, 由电脑随机呈现被标记图片、不被标记图片或者未呈现过的图片, 要求被试再认, 脑电结果表明, 被标记图片的波幅显著高于其他图片的波幅, 进一步验证了本研究的猜想。综合三个实验的研究结果, 本研究提出, 自发视觉注意可以增强人们的情绪感知。

Can Voluntary Visual Attention Increase Perceived Emotional Intensity?

Yang Yang¹, Liu Yuxia¹, Mo Lei¹

1 school of psychology, south China normal university, Guangzhou, 510631, molei@scnu.edu.cn

Abstract: Attention and emotion are two basic psychological systems, and the interaction between them has been highly concerned by researchers. Previous studies have shown that emotions attract and maintain people's attention. Recent studies have explored whether voluntary visual attention can enhance the perceived emotional intensity. Using the spatial-cuing paradigm, researchers asked the subjects to point their attention to the target spontaneously, and then examined whether their emotional response to the target was enhanced. The results showed that the subjects' emotional perception of the target was significantly enhanced. This study is instructive to explore the relationship between attention and emotion from the perspective of the effect of voluntary attention on emotional perception. However, the task of this study is to ask subjects to select or evaluate pictures with high emotional intensity, which may only examine the memory or impression of the target picture. Therefore, we think this study does not really examine whether the subjects' emotional response to the target picture is enhanced, nor how the subjects' emotional response to the target picture is enhanced. Accordingly, our study designed three experiments to explore whether the subjects' perceived emotion of the target picture through voluntary attention is enhanced and how to enhance it. In experiment 1, the spatial-cuing paradigm was used to manipulate voluntary visual attention. Subjects are required to select pictures with strong emotional feelings, and to rate their emotional valence by seven points at the same time. The results showed that the main effect of picture type was significant, and there was no significant difference in emotional valence between cued and uncued pictures, which suggests that the results of previous studies may only show that the cued pictures will make the subjects more impressed, and can not prove whether voluntary visual attention enhance the perceived emotion. In experiment 2, the spatial-cuing paradigm was also used to manipulate voluntary attention. After the picture presentation was over, the subjects did not need to choose. The computer randomly presented the cued picture or not. The subjects were asked to rate the emotional valency of the presented picture by seven points. The results show that voluntary visual attention can enhance the perceived emotion of subjects. The emotion perceived by the negative stimulus of voluntary attention is enhanced in a negative direction, and the emotion perceived by the positive stimulus of voluntary attention is enhanced in a positive direction. It is not a "one-way enhancement", but a "two-way off-center enhancement". In experiment 3, we used EEG technology, and spatial-cuing paradigm was also used to manipulate voluntary attention. After picture presentation, the computer randomly presented cued pictures, uncued pictures or unpresented pictures, requiring subjects to recognize them. The EEG results show that the amplitude of the cued pictures are significantly higher than other pictures, which further validates our hypothesis. Combining the results of three experiments, this study suggests that voluntary visual attention can enhance people's perceived emotion.

Key words: voluntary visual attention, emotional intensity, spatial-cuing paradigm, emotional valency

睡眠剥夺影响恐惧消退的认知神经机制

冯攀^{1,2}, 冯廷勇^{1,2} (通讯作者)

1 西南大学心理学部, 重庆, 400715

2 认知与人格教育部重点实验室, 重庆, 400715, fengty0@swu.edu.cn

摘要 恐惧(fear)是一种与进化密切相关的基本情绪,它可以激发一系列防御机制,在人类的生存和适应中发挥着重要作用。然而,当动物或人类长期处于恐惧状态中,可能发展为焦虑症、恐惧症和创伤后应激障碍等相关情绪障碍,对其身心健康和发展都会造成严重的负面影响。先前的研究表明,睡眠剥夺会对恐惧情绪加工过程产生影响,然而睡眠剥夺影响恐惧记忆消退的认知神经机制并不清楚。为此,本研究采用了功能性磁共振技术探究了睡眠剥夺影响恐惧消退的认知神经基础。行为结果表明,恐惧消退阶段,控制组被试对唤醒刺激和非唤醒刺激的恐惧程度均高于睡眠剥夺组被试;脑成像结果发现,消退阶段,控制组被试在以下脑区有更大的激活:杏仁核、背外侧前扣带回、脑岛、海马和腹内侧前额叶等。因此,睡眠剥夺影响着恐惧消退的效果,其中杏仁核、腹内侧前额叶等脑区的活动起着核心调控作用。

Cognitive neural mechanisms underlying the impact of sleep deprivation on fear extinction

Pan Feng^{1,2}, Tingyong Feng^{1,2}

1 Faculty of Psychology, Southwest University, Chongqing, 400715, China

2 Key Laboratory of Cognition and Personality, Ministry of Education, Chongqing, 400715, China

Abstract: Fear is biologically adaptive responses to environmental threat, and fear learning serves a key role in adaptive function. However, fear learning can be maladaptive at some times, resulting in excessive fear, anxiety and posttraumatic stress disorder (PTSD). Accumulating evidence sleep and sleep deprivation (SD) serves a crucial role in the process of fear. However, the impact of sleep deprivation on fear extinction remains unclear. Thus, the present study measured human brain activity during fear extinction under conditions of 24 h of sleep deprivation and normal sleep using functional magnetic resonance imaging (fMRI). Behaviorally, participants in the control group had greater fear ratings and SCR than that in the SD group for the reminder stimulus (CSa+) and no reminder stimulus (CSb+) at fear extinction stage. Some brain regions including amygdala, dACC, insula, hippocampus and vmPFC showed greater activation in the control group as compared with the SD group at fear extinction stage. The results suggested that sleep deprivation affect extinction of a fear memory as it can alter activity patterns of the insula, amygdala and ventromedial prefrontal cortex (vmPFC). In summary, these results provided a new perspective for exploring the cognitive neural mechanisms underlying the impact of sleep deprivation on processing of fear extinction.

Keywords: sleep deprivation, fear extinction, amygdala, ventromedial prefrontal cortex (vmPFC)

急性应激损害个体对视觉工作记忆中的分心物抑制： 基于 Alpha 振荡的证据

念靖晴¹ 杨润¹ 谢娇¹ 胡莎¹ 张禹¹ 罗禹¹ (通讯作者)

1 贵州师范大学心理学院, 贵阳, 550025, yuluo@gznu.edu.cn

摘要 急性应激状态下,个体大量分泌的激素会影响到与视觉工作记忆目标存储和干扰抑制密切相关的前额叶和后顶叶皮层等脑区的功能。据此我们推测急性应激会影响个体对视觉工作记忆中的目标存储和干扰抑制。研究采用2(组别:应激组,控制组)×3(记忆项目数量:2个红色、4个红色、2个红色+2个蓝色)混合实验设计。其中2个红色+2个蓝色为分心条件,记忆项目的数量为被试内变量,被试间变量为组别。采用MAST应激任务诱发个体的急性应激反应后完成视觉工作记忆任务,在视觉工作记忆任务进行中同步采集脑电活动,以行为学指标和alpha振荡能量作为测量指标。研究结果发现:在MAST应激任务前后的皮质醇

浓度差异量和主观情绪感受分数差值上，应激组显著高于控制组；在行为学指标上，应激组和控制组无显著差异；在 alpha 振荡能量上，应激组在分心条件下的 alpha 振荡能量显著低于控制组的 alpha 振荡能量。结果表明，急性应激损害了分心条件下个体对视觉工作记忆中的干扰抑制。

关键词 急性应激，视觉工作记忆，干扰抑制，alpha 振荡

Acute stress impairs distractor suppression in visual working memory: from evidence of Alpha oscillation

Nian Jingqing¹, Yang run¹, Xie Jiao¹, Hu Sha¹, Zhang Yu¹, Luo Yu¹

¹ School of psychology, Guizhou Normal University, Guiyang, 550025

Abstract: A large number of hormones secreted by the individual under acute stress will affect the function of the brain regions such as the prefrontal and posterior parietal cortex, which are closely related to the target storage of visual working memory and the suppression of interference. So, we guessed that acute stress will affect the target storage and distractor suppression in visual working memory. The study Used 2 (group: stress group, control group) × 3 (number of memory items: 2 red, 4 red, 2 red + 2 blue) mixed experimental design. Among them, 2 red + 2 blue are distraction conditions, the number of memory items is the within-subject factor, and the between-subject factor is the group. Meanwhile, used MAST to induced an individual's acute stress response to complete the visual working memory task, and collect EEG while the visual working memory task is in progress, and behavioral results and alpha oscillation power as measurement indicators. The results of the study found that the stress group was significantly higher than the control group in the difference in cortisol and the difference in subjective emotional perception scores; there was no significant difference in the behavioral indicators between the stress group and the control group; in the alpha power, The alpha power of the stress group under distraction conditions is significantly lower than that of the control group. The results show that acute stress impairs the distractor suppression in visual working memory.

Keywords: acute stress, visual working memory, distractor suppression, alpha oscillations

Disgust as an inhibition: Individuals with high disgust sensitivity have a higher ability to inhibit external stimuli

mengzhang@xxmu.edu.cn (Meng Zhang)

Abstract: Disgust is a basic negative emotion that protects the organism from infection through disease-avoidant behavior, and it is an evolutionary psychological system. Disgust sensitivity refers to the stable tendency of response to disgust stimuli. Whether individuals with high disgust sensitivity have a higher inhibition ability to reject external stimuli at the psychological level has not been elucidated. Here we used abstract external stimulus conflict to simulate the inhibition of a disgust stimulus in order to identify the differences in the ability of disgust-sensitive individuals to deal with external stimuli. The classic flanker paradigm was used in the present study to test the responses of subjects with different disgust sensitivities under a congruent condition (CR) and incongruent condition (IR) so as to obtain their ability to inhibit external stimuli. The results of behavioral tests showed that the reaction time of the subjects was correlated with the disgust score under the IR and CR. EEG results showed that P2 were significantly activated and negatively correlated with disgust sensitivity scores. According to the findings of this experiment, individuals with high disgust sensitivity have relatively higher ability to suppress external stimuli, which might be because these individuals have higher mental immunity than individuals with low disgust sensitivity.

Keywords: disgust, disgust sensitivity, inhibit, external stimuli

小学生父母教养压力的特点及其影响因素

柴彩霞（通讯作者），冯喜珍，连培琴，杨媛

山西师范大学教育科学学院，临汾，041000，896133828@qq.com

摘要 父母的教养压力会通过其教养方式影响儿童的行为、人格以及心理健康。小学阶段是儿童心理发展的关键期，也是受父母影响较大的时期，研究小学生父母的教养压力对儿童的教养有积极的意义。近年来，随着学校教育减负、家校合作的推进，小学生的父母面临着逐渐增大的教养压力，了解小学生父母的教养压力状况，分析其教养压力的内外影响因素，如儿童的性别、年龄以及父母的期望、教养效能、受教育程度、参与状况等，可为父母在家庭教育中采取正确的家庭教养方式提供科学指导，从而对小学生的行为、人格和心理健康产生积极的影响。本研究采用父母期望问卷、父母教养能力感问卷与父母教养压力问卷对 854 名小学生父母进行调查，结果表明：（1）小学生父母的教养压力处于中等水平。（2）农村父母的教养压力显著高于城镇父母（ $t=7.55, p<0.01$ ），二孩以上的家庭父母教养压力显著高于一孩家庭的父母（ $t=7.12, p<0.01$ ），孩子的性别与年龄对父母教养压力的影响均不显著（ $t=0.74, p=0.46$ ； $F=1.19, p=0.32$ ）。（3）母亲参与教养的比例比较高（80.2%），母亲的受教育程度显著影响其教养压力（ $F=31.46, p<0.01$ ），事后检验发现，受教育为大学以下的父母教养压力大于大学及以上的父母。（4）父母的期望、教养满意度和教养效能对其教养压力均有显著影响（ $t=5.71, p<0.01$ ； $t=13.43, p<0.01$ ； $t=2.10, p<0.05$ ）。结论：小学生父母的教养压力受到其居住地、孩子的个数等外在因素影响，也受到父母期望、父母教养满意度、父母教养效能等内在因素的影响。

关键词 小学生父母，父母教养压力，父母期望，父母教养能力感

The Characteristics of Parenting Stress in Primary School Students' Parents and Its Related Influencing Factors

Chai Caixia, Feng Xizhen, Lian Peiqin, Yang Yuan

School of Education Science, Shanxi Normal University, Linfen, 041000

Abstract: Parenting stress can affect children's behavior, personality and mental health through their parenting style. Primary school is the critical period of children's psychological development, and it is also a period greatly influenced by parents. In recent years, with the development of reducing school students' burden and the progress parent-teacher cooperation, elementary student's parents is facing with a gradual increase in the parenting stress. Exploring parenting stress and analyzing its influencing factors such as children's gender, age, parents' education levels and parents' involvement, can provide scientific guidance for parents' correct upbringing. And then it will have a positive impact on elementary school students' behavior, personality and mental health. The study investigated 854 parents of primary school students by using the parental expectation questionnaire, Parenting Sense of Competence Scale and Parenting Stress Index Short Form. The results were as follows: (1) The parenting stress of primary school students was at a middle level. (2) The parenting stress of rural parents was significantly higher than that of urban parents ($t=7.55, p<0.01$). The parenting stress of parents with more than one child was significantly higher than that ones with one child ($t=7.12, p<0.01$; $F=1.19, p=0.32$). (3) The proportion of mothers participating in parenting was relatively high (80.2%), and the mothers' education levels significantly affected their parenting stress ($F=31.46, p<0.01$). The post-test results showed that the stress of mothers with education below college level was higher than that ones with education above college level. (4) Parental expectation, parenting satisfaction and parenting efficacy all had significant effects on parenting stress ($t=5.71, p<0.01$; $t=13.43, p<0.01$; $t=2.10, p<0.05$). Result: The parenting stress of primary school students' parents is influenced by external factors such as their residence and the number of children, as well as internal factors such as parental expectation, parental satisfaction and parental effectiveness.

Keywords: primary school students' parents, parenting stress, parental expectation, parenting efficacy

额叶偏侧化与情绪表达灵活性：一项静息态 EEG 研究

摘要 在社会交往或人际交流中, 个体往往需要根据情境的需求抑制已有的情绪或表达出相应的情绪, 甚至随着情境的变换而转换相应的情绪表达, 这就涉及到了情绪表达灵活性, 即个体根据环境变化的要求, 对情绪表达和抑制的灵活转换。情绪表达灵活性不仅是个体一种情绪智力的体现形式, 也会影响个体的社会化过程。然而, 以往研究往往考察情绪表达灵活性的后效问题, 例如情绪表达灵活性对个体适应性、心理健康等的影响, 很少从认知神经视角考察情绪表达灵活性概念本身。情绪表达灵活性的个体差异具有怎样特定的神经基础? 或者说, 情绪表达灵活性存在怎样客观的电生理指标呢? 这些问题的答案尚不清楚。本研究选择与情绪灵活性密切相关的指标额叶 EEG 偏侧化, 采用静息态脑电技术, 以 48 名大学生 ($M=22.38$, 54% 女性) 为被试, 考察了额叶 α 波偏侧化与个体情绪表达灵活性的关系。回归分析结果显示: (1) 静息态闭眼状态下额叶 α 波(8-13Hz)左侧化能够显著正向预测个体的情绪表达灵活性, 即个体闭眼状态下额叶 α 波的左侧化系数越高, 其情绪表达灵活性越高; (2) 这种预测作用在情绪表达灵活性的两个分维度——增强情绪表达和抑制情绪表达上都有所体现: 个体静息态闭眼状态下额叶 α 波左侧化系数能够显著正向预测个体增强表达能力, 正向预测个体抑制情绪表达能力 (该维度边缘显著, $p=.056$)。综上, 研究表明: 个体静息态闭眼状态下额叶 α 波左侧化能够显著正向预测个体情绪表达灵活性。本研究提示额叶偏侧化可能是情绪表达灵活性的客观电生理指标, 未来尚需更多实证研究提供额叶 α 波左侧化的提高可以增强个体情绪表达灵活性的因果证据。

Abstract: Humans usually need to suppress or enhance or even switch facial emotional expressions in accord with the need of context, especially in social interaction or interpersonal communication. This involves emotional expressive flexibility (EEF) which refers to the ability to enhance and suppress one's displayed emotions in accord with situational demands. EEF was considered an aspect of emotional intelligence and was crucial to individual socialization. Previous studies put more emphasis on exploring the effect of EEF on mental health, such as depression, life satisfaction and adjustment. However, little is known about the neural basis of EEF. What is the specific neural basis for individual differences in EEF? Or is there an objective electrophysiological indicator of EEF? The answers to the questions remain unclear. As frontal alpha asymmetry (FAA) is indicator of emotional flexibility, we investigated the relationship between FAA and EEF. Forty-eight participants ($M_{age}=22.38$, 54% female) underwent resting EEG and completed several questionnaires. FAA was typically calculated by subtracting the natural log of left hemisphere alpha power from that of right hemisphere; and the power within alpha frequency bands (typically 8–13 Hz) is inversely related to actual cortical activations. Thus, higher FAA scores indicated more left hemisphere

activations. Results revealed that FAA scores positively predicted EEF significantly. That is, relatively greater left frontal activation was associated with greater EEF. In addition, this prediction can be reflected in both dimensions of EEF—the enhancement and suppression abilities. To be specific, the higher the left frontal activation, the greater the abilities of enhancement and suppression. Together, these results all suggest FAA can positively predict EEF. The present study indicates that FAA may be an indicator of EEF. In the future, more empirical studies are needed to provide causal evidence that the enhancement of FAA can enhance EEF.

摘要 作为社会资本的重要内容之一，政治信任在国家治理中发挥了重要作用。以往的研究表明，政治信任会影响人们的心理与行为反应，但是政治信任对心理健康的影响及内在机制尚不清晰，尤其是新冠疫情下的情况知之甚少。本研究旨在探索政治信任与心理健康（主要通过焦虑、抑郁两个指标）之间的关系。该研究在招募了 2415 个中国大陆被试（平均年龄=23.70±8.79）进行了一项横断研究，对其人口学信息、政治信任、个人主义、集体主义、焦虑和抑郁进行了问卷测量，用多元回归方法分析了政治信任与心理健康之间的关系，并检验了个人主义、集体主义调节作用。研究结果表明，大部分被试更倾向于相信政府，个人主义没有显著的调节作用，但集体主义显著调节了政府信任对心理健康的影响。随着政治信任程度的提高，在疫情下高集体主义的个体焦虑和抑郁水平会显著降低，而低集体主义的个体焦虑和抑郁水平反而显著上升，即集体主义有效缓冲了政府信任对焦虑抑郁的影响，降低了心理问题发生的可能性。研究还发现，水平的集体主义和垂直的集体主义在发挥条件作用时的机制不同。本研究对新冠疫情下政治信任与民众心理健康之间的关系进行了及时、有效的检验，对疫情下的政府管理和公众健康提供了一定的理论意义与实践参考。

Abstract: Political trust plays a key role in effective government. Previous studies have shown that political trust may affect people's psychological and behavioral responses, but it is less clear whether and how it affects mental health especially during the COVID-19 pandemic. The present study aimed to explore the relationship between political trust and mental health (especially anxiety and depression). 2415 Chinese participants ($Mage = 23.70 \pm 8.79$) were recruited to take part in an online survey in the end of April of 2020. Self-reported political trust, individualism, collectivism, anxiety and depression were measured. Multiple regressions were used to analyse the relationship between political trust and mental health, and examine the moderation of individualism and collectivism on mental health. The findings indicated that most participants tend to trust in government. In addition, collectivism moderates the impact of political trust on mental health. Furthermore, horizontal and vertical collectivism vary in the moderating effect. This research provides a timely and necessary study of the influence of political trust in the COVID-19

pandemic, with theoretical and practical implications for political trust and public health efforts.

Keywords: political trust, mental health, collectivism, COVID-19, anxiety

童年虐待、抑郁和自我怜悯对青少年自伤行为的影响： 一个有调节的中介模型

吴洁¹ 攸佳宁² (通讯作者)

¹ 广东工业大学心理健康教育与咨询中心, 广州, 510006

² 华南师范大学心理应用研究中心, 广州, 510006, youjianing@gmail.com

摘要 背景: 非自杀性自伤行为(以下简称“自伤行为”)是指个体在没有自杀意图的前提下, 直接、故意地伤害自己的身体组织的行为。青少年时期是个体自我发展的关键时期, 自伤行为已成为影响青少年心理健康的重要议题。许多研究表明, 儿童期的虐待经历在精神病理学和其他方面都有着广泛的影响。相较于一般人口, 自伤行为在有童年虐待经历的个体中的发生率更高。为了进一步探究童年虐待与自伤行为的关系, 本研究采用抑郁和自我怜悯作为个体特征变量, 就童年虐待对自伤行为产生影响的内部机制进行探讨。方法: 本研究采用儿童期创伤经历问卷、简版自我怜悯量表、抑郁-焦虑-压力自评量表和自伤行为问卷, 对 758 名中国香港地区中学生进行问卷调查, 得到有效问卷 718 份。对所得数据使用 SPSS 和 PROCESS 插件进行相关统计分析。结果: (1) 童年虐待和抑郁可以正向预测个体的自伤水平; (2) 自伤个体的童年虐待水平和抑郁水平均显著高于非自伤个体; (3) 抑郁在童年虐待对自伤行为的影响中起部分中介作用; (4) 自伤个体的自我怜悯水平显著低于非自伤个体, 并在自我批评、孤立感和过度沉迷三个维度上的平均水平显著高于非自伤个体; (5) 自我怜悯可以调节童年虐待通过抑郁影响自伤行为的直接和间接效应, 即自我怜悯既可以缓冲童年虐待经历对自伤行为的影响, 也可以缓冲童年虐待对抑郁的影响。本论文研究结果丰富了国内青少年自伤行为整合性理论模型的研究, 并为自伤行为的干预与预防提供一定的指导作用。

The effects of childhood abuse, depression and self-compassion on adolescents' self-injury: A moderated mediation model

WU Jie

Mental Health Education & Counseling Center, Guangdong University of Technology, No. 100
Waihuan West Road, Guangzhou Higher Education Mega Center, Panyu District, Guangzhou

Abstract: Background: Non-suicidal self-injury behavior (NSSI) refers to the behavior of an individual directly and deliberately injuring his or her body tissue without the intention of suicide. Youth is a crucial period for individual self-development, and NSSI has become an important issue affecting the mental health of adolescents. Many studies have shown that childhood abuse experiences have a wide-ranging impact on psychopathology and other aspects. Compared to the general population, NSSI is more common among individuals with childhood abuse experiences. In order to further explore the relationship between childhood abuse and NSSI, this study used depression and self-compassion as individual characteristic variables to explore the internal mechanisms of childhood abuse on NSSI. Methods: This study used Childhood Trauma Questionnaire, Self-compassion Scale-Short Form, DASS-21 and Self-injury Questionnaire as research tools. A questionnaire survey was conducted among 758 middle school students in Hong Kong, and 718 valid questionnaires were obtained. The relevant data was analyzed using the SPSS and PROCESS plug-ins. Results: (1) Childhood abuse and depression can effectively predict the individual's NSSI level. (2) The levels of childhood abuse and depression of self-injured individuals were significantly higher than those of non-self-injured individuals. (3) Depression plays a partial intermediary role in the impact of childhood abuse on NSSI. (4) The self-compassion level of self-injured individuals was significantly lower than that of non-self-injured ones, and was significantly higher than that of non-self-injured individuals in the three dimensions of self-judgment, isolation and over-identification. (5) Self-compassion can moderate the direct and indirect effects associations

between childhood abuse and NSSI via depression, that is, self-compassion can buffer the impact of childhood abuse on NSSI and depression. The results of this paper enrich the research on the integrated theoretical models of self-injury behaviors of domestic adolescents, and provide a certain guidance for the intervention and prevention of self-injury behaviors.

Keywords: NSSI; childhood abuse; depression; self-compassion; adolescents

微表情识别训练对大学生欺骗检测能力的作用研究

刘振南¹ 申寻兵¹ (通讯作者)

¹ 江西中医药大学, 南昌, 100101, 330004, 2949857@qq.com

摘要 目的: 近年来, 大学生受骗屡见不鲜, 但是学校和社会教育往往注重于大学生的诚信教育, 很少涉及到对于提高大学生欺骗检测能力的方法研究。微表情作为一种欺骗检测的线索, 对于欺骗检测能力的提升有着重要的作用, 本文通过探究微表情识别训练对于欺骗检测能力的作用探讨微表情识别训练对于提升欺骗检测能力的可行性。方法: 42 名被试参与了本次实验, 完成且数据有效的共 32 份 (21 女, 平均年龄 19.56)。被试依次完成对无声视频内人物的欺骗检测前测、微表情识别训练 (自发微表情识别训练和人工微表情识别训练)、欺骗检测后测实验。结果: 1. 被试的欺骗检测训练效果显著, 欺骗检测后测的成绩 ($M=.53$, $SD=.12$) 显著高于前测成绩 ($M=.43$, $SD=.12$), $t(31)=-3.25$, $p=.003$, $d=.574$; 2. 欺骗检测训练有效率为 65.63%, 且女生 (71.43%) 训练有效率高于男生 (54.55%); 3. 被试的微表情识别训练效果显著, 人工微表情训练后测 ($M=.73$, $SD=.12$) 显著高于前测 ($M=.51$, $SD=.10$), $t(31)=-8.68$, $p<.001$, $d=1.53$; 自发微表情训练后测 ($M=.45$, $SD=.16$) 显著高于前测 ($M=.36$, $SD=.15$), $t(31)=-2.88$, $p=.007$, $d=.51$; 4. 被试的欺骗检测成绩改变和自发微表情识别训练成绩改变显著正相关 ($r=.363$, $p=.041$); 5. 单因素 ANOVA 分析结果显示, 被试的性别因素对于诚实判断的训练效果差异显著 ($F=8.70$, $p=.006$); 结论: 本次研究发现微表情识别训练能显著的提高通过表情识别欺骗检测能力, 且对于女大学生的训练成功率和训练效果优于男性。

Research on the effect of Micro-expression Recognition Training on College Students' Deception Detection Ability

Zhennan liu¹, xunbing shen¹

¹. Jiangxi University of Traditional Chinese Medicine, Nanchang, 330004, 2949857@qq.com

Abstract: Objective: In recent years, college students are often deceived, but school and social education often focus on the integrity education of college students, rarely involving in the study of methods to improve college students' deception detection. As a clue of deception detection, micro-expression plays an important role in improving deception detection ability. The purpose of the study was to investigate the effects of the micro-expression training on the deception detection. Methods: 43 participants were recruited but only 32 (21 female, mean age=19.56) completed the entire experiment. Participants completed the deception detection pretest, micro-expression recognition training (spontaneous micro-expression training and artificial micro-expression recognition training), and post-deception detection experiments on the characters in the silent video same as the pretest. Result: 1. The post-test scores of the subjects ($M=.53$, $SD=.12$) were significant higher than the pre-test scores ($M=.43$, $SD=.12$), $t(31)=-3.25$, $p=.003$, $d=.574$; 2. The effective rate of deception detection training is 65.63%, and the training efficiency of girls (71.43%) is higher than that of boys (54.55%). 3. The training performance of the participants in the micro-expression recognition was significantly improved. The post-test of artificial micro-expression recognition ($M=.73$, $SD=.12$) was significantly higher than the pretest ($M=.51$, $SD=.10$), $t(31)=-8.68$, $p<.001$, $d=1.53$; there are also consistent results in spontaneous micro-expression recognition, post-test ($M=.45$, $SD=.16$) is higher than the pretest ($M=.36$, $SD=.15$), $t(31)=-2.88$, $p=.007$, $d=.51$. 4. There was a significant positive correlation between the change of subjects' performance in deception detection and spontaneous micro-expression recognition training ($r=.363$, $p=.041$).

5.ANOVA analysis results showed that the gender of subjects had a significant difference in the training effect of honest judgment($F=8.70$, $p=.006$). Conclusion: This study found that micro-expression recognition training can significantly improve the ability to detect deception through facial expression recognition, and the training success rate and training effect for female college students are better than the male.

女大学生自我客体化对社交自我效能感的影响： 体像满意度的中介作用

付政 苗振东（通讯作者）

山西师范大学教育科学学院，临汾，041000，617278705@qq.com

摘 要 社交是大学生生活的重要组成部分，社交自我效能感对大学生心理健康水平的预测作用十分明显。前人研究表明，状态自我客体化和特质自我客体化都会降低女性的一般自我效能感；自我客体化可以正向预测社交焦虑；女性的自我客体化会降低其与异性的社交意愿。据此提出假设一：女大学生自我客体化可负向预测其社交自我效能感。自我客体化概念的焦点是外貌，自我客体化的个体以第三人称将自己的外貌与社会理想外貌进行对比，这样的结果往往是不如意的，从而对自己的体像产生不满。研究表明，自我客体化可负向预测体像满意度。体像满意度低会产生一系列例如焦虑、羞耻、抑郁等消极体验，情绪唤起是班杜拉所提出的影响自我效能感的四种因素之一，身体不满导致的负面情绪的唤起会对社交自我效能感产生负面影响。据此提出假设二：自我客体化通过体像满意度来影响社交自我效能感。鉴于自我客体化是一个与女性联系更为紧密的概念，本研究选取山西省某大学 4244 女大学生作为被试，采用客体化身体意识量表、青少年学生身体自我量表和大学生人际交往效能感问卷对其进行调查，结果发现：（1）女大学生自我客体化与体像满意度呈负相关，自我客体化与社交自我效能感呈负相关，体像满意度对社交自我效能感呈正相关。（2）女大学生自我客体化可以直接影响社交自我效能感，也可通过体像满意度的中介作用来影响社交自我效能感。研究揭示了女大学生自我客体化对社交自我效能感的作用机制，为女大学生自我客体化、体像满意度、社交自我效能感之间的动态关系提供了有效的数据支持。

关键词 自我客体化，社交自我效能感，体像满意度，女大学生

The Effect of Self-objectification of Female College Students on Social Self-efficacy: the Mediating Role of Body Image Satisfaction

Zheng Fu, Zhendong Miao

Institution of Education Science, Shanxi Normal University, Linfen, 041000

Abstract: Social interaction is an important part of the life of college students, and social self-efficacy has a significant effect on predicting the level of college students' mental health. Previous studies have shown that both state self-objectification and trait self-objectification can reduce women's general self-efficacy; self-objectification can positively predict social anxiety; women's self-objectification can reduce their willingness to socialize with men. Based on this, hypothesis one is proposed: the self-objectification of female college students can negatively predict their social self-efficacy. The focus of the concept of self-objectification is one's appearance. Self-objectified individuals compare their appearance with the social ideal appearance in the third person. Such results are often unsatisfactory, and they are dissatisfied with their body image. Studies have shown that self-objectification can negatively predict body image satisfaction. Low body image satisfaction will produce a series of negative experiences such as anxiety, shame, depression, etc. Emotional arousal is one of the four factors that Bandura proposed to affect self-efficacy. The arousal of negative emotions caused by body dissatisfaction will have a negative impact on social self-efficacy. Based on this, hypothesis two is proposed: self-objectification affects social self-efficacy through body image satisfaction. In view of the fact that self-objectification is a concept more closely related to women, this study selected 4244 female college students from a university in Shanxi Province as subjects, using the Objectification

Body Consciousness Scale, the Adolescent Student Physical Self Scale, and the Interpersonal Efficacy Questionnaire for College Students to investigate. The results of the investigation showed that: (1) Female college students' self-objectification is negatively correlated with body image satisfaction, self-objectification is negatively correlated with social self-efficacy, and body image satisfaction is positively correlated with social self-efficacy. (2) Self-objectification of female college students can directly affect social self-efficacy, and it can also affect social self-efficacy through the mediating effect of body image satisfaction. The research reveals the mechanism of female college students' self-objectification on social self-efficacy, and provides effective data support for the dynamic relationship among female college students' self-objectification, body image satisfaction, and social self-efficacy.

Keywords: self-objectification, social self-efficacy, body image satisfaction, female college students

大学生手机成瘾与孤独感的关系

杨丁¹ 李芸² 梅冬梅¹ (通讯作者)

1 贵州师范大学, 心理学院, 贵阳, 550025, 通讯作者 mayer_sysu@outlook.com

2 成都中医药大学, 管理学院, 成都, 611137

摘要 手机作为新时代的科技产物, 为人们的生活带来诸多便利, 年轻人尤其喜欢使用手机来建立和维持社交关系。除此之外, 手机功能愈发强大, 促使大学生对手机的使用频率愈发升高, 然而对手机的过度使用有可能会手机成瘾的症状, 对正常生活与身心健康造成负面影响, 例如, 孤独感体验的增加。基于此, 本研究旨在考查大学生手机成瘾(*Mobile phone addiction*)与孤独感(*Loneliness*)之间的关系, 并从手机成瘾的四个维度: 失控性(*Uncontrollability*)、戒断性(*Abstinence*)、低效性(*Ineffectiveness*)和逃避性(*Evasion*)探讨手机成瘾对大学生的影响。方法: 采用 MPAAI 手机成瘾量表和 ULCA 孤独感量表修订版对成都某大学 318 名(20.04 ± 1.10 岁)在校大学生, 包括男生 136 名、女生 182 名进行问卷调查, 探讨大学生手机成瘾与孤独感的现状, 并以手机成瘾的四个维度为自变量, 孤独感为因变量, 性别为调节变量使用逐步回归法进行多元线性回归分析以探讨它们两者之间的相互作用及性别差异。结果表明: 大学生手机成瘾者占比 17.9%, 手机成瘾量表得分($M=42.28 \pm 11.74$); 男女生手机成瘾在低效性($t=-2.338, p<0.05$)和逃避性($t=-3.550, p<0.001$)两个维度差异显著, 女生($M=8.24 \pm 2.94$)比男生($M=7.49 \pm 2.79$)更容易在手机使用时产生低效性, 女生($M=8.26 \pm 2.75$)比男生($M=7.21 \pm 2.41$)更容易产生逃避性; 大学生中有 89.3% 的人体验到孤独($M=48.52 \pm 8.02$); 孤独感体验在性别上存在显著差异($t=-2.392, p<0.05$), 女生($M=49.45 \pm 7.31$)比男生($M=47.29 \pm 8.76$)更容易体会到孤独感; 手机成瘾与孤独感存在显著正相关($r=0.395, p<0.01$); 大学生手机成瘾中的失控性($\beta=0.172, t=3.099, p<0.01$)和逃避性($\beta=0.329, t=5.936, p<0.001$)两个维度能显著正向预测孤独感; 性别在手机成瘾与孤独感调节作用显著, 对于男生, 手机成瘾的失控性($\beta=0.304, t=3.366, p<0.01$)和逃避性($\beta=0.194, t=5.936, p<0.05$)对孤独感具有显著的正向预测作用; 对于女生, 手机成瘾的逃避性($\beta=0.418, t=6.171, p<0.001$)对孤独感具有显著的正向预测作用。研究结论: 大学生手机成瘾程度越高越感受到孤独, 且女生在手机成瘾程度与孤独感体验上都高于男生。失控性和逃避性可能是手机成瘾导致个体增加孤独感的重要影响因素。因此, 提升大学生尤其是女生对手机的自控能力尤为重要, 大学生需要控制手机使用时间以及积极参与线下活动来改善其身心健康。

关键词 手机成瘾, 孤独感, 失控性, 逃避性

The relationship between cell phone addiction and loneliness among college students

Ding Yang¹, Yun Li², Dongmei Mei¹

1 School of Psychology, Guizhou Normal University, Guiyang, 550025, mayer_sysu@outlook.com

2 Chengdu University of TCM, Chengdu, Sichuan 611137

Abstract: As a technology product of the modern era, mobile phones have brought a lot of convenience to our lives. Using mobile phones to establish and maintain social relationships is popular among young people. In addition, college students are attracted by the great multifunction of mobile phones and dependent on using them more

frequently. However, symptoms of mobile phone addiction would cause by excessive use of it, which has a negative impact on normal life and physical and mental health, such as the increase in loneliness. Based on this, current research aims to examine the relationship between the mobile phone addition and the loneliness of college students, and explore the impact of mobile phone addition on college students from four dimensions, uncontrollability, abstinence, low ineffectiveness and evasion. Methods: The MPAI mobile phone addition scale and the revised version of ULCA loneliness scale were used to conduct a questionnaire survey among 318 college students (20.04 ± 1.10 years old) in a university in Chengdu, including 136 males and 182 females, to explore the status quo of mobile phone addition and loneliness among college students. A multiple linear regression analysis was performed to explore the relationship between mobile phone dependence and loneliness (mobile phone dependence is the independent variable, and loneliness is the dependent variable). The results showed that: college students presented mobile phone addition accounted for 17.9% among samples, and the mean score of the mobile phone addition scale was $M=42.28 \pm 11.74$. The dimension of inefficient ($t=-2.338, p<0.05$) and avoidance ($t=-3.550, p<0.001$) was significant difference among male and female, in which, Females ($M=8.24 \pm 2.94$) were more likely to have inefficiency than males ($M=7.49 \pm 2.79$). And females ($M=8.26 \pm 2.75$) were more likely to have evasion than males ($M=7.21 \pm 2.41$) too. There were 89.3% of college students experienced loneliness ($M=48.52 \pm 8.02$). There were significant differences in gender ($t=-2.392, p<0.05$), females ($M=49.45 \pm 7.31$) reported more loneliness experience than males ($M=47.29 \pm 8.76$). Importantly, mobile phone addition was significantly positively correlated with loneliness ($r=0.395, p<0.01$), and the dimension of uncontrollability ($\beta=0.172, t=3.099, p<0.01$) and evasion ($\beta=0.329, t=5.936, p<0.001$) could significantly positively predicted loneliness. There were significant regulative effects in gender, that males, the dimension of uncontrollability ($\beta=0.304, t=3.366, p<0.01$) and evasion ($\beta=0.194, t=5.936, p<0.05$) could significantly positively predicted loneliness, and for females, only the dimension of evasion ($\beta=0.418, t=6.171, p<0.001$) could significantly positively predicted loneliness. Conclusions: the higher the degree of mobile phone addition of college students, the lonelier they feel. Moreover, the degree of mobile phone addiction and loneliness experience of female students were higher than that of male students. Uncontrollability and evasion may be important factors in increasing loneliness caused by mobile phone addiction. Thus, it is essential to improve the control ability of college students, especially girls. College students should control their mobile phone usage time and actively participate in offline activities to improve their physical and mental health.

Keywords: mobile phone addition, loneliness, uncontrollability, evasion

疫情期青少年感知父母负性情绪与自杀意念：同伴交往与自尊的作用

黄肖嘉祺¹ 龙娇娇¹ 宋意霞¹ 陈甜¹ 吴文峰¹ (通讯作者)

¹ 贵州师范大学心理学院, 贵阳, 550025, wwfhsd@aliyun.com

摘 要 为了考察新冠疫情期间青少年感知父母负性情绪对其自杀意念的影响及其作用机制。研究采用正负情绪量表、自杀意念量表、自尊量表、自编同伴交往调查问卷,对贵州省、福建省、湖北省的1100名青少年进行调查,回收有效问卷1005份,有效率91.36%;其中男生492人,女生513人;初一531人,初二444人,初三29人;贵州省学生294人,福建省学生493人,湖北省学生218人;年龄范围在12-18岁,平均年龄为13.99岁。结果发现:(1)疫情重灾区湖北省与疫情轻微地区福建、贵州两省的青少年在自杀意念得分上无明显差异;(2)青少年感知父亲的负性情绪对自杀意念具有显著正向预测作用;青少年感知母亲的负性情绪对自杀意念具有显著正向预测作用;(3)自尊在青少年感知父母负性情绪和自杀意念的关系中起部分中介作用;(4)在青少年感知父母负性情绪通过自尊影响自杀意念的中介模型中,同伴交往调节自尊对自杀意念的作用路径。进一步分析显示,同伴交往时间短的青少年比交往时间长的青少年,在低自尊情况下,自杀意念更高。研究结果表明,疫情期间青少年感知父母负性情绪可能是影响自杀意念的重要因素之一,青少年感知父母负面情绪不仅可以直接影响其自杀意念,还可以通过影响自尊进而对自杀意念产生影响,而同伴交往则可以在自尊和自杀意念之间起调节作用。

Teenagers' Perception of Parents' Negative Emotions and Their Suicide Ideation During COVID-19: The Effect of Peer interaction and Self-esteem

Huang Xiaojiaqi¹, Long Jiaojiao¹, Song Yixia¹, Chen Tian¹, Wu Wenfeng¹

¹ School of Psychology, Guizhou Normal University, Guiyang, 550025, wwfhds@aliyun.com

Abstract: In order to investigate how teenagers' perception of their parents' negative emotions affect their suicide ideation and its mechanism of action during the outbreak of COVID-19. The researching tools that this study adopts include a positive and negative affect schedule, a scale for suicide ideation, a self-esteem inventory and a creative questionnaire about peer interaction. This survey is toward 1100 teenagers in Guizhou province, Fujian province and Hubei province. 1005 questionnaires are collected, the effective rate of which is 91.36%. Participants include 492 boys and 513 girls, among which there are 531 seventh graders, 444 eighth graders and 29 graduates of junior high school. 294 students are from Guizhou, 493 students are from Fujian, and 218 students are from Hubei. Their age ranges from 12 to 18, the average is 13.99. The findings of the investigation are as follows:

(1) In the hardest-hit area Hubei, and the lightly affected areas Fujian and Guizhou, there shows no significant difference on teenagers' suicide ideation; (2) Teenagers' perception of their fathers' negative emotion shows evident positive predictive effect on their suicide ideation, while Teenagers' perception of their mothers' negative emotion also shows evident positive predictive effect on their suicide ideation; (3) Self-esteem plays part of the medium roles in the relation between teenagers' perception of their parents' negative emotions and their suicide ideation; (4) In the mediation model of how teenagers perceive their parents' negative emotions and how their self-esteem affects their suicide ideation, peer interaction can adjust how self-esteem functions to suicide ideation. Further analysis shows that teenagers with less peer communication are more inclined to commit suicide than teenagers with more peer communication when they all have a low self-esteem. The result of this research shows that teenagers' perception of their parents' negative emotions might be one of the key factors contributing to their suicide ideation. Teenagers' perception of their parents' negative emotions during the outbreak of COVID-19 can have direct impact on their suicide ideation, and it can also affect their self-esteem to exert further influence upon their suicide ideation. At the same time, peer interaction can work as an adjustment between self-esteem and suicide ideation.

Keywords: Perception of parents' negative emotions, Suicide ideation, Self-esteem, Peer interaction, Teenagers

认知情绪调节策略和惩罚敏感性在父母心理控制与青少年非自杀性自伤行为间的作用

曲萌雨¹, 王佳宁¹ (通讯作者)

¹ 哈尔滨师范大学教育科学学院, 哈尔滨 150025, wjn@hrbnu.edu.cn

摘要 非自杀性自伤行为(NSSI)与个体诸多心理障碍和问题密切相关, 引起心理学研究者的广泛关注, 其中对其形成机制的探讨逐渐成为研究热点。NSSI 是指在没有明确自杀意图的情况下, 个体故意、重复地改变或伤害自己的身体组织, 这种行为不为社会所认可, 且不具致死性或致死性较低。青春期是 NSSI 的高发期, 家庭作为个体成长的直接环境, 对青少年 NSSI 具有重要的影响作用。父母心理控制作为一种消极的教养行为, 可能是青少年 NSSI 的重要危险因素。根据人际或系统模型与情绪调节模型具有一定的内在联系的观点, 个体早期不良的生活环境使其难以发展出有效的情绪调节策略, 致使情绪危机发生时, 个体只能通过 NSSI 来达到缓解消极情绪的目的。此外, 个体情绪调节的发展不是家庭因素对个体的单向行为, 其中会受到个体特征的调节作用。惩罚敏感性作为一种个体特征, 可能调节父母心理控制与消极认知情绪调节策略之间的关系。基于此, 本研究提出一个有调节的中介模型, 考察父母心理控制、消极认知情绪调节策略、惩罚敏感性对青少年 NSSI 的作用机制。本研究采用父母心理控制量表、认知情绪调节问卷、行为抑制和激活系统量表以及青少年自我伤害行为问卷对 583 名中学生施测。结果表明: (1) 父母心理控制、消极认知情绪调节策略、惩罚敏

感性和 NSSI 四者之间呈两两显著正相关, 相关系数在 0.196 至 0.526 之间($P < 0.001$); (2) 消极认知情绪调节策略在父母心理控制和 NSSI 之间的中介作用显著, 中介效应值为 0.09, 95%BootCI=[0.05, 0.16], 中介效应占总效应的比例为 27.27%; (3) 父母心理控制对消极认知情绪调节策略的影响受到惩罚敏感性的调节。相对于低惩罚敏感性的被试而言, 父母心理控制对消极认知情绪调节策略的预测作用在高惩罚敏感性的被试中更强, 即由 $\beta=0.15$, $P < 0.01$, 95%CI=[0.05, 0.26]增强为 $\beta=0.35$, $P < 0.001$, 95%CI=[0.25, 0.45]。结论: 消极认知情绪调节策略在父母心理控制对青少年 NSSI 的影响中起中介作用, 且该中介效应受到惩罚敏感性的调节。本研究揭示了父母心理控制对青少年 NSSI 的影响及其作用机制, 对科学预防和有效控制青少年 NSSI 具有一定的启示意义。

关键词 父母心理控制, 非自杀性自伤行为, 认知情绪调节策略, 惩罚敏感性

The Role of Cognitive Emotion Regulation Strategies and BIS Sensitivity in the Relationship between Parental Psychological Control and Non-suicidal Self-injury among Adolescents

Qu Meng-yu¹, Wang Jia-ning¹

¹School of Educational Science, Harbin Normal University, Harbin 150025, China

Abstract: Non-suicidal self-injury (NSSI) is closely related to many mental disorders and problems, which has aroused wide attention of psychological researchers, and the discussion of its formation mechanism has gradually become a research hotspot. NSSI refers to the behavior that an individual intentionally and repeatedly changes or injures his or her body organization without a clear intention of suicide, which is not recognized by the society and is not lethal or less lethal. Adolescence is a high incidence period of NSSI. As the direct environment of individual growth, family plays an important role in adolescent NSSI. As a negative parenting behavior, parental psychological control may be an important risk factor for NSSI. According to the view that the interpersonal/systemic model and the affect regulation model are intrinsically linked, it is difficult for individuals to develop effective emotion regulation strategies due to their poor living environment in the early stage. When emotional crisis occurs, individuals can only achieve the purpose of alleviating negative emotions through NSSI. In addition, the development of individual emotion regulation is not a one-way behavior of family factors, which is moderated by individual characteristics. As an individual characteristic, BIS sensitivity may moderate the relationship between parental psychological control and negative cognitive emotion regulation strategies. Therefore, this study constructed a moderated mediation model to investigate the mechanism of parental psychological control, negative cognitive emotion regulation strategies and BIS sensitivity on adolescent NSSI. A questionnaire survey was conducted among 583 adolescents. The results show that: (1) Correlation analysis showed that parental psychological control, negative cognitive emotion regulation strategies, BIS sensitivity and non-suicidal self-injury were significantly and positively correlated with each other. The correlation coefficient was between 0.196 and 0.526 ($P < 0.001$); (2) Negative cognitive emotion regulation strategies played a mediating role in the relationship between parental psychological control and non-suicidal self-injury. The mediating effect was 0.09, which 95% BootCI was [0.05, 0.16], and the proportion of mediating effect in total effect was 27.27%; (3) The effect of parental psychological control on negative cognitive emotion regulation strategies was moderated by BIS sensitivity. Specifically, compared with the subjects with low BIS sensitivity, the positive predictive effect of parental psychological control on negative cognitive emotion regulation strategies was stronger in the subjects with high BIS sensitivity. β from 0.15 which $P < 0.01$ and 95% CI = [0.05, 0.26] increased to 0.35 which $P < 0.001$ and 95% CI=[0.25, 0.45]. Conclusion: Negative cognitive emotion regulation strategies play a mediating role in the effect of parental psychological control on non-suicidal self-injury, and the mediating effect is moderated by BIS sensitivity. This study reveals the influence of parental psychological control on adolescent NSSI and its mechanism, which has certain enlightenment significance for scientific prevention and effective control of adolescent NSSI.

Keywords: parental psychological control, non-suicidal self-injury, cognitive emotion regulation strategies, BIS sensitivity

羞耻情绪与大学生社交焦虑的关系：一个有调节的中介模型

潘越 刘鹏（通讯作者）

山西师范大学教育科学学院，临汾，041000，18435222119@163.com

摘要 社交焦虑是指个体不合理的和过分的惧怕人际互动以及自己在社交场合的表现，它不利于良好人际关系的建立，还会对个体的身心健康产生消极影响，甚至导致抑郁。因此，探索社交焦虑的影响因素及形成机制对个体身心健康有紧迫且重要的意义。羞耻是一种自我意识情绪，是一种指向自我的痛苦、难堪、耻辱的负性情绪体验。目前已有大量实证研究显示，羞耻情绪是社交焦虑的重要影响因子，但二者作用的内在机制还有待深入探讨。基于此，本研究构建一个有调节的中介模型，旨在探讨羞耻情绪对社交焦虑的影响，以及反刍思维的中介作用和神经质的调节作用。本研究使用羞耻情绪量表、反刍思维量表、大五人格量表简明版、社交焦虑量表调查了 356 名大学生，采用 SPSS24.0 软件对数据进行统计分析。研究结果显示：（1）在控制性别和年龄的条件下，羞耻情绪显著正向预测社交焦虑。（2）羞耻情绪、反刍思维、神经质与社交焦虑两两呈显著正相关。（3）羞耻情绪对社交焦虑有直接的正向预测作用，同时还通过反刍思维的中介作用对社交焦虑产生影响。（4）神经质在反刍思维对羞耻情绪与社交焦虑的关系中起调节作用，具体表现为，高神经质会加剧羞耻情绪对社交焦虑的消极影响，低神经质会减弱二者之间的联系。本研究结果有助于深入理解社交焦虑的形成机制，对缓解个体的社交焦虑症状有一定的启示意义。

关键词 羞耻情绪，反刍思维，神经质，社交焦虑

The Relationship between Shame and Social Anxiety in College Students: A moderated mediation model

Pan Yue, Liu Peng (Corresponding Author)

College of Education Science, Shanxi Normal University, Linfen, 041000

Abstract: Social anxiety refers to an individual's unreasonable and excessive fear of interpersonal interaction and his performance in social situations. It is not conducive to the establishment of good interpersonal relationships, but also has a negative impact on individual physical and mental health, and even leads to depression. Therefore, it is urgent and important to explore the influencing factors and formation mechanism of social anxiety for individual physical and mental health. Shame is a kind of self-conscious emotion, and it is a negative emotional experience that points to the pain, embarrassment and shame of the self. At present, a large number of empirical studies have shown that shame is an important influencing factor of social anxiety, but the internal mechanism of their effects needs to be further explored. Based on this, this study constructs a moderated mediation model, aiming to explore the influence of shame on social anxiety, and the mediating role of rumination thinking and the moderating role of neuroticism. In this study, 356 college students were investigated with Shame Emotion Scale, Rumination Thinking Scale, Big Five Personality Scale, and Social Anxiety Scale. The data were statistically analyzed with SPSS24.0 software. The results show that: (1) Shame significantly positively predicts social anxiety under the condition of controlling gender and age. (2) Shame, rumination, neuroticism and social anxiety are positively correlated. (3) Shame has a direct and positive predictive effect on social anxiety, and it also influences social anxiety through the mediation of rumination thinking. (4) Neuroticism plays a moderating role in the relationship between rumination thinking and shame and social anxiety. Specifically, high neuroticism will aggravate the negative influence of shame on social anxiety, while low neuroticism will weaken the relationship between them. The results of this study are helpful to deeply understand the formation mechanism of social anxiety, and have certain implications for relieving individual social anxiety symptoms.

摘要 “全面两孩”政策的实施意味着我国全面进入“两孩时代”。二胎的到来不仅给头胎儿童带来冲击，也给二胎母亲带来身体和精神上的双重考验。二胎母亲虽然具备一定的备孕经验，但由于无法很好地照顾头胎儿童以及处理种种关系，从而更容易导致心理问题。而头胎儿童的问题行为如何影响二胎母亲的产前抑郁在文献中研究较少。而该问题对于刚刚开放二胎的中国具有重要意义。本文旨在研究头胎儿童问题行为是否影响二胎母亲的产前抑郁以及育儿日常琐事在该关系中的中介作用。利用方便抽样方法，本研究征集了105个二胎家庭。这些家庭都满足如下条件：（1）头胎儿童在3-6岁之间；（2）二胎母亲在怀孕后期；（3）头胎儿童与母亲均无身体或精神疾病。利用母亲汇报的问卷对二胎母亲的产前抑郁、育儿日常琐事以及头胎儿童的问题行为进行数据收集。本文利用回归分析和中介效应分析方法对数据进行分析。结果发现：（1）大约12%的二胎母亲存在中等以上的抑郁症状；（2）头胎儿童的问题行为与育儿日常琐事显著相关，育儿日常琐事与二胎母亲产前抑郁显著相关。该研究表明头胎儿童的问题行为并不直接影响二胎母亲的产前抑郁，而是通过育儿日常琐事起作用。育儿日常琐事的中介作用表明针对二胎母亲的支持需要从育儿日常琐事入手。

关键词 儿童问题行为，产前抑郁，育儿琐事，二胎母亲

Association between Second-time mother's prenatal depression and firstborn's behaviour problems

Ran Zhuo¹, Xiaojiao Yuan²

1 Department of Psychology, College of Humanity, Jilin Agricultural University, Changchun, Jilin Province, P.R. China

2 School of Sociology and Psychology, Southwest Minzu University, Chengdu Province, P.R. China

Abstract: The issue of “Universal two-child” policy means China enters the “two-child” era. The arrival of the second child will not only bring shocks to the firstborn child but also bring challenges both physically and mentally for the second-time mothers. Although second-time mothers have some experiences in pregnancy, they are prone to mental health issues due the inability of taking care of the firstborn child and needs of dealing with various relationship. However, the impact of firstborn children's behaviour problems on second-time mothers' prenatal depression has received little attend from family psychologists. This problem is of great importance in China due the increase of two-child families recently after the ending of ‘one-child policy’. This research aims to understand whether firstborn children's behaviour problems affects second-time mothers' prenatal depression and the mediation role of parenting daily hassles on this relationship. Using convenient sampling, the researchers recruited 105 families transitioning to two-child satisfying the following conditions: (1) The firstborn child is between 3-6; (2) The second-time mum is in the third trimester of pregnancy; (3) There is no health issues in both mum and firstborn child. Using mum reported questionnaire, this research collected data on maternal prenatal depression, child behaviour problem and parenting daily hassles. Regression and mediation test are used to do the data analysis. Results show that (1) About twelve percent of the mothers in the sample have moderate or above depressive symptoms. (2) Firstborns' behaviour problem is significantly associated with parenting daily hassles which is significantly associated with mother's prenatal depression. The results imply that firstborns' behaviour problems didn't have direct effect on mother's prenatal depression, but had indirect effect via parenting daily hassles. The mediation role of parenting daily hassles in this relationship suggests the need for supports that reduce the levels of parenting daily hassles for the firstborn children.

摘要 目的 分析新型冠状病毒肺炎(COVID-19)确诊和疑似患者的心理状况,并探讨其心理干预措施。

方法 通过网络在线方式调查收集 2 例确诊和 6 例疑似 COVID-19 患者的资料。采用自编自评式一般情况问卷收集患者的人口学资料,用创伤后应激障碍自评量表 5(PCL-5)评估患者创伤后应激症状,用匹兹堡睡眠质量指数量表评价患者的睡眠质量。使用 SPSS 21.0 软件进行统计学分析。计数资料以例数和百分数表示,计量资料采用描述性分析。**结果** 2 例 COVID-19 确诊患者和 6 例疑似患者的年龄为 17~71 岁。女性 5 例,男性 3 例; 7 例为专科或本科以上学历, 1 例为高中及以下学历; 5 例有武汉市居民接触史。2 例确诊 COVID-19 患者中有 1 例创伤后应激障碍筛查阳性, 6 例疑似患者中有 1 例创伤后应激障碍筛查阳性。8 例患者中符合侵入症状的患者有 5 例,符合回避症状者 3 例,符合认知和情绪负性改变症状者 3 例,符合过度唤醒症状者 1 例。疫情对 8 例患者的睡眠质量均有不同程度的影响,主要表现为夜间易醒或早醒(5 例,每周至少 1~2 次)。PCL-5 总分与睡眠质量变化趋势总体一致, PCL-5 总分越高睡眠质量越差。**结论** COVID-19 确诊患者与疑似患者均存在不同程度的睡眠问题及创伤后应激症状,夜间易醒或早醒和侵入症状较明显,需要采取及时、有效的心理干预措施。

Abstract: Objective To explore the psychological status and interventions in confirmed and suspected coronavirus disease 2019 (COVID-19) patients. **Methods** The data of 2 confirmed cases and 6 suspected cases of COVID-19 were collected through the Internet. Demographic data of the patients were collected by self-designed self-assessment general situation questionnaire. Post-traumatic stress symptoms were assessed by post-traumatic stress disorder checklist for DSM-5 (PCL-5). Sleep quality was evaluated by Pittsburgh sleep quality index. SPSS 21.0 software was used for statistical analysis. Enumeration data were expressed as examples and percentages, and descriptive analysis was used for measurement data. **Results** There were 5 females and 3 males aged from 17 to 71 years old. The education level was junior college, bachelor degree and above in 7 patients, and senior high school or below in one patient. Five cases had the contact history with Wuhan residents. The screening result of post-traumatic stress symptom was positive in one confirmed case and one suspected case. Among the 8 patients, 5 were in line with the invasion symptom, 3 were in line with the avoidance symptom, 3 were in line with the cognitive and emotional negative change symptom, and 1 was in line with the excessive arousal symptom.. The epidemic affected the sleep quality of 8 patients in different degrees, mainly manifested as sleep fitfully at night or early morning awakening (5 cases, at least once or twice a week). The total score of PCL-5 was consistent with the change trend of sleep quality. The higher the total score of PCL-5, and the worse the sleep quality. **Conclusion** Confirmed and suspected COVID-19 patients have sleep disorders (sleep fitfully at night or early morning awakening) and psychological

trauma (invasive symptoms), and they need timely and effective psychological interventions.

揭开正念的神秘面纱：正念的研究现状及未来展望

张瑶瑶¹ 郭成² (通讯作者)

心理健康教育研究中心, 重庆, 4000715

西南大学心理学部, 重庆, 4000715, E-mail: guochen@swu.edu.cn

摘要 起源于东方佛学的正念, 作为一种禅修的方法, 经西方临床咨询的运用开发, 现已成为一种流行的心理疗法。正念作为一个多维度、多层次的概念, 既可以是动态的认知, 也可以是静态的特质; 其复杂性的内涵延展出了多元化的干预方案, 且不同研究者的干预效应存在一定的争议。为此, 依据现有研究文献, 系统梳理正念的本质内涵、作用机制及干预效果。研究显示正念作用的心理成分千差万别, 其所占权重也各不相同, 因此, 我们结合正念的本质内涵和正念作用的心理活动过程, 初步构建了正念心理要素的四维模型, 这对于厘清正念的本质, 明确其作用机制与干预效应, 促进各领域应用正念的科学性与有效性具有积极意义。未来, 正念的研究应从现有的临床与咨询领域向预防与教育发展领域; 充分关注不同形式正念训练的开发与运用, 以增强正念训练的规范性和可操作性; 多方法探寻正念的作用机制; 更严谨地评估和验证正念的实际效果。

Unveiling the mystery of mindfulness: the current status and future trends of research on mindfulness

Yaoyao ZHANG, Cheng GUO

Southwest University Psychology Department, Mental Health Education Research Center,
Chongqing

Abstract: Mindfulness originated in Eastern Buddhism, as a method of meditation, and developed through the application of Western clinical consultation, has now become a popular psychotherapy. Mindfulness, as a multi-dimensional and multi-level concept, can be either dynamic cognition or static characteristics. Its complex connotation extends diversified intervention programs, and the intervention effects of different researchers have certain effects dispute. Based on the existing research literature, systematically sort out the essential connotation, mechanism of action and intervention effects of mindfulness. Studies have shown that the psychological components of mindfulness are very different, and their weights are also different. Therefore, we combined the essential connotation of mindfulness and the mental activity process of mindfulness to initially construct a four-dimensional model of the psychological elements of mindfulness. It is of positive significance to clarify its mechanism of action and intervention effects, and to promote the scientific and effective application of mindfulness in various fields. In the future, the research on mindfulness should move from the current clinical and consulting fields to the field of prevention and education, pay full attention to the development and application of different forms of mindfulness training to enhance the standardization and operability of mindfulness training, explore the mechanism of mindfulness in multiple ways, more rigorously evaluate and verify the actual effects of mindfulness.

Keywords: mindfulness, mindfulness intervention, mechanism of action, intervention component, standardization

“新冠肺炎”期间大学生情绪感染对社会适应的影响： 家庭支持的中介作用

王颀¹ 杨阿丽²

1 沈阳体育学院,沈阳,110102

2 沈阳体育学院体育社会科学研究中心, 沈阳, 110102,通讯作者 E-mail:yalabc135@163.com

摘要 2020年年初, 新型冠状病毒肺炎的突然爆发, 使得担忧、焦虑等一系列情绪通过情绪感染过程在社会群体间传递, 影响着个体对社会的适应。情绪感染是指在人际交互过程中个体通过自动化、无意识模仿而达到的与情绪诱发者相同情绪体验的一种心理状态。情绪和个体的支持资源对个体的社会适应有着重要的意义, 尤其是在突发性公共事件的背景下, 二者在个体适应社会过程中扮演的角色应该得到更多的关注。因此, 本文以正处于人生发展关键阶段的大学生群体为目标群体, 探究在新型冠状病毒肺炎期间家庭支持、情绪感染和社会适应之间的关系, 并揭示家庭支持在其中的作用路径, 为个体更好的适应社会提供帮助。本研究在2020年1月22日到2月17日期间, 通过网络问卷星取样, 共收集214份有效调查问卷。研究结果发现: 大学生群体的情绪易感性和社会适应能力均处于中等水平, 个体的领悟家庭支持水平处于中上水平; 不同性别在情绪感染和家庭支持方面存在显著差异, 女生个体在情绪感染和领悟家庭支持方面显著好于男生; 情绪感染、家庭支持与社会适应存在显著相关, 情绪感染和家庭支持对社会适应有显著预测作用, 家庭支持在情绪感染和社会适应之间的部分中介模型成立, 情绪感染对社会适应路径的直接预测效应量为-0.138, 情绪感染通过家庭支持对社会适应路径的间接预测效应量为0.088, 由于家庭支持的介入, 使得情绪感染对社会适应的预测性质发生改变, 说明家庭支持在情绪感染对个体社会适应的影响中起着重要作用, 因此可以通过有效的家庭支持策略帮助个体更好地调节情绪, 应对外部环境的变化, 以增强自己的适应能力。研究进一步证明了家庭在个体发展中的重要地位。

The relationship between emotional infection and social adjustment in college students during Corona Virus Disease 2019: the mediating role of family support

Wang Jie, Yang A Li

Shenyang sport university, No.36 jinqiansong east road, sujiatun district, Shenyang

Abstract: At the beginning of 2020, the sudden outbreak of the COVID-19 caused a series of emotions such as worry and anxiety to be transmitted between social groups through the process of emotional infection, affecting individuals' adaptation to society. Emotional infection refers to a mental state that an individual achieves the same emotional experience as the emotional inducer through automated and unconscious imitation in the process of interpersonal interaction. Emotions and individual support resources are of great significance to individuals' social adaptation, especially in the context of sudden public events, the roles they play in the process of individual adaptation to society should receive more attention. Therefore, this article takes college students who are at a critical stage of their life development as the target group, explores the relationship between family support, emotional infection, and social adjustment during the COVID-19, and reveals the role of family support in it to better serve individuals. Provide assistance in adapting to society. In this study, from January 22 to February 17, 2020, a total of 214 valid questionnaires were collected by sampling online questionnaires. The results of the study found that the emotional susceptibility and social adaptability of college students are at a moderate level, and the level of individual comprehension of family support is at a mid-to-upper level; there are significant differences in emotional infection and family support between different genders, and individual girls are emotionally infected and comprehend family support is significantly better than boys; emotional infection, family support and social adaptation are significantly related. Emotional infection and family support have a significant predictive effect on social adaptation. Part of the mediating model of family support between emotional infection and social adaptation is established. The direct

predictive effect of infection on social adaptation path is -0.138, and the indirect predictive effect of emotional infection on social adaptation path through family support is 0.088. Due to the intervention of family support, the predictive nature of emotional infection on social adaptation has changed. Family support plays an important role in the influence of emotional infection on individual's social adaptation. Therefore, effective family support strategies can help individuals better regulate their emotions, cope with changes in the external environment, and enhance their ability to adapt. Research further proves the important position of the family in individual development.

Key words: Emotional infection, Family support, Social adaptation, Mediating role

阴性分裂型特质个体情感共情与情绪调节的关系研究

2 中国科学院大学心理系, 北京, 100049

通讯作者 E-mail: wangyi@psych.ac.cn

摘要 分裂型特质是一般人群中表现出的类似精神病的特质和行为表现, 与精神疾病特别是精神分裂症易感性有关, 可以分为阴性和阳性分裂型特质。以往研究表明阴性分裂型特质与共情密切相关, 同时情绪调节与阴性分裂型特质以及共情都存在紧密联系, 因此本研究拟在大学生中探讨阴性分裂型特质个体的共情异常与情绪调节的关系。采用社会快感缺失量表(The Revised Social Anhedonia Scale, CSAS) 筛选并招募了 24 名阴性分裂型特质高分组被试和 21 名低分组被试, 两组被试在年龄、性别比例和受教育年限上没有显著差异。人际反应指针量表(Interpersonal Reactivity Index, IRI)、认知与情感共情问卷(Questionnaire of Cognitive and Affective Empathy, QCAE), 以及中文版的共情准确性任务(Empathic Accuracy Task, EAT) 用来测量共情; 情绪调节问卷(Emotion Regulation Questionnaire, ERQ) 用于测量情绪调节策略使用情况, 包括认知重评和表达抑制两个维度; 此外, 分裂型人格特质问卷(Schizotypal Personality Questionnaire, SPQ) 被用来测量阳性分裂型特质。在 EAT 中, 被试观看视频(4 段正性, 4 段负性) 并实时评价视频中讲述者的情绪效价, 将被试评分与讲述者自评之间的相关作为共情准确性。看完每段视频, 被试需要完成对“讲述者情绪效价/唤醒度”、“自己观看时的情绪效价/唤醒度”、“观点采择”、“情绪感染”的评分。结果表明: 1) 与低分组相比, 高分组的情感共情得分显著更低 (IRI 共情关怀: $F(1,43) = 11.50, p < 0.01$; QCAE 远端反应率: $F(1,43) = 8.79, p < 0.01$); 在 EAT 任务中的情绪感染得分也更低 (积极视频: $F(1,43) = 4.83, p < 0.05$; 消极视频: $F(1,43) = 12.14, p < 0.001$)。2) 在情绪调节方面, 阴性分裂型特质高分组被试更多使用不适应性情绪调节策略, 即表达抑制 ($F(1,43) = 20.67, p < 0.001$)。控制 SPQ 得分后, 共情和情绪调节的组间差异仍然显著。3) 控制 SPQ 总分和性别后的偏相关分析发现阴性分裂型特质高分组被试中表达抑制与 QCAE 远端反应率分量表呈显著负相关 ($r = -0.59, p < 0.01$)。总之, 本研究发现阴性分裂型特质高分组个体表现出情感共情能力的降低和表达抑制策略使用增多, 且情感共情得分的降低可能与他们更频繁地使用表达抑制这一非适应性情绪调节策略有关。

关键词 阴性分裂型特质, 快感缺失, 情感共情, 表达抑制

Emotion regulation is associated with reduced affective empathy in individuals with high level of negative schizotypy

Xiao-dong Guo^{1,2}, Ding-ding Hu^{1,2}, Dun Ruan^{1,2}, Yi Wang^{1,2}, Raymond C. K. Chan^{1,2}

1 Neuropsychology and Applied Cognitive Neuroscience Laboratory, CAS Key Laboratory of Mental Health, Institute of Psychology, Chinese Academy of Sciences, Beijing, 100101

2 Department of Psychology, University of Chinese Academy of Sciences, Beijing, 100049

Abstract: Schizotypy is a set of personality traits distributed in general population, characterized by psychotic-like experiences and behaviors such as delusion and anhedonia. There are at least two dimensions of schizotypy, positive and negative schizotypy. Negative schizotypy was found closely associated with empathy. Meanwhile, previous

studies also suggested that emotion regulation is correlated with both negative schizotypy and empathy. Therefore, we examined the relations between empathy and emotion regulation in individuals with negative schizotypy in the present study. The Revised Social Anhedonia Scale (CSAS) was adopted to screen participants and 24 individuals with high negative schizotypy and 21 individuals with low negative schizotypy were recruited. There were no significant differences in age, gender proportion, and years of education between two groups. The Interpersonal Reactivity Index (IRI), the Questionnaire of Cognitive and Affective Empathy (QCAE), and the Chinese version of Empathic Accuracy Task (EAT) were used to measure empathy. In EAT, participants were asked to continuously rate emotional valence of targets when they watch eight different video clips. The correlations between ratings of the participant and target were calculated to measure Empathic Accuracy (EA). In addition, participants completed a few questions after each video to rate the valence/arousal of target, their own valence/ arousal, perspective taking and emotion contagion. The Emotion Regulation Questionnaire (ERQ) was used to capture the habitual usages of two specific emotion regulation strategies, which are cognitive reappraisal and expressive suppression. Furthermore, Schizotypal Personality Questionnaire (SPQ) was used to measure and control positive dimension of schizotypy. The results showed: 1) Individuals with high negative schizotypy reported lower scores on affective empathy (IRI Empathic Concern: $F(1,43) = 11.50, p < 0.01$; QCAE Peripheral Responsivity: $F(1,43) = 8.79, p < 0.01$) as well as emotion contagion of the EAT (positive videos: $F(1,43) = 4.83, p < 0.05$; negative videos: $F(1,43) = 12.14, p < 0.001$) compared to the control group. 2) In terms of emotion regulation, individuals with high negative schizotypy used the non-adaptive strategy (i.e., expressive suppression) more frequently ($F(1,43) = 20.67, p < 0.001$). These group differences remained significant even after controlling the SPQ total scores. 3) A negative correlation between usage of expressive suppression and affective empathy was observed in high negative schizotypy group (QCAE: Peripheral Responsivity: $r = -0.59, p < 0.01$) after controlling SPQ scores and gender. Taken together, our study showed that individuals with high negative schizotypy showed poorer affective empathy and more frequently usage of expressive suppression. More importantly, the reduced affective empathy was related to more usage of expressive suppression.

悲观倾向与自杀意念的关系：焦虑、抑郁和痛苦的中介作用

刘宗玉¹, 马志遥¹, 孙国晓¹ (通讯作者)

¹ 山东大学体育学院, 济南, 250000, sunguoxiao@sdu.edu.cn

摘要 背景:大学生自杀是一个重大的公共卫生问题。研究证实,悲观倾向对自杀意念有显著影响。本研究评估焦虑、抑郁和痛苦在悲观倾向与自杀意念之间的中介作用。方法:从中国几所高校共招募1798名大学生。参与者完成了悲观倾向、躯体焦虑、积极情绪、痛苦和自杀意念的测量。采用中介模型评估焦虑、抑郁和痛苦的中介作用。结果:大学生悲观倾向与自杀意念存在显著正相关。在中介分析上,焦虑、抑郁和痛苦在悲观倾向与自杀意念的关系中起中介作用。局限性:这是一项以大学为样本的横断面研究。未来的研究将受益于利用访谈法和纵向研究来调查这些关系。结论:悲观倾向直接影响自杀意念,并通过与焦虑、抑郁和痛苦间接影响自杀意念。对未来没有什么积极期望的大学生可能会从对焦虑、抑郁和痛苦的干预中受益。

Why negative focused disposition relates to suicidal ideation? The mediating effects of anxiety, depression, and distress

Zongyu Liu¹, Zhiyao Ma¹, Guoxiao Sun^{1,*}

¹ Department of Sport and Health, School of Physical Education, Shandong

Abstract: Background: Suicide among college students is a major public health problem. Research had confirmed that negative focused disposition had a significant effect on suicidal ideation. This study evaluated anxiety, depression and distress as mediators of the relationship between negative focused disposition and suicidal ideation.

Methods: A total of 1798 college students were recruited from several Chinese universities. Participants completed measures of negative disposition, somatic anxiety, positive affect, general distress and suicidal ideation. The mediation models were conducted to assess the mediating effects of anxiety, depression and distress. Results: There was a significant positive correlation between negative focused disposition and suicidal ideation in Chinese college students. On mediation analysis, anxiety, depression and distress mediated the relationship between negative focused disposition and suicidal ideation. **Limitations:** This is a cross-sectional study of a college sample. Future research would benefit from investigating these relations utilizing interview methods and longitudinal research. **Conclusions:** Negative focused disposition appears to have a direct effect on suicidal ideation and can indirectly affect suicidal ideation through the relation with anxiety, depression and distress. College students with few positive expectations of the future may benefit from interventions focusing on anxiety, depression and distress. **Keywords:** negative focused disposition, suicidal ideation, anxiety, depression, distress

社会排斥对青少年问题性移动社交网络使用的影响：社交焦虑的中介作用和反刍思维的调节作用

滕秀丽¹ 张守臣²

(哈尔滨师范大学 教育科学学院, 哈尔滨, 150025, 2273308279@qq.com)

摘要 近年来,随着移动网络4G技术的发展,社交网络是一种比较受欢迎的信息交流方式,相较于其他网络应用,人们可以从社交网络中获取更多的陪伴和情感支持并且能够增加用户社会资本。青少年是移动社交网络使用的主要对象,过度地使用社交网络势必会对青少年的心理健康将会产生很大的影响。青春期是社交关系敏感期,当他们遭遇了来自周围的排斥或者忽视时,个体的自我关注程度增强,在社交互动中对自己行为的评价更加严格。而过量的注意资源投入到社会监控系统中引发个体社交焦虑。为了避免和缓解现实社交过程中产生的焦虑情绪,极易选择到脱离现实的社交网站中寻找安慰,以满足个体的心理需要。因此,导致个体沉溺于社交网络中。而具有高反刍思维特质的个体更易加重社会排斥引发的焦虑情绪和问题性移动社交网络使用。因此,本研究主要探讨社会排斥、社交焦虑、反刍思维、问题性移动社交网络使用四者的关系。采用社会排斥量表、社交焦虑、反刍思维量表和问题性移动社交网络使用量表对哈尔滨市500名青少年进行调查。研究结果显示:(1)社会排斥正向预测青少年问题性移动社交网络使用;(2)社交焦虑在社会排斥与青少年问题性移动社交网络使用之间起中介作用;(3)反刍思维在社会排斥与青少年问题性移动社交网络使用间起调节作用。具体而言,反刍思维水平高时,社会排斥能显著的正向预测青少年问题性移动社交网络使用,反之亦然。(4)反刍思维在社会排斥与社交焦虑间起调节作用;具体而言反刍思维水平高时,社会排斥能显著地正向的预测社交焦虑,反之亦然。结论:社会排斥通过社交焦虑的中介作用影响青少年问题性移动社交网络使用,这一中介作用受到反刍思维的调节。

关键词 社会排斥, 社交焦虑, 反刍思维, 问题性移动社交网络使用

The effect of ostracism on problematic social networks usage in adolescents: The mediating effect of social anxiety and the moderating effect of rumination

Teng Xiuli¹, Zhang Shouchen²

School of Education Science, Harbin Normal University, Harbin, 150025, 2273308279@qq.com

Abstract: In recent years, with the development of 4G technology of mobile network, social network is a relatively popular way of information communication. Compared with other network applications, people can get more companionship and emotional support from social network and can increase users' social capital. Teenagers are the main objects of mobile social networks. Excessive use of social networks is bound to have a great impact on their mental health. Adolescence is a sensitive period of social relations. When they encounter rejection or neglect from the surrounding, the degree of self-concern of individuals increases and the evaluation of their own behaviors becomes

stricter in social interaction. Excessive attention resources invested in the social monitoring system will cause individual social anxiety. In order to avoid and alleviate the anxiety in the process of real social contact, it is easy to choose to seek consolation in the social network that is divorced from reality, so as to meet the psychological needs of individuals. As a result, individuals become addicted to social networks. Individuals with high rumination traits were more likely to aggravate anxiety caused by ostracism and problematic social networks usage. Therefore, this study mainly discusses the relationship between ostracism, social anxiety, rumination and problematic social networks usage. ostracism scale, social anxiety scale, rumination Scale and problematic social networks usage Scale were used to investigate 500 teenagers in Harbin. The results show that: (1) Ostracism positively predicts problematic social networks usage among adolescents; (2) Social anxiety plays a mediating role between ostracism and problematic social networks usage among adolescents; (3) Rumination plays a moderating role between ostracism and problematic social networks usage among adolescents. Specifically, when rumination level is high, ostracism significantly positively predicts problematic social networks usage among adolescents, and vice versa. (4) Rumination plays a regulating role between ostracism and social anxiety; Specifically, ostracism significantly positively predicted social anxiety at high rumination levels, and vice versa. Conclusion: Ostracism affects problematic social networks usage among adolescents through the mediating effect of social anxiety, which is moderated by rumination.

Keywords: ostracism, rumination, social anxiety, problematic social networks usage

语言标签影响下蒙古语者和汉语者对面部表情类别知觉的识别特点

雅茹^{1,2}, 李杰¹ (通讯作者)

1 内蒙古师范大学心理学院, 呼和浩特, 010022, heathlj2004@163.com

2 呼伦贝尔学院教育学院, 呼伦贝尔, 021008

摘要 面部表情识别是人们日常生活中一项重要的活动, 准确识别他人的表情对成功的人际交往、情绪调节等行为都有着深远的意义。语言情境对面部表情的分类有很大的限制作用, 在面部表情类别知觉构建的过程中语言和文化起到了重要作用。本研究采用自然分类法分析了蒙古语者和汉语者情绪词的概念结构特点, 发现蒙古语被试和汉语被试的情绪词都分布在以原点为圆心的环形周围, 概念结构整体比较一致, 对于高愉悦度情绪词汇, 蒙古语者和汉语者分类基本相同, 但是对于低愉悦度情绪词汇, 蒙古语者和汉语者分类有差异, 表现为汉语者倾向于将恐惧和愤怒情绪词汇放在高唤醒度—低愉悦度水平, 蒙古语者则倾向于将恐惧情绪词汇放在低唤醒度—低愉悦度水平, 对于一般强度的愤怒情绪词汇, 蒙古语者将其放在低唤醒度—低愉悦度水平, 而高唤醒度的愤怒情绪词汇则在高唤醒度—低愉悦度水平。本研究进一步通过识别任务探讨不同语言情绪词有别的个体是如何处理面部表情类别信息, 发现在语言标签作用下, 对于单一情绪渐变的面部表情识别, 蒙古语者愤怒情绪的面部表情知觉的转折点高于汉语者, 但斜率最大, 说明相比于汉语者, 蒙古语者对愤怒情绪的面部表情识别临界点高, 并对高唤醒度的愤怒面部表情敏感, 这与蒙古语者愤怒情绪概念的分布可能有关, 在两种情绪渐变的面部表情识别任务中, 蒙古语者愤怒—悲伤的面孔连续体的类别知觉的转折点更高, 敏感度更高。这说明蒙古语者和汉语者对相同面部表情进行类别知觉有不同表现, 进一步支持了语言标签在类别知觉中起到的重要作用。

The Recognition Characteristics of Mongolian Speakers and Chinese Speakers Categorical Perception of Facial Expressions Under the Influence of Language Label

Yaru^{1,2}, LI Jie¹

1 School of Psychology, Inner Mongolia Normal University, Hohhot 010022, China

2 School of Education, Hulunbuir University, Hulunbuir 021008, China

Abstract: Facial expressions perception is an important activity in people's daily life. Accurate recognition of other's expressions has profound significance for interpersonal communication, and emotional regulation. Language context has a great limitation on the categorical perception of facial expressions. Language and culture play an important role in the construction process of categorical perception of facial expressions. This research uses the natural classification to analyze the Mongolian and Chinese conceptual structure of emotion words, finds that conceptual constructions of Mongolian and Chinese subjects could match with the circumplex model of emotion. It shows the similar pleasant words classification and different unpleasant words classification between Mongolian and Chinese subjects. Chinese subjects tend to classify fear and anger words in unpleasant-arousal level; however, Mongolian subjects tend to put fear words in unpleasant-relax level. Mongolian speakers place anger words of general intensity in unpleasant-relax level, while angry words with high arousal are placed in unpleasant-arousal level. This study further uses the recognition task to explore individuals master different language and different emotion words how to deal with facial expressions category information. Compared with Chinese subjects, the turning point of Mongolian angry face perception is higher and the slope is bigger in single emotion continuum of facial expressions recognition task with language labels. It shows that Mongolian subjects have a high critical point and are sensitive to angry face of high arousal level, which may relate to the anger concept distribution. Mongolian speakers show higher turning points in category perception of two emotion continuum facial expression recognition tasks and higher sensitivity in the angry-sad face continuum. This indicates that there are differences between Mongolian speakers and Chinese speakers in categorical perception of the same facial expressions, which further supports that the language label plays an important role in category perception.

积极心理学视阈下对中国军人自杀行为应对策略的思考

张羽高^{1,2} 朱磊¹

1 空军航空大学飞行研究所 吉林长春 130022

2 空军航空大学飞行研究所 吉林长春 130022 195809111@qq.com

摘 要 自杀是全球范围内引发关注较多的一项心理康问题,其背后有着生物因素、心理因素乃至社会因素等多维度、深层次的动因。在军队这样的特殊群体里,自杀问题同样是威胁着广大官兵生命安全的一大因素。在积极心理学的视角下不难发现,传统的文化环境和教育背景下对自杀问题的应对多是从个体人格中的消极因素入手,其主要问题表现为三个不均衡:(1)思想认识与自身处境的不均衡,即个体在自我认知、态度认识以及心理承受力上的不足与其面临的严峻外部环境存在失衡;(2)心理健康教育需求与资源配备的不均衡,近年来官兵对自身心理健康状况的关与日俱增,但相关配套设施、资源却相对不足;(3)问题严重性与社会关注度的不均衡,军人自杀事件屡屡发生,但是社会各界并未对此提高关注度,同时还存在一定的认识误区。在这些问题的基础上,本研究从积极心理学的角度出发,通过发掘官兵人格中的积极因素并加以利用,分别从积极情绪培养、积极归因训练以及积极系统构建三个方面提出了对预防官兵自杀问题的思路。首先在积极情绪培养方面,让官兵用自身积极的情感体验去激发崇高的道德情操,从而在真实的体验中找到正确的生命价值观,这是积极心理学预防自杀行为的初期思路。其次在积极归因训练中,训练广大官兵进行积极的归因训练有利于个体通过合适的认知渠道进行自我鼓励、自我认可与自我升华,从而有效地减少自杀事件的发生。最后,所谓的积极系统构建就是通过整合家、社会以及工作单位的生命教育资源,调动各方面的积因素来建立有利于官兵身心健康发展的社会支持系统架构,让官兵能够在其中得到鼓励与帮助,从而帮助自己形成和发展积极向上的生活态度,在根源上彻底切断自杀的源头。

Consideration on the Coping Strategies of the Chinese Soldiers' Suicide Behavior from the Perspective of Positive Psychology

Zhang Yugao^{1,2}, Zhu Lei¹

1 Flight Research Institute of Air Force Aeronautical University Changchun, Jilin 130022

2 Flight Research Institute of Air Force Aeronautical University Changchun, Jilin 130022

195809111@qq.com

Abstract: Suicide is one of the mental health problems that attracts more and more attention all over the world. There are multi-dimensional and deep-seated reasons behind, such as biological factors, psychological factors and even social factors. In such a special group as the army, suicide is also a major factor threatening the life safety of officers and soldiers. From the perspective of positive psychology, it is not difficult to find that under the traditional cultural environment and educational background, the response to suicide mainly starts from the negative factors in the individual's personality, and the main problems are as follows: (1) the imbalance between the ideological understanding and their own situation, which means that the lack of the individual's self-awareness, attitude-awareness and psychological endurance is out of balance with the severe external environment; (2) In recent years, officers and soldiers are increasingly concerned about their own mental health, but the related facilities and resources are relatively insufficient; (3) There is an imbalance between the seriousness of the problem and the social attention---- suicide behavior among military personnel occurs more and more frequently, but the community has not paid enough attention and what's worse, there are still some misunderstandings on it. On the basis of these problems, this study, from the perspective of positive psychology, explores and utilizes the positive factors in the personality of officers and soldiers, and puts forward some ideas on the prevention of suicide from three aspects: the cultivation of positive emotions, the training of positive attribution and the construction of positive system. First of all, in the aspect of the cultivation of positive emotion, make the officers and soldiers use their own positive emotional experience to stimulate the noble moral sentiment, so as to find the correct life values in the real experience. This is the initial idea of plank psychology to prevent suicide. Secondly, in the positive attribution training, training officers and soldiers to carry out positive attribution training is conducive to individual self encouragement, self recognition and self sublimation through appropriate cognitive channels, so as to effectively reduce the occurrence of suicide. Finally, the so-called construction of positive system is to integrate the life education resources of family, society and work units and to mobilize all kinds of factors to establish a social support system to the physical and mental health development of officers and soldiers, so that officers and soldiers can get encouragement and help in it, so as to help them form and develop a positive attitude towards life, which could completely cut off the source of suicide.

医学专业学生压力信念与心理困扰的关系：基于潜在剖面分析

罗芸¹ 曾练平² (通讯作者)

1 贵州师范大学, 贵阳, 550001

2 贵州师范大学心理学院, 贵阳, 550001, zenglianping@163.com

摘要 压力信念与其他影响压力的变量不同(例如个体正在经历压力的严重程度、数量以及个体的应对方式等),它与个体当前是否受到压力无关,而是指个体对压力赋予的一种属性和预期。医学生作为特殊的大学生群体,面临着专业知识多,行业标准高,学业任务重、就业压力大等多因素高强度的压力环境中,会产生极大的心理压力,对其身心健康产生不利的影响。而作为对压力的认知和预期,医学生的压力信念十分值得关注。以往的研究多关注医学生压力的影响因素,本研究关注到个体本身的差异,基于个体中心的视角考察医学专业大学生不同的压力信念模式与其心理困扰的程度之间的关系。运用潜在剖面分析进行异质性检验,探究医学专业大学生不同的压力信念。**目的:**了解医学专业大学生压力信念的潜在类别及其与心理困扰的关系。**方法:**于湖南、贵州、云南等地选取医学专业大学生 990 名,以大学生压力信念量表,心理困扰量表(The

item Kessler Psychological Distress Scale)为工具,通过潜在剖面分析技术探讨工作家庭冲突的潜在类别。**结果:**医学专业大学生的压力信念可分为高消极-低积极压力信念组(12.2%),高积极-低消极压力信念组(52.8%)积极压力信念倾向组(15.8%)以及压力信念对抗组(19.2%)4个潜在类别。不同压力信念类型的医学专业大学生在心理困扰得分上差异有统计学意义($P<0.001$)。在心理困扰得分上,高消极-低积极压力信念组得分最高(24.37 ± 7.84),压力信念对抗组第二(24.22 ± 7.65),高积极-低消极压力信念组次之(18.21 ± 5.99),积极压力信念倾向组得分最低(16.48 ± 5.44)。心理困扰得分在16~21分为心理困扰程度较轻,在22-29分为心理困扰程度较重,根据不同组别在心理困扰上的分数,可以看出拥有高积极压力信念以及积极压力信念倾向的个体,其心理困扰程度较轻,心理健康水平相对来说更高;而高消极压力信念以及压力信念对抗组的心理困扰严重,其心理健康水平可能会受到影响。**结论:**医学专业大学生压力信念具有明显的分类特征,且与心理困扰程度密切。

The relationship between stress beliefs and psychological distress among medical students: Based on potential profile analysis

Luoyun

School of psychology, guizhou normal university, Guiyang 550001

Abstract: Stress belief is different from other variables that affect stress (such as the severity and quantity of stress an individual is experiencing and the way an individual copes with it). It has nothing to do with whether an individual is currently under pressure or not, but refers to an attribute and expectation that an individual endures to stress. Medical students, as a special group of college students, are faced with many factors such as high professional knowledge, high industry standards, heavy academic tasks, high employment pressure and other high pressure environment, which will produce great psychological pressure, which has a negative impact on their mental and physical health. As the cognition and expectation of stress, medical students' belief in stress deserves more attention. Previous studies mostly focused on the influencing factors of medical students' stress, but this study focused on the differences of the individuals themselves and investigated the relationship between different stress belief patterns and the degree of psychological distress of medical students from an individual-centered perspective. The potential profile analysis was used to test the heterogeneity to explore the different stress beliefs of medical students. Objective: To investigate the potential types of stress beliefs and their relationship with psychological distress in medical college students. Methods: A total of 990 medical college students were selected from Hunan, Guizhou and Yunnan provinces. The Item Kessler Psychological Distress Scale and Stress Belief Scale were used as tools to explore The potential categories of work-family conflict by potential profile analysis. RESULTS: The pressure beliefs of medical college students could be divided into four potential categories: high passive-low positive pressure belief group (12.2%), high positive-low negative pressure belief group (52.8%), positive pressure belief tendency group (15.8%) and pressure belief counter group (19.2%). There was statistical significance in psychological distress scores of medical college students with different types of pressure beliefs ($P<0.001$). In terms of psychological distress, the score of the high passive-low positive stress belief group was the highest (24.37 ± 7.84), the pressure belief confrontation group was the second (24.22 ± 7.65), the high positive-low negative stress belief group was the second (18.21 ± 5.99), and the positive stress belief tendency group was the lowest (16.48 ± 5.44). Psychological distress scores in 16 ~ 21 divided into psychological distress to a lesser degree, in 22-29 in psychological distress level, according to different category scores on the psychological distress, it can be seen that have high positive pressure and positive pressure beliefs of the individual faith, their psychological distress to a lesser degree, the psychological health level is relatively higher; However, the high negative stress beliefs and stress belief confrontation group had serious psychological distress, and their mental health level might be affected. CONCLUSION: The stress belief of medical college students has obvious classification characteristics, and is closely related to the degree of psychological distress.

童年期情感忽视经历对大学生情绪调节策略使用偏好的影响 及其脑结构基础

魏士琳¹ 徐滨¹ 阴晓娟¹ 朱子良¹ 陈俊涛¹ 金花¹ (通讯作者)

1 天津师范大学心理学部, 天津, 300387, jinhua@mail.tjnu.edu.cn

摘要 童年期创伤经历作为早期不良经历的一种, 与成人期情绪调节策略的使用、与广泛的精神病理学症状相关联。但已有研究均没有将童年期情感忽视从其他童年期创伤经历中分离出来, 单一性的童年期情感忽视对大学生情绪调节策略使用偏好及其脑结构的影响尚不清楚。结合问卷调查和结构磁共振成像技术, 本研究旨在探讨单一性童年期情感忽视经历对大学生情绪调节策略使用及情绪调节相关脑区结构的影响。

研究首先对天津市四所高校共 4566 名的大学生进行《童年创伤问卷》初测, 得到符合标准的伴有单一性童年期情感忽视经历的潜在被试。随后, 对潜在被试进行复测, 并由两名精神科主治医师排除可能存在精神病理学症状和重大躯体隐患的被试。最后获得了仅存在童年期情感忽视经历的大学生被试 21 名 (忽视组, 10 男, 年龄 19.19 ± 0.68 岁), 无任何形式童年期创伤经历的大学生被试 26 名 (对照组, 13 男, 年龄 19.04 ± 0.87 岁)。两组被试均完成了《情绪调节问卷》和结构磁共振成像的测量。结果发现, 对照组的重评策略使用频率显著高于忽视组 (34.08 ± 5.469 Vs. $27.29 \pm 5.02, t(45) = 4.39, p < 0.001$); 而两组在抑制策略使用上无显著差异。对照组在右侧额中回的平均灰质体积显著大于忽视组 (0.52 ± 0.07 Vs. $0.46 \pm 0.07, t(45) = 2.83, p = 0.007$)。回归分析和偏相关分析表明该区域的灰质体积变化与重评策略的使用显著正相关 (回归: $\beta = 0.54, p < 0.001$; 相关: $r = 0.52, p < 0.001$)。此外, 多体素模式分析 (MVPA) 发现右侧脑岛的灰质体素信号模式能够显著预测重评策略使用 ($r = 0.38, p = 0.036$)。结果提示, 右侧额中回和脑岛的结构改变可能是童年期情感忽视经历影响大学生情绪调节策略使用的脑结构基础。基于压力加速假说, 本研究认为上述差异可能与早期压力引发的情绪行为发育敏感期的可塑性终止有关。

The influence of childhood emotional neglect experience on college students' preference for emotion regulation strategies and its brain structure

Wei Shilin, XuBin, Yin Xiaojuan, Zhu Ziliang, Chen Juntao, Jin Hua

Faculty of Psychology, Tianjin Normal University, Tianjin, 300387

Abstract: As an early adverse experience, the experience of childhood trauma is associated with the use of emotion regulation strategies in adulthood and with a wide range of psychopathology symptoms. However, previous studies have failed to separate childhood emotional neglect from other traumatic experiences in childhood, and the effects of single childhood emotional neglect experience on College Students' preferences for the use of emotion regulation strategies and their brain structures are unknown. The purpose of this study was to explore the effects of single childhood emotional neglect experience on the use of emotion regulation strategies and the structure of brain regions related to emotion regulation in college students. Firstly, 4,566 college students from four universities in Tianjin were tested with the childhood trauma questionnaire, and the potential subjects with single childhood emotional neglect experience were obtained. Potential subjects were then retested and excluded from the study by a pair of attending psychiatrists for possible psychopathology and major physical problems. Finally, 21 college students who only had childhood emotional neglect experience (neglect group, 10 males, age 19.19 ± 0.68 years) and 26 college students without any form of childhood trauma experiences (control group, 13 males, age 19.04 ± 0.87 years) were obtained. Both groups completed the emotion regulation questionnaire and the structural magnetic resonance imaging. The results showed that the frequency of cognitive reappraisal strategy use in control group was significantly higher than that in neglect group (34.08 ± 5.469 vs. $27.29 \pm 5.02, t(45) = 4.39, p < 0.001$), but there was no significant difference in expressive suppression strategy use between the two groups. The mean gray matter volume in the right middle frontal gyrus was significantly larger in the control group than that in the neglect group (0.52 ± 0.07 vs. $0.46 \pm 0.07, t$

(45) = 2.83, $p = 0.007$). Regression analysis and partial correlation analysis showed that the volume change of gray matter in this area was positively correlated with the use of reappraisal strategy (regression: $\beta = 0.54$, $p < 0.001$; correlation: $r = 0.52$, $p < 0.001$). In addition, multi-voxel pattern analysis showed that the right insula gray voxel signal pattern significantly predicted the use of cognitive reappraisal strategies ($r = 0.38$, $p = 0.036$). The results suggest that the structural changes of the right middle frontal gyrus and insula may be the structural basis of the influence of childhood emotional neglect experience on the use of emotion regulation strategies. Based on the stress acceleration hypothesis, this study argues that the above differences may be related to early stress-induced termination of plasticity during the developmentally sensitive period of emotional behavior.

A person-centered evaluation of cognitive emotion regulation using a latent profile analysis: Associations with psychological and physical health

Yue Guan¹, Lixian Cui

1 School of Psychological and Cognitive Sciences, East China Normal University, Shanghai 200062, China

2 Division of Arts and Sciences, NYU Shanghai 200122, China

Abstract: The association between cognitive emotion regulation (CER) and young adults' health outcomes has long been emphasized. However previous research has not accounted for the heterogeneity in cognitive emotion regulation strategy use. This study aimed to explore the profiles of cognitive emotion regulation strategies among a community sample of Chinese young adults, and to examine the association of latent profiles with psychological and physical health outcomes. Data were collected from 259 Chinese young adults residing and/or working in urban Shanghai (Mage = 25.85 years, 117 female). A person-centered approach with 3-step Latent Profile Analysis (LPA) was used to identify underlying profiles of cognitive emotion regulation based on the young adults' reports of their use of cognitive emotion regulation strategies when they were confronted with stressful life events. Nine different strategies, five adaptive and four maladaptive, were used as indicators. Covariates of profile members were assessed, including age, socio-economic status (SES), sexual orientation, and education level. LPA revealed three profiles, which have been tentatively labeled: *low regulators* (with little use of all strategies), *adaptive regulators* (with more use of adaptive emotion regulation strategies and less use of maladaptive strategies), and *maladaptive regulators* (with less use of adaptive emotion regulation strategies and more use of maladaptive strategies). A comparison of CER profiles applied to health-related outcomes (i.e., depression, anxiety, perceived stress, physical symptoms, and sleep quality) offered support to the validity of three CER profiles. Results showed that the higher the SES, the higher the probability of being classified into the *adaptive regulators*. And the maladaptive regulators class was associated with the highest levels of depression symptoms, anxiety symptoms, perceived stress, and poorest physical health. In contrast, the adaptive regulators class was associated with the least health problems. Our findings suggest that a person-centered perspective might be a valuable tool for understanding the structure of cognitive emotion regulation and that profiles of young adults' cognitive emotion regulation may be significant risk factors for health.

大学生的自动模仿倾向与社会快感缺失的关系初探

阮盾^{1,2} 郭晓栋^{1,2} 胡丁鼎^{1,2} 王毅^{1,2} (通讯作者) 陈楚侨^{1,2}

1 神经心理学与认知神经科学实验室, 中国科学院心理健康重点实验室(中国科学院心理研究所), 北京, 100101

2 中国科学院大学心理系, 北京, 100049, wangyi@psych.ac.cn

摘要 在社会交往过程中存在自动模仿他人表情、姿势和动作的倾向, 这与情绪识别、观点采择和共情等社会认知有关。精神分裂症存在观点采择和共情等社会认知的缺损, 仅有的几项研究指出患者可能存在自动模仿倾向的改变。社会快感缺失作为一种阴性分裂型特质, 反映了精神疾患的易感性, 因此本研究探讨大学生自动模仿与社会快感缺失之间的关系。根据大学生在线调查中社会快感缺失量表(CSAS)得分, 本研究招募了24名高社会快感缺失被试(CSAS得分高于均分以上1个标准差, 年龄 21.1 ± 1.89 岁, 男性5名)和20名对照组被试(CSAS得分低于均分, 年龄 21.6 ± 2.14 岁, 男性3名)。被试完成模仿抑制任务(imitation-inhibition task), 实验中电脑屏幕上连续快速呈现两张图片以形成食指抬起、中指抬起或是保持静止的动画效果, 要求被试根据食指与中指间呈现的数字线索抬起相应手指(“1”食指, “2”中指), 计算被试在三种实验条件下(根据图片上手指的运动方式和被试需要进行的反应分为一致、不一致和基线)的反应时和正确率。基线条件和一致条件的反应时差异为促进效应, 衡量自动模仿倾向; 一致和不一致条件的反应时差异为衡量抑制自动模仿倾向的抑制效应。结果发现: 1) 无论是对照组还是高分组被试均表现出明显的促进效应(对照组: $11.89\text{ms} \pm 24.03\text{ms}$, $t = 2.21$, $p < 0.05$; 高分组: $16.25\text{ms} \pm 23.81\text{ms}$, $t = 3.34$, $p < 0.01$)和抑制效应(对照组: $15.84\text{ms} \pm 24.90\text{ms}$, $t = 2.84$, $p < 0.05$; 高分组: $11.07\text{ms} \pm 23.85\text{ms}$, $t = 2.27$, $p < 0.05$)。2) 相关分析发现, 对照组中CSAS得分与促进效应存在显著正相关($r = 0.53$, $p < 0.05$), 高社会快感缺失被试中未发现显著相关。两组被试中均未发现CSAS得分与抑制效应的显著相关。因此, 本研究在大学生群体中发现了显著的自动模仿的促进效应和模仿抑制效应。此外, 本研究结果提示自动模仿倾向可能与阴性分裂型特质有关, 可能是精神分裂症及其高危人群社会认知异常的潜在机制。

Abstract: People tend to imitate others' facial expressions, postures and movements during social interactions without awareness, which is related to social cognition such as emotion recognition, perspective taking, and empathy. Schizophrenia is a serious mental disorder with impairments in social cognition such as perspective taking and empathy. Only a few studies have pointed out that patients with schizophrenia may have altered automatic imitations. As a negative schizotypal trait, social anhedonia reflects the vulnerability to psychotic disorder. This study aims to investigate whether automatic imitation effects exist in college students and the relationship between automatic imitation and social anhedonia. Based on the scores of the Chapman Social Anhedonia Scale (CSAS) in a large sample of college students, twenty participants with low level of social anhedonia (CSAS scores were below average, age = 21.6 ± 2.14 , 3 males) and 24 participants with high level of social anhedonia (CSAS scores were more than one standard deviation above the average, age = 21.1 ± 1.89 , 5 males) were recruited. All participants completed computerized imitation-inhibition task, in which two pictures were presented on screen in rapid succession to form animations of raising index finger, middle finger or remain still, participants were asked to raise their fingers according to the clues appeared between the index finger and middle finger with the second picture ("1" for index finger, "2" for middle finger). According to the consistency between the lifting finger on screen and the finger that

participants supposed to lift, accuracy and reaction times (RT) of three conditions (congruency, incongruency and baseline) were calculated. The RT difference between baseline condition and congruent condition was considered as facilitation effect and the RT difference between congruent and incongruent conditions was inhibition effect of automatic imitation. The results showed that: 1) both groups showed significant facilitation effect (control group: 11.89ms±24.03ms, $t=2.21$, $p < 0.05$; high social anhedonia group: 16.25ms±23.81ms, $t=3.34$, $p < 0.01$) and inhibition effect (control group: 15.84ms±24.90ms, $t=2.84$, $p < 0.05$; high social anhedonia group: 11.07ms±23.85ms, $t=2.27$, $p < 0.05$). 2) Correlation analysis showed that there was a significant positive correlation between CSAS scores and facilitation effect only in control group ($r=0.53$, $p < 0.05$). No significant correlations between CSAS scores and inhibition effect were found in either groups. Therefore, we confirmed the facilitation effect and inhibition effect of automatic imitation using an adapted imitation-inhibition task in college students. In addition, our findings suggest that automatic imitation may closely relate to social anhedonia, which might contribute to abnormalities of social cognition and social functioning in schizophrenia and its high-risk populations.

语言能力对面孔情绪感知的影响——一项 ERP 研究

管元浩^{1,2} 孙蕾^{1,2} 何蔚祺^{1,2} (通讯作者)

1 辽宁师范大学脑与认知神经科学研究中心, 大连, 116029

2 辽宁省脑与认知神经科学重点实验室, 大连, 116029, hewq@lnnu.edu.cn

摘 要 从人类使用语言概念命名情绪开始, 语言和情绪感知就绑定在了一起。语言对情绪感知的作用主要存在两种观点: 基本情绪理论认为, 语言是情绪感知的一种附带现象, 情绪感知可以在不依赖语言的条件下产生; 情绪建构理论则认为, 语言是情绪感知的必要条件, 如果没有情绪概念便不会感知到与情绪概念相对应的情绪。基于上述理论背景, 本研究采用事件相关电位技术探究语言能力对成年个体面孔情绪感知的影响。实验采集了 47 名 (23 男, 24 女) 成年被试的数据, 被试年龄范围为 18~28 岁, 平均 19.87 岁。实验程序为被试首先观看一张情绪面孔图片, 然后呈现 500~700 ms 的空屏, 最后呈现两张情绪面孔或情绪词语。被试需要在两张情绪面孔或情绪词语中选择一个与之前面孔情绪类别相一致的选项。实验中的情绪类别包括快乐、恐惧、悲伤和中性四种。实验还通过韦氏智力量表的言语分量表将被试分为语言能力高分组和语言能力低分组。实验的 ERP 结果发现: 在 N170 成分上, 语言能力低分组比语言能力高分组被试在词语任务上由四种情绪诱发的 N170 波幅更大; 在 P2 成分上, 词语任务比面孔任务诱发的 P2 波幅更大; 在 N2 成分上, 面孔任务比词语任务诱发的 N2 波幅更大; 在 N400 成分上, 面孔任务比词语任务诱发的 N400 波幅更大; 在 LPC 成分上, 面孔任务中快乐情绪比中性情绪诱发的波幅更大。总之, 本研究初步揭示了不同语言能力者对于面孔情绪感知的神经动态差异主要体现在早期加工阶段, 进一步支持了情绪建构理论。

Abstract: Since humans use language concepts to name emotions, language and emotion perception are bound together. There are two main views on the influence of language in emotion perception: basic emotion theory argues that language is an incidental phenomenon of emotion perception, and emotion perception can be produced without language; emotion construction theory argues that language is a necessary condition for emotion perception. If there is no emotion concept, the emotion corresponding to the emotion concept will not be perceived. Based on the above

theoretical background, this study used event-related potential technology to explore the influence of language ability on facial emotion perception. The experiment collected data from 47 adult participants (23 males and 24 females). The age range of the participants was 18-28 years old, with an average of 19.87 years old. The experiment procedure was that participants first watched an emotional faces, then presented an empty screen for 500-700 ms, and finally presented two emotional faces or emotional words. Participants needed to choose one face or word that is consistent with the emotion category of the previous face. The emotion categories in the experiment include happiness, fear, sadness, and neutral. The participants were divided into two groups through the language subscale of the Wechsler's Intelligence Scale: high language ability group and low language ability group. The ERP results found that: on the N170 component, the participants in the low language ability group had a larger amplitude of N170 evoked by the four emotions on the verbal task than those in the high language ability group; on the P2 component, the verbal task evoked a larger P2 amplitude than the face task; on the N2 component, the face task evoked a larger N2 than the word task; on the N400 component, the face task evoked a larger N400 amplitude than the word task; on the LPC component, the happy emotion evoked a larger LPC amplitude than the neutral emotion in the face task. In short, this study preliminarily revealed that the neural dynamic differences of people with different language abilities in facial emotional perception were mainly reflected in the early processing stage, which supports the emotion construction theory.

摘要 背景与目的: 重性抑郁患者的工作记忆受损,既往的抑郁症神经影像学提示抑郁症患者的额顶网络功能异常,但异常的额顶区功能与受损的工作记忆之间的发生机制仍不清楚。本研究将考察抑郁患者执行工作记忆任务时额顶区与全脑的功能连接特征,并分析额顶区的有效连接是否存在异常,为阐明抑郁患者工作记忆受损的神经病理学机制提供进一步的证据。**方法:** 共有 33 名重性抑郁患者 (20.24±5.04 岁, 11 男) 和 40 名年龄、性别、教育水平匹配的健康对照组被试 (20.98±2.51 岁, 14 男) 完成流调中心用抑郁量表和简式情感强度等系列心理量表与磁共振成像扫描。采用数字 n-back 任务评估工作记忆,同步采集其任务态脑影像数据 (Siemens, Skyra 3.0 T 核磁共振扫描仪; 重复时间/回波时间= 2000/28 ms, 层厚/层间距= 4/4 mm, 视野 = 210 × 210 mm, 翻转角 = 90°, 层数= 32)。采用心理生理交互作用 (psychophysiological interaction, PPI) 分析 n-back 任务中激活的脑区 (右侧顶下小叶和右侧背外侧前额叶) 与全脑的功能连接差异。采用动态因果模型 (dynamic causal modelling, DCM) 进一步分析右侧顶下小叶与右侧背外侧前额叶的有效连接。**结果:** 抑郁组组的流调中心用抑郁量表 ($t=13.15, p<0.001$)、负性情感强度分量表 ($t=3.73, p<0.001$) 得分均显著高于对照组。与对照组相比,抑郁组在完成高负荷工作记忆任务时有更低的准确率 ($t=2.24, p=0.029$) 和更长的反应时 ($t=2.20, p=0.033$)。PPI 分析结果显示抑郁症患者组的右侧顶下小叶与右侧背外侧前额叶 ($t=4.22, p=0.006$)、右侧颞上回 ($t=4.67, p=0.041$) 的功能连接较对照组显著增强。基于 PPI 分析的组间差异结果, DCM 进一步发现抑郁组从右侧顶下小叶至右侧背外侧前额叶的有效连接较对照组显著增加 ($t=3.021, p=0.003$)。相关分析显示负性情感强度得分与工作记忆中从右侧顶下小叶至右侧背外侧前额叶的有效连接参数有显著负相关 ($r=-0.491, p=0.004$)。**结论:** 抑郁患者在高负荷工作记忆任务下存在异常的额顶网络有效连接, 这为阐明抑郁工作记忆受损的神经病理学机制提供新的实验依据。

Abstract: Background: Working memory (WM) impairment is one of the core cognitive dysfunction in patients with major depressive disorder (MDD). Neuroimaging studies have suggested abnormalities in frontoparietal activation in MDD, while the specific mechanism by which abnormal function in the frontoparietal network contributing to the deficits in working memory remains unclear. Focusing on functional connectivity of frontal and parietal regions with the whole brain and exploring whether there was abnormal effective connectivity in frontoparietal region, this study is aimed to elucidate the neuropathologic mechanism of impaired WM in patients with MDD. **Methods:** A total of 33 patients with MDD (20.24±5.04 years old, 11 male) and 40 age-, gender-, education- matched healthy controls (HCs, 20.98±2.51 years old, 14 male) completed a series of psychological assessment (such as the Center for Epidemiological Studies Depression Scale and the Short Affect Intensity Scale; CES-D & SAIS) and undertook the magnetic resonance imaging (MRI) scanning. Functional MRI data was collected (3.0 T Siemens Skyra scanner, repetition time/echo time = 2000/28 ms, thickness/gap = 4/4 mm, field of view = 210 × 210 mm, flip angle = 90°, and slices = 32) when subjects performing the numeric n-back task, which was used to assess WM. The psychophysiological interaction analysis was applied to investigate functional connectivities between brain regions (right inferior parietal lobule, IPL; right dorsolateral prefrontal cortex, dlPFC) activated during n-back task and whole brain. The dynamic causal modelling (DCM) was used to analyze the effective connectivity between right IPL and right dlPFC. **Results:** The MDD group had significantly higher scores of CES-D ($t=13.15$, $p<0.001$) and SAIS-negative subscale ($t=3.73$, $p<0.001$) than HCs. The MDD group also had lower accuracies ($t=2.24$, $p=0.029$) and longer reaction times ($t=2.20$, $p=0.033$) in high load task than HCs. Compared with HCs, the MDD patients showed increased functional connectivities of the right IPL with right dlPFC ($t=4.22$, $p=0.006$), right superior temporal gyrus ($t=4.67$, $p=0.041$). The modulation from the right IPL to the right dlPFC showed a significant group difference ($t=3.021$, $p=0.003$). A negative correlation was found between scores of SAIS-negative subscale and modulation of the connection from IPL to dlPFC in working task in MDD group ($r=-0.491$, $p=0.004$). **Conclusion:** This study showed abnormal effective connectivity among frontal and parietal regions during high load WM task in patients with MDD, which provides accumulating evidences to elucidate the neuropathologic mechanism of impaired WM in patients with MDD.

边缘性人格障碍患者攻击行为的脑影像研究：一项系统综述

储珺¹ 郑凯莉¹ 蚁金瑶^{1,2} (通讯作者)

1 中南大学湘雅二医院医学心理中心

2 中南大学医学心理研究所

摘要 背景: 约有 73% 的边缘性人格障碍患者 (Borderline personality Disorder, BPD) 曾有过攻击行为。影像学研究提示, BPD 患者的攻击行为可能与其脑结构与功能异常有关。本研究对国内外 BPD 患者攻击行为的脑影像研究成果进行了总结和系统评价, 为进一步阐明 BPD 患者攻击行为的脑机制提供依据。**方法:** 检索 Web of Science 和 PubMed 数据库, 手动检查参考文献, 最终纳入 28 篇文章, 包括 13 篇结构性磁共振成像

(structural Magnetic Resonance Imaging, sMRI) 文章, 6 篇功能性磁共振成像(functional Magnetic Resonance Imaging, fMRI)文章, 8 篇正电子发射型计算机断层扫描 (Positron Emission Tomography, PET) 文章, 以及 1 篇磁共振波谱 (Magnetic Resonance Spectrum, MRS) 论文, 共包括 23 个边缘性人格障碍样本和 21 个健康对照样本, 总计 648 名 BPD 患者和 593 名健康对照被试。**结果:** 所有研究均为横断面设计, 各项研究之间异质性较高, 在研究方法与控制变量 (如样本性别比例、利手、病史、服药等) 上差异较大。多数 sMRI 文章发现攻击与边缘系统和涉及情绪加工与行为控制的皮层 (如眶额叶、前扣带回皮层、脑岛等) 密切相关, 其关系受到偏侧化、症状类型和严重程度等因素的影响, 但有 3 篇报告攻击行为与杏仁核、海马体、眶额叶皮层等结构灰质体积之间缺乏显著相关。2 篇 fMRI 论文显示攻击行为与默认网络和突显网络内静息态功能连接改变相关, 另有 3 篇采用诱导攻击实验范式发现攻击状态下 BPD 患者从脑区 (海马、杏仁核) 到网络 (默认网络、控制网络、情感环路) 均存在异常激活。2 篇 PET 论文采用行为学范式表明 BPD 患者在愤怒状态下, 眶额叶、杏仁核、纹状体等区域相对葡萄糖代谢率存在异常变化。另外, sMRI、fMRI 与 PET 三种类型研究都显示在攻击行为和脑影像结果中, BPD 患者存在显著的性别差异。**结论:** 当前研究揭示 BPD 患者攻击行为与边缘系统和皮层的体积改变密切相关, 存在脑网络激活与连接异常, 且存在大脑内糖代谢改变, 但这些异常改变和边缘性人格障碍症状之间的因果关系尚待探索。未来研究应该致力于完善对关键变量的控制, 采取更优研究方法 (如纵向研究), 进一步探索 BPD 患者攻击行为的神经学基础。

A Systematic Review of Neuroimaging Studies of Aggression in Borderline Personality Disorder

Jun Chu¹, Kaili Zheng¹, Jinyao Yi^{1,2}

1 Medical Psychological Center, The Second Xiangya Hospital, Central South University, Changsha, Hunan, China

2 Medical Psychology Institution, Central South University, Changsha, Hunan, China

Abstract: Background: 73% of patients with Borderline Personality Disorder (BPD) have engaged in aggressive behaviors. Neuroimaging studies have suggested that aggression among BPD patients is linked to the abnormality of structure and function in brain. This systematic review summarizes current research results on aggression among BPD patients and provides an overview of relevant brain mechanisms. **Methods:** A systematic search of PubMed and Web of Science databases, in addition to a manual check of references, identified 28 articles eligible for the review, including 13 about structural magnetic resonance imaging (sMRI), 6 about functional magnetic resonance imaging (fMRI), 8 about positron emission tomography, and 1 about magnetic resonance spectrum. The review covered 23 BPD and 21 Healthy Control samples, encompassing 648 patients with BPD and 593 controls. **Results:** The studies included all were cross-sectional, which were heterogeneous in terms of choosing approaches and controlling variables (e.g. gender, handedness, medical history, medication). Most sMRI studies reported close relationships between aggression and limbic system and cortex regions involved in emotion processing and behavioral control, such as orbitofrontal cortex (OFC), anterior cingulate cortex (ACC), and insula. These relationships were affected by laterality, and type and severity of symptoms. Nevertheless, 3 articles reported no significant relationship between aggression and gray matter volume (GMV) in amygdala, hippocampus, and OFC. Two fMRI articles linked aggression to altered resting-state functional connectivity in Default Mode Network (DMN) and Salience Network (SN), while 3 others adopting an induced aggression paradigm detected abnormal activation in regions (hippocampus and amygdala) and in networks (SN, control network, and emotion circuit) during aggression among BPD patients. Two PET studies adopting an aggressive behavioral task reported that under provocation BPD patients showed altered relative glucose metabolic rate in OFC, amygdala, and striatum. All three types of imaging studies reported significant gender differences in aggressive behaviors and neuroimaging results. **Conclusion:** The current literature has revealed the relationship between aggression in BPD and aberrant volumes of the limbic system and frontal cortex, abnormal activation and network connectivity, and alterations in brain glucose metabolism, while the causal

relationship between these changes and BPD symptoms needs to be confirmed in future research. This review suggests future studies to better control the confound variables and adopt longitudinal design to further explore the neurological basis of aggression in BPD patients.

Keywords: Borderline Personality Disorder, Aggression, Neuroimaging

工作记忆负荷和数学能力对 SNARC 效应的影响

---- 一项 ERP 的研究

韩妮¹ 李富洪¹ 曹碧华²

江西师范大学心理学院,南昌,330000,86457222@qq.com

摘要 空间—数字反应编码联合效应 (Spatial—Numerical Association of Respond Codes effect, 简称 SNARC) 是指在奇偶判断任务中, 被试左手对小数字反应更快, 右手对大数字反应更快的倾向。以往研究发现 SNARC 效应不仅稳定存在于长时记忆的心理数字线上, 同时还会受到不同的工作记忆负荷的影响, 具有很大的灵活性 (Deng, Chen, Xiao, & Li, 2017)。但目前 SNARC 效应受到工作记忆负荷影响的脑机制研究并不清楚。此外, SNARC 效应和个体数学能力之间的关系目前未得出一致的结果 (Hoffmann et al., 2014; He et al., 2021), 但个体的数学能力越高, 抑制控制能力越强, 且抑制控制能力会调节着 SNARC 效应的大小。本研究采用相对大小比较任务和 N-back 任务相结合的双任务范式, 选取文科组 (文学相关专业) 和理科组 (数学相关专业) 作为数学能力高低的指标, 来考察在 0-back 和 1-back 两种负荷下, 两组被试的 SNARC 效应是如何受到数学能力影响的。行为结果表明, 不管是 0-back 还是 1-back 负荷下, 文科组出现经典的 SNARC 效应, 而理科组的 SNARC 效应消失。这表明数学能力越高, SNARC 效应越弱。脑电结果发现, (1) 0-back 条件下, 文科组在额部和顶枕部的早期 N1、P2 波幅以及晚期 P3 波幅上均存在 SNARC 效应, SNARC 一致的波幅比不一致的波幅更正; 而理科组 SNARC 效应只存在于早期的额部和顶枕部的 N1、P2 以及额部 N2 波幅, SNARC 一致的波幅比不一致的波幅更正。(2) 1-back 条件下, 文科组的 SNARC 效应出现在额叶、顶叶的 P2、N2 及 P3 波幅成分, SNARC 不一致的波幅比一致波幅更正; 而理科组的 SNARC 效应只出现于早期 N1、P1 波幅和 P2 潜伏期, SNARC 不一致的波幅比一致波幅更正。(3) 文科组的顶枕 P3 波幅随着负荷的增加而减小, 表明随着刷新程度的增加, P3 波幅减小, 1-back 水平下需要更多的注意资源来完成任务。这些结果说明, SNARC 效应的大小及其发生阶段会受到数学能力的影响。文科组的 SNARC 效应发生在早期的知觉表征阶段和晚期的反应选择阶段, 理科组的 SNARC 效应只发生在早期的知觉表征阶段。这可能是由于理科组对数字更加敏感, 抑制控制能力更强, 能够更早地检测并解决与数字空间相关的冲突。

The influence of working memory load and mathematical ability on the SNARC effect: An ERP study

Han Ni¹, Li Fuhong¹, Cao Bihua²

School of Psychology, Jiangxi Normal University, Nanchang

Abstract: Spatial—Numerical Association of Respond Codes effect refers that participants tend to respond faster to small numbers with their left hands and faster to large numbers with their right hands in the parity task. Previous studies have found that the SNARC effect exists not only stably in the mental number line of long-term memory, but also affected by different working memory loads, which has great flexibility (Deng, Chen, Xiao, & Li, 2017). However, the research on the neuromechanism of the SNARC effect affected by working memory load is relatively unclear. In addition, the relationship between the SNARC effect and individual mathematical ability is still controversial (Hoffmann et al., 2014; He et al., 2021). However, the higher the individual's mathematical ability, the stronger the inhibitory control ability, and the inhibitory control ability regulates the size of the SNARC effect. In the study, a dual-task paradigm combining the relative magnitude comparison task and the N-back task was adopted. We selected literature students (literature majors) and science students (math majors) as the indicators of mathematical

ability, to investigate how the SNARC effect affect by mathematical ability in both groups under 0-back and 1-back conditions. The behavioral results showed that under either 0-back or 1-back condition, the classical SNARC effect appeared in the literature group while the SNARC effect disappeared in the science group. It suggests that the higher mathematical ability, the weaker the SNARC effect. Moreover, the ERP results demonstrated that (1) under the 0-back condition, the SNARC effect in the literature group appeared on the early N1、P2 and the late P3 amplitudes in frontal and parietooccipital regions, SNARC compatible amplitude was more positive than incompatible amplitude; the SNARC effect in the science group only existed in the early frontal and parietooccipital N1, P2 and frontal N2 amplitudes, SNARC compatible amplitude was more positive than incompatible amplitude. (2) Under the 1-back condition, the SNARC effect in the literature group appeared in P2, N2 and P3 amplitudes in frontal and parietal lobes, SNARC incompatible amplitude was more positive than compatible amplitude; the SNARC effect in the science group only appeared in the early N1, P1 amplitudes and P2 latency, SNARC incompatible amplitude was more positive than compatible amplitude. (3) P3 amplitude in parietooccipital regions decreases with the increase of load in the literature group, indicating that P3 amplitude decreases with the increase of the updating degrees, and more attention resources are needed to complete the task at the 1-back condition. These results indicated that the size and processing stage of the SNARC effect are affected by mathematical ability. The SNARC effect in the literature group occurred in the early stage of perceptual representation and the late stage of response selection, while the SNARC effect in the science group only occurred in the early stage of perceptual representation. It may be due to science group being more sensitive to numbers, inhibitory control ability being stronger and being able to detect and resolve numerical-spatial conflicts earlier.

网络游戏成瘾者在决策后赌博任务中 内侧前额叶功能异常与元认知行为的相关

陈晶^{1,2} 成晓彤¹, 秦成¹, 雷威^{1,2}

1 西南医科大学附属医院精神科, 泸州, 646000

2 西南医科大学附属医院神经疾病与脑功能实验室, 泸州, 646000, 通讯作者 leiwei_fy@swmu.edu.cn

摘 要 网络游戏成瘾(IGD)是一种行为成瘾障碍,自我意识功能失调是成瘾的一个关键特征,导致对成瘾行为的自我控制受损。元认知被定义为对自身认知状态的认知,它使个体能够在目标导向行为中评估自己的表现,并能够据此指导合适的行为选择。本研究旨在通过比较44个IGD患者组与46个健康对照组(HC)在完成知觉决策后进行元认知选择(可选的赌博或放弃)与电脑选择(迫选的赌博或放弃)任务时的行为和功能磁共振成像数据的组间差异,以考察IGD基于元认知的行为选择是否存在异常以及相关的脑区神经基础。行为结果发现,知觉决策阶段,IGD组的决策准确性显著高于健康对照;而元认知选择阶段,IGD组的可选放弃率与元认知能力(γ)均无显著性异常。fMRI结果显示,知觉决策阶段,相比于HC组,IGD组的额上回、壳核、顶下小叶、颞下回激活增强。并且IGD组的左侧额上回的脑区活动与决策准确性显著负相关,与冲动性量表得分(BIS)显著正相关,而HC组壳核的脑区活动与决策准确性及反应时显著正相关。此外,元认知选择阶段,相比于HC组,IGD组的内侧前额叶(ACC)激活减弱,而额上回激活增强。并且IGD组与HC组ACC的脑区活动均与可选放弃率显著正相关。并且HC组ACC和额上回的脑区活动与 γ 显著负相关。本研究结果表明IGD者基于元认知的行为选择并未表现异常,但与元认知相关的脑区可能存在功能受损。

Dysfunctional medial prefrontal function is associated with metacognitive behavior in People with internet gaming disorder during the post-decision wagering task

Jing Chen^{1,2}, Xiaotong Cheng¹, Cheng Qin¹, Wei Lei^{1,2}

¹ Department of Psychiatry, The Affiliated Hospital of Southwest Medical University, Luzhou, China, 646000

² Laboratory of Neurological Diseases and Brain Function, The Affiliated Hospital of Southwest Medical University, Luzhou, China, 646000,
Email: leiwei_fy@swmu.edu.cn

Abstract: Internet gaming disorder (IGD) is a kind of behavioral addiction disorder. Dysfunctional self-consciousness is one of the key characteristics of addiction, contributing to compromised control over addictive behaviors. Metacognition is defined as cognition about one's own cognitive state, which enables us to estimate our own performance during goal-directed actions and to select a suitable strategy based on that estimation. This study compared the differences in behavior and fMRI data between 44 IGD patients and 46 healthy controls (HC) when they performed a metacognitive choice (optional wager or pass) and computer choice (forced wager or pass) tasks after perceptual decision making. To investigate whether there were abnormal metacognitive behavioral choices in IGD and the neural substrates. Behavioral results showed that the decision accuracy of IGD was significantly higher than that of HC in perceptual decision-making stage. However, in the metacognitive selection stage, there was no significant abnormality in the optional pass rate and metacognitive sensitivity (gamma) in the IGD group. The fMRI results showed that, compared with the HC, the IGD showed enhanced activation in the superior frontal gyrus, putamen, inferior parietal lobule and inferior temporal gyrus during the perceptual decision-making stage. And the activity of the left superior frontal gyrus was negatively correlated with decision accuracy and positively correlated with Barratt Impulsiveness Scale (BIS) score in the IGD. While the activity of the putamen was positively correlated with decision accuracy and response time in the HC. Furthermore, during metacognitive selection, the IGD group demonstrated reduced activation in the medial prefrontal lobe (ACC) and increased activation in the superior temporal gyrus compared to the HC group. In addition, ACC brain activity in both IGD group and HC group were significantly positively correlated with the optional pass rate. However, the activity of ACC and superior temporal gyrus was negatively correlated with gamma in HC. These findings suggest that IGD did not exhibit abnormal metacognition behavior, but metacognition-related brain regions may have impaired functions.

抑郁特质者对音乐和面孔情绪的识别

王挺¹ 喻妍¹ 肖三蓉²

¹ 江西中医药大学人文学院, 南昌 330004

² 南昌大学公共管理学院, 南昌 330031, xsrong0791@163.com

摘要 抑郁会导致情绪障碍和思维迟缓, 情绪与抑郁的关联成为研究的热点。抑郁特质者识别音乐情绪和面孔情绪是否具有特定敏感度, 且这些情绪识别能力是否受到视听跨通道信息整合的影响? 这些问题还有待探索。本研究选取 27 名高抑郁特质者和 31 名低抑郁特质者, 采用单通道和跨通道的情绪启动范式对此进行探究。研究结果显示, 在单通道情绪识别任务中, 当音乐情绪与面孔情绪不一致时, 高抑郁特质组的音乐和面孔情绪识别能力与低抑郁特质组存在显著性差异, 表现为高抑郁特质者的反应更快, 准确率也更高。在跨通

道的情绪识别任务中, 分别研究以音乐和面孔情绪为启动刺激下对音乐与面孔表情目标刺激的反映, 结果表明当视觉与听觉情绪不一致时, 高抑郁特质者在跨通道信息处理中体现出较强的能力。本研究结果表明, 抑郁特质者表现出较高的音乐情绪敏感性与较低的面孔情绪敏感性, 同时其跨通道信息处理能力较强。

Abstract: Depression can lead to emotional disorders and mental retardation, and the association between emotion and depression has become a hot research topic. Previous studies have examined musical and facial emotion recognition in depression-like traits. However, findings remain to be explored. In this study, using within- and cross-modal affective priming paradigm, we examined musical and facial emotion recognition in depression-like traits. 27 high depression-like traits and 31 low level of depression-like traits were selected to explore this by adopting within-modal and cross-modal affective priming paradigm. The results showed that when the music emotion was inconsistent with the face emotion, there was a significant difference between the music and face emotion recognition ability of the high depression-like trait and the low depression-like traits with a within-modal affective priming paradigm. The reaction of the high depression trait was faster and the accuracy was higher than the low depression trait. We studied the subjects' reaction to target stimulation when target facial images/musical chords were primed by affectively congruent or incongruent musical chords/facial images with a cross-modal affective priming paradigm. The results showed that high depression-like traits showed stronger ability in cross-modal information process when the visual and auditory emotions were inconsistent. Our findings suggest that the depression-like traits show higher level of ability of music emotion recognition and lower level of ability of facial emotion recognition, and their ability of cross-modal information process is stronger.

Keywords: depression-like traits; priming paradigm; music emotion recognition; facial emotion recognition

音乐序列学习的认知神经机制：一项基于 EEG 的研究

赖思羽¹ 滕相斌² 杜忆¹

1 中国科学院心理研究所, 北京, 100101

2 马克斯·普朗克人类发展研究所, 柏林, 14195, siyu.lai.valerie@gmail.com

摘要 像语言一样, 音乐将听觉上的离散元素组织成有层级的序列。前人研究主要集中于对音乐序列层级结构的感知和识别, 及分析其相对应的多种 ERP 成份。然而, 鲜少有研究探究大脑在线加工、学习和记忆音乐序列中的高级层级结构的过程, 音乐序列学习的神经指标与神经机制尚不明确。在当前的研究中, 我们选取 10 首高度结构化(包含多个规整乐句)的巴赫音乐片段作为材料, 通过将每个乐段给被试重复播放 10 遍来模拟自然环境中的音乐学习过程。一共有 21 名未受过专业音乐训练的成年被试参与了实验, 我们通过问卷收集了被试的音乐训练经历和学习后对每首歌曲的记忆程度, 并使用 EEG 记录了被试音乐学习全过程的神经响应, 以探究被试学习和记忆音乐序列中层级结构的认知神经机制。通过计算被试大脑信号与声学信号在频域上的相干(Cacoh), 我们发现了与前人研究一致的大脑对节拍频率和音符频率的神经响应, 但频域上的该神经响应不受聆听音乐遍数的调节。相反, 通过在时域上的分析我们发现: 随着重复聆听音乐片段遍数的增多, 对音乐序列平均记忆程度更好的被试在跨乐句边界处的时间响应函数(TRF)权重上表现出更快速的下降。该现象证明了人脑可以通过被动地重复听音乐来逐步学习音乐乐句的高级结构, 且 TRF 能精细地反映与个体记忆程度相关的对音乐层级结构的学习效应, 是一种在时域上可以用来探究对音乐学习与记忆的认知神经机制的敏感工具。在后续的研究中, 我们可以使用更前沿的分析方法如表征相似性分析(可以提供音乐序列神经表征的具体信息)或时频分析(可以同时提供时域和频域的信息)来更深入地研究音乐序列学习的认知神

经机制。

The Cognitive Neural Mechanism Underlying Music Sequences Learning: An EEG Study

Siyu Lai¹, Xiangbin Teng², Yi Du¹

1 Institute of Psychology of the Chinese Academy of Sciences, Beijing, 100101

2 Max-Planck-Institute for Human Development, Berlin, 14195

Abstract: Same as language, perceptually discrete elements are organized into hierarchically structured sequences in music. Previous studies mainly focus on the perception and recognition of the hierarchical structures in music sequences, and analysis of corresponding ERP components. However, few studies have explored the procedure of online processing, learning, and memory of higher-level structures in music sequences; the neural signatures and neural mechanisms of music sequence learning remain largely unclear. In the current research, we selected 10 highly structured Bach music pieces (including multiple regular phrases) as materials, and simulated the music learning procedure in natural environment by repeatedly presenting each music piece to participants for 10 times. A total of 21 adult participants who have not received professional music training were recruited in the experiment. We collected the participants' music training experience and the degree of memory of each music piece after learning through questionnaires, and employed EEG to record the neural signals of participants' entire learning procedure to explore the mechanism underlying how participants learn and memorize hierarchical structures in music sequences. By calculating the coherence between the participants' cerebral signals and acoustic signals (Cacoh) in the spectral domain, we found neural tracking at beat and note frequencies, which is consistent with previous studies. However, the magnitude of neural tracking was neither modulated by the number of music repetitions nor the memory scores of music pieces. On the contrary, by conducting analysis in the temporal domain, we found that through repetitions of listening, people who memorized the music sequence better showed a sharper decrease on the weights of temporal response function (TRF) over boundary beats of musical phrases. Overall, our research proves that the human brain is capable of gradually learning the high-level structure of musical phrases by passively and repeatedly listening to music. And TRF can precisely reflect the learning effect on the hierarchical structure of music related to the individuals' memory, thus provides a sensitive tool to explore the cognitive neural mechanisms of music sequence learning and memory. In the future, we can further analyze the data using methods like representational similarity analysis which can provide more information about neural representation of music sequences, or time-frequency analysis which can provide resolution in both temporal and spectral domains, to gain a deeper understanding of human music sequence learning.

生成音乐认知：音乐心理学的新进展

周卓钊¹ 欧阳敏^{1,2} (通讯作者) 谢金¹ 彭旻³

1 湖南师范大学教育科学学院, 长沙, 410018

2 湘南学院学生工作处, 郴州, 423099, 通讯作者: 21726798@qq.com

3 King's Health Economics Institute of Psychiatry, Psychology & Neuroscience at King's College London, London, SE5 8AF

摘要 生成音乐认知是音乐心理学中对生成认知心理学方法论的应用和推广。主要理论上, 继承和发展了瓦雷拉“生命——心灵连续统一体”的命题, 即音乐是通过身体语言(具身化)积极洞察他人思绪的特有的生命过程。同时, 对德耶格等人的“社会协同论”的原理又巧妙加以运用。与传统音乐认知是个体大脑的信息加工观点不同, 生成音乐认知是将认知视为一种不同个体参与社会互动的结果, 将音乐视为一种联系他人的组

带社交活动。因而，音乐认知可被理解为参与该互动过程双方“系统性地共同生成”的，是互动双方通过在不断变化的环境中即时、熟练地参与音乐的时间来展开互动，同时具备音乐知觉产生在双方互动全过程变化复杂性和任何一方的差异性，在这个过程中，交往的双方都可以获得对方脸、声音、手和脚以及与周围互动形成的固定模式的可以达到产生共鸣的动机和感受的体验，可以使人类更为成熟地表达情感。方法论上，较之于传统音乐认知主要有三个方面的转变：研究视角上，从生物-文化视角转向社会文化-历史视角；研究路线上，从个体主义的还原论转向人际互动的整体论、具身论；研究方法上从二分法(客观主义/主观主义，内部/外部，先天/后天等)转向主客同一、主体间性。生成音乐认知研究者在音乐疗法等方面有一定的实证成果，例如对新生儿同理心、音乐疗法的理论和实证探索，总结出音乐播放在引出和引导新生儿的交流中起着至关重要的作用，因为人类从出生起就以相对复杂的方式对音乐做出反应。同时，音乐是一种用来启动新生儿同理心的工具，从而音乐疗法可以适用于新生儿等群体。生成音乐认知起步较晚，但有一定的理论基础，并拓宽了音乐心理学研究范畴，未来，生成音乐认知应该注重对 4E 认知理论整合和运用，并结合人的完整形象和实践本质产生更多有益的实证成果。

London, London, SE5 8AF

Abstract: Enactive cognitive music is the application and promotion of enactive cognitive psychology methodology in music psychology. In the main theory, it inherits and develops Varela's proposition of "the life-mind continuum", namely that music is a unique life process of positive insight into the thoughts of others through body language (embodied). At the same time, the principle of "social synergy theory" of De Jaeger et al. is skillfully applied. Different from the traditional view that music cognition is the information processing of individual brain, music cognition is generated by regarding cognition as the result of different individuals' participation in social interaction and music as a social activity that connects others. Music cognition can be understood, therefore, to participate in the interactive process of both sides "systematically co-determined", is the interaction between both sides in the changing environment of real-time, skillfully to participate in the music of time to interact, to have a combination of music perception changes produced in the interaction process complexity, and the differences of each other, in the process, communication both sides can obtain the other side of the face, voice, hands and feet, and interact with the surrounding formation of the fixed pattern to resonate with motives and feelings of experience, can make the human more mature to express emotion. In terms of methodology, compared with traditional music cognition, there are three main changes: from the research perspective, from the bio-cultural perspective to the socio-culture-historical perspective; On the research line, from the reductionism of individualism to the holistic theory of interpersonal interaction, embodied theory; On the research methods from the dichotomy (objectivism/subjectivism, internal/external, nature/nurture, etc.) to the subject-object identity, intersubjectivity. Enactive music cognitive researchers in such aspects as music therapy has certain empirical results, such as newborns for empathy, the exploration in both theory and practice of music therapy, music playback is summarized in the lead and guide the newborn's communication plays a vital role, because humans from birth to respond to music in the form of relatively complex. At the same time, music is a tool used to activate newborn empathy, so that music therapy can be applied to groups such as newborns. Enactive music cognition started late, but it has a certain theoretical basis and broadens the research scope of music psychology. In the future, Enactive music cognition should pay attention to the integration and application of '4E cognition psychology' theory, and produce more beneficial empirical results by combining the complete image of human and the essence of practice.

摘要 当前, 高校大学生的人际敏感问题持续高发, 因人际敏感导致的不良事件引发社会广泛关注。而在网络发达的年代, 大学生每天都会浏览大量的信息, 高人际敏感的大学生是否会对负性的内容和高自我卷入的文字更关注和投入, 尚未得到研究探讨。因此, 本研究采用眼动技术探讨高人际敏感大学生对情绪材料 and 自我卷入感材料加工的注意偏向。实验采用 2(高、低人际敏感)×3(正性、中性、负性情绪词)×2(高、低自我卷入)的混合设计, 人际敏感组为被试间变量, 情绪词和自我卷入感为被试内变量。实验材料: 参照罗跃嘉等人的汉语情感词系统搜集三种情绪效价的两字情绪词, 通过前测让被试完成对情绪词效价、唤醒度和熟悉度的 7 点评定, 根据分析结果分别筛选出正、中、负性的情绪词。以第一人称(如我、我们)作为高自我卷入感材料; 以第三人称(如他/她、小明等)作为低自我卷入感材料。接着, 通过文献分析方法和专家评定法完成 120 个自编的人际情境句子, 同时控制了字数、句子结构及情绪词在句子中的位置及成分, 每一个句子包含一种类型的情绪词和一类自我卷入的名称。实验前被试先完成 SCL-90 量表中的人际敏感因子分量表, 要求被试阅读一系列相关句子后完成共 24 个词汇再认任务, 同时使用 Tobii300 眼动仪追踪被试的眼动轨迹。实验结果发现: (1) 人际敏感程度越高, 对词汇的判定标准越严格, 对负性情绪材料的感受性越弱。(2) 高人际敏感被试存在对负性情绪词的注意偏向, 表现为总注视时间更长以及注视次数更多。(3) 高人际敏感被试不存在自我卷入感偏好, 表现为对高、低自我卷入感材料的总注视时间无显著差异。本研究结果表明, 高人际敏感的大学生可能存在对负性情绪词语的自动地注意偏向, 高人际敏感的大学生在阅读负性情绪词的时候不受自我卷入感的影响。

Abstract: At present, the interpersonal sensitivity problems of college students often have happen much, and the adverse events caused by interpersonal sensitivity have aroused widespread concern in the society. However, in the

era of Internet, college students will browse a large amount of information every day. It is not sure whether college students with high interpersonal sensitivity will pay more attention to negative or high self-involvement content and words. Therefore, this study aim to used eye movement technology to explore the high interpersonal sensitivity college students' attention bias with the emotional materials and self-involvement materials. The mixed design of 2(high and low interpersonal sensitivity) $\times$ 3(positive, neutral and negative emotional words) $\times$ 2(high and low self-involvement) was adopted in the experiment. The interpersonal sensitivity group was the between variable of the subjects, and the emotional words and self-involvement were the within variables of the subjects. Experimental materials: The two-character emotional words with three emotional valence were collected by referring to the Chinese emotional words of Luo Yuejia et al.. The pretest tested the emotional valence, arousal and familiarity of emotional words. According to the analysis results, positive, medium and negative emotional words were selected. The first person (I, we) as the material of high self involvement; Use the third person (he/she, Xiaoming, etc.) as the material of low self involvement. Then, through literature analysis and expert evaluation, 120 self-compiled interpersonal sentences were completed. Meanwhile, the word count, sentence structure and the position and composition of emotional words in the sentences were controlled. Each sentence contained a type of emotional words and a type of self-involvement. Before the experiment, the subjects completed the interpersonal sensitivity factor sub-scale of the SCL-90 scale. After reading a series of related sentences, the subjects were required to complete a total of 24 vocabulary recognition tasks. Meanwhile, the Tobii300 eye tracker was used to track the eye movement of the subjects. Experimental results showed that:(1) the higher interpersonal sensitivity, the stricter the criteria for vocabulary, and the weaker the sensitivity to negative emotional materials. (2) Subjects with high interpersonal sensitivity tended to pay more attention to negative emotional words, which was manifested as longer total gaze time and more gaze times. (3) Subjects with high interpersonal sensitivity had no preference for self-involvement, which showed that there was no significant difference in the total fixation time of materials with high and low self-involvement. This indicates that college students with high interpersonal sensitivity may have an automatic attention bias towards negative emotional words, and they are not affected by self-involvement when reading negative emotional words.

急性应激对积极和消极情绪在注意定向和注意解除中的影响

杨盛娇^{1,2}, 谢娇^{1,2}, 张禹^{1,2}, 罗禹^{1,2}, 通讯作者)

1 贵州师范大学心理学院, 贵阳, 550025

2 贵州师范大学心理学院应激与注意实验室, 贵阳, 550025, yuluo@gznu.edu.cn

摘要 急性应激是个体对不可预期和不可控的环境无法调节时所做出的反应。注意偏向是说与中性刺激相比, 个体把注意更多的分配到情绪刺激上。研究发现, 急性应激影响个体对情绪刺激的注意偏向, 但如何影响注意定向和注意解除的原理尚不清楚。因此, 本研究使用眼动技术探讨了急性应激对情绪刺激在注意定向和注意解除成分中的影响, 本研究将 50 名大学生随机分成两组 (每组 25 人): 应激组 (接受 MAST 急性应激任务) 与控制组。所有被试者进入实验室后分别采集两次唾液皮质醇和状态焦虑量表的基线数据, 在采集之后对应激组进行应激诱发并进行眼动任务。眼动任务中对三种类型图片对 (高兴—中性, 厌恶—中性, 悲伤—中性) 自由观看, 之后收集注意投入和脱离的反应时数据并进行了皮质醇和状态焦虑数据收集。实验结果表明: (1) 状态焦虑分数, 组别和时间交互作用不显著, 但应激诱发后, 应激组的状态焦虑分数显著大于控制组。 (2) 皮质醇浓度, 组别和时间交互作用显著, 简单效应分析, 应激诱发后应激组皮质醇浓度明显大于控制组。 (3) 行为学数据表明组别主效应显著, 事后检验发现, 应激组反应时显著大于控制组。组别、注意类型、效价三方交互作用显著, 简单效应分析发现: 注意定向中, 应激组对高兴和悲伤面孔的反应时显著大于控制组。注意解除中, 应激组对厌恶和悲伤的反应时显著大于控制组。 (4) 眼动数据, 首视点定向偏向分数和首视点潜伏期偏向分数的组别和效价交互作用不显著。首视点注视时间偏向分数和总注视时间偏向分数的组别和效价交互作用显著, 简单效应分析: 应激组对厌恶面孔的首视点注视时间偏向分数显著大于控制

组, 应激组在高兴面孔上的首视点注视时间偏向分数显著小于悲伤面孔。应激组对悲伤面孔的总注视时间偏向分数显著大于控制组。综上所述, 急性应激会导致消极情绪在注意解除中的影响, 然而其在注意定向中的相关性影响并未发现。

关键词 急性应激, 注意定向, 注意解除

Effects of acute stress on positive and negative emotions in attention orientation and attention relief

Yang Shengjiao^{1,2}, Xie Jiao^{1,2}, Zhang Yu^{1,2}, Luo Yu^{1,2}

1 Department of Psychology, Guizhou Normal University, Guizhou, Guiyang

2 Laboratory of Stress and Attention, Department of Psychology, Guizhou Normal University, Guizhou, Guiyang

Abstract: Acute stress is an individual's response to an unpredictable and uncontrollable environment. Attention bias means that individuals pay more attention to emotional stimuli than to neutral stimuli. It is found that acute stress affects the attention bias of individuals to emotional stimuli, but the mechanism of how it affects attention orientation and attention removal is not clear. Therefore, this study used eye movement techniques to explore the effects of acute stress on emotional stimuli in attentional orientation and attentional release components. Fifty college students were randomly divided into two groups (25 per group): the stress group (MAST acute stress task) and the control group. After entering the laboratory, all subjects collected baseline data of salivary cortisol and state anxiety scale twice, and then stress-induced and eye-movement tasks were performed in the stress group. During the eye movement task, three types of image pairs (happy -- neutral, aversive -- neutral, sad -- neutral) were viewed freely, and then data on attention engagement and disengagement responses were collected and cortisol and state anxiety data were collected. The experimental results showed that : (1) the state anxiety score, group and time interaction were not significant, but after the stress induced, the state anxiety score of the stress group was significantly higher than that of the control group. (2) Cortisol concentration, group and time interaction were significant. Simple effect analysis showed that cortisol concentration in stress group was significantly higher than that in control group after stress induced. (3) Behavioral data showed that the main effect of the group was significant, and the post-test found that the stress group was significantly greater than the control group in response. The interaction among groups, attention types and titers was significant. The simple effect analysis showed that in attention orientation, the response of the stress group to happy and sad faces was significantly higher than that of the control group. In the attention relief, the response of the stress group to disgust and sadness was significantly greater than that of the control group. (4) For eye movement data, there was no significant interaction between groups and titers of first sight orientation bias score and first sight latency bias score. The interaction between the group and titer of the first sight fixation time bias score and the total fixation time bias score was significant. Simple effect analysis: the first sight fixation time bias score of the stress group was significantly higher than that of the control group, and the first sight fixation time bias score of the stress group was significantly lower than that of the sad face. The total gaze time bias score of the stress group was significantly higher than that of the control group. In conclusion, acute stress can lead to the effect of negative emotion in attention relief, but its correlation effect in attention orientation has not been found.

Keywords: acute stress, attention orientation, attention relief

视觉搜索中双目标成本的老化效应

张凤筠^{1,2} 解鸿宇^{1,2} 王敬欣^{1,2} (通讯作者)

1 天津师范大学心理学部, 天津, 300387

2 天津师范大学心理与行为研究院, 天津, 300387, wjxpsy@126.com

摘要 视觉搜索是人们获取外界信息进行加工的一种重要方式。在视觉搜索过程需要个体从某一刺激背景中找出特定的刺激, 具有较高的目的性。而在背景中同时搜索两个目标会比独立搜索两次单目标的过程更慢

且更不准确。双目标成本(dual-target cost)效应预示着两种注意资源的竞争以及个体对注意进行分配的控制能力。在青年人中,双目标成本效应是普遍存在的,但是目前对于视觉搜索中双目标成本的老化效应还缺乏实证研究支持,且老年人自上而下的加工的增强还是自下而上的注意的损伤还存在争议。青年人和老年人在视觉加工上的认知策略差异还未得出一致结论。研究使用不同的颜色线索和方向定义目标和干扰物,建立双目标搜索条件和单目标搜索条件。采用 2(年龄:青年人、老年人) $\times$ 2(搜索类型:单目标、双目标) $\times$ 3(搜索子集:4、8、12)的混合实验设计,对青年人和老年人的眼动轨迹进行追踪,探讨青年人和老年人在视觉搜索过程中的双目标成本效应和视觉加工机制。结果发现,与青年人相比,老年人在双目标条件下的潜伏期更长,对干扰物的注视次数更多,回视次数更多,在搜索子集更大时表现出搜索困难。表明老年人对于干扰信息的抑制能力减弱,更多的依赖线索信息引导视觉搜索,使用更为保守的视觉搜索策略,与青年人相比老年人在视觉搜索过程中有着更大的双目标成本。

关键词 视觉搜索,双目标成本,搜索子集,老化效应,眼动

Age-related dual-target cost in visual search

Fengjun Zhang^{1,2}, Hongyu Xie^{1,2}, Jingxin Wang^{1,2}

1 Department of Psychology, Tianjin Normal University, Tianjin, 300387

2 Academy of Psychology and Behavior, Tianjin Normal University, Tianjin, 300387

Abstract: Visual search is an important way for people to obtain external information for processing. The process of visual search requires individuals to find specific stimuli from a certain stimulus background, which has a high purpose. Simultaneous search for one of two targets is slower and less accurate than for a single target. The dual-target cost effect predicts the competition between the two kinds of attention resources and the individual's ability to control the distribution of attention. Dual-target cost effect was prevalent among young adults, but there was still a lack of empirical research to support the aging effect of dual-target cost in visual search, and there was still a dispute whether the enhancement of top-down processing or the damage to bottom-up attention in the older adults. No consensus has been reached on the differences of cognitive strategies in visual processing between the young adults and the older adults. Different color cues and directions were used to define the target and the distractors, and dual-target search conditions and single target search conditions were established. A 2(age: young adults vs. older adults) $\times$ 2(search types: single target vs. double target) $\times$ 3(set size: 4, 8, 12) mixed factorial design was used to track the eye movements of young adults and older adults, and to explore the cost effect and visual processing mechanism of young adults and older adults in the visual search process. The results showed that, compared with the young participants, the older participants had a longer latency period, a greater number of fixations on the distractors, to recheck previously inspected areas of the display more often. The results suggest that the older adults were unable to inhibit irrelevant information, relied more on cue information to guide visual search, and used more conservative visual search strategies. Compared with the young, the older adults had greater dual-target cost in visual search.

Keywords: Visual search, Dual-target cost, Set size, Aging, Eye movement

物质主义价值观对跨期决策偏好的影响：来自信息加工过程的证据

苏倩如¹ 张阳阳¹ (通讯作者)

陕西师范大学心理学院, 陕西西安, 710119, yy.zhang@snnu.edu.cn

摘要 本研究采用眼动追踪技术,分别探讨了物质主义价值观对个体的跨期决策偏好及信息加工过程的影响。研究一采用 2(物质主义倾向:高/低) $\times$ 2(量级:大/小)的混合实验设计,使用物质主义价值观量表界定被试的物质主义倾向,因变量为折扣率。结果表明,物质主义倾向与量级的的主效应显著,其交互作用亦显著。在小量级条件下,高物质主义者在决策中表现出更强的冲动性、其折扣率显著高于低物质主义者;在大量级条件下,高物质主义者的折扣率低于低物质主义者,但其差异不显著。大量级条件下,两类物质主义倾向的被试折扣率均低于小量级条件下的折扣率,且存在显著差异。研究二在已有行为研究结果的基础上,通过眼动追踪,增加了对高低物质主义者决策过程差异的关注,以期对研究一行为结果的差异做出过程方面

的解释。研究二仍采用 2（物质主义倾向：高/低）×2（量级：大/小）的混合实验设计，因变量为被试的折扣率以及各项眼动指标。结果表明，与高物质主义者相比，低物质主义者做决策时，其注视时间及反应时更长，注视点数量更多，并使用更完整的信息搜索策略。

关键词 眼动追踪，物质主义价值观，跨期决策

The Influence of Materialist Values on Intertemporal Decision-Making Preference: Evidence from the Information Processing Process

Su Qianru¹, Zhang Yangyang¹

School of Psychology, Shaanxi Normal University, Xi'an 710119, yy.zhang@snnu.edu.cn

Abstract: This study uses eye tracking technology to separately explore the influence of materialistic values on individuals' intertemporal decision-making preferences and information processing processes. Study 1 adopts a mixed experimental design of 2 (materialism tendency: high/low) × 2 (magnitude: large/small), using the materialism value scale to define the subjects' materialism tendency, and the dependent variable is the discount rate. The results show that the main effect of materialism tendency and magnitude is significant, and the interaction is also significant. Under small-scale conditions, high-materialists are more impulsive in decision-making, and their discount rate is significantly higher than that of low-materialists; under large-scale conditions, high-materialists have a lower discount rate than low-materialists. Activists, but the difference is not significant. Under the large-scale condition, the discount rates of the two types of materialism tendencies are lower than the discount rate under the small-scale condition, and there are significant differences. Based on the results of the existing behavioral research, the second study increased attention to the differences in the decision-making process of high and low materialists through eye tracking, in order to explain the differences in the results of the first behavior. The second study still uses a mixed experimental design of 2 (materialist tendency: high/low) × 2 (magnitude: large/small), and the dependent variables are the discount rate of the subjects and various eye movement indicators. The results show that, compared with high-materialists, low-materialists have longer gaze time and reaction time when making decisions, have more gaze points, and use more complete information search strategies.

Keywords: Eye tracking, materialistic values, intertemporal decision-making

汉语阅读中的词汇识别是优先进行了整体加工吗？

辛丹仪¹ 徐乐阳¹ 靳金金¹ 李琳¹（通讯作者）

¹ 天津师范大学心理学部，天津，300387，linpsy@outlook.com

摘要 对于客体进行的视觉加工存在整体性和局部性两个层面。以人脸等非语言视觉对象的识别为例，大量研究证据强调整体处理的重要性，即所有部分都必须共同考虑。在字母识别中也发现了整体处理效应。然而，对汉字是否也得到整体处理的研究相对较少。另外，关于降低刺激质量究竟是影响早期视觉编码还是词汇通达的争论也鲜有借助汉字为材料进行的研究。为探讨以上两个问题，我们通过高斯模糊汉字的外部或内部的方法对句子中的汉字进行处理，模糊汉字外部相较于模糊内部更大程度上破坏了汉字的整体结构。同时，通过考察模糊条件可能对词频效应产生的影响来进一步探讨刺激质量的下降影响词汇加工的阶段。实验假设，首先，如果读者在正常阅读过程中倾向于利用整体信息来加快词汇识别过程，那么模糊外部应该比模糊内部表现出更大阻碍阅读的效果。因为模糊汉字外部相较于模糊内部更大程度上破坏了汉字的整体结构，模糊外部比模糊内部更不利于整体加工。相反，如果汉字识别不需要首先进行整体处理，我们不应看到模糊外部和模糊内部之间的任何区别。其次，如果文本模糊只影响视觉表征的早期编码，只能看到频率和模糊条件的主效应。否则，应看到频率和模糊条件的交互作用。当前研究采用 2（频率：高/低）×3（模糊条件：内部/外部/正常）被试内设计。在天津师范大学招募被试（18-23 岁）48 名，其中女生 30 名。结果发现：（1）外部和内部模糊条件的注视时间显著长于正常条件，在早期指标中，内部模糊条件需要比外部模糊条件更长的注视时间。（2）在跳读和回视中发现频率和模糊条件之间的存在交互作用。结果表明：（1）汉字的外形在阅读中并不是特别重要。汉字的识别不仅需要整体处理，还需要早期阶段的精细细节。（2）文本质量只影

响视觉和正字法特征的早期编码，没有影响词汇加工阶段。

Does word recognition in Chinese reading have a priority of overall processing?

Danyi Xin, Leyang Xu, Jinjin Jin, Lin Li

Faculty of Psychology, Tianjin Normal University, Tianjin

Abstract: Visual processing for objects has integrity and locality. Taking the recognition of non-verbal visual objects such as face, a lot of research evidence highlights the importance of overall treatment, namely that all parts must be considered together. The overall processing effect was also found in letter recognition. However, relatively little research whether the logographic Chinese characters are also holistically processed. Moreover, whether the stimulus quality reductions affect only the early visual encoding or also the lexical processing of words. However, there is only a few studies have been conducted on this issue in Chinese. To explore the above two problems, we used Gaussian blurring of outside or inside part of Chinese characters in Chinese. At the same time, by examining the effect that blur conditions may have on the effect of word frequency, we further explore the stage of lexical processing which is affected by the decrease of stimulus quality. The experiment assumes that, first, if Chinese readers tend to use the overall information to accelerate the vocabulary recognition process during the normal reading process, then the blur outside should show a more hindering effect of reading than the blur inside. Because blur Chinese characters external than blur internal to a greater extent destroy the overall structure of Chinese characters, blur external than blur internal is more detrimental to the overall processing. Instead, if Chinese character recognition does not require overall processing first, we should not see any difference between blur external and blur inside. Second, if the text ambiguity only affects the early encoding of the visual characterization, we can only see the main effects of the frequency and blur conditions. Otherwise, we should see the interaction between the frequency and the blur conditions. The current study uses the 2 (frequency: high / low) $\times$ 3 (blur condition: internal / external / normal) in-test design. Recruiting 48 subjects (ages 18-23) at Tianjin Normal University, including 30 girls. The results found that (1) Both outside and inside blurring conditions have significant longer fixations than normal condition and inside blurring condition requires longer fixations than outside blurring condition on early-stage measures. (2) The interactions between frequency and blur condition in skipping rate and regressions. The results show that: (1) the interactions between frequency and blur condition in skipping rate and regressions in, but not in any reading time measures. The findings indicate that exterior shape of Chinese characters is not especially important during reading. Chinese characters' recognition requires not only holistically processing, but also fine details on early stage. (2) Text quality affects only the early encoding of visual and orthographic features rather than lexical processing during Chinese reading.

摘 要 常态化疫情防控下，公众及医务人员心理健康水平是打赢这场持久的人民战争的重要致胜因子。通过采用内容分析法，探讨此次新冠肺炎疫情中针对不同人群的心理卫生工作协同机制和途径，为政府提出完

善和落实常态化防控下不同人群的心理卫生工作指南提供参考。利用内容分析法构建组织领导—实施方案—特色工作的三维多方协同分析框架,借助数理统计软件 SPSS20.0 和内容分析法软件 CATPAC 对搜集到的海南省新冠肺炎疫情期间 19 个市县和 2 所精神卫生医疗机构 21 份心理工作情况报告文本,共计 5 万字进行编码分析。在一维分析中发现:海南省疫情防控当中组织领导建基于各市县卫生健康委员会领导,听从卫生行政部门的指挥,政府占主导地位;省级卫生行政部门、各市县卫生健康行政部门的心理危机干预实施方案衔接紧密、协同性较高;特色工作中能够体现出政府、服务机构、公众协同性。在三维分析中发现:组织领导—实施方案协同性较差,实施方案与特色工作协同性表现较好,不同层级组织领导与实施方案协同性表现较好。实施方案应尽快统一心理危机干预标准以及工作内容和注意事项,明确各级卫健委、教育部门和其他行政部门在疫情防控心理卫生工作中的地位,成立"疫情防控心理卫生领导小组",响应国家成立专家队号召,并加强对心理卫生工作和当地实际结合的思考。

An analysis of the collaborative mechanism of mental health work under normal epidemic prevention and control based on content analysis-- Take Hainan Province as an example

Zhou Zhuozhao¹, Xie Jin¹ (Corresponding author) Peng Min², Song Can³

1 college of education science, hunan normal university, changsha 410018, China;

2 King's Health Economics Institute of Psychiatry, Psychology & Neuroscience at King's College London, London, SE5 8AF

3 Hunan Sports Vocational and Technical College, Changsha 410000, China

Abstract: Under the normal epidemic prevention and control, the mental health level of the public and medical personnel is an important factor to win this long people's war. Content analysis was adopted to explore the collaborative mechanism and approaches of mental health work for different populations in this COVID-19 epidemic, so as to provide reference for the government to propose and implement guidelines for mental health work for different populations under normal prevention and control. Using the content analysis to analysis the three-dimensional collaborative analysis framework: organization and leadership, implementation plan, characteristic work with the aid of mathematical statistics software SPSS 20.0, CATPAC and content analysis software to collect COVID - 19 during the outbreak of the 19 cities and counties of hainan province and mental health of medical institutions ,2 mental work report text, a total of more than 50000 words to encode analysis. In the one-dimensional analysis, it is found that in the epidemic prevention and control in Hainan Province, the organizational leadership is based on the leadership of the municipal and county health commissions, and follows the command of the health administration department, with the government in the leading position. The implementation plan of psychological crisis intervention of provincial health administrative departments and municipal and county health administrative departments is closely connected and highly coordinated. The characteristic work can reflect the coordination of the government, service agencies and the public. In the three-dimensional analysis, it is found that the coordination between the organization leader and the implementation plan is poor, the coordination between the implementation plan and the characteristic work is good, and the coordination between the organization leader and the implementation plan at different levels is good. Implementation of the scheme should be unified standard of psychological crisis intervention and work contents as soon as possible and the matters needing attention, clarify the position of health commissions, education departments and other administrative departments at all levels in the mental health work of epidemic prevention and control set up "leading group for epidemic prevention and control of mental health," responded to an appeal by the established national specialists, and strengthen the mental health work is combined with local actual thinking.

农村留守初中生手机依赖问题状况的质性研究

何思宜 郭艳丽 郑显亮

赣南师范大学教育与科学学院, 赣州, 341000, 727990324@qq.com

摘要 随着信息技术的迅猛发展,手机已成为人们日常生活中不可或缺的“必备品”。随之,手机依赖这一现象愈发突出,再加上新冠疫情的突发,“停课不停学”网络课堂的开设使得中学生对手机的使用频率逐渐提高。尤其是对于农村留守儿童这一群体,父母不能长期陪伴在孩子身边,孩子需通过手机与父母维持基本的情感联系。其次,孩子大多以祖辈抚养长大,而祖辈的思想观念与生活方式与“互联网的原住民”初中生可谓存在极大的鸿沟,且初中生也正处成长过程的青春期,有着闭锁性、不稳定性、自主性、动荡性等心理特点。通过与手机“做伴”,孩子从中得到一些心理支持与慰藉,这便更容易促成农村留守初中生“手机依赖”这一问题。本研究采用质性研究的方法,通过滚雪球抽样法和典型抽样法,对10位农村留守初中生及其家长、老师进行单独地深入访谈,将访谈过程进行录音后转化成文字资料,借助Nvivo软件对文字资料进行阅读整理、编码归纳。研究发现,在农村留守初中生眼中手机是一个“利大于弊”的东西,他们可以利用手机来学习、娱乐和人际交往通讯等;而家长和老师分别将手机视为“新时代的鸦片”和“校园里的违禁品”。对于手机的使用和管控方面,学生表示“可以自我管控”、“大人干预过多”、“沟通存在代沟”;家长表明“孩子自控能力弱”、“管控即战争”、“不能理解的游戏世界”;老师一方认为“孩子缺乏自控力”、“家校需要联合管控”、“软硬需共施”。与此同时,针对研究所揭示的农村留守初中生手机依赖问题,研究者提出以下对策:1.增进家长与孩子之间的沟通,聆听孩子的心理需求;2.促进家校合作,达成管理共识;3.开展心理主题活动,提高学生自控力;4.树立理想目标,引导积极价值取向。

A qualitative study on mobile phone dependence of rural left behind junior middle school students

Siyi He, Yanli Guo, Xianliang Zheng

Educational Science School, Gannan Normal College, Ganzhou, 341000

Abstract: With the rapid development of information technology, mobile phone has become an indispensable "must-have" in people's daily life. With this phenomenon, the phenomenon of mobile phone dependence is becoming more and more prominent. With the sudden emergence of COVID-19, the opening of the network classroom which "suspend classes and stop learning" has made the use frequency of mobile phone among middle school students gradually increase. Especially for the group of left behind children in rural areas, parents can not accompany their children for a long time. Children need to maintain basic emotional contact with their parents through mobile phones. Secondly, most children are raised by their grandparents, and there is a great gap between their grandparents' ideas and lifestyles and the "Internet aborigines" junior middle school students, and junior middle school students are also in the puberty of the growth process, with psychological characteristics such as closeness, instability, autonomy and turbulence. By "keeping company" with mobile phones, children get some psychological support and comfort, which makes it easier to promote the problem of "mobile phone dependence" of rural left behind junior middle school students. This study adopts the method of qualitative research. Through snowball sampling and typical sampling, 10 rural left behind junior middle school students, their parents and teachers are interviewed separately. The interview process is recorded and transformed into written materials. The written materials are read, coded and summarized with the help of NVivo software. The study found that in the eyes of rural left behind junior middle school students, mobile phones are a thing with "advantages outweighing disadvantages". They can use mobile phones to study, entertainment and interpersonal communication; Parents and teachers regard mobile phones as "opium of the new era" and "contraband on campus". In terms of the use and control of mobile phones, students said that "self-control", "too much adult intervention" and "there is a generation gap in communication"; Parents said that "children's self-control ability is weak", "control is war", "incomprehensible game world"; The teacher side believes that

"children lack self-control", "families and schools need joint control" and "both hardware and software need to be implemented". At the same time, aiming at the problem of mobile phone dependence of rural left behind junior middle school students revealed by the Research Institute, the researchers put forward the following countermeasures: 1. Improve the communication between parents and children and listen to children's psychological needs; 2. Promote home school cooperation and reach management consensus; 3. Carry out psychological theme activities to improve students' self-control; 4. Set ideal goals and guide positive value orientation.

新时代高校社团成员获得感：影响因素及其作用机制模型 ——基于扎根理论的探索性研究

王茜雅¹ 代文武¹ 申贝贝¹ 李兆岚¹ 贾宁² (通讯作者)

1 河北师范大学教育学院, 石家庄, 050024

2 河北师范大学教育学院, 石家庄, 050024, jnaih@126.com

摘要 教育对象获得感的获得程度是衡量教育水平的对象性标准,也是检验思想政治教育实效性的一个关键因素(裴红娟,2021)。高校社团作为大学生思想政治教育重要阵地,其成员获得感是指个体因参与社团活动时得到需求满足,在相应获得后产生正向积极的主观感受。那高校社团成员获得感受到哪些因素影响,其作用机制是如何生成的?这些问题均值得关注。因此,本研究采用质性研究方法收集和分析资料,选取具有高校社团参与经历的10名在校生(4个男性,6个女性)作为访谈对象,围绕他们在参与社团过程中体验到获得感和影响其提升获得感的因素进行了半结构访谈。所有的访谈均被记录下来并转录为文本,根据扎根理论,并采用Nvivo12.0进行三级编码——开放编码、主轴编码和选择编码后进行模型建构。通过探索性的分析得到如下的影响因素模型:兴趣与技能基础是影响高校社团成员获得感的直接因素,社团参与投入度是影响高校社团成员的中介变量,组织氛围和社会支持是影响高校社团成员的调节变量。本研究建构了高校社团成员获得感影响因素模型,为提升高校社团成员获得感水平提供了初步的理论基础。

Influencing factors and mechanism of the sense of gain of college community members in the new era: An Exploratory study based on grounded theory

Wang, xiya¹, Dai, wenwu¹, Shen, beibei¹, Li, zhaolan¹, Jia, ning² (corresponding author)

Hebei Normal University, Shijiazhuang, 050024

Abstract: The degree of gain of educational objects is the object standard to measure the level of education, and it is also a key factor for testing the effectiveness of ideological and political education (Pei Hongjuan, 2021). College community as an important field of ideological and political education of college students, the sense of gain of its members refers to the individual's need to be satisfied when participating in community activities, and give rise to positive subjective feelings after the corresponding gain. What factors will affect the sense of gain of college community members, and how its mechanism is generated, all of the above research questions are worth mentioning. Therefore, this study adopted qualitative research method to collect and analyze data, and selected 10 students (4 males and 6 females) who have participated in college communities as the interviewees, semi-structured interviews were conducted on the participants' sense of gain and the influencing factors of improving their sense of gain in the process of participating in the community activities. All interviews were recorded and transcribed into texts. According to the grounded theory, Nvivo12.0 was used for three-level coding —open coding、axial coding and selective coding and then the model is constructed. Through exploratory analysis, the following influencing factor models are obtained: interest and skill base are the direct factors that affect the sense of gain of college community

members, engagement of community participation is the intermediary variable that affects college community members, and organizational climate and social support are the moderator variables affecting the sense of gain of college community members. This research constructs a model of the influencing factors of college community members' sense of gain, which provides a preliminary theoretical basis for improving the level of college community members' sense of gain.

高职生入学适应过程及其影响因素 ——基于对 20 位高职大一新生的质性研究

张鹏飞¹（通讯作者）

1 漳州城市职业学院，福建漳州，363000，2254731680@qq.com

摘 要 通过质性研究的方法探索高职生入学适应的过程及其影响因素。研究者采用质性研究所通用的目的性抽样，具体采取了强度抽样和极端型个案抽样相结合的方式，抽取 20 名(男女各 10 名)大一新生作为样本，并在其入学一个月、三个月、六个月对其进行半结构化访谈。运用扎根理论对收集到的资料依次进行初步分析、类属分析和理论建构；运用参与者检验法、非参与者检验法对研究结果进行效度检验。研究得出以下结论：高职生入学适应的过程主要呈现五种模式。模式一：U 型曲线模式，高职生在入学初期对学校生活有着良好的适应，随着时间的进行适应性逐渐降低，当达到最低点时，随着时间流逝，适应性又将逐渐提升。模式二：倒 U 型曲线模式，高职生在入学初期其适应情况较低，随着时间的进行适应性逐渐升高，当达到最高点时，随着时间流逝，适应性又将逐渐降低。模式三：J 型曲线模式，高职生在入学初期对其学校生活适应性较低，但随着时间的进行适应性在逐渐提升中。模式四：反 J 型曲线，高职生在入学初期对其学校生活适应性较高，但随着时间的进行适应性在逐渐降低。模式五：波浪型曲线，高职生在入学之后其适应性一直处于上下波动的状态。同时，高职生的入学适应还受个体因素及其环境因素的影响，个体因素主要包括：入学期待，自我评价等，外部因素主要包括校园环境，教学方式等。

Higher vocational students' admission adaptation process and its influencing factors: Based on the qualitative research of 20 freshmen in Higher Vocational Colleges

Zhang Peng fei

zhangzhou city college, Zhangzhou, Fujian

Abstract: Through the method of qualitative research, this paper explores the process and influencing factors of Higher Vocational Students' admission adaptation. The researcher adopts the purposeful sampling commonly used by the qualitative research institute, specifically adopts the combination of intensity sampling and extreme case sampling, selects 20 freshmen (10 males and 10 females) as samples, and conducts semi-structured interviews one month, three months and six months after their admission. Using the grounded theory, the collected data are preliminarily analyzed, taxonomically analyzed and theoretically constructed; Participant test and non participant test were used to test the validity of the research results. The research draws the following conclusions: the process of admission adaptation of higher vocational students mainly presents five modes. Mode 1: U-shaped curve mode. In the early stage of enrollment, higher vocational students will have a good adaptation to school life. With the progress of time, the adaptability will gradually decrease. When it reaches the lowest point, the adaptability will gradually improve with the passage of time. Mode 2: inverted U-shaped curve mode. In the early stage of enrollment, the adaptability of higher vocational students is low. With the progress of time, the adaptability gradually increases. When it reaches the highest point, the adaptability will gradually decrease with the passage of time. Model 3: J-curve model. Higher vocational students have low adaptability to their school life at the beginning of enrollment, but their adaptability is

gradually improving with time. Mode 4: anti-j curve. Higher vocational students have high adaptability to their school life at the beginning of enrollment, but the adaptability is gradually decreasing with time. Mode 5: wavy curve. The adaptability of higher vocational students has been fluctuating up and down after enrollment. At the same time, the admission adaptation of higher vocational students is also affected by individual factors and their environmental factors. Individual factors mainly include admission expectation, self-evaluation, etc. external factors mainly include campus environment, teaching methods, etc.

摘要 刷新作为工作记忆中央执行功能的重要组成, 具有一定的可塑性, 通过对其进行训练可提升个体工作记忆水平。**实验设计:** 本研究以深圳市大学城研究生为研究对象, 采用 2 (工作记忆水平: 高能力组、低能力组) × 3 (认知负荷: n=2、3、4) × 3 (训练序号: 1、2、3) 混合实验设计, 使用字母 n-back 任务对两组被试进行间隔时间为一周的三次训练, 探究刷新训练对青年人工作记忆表现及神经活动存在怎样的影响。**结果:** 1) 行为指标 ACC: 认知负荷主效应显著, 训练序号主效应极其显著, 训练序号与工作记忆水平间交互作用显著, 无其他显著主效应和交互作用; RT: 工作记忆水平和训练序号各自的主效应极其显著, 二者之间的交互作用十分显著, 认知负荷的主效应及其他交互作用均不显著; TP: 工作记忆水平和训练序号各自的主效应极其显著, 认知负荷的主效应及所有交互作用均不显著。2) ERP P300 平均波幅: 除了 F3 电极点认知负荷及训练序号间交互作用显著外, F3 电极点所有主效应和其他交互作用均不显著; 其余电极点除 FZ 电极点认知负荷、认知负荷与训练序号间交互作用边缘显著之外, 其余交互作用均不显著; P300 潜伏期: 所有主效应及交互作用均不显著。3) 结果表明个体工作记忆表现 (即测量的 ACC、RT、TP 等行为指标) 与神经活动 (P300 平均波幅) 是有一定相关性的, 但高、低能力组的 P300 平均波幅与不同认知负荷下训练间相关性和相关程度是不同的。**结论:** 刷新训练可以提升青年人的工作记忆表现, 但对不同工作记忆水平的改善机制不同; 个体 P300 平均波幅与工作记忆表现存在一定的相关关系, 但会随着认知负荷的变化有所差异。

The influence of refresh training on Young Adults' working memory – the evidence from behavior and ERP

Fu Kun^{1,2*}, Feng Zhantao¹

¹ College of Sports and Health, Shandong Sport University, Jinan 250109, China

² The Brain Cognition and Brain Disease Institute of Shenzhen Institutes of Advanced Technology, Chinese Academy of Sciences, Shenzhen 518055, China

Abstract: As an important component of central executive function in working memory, refresh has been proved to be malleable to a certain extent, training on it can improve the level of individual working memory. **Experimental design:** select graduate students from Shenzhen university town as the research object, this study adopts 2 (working memory level: high capacity, low capacity groups) × 3 (cognitive load: n = 2, 3, 4) × 3 (training sequence number: 1, 2, 3) the mix design of experiment, using the letter n - back task for time interval between two groups of subjects for three times a week training, explore the refresh training to young people working memory performance and neural activity. **Results:** 1) ACC: the main effect of cognitive load was significant, the main effect of training sequence

number was extremely significant, and the interaction between training sequence number and working memory level was significant. RT: the main effects of working memory level and training sequence are extremely significant, and the interaction between them is very significant, while the main effects and other interactions of cognitive load are not significant. TP: the main effects of working memory level and training sequence were significant, while the main effects of cognitive load and all interactions were not significant. 2) average amplitude of ERP P300: all the main effects and other interactions of F3 electrode points were not significant, except the significant interaction between cognitive load and training sequence. In the rest of the electrode points, the interaction between cognitive load and cognitive load and the training sequence number was not significant except the significant edge. P300 incubation period: all main effects and interactions are not significant. 3) The results show that individual working memory performance (that is, measured behavioral indicators such as ACC, RT, TP) is related to neural activity (average amplitude of P300), but the average amplitude of P300 in the high and low ability groups is different with different cognitive loads. The correlation and degree of correlation between trainings are different. **Conclusion:** refresh training can improve the performance of working memory in young people, but the improvement mechanism is different for different working memory levels. There is a certain correlation between the average amplitude of body P300 and the performance of working memory, but it will be different with the change of cognitive load.

视听觉反馈模式对神经反馈学习影响研究

杨文杰¹ 蒋雅丽¹ 南文雅²

1 上海师范大学心理系, 上海, 200234

2 上海师范大学心理系, 上海, 200234, wynan1985@126.com

摘要 脑电神经反馈 (Electroencephalography neurofeedback, 简称 EEG-NF) 利用操作性条件反射原理, 通过视觉或听觉等反馈模式将脑电活动实时呈现给被试, 使得被试学会自主调节脑电活动 (简称为神经反馈学习), 以期改善相应的认知或行为表现。虽然诸多研究表明 EEG-NF 对各种心理障碍的症状和健康个体的认知表现等都具有改善作用, 但其效果具有较大的个体差异性。其中, 神经反馈学习是神经反馈有效性的关键因素。有研究表明, 成功的神经反馈学习伴随目标行为的改善, 而失败的神经反馈学习则不能获得目标行为的改善。因此, 如何优化神经反馈方案从而提升神经反馈学习效果成为重要的研究问题。反馈模式是影响神经反馈方式的重要因素之一, 但哪种反馈模式更有利于神经反馈学习却鲜有探讨。因此, 本研究通过对 Pz 位置进行 alpha (8-12 Hz) 增强训练, 探讨不同的反馈模式 (视觉反馈 vs. 听觉反馈) 对神经反馈学习的影响。实验选取 20 名健康被试, 随机分配到视觉反馈训练组和听觉反馈训练组。被试接受连续 5 天的听觉/视觉神经反馈训练, 每天训练 5 组, 每组 5 分钟, 并且在每天训练前后分别进行 2 分钟的睁眼静息态测试。视觉组利用拼图游戏进行反馈; 听觉组以风景图作为注视屏幕, 利用被试自己所选的最爱的歌曲及海浪声这两种声音进行反馈。与前人研究相比, 该训练模式趣味性更高, 更能吸引被试的注意力, 提高被试的动机。训练结束后, 计算每个被试的短时神经反馈学习指标 (即 alpha 随组数的变化趋势) 和长期神经反馈学习指标 (即 alpha 随天数的变化趋势)。结果发现, 虽然每组内的被试之间的神经反馈学习有个体差异, 但两组被试在组平均上都显示出 alpha 活动在训练过程中得到增长。此外, 无论是短时还是长期神经反馈学习指标, 其在不同的神经反馈模式之间并无显著差异。结果表明, 听觉神经反馈和视觉反馈一样有效, 为今后的神经反馈模式确定提供了依据, 即被试可以选择自己喜欢的视觉或听觉反馈模式。

A comparison of visual vs. auditory feedback modalities effects on neurofeedback learning

Wenjie Yang¹, Yali Jiang¹, Wenya Nan²

1 Department of Psychology, Shanghai Normal University, Shanghai, 200234

2 Department of Psychology, Shanghai Normal University, Shanghai, 200234,
wynan1985@126.com

Abstract: Electroencephalography neurofeedback (EEG-NF) that utilizes the principle of operant conditioning presents EEG activity to individuals in real time through visual or auditory feedback modalities, and enables participants to learn to self-regulate EEG activity (referred to as neurofeedback learning), with the purpose of improving corresponding cognitive or behavioral performance. Although many studies have shown that EEG-NF can improve the symptoms of various psychological disorders and the cognitive performance of healthy individuals, its effects have large individual differences. Among them, neurofeedback learning is a key factor in the effectiveness of neurofeedback. Studies have shown that successful neurofeedback learning accompanies the improvement of target behavior, while failed neurofeedback learning cannot achieve the improvement of target behavior. Therefore, how to optimize the neurofeedback protocol to improve the effectiveness of neurofeedback learning has become an important research question. Feedback modality is a key factor of neurofeedback, but which feedback modality is more effective for neurofeedback learning is rarely discussed. Therefore, this study explored the effects of different feedback modality (visual feedback vs. auditory feedback) on neurofeedback learning in alpha (8-12 Hz) enhancement neurofeedback training on the Pz position. Twenty healthy participants were randomly assigned to the visual feedback training group or the auditory feedback training group. Each training session includes five 5-min training blocks and 2-min eyes-open resting EEG recording before and after the training respectively. The visual group used a jigsaw puzzle to present the alpha activity to the participants, while the auditory group used the landscape picture as the screen and used the participants' favorite songs and the sound of the waves to present the alpha activity to the participants. Compared with previous studies, this training modality is more interesting and can attract the participants' attention and improve their motivation. After training, the short-term neurofeedback learning index (the change trend of alpha over blocks within sessions) and the long-term neurofeedback learning index (the change trend of alpha across sessions) were calculated for each participant. As a result, although there were inter-individual differences in neurofeedback learning within each group, the mean alpha amplitude across all participants in each group significantly increased within sessions and across sessions. In addition, no matter whether short-term or long-term neurofeedback learning index, there was no significant difference between the two groups. The results suggest that auditory neurofeedback is as effective as visual feedback, providing a basis for selection of modality in future neurofeedback studies, that is, participants can choose their favorite visual or auditory feedback modality.

意识状态对反馈评估影响的 ERP 研究

齐日新¹ 贾世伟² (通讯作者)

1 山东师范大学, 济南, 250358

2 山东师范大学心理学系, 济南, 250358, 通讯作者 jiashiwei82@126.com

摘要 为了适应环境, 人们利用多种信息来不断调整自己的行为, 从而达到既定的目标。反馈加工是人脑对反馈结果进行评估的重要心理加工过程。反馈相关负波(FRN)作为反馈相关脑电成分, 表示人脑监控系统对行为结果的评估, 其中消极反馈比积极反馈在头皮前部引起更大的负波。在无意识状态下, 人们在主观意识下无法辨别阈下呈现信息。本研究把阈下反馈信息和脑电技术结合起来, 使用时间估计任务探索监控系统对阈下信息的评估情况, 即阈下反馈信息对 FRN 的影响。具体来说, 本研究通过使用连续闪烁抑制范式(CFS)

将反馈信息置于不同意识状态下,系统考察了客观阈上、主观阈上、主观阈下和客观阈下呈现反馈信息能否诱发反馈相关负波 FRN。实验一使用连续闪烁抑制范式来呈现反馈信息,探讨客观阈上和客观阈下呈现反馈信息对反馈加工的影响。行为结果表明无论是客观阈上还是客观阈下,消极反馈都比积极反馈对接下来的行为产生更大的调整。但是脑电结果表明,在客观阈上呈现时出现 FRN 效应,即消极反馈比积极反馈诱发出更大的 FRN 波幅,在客观阈下呈现时,消极反馈和积极反馈诱发的 FRN 波幅没有显著差异。实验二在实验一的基础上,调整意识状态至主观报告阈限水平,进一步探索客观阈上呈现、主观阈上呈现和主观阈下呈现对反馈加工的影响。结果发现,行为结果中不同意识状态(客观阈上呈现、主观阈上呈现、主观阈下呈现)对行为调整没有显著差异,消极反馈比积极反馈对接下来的行为产生更大的调整。脑电结果中客观阈上呈现条件诱发出 FRN 效应,主观阈上呈现和主观阈下呈现均没有出现 FRN 效应。本研究表明,无意识反馈信息能够对行为产生影响,优化行为的调整。相对于无意识反馈影响行为所体现的对于阈下信息初级加工,FRN 表现的是对于反馈信息更高级的加工,需要意识的参与。其中,反馈相关负波受到注意资源的影响。

The influence of states of consciousness on feedback evaluation:an ERP study

Rixin Qi, Shiwei Jia

School of Psychology, Shandong Normal University, No.1, Daxue Rd, Changqing, Jinan, China

Abstract: In order to adapt to the environment, people use a variety of information to constantly adjust their behavior to achieve the set goals. Feedback processing is an important psychological processing process in which the human brain evaluates the feedback results. The feedback-related negative wave (FRN) is used as a feedback-related EEG component to represent the evaluation of behavioral outcomes in the human brain monitoring system. In the unconscious state, people can not distinguish subliminal presentation of information in the subjective consciousness. This study put the subliminal feedback combined with electrical technology, using the time estimate task exploration evaluation of subliminal information monitoring system, i.e. subthreshold feedback effects on FRNS. Specifically, in this study, the continuous scintillation suppression paradigm (CFS) was used to place the feedback information in different states of consciousness, and systematically investigated whether feedback information can be induced on the objective supraliminal, subjective supraliminal, subjective subliminal, and objective subliminal. Experiment1 uses the continuous flash suppression paradigm to present feedback information, and explores the effect of feedback information on feedback processing under the objective supraliminal and objective subliminal. Behavioral results show that both supraliminal and objective subliminal, negative feedback produces greater adjustment to the following behaviors than positive feedback. However, the results of EEG showed that the FRN effect appeared on the supraliminal, that is, the negative feedback induced a larger FRN amplitude than the positive feedback. When presented under the objective subliminal, there was no significant difference between the negative feedback and the positive feedback-induced FRN amplitude. On the basis of Experiment 1, Experiment 2 adjusts the state of consciousness to the threshold level of subjective report, and further explores the impact of on objective supraliminal presentation, subjective subliminal presentation and subjective subliminal presentation on feedback processing. It was found that different states of consciousness (objective supraliminal presentation, subjective subliminal presentation, subjective subliminal presentation) in behavioral outcomes did not significantly differ in behavioral adjustment, negative feedback produces greater adjustment to the following behaviors than positive feedback. EEG results clearly showed FRN effect on objective supraliminal, none of the subjective supraliminal and subjective subliminal presentations showed an FRN effect. This study shows that unintentional feedback can influence behavior and optimize behavioral adjustment. Compared with the unconscious feedback affecting the behavior of the primary processing of subliminal information, FRN represents a higher level of processing for feedback information, requiring the participation of consciousness. Among them, the feedback-related negative waves are affected by the attention resources.

摘要 研究背景: 抑郁症 (Major Depressive Disorder, MDD) 的静息态脑电 (Resting-State Electroencephalogram, rsEEG) 研究较一致地表明, 额叶 α 不对称性 (Frontal Alpha Asymmetry, FAA, $\ln[\text{右}] - \ln[\text{左}]$) 是抑郁的风险因素之一, 但关于 FAA 能否用于识别抑郁症尚存在争议。因此, 本研究拟进一步考察 MDD 患者在静息状态下是否存在 FAA 异常特征, 并检验异常的 FAA 能否有效识别 MDD。**方法:** 42 名首发未服药 MDD 患者和 42 名在性别、年龄、智力水平与 MDD 患者相匹配的健康对照 (Health Control, HC) 被试完成了 rsEEG 的采集, 并完成了评估抑郁水平的流调中心用抑郁量表 (Center for Epidemiologic Studies Depression Scale, CES-D)。采用 2 (组别: MDD, HC) $\times$ 2 (左右额叶: 左, 右) $\times$ 5 (电极位置: FP1/FP2; F1/F2; F3/F4; F5/F6; F7/F8) 重复测量方差分析比较 MDD 组与 HC 组在功率谱密度值 (Power Spectral Density, PSD) 上的差异; 采用 2 (组别: MDD, HC) $\times$ 5 (电极位置: FP2-FP1; F2-F1; F4-F3; F6-F5; F8-F7) 重复测量方差分析比较 MDD 组与 HC 组的 FAA 差异; 重复测量方差分析的效应量大小用偏 η^2 表示。采用最小绝对收缩和选择算子 (Least Absolute Shrinkage and Selection Operator, LASSO) 回归筛选可有效识别 MDD 的 FAA 指标。基于 LASSO 回归的结果, 使用支持向量机 (Support Vector Machine, SVM) 结合十折交叉验证法对 MDD 与 HC 进行分类。采用皮尔逊相关分析计算所筛选的 FAA 特征与 CES-D 得分的相关性。**结果:** (1) PSD 的组别 $\times$ 左右额叶 $\times$ 电极位置的交互作用显著 ($F_{(4,79)} = 6.69, p < 0.001$, 偏 $\eta^2 = 0.25$), 简单效应分析表明, 在 MDD 组, 各电极对中右侧电极的 PSD 均小于左侧电极的 PSD (p 均 < 0.05); 在 HC 组, 各电极对中的右侧电极的 PSD 值均大于左侧电极 (p 均 < 0.05)。 (2) FAA 的组别 $\times$ 电极位置的交互作用显著 ($F_{(1,82)} = 35.56, p < 0.001$, 偏 $\eta^2 = 0.30$), 简单分析效应表明, 在纳入的 5 个电极对中, MDD 组的 FAA 值均显著低于 HC 组 (p 均 < 0.01)。 (3) LASSO 回归与 SVM 结果显示, rsEEG 的 FAA ($\ln[F4] - \ln[F3]$ 、 $\ln[F6] - \ln[F5]$ 、 $\ln[F8] - \ln[F7]$) 可有效识别 MDD (准确率=87.50%、敏感性=90.00%、特异性=83.33%、ROC 曲线下面积=0.90)。 (4) FAA ($\ln[F4] - \ln[F3]$ 、 $\ln[F6] - \ln[F5]$ 、 $\ln[F8] - \ln[F7]$) 与 CES-D 得分呈显著负相关 ($|r|$ 在 0.48-0.50 之间, p 均 < 0.001)。**结论:** 静息状态下, MDD 患者右侧额叶的活动强度较左侧额叶更强, 其额叶不对称性表现出与一般个体相反的模式, 这可能是 MDD 潜在的神经电生理标记之一。

Email: jinyaoyi@csu.edu.cn

Abstract: Background: Previous studies of resting-state Electroencephalogram (rsEEG) in major depressive disorder (MDD) have consistently shown that frontal alpha asymmetry (FAA, $\ln[\text{right}] - \ln[\text{left}]$) might be one of the risk factors for depression, while there has been controversy about whether FAA could be used to identify depression. Therefore, the present study aimed to reexamine the abnormal FAA in MDD patients during resting state and to

investigate whether the abnormal FAA could identify MDD. **Method:** Forty-two first-episode, drug-naïve MDD patients and 42 gender-, age-, and intelligence- matched healthy controls (HCs) completed rsEEG. All participants also completed the Center for Epidemiologic Studies Depression Scale (CES-D). The group differences in power spectral density (PSD) were compared by $2 \times (\text{group: MDD, HC}) \times 2$ (left or right frontal: left, right) $\times 5$ (electrode position: FP1/FP2, F1/F2, F3/F4, F5/F6, F7/F8) repeated measurement analysis of variance. The group differences in FAA were compared by 2 (group: MDD, HC) $\times 5$ (electrode positions: FP2-FP1, F2-F1, F4-F3, F6-F5, F8-F7) repeated measures ANOVA. Partial η^2 was adopted to estimate the effect size of the repeated measures ANOVA. The least absolute shrinkage and selection operator (LASSO) regression was conducted to select the FAA indexes which could effectively identify MDD patients. Based on the indexes selected by LASSO regression, the support vector machine (SVM) combined with a ten-fold cross-validation method was performed to classify MDD and HC groups. Pearson analysis was used to calculate the correlation between the FAA indexes and CES-D scores. **Results:** (1) The interaction of PSD between group $\times$ left or right frontal $\times$ electrode position was significant ($F_{(4,79)}=6.69, p<0.001$, partial $\eta^2=0.25$). Simple effect analysis showed that the PSD values of the right electrode were lower than those of left electrode in the MDD group (all $p<0.05$), while in the HC group, the PSD values of right electrode were all significantly higher than those of the left electrode (all $p<0.05$). (2) The interaction of FAA between group $\times$ electrode location was significant ($F_{(1,82)}=35.56, p<0.001$, partial $\eta^2=0.30$). Simple effect analysis showed that the FAA values of MDD group were significantly lower than those of HC group in each electrode pair (all $p<0.01$). (3) The results of LASSO regression and SVM showed that the FAA of rsEEG ($\ln[F4]-\ln[F3]$, $\ln[F6]-\ln[F5]$, $\ln[F8]-\ln[F7]$) could identify MDD patients (accuracy=87.50%, sensitivity=90.00%, specificity=83.33%, area under the ROC curve=0.90). (4) FAA of rsEEG ($\ln[F4]-\ln[F3]$, $\ln[F6]-\ln[F5]$, and $\ln[F8]-\ln[F7]$) were negatively correlated with CES-D scores ($|r|$ being 0.48-0.50, all $p<0.001$). **Conclusions:** In the resting state, the activity intensity of the right frontal was stronger than that of the left frontal in MDD patients. The opposite pattern to general population in frontal alpha asymmetry may be one of the potential neurophysiological markers of MDD.

空间指令对数字-空间联结的影响：来自 ERP 的证据

赵肖肖 张志伟 潘运（通讯作者）

贵州师范大学心理学院，贵阳，550025，panyun129@163.com

摘要 数十年来，数字与空间的关系一直引起人们的兴趣。但数字-空间联结的起源仍然存在争议。有两种流行的假说用于解释数字-空间联结：视觉空间编码假说和言语-空间编码假说。本实验中，通过在词语标签（左-右，右-左）后呈现阿拉伯数字（1-9，除了5），让被试对数字大小做出判断，使用事件相关电位（ERPs）技术探索数字空间联合反应编码（SNARC）效应在空间指令条件下的编码机制和时间进程。行为结果发现：空间指令条件下，出现了显著的 SNARC 效应，物理一致性主效应显著，物理一致条件相比，物理不一致条件的反应时更长；词语一致性主效应不显著；物理一致性和词语一致性交互作用不显著。表明视觉空间编码是 SNARC 效应主要的编码方式。脑电结果发现：锁时于刺激时，在 130ms 到 450ms 的时间窗内，物理一致性主效应显著，物理不一致的 s-LRP 起始潜伏期比物理一致的更长，说明 SNARC 效应出现在反应准备之前的知觉阶段；锁时于反应时，在 -260ms 到 -50ms 的时间窗内，R-LRP 的起始潜伏期不存在差异，说明 SNARC 效应与反应准备和反应执行无关。研究结果说明，在空间指令条件下，会出现显著的 SNARC 效应，并且视觉空间编码是数字-空间联结主要的编码方式，这时的 SNARC 效应是数字和空间之间的显性联结，而不是概念之间的相互联结。SNARC 效应出现在早期知觉阶段，而与反应选择无关。

The impact of spatial-number association under spatial instruction: Evidence from ERP

Zhao xiaoxiao, Pan Yun

School of Psychology, Guizhou normal university, Guiyang 55025, China

Abstract: The relationship of number and space has aroused interest for decades. But the origin of spatial-number association remains controversial. There are two popular proposals used to explain the spatial-number association: the visuospatial coding account and verbal-spatial coding account. In this experiment, by presenting Arabic digits(1-9, except 5) after the word labels(Left-Right, Right-Left), the subjects were asked to do magnitude comparison task. Event-related potentials (ERPs) were used to explore the encoding mechanism and time course of the spatial-number association response coding (SNARC) effect under spatial instruction condition. The behavioral results found that: under spatial instruction condition, there is a significant SNARC effect. And the main effect of physical congruency is significant. Longer response times in the physically incongruent compared with physically congruent. The main effect of word congruency is not significant. There is an interaction effect between physical congruency and word congruency. It shows that visuospatial coding is the main coding mechanism of SNARC effect. The results of EEG showed that the main effect of physical congruency is significant in the time window of 130ms to 450ms during the time-locked stimulation, and the onset latency of physically incongruent s-LRP is longer than that of physically congruent, indicating that the SNARC effect appears in the stage of perception before reaction preparation. When the time is locked in the reaction, there is no difference in the onset latency of R-LRP within the time window of -260ms to -50ms, indicating that the SNARC effect has nothing to do with the preparation of the reaction and the execution of the reaction. The research results show that under the spatial instruction condition, there will be significant SNARC effect, and visuospatial coding is the main coding mechanism of space-number association. At this time, the SNARC effect is the explicit connection between number and space, rather than concept. The SNARC effect appears in the early stage of perception, and has nothing to do with response-related.

视觉数字与随机生成数字对行为的影响：一项 ERP 研究

曾晓东¹ 李富洪¹ 曹碧华²

江西师范大学心理学院，南昌，330000，86457222@qq.com

摘要 空间-数字反应编码联合效应（Spatial-Numerical Association of Response Codes Effect，即 SNARC 效应）指人们对数字进行大小或奇偶判断时，左手对小数反应更快，而右手对大数反应更快的现象，是探究人类知觉与行为之间相互关系的证据之一。已有研究使用自由选择范式证实了数字空间表征对行为决策的影响。本研究将视觉数字和随机生成数字与自由选择范式相结合来进一步探究数字的空间表征。研究的目的是采用 ERP 技术考察对视觉数字和随机生成数字做自由按键反应时，是否均存在 SNARC 效应，以及 SNARC 效应的发生阶段和脑机制是否存在异同。本研究采用 2（刺激类型：视觉数字，随机生成数字）×2（数字大小：小数，大数）的实验设计。首先给被试呈现数字（1、2、8 或 9）、符号（#或&）和问号（?）中的任意一个刺激，呈现时间为 1600ms。当刺激为数字或符号时，被试需选择用左手或右手对刺激做自由按键反应；当呈现的刺激是问号（?）时，被试要先在头脑中随机生成“1、2、8、9”中的一个数字后再自由选择按左键或右键，且要求按左右键以及想到四个数字的次数都要尽量平均。最后，要求被试对视觉数字或随机生成数字进行大小判断与奇偶判断，据此推断被试随机生成的数字。行为结果显示：视觉数字与随机生成数字均存在 SNARC 效应，即左手对小数反应更多，右手对大数反应更多。脑电结果显示：（1）视觉数字的 SNARC 效应出现在左半球额部和顶枕部的 N2 波幅上，对应于反应选择阶段，且额部 SNARC 一致条件的 N2 波幅比不一致更负，顶枕部不一致条件的 N2 波幅比一致更负。（2）随机生成数字的 SNARC 效应出现在顶枕部的 N1、P2 波幅上，且不一致条件的 N1 波幅比一致条件更负，一致条件的 P2 波幅比不一致条件更正，表明随机生成数字的 SNARC 效应出现于早期的知觉表征阶段及反应选择阶段。因此，随机生成数字在刺激表征的

早期阶段就开始出现了 SNARC 效应，而视觉数字的 SNARC 效应只出现在反应选择阶段。以上结果表明，在感知觉未输入数字信息时，数字与空间之间的联结仍然存在，并且会影响人们的反应选择。

关键词 SNARC 效应，随机生成数字，自由选择范式，ERP

The impact of visual numbers and randomly generated numbers on behavior: an ERP study

Zeng Xiaodong¹ Li Fuhong¹ Cao Bihua²

School of Psychology, Jiangxi Normal University, Nanchang

Abstract: Spatial-Numerical Association of Response Codes Effect (SNARC effect) refers to the tendency during number processing that the left hand responds faster to small numbers, and the right hand responds faster to large numbers, which is one of the evidences to explore the relationship between human perception and behavior. Previous studies with the help of free-choice paradigm have Confirmed the influence of number representation on behavioral decision-making. This study combines visual numbers and randomly generated numbers with free choice paradigm to further explore the spatial representation of numbers. The aim of this study is to use ERP technology to investigate whether there is SNARC effect when making free key response to visual numbers and randomly generated numbers, and whether there are similarities and differences in the occurrence stage and brain mechanism of SNARC effect. Our study adopted the experimental design of 2 (stimulus type: visual numbers, randomly generated numbers) $\times$ 2 (number magnitude: small, large). Firstly, the participant are presented with any one of the numbers (1, 2, 8, 9), symbols (#, &) or question mark(?) as stimulus for 1600ms. When the stimulus is a number or a symbol, the participants need to press the left or right button freely; When the question mark appears, the participants should first randomly generated a number of “1, 2, 8, 9” in their mind, and then randomly pressed the left or right key. And participants were asked to press the left and right keys and think of four numbers as evenly as possible. Finally, the subjects were asked to make a magnitude and parity judgments on the visual numbers or randomly generated numbers, which is the basis for us to infer the specific numbers that the participants generated. The behavioral result showed that there exist SNARC effect in both visual numbers and randomly generated numbers, that is, the left hand reacts more to small numbers and the right hand reacts more to large numbers. The EEG results showed that: (1) the SNARC effect of visual numbers appeared on the N2 amplitude of the frontal and parieto-occipital regions of the left hemisphere, corresponding to the reaction selection stage, and the N2 amplitude of the frontal SNARC consistent condition was more negative than that of the inconsistent condition, and the N2 amplitude of the parieto-occipital inconsistent condition was more negative than that of the consistent condition. (2) The SNARC effect of randomly generated numbers appears on the N1 and P2 amplitudes of the occipital part, and the N1 amplitude of the inconsistent condition is more negative than that of the consistent condition, and the P2 amplitude of the consistent condition is corrected than that of the inconsistent condition, indicating that the SNARC effect of randomly generated numbers appears in the early perceptual representation stage and response selection stage. Therefore, the SNARC effect of Visual Numbers appears in the early stage of stimulus representation, while the SNARC effect of Randomly Generated Numbers only appears in the response selection stage. These results show that the connection between number and space still exists when digital information is not input, and it will affect people's reaction choice.

Keywords: SNARC effect, Randomly Generated Numbers, Free-choice paradigm, ERP

新冠疫情下锻炼游戏对居家锻炼的心理促进作用

胡景超¹ 殷小川² (通讯作者)

1 首都体育学院研究生部, 北京, 100191, 675958746@qq.com

2 首都体育学院运动科学与健康学院, 北京, 100191, xcyin65@126.com

摘要 在新冠疫情期间, 居家锻炼成为了人们共同关心的问题。锻炼场地不再开放, 外出需佩戴口罩也限制了户外锻炼, 因此很多人选择用锻炼游戏进行居家锻炼。锻炼游戏是一种需要进行粗大动作运动的电子游戏, 这类游戏近年来通常用于培养青少年的运动兴趣及与解决日益增长的超重问题。本文运用文献研究法与逻辑分析法总结出新冠疫情下锻炼游戏对居家锻炼的心理促进作用有: 1、转变认知。锻炼游戏以游戏为载体, 将锻炼与富有挑战和乐趣的游戏结合起来, 转变人们对居家锻炼是枯燥、痛苦行为的认知。2、激发兴趣。锻炼兴趣是建立在个体对锻炼的认识、判断与评价之上的, 很多人会因为没有兴趣而拒绝居家锻炼, 而锻炼游戏将锻炼行为融入到游戏的形式之中, 利用个体对游戏的兴趣让他们产生对居家锻炼的兴趣。3、调整动机。人们进行锻炼的动机多且杂, 而在使用锻炼游戏进行锻炼时, 因各种目的而锻炼的动机会被置于次要层次, 而在游戏中击败敌人获得奖励的动机将被置于首位。这种简单、直接的动机在一定程度上可以将人们的唤醒水平控制在一定的水平上, 并且还可以通过更改游戏难度来控制唤醒水平的高低。4、目标设置。锻炼游戏将常规的很难获得及时、强力反馈的时长、体重、组数等健身目标转化为在游戏中击败越来越强的敌人并获得及时、强力反馈的游戏中的小目标。这可以激励人们坚持锻炼。5、增强自我效能。锻炼游戏为锻炼者带来了锻炼行为的可控性知觉以及通过游戏奖励的形式给出的良好结果的及时反馈, 这会逐步提高锻炼者的自我效能感, 从而产生良性循环。6、保护自尊。很多自尊较低的锻炼者不会去健身房等开放式场合进行锻炼, 锻炼游戏成为了具有独立性、封闭性的居家锻炼的有效工具, 这既能保护他们的自尊, 还能逐步提高他们的自尊。综上所述, 锻炼游戏在新冠疫情下对居家锻炼有着多种心理促进作用。这种促进不仅仅局限于疫情下或只在居家锻炼中, 还可以体现并使用于任何情境下的初学者或刚刚开始锻炼的群体中。

The psychological promoting effect of exergames on home exercise under the circumstance of COVID-19

Hu Jingchao¹, Yin Xiaochuan²

1 Graduate department of Capital University of Physical Education and Sports, Beijing North Third Ring Road West No.11

2 School of Kinesiology and Health of Capital University of Physical Education and Sports, Beijing North Third Ring Road West No.11

Abstract: During the coVID-19 epidemic, exercise at home has become a common concern. Exercise venues are no longer open, and the need to wear masks outside limits outdoor exercise, thus, many people choose to use exergames to exercise at home. Exergames are videogames that require gross motor activity. These games have been used in recent years to develop young people's interest in sports and to deal with the growing problem of overweight. Literature research and logical analysis are used here to summarize that the psychological promoting effects of exercise games on home exercise under the circumstance of COVID-19 are: 1. Change cognition. Exergames use games as the carrier and combine exercise with challenging and fun games to change people's cognition that exercise at home is boring and painful. 2. Stimulate interest. Exercises' interest is based on the individual's understanding, judgment and evaluation of exercise. Many people will refuse to do exercise at home because they have no interest in it. However, exergames integrate exercise behavior into the form of game and use the individual's interest in game to generate their interest in doing exercise at home. 3. Adjust motivation. People have many and varied motivations for

exercising, but when exercising with an exercise game, motivation for exercising for various purposes is put on the back burner, while motivation to win a reward for defeating an enemy in the game is put on the top priority. This kind of simple, direct motivation can control people's arousal level to a certain extent, and can also control the level of arousal by changing the difficulty of the game. 4. Goal-setting. Exergames transform regular fitness goals such as time, weight, and group counts, which are difficult to get timely and powerful feedback, into small goals in games that defeat increasingly strong enemies and get timely and powerful feedback. This can motivate people to keep exercising. 5. Enhance self-efficacy. Exergames bring exercisers' controllable perception of exercise behavior and timely feedback of good results in the form of game rewards, which will gradually improve their sense of self-efficacy, thus creating a virtuous cycle. 6. Protect self-esteem. Many exercisers with low self-esteem will not go to the gym or other open places to exercise, exergames have become an effective tool for independent, closed home exercise, which can not only protect their self-esteem, but also gradually improve their self-esteem. In conclusion, exergames have a variety of psychological promoting effects on home exercise under the circumstance COVID-19. This promotion is not limited to the epidemic or only happened in home exercise, but can also be reflected and applied to beginners or people just starting exercise in any situation.

Keywords: COVID-19, exergame, home exercise, psychological promoting effect

精神健康社工在社会心理服务支持中的作用 ——基于《丹麦社工服务法》的启示

邹宏宇

香港城市大学, 香港特别行政区, 9990771, zouhongyu2016@163.com

摘 要 在社会治理体系中, 精神健康问题越来越受到重视。当我们谈及心理问题或者精神疾病患者时, 多数想到的是精神科医生和心理治疗师, 心理咨询师。他们在患者的康复过程中无可厚非, 起着不可替代的作用。然而这种从病症上和心理机理上的调整真的能够全面的帮到精神疾病的患者群体吗? 时至今日, 在很多的地方他们依旧被当作“疯子”看待, 有很大一部分的患者群体因为“污名化”以及社会舆论的作用下不敢就医。在经济和精神的双重压力下, 这种问题层出不穷, 甚至很多的家长宁愿把患有精神疾病的孩子放在家里, 这不仅对其个人成长极其不利, 也成为了社会治理进程中的一大隐患。同时由于心理治疗领域中对于社会因素的关注缺失, 很大一部分的患者在医院住院或者在家隔离治疗的状态下, 开始出现与社会脱节, 自我效能感降低等现象。因此帮助此类群体的社会功能恢复便显的尤为重要。在欧美等国, 精神健康社工的存在对于解决此类问题就显的尤为重要, 他们通过社区支持给了精神疾病患者更多的人际交往示范以及情感连接, 帮助来访者找寻自己对于社会的价值, 消除他们身上对于精神疾病的羞耻感。要做好我国的心理健康社会支持, 我们就应该向其他先进各国学习。丹麦作为世界上最幸福的国家之一, 其心理健康领域的社会支持在国际领先, 本文通过对《丹麦社工服务法》的全文翻译研究, 发现其对于精神疾病患者的个人日常照护与帮助、住房出行问题, 未成年人及弱势群体的强制就医执行、个人就业与财政救济、护理家庭与寄养家庭, 家属关怀与支持, 社工行为监督以及法律效力等方面都作出了明确的阐述, 这是非常值得我们借鉴与思考的, 希望能够对我国的心理健康社工服务作出启发和思考。

The Role of Mental Health Social Workers in Social Psychological Service Support——Based on the Enlightenment of the "Notice of Social Services Act"

Zou Hongyu

City University of Hong Kong, Hong Kong, 999077

Abstract: In the social governance system, mental health problems have been paid more and more attention. When we talk about mental problems or mental illness, most of us think of psychiatrists and psychotherapists, Psychological

counselor. They are beyond reproach in the process of patients' recovery and play an irreplaceable role. However, can this adjustment in terms of symptoms and psychological mechanism really help the group of patients with mental illness in an all-round way? Today, they are still treated as "madmen" in many places, and a large part of the patients are afraid to seek medical treatment because of "stigmatization" and the influence of public opinion. Under the dual pressure of economy and spirit, this kind of problem emerges endlessly. Even many parents prefer to keep their children with mental illness at home. This is not only extremely detrimental to their personal growth, but also becomes a big hidden danger in the process of social governance. At the same time, due to the lack of attention to social factors in the field of psychotherapy, a large number of patients are in hospital or in isolation at home. Some phenomena began to appear, such as being out of touch with the society, decreasing the sense of self-efficacy and so on. Therefore, it is particularly important to help these groups restore their social function. In Europe and the United States and other countries, the existence of mental health social workers is particularly important for solving such problems. Through community support, they have given people with mental illness more demonstrations of interpersonal communication and emotional connection, helping visitors find their value to society, and eliminating their sense of shame about mental illness. To do a good job of mental health and social support in our country, we should learn from other advanced countries. Denmark is one of the happiest countries in the world, and its social support in the field of mental health is internationally leading. Based on the translation study of the full text of the "Notice of Social Services Act", this article finds that it have made clear explanations of provides daily care and assistance for patients with mental illness, housing and travel issues, enforcement of mandatory medical treatment for minors and vulnerable groups, personal employment and financial relief, Nursing families and foster families, care and support of family members, supervision of social work behavior and legal effects, etc. This is very worthy of our reference and thinking, and hope to inspire and thinking about mental health social work services in our country.

COVID-19 常态化防控期间国内大众的心理反应及相关因素研究

黄晨玮¹,张博睿¹,冯琪云¹,康育玮¹,任慧广¹,刘子豪¹,张帆² (通讯作者)

¹ 海军军医大学(第二军医大学)基础医学院, 上海 200433

² 海军军医大学(第二军医大学)心理系基础心理学教研室, 上海 200433, zhangfansmmu@163.com

摘要 目的:考察新冠肺炎疫情常态化防控期间国内大众的心理反应,探究本阶段时期相比于新冠疫情爆发初期大众心理的特点,为减少疫情的长期心理影响提供参考。方法:采取滚雪球抽样法,通过网上问卷平台收集 526 份有效问卷。采取知觉心理力量表(CPSS)、领悟社会支持量表(PSSS)、焦虑自评量表(SAS)、创伤后应激障碍检查表第五版(PCL-5)分别对国内大众的心理压力、社会支持、焦虑、创伤后应激障碍(PTSD)水平进行测量。同时收集人口学变量及新冠疫情期间的主观和客观收入满意度。结果:总样本中轻度焦虑及以上个体共 104 人(19.8%), PTSD 阳性个体 125 人(23.8%), 具有健康威胁性压力个体 130 人(24.7%)。在控制人口学变量后,以社会支持为自变量,以压力、焦虑、PTSD 为因变量进行多元回归。结果表明,社会支持可以预测压力、焦虑和 PTSD 水平($F_1=21.285, F_2=9.818, F_3=5.683, p<0.05; B_1=-0.174, B_2=-0.207, B_3=-0.16, ps<0.05$)。对于非学生样本,控制人口学变量后多元回归方程结果表明,社会支持可以预测压力、焦虑和 PTSD 水平($F_1=11.128, F_2=6.392, F_3=3.559, p<0.05; B_1=-0.178, B_2=-0.171, B_3=-0.164, ps<0.05$)。此外,客观收入变化水平也与三种心理健康问题呈显著相关($F_1=11.128, F_2=6.392, F_3=3.559, p<0.05; B_1=-1.185, B_2=-1.521, B_3=-2.138, ps<0.05$)。结论:疫情防控期间,社会支持是国内大众心理健康的重要保护性因素,对减轻压力、减少焦虑情绪体验和 PTSD 症状均具有良好的效果。在非学生的成人人群中,除了社会支持外,收入水平的变化也是心理健康的重要影响因子,疫情对收入的影响可以使个体产生不良的心理反应。应该加大对大众的社会支持水平,关注疫情期间社会就业与收入问题。

Abstract: Objective: To investigate psychological response of domestic public during the regular prevention and control of COVID-19, and explore current psychological characteristics compared to the initial outbreak, offer information to reduce the long-term psychological impact of COVID-19. Methods: The participants were selected by snowball sampling method. 526 valid questionnaires were collected through an online questionnaire platform. Chinese Perceived Psychological Stress Scale (CPSS), Perceived Social Support Scale (PSSs), Self-rating Anxiety Scale (SAS) and The PTSD Checklist for DSM-5 (PCL-5) were used to measure the levels of psychological stress, social support, anxiety and post-traumatic stress disorder (PTSD). At the same time, demographic variables, income change and income satisfaction during the outbreak period were collected. Results: There were 104 (19.8%) individuals with mild anxiety or above, 125 (23.8%) with positive PTSD and 130 (24.7%) with health threatening stress. After controlling demographic variables, Multiple Regression Analysis was conducted with social support as independent variable, stress, anxiety and PTSD as dependent variables. The results showed that social support associated with stress, anxiety and PTSD levels ($F_1=21.285$, $F_2=9.818$, $F_3=5.683$, $p<0.05$; $B_1=-0.174$, $B_2=-0.207$, $B_3=-0.16$, $ps<0.05$). For non-students samples, the results of multiple regression equation after controlling demographic variables showed that social support associated with stress, anxiety and PTSD levels ($F_1=11.128$, $F_2=6.392$, $F_3=3.559$, $p<0.05$; $B_1=-0.178$, $B_2=-0.171$, $B_3=-0.164$, $ps<0.05$). In addition, the change degree of income level also associated with the three kinds of mental health problems ($F_1=11.128$, $F_2=6.392$, $F_3=3.559$, $p<0.05$; $B_1=-1.185$, $B_2=-1.521$, $B_3=-2.138$, $ps<0.05$). Conclusion: during the regular prevention and control of COVID-19, as an important protective factor for mental health of the public in China, social support has effect on reducing stress, anxiety and PTSD symptoms. For non-student groups, in addition to social support, the change of income level is also an important factor affecting mental health. The impact of COVID-19 on income can make individuals produce adverse psychological reactions. We should increase the level of social support to the public and pay more attention to employment and income problems during the regular prevention and control period.

Keywords: COVID-19, stress, social support, anxiety, PTSD

新冠肺炎患者的创伤后应激症状及其影响因素研究

尚志蕾¹ 刘念琪¹ 刘伟志² (通讯作者)

1 海军军医大学, 上海, 200433

2 海军军医大学心理系, 上海, 200433, liuweizhi@smmu.edu.cn

摘要 目的: 分析新型冠状病毒肺炎 (COVID-19) 患者创伤后应激症状水平及其影响因素, 为确诊患者心理干预和防护提供数据支撑。**方法:** 本研究采用问卷调查的方式对 258 名 COVID-19 确诊患者进行研究。采用创伤后应激障碍自评量表 5 (PCL-5) 评估患者创伤后应激症状 (PTSS), 该问卷共 20 题采用 0-4 级评分, 将评分为 2 或以上的项目视为症状阳性, 遵循 DSM-5 诊断规则至少要求: B 标准 1 项 (问题 1-5), C 标准 1 项 (问题 6-7), D 标准 2 项 (问题 8-14), E 标准 2 项 (问题 15-20) 符合 PTSS 阳性。**结果:** 258 名患者平均年龄 56.63 岁, 52.7% 为女性, 12.4% 曾诊断为重症或以上, 从症状出现到初次就医的中位时间为 2 天 (四分位区间 1-4 天), 从症状出现到确诊的中位时间为 8 天 (四分位区间 3-13 天)。所有患者 PCL-5 总分为 17.04 ± 13.63 , 按照 DSM-5 诊断规则 PTSS 阳性者 48 人, 占比 18.6%。B 标准 (重复体验) 阳性者 127 人, 占比 49.2%; C

标准（回避）阳性者 99 人，占比 38.4%；D 标准（认知和情绪的消极改变）阳性者 88 人，占比 34.1%；E 标准（警觉性增高）阳性者 81 人，占比 31.4%。女性患者比男性患者 PCL-5 得分高（ 19.54 ± 14.58 VS. 14.25 ± 11.95 , $p < 0.01$ ）。在男性患者当中，出现疑似症状后推迟就医者（ ≥ 3 天）比及时就医者（ < 3 天）PCL-5 得分高（ 19.36 VS. 14.05 , $p < 0.05$ ），出现疑似症状后诊断延迟者（ > 7 天）比及时诊断者（ ≤ 7 天）PCL-5 得分高（ 20.00 VS. 12.30 , $p < 0.01$ ），在女性患者中并未发现延迟就医或诊断对其创伤后症状水平有显著性影响。**结论：**早就医早诊断不仅影响 COVID-19 患者疾病的治疗和干预，也显著影响患者的心理状态。尤其是男性患者，推迟就医或诊断会增加其创伤后应激症状水平。

关键词 新冠肺炎，创伤后应激障碍，影响因素

A cross sectional study on post-traumatic stress symptoms and influence factors in 258 patients diagnosed with COVID-19

Zhilei Shang, Nianqi Liu, Weizhi Liu

Naval Military Medical University, Shanghai, 200433

Abstract: Objective: This article was to study the levels of post-traumatic stress symptoms and influence factors in patients with COVID-19, so as to provide data support for psychological intervention and protection in confirmed patients. Methods: 258 patients diagnosed with COVID-19 in Wuhan were investigated by questionnaire. Post-traumatic stress symptoms (PTSS) were assessed by self-rating scale for post-traumatic stress disorder (PCL-5). Respondents were asked to rate how bothered they had been by each of 20 items in the past month on a 5-point Likert scale ranging from 0-4. The PCL-5 can determine a provisional diagnosis by treating each item rated as 2 = "Moderately" or higher as a symptom endorsed, then following the DSM-5 diagnostic rule which requires at least: 1 Criterion B item (questions 1-5), 1 Criterion C item (questions 6-7), 2 Criterion D items (questions 8-14), 2 Criterion E items (questions 15-20). Results: The average age of 258 patients was 56.63 years old, 52.7% of them were female, and 12.4% had been diagnosed as severe or above. The median time from symptom onset to first hospital visit was 2 days (quartile range 1-4 days), and the median time from symptom onset to diagnosis was 8 days (quartile range 3-13 days). The mean total score of PCL-5 in all patients was 17.04 ± 13.63 . According to DSM-5 diagnostic rules, 48 patients were positive in PTSS, accounting for 18.6%. 127 (49.2%) were positive in Criterion B (intrusion symptoms), 99 (38.4%) were positive in Criterion C (avoidance), 88 (34.1%) were positive in Criterion D (negative alterations of cognitions and mood), and 81 (31.4%) were positive for standard e (increased arousal). The PCL-5 score of female patients was higher than that of male (19.54 ± 14.58 vs. 14.25 ± 11.95 , $P < 0.01$). Among male patients, the PCL-5 score of patients with delayed medical assistance seeking (≥ 3 days) after suspected symptoms was higher than that of patients seeking medical assistance in time (< 3 days) (19.36 vs. 14.05 , $P < 0.05$). Patients with delayed diagnosis (> 7 days) had higher PCL-5 scores than those with timely diagnosis (≤ 7 days) (20.00 vs. 12.30 , $P < 0.05$). However, there was no significant effect of delayed medical assistance seeking and diagnosis on post-traumatic symptoms in female patients. Conclusion: Early medical assistance and diagnosis not only affect the treatment and intervention of patients with COVID-19, but also significantly affect the psychological state of patients. Especially in male patients, delayed medical assistance seeking and diagnosis may increase PTSD symptoms.

信息引导策略对环保行为的影响

铁星¹（通讯作者） 张媛² 黄钧瑜³

陕西师范大学心理学院，西安，710062, tiexing1027@163.com

摘要 环保行为是社会可持续发展的重要组成部分。通过呈现信息影响环保行为，是相对成本低廉且便捷有效的干预方式。呈现不同的信息对环保行为的影响程度是不同的，我们研究两种社会规范和两种环境信息对环保行为的影响。我们假设在社会规范里，描述性规范和命令性规范都能促进环保行为；在环境信息里，呈现

积极信息和消极信息都能提高环保行为。我们招募了 80 名大学生，他们是自愿参加实验并且不知道实验的目的。我们使用环保行为量表将参与者分为高低组，高低组被纳入五个处理水平。研究采用了 Greater Good Game 范式，该范式区分了环保行为和合作行为。我们向参与者展示了不同规范和不同信息引导策略的信息，然后他们将虚拟货币投资到不同的账户：投给自己，投给团体，投给环保组织。我们用每个参与者在环保账户中投入的金额来衡量参与者的环保行为。我们的目的是探索环境信息和社会规范对环保行为的影响。研究采用多项式处理树模型(MPT)建模，通过 multiTree v046 软件进行参数估计及嵌套模型比较。与假设 1 一致，与控制组相比，积极环境描述干预提高环保行为概率；检验假设 2，消极环境信息对环保行为干预效果不显；检验假设 3，描述性规范对环保行为干预不显著；与假设 4 一致，命令性规范提高环保行为概率。研究发现，积极信息可以增加环保行为的频率，而消极信息并没有促进环保行为。强制性规范干预对环保行为的影响显著，而描述性规范干预的效果不显著。本研究探讨了呈现什么样的信息可以促进环保行为。为未来环保行为的宣传提供了更加具体、高效的策略。在开展环保行为信息宣传时，使用积极信息，命令式规范更能促进环保行为。

The influence of information guidance strategy on environmental behavior

Xing Tie¹(Corresponding Author), Yuan Zhang², Junyu Huang³

Shaanxi Normal University, school of psychology, No. 199, Chang'an South Road, Yanta District, Xi'an City, Shaanxi Province

Abstract: Environmental behavior plays a significant role in developing the sustainable society. Presenting information is a relatively low-cost, convenient and effective intervention method to influence environmental behavior. We studied two types of social norms and two types of environmental information that affected environmental behavior and we found that presenting different information has different effects on environmental behaviors. We assumed that in terms of social norms, both descriptive norms and imperative norms could promote environmental behavior. And in terms of environmental information, presenting both positive and negative information could improve environmental behavior. We expect to provide empirical evidence for scientific intervention through research on the factors that influence environmental behaviors. We recruited 80 participants in Shaanxi Normal University. The study adopted the Greater Good Game paradigm. Unlike previous studies that did not distinguish between environmental behavior and cooperative behavior, this paradigm distinguished environmental behavior from cooperative behavior. We presented participants with information of different norms and different information guidance strategies, then, they invested virtual currency into different accounts. The choices were: vote for your own account, vote for the group's account and vote for environmental protection organizations' account. We used the amount of virtual currency by each participant in the environmental protection account to measure the environmental behavior of the participants. Our purpose was exploring the impact of environmental information and social norms on environmental behavior. We recruited 80 participants. The study adopted the Greater Good Game paradigm. Unlike previous studies that did not distinguish between environmental behavior and cooperative behavior, this paradigm distinguished environmental behavior from cooperative behavior. We presented participants with information of different norms and different information guidance strategies, then, they invested virtual currency into different accounts. The choices were: vote for your own account, vote for the group's account and vote for environmental protection organizations' account. We used the amount i virtual currency by each participant in the environmental protection account to measure the environmental behavior of the participants. Our purpose was exploring the impact of environmental information and social norms on environmental behavior. Study used a two-stage multinomial processing tree (MPT) modeling, we conducted parameter estimation and nested model comparisons by multiTree v046. Consistent with Hypothesis 1, epositive> econtrol, compared with the control group, the positive environmental description intervention increased the probability of environmental behavior. When adding

parameter limit $e_{\text{positive}} = e_{\text{control}}$, test hypothesis 1, the degree of model misfit increased significantly, and the parameters are significantly different, positive environmental information significantly promotes environmental behavior; add parameter limit $e_{\text{negative}} = e_{\text{control}}$, test hypothesis 2, parameters difference were not significant, the effect of negative environmental information on environmental behavior is not significant. Add parameter limit $e_{\text{description}} = e_{\text{control}}$, test hypothesis 3, parameters difference were not significant, descriptive norms do not significantly interfere with environmental behavior; consistent with hypothesis 4, $e_{\text{command}} > e_{\text{control}}$, compared with the control group, imperative norms increased the probability of environmental behavior. Add parameter limit $e_{\text{command}} = e_{\text{control}}$, test hypothesis 4, the degree of model misfit increased significantly, and the parameters difference were significant, the imperative description significantly promotes environmental behavior. Positive information effectively increased the frequency of environmental behaviors, while negative information did not; the effect of imperative norms increased the frequency environmental behavior, but descriptive norms did not. On the basis of previous research, this research further explores what kind of information is presented could promote environmental behavior. It provides a more specific and efficient strategy for the publicity of future environmental behaviors. When carrying out environmental behavior information promotion, use more positive information and use less negative information. Moreover, in Chinese culture, the use of imperative norms can better promote environmental protection.

贫困循环：资源稀缺影响人们对不公平分配的容忍

程子鹏¹（通讯作者）

1 北京大学心理与认知科学学院，北京，100871，通讯作者 E-mail: zpcheng@pku.edu.cn

摘 要 摆脱贫困是一个世界性的难题，世界各国都在为消除贫困而努力。稀缺理论(Scarcity Theory)指出，因资源稀缺而产生的稀缺心态会导致一系列的心理后果，从而导致贫困的延续。以往鲜有研究探讨资源稀缺会如何影响人们对不公平分配的态度。本研究提出假设，资源稀缺会增加人们对不公平产出分配（金钱分配）的容忍度，降低人们对不公平投入分配（工作投入分配）的容忍度。本研究改编了最后通牒博弈范式，在博弈过程中同时考虑不公平的投入分配和不公平的产出分配两个方面，考察了主观资源稀缺和客观资源稀缺如何影响人们在最后通牒博弈中对不公平分配的容忍度。研究结果发现，主观资源稀缺和客观资源稀缺会增加人们对不公平的产出分配（金钱分配）的容忍度。但主观资源稀缺会降低人们对不公平的投入分配（工作投入分配）的容忍度以及投入意愿。以上研究结果可能说明，主观资源稀缺和客观资源稀缺存在不同的心理效应，导致在人们在主观资源稀缺和客观资源稀缺条件下对不公平投入分配的态度不一致。同时，主观资源稀缺和客观资源稀缺增加人们对不公平产出分配的容忍可能会导致资源稀缺状态的进一步延续，形成贫困循环。此外，本研究还讨论了以上研究结果对贫困干预的启示。

The Cycle of Poverty: Resource Scarcity Influences People's Tolerance towards Unequal Distribution

CHENG Zipeng

School of Psychological and Cognitive Sciences, Peking University, Beijing 100871

Abstract: As getting rid of poverty is a worldwide issue, all countries around the world are making efforts to eliminate poverty. Scarcity theory suggests that the scarcity mindset stemming from resource scarcity results in a number of psychological consequences, which can cause the continuation of poverty. Given that little research has explored how resource scarcity affects people's tolerance towards unequal distribution, the present study hypothesized that resource scarcity increases people's tolerance towards unequal distribution of output (e.g., money) and decreases people's tolerance towards unequal distribution of input (e.g., workload). By adapting ultimatum game

paradigm to consider both unequal input distribution and unequal output distribution, the present study examined how subjective and objective resource scarcity affected people's tolerance towards unequal distribution in the ultimatum game. The results indicated that people with high level of subjective or objective resource scarcity held higher tolerance towards unequal distribution of output (e.g., money). However, people with high level of subjective resource scarcity held lower tolerance towards unequal resource input (e.g., workload) and less willingness to input. These results may demonstrate that subjective resource scarcity and objective resource scarcity have different psychological effects, and cause different attitudes towards unequal input. Meanwhile, subjective resource scarcity and objective resource scarcity increase people's tolerance to unequal distribution of output, which may lead to further continuation of resource scarcity. Moreover, the potential contributions of these psychological consequences to poverty intervention are discussed.

Keywords: poverty, resource scarcity, tolerance towards unequal distribution, ultimatum game

金钱启动对疫情风险感知的影响

摘要 2020 年年初新冠肺炎疫情突然爆发并迅速蔓延, 疫情持续至今。新冠疫情作为一次重大的公共卫生安全事件, 被感染的风险威胁着社会上的每一个人, 影响着个体的身体健康与情绪状态。而民众对风险感知的水平在一定程度上影响着国家防控措施的顺利实施。同时, 金钱在人们在当今社会生活中是不可或缺的一种资源, 在人们生活中扮演着重要角色。个体在面临重大威胁事件时, 金钱作为一种重要的社会资源, 能否降低个体对于威胁事件的感知? 已有很多前人研究证明金钱概念启动能够使个体产生更强的控制感。控制感作为风险感知的一个重要维度, 影响着个体的风险感知水平。本研究基于金钱启动的社会资源理论与自给自足理论, 试图探讨金钱是否会对民众风险感知水平有所影响。本研究招募了 66 名大学生被试, 采用单因素被试间设计进行研究。研究结果发现, 相对于非金钱启动组的被试, 金钱启动组的被试对风险的感知水平更低。这可能是因为金钱启动降低了个体对负性信息的敏感性, 从而降低个体的风险感知水平, 这有利于减少他们的恐慌情绪, 对疫情防控的顺利进行以及对社会安全的保障都起着积极作用。本研究将金钱启动与个体对于疫情风险感知相联系, 拓展了金钱启动的研究领域, 为防疫工作的顺利进行提供了理论基础, 具有重大实践意义。

The influence of money priming on the perception of epidemic risk

Liu Yu-qing, YANG Yu, ZHANG Yi-ling, YANG Yang

Abstract: COVID-19, which broke out in the early 2020 and spread quickly, has been constantly influencing our lives until now. COVID-19 is a serious public health and safety incident. The risk of being infected is threatening everyone in society, affecting our health condition physically and mentally. And people's level of the perception of risk affects the smooth implementation of national prevention and control measures to a certain extent. Meanwhile, as an essential resource, money plays an important role in our lives. Can money, which is viewed as an important social resource, reduce individuals' sense of threat when they are faced with threatening incidents? Many previous studies have proved that money priming can make individuals have more sense of control. That's because sense of control is an important dimension of risk perception. It affects the level of risk perception. Based on social resource theory and self-contained theory, this study tries to explore whether money has an influence on people's risk perception level. We recruited 66 college students as subjects and adopted a single factor inter-subject design to conduct the research. The result showed that compared with participants of the non-monetary priming group, those in the monetary priming group had a lower level of risk perception to negative information. This may be caused by the fact that money reduced the sensibility to negative information of the non-money priming group and thus lowered their level of risk

perception and reduced their panic. The result contributes to the smooth progress of the prevention and control of the pandemic as well as the guarantee of social security. In this study, money priming and individual perception of epidemic risk are linked, which expands the research field of money priming, provides a theoretical basis for the smooth progress of epidemic prevention, and has great practical significance.

Key Words: money priming, risk perception, COVID-19, negative emotions

信任违背损害了工作记忆刷新能力

袁树歌¹ 杨东¹ (通讯作者)

¹ 西南大学心理学部, 重庆, 400715

通讯作者: 杨东 yangd@swu.edu.cn

摘要 信任渗透于一切社交活动, 是社会资本之一。但是当个体的信任没有得到满足时, 信任违背就会发生, 这种信任危机会直接损害个体的心理健康, 危害到我国的经济发展、政治安定和社会氛围, 对整个社会的和谐有序运行构成严重威胁。目前大多数研究主要关注在信任违背后采用哪种策略修复信任效果更好, 但是很少有人去系统地探讨具体应该修复哪些方面, 即信任被违背后受害方的认知具体受到怎样的影响。根据双加工模型, 控制加工的削弱和对负性或动机相关刺激自动加工的增强是导致抑郁, 焦虑和成瘾等冲动行为的重要原因。研究发现信任违背可能会损害控制性加工, 具体表现为相比经历信任, 经历信任被违背个体的工作记忆刷新能力受损。但是我们不清楚是信任违背损害了控制加工还是信任提高了控制加工。其次, 研究发现信任违背会促使对负性刺激的自动加工增强, 表现为经历信任违背后个体对负性刺激产生注意偏向。那么是否信任违背对控制加工的削弱会受到情绪刺激的调节, 即相对中性刺激, 信任违背个体对负性刺激的刷新能力更弱? 因此, 本研究第一个研究目的是验证信任违背对工作记忆刷新能力的削弱, 第二个是探讨其工作记忆的受损是否受到外在刺激的情绪效价所调节。本研究采用重复信任游戏诱发信任违背, 控制组不涉及信任和不信任反馈。随后采用字母版的 n-back 任务测量工作记忆刷新能力, 情绪性词语版的 n-back 任务测量情绪性工作记忆, 并且后者同时记录 ERP。结果发现, 在字母版的 n-back 任务中, 信任违背组在 2-back 水平下正确率低于控制组。在情绪性词语版的 n-back 任务中, 信任违背组在 P2 上的平均波幅小于控制组, 在 P3 上的平均波幅两组没有显著差异。这表明信任违背损害了一般性工作记忆, 并且无论外在刺激的效价如何, 这种工作记忆能力的受损都同等严重。因此, 今后缓解信任违背的负面影响时可以从控制加工角度入手。

关键词 信任违背, 工作记忆刷新能力, 情绪性工作记忆, 双加工模型

Trust violations impairs working memory updating

Corresponding author: Yang Dong, yangd@swu.edu.cn

Abstract: Trust permeates all social activities and is one of social capital. But when the individual's trust is not satisfied, trust violation will occur. This trust crisis will directly damage the individual's mental health, endanger the country's economic development, political stability and social atmosphere. Previous research mainly focuses on which strategy is better to repair trust behind the violation of trust, but few study systematically explore which aspects should be repaired, that is, how the cognition of the victim is affected by the violation of trust. According to the dual-processing model, the weakening of control processing and the enhancement of automatic processing of negative or motivation-related stimuli are important causes of impulsive behaviors such as depression, anxiety, and addiction. Studies have found that trust violations may impair controlled processing, which is manifested in the impairment of working memory updating when individuals experiencing trust violations compared to experiencing trust. But it is still unclear whether trust violation damages control processing or trust improves control processing.

Secondly, the study found that trust violation can promote the automatic processing of negative stimuli, which is manifested as the individual's attention bias towards negative stimuli after experiencing trust violation. So whether the weakening of control processing by trust violation will be moderated by emotional stimuli, that is, relatively neutral stimuli, and trust violation individuals have weaker ability to update negative stimuli? Therefore, the first purpose of this study is to verify that trust violation impairs working memory updating, and the second is to explore whether the impairment of working memory is moderated by the emotional valence of external stimuli. This study uses repeated trust games to induce trust violations, and the control group does not involve trust and distrust feedback. Subsequently, the letter version of the n-back task was used to measure the ability of working memory updating, and the emotional word version of the n-back task was used to measure the emotional working memory, and the latter recorded ERP at the same time. It was found that in the letter version of the n-back task, the accuracy of the trust violation group was lower than the control group at the 2-back level. In the emotional word version of the n-back task, the amplitude of P2 was smaller in the trust violation group than that of the control group, and there was no significant difference in the amplitude on P3 between the two groups. This shows that trust violation damages general working memory, and regardless of the valence of external stimuli, the impairment of this working memory ability is equally serious. Therefore, when mitigating the negative impact of trust violation in the future, we can start from the perspective of control process.

Abstract: Domestic social support questionnaire surveys over the past 10 years showed that social support still faced difficulties in many aspects, such as the lack of economical, educational, and physical/psychological support. According to the previous investigation reports conducted on teachers of autistic children rehabilitation institutions and parents of autistic children, issues in financial, internal, and human resource management. Low work motivation/implementation and poor institutional system structure has been a malingering issue that has yet seen better solutions. Services provided by rehabilitation institutions for autistic children lack diversity. Monitoring and evaluation of existing social support systems lack standardized evaluation procedures and tests to examine the effectiveness of current social support systems and programs. The present study aims to review the progress of social support and services for special children both domestically and internationally, revolving mainly around autism spectrum disorder (ASD) children over the past 15 years. Furthermore, discuss possible future developments in social support for ASD children in China. Such as the advent of Virtual Reality (VR) technology and VR related works to intervene ASD children's repetitive behavior. Including employment of animal therapy in the treatment process, to improve and enhance ASD children's interpersonal communication skills. The present study also propose a novel concept and framework of ASD intervention by introducing systematic family therapy into current social support systems for children with special needs. Specifically, the need to diversify and enrich current services that social support programs provide for family members of special need children to help parents and the society to better understand their child. To achieve this, Registered Behavior Technician (RBT) training courses could be provided to parents of ASD children and rehabilitation institution teachers in China to better facilitate the treatment process. Emotional guidance and related counselling services to relieve parents' stress, soothe their emotions and promote the treatment, growth, and development of children with special needs should also be provided. The implications and necessity of a reform on the existing social support system/institutions for children with special needs to transform into sustainable recreational centers that hosts recreational activities aimed to facilitate rehabilitation of children with special needs and provide family members support in the future are examined.

摘要 孝道是子女对父母采取的一套社会态度和行为。为了研究孝道与幸福感之间的关系,并探讨这种关系是否因国家而异,本研究基于二元孝道模型和幸福感研究的现状,分析了不同国家的二元孝道对主观幸福感的影响,并探讨了感恩和宽恕的中介作用。本研究采用跨文化研究方法,选取中国大学生300人(男性89人,年龄18-30岁),伊斯兰国家学生303人(男性204人,年龄18-46岁)。采用二元孝道量表(DFPS)、埃蒙斯情绪指标(EMI)、生活满意度量表(LSS)、心田宽恕量表(HFS)和感恩问卷-6(GQ-6)测量二元孝道、主观幸福感、宽恕和感恩的水平。结果表明:(1)互惠孝与感恩、宽恕、主观幸福感正相关,而权威孝与感恩、宽恕、主观幸福感负相关。(2)感恩在互惠孝与主观幸福感之间起中介作用,互惠孝正向预测感恩和主观幸福感,感恩正向预测主观幸福感。然而,当自变量为权威孝时,模型不成立。(3)宽恕在互孝和主观幸福感之间起中介作用,互孝正向预测宽恕和主观幸福感,宽恕正向预测主观幸福感。然而,当自变量为权威孝道时,模型不成立。在这一过程中,互惠孝对宽恕的预测作用以及宽恕对主观幸福感的预测作用因国家不同而不同。因此,本研究揭示了孝道对幸福感的作用机制,并比较了不同文化背景下的差异,对学校和家庭

的孝道教育具有一定的启发作用。

关键词 双元孝道，感恩，宽恕，主观幸福感，跨文化

A Cross-cultural study of Filial Piety and Well-being: The mediating role of Gratitude and Forgiveness

Yiqing Lv¹, Qingke Guo^{1,2}

1 Department of Psychology, Shandong Normal University, Jinan, 250014

2 Department of Psychology, Guangxi Normal University, Guilin, 541004

Abstract: Filial piety is a set of social attitudes and behaviors of children for the purpose of their parents. To investigate the relationship between filial piety and well-being and to explore whether this relationship varies across countries. Based on the dual filial piety model and the status of well-being research. This study analysis the effects of dual filial piety on subjective well-being (SWB) in different countries, and examines the mediating effects of gratitude and forgiveness. In this study, 300 Chinese college students (89 males, aged 18-30 years), 303 Students from Islamic countries (204 males, aged 18-46 years) were selected by cross-cultural study. Dual Filial Piety Scale (DFPS), Emmons Mood Indicator (EMI), Life Satisfaction Scale (LSS), Heartland Forgiveness Scale (HFS) and The Gratitude Questionnaire-6 (GQ-6) were used to measure the levels of dual filial piety, subjective well-being, forgiveness and gratitude. The results showed that: (1) reciprocal filial piety was positively correlated with gratitude, forgiveness, and SWB, while authoritative filial piety was negatively correlated with gratitude, forgiveness, and SWB. (2) Gratitude played a mediating role between reciprocal filial piety and SWB, that is, reciprocal filial piety positively predicted gratitude and SWB, and gratitude positively predicted SWB. However, the model is not valid when the independent variable is authoritative filial piety. (3) Forgiveness played a mediating role between reciprocal filial piety and SWB, that is, reciprocal filial piety positively predicted forgiveness and SWB, and forgiveness positively predicted SWB. However, the model is not valid when the independent variable is authoritative filial piety. In this process, the country plays a moderating role in the effect of reciprocal filial piety on forgiveness and the effect of forgiveness on subjective well-being. Therefore, this study reveals the influence mechanism of filial piety on well-being, and compared the differences between different cultural backgrounds, which has a certain enlightening effect on the education of filial piety in schools and families.

双元孝道在促进内、外群体道德关怀中的作用： 中国与印尼学生的跨文化研究

吕怡清¹ 郭庆科^{1,2} (通讯作者)

1 山东师范大学心理学院, 济南, 250014

2 广西师范大学心理学院, 桂林, 541004, guoqingke@163.com

摘 要 孝道是子女对父母采取的一套社会态度和行为。然而, 孝道与对不同社会成员的道德关怀之间是否存在联系尚不清楚。因此, 本研究旨在探讨中国和印尼样本在双元孝道与道德关怀的关系上是否存在差异, 并探讨自我与他人之间的心理距离的中介作用。本研究共选取 429 名中国大学生 (男性 171 人, 年龄 18-20 岁) 和 363 名印尼大学生 (男性 174 人, 年龄 23-29 岁), 分别完成了双元孝度量表 (DFPS)、自我与他人心理距离量表 (IOS) 和道德关怀圈量表 (CMR) 的自我报告测量。结果表明: (1) 互惠孝和权威孝都与自我和他人的心理距离呈正相关。互惠孝与对内群体的道德关怀正相关, 与外群体的道德关怀负相关, 而权威孝则相反。 (2) 互惠孝通过缩小自己与亲属、陌生人的心理距离来增强对外群体的道德关怀, 国家的差异可以调节互惠孝对道德关怀的影响。 (3) 权威孝可以直接正向预测对外群体的道德关怀。此外, 权威孝可以拉近自我与朋友之间的心理距离, 进而减少对外群体的道德关怀。当中介变量改为自我与陌生人的心理距离时, 这种效应就会逆转。因此, 本研究揭示了不同文化背景下孝道对道德关怀关系的潜在机制。值得注意的是, 权威孝可以促进对外群体的道德关怀, 所以我们认为, 权威孝也需要提倡。家庭和学校要重视孝道的培养, 从而促进自我与他人的心理整合, 增强对他人的道德关怀。

Dual Filial Piety plays different roles in facilitating Moral Concern for in~and out~ group : a Cross-cultural Study comparing Chinese and Indonesian students

Yiqing Lv¹, Qingke Guo^{1,2}

1 Department of Psychology, Shandong Normal University, Jinan, 250014

2 Department of Psychology, Guangxi Normal University, Guilin, 541004

Abstract: Filial piety is a set of social attitudes and social behaviors of children towards their parents. However, it is still unclear whether there is a connection between filial piety and the moral concern for different social members. Therefore, this study aims to investigate whether there are differences in the relationship between dual filial piety and moral concern in Chinese and Indonesian participants, and to explore the mediating role of psychological distance between self and others. 429 Chinese college students (171 males, aged 18-20 years) and 363 Indonesian college students (174 males, aged 23-29 years) were included in this study who completed the Dual Filial Piety Scale (DFPS), Inclusion Others in the Self Scale (IOS) and Circle of Moral Regard (CMR). The results showed that: (1) Reciprocal filial piety and authoritative filial piety were both positively associated with the psychological distance between self and others. Reciprocal filial piety is positively associated with the moral concern for the in-group, and negatively associated with the moral concern for the out-group, while authoritative filial piety is just the opposite. (2) Reciprocal filial piety can enhance the moral concern for out-groups by reducing the psychological distance between self and relatives and between self and strangers, and country can moderate the influence of reciprocal filial piety on moral concern. (3) Authoritative filial piety positively predicted out-group. However, authoritative filial piety can reduce the psychological distance between self and friends to reduce the moral concern for the out-group. This effect was reversed when friends who were psychologically distant from themselves were replaced with strangers. Therefore, this study reveals the influence mechanism of filial piety on the relationship of moral concern in different cultural backgrounds. It is worth noting that authoritative filial piety can promote the moral concern for out-groups, so we believe that authoritative filial piety also needs to be advocated. Families and schools should pay attention to the cultivation of filial piety, so as to promote the psychological integration of individuals and others, and thus enhance the moral concern for different groups.

个人主义调节选择自主性对幸福感的影响程度： 基于全球调查数据的分析

李睿思¹ 王非²

1 清华大学心理系，北京，100084

2 清华大学心理系，北京，100084, wf3126@mail.tsinghua.edu.cn

摘要 选择自主性对幸福感的影响是决策领域的重要话题，以往研究者认为相比西方文化，在东方文化中选择自主性对幸福感的贡献程度不大，但这一猜想缺乏实证数据的直接验证。本研究通过对两批全球调查数据的分析，证明选择自主性对不同文化下的国民幸福感影响程度有所不同。研究一基于 2021 年全球幸福指数报告数据集和霍夫斯泰德文化维度数据，通过对 82 个国家和地区的探索，发现选择自主性对国民幸福指数的主效应显著，同时个人主义和选择自主性对国民幸福指数的交互作用显著，一个社会的个人主义程度越高，选择自主性影响国民幸福指数的效应量越大；将各个地区的人均 GDP、国民预期健康寿命、对腐败的感知程度、社会支持、慷慨程度等其他可能影响幸福感的因素作为控制变量后，该效应仍然存在。研究二基于 2007 年全球幸福指数报告数据集和霍夫斯泰德文化维度数据再次重复了上述分析过程并得到相同结论，证明了这一效应的跨时间稳定性。总结来说，本研究发现了文化维度在影响幸福感的因素中的重要地位，自主性在不同文化下对人的心理健康和行为有着不同程度的影响；自主性的积极影响更多与建立在个人主义意识形态上的西方文化紧密相关，在制定有关提高中国国民幸福感的相关政策时，要考虑到我国独特的集体主义文化背景。

景和相互依赖的行为模式。

Individualism moderates the degree to which choice autonomy affects happiness: Predicting happiness from choice autonomy in 82 societies

Ruisi Li, Fei Wang

Department of Psychology, Tsinghua University, Weiqing Building, Beijing 100084, China

Abstract: The influence of autonomy on happiness is an important topic in the field of decision making. Previous researchers believed that compared with western culture, the contribution of choice autonomy to happiness in eastern culture is small, but this conjecture lacks direct verification of empirical data. By analyzing two batches of global survey data, this study proves that the degree of influence of choice autonomy on citizen happiness under different cultures is different. Study 1 based on 2021 global happiness index data sets and Hofstede's culture dimension data, through the exploration of 82 countries and regions, found that there was a positive effect of choice autonomy on happiness, and the choice autonomy by individualism interaction was also significant; the higher the degree of a society's individualism, the greater the effect of choice autonomy on happiness. The effect remained even after controlling for logged GDP per capita, healthy life expectancy, perceptions of corruption, social support, and generosity, which might influence happiness. Based on the 2007 Global Happiness Report data set and the Hofstede's Cultural Dimensions data, study 2 repeated the analysis and reached the same conclusion, demonstrating the stability of the effect across time. In summary, this study found that the cultural dimension was in an important position of the influencing factors of happiness. Choice autonomy under different cultures has varying degrees of influence on people's mental health and behaviors. Autonomy's positive influence is much more a specialty of western cultures built on the ideology of individualism. When formulating the related policies of improving Chinese's well-being, it should be considered that the unique cultural background of collectivism and the interdependent behavior pattern of our country.

摘要 随着数据时代的到来, 无论是实物性消费亦或是体验性消费, 网购的形式日益重要。而网购时对于商品的观感和体验感都略有缺失, 这种情况下, 网络信息对于商品的评价就显得尤为重要。已有研究表明, 商品的网络评价对于消费者的实物性消费决策和体验性消费决策都存在显著影响。物质生活越来越富足的人们也更加追求体验性消费带来的舒适感和幸福感。参考国内电商平台数据发现, 大学生是体验性消费的主力军。本研究旨在探究网络评价的类型对大学生体验性消费决策的影响。此次研究运用情景模拟的问卷调查法, 采用《消费者网络消费情况调查问卷》在辽宁省某高校随机抽取 187 名在校大学生进行施测, 调查问卷的主体为以著名旅游城市大连的额某家五星级酒店, 通过该酒店的主客观网络评价作为情景材料从而引导被试对该酒店的消费决策。剔除无效数据后, 最终得到有效数据 182 份。对数据分析结果显示, 积极的客观评价对消费者购买意愿的影响显著高于积极的主观评价, ($t=3.297$, $df=180$, $p<0.05$)。因此, 我们得出如下结论: 同样为积极评价的情况下, 相比于主观评价, 网络评价中的客观评价更能影响大学生消费者购买决策, 即, 人们在网预订酒店时, 对酒店客观条件、基础设施的评价比入住后个人感受更能影响其他消费者对于该家

酒店的预订。这一结论能够对体验性消费品牌互联网终端 OT 平台在筛选或罗列网络评价时给出一定的指导建议。

The Influence of The Types of Online Reviews on College Students' Experiential Consumption

SONG Shuang¹, ZHANG Song², YAO Yujie² JU Teng²

1 College of Preschool Education, Liaoning Institute of Education, Shenyang 110169, China

2 Faculty of Applied Psychology, Shenyang City University, Shenyang 110112, China

Abstract: With the advent of the data age, whether it is physical consumption or experiential consumption, the form of online shopping is becoming increasingly important. Previous studies have shown that consumers' online evaluation of goods will affect consumers' consumption decisions. This study aims to explore the impact of the types of network evaluation on College Students' experiential consumption decision. In this study, 187 college students were randomly selected from a university in Liaoning Province by using the questionnaire survey method of scenario simulation, and 182 valid data were obtained. The results showed that positive objective evaluation had a significantly higher impact on consumers' purchase intention than positive subjective evaluation ($t = 3.297$, $df = 180$, $p < 0.05$). Therefore, we draw the following conclusion: in the case of positive evaluation, compared with subjective evaluation, the objective evaluation in network evaluation can more influence college students' consumer purchase decision. This conclusion can give some guidance and suggestions to the operational technology of experiential consumer brand internet terminal when screening or listing network evaluation.

个人投资者的人格特质与非理性投资行为的相关研究

刘稀月¹ 马君妍²

1 天津体育学院, 天津, 301617, sweetyears626@163.com

2 内蒙古师范大学, 呼和浩特, 010022

摘要 当前我国证券市场以小型和中型投资者为主体, 其中, 个人投资者的投资行为对证券市场的健康发展有较大影响。而个人投资者的投资行为往往与其人口学背景与人格特质有着密切关系。研究旨在通过对个人投资者的人格特质及非理性投资行为进行研究, 探讨我国个人投资者的个体差异对其投资行为的影响。结合行为金融学理论, 研究将个人投资者非理性投资行为划分为过度自信, 处置效应及羊群效应, 并探究不同性别, 年龄, 学历, 入市年限等人口学变量的投资者在非理性投资行为上的差异, 同时, 结合人格特质理论, 研究对个人投资者自身人格特质和非理性投资行为的关系进行分析和探讨。研究采用问卷调查法, 使用大五人格量表 (NEO Five-Factor Inventory, NEO-FFI) 和投资行为量表对 236 名近期参与中国证券市场投资的个人投资者进行调查。研究结果如下: (1) 在我国个人投资者的投资活动中, 非理性投资行为普遍存在, 且行为倾向较高; (2) 不同性别个体的非理性投资行为之间不存在显著性差异, 但不同年龄, 学历及入市年限的投资者的非理性投资行为之间差异显著。年龄长, 学历高, 入市年限长的投资者非理性投资行为较少。 (3) 投资者的人格特质和其非理性投资行为之间存在相关关系, 其中, 神经质, 外倾性和开放性 with 处置效应呈现显著相关。而开放性和责任心与过度自信呈现显著相关。

Research on Personality Traits of Individual Investors and Irrational Investment Behavior

Liu Xiyue¹, Ma Junyan²

1 Tianjin University of Sport, Tianjin, 301617, China

2 Inner Mongolia Normal University, Inner Mongolia, 010022, China

Abstract: At present, China's securities market is dominated by small and medium-sized investors. The investment behavior of individual investors has great influence on the healthy development of securities market. And the investment behavior of individual investors is often closely related to its demographic background and personality traits. The purpose of this study is to explore the influence of individual differences of individual investors on their investment behavior through the study of individual investors' personality traits and irrational investment behavior. Combining with behavioral finance theory, individual investors irrational investment behavior is divided into overconfidence, disposition effect and herding effect, and to explore the differences in irrational investment behaviors among investors with different gender, age, education background, years of market entry and other demographic variables. At the same time, combining the theory of personality traits, study analyzes and discusses the relationship between individual investors' personality traits and irrational investment behavior. This study uses NEO Five-Factor Inventory (NEO-FFI) and Investment behavior Scale to survey 236 individual investors who have recently invested in China's securities market. The results are as follows : (1) Irrational investment behavior is common in the investment activities of individual investors in China, and the behavior tendency is high; (2) There is no significant difference between the irrational investment behaviors of individuals with different genders, but there is a significant difference between the irrational investment behaviors of investors with different ages, educational background and years of entering the market. Individuals with older ages, higher education and longer time that enters the market are less likely to make irrational investments. (3) There is a correlation between investors' personality traits and their irrational investment behaviors. Neuroticism, extroversion and openness were significantly correlated with disposition effects. And openness and Conscientiousness were significantly correlated with overconfidence.

助人行业从业者职业压力与生活质量的关系： 家庭经济水平的调节作用

任敏敏¹, 孙相洁¹, 封丹璐¹ (通讯作者)

1. 山东大学齐鲁医学院护理与康复学院, 山东 济南 250012

封丹璐: fdj19@sdu.edu.cn

摘 要 目的: 探讨助人行业从业者(公务员、护理人员和教师)职业压力与生活质量的关系, 以及家庭经济水平在职业压力与生活质量关系中的调节作用。方法: 2018年3月—2019年4月, 采用方便抽样法选取公务员、护理人员以及教师为研究对象。采用生活质量8条目简明量表、职业压力角色量表和自编家庭经济量表进行调查。采用独立样本t检验与单因素方差分析考察一般人口学资料对生活质量的影响; 采用Pearson相关分析探讨职业压力、家庭经济水平与生活质量间的相关性; 采用分层回归分析家庭经济水平对职业压力与生活质量间的调节效应; 采用简单斜率检验, 对调节效应进行详细分析。结果: 独立样本t检验与单因素方差分析结果显示, 护理人员的生活质量得分在年龄方面差异有统计学意义($P < 0.05$)。Pearson相关分析结果表明, 助人行业从业者的家庭经济水平与生活质量间均存在正向相关, 职业压力与家庭经济水平、生活质量间均存在负向相关。分层回归结果显示, 职业压力对生活质量存在负向影响($\beta_{\text{公务员}} = -0.213$, $\beta_{\text{护理人员}} = -0.291$, $\beta_{\text{教师}} = -0.268$, $P < 0.05$)。家庭经济水平与职业压力的交互项对生活质量存在正向作用($\beta_{\text{公务员}} = 0.083$, $\beta_{\text{护理人员}} = 0.090$, $\beta_{\text{教师}} = 0.078$, $P < 0.05$)。调节效应图显示, 伴随职业压力水平增加, 三种助人行业从业者的生活质量均出现下降趋势, 但是这种趋势受家庭经济水平的调节。在公务员人群内, 与家庭经济低水平组相比($\beta_{\text{公务员}} = -0.444$, $P < 0.05$), 家庭经济中、高水平组中的生活质量下降较为平缓($\beta_{\text{公务员}} = -0.318$, $\beta_{\text{公务员}} = -0.192$, $P < 0.05$);

在护理人员人群内,与家庭经济低水平组相比($\beta_{\text{护理人员}}=-0.666, P<0.05$),家庭经济中、高水平组中的生活质量下降也更为平缓($\beta_{\text{护理人员}}=-0.489, \beta_{\text{护理人员}}=-0.313, P<0.05$);同样的趋势也发生在在教师人群内,即与家庭经济低水平组相比($\beta_{\text{教师}}=-0.649, P<0.05$),家庭经济中、高水平组中的生活质量下降也较为平缓($\beta_{\text{教师}}=-0.484, \beta_{\text{教师}}=-0.318, P<0.05$)。结论:职业压力会降低助人行业从业者的生活质量,而较高的家庭经济水平则可以缓解职业压力对生活质量的这种负面影响。

关键词 生活质量,职业压力,家庭经济,助人行业

The Influence of Occupational Stress on Quality of Life among Helping Professionals: the Moderating Role of Family Economy Level

REN Minmin¹, SUNG Xiangjie¹, FENG Danjun¹

¹ School of Nursing and Rehabilitation, Cheeloo College of Medicine, Shandong University, Jinan 250012, Shandong, China

Abstract: Objective: To explore the relationship between occupational stress and quality of life of helping professionals (civil servants, nurses and teachers), and the moderating effect of family economy level in the relationship between occupational stress and quality of life. Methods: From March 2018 to April 2019, using 8-Item Short Form, Occupational Role Questionnaire and Self-compiled Family Economic Scale, civil servants, nurses and teachers were investigated by convenience sampling. The independent sample t-test and one-way analysis of variance were used to examine the influence of general demographic data on quality of life. Pearson correlation analysis was used to explore the correlation among occupational stress, family economy level and quality of life. Stratified regression was used to analyze the moderating effect of family economy level in the relationship between occupational stress and quality of life. The adjustment effect was analyzed in detail by moderating effect test. Results: The results of independent sample t-test and one-way analysis of variance showed that the difference of quality of life scores of nurses was statistically significant in terms of age ($P < 0.05$). Pearson correlation analysis results showed that there was a positive correlation between family economy level and quality of life of helping professionals, and a negative correlation among occupational stress, family economy level and quality of life. Stratified regression results showed that occupational stress had a negative effect on quality of life ($\beta_{\text{civil servants}} = -0.213, \beta_{\text{nurses}} = -0.291, \beta_{\text{teachers}} = -0.268, P < 0.05$) and the interaction between family economy level and occupational stress had a positive effect on quality of life ($\beta_{\text{civil servants}} = 0.083, \beta_{\text{nurses}} = 0.090, \beta_{\text{teachers}} = 0.078, P < 0.05$). The moderating effect charts showed that with the increase of stress level, the quality of life showed a downward trend. Among civil servants, compared with the low level of family economy group ($\beta_{\text{civil servants}} = -0.444, P < 0.05$), the quality of life in the medium and high level of family economy group decreased more slowly ($\beta_{\text{civil servants}} = -0.318, \beta_{\text{civil servants}} = -0.192, P < 0.05$); Among nurses, compared with the low level of family economy group ($\beta_{\text{nurses}} = -0.666, P < 0.05$), the quality of life in the medium and high level of family economy group decreased more slightly ($\beta_{\text{nurses}} = -0.489, \beta_{\text{nurses}} = -0.313, P < 0.05$); In addition, compared with the low level of family economy group ($\beta_{\text{teachers}} = -0.649, P < 0.05$), the quality of life in the medium and high level of family economy group decreased more gradually among teachers ($\beta_{\text{teachers}} = -0.484, \beta_{\text{teachers}} = -0.318, P < 0.05$). Conclusion: Occupational stress can reduce the quality of life of helping professionals, and the higher family economic level can alleviate the negative effect of occupational stress on the quality of life.

工作-家庭冲突对工作激情的影响：组织公民行为的中介作用以及心理弹性的调节作用--基于经验取样法

李越超¹ 李力² (通讯作者)

1 南昌大学, 南昌, 330000

2 南昌大学心理学系, 南昌, 330000, lancyili@163.com

摘要 依据角色理论和资源流失理论, 工作领域和家庭领域所涉及的多个角色对员工提出了许多要求, 为满足各种工作和家庭角色的需要, 许多人屈服于角色压力。而这种压力很可能导致资源消耗的发生。资源流失理论认为时间、注意力和精力等资源是有限的, 个体长时间处于冲突压力情境容易挫伤员工工作的积极态度。以往的研究主要关注于工作-家庭冲突对工作效果的不利影响, 而目前有关工作-家庭冲突对工作效果的有利影响鲜有研究, 并且其中的影响机制尚不明确。基于此, 本研究探讨工作-家庭冲突与工作激情的关系以及组织公民行为的中介作用和心理弹性的调节作用, 采用工作激情量表、工作-家庭冲突量表、组织公民行为量表以及心理弹性量表, 通过经验取样法连续 10 天对 95 位在职员工进行问卷调查并建构结构方程模型进行分析。研究结果表明: (1) 工作-家庭冲突对员工的工作激情表现出了显著的负向影响; (2) 组织公民行为在工作-家庭冲突与工作激情的关系中起部分中介作用; (3) 心理弹性在组织公民行为对工作激情的影响中起显著的调节作用。所以本研究建议相关公司可以采取通过改善员工的组织公民行为, 提升员工的心理弹性水平的方式, 来促进员工工作激情的激发, 进而提升员工的工作效率。

The influence of work-family conflict on work passion: the mediating effect of organizational citizenship behavior and the regulating effect of psychological resilience -- Based on empirical sampling method

Liyuechao

Nanchang University, 999 Xuefu Avenue, Xinjian District, Nanchang City, Jiangxi Province, China

Abstract: According to the role theory and the resource drain theory, the multiple roles involved in the work field and family field put many demands on employees. In order to meet the needs of various work and family roles, many people give in to role pressure. And this pressure is likely to lead to resource consumption. According to the theory of resource drain, resources such as time, attention and energy are limited, and individuals who are in conflict and pressure situation for a long time are likely to frustrate employees' positive attitude towards work. Previous studies mainly focused on the negative impact of work-family conflict on work effect, but there are few studies on the positive impact of work-family conflict on work effect, and the mechanism of the impact is still unclear. Based on this, this study explores the relationship between work-family conflict and work passion, as well as the mediating effect of organizational citizenship behavior and the regulating effect of psychological resilience. Using the Work Passion Scale, work-family Conflict scale, organizational citizenship Behavior Scale and mental resilience scale, 95 employees were investigated by empirical sampling method for 10 consecutive days and the structural equation model was constructed for analysis. The results show that : (1) work-family conflict has a significant negative impact on employees' work passion; (2) organizational citizenship behavior plays a partial mediating role in the relationship between work-family conflict and work passion; (3) Psychological resilience plays a significant regulating role in the influence of organizational citizenship behavior on work passion. Therefore, this study suggests that relevant companies can improve their employees' organizational citizenship behavior and enhance their psychological resilience to stimulate their work passion and thus improve their work efficiency.

黑白还是彩色？图片色彩对公益捐赠意愿的影响

李嘉雯¹ 孙晓敏¹（通讯作者）

¹ 北京师范大学心理学部，北京，100875，E-mail: sunxiaomin@bnu.edu.cn

摘要 图片是公益广告的组成部分之一，在促进公益捐赠的过程中发挥了重要的作用。从解释水平理论的视角来看，图片色彩的不同导致信息表征中解释水平的差异，黑白图片相比于彩色图片有着更高的解释水平，进而带来不同的心理和行为结果。本研究旨在从解释水平理论的视角探究公益广告图片的色彩（黑白、彩色）对消费者公益捐赠意愿的影响及其内在机制和边界条件。实验1采用单因素被试间实验设计，自变量为图片色彩（黑白、彩色），因变量为捐赠意愿。招募被试60名，结果初步证明彩色图片条件下被试的捐赠意愿显著高于黑白图片条件下被试的捐赠意愿， $t(58) = 2.55$ ， $p = 0.013$ ， $d = 0.66$ ，并且心理距离在图片色彩对捐赠意愿的影响中起到完全中介作用。为考察图片中是否呈现受捐者人像对结果的影响，实验2探究了图片色彩和人像呈现对捐赠意愿的影响。实验2采用2（图片色彩：黑白、彩色）×2（人像呈现：有人像、无人像）两因素被试间实验设计，招募被试143名，结果表明人像呈现会调节图片色彩对捐赠意愿的影响， $F(1, 139) = 13.942$ ， $p < 0.001$ ， $\eta^2 = 0.090$ ，当图片中有人像时，彩色（vs. 黑白）图片条件下的捐赠意愿更高；当图片中无人像时，黑白（vs. 彩色）图片条件下的捐赠意愿更高。究其原因，彩色（vs. 黑白）图片代表着更低的解释水平，低解释水平对应较近的心理距离，因此当图片中呈现受捐者人像时，彩色图片能够拉近消费者与受捐者之间的心理距离，消费者愿意付出更多的金钱和爱心。研究结论推进了解释水平理论在消费者亲社会行为领域的理论研究，为公益组织营销公益产品、增加公益资助提供了重要的实践启示，并为公益决策部门通过经济有效的方法促进现实中的慈善捐赠提供了有效的政策参考。

Black-and-white or colorful? The influence of color on charitable donation intention

Jiawen Li¹, and Xiaomin Sun^{1*}

¹ Faculty of Psychology Beijing Normal University, Beijing, China

Abstract: Picture communications can be either colorful or black-and-white. Drawing from construal-level theory, Black-and-white versus color imagery is respectively associated with high-level versus low-level construal, leading to different psychological and behavioral outcomes. Drawing from construal-level theory, this research tests the influence of black-and-white versus color imagery on consumer's charitable donation intention and explores underlying mechanisms and boundary conditions. Study 1 examines the effect of color (presence vs. absence) on donation intention and the mediating role of psychological distance. The study recruits 60 participants and finds that participants are more willing to donate when the imagery is colorful (vs. black-and-white), $t(58) = 2.55$ ， $p = 0.013$ ， $d = 0.66$ ，and psychological distance plays a full mediating role. Study 2 further explores the interaction of color (presence vs. absence) and portrait (presence vs. absence) on donation intention. The study recruits 143 participants and shows a significant interaction of color and portrait, $F(1, 139) = 13.942$ ， $p < 0.001$ ， $\eta^2 = 0.090$. Specifically, color (vs. black-and-white) imagery leads to higher donation intention when portraits present while black-and-white (vs. color) leads to higher donation intention when portraits absent. In summary, this research shows that color (vs. black-and-white) imagery has a significant positive effect on donation intention, driven by close psychological distance, only when there are portraits in pictures. Theoretically, the current findings extend construal level theory to domain of consumer's prosocial behavior. Practically, this research suggests that public service firms should pay great attention to how color can influence public benefits, thus expanding public funding.

Keywords: charitable donation, black-and-white, colorful, psychological distance, construal-level theory

道德概念净脏隐喻对清洁产品消费决策的影响：惩罚的净化效应

张蓉 丁凤琴（通讯作者）宋秀萍 王小芳

宁夏大学教育学院，银川，750021，dingfqn@nxu.edu.cn

摘要 概念隐喻理论强调，个体在感知经验的基础上运用净脏、温度、黑白等简单具体概念来表征复杂抽象的道德概念，形成道德概念净脏隐喻、温度隐喻和黑白隐喻。以往研究发现，道德概念温度隐喻(Van Acker, Kerselaers, Pantophlet, & IJzerman, 2016)、触觉隐喻(丁瑛, 宫秀双, 2016)对消费产品决策产生影响。但到目前为止，鲜有研究探讨道德概念净脏隐喻对消费产品决策的影响。以往研究也表明，道德概念净脏隐喻具有心理现实性(Zhong, Liljenquist, 2006; Lee & Schwarz, 2010)，并且惩罚可以减轻个体因不道德行为而产生的罪恶感，具有道德净化效应(Tangney, Stuewig, & Mashek, 2007)。那么，道德概念净脏隐喻是否对清洁类消费产品产生影响？受到惩罚的个体在道德净化之后是否对清洁类消费产品决策产生影响？基于此，本研究通过3个实验探讨道德概念净脏隐喻的心理现实性及其对清洁相关产品消费决策的影响，在此基础上进一步探讨惩罚在其中的净化作用。研究结果表明：(1) 道德概念净脏隐喻存在心理现实性，具体而言，道德与洁净关联，不道德与肮脏关联；(2) 道德概念净脏隐喻对清洁产品消费决策有影响，与道德概念洁净条件相比，被试在肮脏条件下对清洁相关物品更加渴望，购买意愿也更强；(3) 相比于无惩罚不道德故事条件，在有惩罚不道德故事条件下，被试对清洁相关物品的渴望程度和购买意愿降低。以上研究表明，道德概念净脏隐喻具有心理现实性并对清洁产品消费决策产生影响，而且惩罚在其中起净化作用。以上研究有助于学校通过净化环境从而对学生进行道德教育，帮助学生形成正确的道德认知，也可为消费者决策领域提供心理学方面的决策指导。

关键词 概念隐喻，净脏，消费决策，惩罚

Clean and Dirty Metaphor of Moral Concept and its influence on the consumption decision of clean products:

The purifying effect of punishment

Rong Zhang, Fengqin Ding, Xiuping Song, Xiaofang Wang

Institute of Education, Ningxia University, Yinchuan, 750021, China

Abstract: Conceptual Metaphor Theory (CMT) emphasizes that individuals use simple concrete concepts such as clean and dirty, warm and cold, black and white to represent complex and abstract moral concepts on the basis of perceptual experience, thus forming clean and dirty metaphor, warm and cold metaphor and black and white metaphor of moral concepts. Previous studies have found that moral conceptual temperature metaphor (Van Acker, Kerselaers, Pantophlet, & IJzerman, 2016) and tactile metaphor (Ying Ding & Xiushuang Gong, 2016) have impact on the decision of consumption products. However, up to now, few studies have explored the influence of clean and dirty metaphor of moral concept on the decision of consumption products. Previous studies have also shown that clean and dirty metaphor of moral concept has psychological reality, and punishment can reduce the individual's sense of guilt caused by immoral behavior, it has the effect of moral purification (Tangney, Stuewig, & Mashek, 2007). As a result, does clean and dirty metaphor of moral concept influence the decision of consumption products? Does the punished individual affect the consumption decision of clean products after moral purification? Based on this, the current study explored the psychological reality of clean and dirty metaphor of moral concept and its impact on the consumption decision-making of cleaning related products via three experiments, and further explored the purification effect of punishment in it. The results suggest that: (1) Clean and dirty metaphor of moral concept has psychological reality, specifically, moral and clean were related, so were immoral and dirty; (2) Clean and dirty metaphor of moral concept has an impact on decision-making of clean products consumption, compared with the moral concept of clean metaphor condition, the subjects are more eager for cleaning related items and have stronger willingness to buy them under the dirty metaphor condition; (3) Different from the unpunished immoral story condition, the subjects' desire for cleaning-related items and purchase intention were reduced under the punished immoral story condition. The above research shows that clean and dirty metaphor of moral concept has psychological

reality and has an impact on the consumption decision of clean products, and punishment plays a purifying role in it. It is helpful for schools to carry out moral education for students by purifying the environment and help students form correct moral cognition, and to provide psychological guidance for consumption decision-making.

Keywords: conceptual metaphor, clean and dirty, consumption decision, punishment

自我控制与产品促销对消费者购买意向的影响

张天敏 王莉（通讯作者）

北京体育大学心理学院，北京，100084 wanglili0801@163.com

摘 要 随着社会的发展，人们的生活水平普遍提高，影响其消费的因素也在逐渐增多，促销(promotion)便是其中的一种。产品促销活动一直以来都是消费者与商家共同关注的问题，消费者会经常关注、参与产品促销活动进而减少生活开支，而商家也会经常推出促销活动来激发甚至增强消费者冲动性购买的意向，吸引消费者选购。自我控制对消费者在购买上两难抉择的影响一直以来备受关注，自我控制可以让消费者在面临两难问题时保持理智，直接或间接地影响消费者的购买行为。本研究引入了产品促销这一变量，旨在探究价格促销与赠品促销这两种产品促销对高低不同自我控制能力的消费者购买意向的影响。以北京某大学 108 名大学生为研究对象，实验采用 2（自我控制：高，低）×2（产品促销：价格促销，赠品促销）的混合设计，被试间变量为自我控制，被试内变量为产品促销，因变量为消费者的购买意向。结果表明：1）自我控制的主效应显著。与高自我控制的个体相比，低自我控制个体的购买意向更强；2）产品促销的主效应显著，与赠品促销相比，价格促销更能激起消费者的购买意向；3）自我控制与产品促销的交互作用显著。低自我控制的个体在面对价格促销与赠品促销时，其购买意向均无差异，但都高于在这两种情境下的高自我控制的个体；与赠品促销相比，高自我控制的个体在面对价格促销时的购买意向更强。

关键词 自我控制，产品促销策略，购买意向

The Effect of Self-control and Product Promotion on Consumers' Purchase Intention

ZHANG Tianmin, WANG Li

School of Psychology, Beijing Sport University, Beijing, 100084, wanglili0801@163.com

Abstract: The influence of self-control on consumers' purchasing dilemma has long been the focus of merchants and scholars. In this study, the variable of product promotion was introduced to explore the effect of price promotion and premium promotion on the purchase intention of consumers with different levels of self-control. In this study, 108 students from a university in Beijing were recruited. The experiment was conducted using 2 (self-control: high, low) ×2 (product promotion: price promotion, premium promotion) mixed design. The between-subject variable was self-control, and the within-subject variable was product promotion. The dependent variable was consumers' purchase intention. The conclusion was that self-control and product promotion could affect consumers' purchase intention. Compared with premium promotion, consumers with high level of self-control have stronger purchase intention in the face of price promotions. Consumers with low level of self-control in the face of price promotions and premium promotion, despite their purchase intention having no difference, have higher purchase intention than consumers with high level of self-control in both situations.

Keywords: Self-control, price promotion, premium promotion, purchase intention

组织氛围、工作投入、工作满意度对企业员工工作绩效的影响

周孟波 邓小平（通讯作者）

赣南师范大学大学教育科学学院，赣州，341000, dxp1984@gmail.com

摘 要 背景:员工是企业发展的动力，员工的工作绩效直接关系到企业的生存和发展，如何提高员工的工作绩效也已经成为管理心理学界的热点话题。新生代知识员工的关系与工作绩效的激发无疑是现代企业可持续

发展的关键。目的：探究组织氛围、工作投入和工作满意度三个因素与工作绩效关系及其作业机制。方法：通过问卷调查的方法，对 148 名企业员工进行了调查。其中，男性 54 人，女性 94 人；18-25 岁 79 人，25-40 岁 40 人，40-60 岁 29 人。将组织氛围（分为信任氛围、沟通氛围、情绪氛围、公平氛围四个维度）、工作投入（分为活力、奉献、专注三个维度）和工作满意度（分为对上级的满意度、对报酬、晋升和工作本身的满意度、对同事的满意度、对绩效评价和工作环境的满意度 4 个维度）作为自变量，工作绩效（分为任务绩效、人际绩效、适应和努力绩效三个维度）为因变量，进行相应的描述性统计、差异性检验、相关分析和回归分析。结论：(1)男性员工工作绩效得分大于女性员工；已婚员工工作绩效得分高于离异人群；不同公司性质、公司规模与工作绩效无显著关系。(2)组织氛围、工作投入和工作满意度与工作绩效之间两两呈正相关。(3)工作满意度能显著预测工作绩效，工作投入为中介变量；工作满意度中的对同事满意度维度能显著预测工作绩效，工作投入的专注维度为中介变量。

关键词 组织氛围，工作投入，工作满意度，工作绩效

The Influence of Organisation climate, Job Engagement and Job Satisfaction on Job Performance

Chen Yuqing¹, Wang Meiyin¹ (correspondent author)

¹ Gannan Normal University, Ganzhou, 341000, dxp1984@gmail.com

Abstract: Background: Employees are the driving force of enterprise development, and their job performance is directly related to the survival and development of enterprises. How to improve their job performance has also become a hot topic in the field of management psychology. The relationship between the new generation of knowledge workers and the stimulation of job performance are undoubtedly the key to the sustainable development of modern enterprises. Objective: To explore the relationship between organizational climate, job involvement and job satisfaction and job performance and its operating mechanism. Methods: A questionnaire survey was conducted among 148 employees. Among them, there are 54 males and 94 females; 79 people aged 18-25, 40 people aged 25-40 and 29 people aged 40-60. Organizational atmosphere (divided into four dimensions: trust atmosphere, communication atmosphere, emotional atmosphere and fair atmosphere), job engagement (divided into three dimensions: vitality, dedication and concentration) and job satisfaction (divided into four dimensions: satisfaction with superiors, satisfaction with remuneration, promotion and work itself, satisfaction with colleagues, satisfaction with performance evaluation and work environment) are taken as independent variables, and job performance (divided into task performance, interpersonal performance, adaptation and hard work) is taken as independent variables. Conclusion: (1) The job performance score of male employees is higher than that of female employees; Married employees have higher job performance scores than divorced people. There is no significant relationship between different company nature and size and job performance. (2) Organizational climate, job involvement and job satisfaction are positively correlated with job performance. (3) Job satisfaction can significantly predict job performance, and job involvement is an intermediary variable; The dimension of satisfaction with colleagues in job satisfaction can significantly predict job performance, and the focus dimension of job involvement is an intermediary variable.

Key words: Organizational climate, Job engagement, Job satisfaction, Job performance

积极能否促进安全：心理资本对飞行员安全行为的影响及其机制

徐泉^{1,2} 游旭群^{1,2}（通讯作者）

1 陕西师范大学心理学院，西安，710062

2 陕西省行为与认知神经科学重点实验室，西安，710062, youxuqun@snnu.edu.cn

摘要 近些年来，随着积极心理学和积极组织行为学的兴起和发展，安全科学和人因工程领域的研究者们逐渐开始关注“积极能否促进安全”这一热点问题。然而，当前研究者们对该问题的探讨大多停留在理论层面，缺乏深入的实证研究。基于此，本研究从积极组织行为学的核心概念——心理资本(psychological capital)着手，拟探讨其对飞行安全的潜在积极影响，从而在航空情境中考察“积极能否促进安全”这一问题。心理资本是当前积极心理学运动在工作场所的应用，主要指个体积极的心理发展状态，包括自我效能感、希望、乐观和韧性四个方面。与积极心理学类似，心理资本的研究呼吁将注意力转移到人们积极的、功能性的和富有成效的方面，而不是专注于解决他们的问题，这使得它有望成为一种促进安全行为的积极替代方法。因此，本研究基于积极心理学视角，并围绕心理资本理论和个体-环境交互理论，深入探究心理资本与飞行员安全行为的关系及其内在机制。选取心理资本问卷、工作投入量表、航空安全氛围量表以及飞行员安全行为问卷对 347 名中国航线飞行教员、机长和副驾驶进行调查。在检验共同方法偏差和问卷信效度的基础上，通过结构方程模型分析，结果发现：（1）心理资本对飞行员安全行为具有显著的促进作用，高心理资本飞行员的安全行为水平显著高于低心理资本飞行员；（2）工作投入在心理资本对飞行员安全行为的影响过程中发挥了部分中介作用；（3）组织安全氛围在心理资本对飞行员安全行为的影响过程中发挥了调节作用，即积极的组织安全氛围削弱了心理资本对飞行员安全行为的影响。本研究的意义和贡献在于一方面能够通过实证研究去检验和回答“积极能否促进安全”，从而体现积极心理（心理资本）在安全和人因工程领域的潜在价值，并进一步扩大积极心理学和积极组织行为学的影响；另一方面通过考察飞行员安全行为的心理机制，能够为有针对性的飞行员选拔和训练提供理论支持及科学依据，进而从实践角度进一步保障和提升航空安全。

Can positivity promote safety: the effect of psychological capital on pilots' safety behavior and its mechanism

Xu Quan^{1,2}, You Xuqun^{1,2}

1 School of Psychology, Shaanxi Normal University, Xi'an, 710062

2 Key Laboratory for Behavior and Cognitive Neuroscience of Shaanxi Province, Xi'an, 710062

Abstract: In recent years, with the rise and development of positive psychology and positive organizational behavior, researchers in the field of safety science and human factors engineering gradually pay attention to the hot issue of "can positivity promote safety". However, the current researches on this issue mostly remain at the theoretical level and lack of in-depth empirical research. Based on this, this study started from the core concept of positive organizational behavior -- psychological capital, and intends to explore its potential positive impact on flight safety, so as to investigate the question of "can positivity promote safety" in the aviation context. Psychological capital is the application of the current positive psychology movement in the workplace, which mainly refers to individual's positive psychological state of development, including self-efficacy, hope, optimism and resilience. Similar to positive psychology, psychological capital research calls for shifting attention to the positive, functional, and productive aspects of people rather than focusing on solving their problems, making it a promising alternative to promoting safe behavior. Therefore, this study based on the perspective of positive psychology and centered on psychological capital theory and individual-environment interaction theory, deeply explored the relationship between psychological capital and pilot safety behavior and its internal mechanism. Psychological capital questionnaire, work

engagement scale, aviation safety climate scale and pilot safety behavior questionnaire were selected to investigate 347 flight instructors, captains and co-pilots of Chinese airlines. On the basis of testing the common method deviation and the reliability and validity of the questionnaire, through the analysis of structural equation model, the results show that: (1) psychological capital significantly promoted the safety behavior of pilots, and the safety behavior level of pilots with high psychological capital was significantly higher than that of pilots with low psychological capital; (2) Work engagement partially mediated the effect of psychological capital on pilot safety behavior; (3) Organizational safety climate played a moderating role in the process of the influence of psychological capital on pilot safety behavior, namely, the positive organizational safety climate weakened the influence of psychological capital on pilot safety behavior. The significance and contribution of this study lies in that on the one hand, it can test and answer the question "can positivity promote safety" through empirical research, so as to reflect the potential value of positive psychology (psychological capital) in the field of safety and human factor engineering, and further expand the influence of positive psychology and positive organizational behavior. On the other hand, by investigating the psychological mechanism of pilot safety behavior, it can provide theoretical support and scientific basis for targeted pilot selection and training, and further safeguard and improve aviation safety from the perspective of practice.

正念注意觉知对状态损耗敏感性的影响：认知重评的中介作用

张臻¹ 林闻正² 尉兆梁¹ (通讯作者)

1 武汉大学哲学学院心理学系, 武汉, 430072, zhaoliang@whu.edu.cn

2 江西师范大学心理学院, 南昌, 330022

摘要 损耗敏感性是指同等情景下个体自我控制能力下滑速度。损耗敏感性越高, 个体自我控制资源损耗得越快。作为 Salmon 等 (2014) 为了区别于特质自我控制而提出的概念, 损耗敏感性是否受正念注意觉知影响仍存在争议。为了进一步探究这一分歧, 本研究通过问卷法直接探究了正念注意觉知与状态损耗敏感性的关系。另外, Garland 等 (2009) 等提出的正念应对模型认为, 高正念个体更可能通过进行积极的认知重评 (个体通过重新赋予情绪刺激一个不同以往的意义来调节自身的情绪) 这一情绪调节策略来调节情绪。因此在本研究中, 我们进一步探索了认知重评在正念注意觉知和状态损耗敏感性之间可能的中介作用。同时, 我们还检验了另外一种情绪调节策略, 即表达抑制 (个体通过在外在行为上隐藏自己内在的情绪体验来调节自身的情绪) 作为中介变量的效果, 来验证认知重评的独特中介作用。研究共招募 358 名 MTurk 被试, 剔除注意力不集中以及 IP 地址重复的被试后, 最终回收有效作答 300 份。被试回答一系列问卷, 包括正念注意觉知量表 (MAAS)、情绪调节问卷 (ERQ)、及状态损耗敏感性问卷 (SDSS)。结构方程模型拟合的结果发现, 情绪调节的认知重评策略在正念注意觉知与状态损耗敏感性二者之间起部分中介作用: 正念注意觉知能直接显著负向预测状态损耗敏感性, 同时也可以显著正向预测认知重评策略, 而认知重评策略显著负向预测状态损耗敏感性; 虽然正念注意觉知能够显著负向预测表达抑制策略, 但表达抑制策略对状态损耗敏感性的影响路径系数不显著, 即情绪调节的表达抑制策略在正念注意觉知与状态损耗敏感性二者之间不起中介作用。这一结果表明, 对正念注意觉知的培养与提升能够直接或间接地降低人们的自我控制能力下滑的速度, 帮助个人避免自我损耗。而正念注意觉知的这一效应, 可能是藉由激活个体的认知重评策略而非表达抑制策略实现的。

Mindfulness predicts reduced state depletion sensitivity: The mediating role of cognitive reappraisal

Zhen ZHANG¹, Wenzheng LIN², Zhaoliang YU¹ (Corresponding author)

1 Department of Psychology, School of Philosophy, Wuhan University, Wuhan, 430072

2 School of Psychology, Jiangxi Normal University, Nanchang, 330022

Abstract: Depletion sensitivity refers to the rate of which self-control resource is consumed in controlled situations

(Salmon et al., 2014). It is still controversial whether and how depletion sensitivity could be influenced by mindfulness. In the present research, we examined the relationship between mindfulness and state depletion sensitivity (SDS). In addition, the mindful coping model (Garland et al., 2009) suggests that individuals with higher mindfulness are more likely to regulate their emotions through positive cognition reappraisals. Hence, we also examined the potential mediating role of cognitive reappraisal (CR). Another emotion regulation strategy, namely expressive suppression (ES), was also measured to test if CR could have unique mediating effect. A total of 358 MTurk adults participated in our online study. 58 participants were excluded due to inattentive responses or duplicated IP addresses. The final sample comprised 300 participants. Participants were instructed to answer a series of established questionnaires, including the Mindfulness Attention Awareness Scale, the Emotion Regulation Questionnaire and the State Depletion Sensitivity Questionnaire. Employing structural equation modeling, we found that CR partially mediated the relationship between mindfulness and reduced SDS: mindfulness positively predicted CR, which in turn negatively predicted SDS. Although mindfulness significantly predicted reduced ES, ES did not mediate the relationship between mindfulness and SDS. Echoing past findings, the present research suggests that mindfulness could facilitate one's self-regulatory processes. Specifically, mindfulness predicted reduced state depletion sensitivity, and that this relationship was mediated by increased CR.

拖延对睡眠质量的影响：自我控制的中介作用和心理弹性的调节作用

吕冯婧¹ 薛颐阳² 刘雅惠³ 张桥⁴ 杨亚洁⁵ 梁三才（通讯作者）

陕西师范大学心理学，西安，邮编：710119，2641474622@qq.com

摘要 睡眠障碍已经成为一个全球性问题，睡眠质量不好会导致一系列的身心问题，如肥胖、心脑血管疾病、心脏病以及抑郁等等。因此，为了改善睡眠质量，我们必须要了解影响睡眠质量的因素并探索这些因素是如何对睡眠质量产生影响的。已有研究表明，拖延是大学生群体中的一种普遍现象，会对人们正常的学习生活产生消极影响。已有研究表明，拖延是影响睡眠质量的主要因素之一，然而拖延影响睡眠质量这一过程的内部机制尚不清楚。在本研究中，我们旨在揭示拖延如何影响睡眠质量，并探讨在这一过程中自我控制的中介作用和心理弹性的调节作用。本研究采用了随机整体抽样法，从西北地区两所大学抽取了 522 名大学生，采用简版一般拖延量表（GPS-9），自我控制量表（Brief Self-Control Scale），心理弹性量表（Ego-Resilience Scale）以及匹兹堡睡眠质量问卷（PSQI）为调查工具，并用 SPSS22.0 对数据进行分析。研究结果表明：（1）拖延与自我控制和心理弹性呈负相关，与睡眠质量呈正相关；自我控制与心理弹性呈正相关，与睡眠质量呈负相关；心理弹性与睡眠质量呈负相关。（2）自我控制在拖延和睡眠质量之间起中介作用；（3）心理弹性在拖延和睡眠质量之间起调节作用。结论：拖延通过自我控制对睡眠质量产生影响，这一过程受到心理弹性的调节作用。本研究为睡眠质量的提高提供了理论指导。

利他情境对善良特质个体情绪注意偏向的影响

许伟锋¹ 马悦¹ 袁旭野¹ 王莹莹¹ 翟佳麟¹ 郑玮琦¹ 张禹¹（通讯作者）

¹ 北京体育大学心理学院，北京，100086

通讯作者 E-mail: btzy1973@126.com

摘要 特质一致性效应已在大量研究中得到证明，即个体偏爱加工与其人格特质类型相一致的情绪刺激，消极情感特征个体（如焦虑、抑郁个体）更倾向于选择性注意负性的情绪刺激；积极情感特征个体（如外向性个体）则倾向于选择正性情绪进行加工。那么善良作为一种中华民族自古推崇的道德观念和中国人特有的人格特质，其对于个体的注意偏向又会产生怎样的影响呢？此外，是否可以通过一些方式来改变高善者和低善者在这方面的差异呢？基于此，本研究通过两个实验探索了高、低善良特质个体的情绪面孔注意偏向特点，以及利他情境对其的影响。本研究两个实验均通过中国人格问卷测量个体的善良特质得分，并筛选出高、低善良人格特质个体参与实验。实验 1 采用 2（组别：高、低善良特质）× 4（面孔组合：愤怒-中性，高兴-中性，

中性-愤怒, 中性-高兴) 的混合实验设计, 借用面孔表情视觉搜索范式探索善良特质个体的情绪注意偏向。结果发现, 低善良特质个体对愤怒面孔的察觉速度显著快于对高兴面孔的察觉速度 ($F(1, 51) = 4.720, p = 0.034$); 而高善良特质个体对两种情绪面孔的察觉速度不存在显著差异 ($F(1, 51) = 1.587, p = 0.214$); 实验 2 引入利他情境, 为 2 (组别: 高、低善良特质) $\times$ 2 (利他情境、非利他情境) $\times$ 4 (面孔组合: 愤怒-中性, 高兴-中性, 中性-愤怒, 中性-高兴) 的混合实验设计。通过署名捐款的形式进行利他操纵, 并接着完成与实验 1 相同的实验任务。发现进行了利他操作的高低善良特质被试间不存在注意偏向差异, 且呈现出对正性面孔的搜索速度快于负性面孔的趋势 ($F(1, 20) = 4.082, p = 0.057$)。由此可见, 高善者对正、负性情绪面孔的察觉表现出注意对称性, 低善者则表现出愤怒优势效应; 同时, 利他情境能够对善良特质个体的注意偏向产生短时影响。

关键词 善良特质, 利他情境, 注意偏向, 情绪面孔搜索

Effect of altruistic situations on the attentional bias of individuals with kindness trait

Weifeng Xu¹, Yue Ma¹, Xuye Yuan¹, Yingying Wang¹

Jialin Zhai¹ Weiqi Zheng¹ Yu Zhang¹ (Corresponding Author)

1 Department of Psychology, Beijing Sport University, Beijing, 100086

E-mail: btzy1973@126.com

Abstract: Trait-congruency effect has been proved in a large number of studies, that is, individuals prefer to process emotional stimulations consistent with their trait types, individuals with negative emotional traits (e.g., anxiety and depression) tend to selectively pay attention to negative emotional stimulations. Individuals with positive emotion traits (e.g., extroversion) tend to choose positive emotion for processing. Then, as a moral concept advocated by the Chinese nation since ancient times and a unique personality trait of The Chinese people, what impact will kindness have on the attentional bias of individuals? In addition, is there any way to change this difference between people with high-kindness and low-kindness? In this study, two experiments were conducted to explore the attentional bias of emotional faces in individuals with high and low kindness traits, and the effects of altruistic situations on the attentional bias of individuals with kindness trait. In both experiments, the Chinese Personality Scale was used to measure kindness level, and individuals with high-kindness and low-kindness were selected to participate in two studies. In experiment 1, we used 2 (kindness trait: high vs. low) $\times$ 4 (combination matrixes: angry-neutral vs. happy-neutral vs. neutral-angry vs. neutral-happy) hybrid experimental design to explore the emotional attentional bias of individuals with kindness by using a visual face detection task. The results showed that, in low kindness-group, the searching speed of angry faces was significantly faster than that of happy faces ($p = 0.034$). However, this difference was not found in high-kindness group ($p = 0.214$). In experiment 2, we added 'altruistic situation' as an intergroup variable, using 2 (kindness trait: high vs. low) $\times$ 2 (situation: altruistic vs. non-altruistic) $\times$ 4 (combination matrixes: angry-neutral vs. happy-neutral vs. neutral-angry vs. neutral-happy) hybrid experiment design to find the effects of altruistic situations on the attentional bias of individuals with kindness trait. In the altruistic situation, participants were asked to participate in a donation activity, and they would donate ¥10 under their real names. It was found that there was no difference in attentional bias between the high and low kindness participants with altruistic operation, and they tended to search for positive faces faster than negative faces ($p = 0.057$). In conclusion, high-kindness people showed attentional symmetry when searching positive and negative emotional faces, while low-kindness people searched angry faces more faster. At the same time, the altruistic situation can have a short-term effect on the attentional bias of individuals with kindness trait.

摘要 人工智能技术的快速发展带来了新的隐私挑战。一个典型的例子是所谓的“隐私悖论”，即人们表面上声称关心自己的隐私，但依然公开分享自己的信息。例如，大多数在线交易需要消费者提供姓名、地址、银行卡等内容，消费者对个人信息是否会被黑客入侵或不当使用存在担忧，但在大多数情况下依然会同意共享隐私信息。技术的发展为我们提供了诸多便利，丰富了人们社交和娱乐的方式，创造了更多元和复合的个性化体验，但这些好处往往需要我们用个人隐私换取。让渡隐私，似乎成为了享受人工智能时代先进性的代价。尽管人们一直关注和争取隐私权，但算法的高效运作和广泛传播可能会系统地削弱人们采取有意义行动的能力和心理动机。人工智能时代的隐私往往以各类数据为载体进行留存和传播，个人数据成为了一种高价值的商品。人工智能时代的隐私让渡问题，概括来说是什么样的人出于什么样的原因在什么样的情况下愿意去让渡隐私的问题。本文基于人工智能时代的隐私背景，根据“何人让渡隐私-为何让渡隐私-何时让渡隐私-隐私让渡以何为度”的框架，系统地探讨了人们在隐私让渡方面的个体差异和内在动机，以及实际语境对于人们态度和行为的影响，并提出了人工智能时代隐私管理的策略。个体在让渡隐私方面的具体差异，主要体现在个性特征和具体的决策过程之中，人们的隐私关注和隐私素养与具体的隐私行为之间存在紧密的联系。以下四方面因素都会影响人们的隐私让渡行为：（1）对技术易用性和享乐性的追求；（2）塑造自我或是增进人际关系的需要；（3）人们对于隐私泄露所产生的负面影响的轻视；（4）机器拟人化程度的提高。当隐私让渡在某些语境中具有必要性时，或是人们分享个人信息的意愿超于隐瞒信息的意愿时，可能会选择让渡隐私。人工智能时代的隐私管理，首先需要保障隐私让渡主体的知情权和同意权，其次在隐私让渡的内容和程度上要为用户提供更大的选择空间，最后隐私保护应当被纳入数据系统和技术的设计、开发和应用中。

Abstract: The rapid development of artificial intelligence has brought new privacy challenges. A typical example is the so-called "privacy paradox", which means that people ostensibly claim to care about their privacy but still share their information publicly. For example, most online transactions require consumers to provide their names, addresses, bank card numbers, etc. Consumers are concerned about whether personal information will be hacked or improperly used, but in most cases they will still agree to share private information. The development of technology has provided us with a lot of convenience, enriched the way people socialize and entertain, and created more diverse and complex personalized experiences, but these benefits often require us to offer personal information. Giving up privacy seems to be the price of enjoying the advancement of the artificial intelligence era. Although people have been paying attention to and fighting for the right of privacy, the efficient operation and widespread dissemination of algorithms may systematically weaken people's ability and psychological motivation to take meaningful actions. In the era of artificial intelligence, privacy is often retained and disseminated by various types of data, and personal data has become a high-value commodity. The issue of privacy transfer in the era of artificial intelligence is, in general terms, what kind of person is willing to transfer privacy for what reasons and under what circumstances. Based on the background of privacy in the era of artificial intelligence, this paper systematically discusses people's individual differences and internal motivation in privacy transfer, as well as the impact of actual context on people's attitudes

and behaviors, and puts forward privacy management strategies. The individual differences in transferring privacy are mainly reflected in people's personalities and specific decision-making processes, and there is a close relationship between people's privacy concerns, privacy literacy and specific privacy behaviors. The following four factors will affect people's privacy transfer behaviors: (1) the pursuit of ease of use and enjoyment of technology; (2) the need to shape themselves or enhance interpersonal relationships; (3) people's contempt for the negative impact of privacy leakage; (4) the increasing degree of machine anthropomorphism. When privacy transfer is necessary in certain contexts, or when people's willingness to share personal information exceeds their willingness to conceal information, they may choose to transfer privacy. Privacy management in the era of artificial intelligence first requires to ensure people's right to know, and secondly, to provide users with more choice in the content and extent of privacy transfer, and finally, privacy protection should be incorporated into the data system and technology design, development and application.

大学生自我同情对主观幸福感的影响： 个人成长主动性和生命意义感的链式中介作用

何雪莹¹ 张守臣¹（通讯作者）

1 哈尔滨师范大学教育科学学院，哈尔滨，150025，zsc9669@163.com

摘 要 随着积极心理学的发展，幸福感逐渐成为人们关注的议题之一。根据自我决定理论，内在目标和内部动机是提升幸福感的重要因素(Vansteenkiste, Simons, Lens, Sheldon, & Deci, 2004)。自我同情是一种积极的自我态度，与个体的发展和心理健康密切联系。自我同情不仅可以使个体更清晰地看待自己，尊重自己作为一个完整的人，对自身的痛苦、不足给予不加评判的理解，避免了自我批判的消极后果，还能够通过增加自我完善的内部动机，激发个人成长这一内在目标，使得个体更加有意识地提升和完善自己、实现自我，进而体验到更强烈的主观幸福感。尽管已有研究表明，自我同情对主观幸福感具有积极影响，但是，自我同情和主观幸福感之间的具体影响机制仍有待进一步探讨。因此，本研究从积极心理学的视角出发，基于自我决定理论，探讨自我同情、个人成长主动性、生命意义感和主观幸福感四者之间的关系。以 549 名大学生为被试，采用自我同情量表、主观幸福感量表、个人成长主动性量表及生命意义感量表进行测试。结果显示：(1) 自我同情显著正向预测主观幸福感；(2) 个人成长主动性在自我同情和主观幸福感之间起到部分中介作用；(3) 生命意义感在自我同情和主观幸福感之间起部分中介作用；(4)自我同情通过正向影响个人成长主动性和生命意义感进而对主观幸福感产生积极影响，即个人成长主动性和生命意义感在自我同情与主观幸福感之间起链式中介作用。

关键词 自我同情，个人成长主动性，生命意义感，主观幸福感

The relationship between self-compassion and subjective well-being of college students: the chain-mediating effect of personal growth initiative and meaning in life

HeXueying¹, ZhangShouchen¹

1 Harbin Normal University, Harbin 150025

Abstract: With the development of positive psychology, well-being has become one of the issues that people are concerned about. According to Self-Determination Theory, intrinsic goal and intrinsic motivation act an important role in enhancing one's subjective well-being (Vansteenkiste, Simons, Lens, Sheldon, & Deci, 2004). Self-compassion is a positive self-attitude, which is closely related to one's development and mental health. Self-compassion involves being kind and understanding toward oneself, respecting oneself as a fully human and offering nonjudgmental understanding to one's pain, inadequacies and failures, so that protect against the negative consequences of self-judgment. Through increasing self-improvement motivation, self-compassion can stimulate the

intrinsic goal of personal growth, encouraging individuals to improve themselves intentionally and with full awareness. With all these above, individuals can fulfill themselves finally and experience high level of subjective well-being. Although previous studies have shown that self-compassion has a positive impact on subjective well-being, the specific mechanism between them needs to be explored. Based on Self-Determination Theory, this study explored the relationship among self-compassion, personal growth initiative, meaning in life and subjective well-being. 549 college students were tested with Self-Compassion Scale, Index of Well-Being, Personal Growth Initiative Scale-II and Meaning in Life Scale. The results showed that: (1) Self-compassion positively predicted subjective well-being. (2) Personal growth initiative played a mediation role in the relationship between self-compassion and subjective well-being. (3) Meaning in life played a mediation role in the relationship between self-compassion and subjective well-being. (4) Personal growth initiative and meaning in life exerted a chain-mediating effect on the association of self-compassion with subjective well-being.

Keywords: self-compassion, personal growth initiative, meaning in life, subjective well-being

道德提升感对大学生亲社会行为的影响：生命意义感的中介作用

毛宇轩 郑轶男 孙梦雅 杨晓峰（通讯作者）

内蒙古师范大学心理学院，呼和浩特，010022，yangxf@imnu.edu.cn

摘要 亲社会行为的心理机制一直是心理学研究领域中的热点问题，它能够衡量整个社会的道德发展水平和公民素质的高低，且对于维持人与人之间良好的社会关系也有重要作用。道德提升感是欣赏他人的美德并感到自己的道德情操被提升的一种积极的道德情绪，对亲社会行为有积极的作用。本研究基于积极情绪的扩展与建构理论和社会学习理论，主要探讨了道德提升感、生命意义感和大学生亲社会行为之间的关系及其内在作用机制。采用方便取样方法，选取来自内蒙古自治区和山西省共 524 名大学生作为被试，其中男生 131 人，女生 393 人，平均年龄为 20.20 ± 1.39 岁。研究采用道德提升感问卷、青少年亲社会倾向量表及生命意义感问卷进行测试，采用 SPSS25.0、AMOS21.0 和 Mplus8.0 统计软件进行数据处理，采用偏差校正的非参数百分位 Bootstrap 方法对生命意义感在道德提升感和大学生亲社会行为中的中介作用进行检验。研究结果发现：（1）道德提升感与生命意义感及大学生亲社会行为两两间均存在显著的正相关；（2）采用偏差校正的非参数百分位 Bootstrap 法检验显示，道德提升感对大学生亲社会行为有显著的正向预测作用；（3）道德提升感间接地通过生命意义感对大学生亲社会行为产生作用，生命意义感起着部分中介作用。因此得出结论，道德提升感可以通过生命意义感间接影响大学生的亲社会行为。

关键词 道德提升感，亲社会行为，生命意义感，大学生

The Influence of Moral Elevation on Prosocial Behavior in College Students: The Mediating Role of Meaning of Life

Mao Yuxuan, Zheng Yinan, Sun Mengya, Yang Xiaofeng

School of Psychology, Inner Mongolia Normal University, Hohhot, 010022

Abstract: This present study aimed to explore the relationship among moral elevation, meaning of life and prosocial behavior, by surveying 524 college students, with 131 males and 393 females, with moral elevation questionnaire, meaning of life questionnaire, and prosocial behavior questionnaire. The results show that: (1) The relationships between each pair of moral elevation, meaning of life and prosocial behavior are correlated significantly and positively; (2) Moral elevation has a significant direct effect on prosocial behavior. (3) Moral elevation have a significant indirect effect on prosocial behavior through meaning of life, that is, moral elevation have a significant direct effect on prosocial behavior and meaning of life play a partial mediating role between them. It is concluded that in the structural equation model of moral elevation on prosocial behavior of college students, meaning of life plays a partial mediating role. These findings suggest some measures for college students' prosocial behavior should be taken.

小学五年级孤儿生活满意度与攻击行为的关系

王学森¹ 卢影¹ 鞠腾¹ 仇召武² 宋爽³

1 沈阳城市学院 应用心理系, 辽宁 沈阳, 110112

2 辽宁省孤儿学校(辽宁省光明学校), 辽宁 沈阳 110169

3 辽宁教育学院, 辽宁 沈阳 110169 通讯作者 E-mail:song555777@126.com

摘要 以往对孤儿心理的研究往往单独的关注于孤儿消极心理, 或积极心理的某一方面, 尚无对二者关系的探究。本文以辽宁某小学三个班级普通小学五年级学生为对照组, 选用 Buss_Perry(1992)攻击问卷、《青少年生活满意度量表》张兴贵(2004)等量表对某公立孤儿学校五年级学生的生活满意度与攻击行为两者之间的关系进行探究。研究结果表明: 孤儿学生环境满意度得分与躯体攻击得分、敌意得分、攻击总分呈显著负相关($p<0.05$)。普通学生友谊满意度得分、学习满意度得分、环境满意度得分、自由满意度得分及总满意度均与躯体攻击得分、愤怒得分、敌意得分、攻击总分呈显著负相关($p<0.01$)。孤儿学生愤怒得分、敌意得分、攻击总分显著高于普通学生。普通学生学校满意度得分、环境满意度得分、生活满意度总分显著高于孤儿学生。孤儿学生攻击性量表各维度得分主效应显著, 敌意与躯体攻击得分无显著性差异, 敌意得分显著高于言语攻击、愤怒得分, 言语攻击与愤怒得分差异不显著, 躯体攻击得分与言语攻击得分差异不显著; 青少年生活满意度量表各维度得分主效应显著, 友谊满意度与学校满意度得分无显著差异, 显著高于其余各维度得分, 学校满意度与学业满意度得分无显著差异, 显著高于环境满意度及自由满意度得分, 环境满意度、自由满意度以及学业满意度得分差异不显著。普通学生攻击性行为, 以及生活满意度量表各维度得分的单因素重复测量方差分析结果显示: 攻击性行为量表各维度得分主效应显著, 敌意与躯体攻击得分无显著性差异, 敌意维度得分显著高于言语攻击维度得分、愤怒得分, 言语攻击与愤怒得分差异不显著; 青少年生活满意度量表各维度得分主效应显著, 学校满意度得分显著高于其余各维度得分, 友谊满意度得分显著高于环境满意度、自由满意度以及学业满意度得分, 环境满意度、自由满意度以及学业满意度得分差异不显著。普通小学女生学校满意度得分显著高于男生, 男生躯体攻击得分显著高于女生。孤儿学生的攻击性高于普通学生, 普通学生的生活满意度高于孤儿学生。孤儿学生生活满意度中环境满意度越低, 攻击性行为越高。孤儿学生环境满意度低于普通学生。相比于孤儿学生, 普通学生攻击性行为受到生活满意度量表中更多因素的影响。

关键词 孤儿, 生活满意度, 攻击性行为

Relationship Between Life Satisfaction and Aggressive Behavior of Orphans in The Fifth Grade of Primary School

WANG Xuesen¹, LU Ying¹, JU Teng¹, QIU Zhaowu², SONG Shuang³

1 Shenyang City University, Shenyang 110112, China

2 Liaoning Provincial Orphan School, Shenyang 110169, China

3 Liaoning Institute of Education, Shenyang 110169, China

Abstract: Previous studies on orphans' psychology often focused solely on the negative or positive psychology of orphans, and there has been no exploration of the relationship between the two. This article takes the fifth-grade students in three classes of a primary school in Liaoning as a control group, and chooses Chinese Buss—Perry Attack Questionnaire (1992), "Adolescent Life Satisfaction Scale" Zhang Xinggui (2004) and other scales to investigate the relationship between life satisfaction and aggressive behavior of orphans in a public orphan school. The results of the study showed that the scores of environmental satisfaction of orphan students were significantly negatively correlated with the scores of physical attack, hostility, and total attack scores ($p<0.05$). Ordinary students' friendship satisfaction

scores, learning satisfaction scores, environmental satisfaction scores, freedom satisfaction scores, and total satisfaction were all significantly negatively correlated with physical attack scores, anger scores, hostility scores, and total attack scores ($p < 0.01$). The scores of anger, hostility and attack of orphan students were significantly higher than those of ordinary students. Ordinary students' school satisfaction scores, environmental satisfaction scores, and total life satisfaction scores are significantly higher than those of orphan students. The main effect of scores in each dimension of the Orphan Student Aggressiveness Scale is significant. There is no significant difference between the scores of hostility and physical attack. The scores of hostility are significantly higher than the scores of verbal attack and anger. The scores of verbal attack and anger are not significantly different. The scores of physical attack and verbal attack are not significant. The difference is not significant; the main effect of the scores on each dimension of the Youth Life Satisfaction Scale is significant. There is no significant difference between the scores of friendship satisfaction and school satisfaction, which is significantly higher than the scores of other dimensions. There is no significant difference between the scores of school satisfaction and academic satisfaction, and the scores are significantly high. In terms of environmental satisfaction and free satisfaction scores, the differences in environmental satisfaction, free satisfaction and academic satisfaction scores were not significant. The results of single-factor repeated measures analysis of variance of the average students' aggressive behavior and life satisfaction scale scores on each dimension show that the main effect of the scores on each dimension of the aggressive behavior scale is significant, there is no significant difference between the scores of hostility and physical aggression, and the scores of the hostile dimension are significant. Higher than the verbal aggression score and anger score, the difference between the verbal aggression and anger scores is not significant; the main effect of the scores on each dimension of the Youth Life Satisfaction Scale is significant, the school satisfaction score is significantly higher than the scores of the other dimensions, and the friendship satisfaction score is significantly higher the scores of environmental satisfaction, freedom satisfaction, and academic satisfaction, while the scores of environmental satisfaction, freedom satisfaction, and academic satisfaction are not significantly different. Ordinary primary school girls have significantly higher school satisfaction scores than boys, and boys' physical attack scores are significantly higher than girls. The results show that: orphan students are more aggressive than ordinary students, and the life satisfaction of ordinary students is higher than that of orphan students. In the life satisfaction of orphans, the lower the environmental satisfaction, the higher the aggressive behavior. The environmental satisfaction of orphan students is lower than that of ordinary students. Compared with orphan students, the aggressive behavior of ordinary students is affected by more dimensions in the life satisfaction scale.

学校氛围与青少年攻击行为的关系：自我控制的中介与父母支持的调节作用

利振华¹ 喻承甫¹ 刘庆奇¹ 涂巍¹ 聂衍刚¹ (通讯作者)

¹ 广州大学教育学院青少年心理与行为研究中心, 广州, 510006,

nie-yangang@gzhu.edu.cn

摘要 青少年攻击行为一直是社会关注的热点问题, 以往研究表明, 攻击行为会给青少年带来一系列不良影响, 如严重影响个体的身心健康、人格发展以及社会适应。学校是青少年学习和生活的重要场所, 学校环境(如学校氛围)与青少年攻击行为的形成有着密切联系。然而, 以往较少探讨学校氛围影响青少年攻击行为的内在作用机制。本研究基于生态系统理论, 从学校和家庭微系统的角度出发, 采用学校氛围量表、自我控制量表、攻击行为量表和父母支持量表对广州市五所中小学 1008 名学生(男生占 52.8%)进行测试, 旨在考察学校氛围与青少年攻击行为的关系, 以及自我控制在其中的中介作用和父母支持的调节作用。结果发现: (1) 在控制性别和年龄后, 学校氛围显著负向预测攻击行为($\text{effect} = -0.33, SE = 0.03, p < .001$), 即学校氛围越好, 青少年表现出的攻击行为越少。(2) 中介效应分析显示, 自我控制在学校氛围与攻击行为的关系中起显著的中介作用($\text{effect} = -0.05, SE = 0.01, 95\% CI = [-0.08, -0.03]$), 学校氛围通过促进青少年的自我控制,

进而降低其攻击行为。(3)有调节的中介效应分析显示,父母支持显著调节学校氛围与自我控制的关系,在高父母支持下,学校氛围对自我控制的作用更强。本研究揭示了学校氛围影响青少年攻击行为的中介和调节机制,对学校和家庭有针对性地预防和降低青少年的攻击行为具有重要参考价值。一方面,学校应当致力于为学生营造安全公平、和睦的环境,促进教师与学生的沟通,对做出攻击行为的学生进行有效的引导和教育;同时,父母应当给予孩子更多的鼓励和支持,信任和尊重孩子,培养积极健康的亲子关系,这有助于提高青少年的自我控制。

The Effect of School Climate on Adolescent Aggression: Self-control as a Mediator and Parental support as a Moderator

Li Zhenhua¹, Yu Chengfu¹, Liu Qingqi¹, Tu Wei¹, Nie Yangang^{1*}

¹ Research Center of Adolescent Psychology and Behavior, School of Education, Guangzhou University, Guangzhou, 510006

Abstract: Aggression has always been a hot issue of social concern. Previous studies have shown that aggression will bring a series of adverse effects to adolescents, such as seriously affecting individual physical and mental health, personality development and social adaptation. School is an important place for young people to study and live, and school environment (e.g., school climate) is closely related to the formation of aggressive behavior. However, the internal mechanism of school climate affecting adolescents' aggressive behavior has rarely been explored in the past. Based on the ecosystem theory and from the perspective of school and family microsystems, this study tested 1008 students (52.8% males) from five primary and middle schools in Guangzhou using the school climate scale, the self-control scale, the aggression scale and the parent support scale. The purpose of this study was to investigate the relationship between school atmosphere and adolescent aggression, the mediating role of self-control and the moderating role of parental support. The results showed that: (1) after controlling for gender and age, school climate significantly negatively predicted aggression (effect = -0.33, $SE = 0.03$, $p < .001$), that is, the better the school climate, the less aggression of adolescents. (2) The analysis of the mediating effect showed that self-control played a significant mediating role in the relationship between school school climate and aggression (effect = -0.05, $SE = 0.01$, 95%CI = [-0.08, -0.03]). The school climate reduced aggression by promoting self-control. (3) The moderated mediating effect analysis showed that the relationship between school climate and self-control was significantly moderated by parental support. Specially, the effect of school climate on self-control was stronger under the condition of high parental support. This study reveals the mediating and moderating mechanism of school climate affecting adolescent aggression, which has important reference value for school and family to prevent and reduce adolescent aggression. On the one hand, schools should be committed to creating a safe, fair and harmonious environment for students, promoting the communication between teachers and students, and providing effective guidance and education to students who commit aggressive behaviors. At the same time, parents should give their children more encouragement and support, trust and respect their children, and cultivate a positive and healthy parent-child relationship, which is conducive to improving adolescents' self-control.

道德推脱与校园欺凌中旁观者亚型的关系研究：基于潜在剖面分析

王帆¹ 鲍振宙¹ (通讯作者)

¹ 赣南师范大学教育科学学院, 赣州, 341000, baozhenzhou0819@163.com

摘要 校园欺凌不仅是欺凌者和受欺凌者之间发生的简单互动关系,在欺凌事件中旁观者也发挥着重要的作用。Salmivalli 根据旁观者不同的行为特征将其分为四种类型:保护者、协助者、强化者、局外者,并提出目前校园欺凌干预的焦点是扩大保护者群体,将消极旁观者,尤其是局外者转变成为保护者。然而校园欺凌

旁观者的已有分类忽略了保护者、局外者在实际欺凌发生中可能存在的不同亚型。如保护者行为既可指向受欺凌者，如安慰受欺凌者；也可表现为指向欺凌者的坚定保护行为。因此本研究聚焦于旁观者中的保护者与局外者群体可能存在的异质性。此外，道德推脱被证实与个体所做出的旁观者行为存在紧密联系，道德推脱水平越高，个体更倾向于做出消极的旁观者行为。综上，本研究拟使用潜在剖面分析方法，探究校园欺凌保护者与局外者可能存在的亚型，并考察道德推脱与保护者、局外者亚型的关系。采用道德推脱问卷、保护者与局外者角色问卷对江西省 1562 名初高中生进行问卷调查。使用潜在剖面分析方法对校园欺凌保护者、局外者群体的异质性进行探索，并用 logistic 回归探究道德推脱与保护者、局外者亚型的关系。结果发现：（1）校园欺凌保护者、局外者群体可分为四个潜在类别：攻击型保护者（20.8%）、安慰型保护者（32.4%）、同情型局外者（15.8%）和矛盾型角色（30.9%）。（2）不同的亚型角色在道德推脱水平上差异显著（ $p < .001$ ）。（3）相对于攻击型保护者，同情型局外者与矛盾型角色报告更高的道德推脱水平（ $\text{logit} = .54, p < .001$; $\text{logit} = .56, p < .001$ ）。（4）攻击型保护者与安慰型保护者的道德推脱水平差异不显著（ $\text{logit} = -.08, p > .05$ ）。研究表明，个体的道德推脱水平与校园欺凌事件中的保护者、局外者亚型密切相关，道德推脱水平低的个体更容易做出积极的保护行为，如安慰受欺凌者或攻击欺凌者以保护受欺凌者。本研究结果启示教师和家长要引导学生切实体会受欺凌者的心理感受，降低其道德推脱水平，从而促进更多的学生在面对校园欺凌时做出保护者行为，降低校园欺凌发生的概率。

关键词 潜在剖面分析，校园欺凌，旁观者亚型，道德推脱

The Relationship between Moral Disengagement and Bystander Subtypes in School Bullying: Based on Latent Profile Analysis

Wang Fan¹, Bao Zhenzhou¹(Corresponding author)

1 School of Educational Science, Gannan Normal University, Ganzhou, 341000

Abstract: School bullying is not only a simple interaction between the bullies and the victims, but bystanders also play an important role in bullying. Salmivalli divided bystanders into four types according to different behavioral characteristics of individuals: defenders, assistants, reinforcers and outsiders, and proposed that the current focus of school bullying intervention is to expand the group of defenders, and turn passive bystanders, especially outsiders, into defenders. However, the existing classification of bystanders in school bullying ignores the different subtypes of defenders and outsiders that may exist in the actual bullying. It may act as a defender who can point to bullying, such as comforter bullied; but also may showed strong protective behavior to point to the bullies. Therefore, this study focuses on the possible heterogeneity of the group of defenders and outsiders. In addition, moral disengagement has been shown to be strongly correlated with bystander behavior, the higher level of moral disengagement, the more likely the individual is to engage in negative bystander behavior. Therefore, this study aims to use latent profile analysis to explore the possible subtypes of defenders and outsiders and the relationship between moral disengagement and defenders and outsiders' subtypes. The moral disengagement questionnaire and the defender and outsider roles questionnaire were used to investigate 1562 middle and high school students recruited from Jiangxi Province. The latent profile analysis was used to explore the heterogeneity of the defenders and outsiders, and the logistic regression was used to explore the relationship between moral disengagement and defenders and outsiders' subtypes. The results showed that: (1) defenders and outsiders can be divided into four potential categories: aggressive defenders (20.8%), comforting defenders (32.4%), sympathetic outsiders (15.8%) and ambivalence roles (30.9%). (2) There were significant differences in the level of moral disengagement among different subtypes. (3) compared with aggressive defenders, the sympathetic outsiders and ambivalence roles reported higher levels of moral disengagement ($\text{logit} = .54, p < .001$; $\text{logit} = .56, p < .001$). (4) There was no significant difference in the level of moral disengagement between aggressive defenders and comforting defenders ($\text{logit} = -.08, p > .05$). In sum, adolescents' level of moral disengagement is closely related to the defenders and outsiders' subtypes in school bullying. Adolescents with lower levels of moral disengagement are more likely to engage in defender behavior, such as comforting the victims or attacking the bullies to protect the victims. The results of this study suggest that teachers

and parents should guide students to truly understand the psychological feelings of the victims of bullying and reduce their level of moral disengagement. In this way, more students will be encouraged to act as defenders in the face of school bullying and reduce the probability of school bullying.

疫情常态化下威胁感知对高中生攻击行为的影响：有调节的中介作用

叶雪莲¹ 杨林川¹ 王栋超¹ 杜静蓉¹ 王鸿璞¹ 曹樱馨¹ 李娜¹ 陈安¹

¹ 三峡大学, 湖北宜昌, 443002, yanglinchuan.scn@gmail.com

摘 要 大量研究表明环境对青少年攻击行为有着重要的影响。然而, 以往的研究大多是从个人层面来研究青少年攻击行为的影响机制, 而较少从群体层面出发研究群体情绪与高中生攻击行为的关系。根据社会认同理论, 群体情绪也能影响个体行为。因此, 我们预测, 疫情常态化下, 对新冠疫情的威胁感知会影响高中生攻击行为, 并且群体焦虑在威胁感知和高中生攻击行为之间起中介作用; 国家认同在威胁感知和群体焦虑之间起调节作用。本研究通过对 250 名高中生进行威胁感知, 群体焦虑, 国家认同以及攻击行为调查问卷后, 发现: 1) 威胁感知和群体焦虑都能显著预测高中生的攻击行为; 2) 群体焦虑在威胁感知和高中生攻击行为之间起中介作用。3) 国家认同在威胁感知和群体焦虑之间起调节作用; 具体来说, 国家认同越低的高中生其群体焦虑水平会越低, 国家认同较低的个体其群体焦虑水平会越高。本研究从群体认同的视角探讨了疫情常态化下, 威胁感知与高中生攻击行为的内在机制, 以及国家认同在该机制中的作用。

关键词 威胁感知, 群体焦虑, 高中生攻击行为

The Impact of Threat perception in COVID-19 on Aggressive behavior of senior high school students: A Moderated Mediation Model

YE Xuelian¹, YANG Linchuan¹, DU Jingrong¹, WangHongpu¹, CaoYingxin¹, LiNa¹, ChenAn¹

¹ College of Education & Research Institute of Education Psychology, China Three Gorges University, Yichang 443002, China

Abstract: Abundant evidence has demonstrated an association between environmental influences and adolescent aggressive behavior. However, previous research has demonstrated the mechanism of aggressive behavior of senior high school students from the personal level rather than the group level. From the social identity theory, we predicted that the relationship between threat perception in COVID-19 and aggressive behavior of senior high school students would be mediated by collective angst, and this mediation relationship would be moderated by national identity. This research showed a moderated mediation model by investigated 300 senior high school students through the questionnaire survey. The results showed that: (1) senior high school students with a higher level of threat perception in COVID-19 have higher tendency of aggressive behavior. The positive association was mediated by collective angst; threat perception in COVID-19 significantly positively affected collective angst, and collective angst positively affected aggressive behavior of senior high school students; (2) National identity could moderate the relationship of threat perception and aggressive behavior of senior high school students; The indirect effect was stronger for lower national identity senior high school students than upper national identity senior high school students. From the perspective of group identity, this study identifies the potential underlying mechanism by which threat perception in COVID-19 is associated with aggressive behavior of senior high school students, and highlights an important role of collective angst in influencing mechanism.

坚毅训练课程对初中生校园欺凌的影响：一项准实验研究

叶彩霞 王磊（通讯作者）

武汉体育学院心理学系, 武汉, 430079, 378299706@qq.com

摘要 联合国教科文组织（UNESCO）于 2019 年 12 月 1 日宣布每年 11 月的首个星期四为“反对校园暴力和欺凌国际日”，并强调了任何形式的校园暴力行为都是对青少年受教育权利和健康生活的侵害。探讨如何采取有效措施减少校园欺凌显得尤为重要。本研究从培养个体积极品格出发，设计开发六周的坚毅训练系列课程，考察干预课程在减少初中生校园欺凌上的效果。采用准实验的研究范式，以《简式坚毅量表》、《青少年网络受欺凌量表（CSAC）》、《欧洲网络欺凌干预量表（ECIPQ）》和《中学生欺负行为量表》为调查工具，采用整班抽样的方式，选取 163 名初中生作为实验组，201 名初中生作为对照组，检验坚毅训练课程的实施效果。结果表明：（1）坚毅课程有效减少了初中生的传统被欺凌（ $t=2.49, p<0.05$ ）和网络被欺凌（ $t=2.78, p<0.05$ ）；（2）干预课程显著减少欺凌者的传统欺凌行为（ $t=3.66, p<0.05$ ）和被欺凌者的传统被欺凌（ $t=2.75, p<0.05$ ）；（3）干预课程显著减少了高坚毅者的传统被欺凌（ $t=2.83, p<0.05$ ）、中等坚毅者的网络被欺凌（ $t=2.67, p<0.05$ ）以及低坚毅者的传统欺凌行为（ $t=2.97, p<0.05$ ）。本研究验证了六周坚毅课程训练在减少校园欺凌上产生积极成效，未来可以设计坚毅主题的校本课程，通过提升个体积极品质，达到预防校园欺凌的目的。

The impact of grit training programs on school bullying among middle school students: A quasi-experimental study

Ye caixia, Wanglei(Corresponding author)

Department of Psychology, Wuhan Sport University, Wuhan, 430079

Abstract: The United Nations Educational, Scientific and Cultural Organization (UNESCO) declared the first Thursday of November every year as the International Day against school violence and bullying" on December 1, 2019, and emphasized that any form of school violence is a violation of teenagers' right to education and healthy life. It is particularly important to explore how to take effective measures to reduce school bullying. In this study, we designed and developed a six-week series of grit training courses based on the development of individual positive character, and investigated the effect of intervention courses on reducing school bullying of middle school students. In this study, 163 junior high school students were selected as the experimental group and 201 junior high school students as the control group by using the quasi experimental design idea a quasi-experimental research paradigm, with the survey tools of Grit Scale, CSAC, ECIPQ and Bullying Behavior Scale for Middle School Students to test the implementation effect of the grit training course. The result shows: (1) Grit curriculum effectively reduced traditional victimization ($t=2.49, P < 0.05$) and cyberbullying victimization ($t=2.78, P < 0.05$) of junior high school students; (2) The intervention program significantly reduced the traditional bullying behavior of the bullies ($t=3.66, p<0.05$) and the traditional victimization of victims ($t=2.75, p<0.05$); (3) And significantly reduced traditional bullying of high gritter ($t=2.83, p<0.05$), cyberbullying of medium gritter ($t=2.67, p<0.05$), and traditional bullying of low gritter ($t=2.97, p<0.05$). This study verifies that the six-week grit course training has produced positive results in reducing school bullying. In the future, school-based courses with the theme of grit can be designed to achieve the purpose of preventing school bullying by improving the positive qualities of individuals.

Keywords: middle school students, school bullying, grit training course, a quasi-experimental

六周成长型思维课程对初中生校园欺凌态度的影响： 一项准实验研究

宋一锐¹ 古丽那扎尔外力² 王磊¹(通讯作者)

¹ 武汉体育学院心理学系，武汉，430079，378299706@qq.com

² 新疆农业大学农学院，新疆，830052

摘要 目的：探究成长型思维课程干预减少初中生校园欺凌的效果。方法：选取湖北省宜昌市某县两所中学 480 名初中生，随机分为实验组($n=276$)和对照组($n=204$)。实验组进行 6 周成长型思维课程干预，在此期间对照组不进行任何干预。干预组和对照组初中生在干预前、干预后分别实施成长型思维量表、中学生欺负行

为量、欧洲网络欺凌调查问卷、青少年网络受欺凌量表等问卷调查；运用配对样本 t 检验进行数据分析处理，并运用 SPSS 宏程序 PROCESS 建立回归方程。结果：（1）前测数据表明，实验组和对照组在成长型思维和校园欺凌行为上均无显著差异。（2）追踪数据表明，干预课程显著提升了初中生成长型思维水平。实验组学生的成长型思维均显著提高，对照组学生的成长型思维变化不显著；（3）成长型思维课程能够有效减少校园欺凌。实验组学生的欺凌态度出现显著性提高，校园欺凌和受欺凌行为都出现显著性下降，对照组学生的欺凌态度、欺凌和受欺凌行为变化不显著；（4）成长型思维和欺凌基线水平的主效应都显著，成长型思维基线水平越低，个体在成长型思维各维度上升幅度越大；欺凌基线水平越高的个体，校园欺凌行为下降越明显。结论：成长型思维课程干预可以显著提高初中生的成长型思维水平，提升他们反对欺凌的态度，进而有效减少欺凌行为的发生。

Abstract: Objective: To explore the effect of growth mindset intervention courses in reducing school bullying of junior school students. Methods: 480 junior school students from two middle schools were selected and randomly divided into experimental group ($n=276$) and control group ($n=204$). The experimental group received 6-week growth mindset intervention course, while the control group did not receive any intervention during this period. In the intervention group and the control group, Growth Mindset Scale, Bullying Behavior Scale for Middle School Students, European Cyberbullying Questionnaire and Youth Internet Bullying Scale were conducted. The paired t -test was used for data processing. Using PROCESS to establish regression equation model in SPSS. Results: (1) The pre-test data showed that the experimental group and the control group had no significant differences in growth mindset and bullying behavior. (2) The intervention courses significantly improved the growth mindset level of junior school students. The growth mindset of the experimental group students was significantly improved, the control group students did not change significantly; (3) School bullying was effectively reduced by the growth mindset courses. For the experimental group, the anti-bullying attitude was increased significantly, school bullying was declined significantly. While the control group did not change significantly; (4) The main effect of growth mindset and bullying baseline level is significant. The lower baseline level of growth mindset, the greater increase of the individual growth mindset; the higher individual with the higher baseline level of bullying, the more obvious the decline in school bullying behavior. Conclusion: The growth mindset intervention courses can significantly improve the level of growth mindset in junior school students, enhance their anti-bullying attitude, and effectively reduce school bullying.

Keywords: growth mindset, bullying attitude, junior school students

儿童心理虐待对关系攻击的影响：黑暗人格和友谊嫉妒的链式中介

付进进 蔡婷婷 桂腾娅 彭小凡（通讯作者）

贵州师范大学，心理学院，贵阳，550025，通讯作者：pengxf@gznu.edu.cn

摘要 目的：本研究探讨了黑暗人格和友谊嫉妒在儿童心理虐待对关系攻击影响的中介作用。方法：选取了 2053 名中职生，采用儿童心理虐待量表、黑暗人格量表、友谊嫉妒量表和关系攻击量表分别测遭受心理虐待程度、黑暗人格、友谊嫉妒和关系攻击的水平，并用结构方程模型分析各变量间的关系。结果：儿童心理虐待、黑暗人格、友谊嫉妒和关系攻击间两两显著正相关（ $r=0.208\sim0.922$ ， $P<0.01$ ），结构方程模型显示，儿童心理虐待通过黑暗人格和友谊嫉妒的中介作用对关系攻击产生影响，且该中介作用包含三条路径：黑暗

人格的单独中介作用、友谊嫉妒的单独中介作用，以及黑暗人格—友谊嫉妒的链式中介作用。结论：儿童心理虐待对关系攻击的影响，主要是通过黑暗人格这一中介路径，黑暗人格特质是产生关系攻击的关键因素。

关键词 儿童心理虐待；黑暗人格；友谊嫉妒；关系攻击

The Influence of Child Psychological Abuse on Relationship Attack: The Chained Mediation of Dark Personality and Friendship Jealousy

FU Jin-jin, CAI Ting-ting, GUI Teng-ya, Peng Xiaofan (corresponding author)

School of Psychology, Guizhou Normal University, Guiyang, 550025, corresponding author:

pengxf@gznu.edu.cn

Abstract: Objective: This study explored the mediating role of dark personality and friendship jealousy in the influence of child psychological abuse on relationship aggression. Method: Selected 2053 secondary vocational students, using the Child Psychological Abuse Scale, Dark Personality Scale, Friendship Jealousy Scale, and Relationship Aggression Scale to measure the level of psychological abuse, dark personality, friendship jealousy, and relationship aggression, respectively. The structural equation model analyzes the relationship between the variables. Results: Child psychological abuse, dark personality, friendship jealousy, and relationship aggression are significantly positively correlated ($r=0.208-0.922$, $P<0.01$). The structural equation model shows that child psychological abuse is through the mediating effect of dark personality and friendship jealousy. Relationship attacks have an impact, and the mediating role includes three paths: the sole mediating role of dark personality, the sole mediating role of friendship jealousy, and the chain mediating role of dark personality-friendship jealousy. Conclusion: The influence of child psychological abuse on relationship aggression is mainly through the intermediary path of dark personality. Dark personality traits are the key factor for relationship aggression.

基于动机的四分暴力类型说的概述与应用

成秀梅^{1,2} 张媛³ 李杰² (通讯作者)

1 内蒙古医科大学人文教育学院，呼和浩特，010059

2 内蒙古师范大学心理学院，呼和浩特，010022, healthlj2004@163.com

3 内蒙古医科大学卫生管理学院，呼和浩特，010059

摘要 传统的反应性-主动性攻击的二分法比较模糊，掩盖了攻击产生的异质性，阻碍了对攻击的深入研究。逆转理论从动态、多维、可变的视角对动机、情绪以及暴力等核心主题的论述，为从动机角度深入探究和理解人类攻击行为的复杂性提供了理论基础。基于逆转理论，综合考虑攻击产生的动机和实施攻击时的自我控制的协同作用，研究者提出了四分暴力类型说(Quadrupartite Violence Typology, QVT)。该学说将攻击类型扩展为冲动厌恶型(反应性)攻击、控制欲求型(主动性)攻击、冲动欲求型攻击以及控制厌恶型攻击等四类，每种类型都与特定的目标、情绪以及关键的心理过程相关。四种攻击类型从动机角度又可表述为愤怒驱动的攻击、娱乐驱动的攻击、奖励驱动的攻击以及报复驱动的攻击，而从愤怒角度又可表述为反应性愤怒攻击、强迫性愤怒攻击、报复性愤怒攻击以及寻求刺激性愤怒攻击。研究者已在不同的样本中证实了四分暴力类型的合理性，并围绕愤怒类型开发了愤怒攻击量表(Angry Aggression Scales, AAS)，网络攻击类型问卷(The Cyber-Aggression Typology Questionnaire, CATQ)以及面对面攻击类型问卷(Face-to-Face Aggression Typology Questionnaire, FATQ)。该学说的应用从最初对具有人格障碍的罪犯的分析，扩展到了青少年的研究中；从对现实中的犯罪、暴力、欺凌攻击的分析，扩展到网络攻击和网络欺凌的研究中；该学说还可与攻击的经典理论相结合，提高对攻击的解释力。四分暴力类型说对现实攻击以及网络攻击的解释更加细化、多维、可变，更符合生活实际，但目前的研究仍以静态测量的方式来验证QVT结构的合理性，还没有突显动态性。未来可围绕愤怒情绪开发相应的实验室任务，从动态、可变的视角验证QVT结构的合理性，并进一步完善基于四分暴力类型说的预防和干预策略，防止集中在愤怒(反应性攻击)和奖励(主动性攻击)动机的暴力和欺凌干

预策略无效或适得其反。

Summary and Application of The Quadripartite Violence Typology Based on Motivation

XiuMeiCheng^{1,2}, YuanZhang³, JieLi²

1 School of Humanities Education, Inner Mongolia Medical University, Hohhot,010059

2 School of Psychology, Inner Mongolia Normal University, Hohhot,010022

3 School of Health Management, Inner Mongolia Medical University, Hohhot,010059

Abstract: The traditional dichotomy of reactive-proactive aggression is vague, which covers up the heterogeneity of aggression and hinders the further study of aggression. The reversal theory discusses the core themes such as motivation, emotion, and violence from a dynamic, multidimensional and variable perspective, which provides the theoretical basis to deeply explore and understand the complexity of human aggression from the perspective of motivation. Based on the reversal theory, the researchers put forward the theory of Quadripartite Violence Typology (QVT), considering the synergy between the motivation of aggression and self-control when aggressing. This theory expands the aggression types into four types: impulsive-aversive aggression (reactive aggression), controlled-appetitive aggression (proactive aggression), impulsive-appetitive aggression, and controlled-aversive aggression, and each type is related to specific goals, emotions and key psychological processes. The four aggression types can be expressed as anger-driven aggression, entertainment-driven aggression, reward-driven aggression and revenge-driven aggression from the perspective of motivation, and can be expressed as reactive anger aggression, compulsive anger aggression, retaliatory anger aggression and stimulating anger aggression from the perspective of anger. Researchers have confirmed the rationality of Quadripartite Violence Typology in different samples, and developed Angry Aggression Scales, AAS), The Cyber-Aggressive Typology Questionnaire (CATQ) and Face - to - Face Aggressive Typology Questionnaire (FATQ) around anger types. The application of this theory has expanded from the initial analysis of criminals with personality disorder to the study of teenagers; From the analysis of crime, violence and bullying aggression in reality, it extends to the research of cyber aggression and cyber bullying; This theory can also be combined with the classical theory of aggression to improve the explanatory power of aggression. The explanation of the quartered violence type theory on real aggression and cyber aggression is more detailed, multidimensional and changeable, which is more in line with the actual life. However, the current research still verifies the rationality of QVT structure by static measurement, and has not highlighted its dynamics. In the future, we can develop corresponding laboratory tasks around anger, verify the rationality of QVT structure from a dynamic and variable perspective, and further improve the prevention and intervention strategies based on QVT ,so as to prevent the violence and bullying intervention strategies focusing on anger and reward motivation from being ineffective or counterproductive.

Keywords: quadripartite violence typology, reversal theory, proactive aggression, reactive aggression

校园排斥对中职生生命意义感的影响：链式中介效应分析

陈颖¹ 张野¹（通讯作者） 刘致宏¹ 李佳霖¹

沈阳师范大学教育科学学院，辽宁沈阳，110034, zhangye_psy@163.com

摘 要 近年来，关于人类生命意义的议题受到各领域的广泛关注。有学者认为，人类具备寻找生命意义的内在驱动力，无法实现生命意义会导致心理痛苦。生命意义感(*meaning in life*)是指个体积极寻找并发现生活意义的程度。生命意义感主要从人际交往中获得，当个体的人际互动出现问题，便会增加其失去生命意义及价值感的威胁。作为一种常见的人际交往现象，校园排斥(*campus exclusion*)是发生在校园范围内的社会排斥，具体指个体在校园生活中被他人拒绝或忽视，难以建立和维持正常人际关系，使其归属和关系需求受到阻碍的现象和过程。本研究通过整群抽样方式，采用青少年校园排斥问卷、心理资本问卷、消极应对方式问卷和生命意义感量表对 1043 名中职生进行问卷调查。通过 SPSS23.0 和 AMOS23.0 软件对数据进行处理和分析，探讨校园排斥对生命意义感的影响，以及心理资本和消极应对方式的作用。在控制性别和年龄后，结果表明：

(1) 校园排斥负向预测中职生的生命意义感；(2) 校园排斥既能通过心理资本和消极应对方式的单独中介作用预测生命意义感，也能通过心理资本与消极应对方式的链式中介作用对生命意义感加以预测。研究最终梳理出一条“人际环境压力→人格特质发展→应对方式运用→生命意义建构”的理论作用机制，同时揭示出校园排斥对中职生生命意义感的影响，并强调了心理资本等人格因素与应对方式对生命意义感的作用。

关键词 校园排斥，生命意义感，心理资本，消极应对方式，中职生

The Effects of Campus Exclusion on Secondary Vocational Students' Perceived Meaning in life: Chain Mediating Effect Analysis

Chen Ying, Zhang Ye, Liu Zhihong, Li Jialin

School of Education Shenyang Normal University No. 253, Yellow River North Street, Huanggu District, Shenyang City, Liaoning Province

Abstract: In recent years, the issue of the meaning of human life has attracted wide attention in various fields. Some scholars believe that human beings have the inherent drive to seek the meaning of life, and failure to achieve the meaning of life will lead to psychological pain. The meaning in life refers to the degree to which an individual actively seeks and finds the meaning of life. The meaning in life is mainly obtained from interpersonal communication. When individuals have problems in interpersonal interaction, it will increase the threat of losing their sense of meaning and value in life. Campus Exclusion, as a common phenomenon of interpersonal communication, is a social exclusion occurring on campus. It specifically refers to the phenomenon and process of individuals being rejected or ignored by others in campus life, which makes it difficult for them to establish and maintain normal interpersonal relationships, thus impeding their needs for belonging and relationship. In this study, 1043 secondary vocational students were surveyed by cluster sampling using the adolescent school exclusion questionnaire, the psychological capital questionnaire, the negative coping style questionnaire, and the life meaning scale. The data were processed and analyzed by SPSS23.0 and AMOS23.0 software to explore the impact of campus exclusion on the life meaning, as well as the role of psychological capital and negative coping style. After controlling for gender and age, the results showed that : (1) campus exclusion negatively predicted secondary vocational students' life meaning; (2) School exclusion can predict the meaning in life through the single mediating effect of psychological capital and negative coping styles, and can also predict the meaning in life through the chain mediating effect of psychological capital and negative coping styles. The theoretical mechanism of " interpersonal environmental stress → personality traits development → coping style application → meaning in life construction " was sorted out. Meanwhile, the influence of campus exclusion on the meaning in life of secondary vocational students was revealed, and the role of personality factors such as psychological capital and coping style on the meaning in life was emphasized.

Keywords: campus exclusion, meaning in life, psychological capital, negative coping style, secondary vocational students

少年的呼喊——对学业成就较高群体遭遇校园欺凌的调查分析

卢玥辰

中国人民大学心理学系，北京，100872，luyuechen@ruc.edu.cn

摘要 影片《少年的你》的播出，引发了公众对校园欺凌的关注和讨论。在电影中，学业成就较高的陈念性格内向，家庭条件较差，因帮助受欺凌同学的行为而遭到了校园欺凌。但国内以往研究大多聚焦弱势群体，而在学业成就较高（High academic achievement）群体的遭遇方面，为数不多的研究也仅片面地分析了相关现状及原因。电影作品是对现实生活的反映，在当下电影制片和公众共同关注到学业成就较高群体遭遇校园欺凌的问题时，有必要对其进行进一步讨论。本研究从学业成就较高的群体遭受校园欺凌的现状的严重性及特点、遭受校园欺凌的独特原因、遭受校园欺凌带来的影响展开，探讨校园欺凌与学业成绩较高的群体之间的关系。通过问卷法和半结构化访谈等方式，采用 SPSS 26.0 对数据进行统计分析，还原了学业成就较高的群

体遭遇校园欺凌的现状，深入分析了此类问题的产生原因和影响，以期引起国内对这一群体遭遇校园欺凌现状的关注；同时以《少年的你》为载体，考察了校园欺凌影片对防治校园欺凌的作用，从传播学的角度，为防治校园欺凌提供了新的思路本研究丰富和完善了我国在校园欺凌与学业成就的关系上的研究，填补了原有研究中对这一群体遭遇校园欺凌的空白，为今后对学业成就较高的群体遭受校园欺凌的充分研究奠定了一定基础；通过对校园欺凌的核心判定依据“反复性”、“持续性”的重新界定，综合影视传播、法律、教育等方面，对校园欺凌的综合防治提出建议，并对未来研究方向进行展望。

关键词 校园欺凌，暴力防治，学业成就，少年的你

The Cry of Teenagers — An Investigation and Analysis of School Bullying Encountered by Groups with High Academic Achievement

LU Yuechen

Department of Psychology, Renmin University of China, Beijing 100872

Abstract: The release of the film *Better Days* has sparked public concern and discussion about school bullying. In the film, Chen nian, an introvert with high academic achievement and poor family conditions, is bullied in school for helping a bullied classmate. However, most of the previous domestic researches focused on the disadvantaged groups, and in terms of the experiences of the groups with High academic achievement, the few researches only made a one-sided analysis of the relevant situation and reasons. Films are reflections of real life, and at a time when both filmmaking and the public are concerned about the problem of bullying among high achiever groups, it needs to be discussed further. This study explores the relationship between school bullying and groups with high academic achievement from the perspective of the seriousness and characteristics of the current situation, the unique causes of school bullying, and the impact of school bullying. By means of questionnaire and semi-structured interview, SPSS 26.0 was used for statistical analysis of the data, to restore the status quo of the group with high academic achievement suffering from school bullying, and to deeply analyze the causes and effects of such problems, in order to draw attention to the status quo of this group suffering from school bullying in China. This study uses *Better Days* as the carrier to examine the bullying effect on prevention and control of bullying film, from the perspective of communication studies, offers a new way for the prevention of bullying, enrich and perfect our country of this research on the relationship between bullying and academic achievement of research, fill in the research of the original blank for this group encounter bullying, It lays a foundation for the research on the bullying of the group with high academic achievement in the future. By redefining the core judgment basis of "repeatability" and "continuity" of school bullying, this paper puts forward suggestions on the comprehensive prevention and treatment of school bullying from the aspects of film and television communication, law and education, and looks forward to the future research direction.

Keywords: school bullying, violence prevention, academic achievement, *Better Days*

小学生受欢迎程度与欺负行为的关系 ——个体感知的欺负行为可接受性与道德推脱的调节作用

张金凤（通讯作者），刘静

重庆大学公共管理学院，重庆，400000，psyzhangjf@cqu.edu.cn

摘 要 当前我国和全球的校园欺负现象都十分严峻，各国政府和各国际组织也出台了相关法律法规、政策及文件以应对校园欺负。联合国教科文组织提出的“全面性教育”理念中也涵盖了认识与应对校园欺负的相关内容。生态系统理论认为，多重环境因素影响着人类个体的行为发展，其中关键的一环就是同伴关系。根据柯尔伯格的道德认知发展理论中习俗水平的好孩子定向阶段，那些在同伴群体中受欢迎的学生为了维持自己在同伴心中的好孩子形象，因而更少实施欺负行为，相反，那些在同伴群体中不受欢迎的个体则会表现出更多的欺负行为。同伴关系是小学阶段最主要的人际关系，个体感知的欺负行为可接受性主要是指行为主体感

知到的来自同伴群体对欺负行为的认同程度。道德推脱是指个体做出某些不道德行为后产生的一些特定的认知倾向，这些认知倾向包括重新定义自己的行为，使其伤害性显得更小、最大限度地减少自己在行为后果中的责任和降低对受害者痛苦的感知。小学生受欢迎程度与欺负行为的关系会因为其感知到的欺负行为可接受性以及个体自身的道德推脱水平这一认知倾向而发生变化。本研究以 1262 名四、五年级的小学生为被试（51% 男孩），考察个体感知到的欺负行为可接受性和个体的道德推脱如何影响受欢迎程度和欺负行为之间的关系。受欢迎程度采用同伴提名测量，欺负行为采用张文新，武建芬和 Jones(1999)修订的 Olweus 欺负问卷进行测量、个体感知到的欺负行为可接受性通过学生自我报告两个问题——“你的五个好朋友中，有几个认为可以欺负其他同学？有几个认为不可以欺负其他同学？”进行测量、道德推脱采用潘清泉、周宗奎（2010）修订的儿童道德脱离量表进行测量。结果发现：（1）小学生的受欢迎程度可以显著负向预测其欺负行为；（2）个体感知的欺负行为可接受性在小学生受欢迎程度与欺负行为之间起到调节作用。当个体感知的欺负行为可接受性低时，受欢迎程度低的学生比受欢迎程度高的学生有更少的欺负行为，相反，当个体感知到的欺负行为可接受性高时，受欢迎程度低的学生比受欢迎程度高的学生有更多的欺负行为；（3）道德推脱对小学生的受欢迎程度与欺负行为可接受度对欺负行为的交互效应具有高阶调节作用。在道德推脱水平低的学生中，个体感知到的欺负行为可接受性与受欢迎程度对欺负行为的交互效应显著，在道德推脱水平高的学生中，该交互效应则不显著。本研究检验了个体感知的欺负行为可接受性与道德推脱在小学生受欢迎程度与欺负行为之间的作用，对从同伴关系角度减少小学生的欺负行为具有一定的指导意义。

关键词 受欢迎程度；欺负行为；感知欺负行为可接受性；道德推脱；小学生

Relationship between primary school students' popularity and bullying - the moderating role of individual's perceived bullying acceptability and moral disengagement

Abstract: At present, the phenomenon of campus bullying in China and worldwide is very serious, governments and international organizations have also issued relevant laws and regulations, policies and documents to deal with campus bullying. UNESCO's concept of "comprehensive education" also includes awareness and response to bullying on campus. Ecosystem theory holds that multiple environmental factors influence the behavior development of human beings, one of the key factors is peer relationship. According to Kohlberg's theory of moral cognitive development, students who are popular in the peer group are less likely to commit bullying in order to maintain their image as good children in the peer group, while those who are not popular in the peer group exhibit more bullying. Peer relationship is the main relationship in primary school. Individual's perceived bullying acceptability mainly refers to the degree of recognition of bullying behavior from peer groups perceived by the actor. Moral disengagement refers to specific cognitive tendencies that arise from individuals making certain immoral behaviors, including redefining their own behavior to make it less harmful, minimizing their own responsibility for the consequences of the behavior, and reducing their recognition of the victim's pain. The relationship between primary school students' popularity and bullying can change due to individual's perceived acceptability of the bullying behavior and individual's own moral disengagement level. The study investigated 1,262 fourth- and fifth grade primary school students (51 percent of boys) on how individual's perceived acceptability of the bullying behavior and individual's moral disengagement affected the relationship between popularity and bullying. Popularity is measured by peer nomination, Bullying was measured using the Olweus Bullying Questionnaire revised by Zhang Wenxin, Wu Jianfen and Jones (1999), and individual's perceived bullying acceptability was measured by student's self-report - "How many of your five best friends think it's ok to bully other students?" How many think it is not proper to bully other students? ". Moral disengagement was measured using the child moral disengagement scales revised by Pan Qingquan, and Zhou Zongkui (2010). The results showed that: (1) the popularity of primary school students can significantly negatively predict their bullying behavior; (2) Individual's perceived bullying acceptability moderates the relationship between primary school students' popularity and bullying behavior. When individual's perceived

acceptability is low, students with low popularity have less bullying than students with high popularity, whereas students with low popularity have more bullying behavior than students with high popularity when individual's perceived bullying acceptability is high; (3) Moral disengagement has a high-order moderation effect on the interaction between primary school students' popularity and perceived acceptability on bullying behavior. Among the students with low moral disengagement level, the interaction effect of individual's perceived acceptability and popularity on bullying behavior was significant, and among the students with high moral disengagement level, the interaction effect was not significant. This study examines the role of individual's perceived bullying acceptability and moral disengagement in the relationship between popularity of primary school students and bullying behavior, which has some guiding significance for reducing bullying behavior in primary school students from the perspective of peer relationship.

Key words: popularity; bullying; perceived bullying acceptability; moral disengagement; primary school students

农村小学生同伴攻击/受侵害类型及其学校适应： 基于潜在剖面分析

吴旻¹ 宋文琦² 梁丽婵² (通讯作者)

1 赣南师范大学 a.教育科学学院, b.学报编辑部, 赣州, 341000

2 北京师范大学中国基础教育质量监测协同创新中心, 北京, 100875, lianglichan@bnu.edu.cn

摘 要 本研究采用方便抽样调查了江西省 1489 名 4-6 年级农村小学生的攻击受侵害情况, 采用潜在剖面分析方法探索其攻击与受侵害类型, 并尝试从积极情绪、消极情绪、师生关系、同伴关系及学业成绩维度进一步解释不同攻击受侵害类型与其学校适应的关系。结果表明: (1) 农村小学生攻击受侵害分为四类: 高攻击-高受侵害型(2.35%)、低攻击-高受侵害型(22.16%)、中攻击-中受侵害型(8.87%)及低卷入型(66.62%); (2) 不同亚类型具有一定的“共发性”, 除高攻击-高受侵害组外, 各亚组均表现出间接攻击高于直接攻击, 间接受侵害高于直接受侵害; (3) 不同亚型在性别、年级、是否寄宿上均差异显著, 男生、低年级、寄宿生更容易卷入校园欺凌; (4) 不同亚型在学校适应上的表现, 在积极情绪及消极情绪上, 高攻击-高受侵害均显著高于其他各组, 在人际关系和学业表现上, 低卷入组显著优于其他各组。这提示说明: 农村小学生卷入校园欺负的比例及风险明显更高, 且攻击受侵害群体内部存在异质性分类, 不同亚型均表现出间接攻击侵害高于直接攻击侵害行为, 这一“隐蔽性”要求农村学校教师、学生家长应及早发现校园欺负的苗头, 防微杜渐, 不能忽视学生间较为隐秘间接的攻击侵害行为, 及时制止, 消除校园欺负进一步恶化; 其次, 应科学甄别农村小学生群体中“高攻击-高受侵害”组个体身份的“双重性”, 长期关注其在学校适应方面的特殊性; 再次, 在干预实践中, 需要针对男生、低年级、寄宿生等校园欺负高发人口学特征群体, 有区别地进行校园欺负的防治及干预。

Types of Aggressive Victims of Rural Pupils and Their School Adaptation: Based on Latent Profile Analysis

WU Ming¹, SONG Wenqi², LIANG Lichan²

1. Editorial Department of Journal and School of Educational Science of Gannan Normal University,
Ganzhou

2. Collaborative Innovation Center of Assessment toward Basic Education Quality of Beijing
Normal University, Beijing

Abstract: The current study investigated whether there were distinct subgroups of rural children who experienced different forms of aggression and victimization using latent profile analysis (LPA), and whether these subgroups differed from one another in their different levels of school adaptation. Participants were children in grades 4-6 from rural central primary schools. It showed that: 1) four subgroups were identified, including high aggression-victimization subgroup, high victimization subgroup, medium aggression-victimization subgroup, and low

involvement subgroup;2) There was high degree of co-occurrence among four subgroups of aggression and victimization. Except for the high aggression-victimization subgroup, all subgroups showed that indirect aggression was higher than direct aggression, and indirect victimization was higher than direct victimization;3) There were significant differences in gender, grade and boarding status among different subgroups. Boys, lower grade and boarding students were more likely to be involved in campus bullying ;4) In terms of school adaption, the scores of positive and negative emotions in high aggression-victimization subgroup were significantly higher than those in other subgroups. However, the scores of Interpersonal relationship and academic achievement of low involvement subgroup were significantly better than those of other subgroups. Therefore, we should pay more attention to bullying in rural schools, pay attention to rural primary school students who are in high aggression-victimization subgroup, and carry out targeted intervention and prevention according to the characteristics of different subgroups and students' adaptation.

摘 要 校园欺凌一直是国内外研究热点之一,但研究大多数集中在欺凌者与被欺凌者这两种角色,对校园欺凌旁观者的关注研究较少。有研究表明当校园欺凌发生时,旁观者如果能进行及时干预,欺凌行为则会减少,而对于经历欺凌事件的旁观者而言,其人生价值观也会受到影响。可见,对于减少校园欺凌行为,对旁观者进行相关研究显得尤为重要。本文对以往国内外关于校园欺凌旁观者角色进行系统的综述与分析,重点分析不同类型初中校园欺凌旁观者的行为特征及其影响因素。现有的研究中发现旁观者这一类群体也会受到欺凌事件的影响,在欺凌事件发生时,对欺凌行为持有不同态度的初中生会表现出不同的行为特征,相关研究将旁观者角色分为4种:协助者,强化者,局外人和保护者。有因未能制止欺凌行为而使被欺凌者受伤害,自身出现内疚,焦虑,难过等负面情绪;也有在欺凌事件发生时持有什么都不做,消极,被动的旁观者态度;而有些旁观者行为会对欺凌事件的发展起到助推作用。以往研究表明,影响校园欺凌旁观者行为因素包括个体因素如欺凌态度,共情,自尊,学校满意度,亲社会行为,公正世界信念等,其他因素如父母教养方式,友谊质量,师生关系,社会支持等。最后本文从旁观者干预模型,社会认知理论对不同类型的旁观者行为特征及其影响因素进行解释,为制定相关校园欺凌干预措施提供借鉴。

A study on the behavior characteristics and influencing factors of bystander bullying in middle school

Yao Benxian (Corresponding author), Wang YiShu

Hefei Normal University, Hefei, 230601

Department of Education and Teaching, Hefei Normal University, Hefei, 230601

Abstract: School bullying has been one of the hot research topics at home and abroad, but most of the research focuses on the two roles of the bully and the bullied, and there is little research on the bystanders of school bullying. Studies have shown that when bullying occurs, bystanders who intervene can reduce bullying behavior, and for bystanders who experience bullying, their life values are affected. Therefore, it is particularly important to conduct research on bystanders to reduce school bullying. This paper systematically reviews and analyzes the role of bystanders in school bullying at home and abroad, and focuses on analyzing the behavioral characteristics and influencing factors of bystanders in different types of middle school bullying. Existing research has found that

bystanders are also affected by bullying, junior high school students with different attitudes towards bullying will show different behavioral characteristics. Related studies have divided the roles of bystanders into four types: helper, reinforcer, outsider and protector. The failure to stop the bullying behavior caused the victim to be hurt, their own guilt, anxiety, sad and other negative emotions; There is also a do-nothing, passive, passive bystander attitude when bullying occurs; And some bystander behavior can contribute to the development of bullying. Previous studies have shown that the factors influencing bystander behavior in school bullying include individual factors such as bullying attitude, empathy, self-esteem, school satisfaction, prosocial behavior, belief in a just world, and other factors such as parenting style, friendship quality, teacher-student relationship, and social support. Finally, this paper explains different types of bystander behavior characteristics and their influencing factors from the bystander intervention model and social cognitive theory, so as to provide reference for the formulation of relevant intervention measures of school bullying.

Keywords: School bullying, Bystanders, Bystander Intervention Models, Junior high school students

青少年早期的同伴地位与同伴圈子层的群体规范对校园欺凌中保护行为的作用及性别差异

梁文雨¹ 陈嘉仪¹ 辛国刚¹ 王晨旭¹ 张李斌¹ 张其文¹ 张云运² (通讯作者)

1 北京师范大学中国基础教育质量监测协同创新中心, 北京, 100088

2 北京师范大学中国基础教育质量监测协同创新中心, 北京, 100088, yyzhangff@126.com

摘要 以我国中部地区某省会 2 个区县 7 所学校的八年级 2470 名学生为被试, 采用多元线性回归和多层线性模型对保护行为的影响因素进行分析, 考察学生的两种同伴地位 (社会支配和社会喜爱) 和保护行为的关系, 并考察同伴圈子层的群体规范 (保护行为规范和欺凌行为规范) 和保护行为的关系, 以及对同伴地位和保护行为关系的调节作用, 同时探究此作用机制在不同性别或性别圈子的结果。研究的主要结果如下: (1) 同伴地位中, 社会支配对保护行为有显著的正向预测作用, 社会喜爱对保护行为的正向预测作用只在男生或男生圈子中显著。(2) 同伴圈子的群体规范中, 只有保护行为规范会显著正向预测保护行为, 欺凌行为规范则不显著。(3) 保护行为规范对社会支配、社会喜爱和保护行为的关系都有显著的调节作用。高保护行为规范的同伴圈子中, 社会支配对保护行为的正向预测作用更强, 男生圈子中的社会喜爱才会显著正向预测保护行为。圈子欺凌行为规范对社会支配和保护行为的关系有显著的调节作用, 这一调节作用在不同性别圈子中的效应具有差异, 表现为男生圈子中, 随着圈子欺凌行为规范的降低, 社会支配和保护行为的正向预测作用越强, 而女生圈子则相反。结果启示我们, 面对欺凌事件的干预和预防, 应该更加注重积极行为的正面示范作用和积极规范的引导作用, 及时识别并鼓励欺凌中的积极保护行为, 发挥同伴中积极规范的影响作用, 以此促使更多的学生去遵守积极规范, 表现出积极行为, 促进亲社会行为和保护行为的传播。同时, 性别上的差异启示我们, 在校园中建立积极规范过程中, 应当尤其注重对男生圈子中群体规范的塑造。

The effects of social status, peer clique norms and gender differences on protective behaviors in bullying among early adolescents

Wenyu Liang, Jiayi Chen, Guogang Xin, Chenxu Wang, Libin Zhang, Qiwen Zhang, Yunyun Zhang
China basic education quality monitoring Collaborative Innovation Center, Beijing Normal University

Abstract: This study would use Multiple Linear Regression and Hierarchical Linear Models to reveals the relationships. We would focus on the effect of social status (Social dominance and Social preference), the influences of clique norms (Defending norm and Bullying norm), and to which extent the clique norms moderate the effect of the two measures of social status on defending behaviors. Additionally, the gender difference would be explored in each study. Participants in the study were 2470 Grade 8 students (1200 girls, Mage = 14.4 years) in Central China.

The findings are as follow:(1) Social dominance was positively associated with defending behaviors significantly, but social preference was only positively associated with the boys' defending behaviors significantly. (2) Only clique defending norm was positively associated with defending behaviors, clique bullying norm was not significant. (3) Clique defending norm had significant moderating effects on the relationships between social status and defending behaviors. When in cliques with higher defending norms, the positive associations between social dominance and defending behaviors were stronger. The positive association between social preference and defending behaviors was significant only in boy cliques with high clique defending norms. The main effect of clique bullying norm was not significant, but clique bullying norm had significant moderating effects on the relationship between social dominance and defending behaviors. The moderating effect was different among different gender groups. The positive association between social dominance and defending behaviors was stronger with the decrease of bullying norms in the boy cliques, while the opposite effect was found in the girl cliques. The results inspire us that, in the face of bullying intervention and prevention, we should pay more attention to the positive exemplary role and regulate positively guide of the positive behavior. And timely identify and encourage positive protection behavior of bullying, promoting the effect of positive norms in the play companion, to encourage more students to comply with the specifications and to show positive behavior, and at last promoting the spread of prosocial and protective behaviors. At the same time, gender differences suggest that in the process of establishing positive norms on campus, we should pay special attention to the shaping of group norms in the boys' clique.

Keywords: Bullying, Defending behaviors, Social status, Clique, Group norm

创伤后应激障碍相关精神障碍与自身免疫疾病的遗传关联

张静怡^{1,2} 赵光义^{1,2} 张紫倩^{1,2} 张昆林^{1,2*} (通讯作者)

1 遗传与生物医学信息学研究中心, 中国科学院心理健康重点实验室(中国科学院心理研究所), 北京, 100101

2 中国科学院大学心理学系, 北京, 100049, zhangkl@psych.ac.cn

摘要 背景: 创伤后应激障碍(posttraumatic stress disorder, PTSD)是患者经历创伤事件后引发的一种应激性精神障碍。创伤后应激障碍与另外两种精神疾病精神分裂症(schizophrenia, SCZ)和重性抑郁障碍(major depressive disorder, MDD)高度相关。包括流行病学在内的研究表明, 精神障碍可能与某些自身免疫疾病有关, 如干燥综合征(Sjögren's syndrome, SS)。研究创伤后应激障碍相关的精神障碍(包括创伤后应激障碍本身、精神分裂症和重性抑郁障碍)与自身免疫疾病之间的遗传关联性(genetic correlation), 有助于发展创伤后应激障碍的遗传学和症状学研究。目前全基因组关联研究(genome-wide association study, GWAS)从基因组大样本的角度提供了发现不同性状之间相关性的契机。方法: 应用多基因风险评分(polygenic risk score, PRS)对全基因组关联研究数据进行分析, 检测创伤后应激障碍相关精神障碍(创伤后应激障碍、精神分裂症和重性抑郁障碍)与两种自身免疫疾病(干燥综合征和乳糜泻(Celiac disease))的遗传关联。所有的全基因组关联研究数据都来自公共资源。结果: 创伤后应激障碍与干燥综合征和乳糜泻均呈遗传相关(P 值=0.0043和0.029); 精神分裂症和重性抑郁障碍与两种自身免疫疾病呈高度遗传重叠(P 值在 $9.8\text{e-}26$ ~ $4.1\text{e-}5$ 之间)。结论: 干燥综合征和乳糜泻与创伤后应激障碍相关精神障碍显著关联。自身免疫疾病和创伤后应激障碍相关的精神障碍可能有着某些遗传机制共性。在研究创伤后应激障碍时, 可以考虑自身免疫疾病的症状。

E-mail: zhangkl@psych.ac.cn

Abstract: Background: Posttraumatic stress disorder (PTSD) is a stress-related psychiatric-condition which occurs after trauma exposure. PTSD is highly correlated to two mental disorders, schizophrenia (SCZ) and major depressive disorder (MDD). Available studies, including epidemiology investigations, have indicated that mental disorders may be correlated to some autoimmune disorders such as Sjögren's syndrome. Discovering genetic correlation between PTSD-related mental disorders (including PTSD itself, SCZ and MDD) and autoimmune disorders could help to develop genetics and symptomology study of PTSD. Now genome-wide association study (GWAS) with large sample size provides the opportunity to discover the genetic correlations across disorders from the point view of whole genome variations. Methods: In this study, we tested the relationship between PTSD-related mental disorders (PTSD, SCZ and MDD) and two common autoimmune disorders, Sjögren's syndrome (SS) and Celiac disease (CeD), by applying polygenic risk score (PRS), to GWAS data. All the GWAS data were from public resources. Results: PTSD showed genetic correlation to both SS and CeD ($P = 0.00425072$ and 0.0289555 , respectively); SCZ and MDD showed highly genetic overlap with both SS and CeD (P ranging from $9.8e-26$ to $4.1e-5$). Conclusions: Sjögren's syndrome and Celiac disease are significantly correlated to PTSD-related mental disorders. Autoimmune disorder and PTSD-related disorders may share close genetic mechanisms. It's worthy to considering autoimmune disorder symptoms when investigating PTSD.

摘要 随着移动互联网技术的发展, 社交媒体成为日常生活中不可缺少的一部分, 并对人们的生活产生重要影响。已有研究表明, 社交媒体是影响人们身体意象及进食态度与行为的重要因素。近年来, 自拍成为社交媒体上一种十分流行的现象, 备受青少年群体的青睐。同时, 青少年正处于身体发育的关键时期, 进食行为对他们的身心健康起重要影响。因此, 本研究以青少年为研究对象, 旨在探讨社交媒体浏览自拍与限制性饮食之间的关系及瘦理想内化在其中的中介作用。同时, 研究将考察媒介素养在上述中介效应中的调节作用。研究选取 1481 名中学生 (女生 720 人, 平均年龄 15.49 ± 1.84 岁) 为研究对象, 调查了他们在浏览自拍、瘦理想内化、媒介素养及限制性饮食上的得分。结果发现: ①社交媒体浏览自拍与青少年限制性饮食之间存在显著正相关。②瘦理想内化在社交媒体浏览自拍与青少年限制性饮食之间中介效应显著, 且这一中介模型不存在性别差异; 也就是说, 对于青少年而言, 在社交媒体浏览他人自拍, 会导致瘦理想内化水平的提高, 进而产生限制性饮食行为。③媒介素养在社交媒体浏览自拍与瘦理想内化之间起调节作用, 具体而言, 对于媒介素养高的个体, 社交媒体浏览自拍对瘦理想内化的预测作用显著低于低媒介素养的个体; 换句话说, 媒介素养对社交媒体浏览自拍影响限制性饮食的间接效应起缓冲作用。研究结果丰富了中国背景下青少年身体意象和饮食行为的相关研究, 提示我们通过媒介素养干预项目的实施, 提高青少年媒介素养水平, 有助于降低青少年消极身体意象, 减少限制性饮食行为的产生, 对青少年心理健康水平的提高有重要意义。

Abstract: With the development of mobile Internet technology, social media has become an essential part of and has an important influence on people's daily life. A wide range of research has documented that social media use is an important influence factor of people's body image and eating behaviors. Recently, selfie has become a very popular phenomenon on social media, especially among adolescents. Adolescents are in a critical period of physical development and eating behaviors have a crucial effect on their physical and mental health. Therefore, the present study examined the link between selfie-viewing on social media and restrained eating as well as the mediating role of thin-ideal internalization in this relationship. Furthermore, the moderating role of media literacy in the indirect effect was also examined. A sample of 1481 Chinese middle and high school students (720 girls, mean age = 15.49 ± 1.84) completed self-reported measures of selfie-viewing, thin-ideal internalization, media literacy, and restrained eating. Results showed that selfie-viewing was positively associated with restrained eating. Thin-ideal internalization mediated the association between selfie-viewing and restrained eating and no gender difference was found in the mediation model. Media literacy moderated the relationship between selfie-viewing and thin-ideal internalization. To be specific, for adolescents higher in media literacy the association between selfie-viewing and thin-ideal internalization was weaker than that for those lower in media literacy. In other words, media literacy had a buffering role in the indirect effect of selfie-viewing on restrained eating via thin-ideal internalization. Findings of the present study enrich the literature on body image and eating behaviors among adolescents in the Chinese context, and imply that media literacy intervention program could be developed to improve adolescents' media literacy and further decrease their body image and eating concerns, which would have important implications for adolescents' mental health.

大学生生活目标对正负情绪和生活习惯的影响

李希雅¹ 李晓茹²

1 安徽师范大学心理健康教育系, 芜湖, 241000, lixiya2017@163.com

2 复旦大学应用心理学系, 上海, 200000, lixiaoru@fudan.edu.cn

摘要 问题提出: 近年来大学生患高血压、肥胖的比例在逐年增加, 这与其不良的生活习惯密不可分。与此同时, 他们还受到情绪问题的困扰, 导致学习成绩下降、人际关系恶化等问题。而目标本身有激励的作用, 对个体意义重大。因此本研究对生活目标、正负情绪和生活习惯进行了研究。**目的:** 将生活目标的分类细化, 分别探究内外部生活目标对大学生的正负情绪和其生活习惯的影响。并探讨生活目标在个体保持心理健康和养成良好生活习惯中发挥的巨大作用。**研究方法:** 采用问卷调查法, 使用生活目标量表、生活愿望量表、正负情绪量表和生活习惯问卷对 H 大学 379 名同学 (其中女生 227 人, 男生 152 人) 进行了问卷调查, 平均年龄为 19 岁。所有资料均采用 Excel 软件建立调查表数据库, 应用 SPSS22.0 软件进行数据分析。采用的统计方法主要有: 相关分析、T 检验和单因素方差分析。**结果:** (1) 男生、女生在烟酒生活习惯上有显著差异 ($p < .001$), 男生的烟酒生活习惯差于女生。不同年级大学生的生活目标有显著差异 ($p < .01$), 本科二年级学生的生活目标与其他年级相比目标不明确。不同专业大学生的烟酒生活习惯有显著差异 ($p < .01$), 理工科学生的烟酒使用多于其他专业; (2) 生活目标与正性情绪呈正相关 ($p < .001$), 与负性情绪呈负相关 ($p < .001$); (3) 内部生活目标与正性情绪、健康的烟酒、饮食、睡眠、活动生活习惯有显著正相关 ($p < .001$), 与负性情绪有显

著负相关($p<.001$)。外部生活目标与负性情绪有显著正相关($p<.001$)，与正性情绪、健康的烟酒、饮食、睡眠、活动生活习惯有显著负相关($p<.001$)；(4)外部与内部生活目标的个体在正性情绪($p<.001$)、负性情绪($p<.001$)、生活习惯($p<.001$)上差异显著。具体表现为：相比拥有外向生活目标的个体，内向生活目标的个体正性情绪多、负性情绪少且生活习惯更加健康。**结论：**生活目标是正负情绪和生活习惯的重要影响因素。树立内部的生活目标有利于正性情绪和健康生活习惯的培养，为大学生生活目标的研究提供数据支持与理论支撑。

The influence of life goals on positive and negative emotions and living habits of college students

Lixiya¹, lixiaoru²

Anhui Normal University, Wuhu

Fudan University, Shanghai

Abstract: Questions raising: In recent years, the proportion of college students suffering from hypertension and obesity is increasing year by year, which is inseparable from bad living habits. At the same time, many college students are troubled by emotional problems, resulting in the decline of academic performance and the deterioration of interpersonal relations. The goal itself has the role of incentive, which is of great significance to individuals. Therefore, this study studies life goals, positive and negative emotions and living habits. **Purpose:** The classification of life goals is refined to explore the impact of internal and external life goals on College Students' positive and negative emotions and their living habits. It also discusses the great role of life goals in maintaining mental health and developing good living habits. **Research method:** Questionnaire survey method was used. 379 students from North China University of science and technology were selected as the subjects (female=227,male=152). They were measured with life goal questionnaire, life desire questionnaire, positive and negative emotion questionnaire and living habit questionnaire. The average age was 19 years old. Excel software was used to establish questionnaire database for all the data, and SPSS software 22.0 was used for data analysis. The statistical methods mainly included correlation analysis, T test and single factor analysis of variance. **Result:** 1 Male and female students have different smoking and drinking habits($p<.001$). Male students smoke and drink more than female students. Different grades of college students have differences in life goals ($p<.01$), the specific performance is that the sophomores' life goals are not clearer compared with other grades. Different majors have differences in smoking and drinking habits($p<.01$), the specific performance is that science and engineering students smoke and drink more than other majors. 2 There is a significant positive correlation between life goals and positive emotions ($p<.001$), and a significant negative correlation between life goals and negative emotions ($p<.001$). 3 Introverted life goals have significant positive correlation with positive emotions, healthy tobacco and alcohol, diet, sleep and activity living habits($p<.001$), and significant negative correlation with negative emotions($p<.001$). Extroverted life goals have significant positive correlation with negative emotions($p<.001$), and have significant negative correlation with positive emotions, healthy smoking, drinking, diet, sleep and activity living habits($p<.001$). 4 Individuals with extroverted and introverted life goals have significant differences in positive emotions ($p<.001$), negative emotions ($p<.001$) and life habits ($p<.001$). The specific performance are: Compare with people with extroverted life goals, introverted individuals have more positive emotions, less negative emotions, and healthier lifestyles. **Conclusion:** Life goals are important influencing factors of positive and negative emotions and living habits. Establishing internal life goals is conducive to the cultivation of positive emotions and healthy living habits, and provides data support and theoretical support for the research of College Students' life goals.

锻炼和久坐的关系：基于行为能量消耗最小化(BMEC)的新视角

周炜仪¹ 张国礼²

北京体育大学, 北京, 100084

北京体育大学心理学院, 北京, 100084, guoli_zhang@126.com

摘要 在传统研究中, 锻炼与久坐具有冲突对立的关系, 很多研究都把久坐行为和锻炼视为对立面, 就像是同一枚硬币的两面, 锻炼和久坐被视为是不同的结构。诚然是有大量的研究支持这一观点。但是, 最近的研究表示, 锻炼和久坐并不一定完全对立。行为能量消耗最小化(Behaviors Minimizing Energetic Cost, BMEC)中和了锻炼和久坐的对立关系, 在这一框架下, 久坐是因为个体被能量消耗最小化吸引, 这时久坐行为就变成了一种奖励。奖励对锻炼行为很重要, 锻炼被认为是一种奖励, 同样, 久坐行为也是一种奖励。这时, 两者关系并不对立, 而是同一连续体上的构面。在这一理论中, 身体不活动的流行可以用尽量减少能量消耗的行为的潜在回报价值来解释, 能量消耗最小化在人类进化中获得了有益的价值。从进化角度来看, 人类已经参与进 BMEC 中去, 行为总是遵循两种机制, 经济和效率。有效的行动为生存提供了优势。虽然 BMEC 有间接证据证明但缺少直接证据, 这无疑是该理论继续发展的障碍。这一理论为阐述锻炼和久坐的关系开辟了新的视角, 从人类进化和奖励的角度, 给锻炼和久坐的关系有了新的解释。该理论接纳久坐, 认为久坐是人类的本能, 并有回报价值, 提出个体需要抵抗的是对能量消耗最小化的吸引, 而不是纯粹久坐不动的这个行为。在未来的研究中, 首先是需要加入更多人类进化学, 解释身体不活动流行的原因, 其次急需大量实证研究证明久坐等消耗量最小化的行为是奖励, 最后, 根据研究结果, 提供针对减少对能量消耗最小化的吸引的干预手段, 而不是提供减少单纯的久坐行为方案。

The Relationship Between Exercise and Sedentary: A new perspective based on the theory of BMEC

Weiye Zhou¹, Guoli Zhang²

Beijing Sport University School of Psychology, Beijing, 100084

Abstract: In traditional research, exercise and sedentary have a conflicting and opposite relationship. A lot of studies regard sedentary behavior and exercise as opposite sides, just like the two sides of the same coin, exercise and sedentary are viewed as different constructs. It is true that there is a large amount of research supporting this view. However, recent studies have shown that exercise and sedentary are not completely stand in opposite sides. The theory of BMEC (Behaviors Minimizing Energetic Cost) counterbalance the relationship. In this frame of the theory, the reason why a person going to sedentary is because he or she fascinated by behaviors minimizing energetic cost, in this time, sedentary will become a rewarding. Reward is an important in exercise behavior. Exercise is considered a reward, as is sedentary. In this time, relationships are not opposite, but rather on the same facet continuum. In this theory, physical inactivity pandemic can be explained in potential rewarding value of BMEC, and BMEC gained beneficial value in human evolution. From an evolutionary perspective, humans have evolved to BMEC, behavior always follows two mechanisms: economy and efficiency, effective action provides an advantage for survival. Although BMEC's indirect evidence has been provided, direct experimental evidence is lacking, which undoubtedly will become an obstacle to the continued development of the theory. This theory opens up a new perspective for explaining the relationship between exercise and sedentary, from the perspective of human evolution and reward, giving a new explanation for the relationship between exercise and sedentary. This theory accepts sedentary and believes that sedentary is a human instinct and has rewarding value. Meanwhile it proposes that what individuals need to resist is the attraction to minimize energy cost, rather than the pure sedentary behavior. It is sure that firstly need add more human evolutionary to explain physical inactivity pandemic. Secondly, a large number of empirical studies are urgently needed to prove that BEMC is a reward. And lastly, according to the results of the study, provide interventions aimed at reducing the attraction of BMEC, rather than providing solutions to reduce pure sedentary

behavior.

伴随心境对环境复愈性效果的影响--基于压力减少理论的视角

侯演¹ 王小娇¹ 张媛²(通讯作者)

1 陕西师范大学心理学院, 西安, 710000

2 陕西师范大学心理学院, 西安, 710000, zhangyuan920@snnu.edu.cn

摘要 压力减少理论认为复愈性环境可以降低个体的生理唤醒, 激发积极情绪, 使其原本消极的情绪被积极情绪所取代, 进而缓解压力。然在复愈过程中, 人们会因为有其他事件或人物的伴随而使复愈性效果受到影响。本文通过对被试的伴随心境状态进行调节, 分析在不同伴随状态中被试的表现, 探究了其对环境复愈性效果的影响以及可能存在的作用机制。本研究分为两个部分, 第一部分通过浏览复愈性环境图片来验证自然环境图片的复愈性效果; 第二部分采用 SART 的范式, 通过指导语诱发被试在浸入复愈性环境时产生不同伴随状态(喜欢的人、讨厌的人和独自一人), 分析被试前后测的注意反应测验成绩, 以探究复愈性环境下个体复愈性的效果及其心理机制。结果发现, 实验一中浏览自然环境图片的被试任务测验成绩显著地好于控制组, 说明本研究中采用的自然环境图片具有实证的复愈性效果。而实验二中不同伴随心境的被试在持续性注意反应任务中的前测与后测成绩存在差异, 喜欢的人伴随实验组被试在前测和后测任务成绩无显著性差异, 说明由喜欢的人伴随的个体在复愈性环境中没有获得复愈性效果的提升; 讨厌的人伴随实验组后测任务成绩显著低于前测成绩; 独自一人观看复愈性环境图片实验组的后测成绩也不如前测成绩。我们认为个体在喜欢的人伴随的情况下, 削弱了复愈性环境的复愈性效果体验, 在讨厌的人伴随下会想到讨厌的人产生愤怒、厌恶等消极情绪, 然而复愈性环境对情绪的改善和缓解是有限的, 以致于影响到后测任务成绩, 而独自一人组的结果我们猜测可能与实验时间设置有关。两个实验表明个体在复愈性环境中的复愈性效果受到各种社会交往背景的影响, 被试当时的伴随心境及情绪会影响环境复愈性效果的发挥。

The Influence of Company on the Restoration Effect of Environment -- A Perspective Based on the Stress Recovery Theory

Hou Yan¹, Wang Xiaojiao¹, Zhang Yuan² (Corresponding author)

1 School of psychology, Shaanxi Normal University, Shaanxi, 710000

2 School of psychology, Shaanxi Normal University, Shaanxi, 710000, zhangyuan920@snnu.edu.cn

Abstract: The stress recovery theory (SRT) assumes that in the restorative environment, individual's physiological arousal would be reduced, and negative emotions would be replaced by positive emotions, which can relieve pressure to get restoration. However, in the process of restoration, the effect would be influenced by social background factors. Thus, this experiment regulates emotional state of the subjects to explore the influence of company on restoration effect and the mechanism of restoration effects. In this study, there are two experiments. The experiment 1 verifies the restoration effect of virtual environment by browsing the environment pictures. And based on the results of experiment 1, the experiment 2 explores the restoration effect in different accompanying states which induced by instructional language in the process of experiment. The subjects are divided into three conditions that can bring relatively intense emotional state: accompanied by the person you like, accompanied by the person you dislike and being alone. The results of the experiment 1 show that the accuracy of task in the experimental group is significantly improved, and there is also a significant difference in the accuracy of post-test results between the two groups, which indicates that psychological restoration effect exists in the natural environment pictures to the subjects. The results of the experiment 2 show that there is no significant difference in the scores of pre-test and post-test tasks in the group accompanied by the preferred person, which indicates that the individual accompanied by the preferred person does not achieve the restoration effect in the restorative environment. Second, the scores of pre-test and post-test tasks in

the group accompanied by the disliked people are significantly different, and the latter is lower than the former. Third, the post-test results of being alone group are not as good as the pre-test results. We think, the presence of preferred person weakens the restoration effect experience of the restorative environment. Second, the instruction in the experiment may induce negative emotions, while the restorative environment has limited effects on emotional improvement and remission, which affects the performance of the post-test task. Third, the defect in the being alone group may attribute to the specific time of schedule. In conclusion, the restoration effect is affected by the background of social interaction, which is influenced by different emotional experience and company states of the subjects in the restorative environment.

摘 要 物质依赖是具有反复性的, 研究者们致力于寻找有效的预防复吸的方法。对毒品的渴求会破坏毒品戒断状态; 毒品成瘾者能够清晰地意识到毒品使用的危害, 双过程模型提示独立于意识之外的自动化过程可能影响着毒品使用行为, 因此毒品的内隐渴求更为关键。正念防复吸治疗整合了正念冥想和传统防复吸技术; 正念训练可以提高特质正念的水平, 进而降低对毒品的渴求; 负强化情绪加工模型也认为, 正念训练可以降低负性情绪, 进而减少个体为回避负性情绪而产生的寻药行为。因此本研究认为, 正念训练能够降低冰毒戒断者的毒品内隐渴求。采用随机抽样的方法, 从山东省女子戒毒所选取 70 名无长期冥想经验、冰毒依赖至少半年以上的戒断者参与实验, 其中 40 名为实验组 (M 年龄=32.42, SD 年龄=6.72)、30 名为对照组 (M 年龄=28.13, SD 年龄=4.06)。实验组参与者要进行为期 3 个月的正念训练, 采用 2 (组别: 实验组、对照组) × 2 (测量时间: 前测、后测) 的混合实验设计, 毒品内隐渴求为实验因变量, 以毒品内隐态度和毒品内隐动机作为毒品内隐渴求的指标, 由 Eprime1.0 编制的 SC-IAT 进行测量, 自我报告的积极情绪、消极情绪、正念水平为控制变量。结果表明 SC-IAT 测量的内部一致性信度是良好的, 测量时间和组别的交互效应显著: 对于实验组, 后测的毒品内隐态度和毒品内隐动机显著低于前测; 对于对照组, 后测的毒品内隐态度和毒品内隐动机与前测没有显著差异。因此, 我们认为正念训练是可以降低毒品内隐渴求的, 正念训练为毒品戒除工作提供了一种有效的方法, 正念训练对毒品内隐渴求的降低效果与已有的外显毒品渴求研究的结果一致, 同时我们需要男性参与者的研究和更大样本量的研究对本研究的结论进行进一步的检验和复制。

关键词 正念训练, 冰毒戒断者, 毒品内隐渴求

Mindfulness training reduces drug implicit craving of methamphetamine abstiners

Fan Junyi^{1,2}, Guo Qingke^{2,3}

2 College of Psychology, Shandong Normal University, Jinan 250399, China

3 Ministry of Education, Guangxi Normal University, Guilin 541001, China

Abstract: Substance dependence is repetitive, and researchers are committed to finding effective ways to prevent relapse. Drug craving can destroy the drug withdrawal state; drug addicts can clearly realize the harm of drug use. The dual-process model suggests that automated processes independent of consciousness may affect drug use behaviors, so the implicit craving for drugs is more critical. Mindfulness-Based Relapse Prevention integrates Mindfulness Meditation and traditional Relapse Prevention; mindfulness training can improve the level of trait mindfulness, thereby reducing the craving for drugs; the negative reinforcement emotional processing model also

believes that mindfulness training can reduce negative emotions, thereby reducing the individual's drug-seeking behavior to avoid negative emotions. Therefore, this study believes that mindfulness training can reduce the drug implicit craving of methamphetamine withdrawal patients. Using a random sampling method, 70 abstainers who had no long-term meditation experience and had been dependent on methamphetamine for at least half a year were selected from the Shandong Women's Rehabilitation Center to participate in the experiment, of which 40 were in the experimental group (M age = 32.42, SD age = 6.72), Thirty subjects were the control group (M age = 28.13, SD age = 4.06). Participants in the experimental group were required to undergo mindfulness training for 3 months, using a mixed experimental design of 2 (groups: experimental group, control group) $\times$ 2 (measurement time: pre-test, post-test), and the implicit craving for drugs was the experimental cause Variables, using implicit drug attitude and motivation as indicators of implicit drug cravings, measured by SC-IAT compiled by Epime1.0, and self-reported positive emotions, negative emotions, and mindfulness levels as control variables. The results show that the internal consistency reliability of the SC-IAT measurement is good, and the interaction effect between the measurement time and the group is significant: for the experimental group, the implicit attitude and implicit motivation of drugs in the post-test are significantly lower than those in the pre-test; for the control In the group, there was no significant difference between the implicit attitudes and motivations of drugs in the post-test and the pre-test. Therefore, we believe that mindfulness training can reduce the implicit craving for drugs, and mindfulness training provides an effective method for drug abstinence. The effect of mindfulness training on the reduction of implicit craving for drugs is the same as the results of existing research on explicit drug cravings. Consistent, and at the same time, we need a study of male participants and a larger sample size to further test and replicate the conclusions of this study.

Keywords: Mindfulness training, methamphetamine addicts, implicit drug craving

初中生自我同情与睡前拖延的关系：情绪调节的作用

张慧籽 姜媛（通讯作者）

北京体育大学心理学院，北京，100084，通讯作者 E-mail: jiangyuan97@sina.cn

摘 要 睡前拖延是拖延领域的一个新概念，它会导致普通人群的睡眠不足，严重影响人们的身心健康。已有研究表明，自我同情者会积极实践健康行为，不太可能有睡前拖延，并且也可能采用认知重评策略来减少影响入睡的消极情绪。但以往研究较少探讨中学生的睡前拖延情况。因此，本研究采用问卷法，以 483 名初中生(男生 229,女生 254)为参与者，探讨初中生自我同情与睡前拖延的关系，以及情绪调节在这一关系中所起的作用。结果发现：自我同情与睡前拖延存在显著负相关($r=-0.469, P<0.001$)；自我同情与认知重评存在显著正相关($r=0.375, P<0.001$)，而与表达抑制存在显著负相关($r=-0.284, P<0.001$)；认知重评与睡前拖延存在显著负相关($r=-0.415, P<0.001$)，表达抑制与睡前拖延存在显著正相关($r=0.103, P<0.05$)。进一步中介效应分析结果显示，认知重评在初中生自我同情与睡前拖延之间的关系中起着部分中介作用，中介效应占总效应的 22.25%。通过 Bootstrap 程序检验中介效应，95%的置信区间为 $[-0.147, -0.065]$ 。本研究结果增进了对初中生自我同情与睡前拖延潜在关联机制的理解，并可以为初中生睡前拖延的干预提供科学参考。

关键词 睡前拖延，自我同情，情绪调节，初中生

Self-compassion and Bedtime Procrastination in Junior Middle School Students: The Effects of Emotion Regulation

ZHANG Huizi, JIANG Yuan

School of Psychology, Beijing Sport University, Beijing100084, China

Abstract: Bedtime procrastination is a new concept in the field of procrastination. It may cause sleep deprivation in the general population and seriously affect people's physical and mental health. Studies have shown that self-compassion actively practice healthy behaviors, and are less likely to have bedtime procrastination, and may also use cognitive reappraisal strategies to reduce the negative emotions that affect falling asleep. However, previous

studies have rarely explored the bedtime procrastination of junior middle school students. Therefore, this study used a questionnaire method, with 483 junior middle school students (229 boys and 254 girls) as participants, to explore the relationship between self-compassion and bedtime procrastination, and the role of emotion regulation in this relationship. The results showed that self-compassion was significantly negatively correlated with bedtime procrastination($r=-0.469$, $P<0.001$), and was significantly positively correlated with cognitive reappraisal($r=0.375$, $P<0.001$), but was significantly negatively correlated with expression inhibition($r=-0.284$, $P<0.001$); cognitive reappraisal was significantly negatively correlated with bedtime procrastination($r=-0.415$, $P<0.001$), and expression inhibition was significantly positively correlated with bedtime procrastination($r=0.103$, $P<0.05$). Further analysis of the mediating effect showed that cognitive reappraisal played a partial mediating role in the relationship between self-compassion and bedtime procrastination in junior middle school students, and the mediating effect accounted for 22.25% of the total effect. The mediation effect was tested by the Bootstrap program, and the 95% confidence interval was [-0.147, -0.065]. This study deepens our understanding in regard to the potential mechanisms underlying the association between junior middle school students' self-compassion and bedtime procrastination, and can provide a scientific reference for the intervention of junior middle school students' bedtime procrastination.

Keywords: bedtime procrastination, self-compassion, emotion regulation, junior middle school students

15 天头低位卧床对情绪性时间知觉的影响

钱一铭¹ 吴斌² 迟立忠¹ (通讯作者)

1 北京体育大学心理学院, 北京, 100084, Chilzh3804@163.com

2 中国航天员训练中心, 北京, 100094

摘要 情绪刺激会使个体的时间知觉产生扭曲, 对于决定情绪性时间调整的因素, 情绪维度观认为情绪的基本维度——唤醒度和愉悦度是影响时间判断的主要因素, 而具身化情绪观则强调对情绪的感受包括知觉、身体状态及其与周围环境交互作用产生的反应。本研究利用模拟太空失重状态下生理反应的经典头低位卧床模型, 采用 IAPS 中筛选出的三类情绪性图片刺激: 中性刺激、高唤醒威胁性刺激和高唤醒恶心刺激, 结合 300ms-900ms 呈现时距的二分任务探究参与者在 15 天-6°头低位卧床状态下的时间知觉变化。实验共持续 29 天, 分别为卧床前适应阶段(7 天)、卧床阶段(15 天)与卧床后恢复阶段(7 天), 在卧床阶段, 参与者全程维持-6°头低位卧床状态。16 名参与者在四个时间点的数据(卧床前阶段第 3 天, 卧床第 8 天, 卧床第 15 天, 卧床后恢复阶段第 4 天)被采集, 研究结果表明: (1) 参与者在卧床中期阶段(第 8 天)表现出对威胁性刺激的时间高估效应($PSE = 595.15ms$) ($F_{(2,45)} = 4.750$, $p = 0.006$, $\eta_p^2 = 0.387$); (2) 参与者对威胁性刺激的时间敏感性出现显著下降的趋势, 在卧床后期阶段(第 15 天)尤为明显($F_{(3,45)} = 4.596$, $p = 0.007$, $\eta_p^2 = 0.235$)。本研究结果表明当参与者的行为模拟(后倾身体状态)与情绪刺激的行动含义一致(远离威胁性刺激)时, 对身体状态的关注会引起时间高估。同时, 短期情绪刺激的多次呈现也可能导致情感效应的缺乏, 影响时间知觉的敏感性。这些结果在一定程度上支持了情绪的具身认知观点, 并为今后在特殊环境(如微重力)下的时间感知科学研究提供了重要证据。

Effects of 15-Day Head-Down Bed Rest on Emotional Time Perception

Qian Yiming¹, Wu Bin², Chi Lizhong¹ (Correspondence)

1 School of Psychology, Beijing Sport University, Beijing, China

2 China Astronaut Research and Training Center, Beijing, China

Abstract: Emotional stimuli can distort individual's time perception. Dimensional emotion perspective considers emotional valence and arousal as the main factors influencing temporal judgments, while the embodiment emotion

perspective emphasizes that feelings of emotion include perceptions, bodily states and reactions to their interaction with the surrounding environment. The present study used three emotional picture stimuli: threatening pictures evoking high-arousal, disgusting pictures also classed as high on arousal, and neutral pictures rated “neutral” in both valence and arousal, in combination with a 300ms-900ms time intervals bisection task to measure participants' time perception in 15 days of -6° head-down bed rest. This study based on a classical head-down bed model that simulates the physiological response to weightlessness in space. It lasted for a total of 29 days, which comprised a pre-HDBR period of 7 days, a -6° HDBR period of 15 days and a post-HDBR recovery period of 7 days. During the 15 days bed rest period, participants were restricted to absolute head-down recumbence. Data were collected from 16 participants at four time points: the third day of the pre-BR, the eighth (BR-Mid), the fifteenth day (BR-Late) of the HDBR period, and the fifth day of the post-BR. We found that: (1) participants showed temporal overestimation of the threatening stimuli in the middle phase (day 8) ($PSE=595.15ms$) ($F_{(2,45)} = 4.750, p = 0.006, \eta_p^2=0.387$). (2) Participants' temporal sensitivity to threatening stimuli decreased significantly in the later phase (day 15) ($F_{(3,45)} = 4.596, p = 0.007, \eta_p^2=0.235$). These results suggested that attention to the physical state causes temporal overestimation when participants' behavioural simulation (backward leaning body state) is consistent with the action implications of the emotional stimulus (away from the threatening stimulus). Also, multiple presentations of short-term emotional stimuli may lead to a lack of affective effects and affected temporal perceptual sensitivity. This study provides new evidence to support the theory of embodied cognition in the context of time perception and suggests important perspectives for future perception science research in special environments such as microgravity.

2 广西师范大学,体育与健康学院,广西桂林,541006

摘要 未来时间洞察力的研究起源于时间知觉的研究,是一种同时含有能力和动力特性的相对稳定的人格特质,是个体对未来时间的认知、情感态度和行为倾向的总和。为了更深刻认识未来时间洞察力,探讨其研究概况、热点以及发展趋势,为研究者提供参考。对 web of science 核心合集数据库中检索时间为 2011-2020 年,主题为“future time perspective”或“future time insight”,语种为 English,文献类型为 Article OR Review,关于未来时间洞察力研究的 434 篇文献进行知识图谱分析。

结果显示:(1)2011 到 2020 年对未来时间洞察力的研究呈现持续上升的趋势,由预测趋势线知,未来对此方面研究仍会持续增长。(2)主要国家及机构:美国(121 篇)及中国(49 篇)在未来时间洞察力研究领域处于国际领先地位,但中国发文数量偏少,与美国存在差距。研究机构集中在荷兰(3 所)、中国(2 所)和德国(2 所)。(3)未来时间洞察力研究热点高频词的关键词大致可以归为八大类——社会情感选择性理论、交叉滞后面板、时间洞察力、未来动机、社会工作、未来方向、一般自我效能感、学习策略;通过关键词凸显显示此领域的近期的研究热点为社会支持。今后要进一步开展多学科视角下的研究,将相关研究各学科交叉融合,跨学科研究多样化,以提升研究的内在理论支撑力。(4)主要研究者:分别来自莱比锡大学的 Hannes Zacher 教授,内梅亨大学的 Annet De Lange 教授以及荷兰开放大学 Beatrice van der Heijden 教授。高产作者也是国外研究者居多,今后要吸引更多国内学者研究,以期深化该领域的相关研究。

2 College of physical education and health, Guangxi Normal University

Abstract: Future time perspective of research originated in time perception, Is a kind of contained both capacity and the dynamic characteristics of a relatively stable personality, is the individual's perception of future time, emotional attitude and behavior of combined. For deeper understanding in the future time perspective, this paper discusses the research work, hotspot and development trend, provide reference for the researchers. In this paper, knowledge map analysis is made on 434 literatures about future time insight, whose retrieval time is from 2011 to 2020, the subject word is "future time perspective" or "future time insight", the language is English, and the literature type is Article OR Review. The results show that: (1) From 2011 to 2020 in the future time perspective studies showed a trend of rising, by predicting the trend line, this research will still hold in the future. (2) Major countries and institutions: the United States (121 papers) and China (49 papers) are in the leading position in the field of future time perspective research, but the number of papers published by China is relatively small, and there is a gap with the United States. Research institutions are concentrated in the Netherlands (3), China (2) and Germany (2). (3) The key words of high-frequency words can be roughly divided into eight categories: social emotion selectivity theory, cross lag panel, time insight, future motivation, social work, future direction, general self-efficacy and learning strategies; Key words highlight that the recent research hotspot in this field is social support. In the future, it is necessary to further carry out the research from the perspective of multi-disciplinary, integrate the relevant research disciplines, and diversify the interdisciplinary research, so as to enhance the internal theoretical support of the research (4) Main researchers: Professor Hannes Zacher from the University of Leipzig, Professor Annet de Lange from the University of nemegen and Professor Beatrice van der Heijden from the Open University of the Netherlands. Most of the high-yield authors are also foreign researchers. In the future, more domestic scholars should be attracted to deepen the relevant research in this field.

大学生未来时间洞察力和择业效能感的关系—— 时间管理倾向的中介作用

王英月¹ 蒋锡平¹ 张璇¹ (通讯作者)

¹ 西南大学心理学部, 重庆, 400715, zhangxuan@swu.edu.cn

摘 要 未来时间洞察力是个体感知未来和表现出来的稳定的行为倾向所表征的人格特质, 大学生对自己未来的工作有一些思考和规划, 是未来时间洞察力在择业过程中的一种体现。在择业过程中, 择业效能感、时间管理倾向也都是重要的因素。本研究主要探讨大学生群体中未来时间洞察力各维度(未来积极、未来消极、未来迷茫、未来清晰、未来坚持、未来计划)与时间管理倾向、择业效能感之间的关系, 对 240 名不同年级的重庆市大学生进行了问卷调查和数据分析, 并且通过 Bootstrap 方法分析中介效应。结果表明: 在大学生群体中, (1) 未来时间洞察力在六个维度上均显著正向预测时间管理倾向($p < .01$); 未来时间洞察力在未来积极($r = .94, p < .01$)、未来坚持($r = .94, p < .01$)、未来清晰($r = .90, p < .01$)、未来计划维度($r = .88, p < .01$)上显著正向预测择业效能感, 在未来消极($r = -.74, p < .01$)和未来迷茫维度($r = -.85, p < .01$)上显著负向预测择业效能感; 时间管理倾向和择业效能感呈正相关($r = .98, p < .01$); (2) 时间管理倾向在未来积极(中介效应值=3.82, 95%CI=[3.34,4.28], 直接效应值=.68, 95%CI=[.32,1.05])、未来坚持(中介效应值=4.01, 95%CI=[3.49,4.48], 直接效应值=.47, 95%CI=[.05,.89])与择业效能感的关系中, 起部分中介作用; 在未来迷茫(中介效应值=5.80, 95%CI=[5.32,6.25])、未来清晰(中介效应值=6.47, 95%CI=[5.69,7.24])、未来计划(中介效应值=5.42, 95%CI=[4.94,5.91])与择业效能感的关系中, 起完全中介作用; 在未来消极(中介效应值=2.66, 95%CI=[2.32,2.96], 直接效应值=-.15, 95%CI=[-.29,-.003])和择业效能感的关系中产生遮掩效应。研究发现, 未来时间洞察力、择业效能感和时间管理倾向三者均显著相关, 大学生被试在三者均处于中等偏上水平。拥有未来积极、未来坚持特征的学生, 更倾向通过合理管理时间去实现目标, 未来迷茫、未来消极在某种程度上也促进学生的时间管理能力。根据以上结果, 高校在进行专业教育的同时, 可以设置相应课程提升同学们的职业规划能力、时间管理能力, 提升大学生的择业效能感, 帮助同学实现自己的价值。

关键词 未来时间洞察力, 时间管理倾向, 择业效能感, 大学生

The Relationship Between Future Time Perspective and Career Self-Efficacy of College Students — The Mediating Role of Time Management Disposition

Wang Yingyue¹, Jiang Xiping¹, Zhang Xuan¹

¹ Southwest University Faculty of Psychology, Southwest University, Chongqing, China

Abstract: Future Time Perspective (FTP) is a personality trait characterized by individual perception of the future and stable behavior tendency. College students have some thinking for their future work, which is an example of FTP in the process of job selection. Time management disposition and career self-efficacy are also important factors of job selection. The main purpose of this research is to explore the relationship between the dimensions of FTP (future positivity, future negativity, future confusion, future clarity, future persistence, future planning), time management disposition and career self-efficacy. A questionnaire survey and data analysis were conducted on 240 college students of different grades in Chongqing, and the mediational model was analyzed by bootstrap method. The results show that: for college students, (1) FTP positively predicts time management disposition in six dimensions ($P < .01$); FTP significantly positively predicted career self-efficacy in the future positivity ($r = .94, P < .01$), future persistence ($r = .94, P < .01$), future clarity ($r = .90, P < .01$) and future planning dimensions ($r = .88, P < .01$), and significantly negatively predicted career self-efficacy in the future negativity ($r = -.74, P < .01$) and future confusion dimensions ($r = -.85, P < .01$); time management disposition was positively correlated with career self-efficacy ($r = .98, P < .01$). (2) Time management disposition plays a partial mediating role in the relationship between future positivity (indirect effect = 3.82, 95% CI = [3.34, 4.28], direct effect = .68, 95% CI = [.32, 1.05]), future persistence (indirect effect = 4.01, 95% CI = [3.49, 4.48], direct effect = .47, 95% CI = [.05, .89]) and career self-efficacy; It plays a complete mediating role in the relationship between future confusion (indirect effect = 5.80, 95% CI = [5.32, 6.25]), future clarity (indirect effect = 6.47, 95% CI = [5.69, 7.24]), future plan (intermediary effect value = 5.42, 95% CI = [4.94, 5.91]) and career self-efficacy; It also produces a masking effect in the relationship between future negativity (indirect effect = 2.66, 95% CI = [2.32, 2.96], direct effect = -.15, 95% CI = [-.29, -.003]) and career self-efficacy. The study found that there was a significant correlation among FTP, career self-efficacy and time management disposition, and the college students were at the upper middle level. Students who have the characteristics of positive future and persistence in the future are more inclined to achieve their goals through reasonable time management. Confusion and negativity in the future also promote students' reflection of time management ability to some extent. According to the above results, while carrying out professional education, colleges and universities can set up courses to improve students' career planning ability and time management ability, to improve college students' career self-efficacy and help students realize their own value.

语义认知老化：基于语义关联效应的考察

白亚婷 何文广

曲阜师范大学心理学院 曲阜 273165, hewg@qfnu.edu.cn

摘要 有关语义认知是否存在老化一直存在争议，一些研究认为如同诸多认知能力，语义认知同样存在老化，但也有研究认为老年人依然有着较好的语义认知能力(Laver, 2009; Verhaeghen, 2003)。为探究该问题，本

研究采用图-词干扰范式,操纵词汇与图片间的语义关联性(一致、高相关、低相关和无关),让老年或年轻被试根据颜色线索阅读词汇或命名图片,记录被试的反应时和正确率。词汇阅读任务:(1)反应时:语义关联性主效应显著, $F_{(3, 144)} = 6.11, p < .01, \eta_p^2 = .11$, 事后多重比较表明,一致条件反应时最短,其次是无关条件,语义高相关条件下反应时最长,但后三种条件差异不显著。被试主效应不显著,语义关联性和被试间交互作用显著, $F_{(3, 144)} = 3.42, p < .05, \eta_p^2 = .07$, 简单效应分析表明,两类被试语义关联性效应都达到了显著水平,老年被试语义关联性效应更为明显;(2)正确率:语义关联性主效应显著, $F_{(3, 144)} = 8.05, p < .01, \eta_p^2 = .14$, 事后多重比较表明,无关条件下错误率最高,与其它三种条件差异显著,其他条件差异不显著。被试主效应显著, $F_{(1, 48)} = 7.84, p < .01, \eta_p^2 = .14$, 老年人正确率较低,语义关联性和被试间交互作用显著, $F_{(3, 144)} = 5.18, p < .01, \eta_p^2 = .10$, 简单效应分析表明,年轻被试语义关联性效应不显著,老年被试语义关联性效应显著。图片命名任务:(1)反应时:语义关联性主效应显著, $F_{(3, 144)} = 12.07, p < .001, \eta_p^2 = .20$, 事后多重比较表明,高相关条件反应时最长,与其它三种条件差异显著,其它条件差异不显著。被试主效应显著, $F_{(3, 48)} = 28.27, p < .001, \eta_p^2 = .37$, 老年被试反应时间较长,语义关联性和被试间交互作用显著, $F_{(3, 144)} = 7.3, p < .001, \eta_p^2 = .13$, 简单效应分析表明,老年被试语义关联性效应不显著,年轻被试效应显著, $F_{(3, 144)} = 23.23, p < .001, \eta_p^2 = .31$;(2)正确率分析:语义关联性主效应不显著,被试主效应不显著,语义关联性和被试间交互作用显著, $F_{(3, 144)} = 8.89, p < .001, \eta_p^2 = .16$, 简单效应分析表明,两类被试语义关联性效应都显著,老年被试效应表现较小, $F_{(3, 144)} = 3.02, p < .05, \eta_p^2 = .06$, 年轻被试效应较为明显, $F_{(3, 144)} = 7.28, p < .001, \eta_p^2 = .14$ 。结论:(1)语言产出中语义关联性效应显著,高语义关联条件下被试反应较慢且错误率较高;(2)语义认知老化效应明显,较之于年轻被试,在图-词任务语义高关联条件下,老年被试反应时较长。主要原因可能是老年人认知控制能力的衰退,存在语义干扰时老年人不能较好地抑制干扰因素的影响。

Semantic cognition aging:

A research based on the effect of semantic associations

Bai Yating, He Wenguang

Institute of psychology, Qufu Normal University, Qufu 273165

Abstract: Whether or not semantic cognition aging effect is present has been controversial, although some studies have found semantic cognition aging like other cognitive abilities, others claimed that older adults still have better semantic cognition abilities. To probe this problem, the present study has employed the picture-word interference paradigm and manipulated different degree of semantic associations between words and pictures (repeated, high associations, low associations, and no associations). According to the colors of cues older or young participants need to read the words or name the pictures, recording their response time and correct rate. The words reading task: (1) response time: the main effect of semantic association is significant, $F_{(3, 144)} = 6.11, p < .01, \eta_p^2 = .1$, multiple comparisons indicate that response time of the repeated condition is the shortest followed by no associations condition, time of high association condition is the longest, but the latter three have no significant difference. The main effect of participants is not significant, but a significant interaction effect between semantic association and participants has been found, $F_{(3, 144)} = 3.42, p < .05, \eta_p^2 = .07$. Simple effects analysis demonstrates that the semantic association effects of both the two kinds of participants are significant and the effect of the older is stronger; (2) correct rate: the main effect of semantic association is significant, $F_{(3, 144)} = 8.05, p < .01, \eta_p^2 = .14$, multiple comparisons demonstrate that wrong rate is the highest for the no associations condition, showing significant differences with other three conditions, but there are no significant differences among other three conditions. The main effect of participants is significant, $F_{(1, 48)} = 7.84, p < .01, \eta_p^2 = .14$, the correct rate of the older is lower, the interaction effect between semantic association and participants is significant, $F_{(3, 144)} = 5.18, p < .01, \eta_p^2 = .10$, simple effects analysis demonstrates that the semantic association effect of the young is not significant but the older. Pictures naming task: (1) response time: the main effect of semantic association is significant, $F_{(3, 144)} = 12.07, p < .001, \eta_p^2 = .20$, multiple comparisons indicate that response time of the high association condition is the longest, showing

significant differences with other three conditions, but there are no significant differences among other three conditions. The main effect of participants is significant, $F_{(3, 48)} = 28.27, p < .001, \eta_p^2 = .37$, the older response longer, the interaction effect between semantic association and participants is significant, $F_{(3, 144)} = 7.3, p < .001, \eta_p^2 = .13$, simple effects analysis demonstrates that the semantic association effects of the old is not significant but the young, $F_{(3, 144)} = 23.23, p < .001, \eta_p^2 = .31$; (2) correct rate: the main effect of semantic association is not significant, but a significant interaction effect between semantic association and participants has been found, $F_{(3, 144)} = 8.89, p < .001, \eta_p^2 = .16$, simple effects analysis demonstrates that the semantic association effect of both the two kinds of participants are significant, but the effect of the old is weaker, $F_{(3, 144)} = 3.02, p < .05, \eta_p^2 = .06$, and the effect of the young is stronger, $F_{(3, 144)} = 7.28, p < .001, \eta_p^2 = .14$. Conclusions: (1) there is a significant semantic association effect during language production, participants respond longer with a high wrong rate in the high association condition; (2) semantic cognition aging effect is obvious, comparing with the young, the older need longer time to respond in high association condition of the picture-words interference tasks. The main reason may be the cognitive control abilities' aging, so the older could not control the effects of interference factories when the semantic interference is present.

摘要 预期在个体知觉过程中起着重要作用。面部表情作为重要的知觉目标, 总是出现在一个场景中, 这使人们能够根据一定的规律对面面部表情产生预期。然而, 很少有研究从预期的角度关注场景对面面部表情加工各个阶段的影响。本研究利用事件相关电位, 探讨情景预期对早期和晚期面部表情加工的影响。此外, 我们还使用认知任务来操纵认知负荷, 以干扰基于场景的预期。在每个实验试次开始时, 都会呈现一幅场景图片(积极的, 消极的), 以期诱发个体对之后面部表情的预期。结果显示: 在认知资源充足的条件下, 当场景与面孔的情绪效价一致时, 面孔诱发的 N170 波幅较大, 而当面孔不一致时, 面孔诱发的 N400 波幅较小; 而在认知负荷条件下, 则没有这种差异。这表明, 预期对面面部表情识别的影响存在于面部表情加工的早期和后期阶段, 当个体的认知资源被不相关的任务所占用时, 预期对面面部表情识别的影响会减弱。由于面部表情在现实生活中的感知不是孤立的目标, 而是整个场景, 本研究的发现不仅有利于我们了解预期发生作用的认知过程, 而且对我们理解真实世界的面部表情知觉具有重要意义。

Abstract: Prior expectations play an important role in the process of individual perception. Facial expressions, as important perceptual targets, almost always appear within a scene which enable individuals to generate predictions of facial expressions based on this conditional probability. However, few studies paid attention to how scenes impact various processing stages of facial expressions in the perspective of expectation. In the present study, using event-related potential, we investigated the influence of scene-based prediction on early and late facial expression

processing. In addition, we used a cognitive task to manipulate cognitive load, to interfere with scene-based prediction. In each trial, a scene picture (positive, negative) at the start of each sequence was presented, implying the type of facial expressions that will occur later. The results indicated that under the condition of sufficient cognitive resources, faces elicited larger N170 amplitudes and smaller N400 amplitudes when the emotional valences of the scenes and faces were congruent than when the emotion valences of faces were incongruent. However, in the condition of cognitive load, there was no such difference. The results suggested that the effect of expectation on facial expression recognition existed both in the early and late stages of processing facial expressions, and the effect of expectation on facial expression recognition would be weakened when an individual's cognitive resources were occupied by unrelated tasks. Since perception of facial emotion in the real life is never of isolated targets, but always of entire scenes, these findings are important not only for tracking the cognitive processes of expectation, but for our understanding of real-world facial expression perception in general.

大学生相对剥夺感、愤怒沉浸和社会攻击的发展特点与关系以及新冠肺炎疫情带来的影响：基于潜在增长模型的分析

岑雨珊¹ 夏凌翔¹（通讯作者）

¹ 西南大学心理学部，重庆，400715, xialx@swu.edu.cn

摘要 社会攻击是大学生中普遍存在的一种攻击行为，具有较大的危害，有必要对这一种攻击行为在大学生中的发展特点和机制进行探究。新冠肺炎疫情(COVID-19)对大学生的心理和行为也产生了重大的影响，在此期间大学生社会攻击的发展特点和机制可能出现变化。本研究选取大学生 1174 人，从 2018 年 10 月至 2020 年 10 月以半年为间隔进行五次追踪调查，采用个人相对剥夺感量表修订版、愤怒沉浸分问卷以及社会攻击亚量表，借助分段潜在增长模型(piecewise latent growth model)考察了相对剥夺感、愤怒沉浸和社会攻击的发展轨迹趋势以及疫情对这些变量的发展趋势的影响，并对愤怒沉浸在相对剥夺感与社会攻击之间的中介作用进行检验。结果发现：（1）相对剥夺感、愤怒沉浸以及社会攻击均在疫情前均呈下降趋势，而在疫情期间均呈上升趋势；（2）愤怒沉浸的初始水平在相对剥夺感的初始水平与社会攻击的初始水平之间发挥中介作用；（3）在疫情发生前以及疫情期间，相对剥夺感的发展速度均通过愤怒沉浸的发展速度对社会攻击的发展速度起中介作用。上述结果提示，大学生入学后的社会攻击呈现下降趋势，而疫情的流行会增加社会攻击，此外，随着时间发展，相对剥夺感可通过愤怒沉浸影响社会攻击。了解疫情前后社会攻击的发展趋势和影响因素，有助于预测未来紧急事件发生时社会攻击的产生与发展，从而为实现迅速的社会预防和干预提供指导。

Developmental trajectories and relationships of relative deprivation, anger rumination, and social aggression in college students and the impact of COVID-19 pandemic: A latent growth curve analysis

Cen Yushan¹, Xia Lingxiang¹

¹ Southwest University Faculty of Psychology, Chongqing 400715, China, xialx@swu.edu.cn

Abstract: Social aggression is a common aggressive behavior among college students, which harmful to both individuals and society. It is necessary to explore the development characteristics and mechanism of this kind of aggressive behavior in undergraduates. The COVID-19 pandemic has a significant impact on college students' psychology and behavior, so it may be seen as a turning point that changed the trajectory and mechanism of social aggression in undergraduates. In this study, 1174 college students were selected for five follow-up surveys at six-month intervals from October 2018 to October 2020. We used Personal Relative Deprivation Scale-Revised, the anger rumination subscale of the Displaced Aggression Questionnaire and the social aggression subscale of the Subtypes of Antisocial Behavior Questionnaire. Using piecewise latent growth model, we investigated the

development of relative deprivation, anger rumination and social aggression and the influence of the COVID-19 pandemic on the trajectories of these variables, then examined the mediating effect of anger rumination in the relationship between relative deprivation and social aggression. The results showed that : (1) the changes of relative deprivation, anger rumination and social aggression showed a similar trend, which decreased before the outbreak of COVID-19, while increased during the pandemic; (2) The initial level of anger rumination played a mediating role between the initial level of relative deprivation and the initial level of social aggression; (3) The changes of relative deprivation affected the changes of social aggression through the changes of anger rumination before and during the pandemic. These results suggest that relative deprivation in college students showed decrease tendency from entrance to pre-pandemic, while the pandemic would increase the social aggression. In addition, we found the indirect role of anger rumination in the relationship between relative deprivation and social aggression over time. Understanding the development trend and influence factors of social aggression before and after the COVID-19 pandemic is helpful to predict the production and development of social aggression when emergency occur, thus providing guidance for rapid social prevention and intervention.

老年人的多感觉整合特性分析

陈星(通讯作者) 邓欢

淮北师范大学教育学院, 安徽淮北, 235000, 2224726757@qq.com

摘要 在日常生活中, 我们往往需要接收来自多个感觉通道的大量感官输入, 这些感觉信息通过适当整合, 从而帮助我们有效地认识客观世界, 这种现象被称为多感觉整合。随着年龄的增长, 老年人的认知功能和神经系统逐渐退化, 此时多感觉整合作为一种补偿机制对老年人而言意义重大。基于已有的研究成果, 主要从两方面对老年人的多感觉整合进行论述: (1) 影响老年人多感觉整合的相关因素, 主要分为两方面, 即被试间因素和被试内因素。其中, 被试间因素包括认知退化、注意控制赤字和对先验的依赖程度, 随着老年人的年龄增长, 其认知神经机制逐渐退化、对无关信息的抑制和对目标信息的识别能力逐渐下降以及对先验知识的依赖程度增强, 从而导致其在认知等多个方面弱于年轻人, 多感觉整合作为单一感觉能力下降的补偿机制, 能够保证老年人的正常生活; 被试内因素包括刺激的一致性、呈现时间的一致性和任务的难度, 随着呈现多感觉信息的一致性程度增强、呈现时间无限趋近以及任务难度下降, 老年人的多感觉整合增益增强; (2) 利用脑成像技术, 如 ERP、MEG 等, 探索老年人进行多感觉整合加工过程中的认知神经机制, 包括研究老年人进行多感觉整合时的神经震荡(α 、 β 、 γ 、 θ 、 δ)特性, 以及老年人进行多感觉整合时涉及的脑区(颞上沟、上丘、扣带回等)。本文最后讨论了迄今为止开展的工作对老年人多感觉整合相关理论和研究的影响, 并指出推进该领域的下一步工作。

The analysis of characteristics of multisensory integration in older adults

Chen Xing, Deng Huan

College of Education, Huaibei Normal University, Huaibei 235000

Abstract: In our daily life, we receive a great quantity of sensory inputs from multiple sensory channels. These sensory information can help us understand the objective world effectively through appropriate integration. The phenomenon is called multisensory integration. With the growth of age, the cognitive function and nervous system of older adults gradually degenerate. At this time, multisensory integration as a compensation mechanism is of great significance to older adults. Based on the previous studies, this paper mainly discusses the multisensory integration of older adults from two parts: (1) the influential factors that affect the multisensory integration of older adults are mainly divided into two aspects, namely, between variables and within variables. Between variables include cognitive

degradation, attention control deficit and dependence on prior knowledge. With the growth of older adults, their cognitive neural mechanism degenerates, their inhibition of irrelevant information and their ability to recognize target information decline, and their dependence on a prior knowledge increases, resulting in their weakness in cognition and other aspects. As a compensation mechanism for the decline of single sensory ability, multisensory integration can ensure the normal life of the older adults; within variables include stimulus consistency, time consistency and task difficulty. With the increase of the consistency of presentation of multisensory information, the infinite approach of presentation time and the decrease of task difficulty, the gain of multisensory integration of older adults is enhances; (2) explore the cognitive neural mechanism of the older adults in the process of multisensory integration by using brain imaging technologies, such as ERP and MEG, it includes the study of the characteristics of nerve concussion (α 、 β 、 γ 、 θ 、 δ) during multisensory integration in older adults, as well as the brain areas involved in multisensory integration in older adults (superior temporal sulcus、superior colliculus、cingulate gyrus). Finally, this paper discusses the impact of the work so far on the theory and research of multisensory integration in older adults, and points out the next work in this field.

摘要 关于语义透明度在单词识别加工的作用, 一类理论采用连接激活法 (Conjunctive activation approach) (Libben, 1998), 认为透明成分的语义存在词汇到语义层面的连接, 在加工过程中可以被激活, 继而促进整词的识别加工; 而不透明成分的意义缺乏从词汇至语义的连接, 导致其语义在加工过程中不可用, 对单词加工不产生影响。意义计算法 (Meaning Computation Approach, Ji 等人, 2011) 认为, 无论是透明成分还是不透明成分, 其词汇及语义表征在加工过程中都会激活, 以建构单词所有可能的解释。在意义构建过程中, 透明成分会促进加工, 不透明成分阻碍加工, 因为含有不透明成分单词的建构意义与实际意义会不一致, 需要时间和认知资源解决语义冲突。鉴于此, 本研究的目的是探讨语义透明度如何影响汉语单词视觉识别机制, 同时考察上述两个不同模型的适切性。

本研究设计了两个 ERP 实验, 实验一为首成分重复启动, 实验二采用整词重复启动, 均采用单因素四水平设计和掩码启动范式 (SOA=47ms)。实验共包含 4 个条件, 分别为透明词 (如“马夫”), 半透明词 (如“马蜂”), 不透明词 (如“马虎”) 和控制组 (如“炉灶”)。24 名和 23 名大学生完成两种语义分类判断任务。结果发现不透明词加工最容易, 透明词次之, 而半透明词在各个时段加工最困难。研究结果表明, 汉字的语义透明度信息影响了单词视觉识别的过程, 连接激活法和意义计算法并未完全预测汉语单词的视觉识别加工, 不透明成分语义作用根据单词类型的不同有所区分。本研究倾向于扩展支持 El-Bialy 等人 (2013) 的结果, 及汉语单词加工的双通道模型, 语义透明度可能影响使用哪条路径 (如 Schreuder & Baayen, 1995)。汉语单词的视觉识别加工可能是一个动态的、可逆的、双向加工路径。

5 Beijing International Studies University, School of English Language Literature and Culture

Abstract: There exist two major approaches on the role of semantic transparency in the processing of compound words. The first one is the Conjunctive Activation Approach (CAA), which supposes that the meanings of transparent constituent speed compound processing, while the meanings of opaque constituents exert no influence on the processing. The second one is the Meaning Computation Approach (MCA) due to Ji et al. (2011), which assumes that both opaque and transparent constituents' semantic representations are activated and computed into a combined representation. However, the meanings of opaque constituents slow down the processing as the computed meaning contradicts the conventional lexicalized meaning, which takes time and cognitive resources to solve the semantic conflicts. In view of this, the present study attempts to examine whether the visual processing mechanism of Chinese two-character words would be affected by semantic transparency in a masked priming paradigm. Using one single factor four-level experimental design and mask priming paradigm(SOA=47ms), two ERP experiments are conducted. Two-character words of Chinese varying with a graded degree of semantic transparency were divided into such four conditions: Transparent-transparent ("TT", e.g. “马夫” / ma3 fu1/ horse-keeper), Opaque-transparent ("OT", e.g. “蜜蜂” / ma3 feng1/ hornet), Opaque-Opaque ("OO", e.g. “马虎” / ma3 hu / careless), and the control (e.g. “炉灶” / lu2 zao4 / range). Each of them served as either a target (in Exp.1) or a prime(in Exp.2) with both forward and backward masks and an SOA of 47ms, and their initial character as a prime (in Exp.1) or a target (in Exp.2) (e.g. “马” / ma3/ horse or “炉” / lu2/ range). 21 and 23 undergraduate and graduate students, whose native language is Chinese, performed two semantic categorization tasks. It was found that opaque words (OO) were the easiest to process, transparent words (TT) were the second, and semi-transparent words (OT) were the most difficult to process. The results show that semantic transparency affects the visual recognition processing of Chinese words. both two approaches do not completely predict the current results. This study tends to extend the results supporting El-Bialy et al. (2013) and support the dual-route processing model of Chinese word, and semantic transparency may influence which route is used (e.g., Schreuder & Baayen, 1995). Also, the processing may be dynamic, reciprocal and bi-directional.

摘要 时间知觉是对客观现象的延续性和顺序性的反映。既往研究表明影响时间知觉的因素较多。例如, 有研究发现不同人格特质个体的时间知觉存在差异, 也有发现情绪唤醒对个体时间知觉产生影响。但目前鲜有研究同时探讨人格特质与情绪唤醒对个体时间知觉的影响。因此, 本研究基于 A-B 型人格特质视角, 探讨个体在正负性情绪唤醒下时间知觉能力变化。本研究采用 AB 型人格特质测量表筛选出 A 型、B 型人格被试各 20 名; 所有被试共接受两轮实验, 间隔一小时; 时间知觉任务为四种时距材料(500ms、1000ms、2000ms、4000ms)分别随机呈现四次, 被试通过复制法进行反应。实验一采用两因素混合实验设计。其中, 组间变量为 A-B 型人格特质(A 型人格与 B 型人格), 组内变量为时间知觉材料(500ms、1000ms、2000ms、4000ms); 被试按人格特质分为两组, 每组二十人。结果显示情绪未唤醒时, 四个时距中 A 型被试时间估计较 B 型被试更接近标准时距。实验二采用三因素混合实验设计。其中, 组间变量为 A-B 型人格特质(A 型人格与 B 型人格)和情绪唤醒(正性、负性), 组内变量为时间知觉材料(500ms、1000ms、2000ms、4000ms); 被试按照两个组间变量随机分为四组, 每组十人。结果显示较长时距(4000ms)下 A-B 型人格类型($F_{(1, 36)}=8.417$,

$p<0.01$)主效应显著, 情绪唤醒($F_{(1,36)}=2.781$, $p>0.05$)主效应不显著, 两者的交互作用显著($F_{(1,36)}=5.524$, $p<0.05$); 进一步做简单效应分析发现, 情绪唤醒的简单效应只在 A 型被试中显著。结合实验一、实验二的实验数据发现接受正性和负性情绪唤醒后, A 型人格被试时间估计能力较未唤醒时变化都显著, B 型变化都不显著; 在较长时距 (4000ms) 下, 无论是否接受情绪唤醒, A、B 两种人格类型被试时间估计差异都显著, 但未接受情绪唤醒时差异更大。本研究通过引入情绪唤醒变量对人格类型变量和时间知觉能力的关系做进一步探讨, 发现 A、B 两种人格类型被试的时间知觉能力在情绪唤醒和未接受情绪唤醒状态下都存在差异, 在较长时距 (4000ms) 下差异显著; 并且情绪唤醒会对不同人格特质被试的时间知觉能力产生调节作用。

关键词 时间知觉, 情绪唤醒, A-B 型人格类型

The Influence of Positive and Negative Emotional Arousal on Time Perception: The Perspective of Type A-B Personality Traits

Feng Yuanwei¹, Hong Xiaobin^{2,3}

1 Graduate school, Wuhan Sports University, Wuhan, 430079

2 Department of Psychology, Wuhan Sports University, Wuhan, 430079,

3 Hubei Exercise Training and Monitoring Key Lab, Wuhan Sports University, Wuhan, 430079

Abstract: Time perception is a reflection of the continuity and order of objective phenomena. Previous studies have shown that there are many factors that affect time perception. For example, some studies have found that there are differences in the time perception of individual with different personality traits, and some studies have found that the emotional arousal has an impact on individual time perception. However, there are few studies that explore simultaneously the impact of personality traits and emotional arousal on individual time perception. Therefore, based on the perspective of A-B personality traits, this study explores the changes in individual time perception ability under positive and negative emotional arousal. In this study, 20 type A and type B personality test subjects were screened out using the AB type personality trait measurement table; all subjects received two rounds of experiments with an interval of one hour; the time perception task which is consisted of four time interval materials (500ms, 1000ms, 2000ms and 4000ms) was presented randomly four times, and the subjects responded by copying. Experiment 1 used a two-factor mixed experimental design. Among them, the between-group variables are type AB personality traits (type A personality and type B personality), and the interclass variables are time perception materials (500ms, 1000ms, 2000ms, 4000ms); the subjects were divided into two groups according to personality traits, each group has twenty people. The results showed that when the emotion was not awakened, the estimated time of type A subjects in the four intervals of time was closer to the standard time interval than that of type B subjects. Experiment 2 used a three-factor mixed experimental design. Among them, the between-group variables are type AB personality traits (type A personality and type B personality) and emotional arousal (positive and negative), and the interclass variables are time perception materials (500ms, 1000ms, 2000ms, 4000ms); the subjects were randomly divided into four groups with ten persons in each group according to the variables between the two groups. The results showed that the main effect of type AB personality type ($F_{(1,36)}=8.417$, $p<0.01$) was significant at a longer time interval (4000ms), and the main effect of emotional arousal ($F_{(1,36)}=2.781$, $p>0.05$) was not significant, the interaction between the two variables was significant ($F_{(1,36)}=5.524$, $p<0.05$); the simple effect analysis found that the simple effect of emotional arousal was only significant in Type A subjects. Combined with the experimental data of Experiment 1 and Experiment 2, it is found that after receiving positive and negative emotional arousal, the time estimation ability of Type A personality subjects changed significantly compared with that when they were not awakened, and the change of Type B personality was not significant; at a longer time interval (4000ms), regardless of whether they accept emotional arousal, there was a significant difference in the estimated time of the two personality types A and B, but the difference was even greater when they did not receive emotional arousal. This study further explored the relationship between personality type variables and time perception ability by introducing

emotional arousal variables. It found that the time perception ability of the two personality types A and B are different in the state of emotional arousal and unaccepted emotional arousal, and the difference is significant under a longer time interval (4000ms); and emotional arousal can regulate the time perception ability of subjects with different personality traits.

中文简版自我控制问卷(BSCS)在不同性别和年级中的 测量等值性

高正端¹ 金青青¹ 曾小叶¹ 曾练平¹ (通讯作者)

¹ 贵州师范大学心理学院, 贵阳, 550025, zenglianping@163.com

摘 要 自我控制能力对个体实现目标、完成任务以及身心健康的发展起着关键的作用。自我控制 (Self-Control) 是自我的核心功能之一, 指人们克服冲动、习惯或自动化的反应, 有意识的掌控自己行为方向的能力。国内外有众多研究都使用了简版自我控制问卷 (Brief Self-Control Scale, BSCS) 作为测量工具, 发现个体的自控能力存在性别和年级的差异, 但这种差异是由真实的性别和年级的差异造成的还是由于测量工具本身导致的尚不清楚。自我控制问卷经修订成中文版后从原本的五个维度变成了四个维度, 因此本研究进一步验证中文简版自我控制问卷在我国文化背景下的四因子模型, 考察中文简版自我控制问卷在青少年群体中的跨性别和跨年测量等值性。采用中文版 BSCS 对贵州省某两所中学 1793 名学生 (男 812, 女 981) 开展调查。对调查的有效数据进行验证性因素分析和多组比较, 结果显示该问卷在总样本及性别的组间样本中的四因子模型拟合良好, 该问卷在中学生不同性别间和不同年级间的形态等值、弱等值、强等值和严格等值模型均可被接受, 即中文版 BSCS 在男女生之间和高一至高三年级之间测量等值性假设成立, 中文版 BSCS 的四因子结构在中学生男女性别之间具有测量等值性, 并且具有跨年度的测量等值性。性别、年级之间的群组差异可以认为是由样本特质造成的差异而非量表本身的系统误差所致, 测量结果可以在年级、性别之间进行跨组比较, 可以用于中国青少年有关研究。

Measurement Invariance of Chinese Brief Self-Control Scale across gender and grade

Gao Zhengduan¹, Jin Qingqing¹, Zeng Xiaoye¹, Zeng Lianping¹

School of Psychology, Guizhou Normal University, Guiyang 550025, China

Abstract: Self-control ability plays a key role in achieving goals, accomplishing tasks, and developing physical and mental health. Self-control is one of the core functions of the self. It refers to the ability of people to overcome impulse, habit or automated response and consciously control the direction of their behavior. Many studies at home and abroad have used the Brief Self-Control Scale (BSCS) as a measurement tool, and found that there are differences in the self-control ability of individuals by gender and grade, but it is not clear whether this difference is caused by the real gender and grade difference or the measurement tool itself. The Self-Control Scale has been revised into the Chinese version from its original five dimensions to four dimensions. Therefore, this study further validates the four-factor model of the Chinese Brief self-control questionnaire in the context of Chinese culture, and examines the simplified Chinese self-control questionnaire across gender and grade measurement Invariance in adolescents. The Chinese version of BSCS was used to conduct a survey of 1793 students (812 males and 981 females) from two middle schools in Guizhou Province. A confirmatory factor analysis and multi-group comparison of the valid data of the survey showed that the questionnaire fits well in the four-factor model of the total sample and the gender inter-group sample. The questionnaire has a good shape among middle school students of different genders and different grades. Equivalence, weak equivalence, strong equivalence, and strict equivalence models are all acceptable, that is, the Chinese version of BSCS measures equivalence between male and female students and

between the first to third grades. The four-factor structure of the Chinese version of BSCS It has measurement equivalence between male and female middle school students, and has measurement equivalence across grades. Group differences between genders and grades can be considered to be caused by differences in sample characteristics rather than systematic errors in the scale itself. Measurement results can be cross-group comparisons between grades and genders, which can be used for research on Chinese youth.

摘要 心脏作为人体的重要器官, 它在大脑皮层上的响应与许多认知任务存在交互作用。由于大脑皮层不断地从身体接收心脏的信息, 其对心跳的神经响应可能影响正在进行的认知活动。近年来, 越来越多研究者关注心脏与大脑的关系。一些研究者发现, 刺激呈现前出现的心跳诱发反应 (heartbeat evoked responses, HERs) 可以影响在阈值处的微弱视觉光栅的检测: 当 HERs 越大时, 在阈值处的微弱光栅的检出率越高, 在一定程度上说明 HERs 和意识以下的感知觉探测是存在密切关系的。结合前人研究的发现, 本研究拟进一步探讨心跳诱发电位 (heartbeat evoked potentials, HEPs) 对无意识视觉信息加工的影响机制。为此, 本研究设计了特定的突破连续性闪烁抑制任务 (breaking continuous flash suppression, b-CFS), 共采集 34 名健康成年大学生的行为和心电数据, 以及 129 名健康成年人士的行为、脑电和心电数据。具体操作如下: 屏幕中央出现一张被连续动态视觉噪音掩蔽的光栅刺激, 其对比度在 1 秒钟之内由 0% 增加到 100%, 确保其初始时处于不可见的状态, 使光栅识别处于抑制阶段, 但在一段时间后突破抑制。被试需要在觉察到光栅刺激出现时尽快判断刺激倾斜的方向。实验结果发现, 从大学生被试的行为数据来看, 无意识视觉信息加工的时间与心率变异性的低频/高频 (LF/HF) 存在显著负相关关系。低频/高频是心率变异性频域分析中可用于反应人体交感神经活性的重要指标。说明人体交感神经活性越强, 无意识视觉信息加工的时间越短。此外, 从心电与脑电数据来看, 发生在心跳的舒张期和收缩期的试次的反应时之间无显著差异; 而锁定到心跳 R 波之后 200ms 到 500ms 的 HEP 的振幅更大时, 反应时更短, 也就是无意识视觉信息加工的时间与 HEPs 有关。这表明心脏活动与视觉感知任务在大脑皮层上存在相互作用。

Abstract: As an important organ of the human body, the heart's response on the cerebral cortex interacts with many cognitive tasks. Since the cerebral cortex continuously receives information from the heart from the body, its neural response to the heartbeat may affect ongoing cognitive activities. In recent years, more and more researchers have paid attention to the relationship between the heart and the brain. Some researchers have found that heartbeat evoked responses (HERs) before stimulus presentation can affect the detection of faint visual gratings at the threshold: the

larger the HERs, the higher the detection rate of the faint gratings at the threshold. It shows that HERs are closely related to perceptual detection below consciousness. Combining the findings of previous studies, this study intends to further explore the mechanism of heartbeat evoked potentials (HEPs) on the processing of unconscious visual information. To this end, this study designed a specific breakthrough continuous flash suppression (b-CFS) task, which collected 34 healthy adult college students' behavior and ECG data, and 129 healthy adults' behavior and brain Electricity and ECG data. The specific operation is as follows: A grating stimulus masked by continuous dynamic visual noise appears in the center of the screen, and its contrast is increased from 0% to 100% within 1 second to ensure that it is initially invisible, so that the grating recognition is inhibited Stage, but break the inhibition after a period of time. Participants need to determine the direction of the stimulus tilt as soon as they perceive the grating stimulus. The experimental results found that from the behavioral data of college students, there is a significant negative correlation between the time of unconscious visual information processing and the low frequency/high frequency (LF/HF) of heart rate variability. Low frequency/high frequency is an important indicator that can be used to reflect the activity of human sympathetic nerves in the frequency domain analysis of heart rate variability. It shows that the stronger the human sympathetic nerve activity, the shorter the processing time of unconscious visual information. In addition, from the ECG and EEG data, there is no significant difference in the response time between the diastolic and systolic phases of the heartbeat; while the HEPs, which is locked to the ECG R wave, has a greater amplitude of 200ms to 500ms. The reaction time is shorter, that is, the time of unconscious visual information processing is related to HEP. This indicates that there is an interaction between heart activity and visual perception tasks in the cerebral cortex.

高低行为抑制控制对情绪标注效应影响的 ERP 研究

胡月敏 岳鹏飞 (通讯作者)

信阳师范学院教育科学学院, 信阳, 464000, ypf07@126.com

摘要 情绪标注效应 (Emotion labeling effect) 指对刺激的情绪特征进行描述或命名时个体情绪减弱的现象, 以往研究探讨了行为抑制能力是否影响外显的情绪调节, 但尚未有研究探讨行为抑制能力对内隐的情绪调节的影响。本研究采用 ERP 技术, 比较高、低不同抑制能力大学生 (每组各 16 名, 男女各半) 进行情绪标注 (内隐的情绪调节) 的脑电活动特点。具体而言, 采用修正的双选择 oddball 任务, 以区分个体行为抑制能力高低; 以中国面孔情绪图片系统 (CFAPS) 中的愤怒和愉快情绪图片为实验材料的情绪标注实验, 采用被试类型 (行为抑制能力高、行为抑制能力低) $\times$ 情绪 (愤怒、愉快) $\times$ 任务类型 (情绪标注、性别标注) $\times$ 电极点 (FZ、FCZ、CZ、CPZ、PZ) 的混合实验设计, 以图片呈现后的 LPP 波幅 (300~800ms) 作为情绪标注效应的指标, 来探索高低行为抑制控制对情绪标注效应的影响。结果发现: 高抑制能力组与低抑制能力组相比, 在情绪标注任务上诱发的 LPP 幅值显著低于性别标注, 而低抑制能力组, 在情绪标注和性别标注任务上诱发的脑电波幅差异不显著; 无论行为抑制控制能力高或低, 在愉快情绪下情绪标注与性别标注差异显著, 情绪标注下 LPP 波幅更低。结果表明, 高抑制能力个体可以通过情绪标注产生情绪标注效应, 个体的反应抑制能力高, 情绪标注效应越好; 结果支持了力量模型。

A Study of High and Low Behavior Inhibitory Control on Emotional Labeling Effect from ERPs

Hu Yuemin, Yue Pengfei (Corresponding author)

School of Education Science, Xinyang Normal University, Xinyang, 464000, ypf07@126.com

Abstract: Emotion labeling effect refers to the reduction of Emotion in labeling or naming of emotional features of a stimulus. Previous researches have explored whether the ability of behavioral inhibition affects the regulation of

explicit emotions, while there is no studies learning about the impact of behavioral inhibition on implicit emotions regulation. We use the method of ERP to access the characteristics of brain electrical activity of emotional labeling (implicit emotions regulation), under high and low inhibitory abilities (16 college students in each group, half male and half female) . Modified double-choice oddball task are administered to distinguish the inhibition capacity of subject; the emotion labeling experiment make angry and happy emotion images from the Chinese Faces Emotion Picture System (CFAPS) as materials, use a mixed design of Behavioral inhibition(high, low) $\times$ Emotion (anger, pleasure) $\times$ Task type (emotional labeling, gender labeling) $\times$ Electrode points (FZ, FCZ, CZ, CPZ, PZ) to explore the impact of behavior inhibitory control on emotional labeling, and compare with LPP amplitude (300~800ms) after images presented we can find difference of those two kind subjects on emotional labeling effect. The results show that the amplitude of LPP was significantly lower, when the labels of affect labeling are high inhibitory ability, but the amplitude of LPP has no difference when the labels of affect labeling are low inhibitory ability; the difference between emotion labeling and gender labeling is significant in happy mood, and the amplitude of LPP is lower in emotion labeling. The results suggest that individuals with high inhibition ability can produce emotion labeling effect through emotion labeling. The higher the response inhibition ability of individuals, the better the emotion labeling effect. The strength model has been further proved.

不同编码意识下目标探测对背景项目的影响——基于 R/K 范式的研究

黄思捷 孟迎芳（通讯作者）

福建师范大学心理学院，福州，350117，通讯作者 E-mail:175695016@qq.com

摘要 注意促进效应（Attentional Boost Effect, ABE）指当学习阶段采用目标探测性质的二级任务，伴随目标项同时呈现的背景项目的加工会得到增强，产生一种伴随目标项的记忆优势。已有研究证实 ABE 在多种条件下存在相对稳定性，无论实验材料是词汇还是图片，无论是内隐记忆还是外显记忆。目前有关 ABE 的大多数研究中，学习阶段要求被试进行有意编码，而也有研究发现，无意编码条件下随后的再认测验中也能发现 ABE。不同的编码意识条件下对信息进行不同的加工：有意识编码下对信息的加工更加精细化，而无意识编码则更依赖于对信息的知觉加工。过去已有研究采用 R/K 范式对有意编码下再认中的回想和熟悉进行区分，发现目标探测主要促进的是依赖于信息精加工的回想，而对于依赖信息知觉加工的熟悉则没有促进作用。为探讨在不同的编码意识条件下，目标探测对再认记忆中的回想和熟悉的作用是否不同，本研究在经典的注意促进效应的研究范式的基础上，通过指导语操纵被试在学习阶段的编码意识状态。有意编码条件下要求被试进行目标探测任务的同时记忆屏幕上呈现的词汇；而无意识编码条件下要求被试仅进行目标探测任务忽略屏幕上呈现的词汇。在随后的再认测验中，目标词和分心词与新词混合随机呈现，要求被试做出新/旧判断以及旧词判断后的记得/知道（R/K）判断。结果发现，两种编码条件下都产生了明显的注意促进效应，但目标探测对再认记忆中的回想和熟悉的作用有所不同，具体表现为：有意编码条件下，在 R 反应上目标显著大于分心，而在 K 反应上没有差异，说明目标探测主要作用于依赖信息精细加工的回想；而无意识编码条件下，在 R 反应上二者没有差异，在 K 反应上目标显著大于分心，说明目标探测主要作用于受项目知觉加工变化影响的熟悉。综合两个条件下的实验结果，我们可以认为，目标探测引发的加工增强作用具有非特异性，时间选择注意机制促进的加工类型取决于与目标探测同时进行的认知加工。

The influence of target detection on background item under different encode intentionality condition——A study based on R/K paradigm

Huang Sijie, Meng Yingfang

School of Psychology, Fujian Normal University, Fuzhou, 350117

Abstract: Attention boost effect (ABE) refers to the phenomenon that when performing a secondary task of target detection in the study phase, the processing of the background item presented with target will be enhanced, producing a memory advantage accompanying the target item. Studies have found that ABE is relatively stable under various conditions, whatever the experiment material is word or picture, whatever the test is implicit or explicit. In most studies about ABE, participants were instructed to perform intentional encoding in the study phase, but other studies have found that ABE can also be found under incidental encode condition. Information is processed differently under different encode conditions: the processing of information under intentional encode condition is more elaborative, while incidental encode is more dependent on the perceptual processing of information. Previous studies have used the R/K paradigm to discuss recollection and familiarity in recognition under intentional encoding. It was found that target detection mainly promotes recollection based on elaborative processing, but has no effect on familiarity affected by perceptual processing. In order to discuss whether target detection has different effect on recollection and familiarity in recognition memory under different encoding intentionality conditions, this study manipulated encode intentionality of participants in the study phase through instruction, basing on the classic ABE paradigm. Participants were told to encode a series of words while performing target detection task in the intentional encode condition, while other participants were instructed to perform target detection task only and ignore the words presented on the screen in the incidental encode condition. In subsequent recognition test, the target words and distractor words were mixed with new words and presented randomly, participants were instructed to make old/new judgments and remember/know judgments. The results showed that ABE was produced in both two encode conditions, but the effect of target detection on recollection and familiarity in recognition memory was different. Specifically, under intentional encode condition, the hit rate of target words was significantly higher than that of distractor words in remember, but there was no difference between target and distractor in know, indicating that target detection mainly has effect on recollection based on elaborative processing; under incidental encode condition, there was no difference between target and distractor in remember, but target was significantly higher than distractor in know, indicating that the effect of target detection mainly appears in familiarity affected by perceptual processing. Combining the results of the two experiments, we can draw a conclusion that the processing enhancement effect triggered by target detection is non-specific, and the type of processing promoted by the time-selective-attention mechanism depends on the cognitive processing performed simultaneously with target detection.

不同认知资源下情绪调节策略对道德决策的影响

靖淑针¹ 张晨¹ 范宁¹ (通讯作者)

¹ 河北大学教育学院, 保定, 071002, ningfan@hbu.edu.cn

摘 要 人们在进行道德决策时, 往往会伴随强烈的情绪体验。情绪调节策略可以减弱道德决策中的情感冲突, 然而不同的情绪调节策略在侧重点上有所不同, 如认知重评侧重改变情绪的前因, 表达抑制侧重改变情绪的反应, 且二者所需认知资源也存在差异。已有研究表明, 有效使用情绪调节策略可以改变道德决策的倾向, 但是哪种调节方式更有效, 不同的方式对道德决策会产生怎样的影响, 目前尚未统一定论。本研究旨在探讨认知重评和表达抑制在不同认知资源条件下对道德决策产生的影响。预实验用于检验情绪调节策略在情绪调节及道德评价任务中的作用。结果显示, 使用情绪调节策略的被试相比对照组的情绪自评更加积极, 且对不道德行为的评价更积极。实验一采用 2 (时间压力: 有、无) × 3 (情绪调节策略: 认知重评、表达抑制、无) 的被试间设计, 利用时间压力范式探讨不同情绪调节策略对道德决策的影响。结果发现, 时间压力与情绪调节策略交互作用显著, 无时间压力条件下, 认知重评组与表达抑制组被试都更倾向于选择功利主义决策, 对自己决策的道德程度评价更积极; 时间压力条件下认知重评的调节效应不显著, 而表达抑制仍然具有显著的调节效果。实验二采用 2 (认知资源损耗: 高、低) × 3 (情绪调节策略: 认知重评、表达抑制、无) 的被试间设计, 利用 Stroop 任务探讨在不同认知资源损耗条件下情绪调节策略对道德决策的影响。结果发现, 认知资源损耗与情绪调节交互作用显著, 低认知资源损耗条件下, 认知重评组与表达抑制组被试都更倾向于选

择功利主义决策, 对自己决策的道德程度评价更积极; 高认知资源损耗条件下, 表达抑制仍然具有显著的调节效果, 而认知重评的调节效应不显著。本研究结果表明, 情绪调节过程会受到认知资源的影响, 并对道德判断产生显著作用。

The Impact of Emotional Regulation Strategies on Moral Decision-making under Different Cognitive Resources

Shuzhen Jing, Chen Zhang, Ning Fan

College of Education Hebei University, Baoding

Abstract: During making moral decisions, people are often accompanied by strong emotional experience. Emotion regulation strategies can weaken emotional conflicts in moral decision-making. However, different emotion regulation strategies have different emphases. For example, cognitive reappraisal focuses on the antecedents of changing emotions, while expression inhibition focuses on the response to changing emotions. There are differences in the demand for recognize resources between the two approaches. Studies have shown that effective use of emotion regulation strategies can change the tendency of moral decision-making, but which regulation method is more effective and how different methods will affect moral decision-making has not yet been unified. This study aims to explore the impact of cognitive reappraisal and expression inhibition on moral decision-making under different cognitive resource. Pre-experiment was conducted to test the role of emotion regulation strategies in emotion regulation and moral evaluation tasks. The results showed that compared with the control group, the participants who used emotion regulation strategies had more positive emotion self-evaluation and more positive evaluation of immoral behavior. In Experiment 1, 2 (Time pressure: Yes or No) $\times$ 3 (Emotional Regulation Strategy: Cognitive Reappraisal, Expression Inhibition, None) were designed among the subjects. The time pressure paradigm was used to explore the effects of different emotional regulation strategies on moral decision-making. The results showed that the interaction effect between time pressure and emotional regulation strategies was significant. Without time pressure, both cognitive reappraisal group and expression inhibition group were more inclined to choose utilitarian decision-making and evaluate their moral level more positively. Cognitive reappraisal had no significant moderating effect under time pressure, while expression inhibition still had significant moderating effect. Experiments 2 (Cognitive Resource Depletion: High or Low) $\times$ 3 (Emotional Regulation Strategy: Cognitive Reappraisal, Expression Inhibition, None) were designed among the subjects. Stroop task was used to explore the impact of emotional regulation strategies on moral decision-making under different cognitive resource depletion conditions. The results showed that the interaction effect between cognitive resource depletion and emotional regulation strategies was significant. With the absence of cognitive resource depletion, both cognitive reappraisal group and expression inhibition group were more inclined to choose utilitarian decision-making and scored more positively on the moral level of their decision-making. Without the absence of cognitive resource depletion, expression inhibition still had a significant moderating effect, while cognitive reappraisal had no significant moderating effect. The results of this study show that emotional regulation is influenced by cognitive resources and has a significant effect on moral judgment.

3 慕尼黑 FAF 大学运动科学学院, 德国慕尼黑, 85579

摘要 有意识行动理论认为个体的适应能力包含生理、社会和心理三个部分。呈现良好的心理表现, 承受应激状态的能力和从应激状态中恢复的能力是心理适应能力的构成要素, 心理稳健性反应的是个体承受应激状态和从应激状态中恢复的能力, 是心理适应能力的一个基础要素, 包含两个基础的因子: 阻碍和助推。心理稳健性量表从认知和情感两个维度测量影响任务表现的心理特质, 包含自我效能感、心理韧性、心理弹性、反刍思维等心理特质。目的: 对由 Hackfort 编制的心理稳健性量表(2020 英文版)进行跨文化的检验和修订, 为国内个体心理稳健性的相关研究提供测量工具。方法: 采用两人直译-回译的方法将源量表进行翻译, 以 968 名在校大学生为对象进行问卷网上调查, (1) 英文版量表的条目被调整为符合中文语法的相应条目, (2) 采用探索性因素分析、内部一致性检验和验证性因素分析对心理稳健性量表(中文版)进行信效度检验和修订。结果: 探索性因素分析发现, 中文版心理稳健性量表与英文版量表同样由自尊、自信、情绪稳定性和再生不足四个维度组成; 内部一致性信度系数分别为 0.778、0.589、0.589、0.381; 验证性因素分析结果表明, 修订后的心理稳健性量表(中文版)的模型拟合较好: $NFI = 0.922$, $IFI = 0.946$, $NNFI = 0.922$, $CFI = 0.946$, $RMSEA = 0.064$ 。结论: 修订后的心理稳健性量表具有较好的信度和效度, 可以用来测量心理稳健性这一心理特质。建议今后研究可以采用不同的被试群体, 以检验量表的外部效度。

Reliability and Validity Test of the Mental Robustness Scale (MR2B) and Norms for College Students

Abstract: According to the action-theory, the adaptation ability of individuals including three parts: physical, social and psychological. Those ability to render mental performances, to withstand stressful situations and to recover from stressful situations are the adaptability of the psychological elements. Mental robustness is composed by withstanding stressful situations and recovering from stressful situations. It is a basic elements of psychological adaptation ability, consists of two basic factors: barriers and boosters. The Mental Robustness scale measures psychological traits that affect mental performance from cognitive and emotional dimensions, including self-efficacy, resilience, resilience, rumination and other mental traits. Objective: To test and adapt *The Mental Robustness Scale by Hackfort (English Version 2020)* for the Chinese culture, and to provide a measurement tool for Chinese research on individual appraisal of mental robustness. Methods: *The Mental Robustness Scale* was translated from English to Chinese by the parallel-back translation method. An online study was conducted among 968 college students. (1) The English version of the Scale was adapted to Chinese language and meaning of the items. (2) For testing the structure of this adapted version and its reliability and validity an exploratory factor analysis the calculation of internal consistency, and a confirmatory factor analysis were run. Results: Exploratory factor analysis showed that Chinese version of *The Mental Robustness Scale* in accordance with the English version comprises four dimensions: Self-assurance, Self-Esteem, Emotional Lability and Regeneration Insufficiency. The internal consistency coefficients are 0.778, 0.589, 0.589, and 0.381. The results of the confirmatory factor analysis showed that the model fit of the adapted Chinese version can be well accepted: $NFI = 0.922$, $IFI = 0.946$, $NNFI = 0.922$, $CFI = 0.946$, $RMSEA = 0.064$. Conclusion: The adapted Mental Robustness Scale has proven a good reliability and validity, and can be used to measure the trait aspect of mental robustness. It is suggested for future studies to refer to different groups of subjects to create further norms and evaluations of the external validity of the scale.

乳酸诱发神经可塑性的潜在机制

冷悦炜¹ 张连成¹ 郭千会²

¹ 天津体育学院, 天津, 300381

² 天津体育学院体育教育与教育科学学院, 天津市, 300381, 824312909@qq.com

摘要 越来越多的实验证明证据支持体育锻炼可以增强神经可塑性,进而延缓增龄性神经退化,乃至降低神经退行性疾病发生风险。但体育锻炼诱发神经可塑性的潜在机制尚不明确,乳酸可能是体育锻炼诱发神经可塑性的关键点之一。现在从三个层面介绍乳酸诱发神经可塑的潜在机制。1.Yang et al.乳酸盐通过增强神经元中 NMDA 谷氨酸受体的活性来促进可塑性相关基因的表达。此外,乳酸盐增加细胞内 NADH 和钙水平。这可能是星形胶质细胞乳酸诱导神经可塑性的中心机制。乳酸诱导的 NMDA 受体活性增强后细胞内钙的增加可能是运动和 BDNF 表达之间的联系。2.乳酸盐可以结合神经元上的 GPCR81 和 BBB。Lauritzen 等人已经表明,在鼠模型中,血脑屏障上的 HCAR1 对于调节运动对血管生成的影响至关重要。乳酸盐结合神经元上的 HCAR1 抑制腺苷酸环化酶,从而降低 cAMP,导致神经元活性和基因调控降低。乳酸盐可能在控制血流和突触功能方面具有代谢和调节功能。乳酸盐可以影响前列腺素 E2 的摄取,从而影响血管舒张。3.乳酸盐可以通过 sir t1 激活诱导 PGC1 α /FNDC5/BDNF Hayek et al. 表明,在啮齿动物中,自主运动促进海马 BDNF 表达,并以乳酸依赖的方式改善记忆和学习。小鼠腹腔内乳酸输注诱导 SIRT1 活性,从而增强 PGC1 α /FNDC5/BDNF 途径,从而改善空间学习和记忆保持。基于神经可塑性视角来探讨体育锻炼的神经可塑性效益,可以为最佳的锻炼认知效益寻找指标,也可以为未来促进认知能力与抵抗增龄性神经退行性疾病寻找药物。

Potential Mechanism of Neuroplasticity Induced by Lactic Acid

lengyuewei, zhangliancheng, guoqianhui

tianjin university of sport No.16 Donghai Road, West District, Tuanbo New City, Jinghai District,
Tianjin

Abstract: More and more experiments prove that physical exercise can enhance neural plasticity, thus delaying aging neurodegeneration and even reducing the risk of neurodegenerative diseases. However, the potential mechanism of neural plasticity induced by physical exercise is not clear, and lactic acid may be one of the key points of neural plasticity induced by physical exercise. This paper introduces the potential mechanism of neural plasticity induced by lactic acid from three aspects. 1.Yang et al. lactate promotes the expression of plasticity related genes by enhancing the activity of NMDA glutamate receptor in neurons. In addition, lactate increased intracellular NADH and calcium levels. This may be the central mechanism of neural plasticity induced by lactic acid in astrocytes. The increase of intracellular calcium after the increase of NMDA receptor activity induced by lactic acid may be the connection between exercise and BDNF expression. 2. Lactate can bind to GPCR81 and BBB on neurons. Lauritzen et al. have shown that HCAR1 on the blood-brain barrier plays an important role in regulating the effect of exercise on angiogenesis in mouse model. HCAR1 on lactate-bound neurons inhibits adenylate cyclase, thereby reducing cAMP, resulting in decreased neuronal activity and gene regulation. Lactate may be controlling blood

摘要 沙盘游戏疗法由瑞士心理学家卡尔夫创建,在 20 世纪 90 年代逐渐进入中国。沙盘游戏疗法作为一种非语言性的心理咨询与治疗的技术,它充分利用了非语言交流和荣格心理学的象征含义,重视沙盘制作者在创作过程中的自主性和自发性。沙盘游戏疗法的具体操作如下:首先,心理咨询师要创建一种安全且自由的环境,使沙盘制作者可以放心的展现自己的内心世界。之后沙盘制作者可从摆放各种微缩小型模具的架子上自由地挑选沙具,并在装有细沙的沙盘中自由地摆放自己的沙具,最终形成可以表现自己内心世界的沙盘“场景”,整个过程不受外界干扰。最后,沙盘分析师通过分析每个沙具的不同摆放位置,了解制作者的潜意识层面的相关内容,更好地探究沙盘制作者的内心世界。起初,沙盘游戏疗法在国外被用来治疗各类儿童情绪障碍和行为障碍,并且起到很好的治疗效果。之后随着它的不断完善,使用技术的不断提高,沙盘游

戏疗法的治疗对象也不仅限于儿童，它的治疗对象也逐渐拓展，其应用范围也不断拓宽。沙盘游戏疗法在我国的应用还处在探索时期，它的本土化进程也在逐渐展开，尤其是对中国经典代表性文化的具体释义的研究。未来研究还可继续提升沙盘游戏疗法在不同领域的应用，并标准化其在不同领域内的诊断指标。

Abstract: Sandplay therapy was founded by Swiss psychologist Karl Karf and gradually entered China in the 1990s. As a non-verbal psychological counseling and therapy technique, sandplay therapy makes full use of nonverbal communication and the symbolic meaning of Jungian psychology, and attaches importance to the autonomy and spontaneity of the sandplay maker in the creative process. The specific operation of sandplay therapy is as follows: First, the psychologist should create a safe and free environment, so that the sandplay maker can feel safe to show their inner world. After that, sand table makers can freely select sand tools from the shelves where all kinds of miniature molds are placed, and freely place their own sand tools in the sand table equipped with fine sand, finally forming a sand table "scene" that can express their inner world, and the whole process is free from external interference. Finally, the sand table analyst can better explore the inner world of the sand table maker by analyzing the different placement of each sand set to understand the subconscious level of the maker. At first, sandplay therapy was used to treat a variety of emotional and behavioral disorders in children abroad, and it has a good therapeutic effect. Since then, with its continuous improvement and the continuous improvement of the use of technology, the treatment objects of sandplay play therapy are not limited to children, its treatment objects are also gradually expanded, and its application scope is also continuously broadened. The application of sandplay play therapy in China is still in the exploration period, and its localization process is also gradually developing, especially the study of the specific interpretation of the representative Chinese classical culture. Future research should continue to improve the application of sandplay therapy in different fields and standardize its diagnostic indicators in different fields.

声调相似性在汉语口语识别中的作用——来自眼动的证据

李爽^{1,2} 申薇^{1,2}

1 杭州师范大学, 杭州, 311121

2 杭州师范大学, 杭州, 311121, kate2009dx@sina.com

摘要 已有的听觉词汇识别模型认为, 在听觉词汇识别过程中, 听觉输入信号与词汇表征之间的语音相似程度会影响候选词汇的激活程度。然而, 以前的模型大都是基于非声调语言和音段信息建立的(如, 英语、西班牙语)。与字母语言不同, 中文是一种声调语言, 在汉语普通话中有四种声调, “阴平”(一声), “阳平”(二声), “上声”(三声)和“去声”(四声)。研究发现, 不同的声调之间存在相似性的差异, 例如, 与其它声调相比, 汉语普通话中的阳平(二声)与上声(三声)有更多的语音相似性(Gandour, 1983)。当前研究的目的是使用词汇情境范式来探讨词汇声调相似性如何影响中文的听觉词汇识别。在范式中, 被试被要求听一个口语目标词, 同时给被试呈现由四个词组成的视觉屏幕, 即目标词, 声调相似的语音竞争词, 和两个不相关的干扰词。对于每一个阳平(二声)的听觉目标词(如, “阳台”/yang2tai2/), 匹配两种类型的声调竞争词, 一个上声(三声)的高声调相似性竞争词(如, “养子”/yang3zi3/), 和一个去声(四声)的低声调相似性竞争词(如“样本”/yang4ben3/)。任务是用鼠标点击视觉屏幕上的目标词, 同时记录被试在视觉屏幕上的眼动情况。结果发现, 在两种声调条件下, 都观察到了显著的语音竞争效应, 即在声调竞争词上的注视概率高于两个无关的干扰词。特别的是, 在高声调相似性条件下观察到的语音竞争效应比低声调相似性条件下更大。结果表明, 在听觉词汇识别过程中, 声调信息是以一种逐级的方式起作用, 与目标词声调相似性高的词比声调相似性低的词被激活的程度更高。当前研究的发现表明声调信息的激活水平受到声调相似性的影响。

Abstract: Existing spoken-word recognition models agree that in the process of spoken-word recognition, the phonological similarity between the auditory input signal and lexical representation affected the activation degree of the lexical candidates. However, previous models are mostly based on non-tonal languages and the segmental information, such as English, Spanish. Unlike alphabetical languages, Chinese is a tonal language with four lexical tones—high-level, mid-rising, low-dipping, and falling tones. Studies found that different lexical tones shared different similarities between each other. For example, the mid-rising tone is more phonetically similar with the low-dipping tone compared to other tone pairs (Gandour, 1983). The aim of the current study was to explore that how the lexical tone similarity affects the Chinese spoken-word recognition using a printed-word paradigm. In the paradigm, participants were asked to listen to a spoken target word, and simultaneously they were presented with a visual display of four words—namely, a target word, a phonological competitor, and two unrelated distractors. For each target word with a mid-rising tone (e.g., 阳台 /yang2tai2/ “balcony”), two types of tonal competitors: a high tonal similarity competitor with a low-dipping tone (e.g., 养子 /yang3zi3/ “adopted son”) and a low tonal similarity competitor with a falling tone (e.g., 样本 /yang4ben3/ “sample”) were constructed. The task was to click on the target word on the visual screen with the mouse, and participants’ eye movements on the visual screen were recorded at the same time. Results showed significant phonological competitor effects (i.e., the fixation proportion on the phonological competitor was higher than that on the distractors) under both tone conditions. Specifically, a larger phonological competitor effect was observed in the high tonal similarity condition compared to the low tonal similarity condition. The results indicate that the tonal information functions in a graded manner during the spoken-word recognition, and words with high tonal similarity with targets are activated to a higher degree than words with low tonal similarity. Findings of current study contribute to the activation level of tone information is affected by the similarity of tones.

自我关注重评和情境关注重评对积极情绪的作用机制

李雪 王梦姣 郝芳

南京师范大学心理学院, 南京, 210097, haofang1979@163.com

摘要 认知重评是一种高效的情绪调节策略, 相对于其他的情绪调节策略, 认知重评对生理和心理的影响更有益。认知重评可以分为自我关注重评和情境关注重评, 两种重评策略都可以有效的调节负性情绪, 但是调节效果存在差异。以往研究主要考察其对消极情绪的调节, 并未探索重评的两种亚型对积极情绪的调节效果以及对随后认知控制的影响。本研究共两个实验, 分别考察自我关注重评和情境关注重评对积极情绪的调节效果以及对随后认知控制的影响差异。实验1考察自我关注重评(n=26)和情境关注重评(n=27)对积极情绪的调节效果, 对正性图片进行重评, 并且对图片的效价和唤醒度进行评级。实验2考察使用认知重评(自我关注组 n=27, 情境关注组 n=30)后, 在随后的冲突任务中的认知控制能力, 在实验1的基础上增加数字 Stroop 任务, 利用反应时和正确率干扰分数评估认知控制能力。实验1结果表明, 两种重评方式都可以有效的调节积极情绪, 但是其调节效果存在差异。在降低正性的条件下, 情境关注组的效价显著低于自我关注组。在增加正性的条件下, 本研究并未发现自我关注组和情境关注组之间情绪调节的显著差异。本研究的另一点发现是, 在降低正性的条件下, 自我关注组的唤醒度显著低于情境关注组, 该结果与图片效价结果相矛盾。实验2并未发现两种重评方式的认知控制能力的显著差异, 但是调节方式的主效应达到了边缘显著, 呈现出自我关注

重评的反应时干扰分数(一致条件-不一致条件)低于情境关注重评的趋势。总之,两种重评方式都可以有效的调节情绪,但是其调节效果存在差异。使用情境关注重评降低正性情绪比使用自我关注重评更加有效,但是由于自我关注重评是通过降低事件的个人相关性来降低正性情绪,因此其唤醒度低于情境关注重评。对于重评后的认知控制能力,与情境关注重评相比,使用自我关注重评调节积极情绪后,在随后的冲突任务中认知控制能力呈现出更强的趋势。

The Mechanism of Self-focused and Situation-focused Reappraisal on Positive Emotions

LI Xue, WANG Meng Jiao, HAO Fang

School of Psychology, Nanjing Normal University, Nanjing 210097, haofang1979@163.com

Abstract: Cognitive reappraisal, is a kind of effective emotion regulation strategies, beneficial to physical and psychological effects more cognitive reappraisal than other emotion regulation strategies. It can be divided into self-focused and situation-focused reappraisal, both reappraisal strategy can effectively adjust the negative emotions, while the regulate effects were different. Previous studies focused on the regulation of negative emotions, but did not explore the effects of the two reappraisal subtypes on the regulation of positive emotions and the subsequent cognitive control. There are two experiments In this study. In Experiment 1, the moderating effects of self-focused reappraisal ($n = 26$) and situation-focused reappraisal ($n = 27$) on positive emotions were examined. Participants were asked to reappraisal the positive images and rate the valency and arousal of all the images. In Experiment 2, self-focused reappraisal ($n = 27$) and situation-focused reappraisal ($n = 30$) were used to investigate whether attempts to increase or decrease positive emotions had different effects on subsequent cognitive control tasks. The digital Stroop task was added on the basis of Experiment 1 and cognitive control was evaluated by the interference scores of response time and accuracy rate. The results of Experiment 1 showed that both reappraisal strategy can effectively adjust the negative emotions, while the regulate effects were different. In the condition of decreasing positive emotion, the situation-focus reappraisal had a significantly lower valency than the self-focus reappraisal. Under the condition of increasing positive emotion, no significant difference in emotion regulation was found between the self-focus reappraisal and the situation-focus reappraisal in this study. Another point of this study finding is that the arousal of self-focus reappraisal in the condition of decreasing positive emotion was significantly lower than situation-focus reappraisal. This result is in contradiction with the results of the valence. In Experiment 2, there was no significant difference in the cognitive control between the two reappraisal subtypes, but the main effect of moderating mode reached marginal significance, showing a tendency that the response time interference score of self-focus reappraisal was lower than that of situation-focus reappraisal. In conclusion, self-focused reappraisal and situation-focused reappraisal can effectively regulate emotions, while the regulate effects were different. Reducing positive emotion by situation-focus reappraisal is more effective than self-focus reappraisal. But since self-focused reappraisal reduces positive emotions by reducing the personal relevance of events, its arousal degree is lower than that of situation-focused reappraisal. For the cognitive control after reappraisal, the individual's cognitive control after the self-focus reappraisal is stronger compared with the situational attention reappraisal.

摘要 背景: 对多个具有独特身份特征的目标的持续追踪需要视觉注意系统频繁刷新目标的位置信息并与身份信息绑定, 现有的多客体追踪模型和多身份追踪模型 2.0 都没有说明当多身份追踪中存在若干相同特征的目标时注意系统将如何进行追踪。目的: 结合布尔地图理论, 本研究探究了多身份追踪中注意系统是否会对多个相同的客体同时进行注意刷新。本研究操纵在运动结束前对某一个目标进行线索提示, 如果注意刷新的单元是布尔地图, 则提示目标被注意刷新的同时与之具有相同身份的目标也将被刷新。方法: 实验采用多身份追踪范式, 以颜色作为客体身份信息。屏幕上首先呈现 12 个圆, 其中两两颜色相同。所有客体随机运动 5 到 7 秒, 参与者被要求追踪两两颜色相同的 6 个目标客体。在运动将要结束前 300 ms, 6 个目标客体中的随机一个会在 150ms 内连续闪烁两次作为线索提示, 随后运动结束, 每个客体被一个灰色圆遮蔽。之后进入报告阶段, 某个客体被白色实线圈出作为探测刺激, 同时屏幕下方呈现 6 种颜色和一个叉号。参与者若判断该探测刺激非追踪目标, 则点击叉号, 若判断该探测刺激为追踪目标则点击报告该目标的颜色。实验记录了参与者反应的击中率、反应时以及错误类型。实验采用单因素四水平重复测量设计, 条件分别为探测刺激与提示刺激相同 (PSC), 探测刺激为提示刺激同色的另一目标 (POC), 探测刺激为非提示颜色的目标 (PNC), 探测刺激为干扰项 (PD)。结果: 重复测量方差分析结果显示, PSC 条件击中率显著高于 POC 条件 (.830 vs .774, $p = .008$) 和 PNC 条件 (.830 vs .732, $p < .001$); POC 条件击中率显著高于 PNC 条件 (.774 vs .732, $p = .028$)。未被直接提示但与提示目标具有相同身份信息的目标击中率显著高于其余目标, 表明提示线索同时引起了两个相同目标的注意刷新。结论: 多身份追踪的刷新过程中存在同身份优势, 刷新的单元可能是布尔地图, 多个相同身份的客体可表征在同一张布尔地图上并被同时刷新。

Abstract: Background: The continuous tracking of multiple targets with unique identity characteristics requires the visual attention system to update the location information of the targets and bind them with the identity information in current time, the existing model of multiple object tracking and Model of Multiple Identity Tracking 2.0 (MOMIT 2.0) do not explain how the visual attention system will work when there are several targets have the same identity information in multiple identity tracking (MIT). Purpose: Combined with the Boolean map theory, the present study explored whether visual attention will refresh the attention of multiple identical objects at the same time. The present study manipulated the process of MIT that one target will be cued before the end of tracking, if the unit of visual attention is multiple identical objects, the target with the same identity will be refreshed at the same time as the cued target is refreshed. Method: The experiment used multiple identity tracking paradigm and took color as identity information. 12 discs were displayed on a monitor, every two of which had the same color. All objects moved randomly for 5 to 7 seconds, participants were asked to track 3 pairs of objects. In the first 300 ms before the motion

was about to end, a random one of the six targets would flash twice as a clue in 150 ms, and then the motion ended, each object was obscured by a gray disc. In reporting stage, one object was circled by a white solid line as a probe stimulus, 6 colors and a cross were displayed at the bottom of the screen. If participant judge that the probe stimulus is not one of tracking targets, then click the cross., otherwise, click to report the color of the target. The hit rate, reaction time and error type were recorded. The experiment used a single factor repeated measurement design. The conditions were as follow: the probe target was the same as the cued target (PSC), the probe target was the target with the same color as the cued target (POC), the probe target was a random one of the rest two pairs of targets (PNC), and the probe target was a random one of distractor (PD). Results: The results of repeated measurement ANOVA showed that the hit rate of PSC condition was significantly higher than that of POC condition (.830 vs. .774, $p = .008$) and PNC condition (.830 vs. .732, $p < .001$); the hit rate of POC condition was significantly higher than that of PNC condition (.774 vs. .732, $p = .028$); the hit rate of the target that is not directly cued but had the same identity as the cued target was significantly higher than that of other targets, indicating that the clue has attracted the attention of two same targets at the same time. Conclusion: The present study shows a same identity advantage in multiple identity tracking. The same Boolean map may be the unit of attentional refreshing, that is, multiple identical targets that are presented on the same Boolean map could be refreshed at the same time.

视觉工作记忆中是否存在多种表征形式

罗鑫宇 孙彦良（通讯作者）

山东师范大学心理学院，济南，250358，yanliangsun@126.com

摘 要 大量研究证明视觉工作记忆编码阶段存在知觉表征和语义表征两种表征形式。但对于视觉工作记忆的保持阶段是否也存在这两种不同的表征形式这一问题还存在争议。已有研究使用脑电技术对该问题进行了探究，结果表明视觉工作记忆保持阶段存在起源于不同编码时期的知觉表征和语义表征。但脑电技术存在解码所需训练试次多、噪音大等缺点。而眼动技术中瞳孔大小指标有着指标明确、无需解码等优点。因此本研究使用眼动追踪技术，通过瞳孔光反射来对视觉工作记忆保持阶段是否存在多种表征形式这一问题进行进一步探究。

实验将眼动追踪技术、Stroop 范式和变化觉察范式相结合，使用了 2(字体颜色：黑色、白色)×2(字义：黑、白)的被试内实验设计。被试需要记住注视点两侧刺激的字体颜色，随后的声音线索会提示要测试的刺激的位置。被试需要在接下来的 3 秒钟内紧盯中间注视点，并且回忆线索位置的字体颜色，同时记录眼动数据。最后屏幕上呈现一个色块，需要被试判断色块颜色是否与线索提示位置的字体颜色一致。

对行为数据结果进行分析，发现字色一致条件下的正确率要高于字色不一致，反应时要快于字色不一致，与 Stroop 效应一致。使用 python 构建线性混合效应模型，以 10ms 为时间窗口对瞳孔直径进行分析。结果发现在字色一致条件下，字体颜色为黑色条件下的瞳孔直径大于字体颜色为白色条件下的瞳孔直径，且这种差异时程长于字色不一致。字色不一致条件只在早期表现出这种差异，后期两种字体颜色条件下的瞳孔大小无差异。说明在字色不一致条件下，字义产生的效应混合了字体颜色的效应，使得后期两种字体颜色条件下的瞳孔直径的差异不显著。综合以上结果说明，视觉工作记忆保持阶段的初期和后期的表征形式不同，存在两种表征形式，保持阶段初期为知觉表征，负责加工刺激的基本特征；后期转换为语义表征，负责加工刺激的语义。

Whether there are multiple Representational Formats in Visual Working Memory

Xinyu Luo, YanliangSun

School of Psychology, Shandong Normal University, Jinan 250358, China

Abstract: Many studies have demonstrated that perceptual representation and semantic representation exist in the encoding period of visual working memory. However, whether these two different forms of representation also exist in the maintenance of visual working memory is controversial. A previous study explored by EEG has shown that perceptual representations and semantic representations originated from different encoding periods exist in visual working memory maintenance. But EEG has many disadvantages, such as plenty of training trials for decoding and high noise. While the pupil size index in eye tracking technology has many advantages, for instance, intuitionistic index and no need to decode. Therefore, in this study, we used eye tracking technology to investigate whether there are multiple representational formats in visual working memory maintenance.

In this experiment, eye tracking technology, Stroop paradigm and Change Detection paradigm were combined, and a 2(color: black and white) $\times$ 2(semantics: black and white) within-subject design was used. Participants were asked to remember the colors of the memory items on both sides of the fixation, then a acoustic cue would indicate the location of the stimuli to be tested. The participants were required to focus on the fixation for the next three seconds and recall the color at the cued location while recording the eye-movement data. Finally, a color patch was presented on the screen, and the participants needed to judge whether the color patch is the same as the color of the cued memory item.

The analysis of behavioral data results shows that the correct rate in the semantic-color consistent condition is higher than that in the condition of semantic-color inconsistent condition, and the response time is also faster in the semantic-color consistent condition than that in the semantic-color inconsistent condition, which is the same as the classical Stroop effect. A linear mixed effect model was constructed in Python, and the pupil diameter was analyzed with a moving time window of 10ms. The results showed that the pupil diameter in the black was larger than that in the white under the semantic-color consistent condition, and the duration of the difference was longer than that in the inconsistent condition. This difference was only shown in the early stage of the inconsistent condition, and no significant difference was found in the later stage. These results indicate that the semantic effect is mixed with the color effect under the inconsistent condition, so that the difference of pupil diameter under the two colors conditions is not significant. These results suggest that there are two representational formats in the early and later stages of visual working memory maintenance. In the early stage of visual working memory maintenance, representational format is perceptual representation, which processes basic features of stimuli. Later stage, representational format transformed into semantic representation, which processes the semantics of the stimulus.

双价转换任务中口译经验对个体认知转换优势的影响

穆思薇 姚昭 王非 (通讯作者)

西安交通大学外国语学院, 西安, 710049, fei@mail.xjtu.edu.cn

摘 要 口译是一种强化的双语转换活动, 口译经验丰富者表现出明显的双语任务转换优势。已有研究表明, 双语任务转换与非语言任务转换具有相似的神经机制, 因此, 口译员的双语转换经验可能会影响其在非语言任务转换中的表现。本研究采用双价“颜色-形状”转换任务, 考察了口译专业研究生(一年口译训练经验)和普通大学生(无口译训练经验)两组被试在非语言任务转换中的认知灵活性。在本实验中, 两组被试分别完成单任务转换任务(判断颜色或形状)和混合任务转换任务(根据线索提示进行颜色或形状的判断), 以转换代价和混合代价为认知转换能力的测量指标。结果显示, 两组被试的混合代价无显著差别, 但口译学生组转换代价小于普通学生组。这一结果表明, 密集的口译活动的确会增强非语言任务转换能力, 且具体任务转换控制能力与

口译员接受的口译训练时长有一定关系。以往研究多在低要求的单价转换任务中发现口译员或双语者的局部转换能力,而在本实验中,口译学生组在双价任务转换实验中也表现出转换代价优势,表明口译学生具有瞬间、具体的局部认知转换能力。本研究结论进一步验证了口译经验不仅可加强口译员双语转换能力,且同样促进了其非语言转换能力。这一结论为口译研究提供了研究思路,对口译人才培养具有借鉴意义。

加工难度对概念隐喻的影响及其机制

沈文意 于战宇(通讯作者)

江苏师范大学教育科学学院,徐州,221116, 523506548@qq.com

摘要 隐喻是一种常见的认知方式,根植于日常生活的思维和行为中,在日常生活和特殊儿童干预治疗等领域中应用广泛。概念隐喻指由具身经验向抽象概念进行映射,从而理解抽象概念的过程,对理解语言认知与教育实践运用起重要作用。目前,概念隐喻的理论内容不断的更新和发展,但受限于研究关注的缺乏,加工难度对概念隐喻的影响机制的系统性有待提高。本研究在剖析加工难度对概念隐喻理论、知觉符号理论以及语言学角度等概念隐喻的影响机制与理论进展基础上,围绕始源概念域、目标概念域以及始源概念域向目标概念域映射三个核心成分,从加工难度的视角对概念隐喻进行重新梳理与分类。最后,基于概念隐喻的发展轨迹、特殊群体、认知神经机制研究现状,提出未来研究可以对比科学、新颖和传统概念隐喻间,具体和抽象概念隐喻间的加工机制及认知神经基础差异。进一步地,未来可尝试引入社会心理学的相关范式,通过更有生态效度的情景实验法,以提高概念隐喻研究的认知生态性,揭示社会交往情境下个体如何获取身体经验,并结合认知神经科学研究方法揭示概念隐喻的脑机制。加工难度与其他因素对概念隐喻的交互影响机制,有助于为后续研究提供方法与视角方面的启示,深化概念隐喻的理论内容和实践意义。

The influence and mechanism of difficulty on conceptual metaphor

Shen Wenyi, Yu Zhanyu (corresponding author)

School of Educational Science, Jiangsu Normal University, Xuzhou, 221116, 523506548@qq.com

Abstract: Metaphor is a common way of cognition, rooted in the mind and behavior of daily life. It is widely used in daily life and special children's intervention and treatment. Conceptual metaphor refers to the process of mapping from embodied experience to abstract concepts for understanding abstract concepts. It plays an important role in understanding language cognition and educational practice. At present, the theoretical content of conceptual metaphors is constantly updated and developed, but due to the lack of research attention, the systematic of the impact mechanism in processing difficulty on conceptual metaphors needs to be improved. Based on the analysis of the impact mechanism and theoretical progress of difficulty on conceptual metaphor, this research focuses on the three core components of source conceptual domain, target conceptual domain, and the mapping of source conceptual domain to target conceptual domain. From the perspective of difficulty, we re-organize and classify conceptual metaphor. Finally, based on the development trajectory, special groups, and the cognitive neural mechanisms of conceptual metaphor, it is proposed that future study can compare the processing mechanism and cognitive neural basis differences among scientific, novel and traditional conceptual metaphor, or between concrete and abstract conceptual metaphor. Furthermore, this research attempts to combine cognition and paradigms of social psychology which have more ecologically valid situational experiment methods, to improve the cognitive ecology of conceptual metaphor research and reveal how individuals gain physical experience in social interaction situations. Neuroscience research methods reveal the brain mechanism of conceptual metaphors, as well as the interaction mechanism of processing difficulty and other factors on conceptual metaphors, which will help to provide enlightenment on methods and perspectives for subsequent research. It can also deepen the theoretical content and practical significance of conceptual metaphors.

急性社会压力对第三方帮助行为的影响

石鹭琳¹ 常晶晶¹ (通讯作者)

¹ 厦门大学心理学研究所, 厦门, 361000

摘要 第三方行为在日常生活中广泛存在, 例如警察执法、路人见义勇为等, 在社会规范的建立和维持过程中发挥重大作用。第三方行为多发生在急性压力下, 但目前关于急性压力如何影响第三方行为的研究较少, 且结果并不一致。此外, 第三方行为包括第三方惩罚和第三方帮助, 已有文献集中于探讨第三方惩罚机制及急性压力影响其的作用机制, 有关第三方帮助行为及急性压力如何影响该行为的研究尚处于初步阶段。本研究使用第三方帮助范式和特里尔社会压力测试(Trier Social Stress Test, TSST)考察急性社会压力下被试的第三方帮助行为, 并探索分配方案不公平程度的调节作用。研究发现, 对于被试的投币个数, 分配方案不公平程度的主效应显著, 即非常不公平条件下第三方被试的助人力度显著大于较不公平条件, 较不公平条件下的助人力度显著大于公平条件。急性压力的主效应不显著, 分配方案不公平程度和急性压力的交互作用不显著。对于被试的投币频率, 分配方案不公平程度的主效应显著, 即非常不公平条件下和较不公平条件下第三方被试的助人力度显著大于公平条件, 较不公平条件下的助人力度和非常不公平条件下的助人力度没有显著差异。急性压力的主效应不显著, 分配方案不公平程度和急性压力的交互作用不显著。以上结果表明在仅有助人选项的情况下, 急性社会压力对第三方帮助行为没有显著影响。本研究丰富了第三方行为领域的研究, 为急性压力如何影响第三方行为提供新的实验证据, 为后续研究提供了更多思路。

关键词 急性压力, TSST, 第三方帮助

The impact of acute social stress on third-party helping

LULIN SHI,¹ JINGJING CHANG¹

¹ Institute of Psychology, Xiamen University, Xiamen, 361000

Abstract: Third-party behaviors are widespread in daily life, such as police law enforcement, passerby's act of courage, etc. They play a major role in the establishment and maintenance of social norms. Third-party behaviors mostly occur under acute stress, but there are few studies on how acute stress affects third-party behaviors, and the results are not consistent. In addition, third-party behavior includes third-party punishment and third-party helping. The existing literature has focused on exploring the mechanism of third-party punishment and the mechanism by which acute stress affects it. Research on third-party helping behavior and how acute stress affects this behavior is still at the preliminary stage. This study uses the third-party help paradigm and the Trier Social Stress Test to investigate the third-party help behavior of participant under acute social stress, and to explore the moderating effect of the unfairness of the distribution plan. The study found that the main effect of the unfairness of the distribution plan is significant for the number of coins invested by the participants, that is, under very unfair conditions, the helping of third-party participants was significantly greater than the less fair conditions, and the helping under less fair conditions was significantly greater than the fair conditions. The main effect of acute stress is not significant, and the interaction between the degree of unfairness of the allocation plan and acute stress is not significant. For the frequency of coin insertion by the participants, the main effect of the degree of unfairness of the distribution plan is significant, that is, the third-party participants' assistance under very unfair conditions and under less fair conditions is significantly greater than that under fair conditions and under less fair conditions. There is no significant difference between the intensity of helping under less fair conditions and the intensity of helping under very unfair conditions. The main effect of acute stress is not significant, and the interaction between the degree of unfairness of the allocation plan and acute stress is not significant. The results show that when there is only a helping option, acute social stress has no significant impact on third-party help behavior. This study enriches the research in the field of third-party behavior, provides new experimental evidence for how acute stress affects third-party behavior, and provides more ideas for follow-up research.

Keywords: acute stress, TSST, third-party helping

外显情绪判断任务中自我相关性影响情绪词加工的时间进程

宋一丹¹ 张琪¹ 李卫君^{1*} (通讯作者)

辽宁师范大学脑与认知神经科学研究中心, 大连, 116029

*通讯作者 李卫君 辽宁师范大学脑与认知神经科学研究中心, 大连, 116029, li_wj@126.com

摘要 现实生活中的情绪信息经常伴随着相关人物出现, 与自我相关的情绪性刺激能够更有效地激发个体的动机性注意。因此, 判断情绪信息是否与自我相关, 并对自我和他人情绪进行区分在社会交往中非常重要。本研究利用 ERPs 技术, 要求 22 名被试对呈现在名字 (自我和他人) 之后, 不同词性 (名词和形容词) 的情绪词 (积极和消极) 进行效价判断, 考察在外显情绪判断任务中, 自我相关信息影响情绪词加工的动态时间特征及二者的整合机制。结果发现, 在情绪词加工早期, 消极词比积极词诱发了波幅更大的 N1, 表明个体对高唤醒刺激的加工存在消极偏向。重要的是, 在自我名字条件下, 积极词比消极词诱发了波幅更大的 P2 和波幅更小的 N400, 而在他人名字条件下, 积极词和消极词的波幅不存在显著差异。P2 的结果表明自我名字的呈现激活了个体的自我积极概念, 从而使积极词比消极词自动捕获了更多的注意资源。N400 的结果则表明相比于他人, 个体将自我和积极信息进行整合时消耗了更少的认知资源。此外, 自我与情绪性名词和形容词之间的相互作用不存在显著差异, 说明词性不是影响自我对情绪产生偏向的因素。综上, 本研究结果表明, 在外显情绪判断任务中, 自我相关信息促进积极词的加工不仅出现在晚期的语义整合阶段, 而且在早期的词形分析阶段就已经开始, 且符合自我积极偏向假说。

The Time Course of Self-relevance Affecting Emotional Words Processing in Explicit Emotional Tasks

Yidan Song¹, Qi Zhang¹, Weijun Li^{1*}

Research Center of Brain and Cognitive Neuroscience, Liaoning Normal University, Dalian, China

Abstract: In real life, emotional information is often accompanied with relevant person, and self-related emotional stimuli can efficiently stimulate individuals' motivational attention. Therefore, it is very important to judge whether emotional information is related to self and to distinguish between self and others' emotions is of significance in social interaction. In the present study, by using ERPs, we asked 22 subjects to judge the valence of emotional words (positive and negative) with different word class (nouns and adjectives) that appeared after the name (self and others), exploring the dynamic temporal characteristics of self-related information affecting emotional information and their integration mechanism in explicit emotional tasks. ERP results showed that negative words elicited larger N1 amplitudes than positive words in the early processing stage, indicating that there was a negative bias in the processing of high arousal stimuli. More importantly, positive words paired with self-names elicited significantly larger P2 amplitude and smaller N400 amplitude than negative words paired with self-names. Nevertheless, there was no significant difference between the positive and negative words paired with other names in the ERPs amplitude. The P2 results indicated that the presentation of self name activated the individual's positive self-concept, so that positive words automatically captured more attention resources than negative words. The N400 results may demonstrate that compared to others, individuals consumed fewer cognitive resources to integrate self and positive information. In addition, there was no significant difference in the interaction between self and emotional nouns and adjectives, indicating that word class was not a factor affecting the self's bias towards emotions. In conclusion, self-related information not only promoted the semantic processing of positive words in the later stage, but also in the early stage of word form analysis, supporting the self-positive bias hypothesis.

摘要 在视觉搜索任务中, 类别特异的注意控制定势 (category-specific attentional control setting, cACS) 帮助注意系统选择与目标类别相匹配的刺激, 认知系统对相关刺激的神经反应增强。注意选择过程包括自上而下加工和显著性加工, 但两种加工对 cACS 的作用机制尚不清楚。为考察两种注意选择加工在不同类型 cACS 加工中的作用, 本研究采用多数函数任务 (majority function task, MFT) 的变式和 oddball 范式, 通过改变认知负载控制自上而下的加工, 通过改变刺激的新异水平来控制显著性加工。此外, 将目标定义为基于语义概念的范畴的数字和字母, 以及基于原型范畴的“O”型和“X”型图案两种, 以此考察不能类型的 cACS 的作用差异。研究结果发现: 1) 自上而下加工影响 cACS, 认知负载主效应显著: 相比于低认知负载, 高认知负载的目标识别正确率更低, 反应时更长。2) 显著性加工是否影响 cACS 与目标反应有关: 当显著性水平与目标反应无关时, 对不同 cACS 的影响较小; 当显著性水平与目标反应相关时, 对两种 cACS 均产生显著影响, 且自上而下加工和显著性加工对 cACS 产生注意整合。3) 当刺激新异时, 基于原型的 cACS 表现显著优于基于语义的 cACS, 表明基于原型的 cACS 可能涉及更多自下而上的加工。总的来说, 研究结果证实了注意选择的自上而下和显著性加工及其整合过程能够影响不同类别的 cACS, 研究结果从类别信息加工层面探讨注意过程, 并为现实中类别信息识别等提供了理论证据。

The effects of top-down and salience processing on category-specific attentional control settings

Xiaoya Sun², Fangyuan Ou², Jingjing Zhao², Yunpeng Jiang^{1,2,3}, Xia Wu^{1,2,3}

1 Key Research Base of Humanities and Social Sciences of the Ministry of Education, Academy of Psychology and Behavior, Tianjin Normal University, Tianjin 300387, China

2 Faculty of Psychology, Tianjin Normal University, Tianjin 300387, China

3 Tianjin Social Science Laboratory of Students' Mental Development and Learning, Tianjin 300387, China

Abstract: In visual search tasks, category-specific attentional control setting (cACS) helps the attention system select stimuli that match the target category, and the neural response of cognitive system to the relevant stimuli will be enhanced. Attentional selection processing includes top-down process and salience process, but the mechanism of both types of processes on cACS is still unclear. To investigate the role of the two attentional selection processes in different types of cACSs, the present study employed a variation of the majority function task (MFT) and the oddball paradigm. Top-down process was controlled by changing the cognitive load and salience process was controlled by changing the stimuli surprise level. In addition, to investigate the differences in the effects of cACSs, we defined the targets as numbers and letters in the semantic-based category, and "O" type and "X" type patterns in the prototype-based category. The findings revealed that 1) top-down process affected cACS with a significant main effect of cognitive load: compared with lower cognitive load, higher cognitive load resulted in lower correct target recognition rates and longer response times. 2) whether salience process affected cACS was related to target response: when salience was irrelevant to target response, the effect on different cACSs was smaller; when salience level was relevant to target response, the effect on both types of cACSs was significant, moreover, top-down process and salience process produced attentional integration of cACS. 3) When the stimuli were oddball stimulus, prototype-based cACS performed better than semantic-based cACS, suggesting that prototype-based cACS may

involve more bottom-up processing. In summary, the results of this study confirm that top-down and salience process of attentional selection and their interaction process can influence different categories of cACSs. The findings broaden the view of attentional process at the level of category information processing and provide theoretical evidence for realistic category information recognition, etc.

语言类型对熟练双语者道德判断影响:来自藏族被试的证据

覃朗宽¹ 秦泽龙

四川师范大学

四川师范大学心理学院, 成都, 610068, qinlangkuan@126.com

摘要 道德外语效应指外语呈现相同意义材料会使被试更倾向于功利主义选择。虽然近年来有研究发现, 道德外语效应不能出现在高熟练度双语被试中, 但有学者认为即便是高熟练度双语被试, 语言的外语性, 即母语与目标语及其承载文化之间的相对心理距离也可能影响被试的判断。本研究基于汉藏语系被试, 设计了3个实验, 对这一设想进行检验。

3个实验被试均采用“滚雪球”的方式进行招募, 实验1实验材料是天桥困境和亚洲疾病问题。采用单因素被试间设计, 自变量为语言类型(汉文和藏文), 因变量为被试选择道义主义倾向所占比例, 采用线上和线下相结合的方式, 考察视觉通道下的道德外语效应。收集有效数据95份。结果表明, 被试在天桥困境中的选择无显著差异, $\chi^2(1, N=95)=3.517, p=0.061$ 。在亚洲疾病问题中, 不论是在收益框架, $\chi^2(1, N=95)=0.78, p=0.37$; 还是损失框架 $\chi^2(1, N=95)=0.49, p=0.48$, 语言类型都没有影响被试的选择。

实验2与实验1类似, 区别在于实验2考察的是听觉通道下的道德外语效应。一共收集40份有效数据。结果显示, 在天桥困境中, 语言类型不影响被试的选择, $\chi^2(1, N=40)=0.20, p=0.88$ 。在亚洲疾病问题中, 无论是在收益框架中 $\chi^2(1, N=40)=0.16, p=0.69$; 还是损失框架中 $\chi^2(1, N=40)=0.02, p=0.89$, 两种语言没有出现差异。

实验3使用的是道德判断CNI模型, 为的是更细致地考察被试在使用两种语言时的差异。一共收集有效数据117份。结果显示, 在考虑语言分组之时, CNI模型的拟合良好, $G^2(2)=2.15, p=0.34$ 。两组被试在N参数上差异显著, $\Delta G^2(1)=19.54, p<0.01$; 在C参数上差异显著, $\Delta G^2(1)=6.24, p<0.05$; 在I参数上差异不显著, $\Delta G^2(1)=0.90, p=0.34$ 。结果表明, 语言类型影响了被试对结果和规则的敏感性, 具体来说, 汉语“提高”了藏族被试功利主义倾向(C), 以及对社会道德规范(N)的敏感性, 即语言激活了该语言所处文化下所对应的道德观。

总的来说, 本研究说明, 在高熟练度的双语被试中, 语言外语性对被试道德判断的影响是存在的, 但这一影响需要通过设计更为精巧的实验中才能体现。

The influence of language type on the moral judgment of skilled bilinguals: evidence from Tibetan subjects

Qinlangkuan, Qinzelong

Sichuan Normal University

School of psychology, Sichuan Normal University, Chengdu, 610068, qinlangkuan@126.com

Abstract: Moral foreign language effect refers to the fact that when materials are presented with the same meaning in foreign language as the mother tongue, skilled bilinguals are inclined to utilitarian choices. Although recent studies have found that moral foreign language effects usually appear in highly proficient bilingual subjects inapparently, some scholars believe that skilled bilinguals' judgment will be influenced by the foreign language nature of the language, which means the relative psychological distance between the mother tongue and the foreign language for

subjects. Based on the subjects of the Sino-Tibetan language department, three experiments were designed to test this assumption.

The three kinds of experimental subjects were recruited in a "snowball" way. The experimental materials of Experiment 1 contained the flyover dilemma and the Asian disease problem. A single-factor inter-subject design is adopted, the independent variable is the language type (Chinese and Tibetan), and the dependent variable is the proportion of the subjects' choice of moralism. The online and offline methods are combined to examine moral foreign language effect under the visual channel. 95 valid data were Collected. The results show that there is no significant difference in the choices of the subjects in the flyover dilemma, $\chi^2(1, N=95) = 3.517, p=0.061$. In the Asian disease problem, whether in the benefit frame, $\chi^2(1, N=95)=0.78, p=0.37$; or the loss frame $\chi^2(1, N=95)=0.49, p=0.48$, the language type has no effect on Participant's choice.

Experiment 2 is similar to Experiment 1, the difference is that the moral foreign language effect were examined under the auditory channel in Experiment 2. A total of 40 valid data were collected. The results show that in the flyover dilemma, the choice of subjects won't be affected by the language type, $\chi^2(1, N=40)=0.20, p=0.88$. In the Asian disease problem, whether it is $\chi^2(1, N=40)=0.16, p=0.69$ in the benefit framework, or $\chi^2(1, N=40)=0.02, p=0.89$ in the loss framework, there is no difference in such two languages.

The CNI model of moral judgment were used in Experiment 3, in order to examine the differences in the subjects' use of the two languages in detail. A total of 117 valid data were collected. The results show that when the language grouping is considered, the CNI model fits well, with $G^2(2)=2.15, p=0.34$. There is a significant difference between the two groups of subjects on the N parameter, $\Delta G^2(1)=19.54, p<0.01$; the difference is significant on the C parameter, $\Delta G^2(1)=6.24, p<0.05$; the difference is not significant on the I parameter, $\Delta G^2(1)=0.90, p=0.34$. The results show that the subjects' sensitivity to results and rules were affected by the language type. Specifically, Chinese "improves" the Tibetan subjects' utilitarian tendency (C) and their sensitivity to social ethics (N), which means language activate the corresponding moral values in the culture of the language.

In general, this study demonstrates that in highly proficient bilingual subjects, the influence of foreign language on subjects' moral judgments exists, but this kind of influence needs to be reflected in further experiments.

自我感知的无用对中国老年人认知功能的影响研究

陶迎香¹ 张静平² (通讯作者)

1 中南大学湘雅护理学院, 长沙, 410006

2 中南大学湘雅护理学院, 长沙, 410006, jpzhang1965@163.com

摘要 目的:了解我国老年人自我感知的无用对认知功能的影响,为提高老年人的生活质量、促进积极老龄化提供参考。方法:基于中国老年健康影响因素跟踪调查(CLHLS)2018年数据,采用简易智力状态检查量表(MMSE)评估认知功能水平,自我感知的无用是采用一个单独的问题来衡量的:“随着年龄的增长,你是不是觉得自己更没用了?”并按频率编码为:高(总是和经常)、中(有时)和低(很少和从不)。采用均值(±标准差)、例数(百分比)描述性分析,采用 Mann-Whitney U Test 检验探究各变量在有无认知障碍上的差异,采用二分类 logistic 回归探究自我感知的无用对老年人认知功能的影响。结果:共采集到 14500 名老年人数据资料,自我感知无用高频组 2665 人(18.4%),中频组 4306 人(29.7%),低频组 5994 人(41.3%),无法回答 1535 人(10.6%)。MMSE 平均分(23.27±8.29)分,有认知障碍 5376 人(37.1%),无认知障碍 9124 人(62.9%)。Mann-Whitney U Test 检验结果显示年龄大 85 岁以上、女性、居住地为城镇、丧偶、不吸烟、不喝酒、不经常锻炼、感知无用高频的老年人认知障碍的发生风险较高;Logistic 回归模型在调整了年龄、性别、居住地、婚姻状况、是否抽烟、是否喝酒、是否经常锻炼之后,不同程度的自我感知无用与认知功能仍存在显著关系,以高频组为参考,自我感知无用低频组出现认知功能障碍的风险降低。(P<0.001, OR=0.03, 95% CI: 0.03-0.05) 结论:高频的自我感知无用与认知功能障碍的发生显著相关,需要更多的干预方法减轻老年人的自我感知无用,从而减缓认知障碍的发生,促进我国积极老龄化。

The effect of self-perceived uselessness on cognitive function in Chinese elderly

Tao Ying-Xiang¹, Zhang Jing-Ping¹

¹ XiangYa Nursing School of Central South University, Changsha, China

Abstract: Objectives: To understand the effect of self-perceived uselessness on cognitive function of the elderly in China, and to provide reference for improving the quality of life of the elderly and promoting active aging. **Methods:** Based on 2018 data from the Chinese Follow-up Survey on Health Influencing Factors in Aging (CLHLS), cognitive function was assessed by MMSE. Self-perceived uselessness was measured by a single item: “with age, do you feel more useless?” and coded by frequency: high (always and often), moderate (sometimes) and low (seldom and never). The M($\pm$ SD) and N (%) were used for descriptive analysis. The mann-Whitney U Test was used to explore the difference between variables with or without cognitive impairment. The binary logistic regression was used to explore the impact of self-perceived uselessness on the cognitive function of the elderly. **Results:** A total of 14,500 elderly data were collected, There were 2665 people (18.4%) in the self-perceived useless high-frequency group, 4306 people (29.7%) in the mid-frequency group, 5994 people (41.3%) in the low-frequency group, and 1535 people (10.6%) who could not answer. The mean MMSE score was (23.27 $\pm$ 8.29). There were 5376 (37.1%) patients with cognitive impairment and 9124 (62.9%) patients without cognitive impairment. The results of Mann-Whitney U Test showed that the elderly who were over 85 years old, female, lived in the town, widowed, did not smoke, did not drink, did not exercise regularly, and experienced high frequency of perceptual useless had a higher risk of cognitive impairment. After adjusting for age, sex, residence, marital status, smoking, drinking and regular exercise, the Logistic regression model showed a significant relationship between different levels of self-perceived uselessness and cognitive function. Using the high frequency group as reference, the low frequency group of self-perceived uselessness had a reduced risk of cognitive dysfunction ($P < 0.001$, OR = 0.03, 95% CI: 0.03 0.05) **Conclusions:** High-frequency self-perceived uselessness is significantly related to the occurrence of cognitive dysfunction. More intervention methods are needed to reduce the self-perceived uselessness of the elderly, so as to slow down the occurrence of cognitive impairment and promote active aging in China.

汉语歧义消解认知加工的研究方法述评

王 芳¹ 肖少北² (通讯作者)

¹ 海南师范大学心理学院, 海口, 571158

² 海南师范大学心理学院, 海口, 571158, 通讯作者 E-mail xiaoshb@hainnu.edu.cn

摘 要 汉语歧义消解认知加工的研究方法主要有非即时加工实验方法与即时加工实验方法两种方法。非即时加工实验方法主要指行为实验法, 其指标多为反应时, 采用的范式主要有词汇判断任务、意义适合性判断任务、句子验证任务、跨通道启动任务、移动窗口技术等, 侧重于刺激材料的呈现以及实验任务的设置。其中, 跨通道启动任务的基本要求是以听觉方式呈现刺激材料, 以视觉方式呈现探测词, 可以与其他多任务范式结合使用。而即时加工实验方法则主要采用眼动记录技术和事件相关电位脑电记录技术, 侧重于即时测量被试所作反应及相应的脑电效应, 为汉语歧义消解加工过程提供即时测量数据。无论是非即时加工实验方法中的各种经典实验范式, 还是即时加工实验方法中眼动记录技术和脑电技术, 都为汉语歧义消解认知加工的研究工作提供了有效工具, 但也各有其局限性。未来的研究可选择将非即时加工实验方法和即时加工实验方法结合使用, 以避免或减少单一方法局限性所带来的研究结论的不确定。同时, 也可尝试应用正电子发射断层摄像术与功能性磁共振成像术, 有助于将行为数据与生理数据结合起来, 更加准确地揭示汉语歧义消解认知加工过程的规律。

A Review of the Research Methods of Cognitive Processing in Chinese Ambiguity Resolution

WANG Fang, XIAO Shao-bei

College of Psychology, Hainan Normal University, Haikou 571158

Abstract: There are two main research methods in cognitive processing of Chinese ambiguity resolution: off-line measures and on-line measures. The off-line measures mainly refer to the behavioral experimental methods, whose indicator is mostly reaction time. The paradigms adopted mainly include word judgment task, meaning suitability judgment task, sentence verification task, cross-channel initiation task, mobile window technology, etc., focusing on the presentation of stimulus materials and the setting of experimental tasks. Among them, the basic requirement of cross-channel initiation task is to present the stimulus materials in auditory mode and probe words in visual mode, which can be combined with other multitask paradigms. The on-line measures mainly adopt eye movement recording technology and event-related potential recording technology, focusing on the on-line measurement of the subjects' responses and corresponding electroencephalogram effects, and providing on-line measurement data for the processing of Chinese ambiguity resolution. Both the classical experimental paradigms in the off-line processing experimental methods and the eye movement recording technology and event-related potential recording technique in the on-line processing experimental methods provide effective tools for the research of Chinese ambiguity resolution cognitive processing, but each has its own limitations. Future research may choose to combine the off-line processing experimental methods and the on-line processing experimental methods, in order to avoid or reduce the limitations of single method research. At the same time positron emission tomography and functional magnetic resonance imaging can also be used to combine behavioral data with physiological data, so as to reveal more accurately the rules of cognitive processing in Chinese ambiguity resolution.

Keywords: Chinese, ambiguity resolution, off-line measures, on-line measures

基于位置的奖赏干扰子抑制的眼动研究

王相珍 冉德育 秦泽杰 涂艳艳 任衍具 (通讯作者)

山东师范大学心理学院, 济南, 250358, renyanju@gmail.com

摘要 研究者们提出信号抑制假说用于解决刺激驱动假说和目标定向假说的争议。该假说认为突显的刺激会产生一个注意优先性的信号, 这一信号有可能自动地捕获观察者的注意, 也可能被观察者所抑制。然而奖赏学习的研究表明人们有强烈的倾向去关注奖赏线索, 即使这些线索与他们当前的目标或任务无关, 当奖励线索与目标无关时, 它们的存在可能会损害认知表现。这种现象被称为奖赏驱动的干扰, 也就是任务无关、奖励相关的干扰刺激影响观察者搜索目标项目的绩效。先前的研究中所采用的奖赏信息一般是与干扰项特征建立联结, 将奖赏信息与干扰项位置建立联结是否会观察到不一样的现象? 实验室近期的研究发现奖赏位置的干扰子可以被显著的抑制, 为信号抑制假说提供了基于位置抑制的实验证据。本研究采用眼动追踪技术, 期望为基于位置的干扰子抑制提供眼动方面的证据。实验采用奇异项搜索模式, 在奇异项存在的试次中存在一个高奖联结的位置, 一个低奖联结的位置和两个无奖联结的位置, 被试抑制住哪种位置上的奇异项就会获得相应类别的奖赏反馈。结果发现当奇异项出现在有奖位置时与奇异项出现在无奖位置相比, 反应时明显更快; 且高奖位置的首次眼跳潜伏期比无奖位置的首次眼跳潜伏期长。研究结果表明: 奖赏位置的干扰子可以被显著的抑制, 为信号抑制假说提供了基于位置抑制的眼动证据。

Location-based reward distractor suppression: An eye tracking study

Xiangzhen Wang, Deyu Ran, Zejie Qin, Yanyan Tu, Yanju Ren

School of Psychology, Shandong Normal University, Jinan, 250358, renyanju@gmail.com

Abstract: Signal suppression hypothesis has been proposed to solve the controversy between stimulus-driven hypothesis and goal-directed hypothesis. The hypothesis holds that the salient stimulus will produce a signal of attention priority, which may automatically capture observers' attention or be suppressed by observers. However, the findings of reward learning show that reward cues have a strong tendency to capture attention of observers. Even if these cues are not related with their current goals or tasks, reward cues may impair cognitive performance when they are not related to goals of observers. This phenomenon is called reward-driven distraction, that is, task independent and reward related distraction affect the performance of the observer in searching the target item. The reward information used in previous studies is usually associated with the characteristics of the distractor. Will the different phenomenon be observed when the reward information is associated with the location of the distractor? Recent studies in the laboratory have found that the distractors associated with reward location can be significantly suppressed, which provides experimental evidence for location-based inhibition of the signal inhibition hypothesis. In this study, the eye tracking is used to provide oculomotor evidence for location-based suppression. The experiment adopts the singleton detection mode. There are a high-reward, a low-reward and two non-reward positions in the singleton-present trials. The participants will obtain the corresponding reward feedbacks if they inhibit corresponding reward locations. The results show that when the singleton appears in the reward position, the reaction time is significantly faster than when the singleton appears in the non-reward position; The latency of the first saccade in the high reward locations was longer than that in the non-reward locations. The results show that the distractors of reward location can be significantly suppressed, which provides oculomotor inhibition evidence for the signal suppression hypothesis.

Keywords: selective attention, signal suppression hypothesis, reward location, distractor inhibition

词频影响汉语口语中交集歧义字段的切分——来自眼动的证据

王宥惜^{1,3} 马国杰² 申薇^{1,3}

1 杭州师范大学, 杭州, 311121

2 陕西省行为与认知神经科学重点实验室, 心理学院, 陕西师范大学, 西安, 710062

3 浙江省认知障碍评估技术研究重点实验室, 杭州, 311121, kate2009dx@sina.com

摘要 交集歧义字段在汉语中普遍存在。例如, 四字交集歧义字段“移动物体”可以组成三个不同的词汇: “移动”(AB)、“物体”(CD)以及中间词“动物”(BC)。大量的前人研究已经对汉语阅读中交集歧义字段的切分机制进行了探索。然而, 目前仍不清楚听觉形式下交集歧义字段的词切分机制以及词汇激活情况。由于, 与视觉信息相比, 听觉信息具有时间序列性以及不确定性的特点, 我们假设, 听觉形式下交集歧义字段的词切分机制以及词汇激活情况也许会与视觉形式下有所不同。因此, 本研究旨在探究 1): 在听觉四字交集歧义字段 ABCD 的识别过程中, 中间词(BC)是否能够语义激活; 2): 词频因素如何影响听觉交集歧义字段中词汇的切分和激活。在当前的研究中, 我们操纵了交集歧义字段(ABCD)中 BC 词的词频。在高频条件下, BC 词频高于 AB 和 CD 词频(如“移动物体”), 在低频条件下, BC 词频低于 AB 和 CD 词频(如“发现金属”)。实验中, 被试在听目标四字交集歧义字段(如, “移动物体”)的同时, 观看由一个 BC 语义相关词(如, “昆虫”, 与“动物”语义相关)和两个无关干扰词组成的视觉屏幕, 其在视觉屏幕上的眼动轨迹会被记录下来。实验任务要求被试判断视觉屏幕中是否有与听觉目标有语义相关的词。实验结果显示, 落在 BC 语义相关词上的注视点比干扰词更多, 这说明四字交集歧义字段的中间词(BC)的语义信息可以被激活。更重要的是, 我们发现词频因素影响了交集歧义字段的切分过程, 即只在高频条件下观察到了语义竞争效应, 而并未在低频条件下观察到。该发现意味着词频因素在汉语口语中交集歧义字段的切分过程中起着关键性的作用, 高频中间词更有可能被更高程度地激活, 而低频中间词不能或者只能很小程度被激活。我们的研究为共同激活假设提供了证据。

Word frequency influences the segmentation of the overlapping ambiguity strings (OASs) in spoken Chinese: evidence from eye-tracking

Youxi Wang^{1,3}, Guojie Ma² and Wei Shen^{1,3}

¹ Institute of Psychological Sciences, Hangzhou Normal University, Hangzhou, China

³ Shaanxi Key Laboratory of Behavior and Cognitive Neuroscience, School of Psychology, Shaanxi Normal University, Xi'an, China

Abstract: The overlapping ambiguity strings (OASs) are common in Chinese. For example, the 4-character OAS “移动物体” (ABCD) can compose three different words: “移动” (AB, move), “物体” (CD, object) and a middle word “动物” (BC, animal). A number of prior studies have investigated that the mechanism of segmenting the OASs in Chinese reading. However, the word segmentation mechanism and word activation of OASs remains less clear in the spoken modality. Given that auditory stimuli is time-locked and of uncertainty compared to the visual stimuli, we assumed that segmentation mechanism underlying the spoken OASs may be different from that in the visual modality. The present study aims to investigate 1) whether or not the middle words could be semantically activated in the spoken OASs; 2) how word frequency influences the word segmentation and activation of spoken OASs. In the current study, we manipulated the word frequency of the middle words (i.e., BC) in the OASs. In the high-frequency condition, the frequency of BC was higher than that of AB and CD words (e.g., 移动物体) and in the low-frequency condition, frequency of BC was lower than that of AB and CD words (e.g., 发现金属). In the study, participants' eye-movements on the visual display composing of a BC semantic-related word (e.g., “昆虫”, beetle, semantic-related to BC “动物”, animal) and two distractors were recorded when hearing the target 4-character OAS (e.g., “移动物体”) simultaneously. The task was to judge whether there was a semantic associate of the spoken target on the visual display. Results showed that more fixations fall on the BC semantic-related words than distractors, suggesting that the semantic information of the middle words in the 4-character OASs can be activated. More importantly, we found that the segmentation of OASs was influenced by word frequency such that the semantic competition effect was only observed in the high-frequency condition and absent in the low-frequency condition. The findings suggest that the word frequency plays a critical role during the segmentation of OAS in spoken Chinese and high-frequency middle words were more likely to be activated to a higher degree and low-frequency words were not activated or only activated to a lower degree. Our study provides supporting evidence for the multiple activation hypothesis.

基于希望感理论对大学生无望型抑郁的干预

武文慧 李杰 (通讯作者)

内蒙古师范大学心理学院, 呼和浩特, 010020, healthlj2004@163.com

摘要 抑郁是大学生中常见的消极情绪, 无望抑郁是其中重要的亚型。若不进行干预, 将可能发展成严重心理问题。积极心理学倡导关注人的积极品质而非心理问题, 主张通过培养积极品质来挖掘个体潜力并获得良好生活, 而希望感正是其中一种。希望感作为一种积极的心理资本, 对改善大学生的无望抑郁情绪, 提升心理健康水平具有独特作用。本研究在 CiteSpace 文献可视化技术的支持下, 从积极心理学的角度出发, 避开抑郁的危险因素, 直接关注抑郁恢复的保护性因素, 为个体重获希望缓解抑郁提供了新的路径。首先, 通过普查大学生抑郁情绪和希望感来筛选被试; 其次, 采用希望疗法干预抑郁情绪。在此基础上, 利用心理测量法和 fNIRS 技术评定抑郁情绪和希望感的水平及干预效果。

Intervention of Hopeless Depression in College Students Based on Sense of Hope Theory

WU Wenhui, LI Jie

School of Psychology, Inner Mongolia Normal University, Hohhot 010022, China

Abstract: Depression is a common negative emotion among college students, among which hopeless depression is an important subtype. Without intervention, serious psychological problems may develop. Positive psychology advocates focusing on people's positive qualities rather than psychological problems. It advocates cultivating positive qualities to tap individuals' potential and achieve a good life, and the sense of hope is one of them. As a kind of positive psychological capital, the sense of hope plays a unique role in improving the hopeless depression and mental health of college students. With the support of CiteSpace literature visualization technology, this study, from the perspective of positive psychology, avoided the risk factors of depression and directly focused on the protective factors of depression recovery, providing a new path for individuals to hope to alleviate depression. First of all, we screened the students by examining their depression and hope. Secondly, hope therapy was used to interfere with depression. On this basis, the level of depressive mood and sense of hope and the effect of intervention were assessed by psychometric and fNIRS techniques.

Keywords: hope, depression, fNIRS

学习判断改变记忆表现的元分析

徐杜红, 赖嘉飏, 沐守宽

闽南师范大学 教育科学学院, 福建 漳州 363000

摘要 学习判断是个体对于新近学习内容在未来测验中正确提取信心的预见性估计。它是记忆研究中经常使用的一种评估个体元认知能力的方法。然而, 让学习者进行学习判断可能会改变他们的记忆表现, 这被称为学习判断反应性, 目前对于学习判断反应性的存在有无及表现方向尚存争议。本研究使用元分析探究学习判断对记忆表现的影响, 结果表明: (1) 存在学习判断的正反应性($\text{hedges}'g=0.202$), 即进行学习判断会使个体记忆表现更佳; (2) 学习材料类型对学习判断的反应性存在调节作用, 相比使用低相关词对($\text{hedges}'g=0.069$)、混合词表($\text{hedges}'g=0.143$)以及文本材料($\text{hedges}'g=0.124$), 使用高相关词对($\text{hedges}'g=0.359$)作为学习材料所表现出学习判断反应性更强; (3) 学习时间对于学习判断的反应性存在调节作用, 相比于没有时间限制的学习(学习者自定步调, $\text{hedges}'g=0.082$), 固定时间学习步调($\text{hedges}'g=0.252$)的学习判断反应性更加显著; (4) 测验类型对学习判断反应性不存在调节作用($Q_b=0.78, p=0.677$)。

A meta-analysis on judgments of learning changing memory performance

Xu Duhong, Lai Jiafan, Mu Shoukuan

Minnan Normal University, School of Educational Sciences, Zhangzhou, Fujian, 363000

Abstract: Judgments of learning assess the likelihood that an individual will retrieve learned items on a future test, which often be used in memory research to evaluate individual's metacognitive ability. However, judgments of learning may change the memory performance, positively or negatively, which can be called as reactivity of judgment of learning. Prior studies showed little consensus on the existing and direction of the effect. We conducted a meta-analysis to explore the effect of judgment of learning on memory performance. The results indicated that judgment of learning have a positive effect on memory performance($\text{hedges}'g=0.202$).sub-group analysis revealed that the reactivity of judgment of learning was moderated by types of stimuli, with positive reactivity observed for the related word pairs($\text{hedges}'g=0.359$),small reactivity for mixed word pair($\text{hedges}'g=0.143$)and text material($\text{hedges}'g=0.124$),but no reactivity to unrelated word pair($\text{hedges}'g=0.069$).And the reactivity of judgment of

learning was also moderated by learning times, which experimenter-paced study showed more positive reactivity(hedges'g=0.252) than self-paced study(hedges'g=0.082).In addition, there was no moderate effect on test types. This result indicated individual's memory will be of beneficial to making judgment of learning.

Keywords: judgment of learning, reactivity of judgment of learning, memory performance, meta-analysis

特质正念对正负性情绪注意偏向的影响

徐霞霞 田容博 冯果（通讯作者）

西南交通大学心理研究与咨询中心，成都，611756

摘 要 特质正念是影响情绪与情感体验的重要人格因素，但特质正念影响情绪与情感体验的内在机制尚不清楚。因此，本研究采用点探测范式与情绪 Stroop 范式，探讨了特质正念对正负性情绪注意偏向的潜在影响。实验一为 2（组别：高特质正念组，低特质正念组）*3（与探测点一致的情绪类型：正性，中性，负性）混合实验设计。结果发现：组别与情绪类型的交互作用显著($F_{(1,43)} = 5.81, p < .01, \eta^2 = .12$)，即高特质正念个体在探测点与正性情绪面孔一致时反应最快，探测点与负性情绪一致时反应最慢($M_{正性} = 420.38, SD = 13.41; M_{负性} = 440.40, SD = 13.85; p < .05$)；而低特质正念个体在各种情绪条件下的反应时无明显差异。实验二为 2（组别：高特质正念组，低特质正念组）*3（情绪类型：正性，中性，负性）混合实验设计。结果表明：组别与情绪类型交互效应显著($F_{(1,44)} = 9.61, p < .001, \eta^2 = .18$)，即正性情绪条件下，高特质正念个体对图片边框颜色的反应显著慢于低特质正念个体($M_{高} = 476.54, SD = 8.35; M_{低} = 445.88, SD = 7.65; p < .05$)；中性情绪条件下结果相同($M_{高} = 468.32, SD = 8.26; M_{低} = 443.95, SD = 7.57; p < .05$)；而在负性情绪条件下，两组的反应时无显著差异。以上结果说明，在注意的早期选择阶段，对正负性情绪的注意偏向受到特质正念的影响，具体表现为特质正念促进对正性情绪面孔的注意定向；并且在早期注意定向之后，特质正念还进一步削弱对正性情绪面孔的注意脱离，同时也减弱了对中性情绪面孔的注意脱离。

Trait mindfulness influences attentional bias of positive and negative emotion

Xu Xiaxia, Tian Rongbo, Feng Guo (Corresponding Author)

Psychological Research and Counseling Center, Southwest Jiaotong University, Chengdu 611756, Sichuan, China

Abstract: Trait mindfulness is a widely recognized susceptibility personality factor affecting emotional and affective experience. However, the underlying mechanisms is unclear. Therefore, dot-probe task and emotional-Stroop paradigms were used to explore the inner mechanism of trait mindfulness on positive and negative emotional attentional bias in this study. Experiment 1 was a 2*3 mixed design with the group (high trait mindfulness and low trait mindfulness) as a between-subject factor and emotion type consistent with the detection point' location (positive, neutral, and negative) as a within-subject factor. The results showed that the interaction between trait mindfulness and emotional condition was significant ($F_{(1,43)} = 5.81, p < .01, \eta^2 = .12$). Specifically, the reaction time (RT) of positive pictures consistent with detection point (420.38 ± 13.41) was significant shorter than negative conditions (440.40 ± 13.85) in high trait mindfulness group ($p < .05$); while there were no significant differences between positive, neutral and negative conditions in terms of low trait mindfulness group ($p > .05$). In Experiment 2, a 2 (group: high trait mindfulness and low trait mindfulness) * 3 (emotion type: positive, neutral, and negative) mixed design also revealed a significant interaction ($F_{(1,44)} = 9.61, p < .001, \eta^2 = .18$). Follow-up analyses showed that the RT of positive conditions in high trait mindfulness group (476.54 ± 8.35) were significantly longer than that of the low trait mindfulness group (445.88 ± 7.65), $p < .05$. The same above result was found in neutral condition ($M_{High} = 468.32, SD = 8.26; M_{Low} = 443.95, SD = 7.57; p < .05$). However, there was no significant difference between different trait mindfulness groups in response to the negative emotion pictures ($p > .05$). All the results suggested that: (1) at the

early stage of attention selection, the attention bias to positive and negative emotions was influenced by trait mindfulness, which facilitated attention orienting to positive emotional faces. (2) after the early attention orienting, trait mindfulness weakened the attention disengagement from the positive emotion further, and led to disengage from neutral emotion much slower.

Keywords: Trait mindfulness; Positive and Negative Emotion; Attentional bias

多语者多能：熟练英汉双语青年认知灵活性中的认知优势

徐泽坤¹ 张莉琴² (通讯作者) 赵春黎¹

摘要 语言经验是执行功能的一个重要的影响因素。有研究发现, 在掌握两种以上语言后, 个体的执行功能会发生变化。但也有研究发现, 语言经验的影响作用并不显著, 尤其在认知灵活性方面。本研究采用任务切换范式中的数字转换范式, 探究不同熟练度双语青年在认知灵活性中的差异。方法: 2 (熟练度类型) * 2 (任务类型) 的混合实验设计, 熟练类型为熟练度双语青年和非熟练度双语青年。结果发现: 熟练度与任务类型交互作用显著, 两组被试在重复任务中无明显差异, 在换任务中熟练度被试反应时显著小于非熟练度被试。切换代价差异显著, 非熟练度被试切换代价大于熟练度被试。结论: (1) 熟练度双语青年在转换任务中表现出更好的认知灵活优势。(2) 熟练度双语青年切换代价更小。(3) 双语优势促进认知灵活能力。

² School of Normal, University of Shihezi, Shihezi

Abstract: Language experience is an important factor influencing executive function. Studies have found that after mastering two or more languages, an individual's executive function will change. However, some studies have found that the influence of language experience is not significant, especially in terms of cognitive flexibility. This study uses the number switching paradigm of task switching paradigm, this paper explores the differences of cognitive flexibility among young bilinguals with different proficiency levels. Method: 2 (proficiency type) * 2 (task type) mixed experiment design. The proficiency types were proficient young bilinguals and unskilled young bilinguals. Results: the interaction between proficiency type and task type was significant, and there was no significant difference between the two groups in repeated tasks. The reaction time of skilled subjects was significantly higher than that of unskilled subjects in switching tasks. The switching cost of unskilled subjects was higher than that of proficient subjects. Conclusion: (1) proficient young bilinguals have better cognitive flexibility in switching tasks. (2) The switching cost of proficient young bilinguals is lower. (3) Bilingual advantages promote the cognitive flexibility.

Keywords: Executive function, cognitive flexibility, task switching, proficiency levels

价值观念词的垂直空间隐喻及其影响因素

杨佩莹¹ 姚昭^{1, 2}

摘要 概念是人类思维的基本单位, 概念隐喻理论认为, 隐喻在形成和理解概念的过程中发挥着重要作用。已有研究表明, 抽象概念的加工与隐喻过程中个体的身体经验有联系, 空间方位作为人类最直接的身体经验, 深度参与着抽象概念的理解。然而, 作为一种特殊的抽象概念, 价值观念(如“文明”、“富强”)的隐喻机制还不

清楚。因此,本研究从空间隐喻的角度,通过三个实验依次探讨价值观念这一类抽象概念的隐喻机制,考察不同情绪效价价值观念词的垂直空间隐喻特点,及其是否受语言因素(语义关系)和具身因素(空间位置)的影响。实验一采用愉悦度判断任务,要求被试对呈现在屏幕上方或下方的正、负价值观念词进行判断。结果发现,价值观念词存在空间隐喻特点,表现为正性价值观念词呈现在空间上方时,被试对词汇愉悦度判断的反应更快,类似的加工优势也出现在位于空间下方的负性价值观念词中;实验二要求被试完成语义判断任务,即判断屏幕上下呈现的两个词汇之间的语义关系(反义 vs. 无关),探讨词对呈现的空间位置如何影响价值观念词汇的语义理解。结果表明,与词汇—空间位置一致条件相比(即正性价值观念词在上,负性价值观念词在下),被试在词汇—空间位置不一致条件下的词对判断时间更长;实验三采用空间位置判断任务,判断价值观念词的意义与其出现的位置是否一致,探讨语义关系如何影响价值观念词汇的空间隐喻特点。结果发现,在语义无关词对的条件下,被试对词对进行空间位置判断的反应时间更长。总的来说,本研究证明了价值观念与道德概念、情绪概念等类似,都具有明显的空间隐喻心理现实性,同时受到具身因素和语言因素的影响。这一结论支持了概念的隐喻理论,有利于促进人们对不同类型抽象概念隐喻机制的理解。

部分线索对工作记忆提取的影响

张小敏¹ 刘湍丽¹ 陈昌明¹

¹ 信阳师范学院 教育科学学院, 河南 信阳 464000

摘要 为了探讨部分线索对工作记忆提取的作用,使用被试内实验设计,采用修正的部分线索范式,通过4个实验对被试的再认成绩进行分析,结果发现:(1)实验1当学习阶段的记忆负荷量为4个,线索呈现在保持阶段时,被试对线索所在组目标词的反应时快于线索不在组,表明线索具有促进记忆提取的作用;被试对线索所在组和线索不在组目标词的反应正确率差异不显著,说明在任务相对简单的情况下,被试的正确率不受线索影响。(2)实验2当学习阶段的记忆负荷量不变,线索呈现在提取阶段时,被试对线索所在组目标词的反应时快于线索不在组,表明线索仍旧具有促进记忆提取的作用;被试对线索所在组和线索不在组目标词的反应正确率差异不显著。(3)实验3当学习阶段的记忆负荷量增加到6个时,被试对不同线索条件的反应时差异不显著,表明增加记忆负荷量的任务削弱了线索的促进作用,被试对不同线索条件的反应正确率差异不显著。(4)实验4当学习阶段的记忆负荷量仍旧为4个,在线索阶段增加无线索的条件时,被试对有线索组目标词的反应时快于无线索组,表明线索具有促进记忆提取的作用;被试对不同线索条件的反应正确率差异不显著。结果表明:当学习阶段记忆负荷量为4个时,无论是否有线索,以及无论线索呈现在保持阶段还是提取阶段,线索对工作记忆信息提取均具有促进作用,增加记忆负荷量则会削弱线索的促进作用,研究结果支持优先提取说。

Effects of Partial Cues on Working Memory Retrieval

Zhang Xiaomin¹, Liu Tuanli¹, Chen Changming¹

¹ School of Educational Science, Xinyang Normal University, Henan Xinyang 464000

Abstract: In order to explore the effect of partial cues on working memory retrieval, an in-subject experiment design was used to analyze the recognition performance of four experiments using the modified partial cues paradigm. The results showed that: (1) In Experiment 1, when the memory load in the learning stage was 4 and the cue was presented in the retention stage, the subjects reacted to the target words in the cue group was faster than that in the absence of the cue group, which indicated that the cue had the effect of promoting memory retrieval. There was no significant difference in the correct response rate between the target words in the group where the cue was and those in the group where the cue was not, indicating that the correct response rate was not affected by the cue when the task was relatively simple. (2) In experiment 2, when the memory load in the learning stage was unchanged and the cue was presented in the retrieval stage, the participants' response time to the target words in the cue group was faster than that in the absence of the cue group, indicating that the cue still had the effect of promoting memory retrieval.

There was no significant difference in the response accuracy between the target words in the cue group and the target words in the cue group. (3) In Experiment 3, when the memory load in the learning stage was increased to 6, there was no significant difference in the response time of the subjects to different cue conditions, indicating that the task of increasing the memory load weakened the stimulative effect of cue, and there was no significant difference in the correct response rate of the subjects to different cue conditions. (4) In Experiment 4, the participants' response time to the target words in the cued group was faster than that in the uncued group when the uncued condition was added in the cued stage, while the memory load in the learning stage was the same as that in the uncued group. There was no significant difference in the response accuracy of the subjects under different cueing conditions. The results showed that when the memory load was 4 in the learning stage, no matter there was a cue, and no matter the cue was presented in the retention stage or the retrieval stage, the cue promoted the working memory information retrieval, and the increase of memory load would weaken the promotion effect of the cue. The results supported the priority retrieval theory.

面孔整体加工的 ERP 研究：类别-个体化理论的验证

郑成艳，严璘璘（通讯作者），王哲

浙江理工大学理学院心理学系，浙江，杭州 310018 yanlinlin@zstu.edu.cn

摘要 面孔整体加工是指知觉系统有选择性地快速、准确地整合面孔各部分信息，从而形成一种整体表征。类别-个体化理论认为，对于外群体成员，人们往往关注类别信息，倾向于将成员均归为一类，而对于内群体成员，更关注个体信息，倾向于将每个成员形成单独的整体表征。早期支持该理论的研究表明，高加索人对本族面孔的组合面孔效应大于他族面孔。但近年来，亚洲人或高加索人在知觉本族和他族面孔时行为上均表现出相同程度的组合面孔效应（整体加工的指标）。这意味着人们在面孔知觉早期是否存在类别信息和个体信息的选择性注意及其对后续加工的影响等问题并不清楚。为了考察面孔知觉早期是否存在信息选择及其对后续加工模式的影响，本研究采用事件相关电位（event-related potential, ERP）来探测个体在面孔知觉最初几百毫秒的电生理信号变化（如 P100、N170、P200 和 N200）及其与后续加工模式之间的关系。实验选取 19 名（9 男）中国被试，测量其对三类面孔（亚洲面孔、高加索面孔以及亚洲-高加索两歧面孔）的组合面孔效应及其脑电成分幅度和潜伏期。行为结果表明，中国被试对于亚洲面孔和高加索面孔表现出相同的组合面孔效应（ $p < 0.01$ ），但对两歧面孔未表现出类似的组合面孔效应（ $p = 0.52$ ）。ERP 结果表明，他族面孔诱发 P100 和 N170 幅度大于本族和两歧面孔（ $p < 0.001$ ），而本族和两歧面孔之间没有明显差异（ $p > 0.05$ ）。他族面孔诱发 P200 成分的幅度大于两歧面孔（ $p < 0.001$ ），且两歧面孔诱发 P200 的幅度大于本族面孔（ $p = 0.05$ ）。两歧面孔诱发 N200 的幅度小于本族面孔（ $p = 0.02$ ），与他族面孔没有明显差异（ $p = 0.43$ ）。ERP 与行为数据的相关分析进一步显示，对亚洲面孔而言，P200 的幅度越小，组合面孔效应越大（ $r = -0.45$, $p = 0.05$ ）；对高加索面孔和两歧面孔而言，P200 的幅度和组合面孔效应没有相关（高加索面孔 $r = -0.13$, $p = 0.59$ ；两歧面孔 $r = -0.09$, $p = 0.70$ ）。上述结果提示，在面孔知觉早期，他族信息诱发更强的注意，而本族信息能促使个体形成整体加工，支持了类别-个体化理论。

An ERP Study on Holistic Face Processing: Categorization-Individuation Model Testing

Zheng Chengyan, Yan Linlin (corresponding author), Wang Zhe

Department of Psychology, School of Science, Zhejiang Sci-tech University, Hangzhou 310018,
yanlinlin@zstu.edu.cn

Abstract: Holistic Face processing refers to the selectively rapid and accurate integration of face information by the perceptual system, so as to form a whole representation. Categorization-Individuation Model proposes that attention

to category-diagnostic facial characteristics of out-group members can cause targets to be perceived and remember as more homogeneous. While selective attention to the identity-diagnostic facial characteristics of in-group members tend to form a whole representation of each member. Early work supported this hypothesis by showing stronger composite effect size in own-race faces than in other-race faces. While more recent studies showed that same composite-face effect (an index for holistic face processing) sizes were observed with composite face paradigm for own-race faces and other-race faces by Asians and Caucasians. It was not clear whether selective attention to the category- or identity-diagnostic facial characteristics be at the early stage of face perception and how to influence the subsequent face processing. In order to investigate whether characteristic selection be at the early stage and how to influence the subsequent face processing, an event-related potential (ERP) was used to detect the electrophysiological components (e.g., P100, N170, P200, and N200) during the first few hundred milliseconds of face perception and the relationships with subsequent face processing. Nineteen (9 males) Chinese participants were recruited. We measured the composite face effect size of three face types (Asian faces, Caucasian faces, and Asian-Caucasian ambiguous faces) and the amplitude of the ERP component. The behavioral results showed that same composite face effect sizes were observed for Asian faces and Caucasian faces ($p < 0.01$), but no similar effect for the ambiguous faces ($p = 0.52$). The ERP results showed that P100 and N170 amplitudes were significantly larger for other-race faces than own-race and ambiguous faces ($p < 0.001$), but no difference between own-race and ambiguous faces ($p > 0.05$). P200 amplitude was significantly larger to other-race faces than ambiguous faces ($p < 0.001$), and it was marginally larger for ambiguous faces than own-race faces ($p = 0.05$). N200 amplitude was markedly smaller for ambiguous faces than own-race faces ($p = 0.02$), but there was no difference between other-race and ambiguous faces ($p = 0.43$). The correlation analysis between neural responses and behavioral data showed that the smaller P200 amplitude, the larger composite face effect for Asian faces ($r = -0.45$, $p = 0.05$). However, there was no correlation between the amplitude of P200 and the composite face effect for Caucasian ($r = -0.13$, $p = 0.59$) and ambiguous faces ($r = -0.09$, $p = 0.70$). The results suggest stronger attention to category-diagnostic characteristics were elicited by other-race faces at the early stage of perception. And attention to identity-diagnostic characteristics for own-race faces played a role in holistic face processing which support the Categorization-Individuation Model.

团队成员利己利他倾向的数量和分布对个体决策的影响

邹密¹（通讯作者） mo lei¹

¹ 华南师范大学心理学院, 广州, 1476524570@qq.com

摘要 Gross(2019)首次探索了个体解决方案存在时个体解决方案与合作解决方案的成本比对人们合作倾向的影响。本研究进一步探讨了个体解决方案存在时团队可信度对人们合作倾向的影响。实验一和实验二考察了合作伙伴不同水平的利他倾向和利己倾向对被试决策的影响。实验三和实验四探讨了利他倾向和利己倾向的分布对被试决策的影响。实验一和实验二的结果显示,随着队友利他倾向的增加,被试选择合作解决方案的比例增加。当团队成员的利他倾向达到一定值时,参与者会稳定地信任团队并采用合作解决方案。随着队友利己倾向的增加,参与者选择个人解决方案的比例增加。当队友的利己倾向达到一定值时,个体解决方案会稳定地被采用。实验三和实验四的结果显示,在团队中总利他倾向不变的情况下,利他倾向分配的利他群体成员越多,参与者对团队的信任越高,表现出利他倾向的分散效应。在总利己倾向不变的情况下,利己倾向分配到的利己群体成员越少,参与者对团队的信任越高,显示出利己倾向的收敛效应。

关键词 利他倾向, 利己倾向, 合作, 可信度, 发散效应, 收敛效应

The Effect of Quantity and Distribution of Teammates' Tendency of Self-interest and Altruism on Individual Decision-making

Abstract: Gross and De (2019) were the first to explore the impact of the cost ratio of individual solution versus collective solution on people's cooperation tendency in the presence of individual solution. This study further explored the impact of team credibility on people's propensity to cooperate in the presence of individual solution. Study one and two investigated the influence of different altruistic tendency or self-interest tendency of teammates on participants' decision-making. Study three and four explored the influence of the distribution of altruistic tendency or self-interest tendency on participants' decision-making. The results of study one and two showed that the proportion of participants taking the collective solution increased with the increase of the altruistic tendency of the teammate. When the altruistic tendency of the teammate reached a certain value, the participants would stably trust the team and adopt the collective solution. The proportion of participants taking the individual solution increased with the increase of the self-interest tendency of the teammate. When the self-interest tendency of the teammate reached a certain value, the individual solution would be adopted stably. The results of study three and four showed that, with total altruistic tendency unchanged, the more altruistic group members the altruistic tendency was allocated to, the higher a participant's trust in the team would be, showing the decentralized effect of altruistic tendency. In the case that total self-interest tendency was unchanged, the fewer self-interest group members the self-interest tendency was allocated to, the higher a participant's trust in the team would be, which showed the convergent effect of self-interest tendency.

Keywords: altruistic tendency, self-interest tendency, cooperation, credibility, decentralized effect, convergent effect

新冠疫情下我国大学生居家体育锻炼和身心健康的相关研究

陈夏妮

郑州大学体育学院, 郑州, 450044

摘要 2020年新型冠状病毒肺炎流行, 严峻的疫情和严格的交通外出限制, 使得大部分大学生不得不停留在家。疫情发展带来的焦虑、恐惧、长期居家带来的压抑等, 均使得大学生的身心状况受到影响。相关研究表明, 体育运动可以降低焦虑感和抑郁感, 且与心理健康水平密切相关。然而上述研究的背景为正常的生活情境, 新型冠状病毒肺炎流行属于重大公共卫生事件, 造成大众应激水平较高。虽然有研究指出, 体育运动在危机干预中对心理健康有积极的作用, 但是此次疫情尚在持续中, 结束期限也没有明确, 大学生无法外出, 在家“停课不停学”情况下, 体育锻炼是否还能带来相应的心理益处呢? 本研究整合《体育活动等级量表》, 大学生身心健康自评、大学生人口统计学信息等, 编写了《新型冠状病毒肺炎期间体育锻炼调查问卷》, 并随机选取328名年龄为18-24岁的在校大学生作为调查对象, 以了解疫情期间大学生居家体育锻炼情况, 以及体育锻炼和大学生身心健康之间的关系。研究结果显示: 1. 疫情期间76.2%大学生参加体育锻炼, 参加锻炼的学生中的65.6%参与小锻炼量的体育活动。2. 疫情期间参与体育锻炼的大学生最近身体状况($F=6.740$, $p<0.001$)得分显著高于未参与活动的学生, 不同锻炼量的大学生心理健康自评($F=4.081$, $p<0.05$)得分差异显著。3. 焦虑自评、最近身体状况可以显著预测($F=914.504$, $p<0.001$)疫情期间大学生身心健康水平, 回归方程对变异的解释率为84.8%, 拟合优度良好。本研究表明, 疫情期间, 体育锻炼高参与率是大学生体育锻炼的主要特点, 体育锻炼的等级为小锻炼等级; 适量的体育锻炼可以产生心理效益, 对疫情期间大学生身心健康起到了积极的作用; 大学生焦虑水平和自身最近身体状况对该时期的身心健康影响最大。

The Relationship between Physical Exercise at Home and Physical-Mental Health of College Students in China during the COVID-19 Outbreak

CHEN Xiani

Physical Education College of Zhengzhou University, Zhengzhou 450000, China; Department of Psychology, Tianjin Normal University, Tianjin 300380, China

Abstract: Because of the widespread of COVID-19 epidemic in 2020, most college students have to stay at home. The anxiety, depression and fear brought by the epidemic affected the physical and mental condition of college students. Studies have shown that physical activity can reduce anxiety and depression and is related to mental health. However, the background of the previous studies are relate to normal situation, the epidemic of COVID-19 as a public health event, most likely to causing higher level of stress among the public. Under this background, whether physical exercise can bring the corresponding psychological benefits? This study integrated Sports Rating Scale, college students' physical-mental health, students' demographic information into a new questionnaire. Randomly selected 328 college students as the objects (aged 18-24 years), in order to understand college students' physical exercise at home during the epidemic situation, as well as physical exercise and the relationship between the college students' physical- mental health. Research results showed that (1) 76.2% of college students take part in physical exercise during the COVID-19 outbreak and 65.6% of the students take part in low level of Exercise Level Valuation. (2) During the outbreak, college students who taking part in physical exercise make significant higher score ($F = 6.740, p < 0.001$) in Recent Physical Condition score than those who did not; and students of different exercise level have significant different score ($F = 4.081, p < 0.05$) in The Self-evaluation of Mental Health. (3) Recent Physical Condition and Anxiety Self-assessment can significantly ($F = 914.504, p < 0.001$) predict college students' physical-mental health level during the outbreak, the Regression Equation results can explain 84.8% of the mutation rate, its goodness-of-fit is fine.

Key words: physical exercise, physical-mental health, COVID-19, at home

“I come from Beijing”比“I come from běi jīng”更省力？ 发音方式调节双语控制机制

计艳楠^{1,2} 王启萍^{1,2} 闫国利^{1,2} 吴俊杰^{1,2} (通讯作者)

1 教育部人文社会科学重点研究基地天津师范大学心理与行为研究院, 天津, 300387

2 天津师范大学心理学部, 天津, 300387, psywujunjie@tjnu.edu.cn

摘 要 双语者在语言产生过程中需要双语控制机制来避免两种语言的冲突。已有研究认为, 双语控制可分为指向语言整体的全局控制(常用混合代价作为指标)和指向具体词汇的局部控制(常用切换代价作为指标), 而且发音过程是双语控制的重要位点。然而, 以往研究关心的大多是标准发音方式下的双语控制, 但是在日常语言使用中, 我们除了使用(尽可能)标准的发音方式之外, 还可能使用一些其它的发音方式(如, I come from Beijing [而非 běi jīng]、高德猫腻 [而非 Good morning]), 尚不清楚发音方式会如何调节双语者的局部控制和全局控制。本研究招募了 36 名汉-英非平衡双语者(其中 18 名女性), 让他们分别使用标准口音、中式口音、英式口音来完成单词图片命名任务和语言切换任务。结果发现, 相比于标准口音, 中式口音显著地增大了汉语的切换代价(即切换试次比重复试次多花费的反应时间)和混合代价(即重复试次比单语试次多花费的反应时间)、减小了英语的切换代价和混合代价, 英式口音显著地增大了英语的切换代价和混合代价、减小了汉语的切换代价、并使得汉语混合代价有减小的趋势。这表明使用非目标语言的发音方式来产出目标语言可以减弱目标语言所受到的干扰, 该效果的实现很可能是因为口音营造的语言情境使得双语者对非目标语言的整体控制和局部控制都得到了增强, 从而使得切换至目标语言更有效率。本研究首次揭示发音方式对双语控制机制的调节作用, 为进一步完善双语控制理论提供证据, 为语言教学和语言使用提供启示。

psywujunjie@tjnu.edu.cn

Abstract: Bilinguals need bilingual language control mechanisms to avoid cross-language interference during language production. Research has shown that bilingual language control differentiates into local and global language control (indexed by switching costs and mixing costs, respectively), which operate on a specific item and the whole language system, respectively. Furthermore, articulation was documented as an important locus of bilingual language control. However, previous studies mostly focused on the bilingual language control when bilinguals articulate in a standard manner, leaving the global and local language control during accented articulation unknown (e.g., *I come from Beijing* [rather than *běi jīng*], or *gǔ dé mǎo nǐ* [rather than *Good morning*]). Thirty-six unbalanced Chinese-English bilinguals (18 females) were recruited to complete the picture naming task of the single-language and dual-language using standard, Chinese and English accents. The results showed that, compared to the standard accent, the Chinese accent significantly increased the switching costs (i.e., the extra reaction times [RTs] for switching trails than non-switching trails) and the mixing cost (i.e., the extra RTs for non-switching trails than single-language trails) in Chinese, and decreased the switching costs and mixing costs in English. The English accent significantly increased the switching costs and mixing costs of English, whereas decreased the switching costs of Chinese, and resulting in a tendency of reduced mixing costs of Chinese. These suggest that articulating the target language in a manner of the non-target language leads to reduced interference from non-target language and increased efficiency of language switching, which is likely due to the boosted global and local control in accented-articulation context over non-target language. The present study first reveals the effects of accented articulation on bilingual language control, providing evidences for improving the theory of bilingual language control theory and implications for language teaching and language use.

Keywords: bilingual, accented articulation, accent, global control, local control

选择性注意在跨通道分类中的作用

李建花^{1,2} 邓玮^{1,2} (通讯作者, E-mail: wdeng@um.edu.mo)

¹ 澳门大学心理学系, 澳门

² 澳门大学认知与脑科学研究中心, 澳门

摘要 多模态环境下, 个体是如何处理信息以优化任务表现的? 选择性注意是关注任务相关信息的同时过滤任务无关内容的能力。以往研究显示, 选择性注意在分类任务中有重要作用。多模态环境会促进或干扰分类任务表现, 但其中的选择性注意机制少有研究。本研究结合分类任务与反应抑制的 Flanker 范式, 使用多项式加工树模型(Multinomial Processing Tree model), 探究选择性注意的聚焦成分和过滤成分在跨通道分类中的作用。69 名成年被试在视听环境下完成视觉分类任务和听觉分类任务, 结果发现, 选择性注意会通过聚焦成分和过滤成分在跨通道分类任务中发挥作用, 但其作用的机制是不同的。具体表现为: 听觉信息会被优先处理, 表现在其作为任务相关或任务无关的信息时, 均会自动分配更多的注意资源; 而对视觉信息的处理有更强的灵活性, 会根据其与任务的相关性, 灵活有效地在聚焦成分和过滤成分上分配注意资源。这些新颖的结果证明了选择性注意在多感官分类中的关键但不同的作用, 这为理解跨通道分类的机制提供了一个很有前景的视角。

The Role of Selective Attention in Multisensory Categorization

Jianhua Li^{1,2}, Wei Deng^{1,2}

1 Department of Psychology, University of Macau, Macau SAR, China

2 Centre for Cognitive and Brain Sciences, University of Macau, Macau SAR, China

Abstract: Selective attention is the ability to focus on goal-relevant information while filtering out irrelevant information. Previous research showed that behavioral responses could be either facilitated or interfered with in a multisensory context. The question of how selective attention works in this scenario arises. To address this question, a modified flanker task was used, in which adults ($N = 69$) were asked to attend to visual or auditory targets and categorize them, while ignoring other stimuli. A Multinomial Processing Tree (MPT) model was used to decompose selective attention into focusing and filtering components. We found that both the ability to focus on the target and filter out irrelevant information are needed in the visual and auditory categorization, but the underlying mechanisms are different. Specifically, auditory information tends to be prioritized: We allocate more attention to it automatically, regardless of whether it is a target or a distractor. In contrast, visual information is processed flexibly: We can focus on it voluntarily and filter out it effectively. These novel results demonstrate the critical but differential role of selective attention in multisensory categorization, which offers a promising perspective to understand the mechanism of multisensory processing.

阈下药物相关线索对海洛因戒断者反应抑制的影响

李玲¹, 曹华¹, 杨玲¹ (通讯作者)

1 西北师范大学心理学院, 兰州, 730070, yangling@nwnu.edu.cn

摘要 海洛因成瘾问题是个世界性的难题, 它对家庭和社会都造成了很多无法弥补的危害。长期的药物使用会损害人体大脑的结构和功能, 导致个体的反应抑制功能降低。反应抑制是指有意识地抑制与当前行为不相关的反应, 或者是抑制被自动激活的行为的能力, 人们常常需要处于某种原因的考虑而去抑制自己的行为, 这就需要反应抑制功能来起作用, 而这种反应抑制能力的异常或损伤也是成瘾者反复复吸的重要原因。以往研究主要通过阈上呈现药物相关线索来探索药物相关线索对海洛因戒断者反应抑制的影响, 然而阈上和阈下刺激加工的神经通路和反映特点并不一致, 那么阈下的药物相关线索是否也会对海洛因成瘾者反应抑制产生影响? 本研究根据 go/nogo 任务范式, 采用 2 (被试类型: 海洛因戒断组、正常组) × 2 (线索类型: 海洛因相关线索、中性线索) 的两因素混合实验设计来考察阈下呈现药物相关线索对海洛因戒断者反应抑制的影响。结果表明: (1) 海洛因戒断组的反应时显著长于正常组, 验证了海洛因成瘾者存在受损的反应抑制功能; (2) 海洛因相关线索的反应时显著短于中性线索, 说明海洛因戒断群体中出现了阈下药物相关线索对反应抑制的促进作用, 这可能是因为相对其它刺激, 阈下药物相关刺激的生理唤醒能够有效地唤醒个体的活动, 提升戒断者的警觉性和反应准备。

Effect of subthreshold drug-related cues on response inhibition in heroin abstainers

Li ling¹, Cao hua¹, Yang ling¹

1 College of psychology, Northwest Normal University, Lanzhou, 730070, yangling@nwnu.edu.cn

Abstract: The problem of heroin addiction is a worldwide problem, and it has caused many irreparable harms to the family and society. Long term drug use will damage the structure and function of human brain, resulting in the reduction of individual response inhibition function. Response inhibition refers to the ability to consciously inhibit the response that is not related to the current behavior, or the behavior that is automatically activated. People often need to suppress their own behavior for some reason, which requires the function of response inhibition, and the

abnormality or damage of this response inhibition ability is also an important reason for the repeated relapse of addicts. Previous studies mainly explored the effect of drug-related cues on the response inhibition of heroin addicts by presenting drug-related cues above the threshold. However, the neural pathways and reflection characteristics of suprathreshold and subthreshold stimulation processing are not the same, so will subthreshold drug-related cues also affect the response inhibition of heroin addicts? According to the go / NoGo task paradigm, this study adopted 2 (subjects: heroin abstiners group, normal group) * 2 (cue type: heroin-related cues, neutral cues) to investigate the effect of subthreshold drug-related cue on heroin abstiners' response inhibition. The results showed that: (1) the response time of heroin abstiners group was significantly longer than that of normal group, which verified that heroin addicts had impaired response inhibition function. (2) The response time of heroin related cues is significantly shorter than that of neutral cues, indicating that subthreshold drug-related cues have a promoting effect on response inhibition in heroin abstiners groups, which may be because the physiological arousal of subthreshold drug-related stimuli can effectively awaken the individual's activities, enhance the alertness and response preparation of abstiners compared with other stimuli.

理性经济人信念对金钱捐赠的影响及作用机制

刘好¹ 伍珍¹ (通讯作者)

¹ 清华大学心理学系, 北京, 100084, zhenwu@mail.tsinghua.edu.cn

摘要 捐赠行为是典型的亲社会行为, 对于个体的人际交往和社会的道德文明建设都有重要意义。已有研究发现, 理性经济人信念会影响亲社会行为。共情作为诱发亲社会行为的亲社会动机, 可能在当中起着中介作用。然而, “理性经济人信念-共情”的影响路径以及“理性经济人信念-亲社会行为”的影响路径尚不清晰。本研究使用线上问卷实验法对于“理性经济人信念-共情-亲社会行为”的路径进行了深入的探索, 发现情境中的责任感知和钱的效用感知调节了不同理性经济人信念个体的捐赠行为。

研究一探讨了责任感知的作用, 收集到 447 份有效答卷。研究一启动理性经济人信念, 之后描述捐赠情境, 并测量了参与者对受捐者的状态共情、对捐赠行为的责任感知以及捐赠意愿和金额。结果发现, 当个体的理性经济人信念较强时, 个体的责任感知越高, 对受捐者的共情越高, 愿意捐赠的金额也越多。研究二探讨了效用感知的作用, 收集到 321 份有效答卷。结果发现, 当个体的理性经济人信念较强时, 个体在金钱效用感知水平高时, 对受捐者的共情越低, 愿意捐赠的金额越少。本研究通过构建有调节的中介模型, 探讨了理性经济人信念如何影响状态共情进而影响捐赠行为, 及其责任感知和金钱效用感知在其中所起的作用。研究结果表明, 可以对强理性经济人信念者强调其责任感, 弱化金钱效用感知, 从而有针对性地促进其亲社会行为。

The Effect and Mechanism of Rational Economic Man Belief on Money Donation

Hao Liu¹, Zhen Wu¹ (corresponding author)

¹ Department of Psychology, Tsinghua University, Beijing, 100084, zhen-wu@mails.tsinghua.edu.cn

Abstract: Donation is a typical prosocial behavior, which is of great significance for individual interpersonal communication and social moral civilization construction. It has been found that rational economic man belief can affect prosocial behavior. Empathy, as a prosocial motivation to induce prosocial behavior, may play a mediating role. However, the influence path of "rational economic man belief — empathy" and "rational economic man belief — prosocial behavior" are not clear. This study uses online questionnaire experiment method to explore the path of "rational economic man belief — empathy — prosocial behavior", and finds that the perceived responsibility and

money effectiveness in the context moderate the donation behavior of participants holding different degrees of rational economic man belief.

Study 1 explores the role of perceived responsibility and collected 447 valid data. In the first study, we use certain mechanism to activate participants' rational economic man belief, and then describe the context of donation to them. Next, we measure participants' state empathy for the help seeker, and their perceived responsibility in the donation context, as well as their donation willingness and money amount. The results show that when the rational economic man belief is strong, the higher the perceived responsibility, the higher the empathy for the help seeker, and the more the money donation amount. Study 2 explores the role of perceived money effectiveness and collected 321 valid data. The results show that when the rational economic man belief is strong, the higher the perceived money effectiveness, the lower the empathy for the help seeker, and the less the money amount he is willing to donate. By constructing a moderated mediation model, we find how rational economic man belief affects state empathy and then money donation, and the role of perceived responsibility and money effectiveness in the pathway. The results show that for people whose rational economic man belief is strong, we can emphasize their sense of responsibility and weaken the money effectiveness in the donation context, so as to promote their prosocial behaviors.

青少年关爱道德判断的测评及其与亲社会行为的关系

牛海群 王云强 郭本禹（通讯作者）

南京师范大学心理学院，南京，210000，gbypro@163.com

摘要 自科尔伯格提出道德认知发展理论以来，公正概念一度成为道德判断的核心，而 Gilligan 认为还存在关爱取向的道德判断，并在大量女性案例的研究基础上，提出了关爱道德发展理论，将关爱道德分为三个水平。Skoe 在此基础上将其扩展为三个水平和两个过渡阶段，并构建关爱伦理访谈(the Ethic of Care Interview, 简称 ECI) 来测量个体的关爱道德发展。但 ECI 作为一种半结构化访谈式问卷，不便于进行团体施测。同时，道德判断与亲社会行为之间关系的问题一直是道德心理学领域研究的热点问题，但各研究结果不一，甚至彼此冲突。针对这些问题，本研究通过自编青少年关爱道德判断测验，以 530 名青少年学生为被试，在检验问卷信效度的同时，探究青少年关爱道德判断能力的特点以及关爱道德与亲社会行为之间的关系，结果表明：

（1）青少年关爱道德判断问卷信效度良好，可作为青少年关爱道德判断能力的测量工具；（2）青少年关爱道德判断在性别变量上存在显著差异，女生关爱道德判断显著高于男生，在年级、是否独生子女和父母文化程度变量上差异不显著；（3）青少年关爱道德判断与亲社会行为之间呈显著正相关，能有效预测个体的亲社会行为；（4）道德同一性在关爱道德判断与亲社会行为的关系之间起着部分中介作用；（5）青少年关爱道德判断-道德同一性-亲社会行为的中介模型受到公正道德判断的调节，四者构成一个有调节的中介模型，且公正道德判断仅对后半路径起到调节作用。

由此可见，青少年关爱道德判断确实存在性别差异，女生关爱水平显著高于男生；关爱道德判断不仅能直接预测亲社会行为，还受到道德同一性的中介作用；尽管公正道德判断不能直接影响青少年的亲社会行为，但可以在道德同一性与亲社会行为关系中起到调节作用，进而作用于亲社会行为。

The evaluation of adolescents' care-based moral judgment and its relationship with the prosocial behavior

Niu Haiqun¹, Wang Yunqiang¹, Guo Benyu¹ (corresponding author)

School of Psychology, Nanjing Normal University,

12 Ninghai Road, Gulou District, Nanjing City, Jiangsu Province, China

Abstract: The concept of justice has become the core of moral judgment since Kohlberg put forward the theory of cognitive development of morality. While Gilligan believed that caring orientation of moral judgment could not be ignored. Based on the research of a large number of women's cases, Gilligan proposed a care-based moral development theory, which divided care-based morality into three levels. Skoe extended that theory including three levels and two transition phases. Although ECI (The Ethic of Care Interview) developed by Skoe has been proven to be an effective measurement for the development of caring ethics, it is not convenient for group testing as a semi-structured interview questionnaire. The relationship between moral judgment and prosocial behavior has always been a hot issue in the field of moral psychology. But the results are different and even conflict with each other. In response to these problems, this study adopted a self-designed Adolescent Care Moral Judgment Test, with 530 young students as subjects. While testing the reliability and validity of the questionnaire, this study explored the characteristics of adolescents' care moral judgment and the relationship between care-based morality and prosocial behavior. The results are as follows:

(1) The questionnaire has good reliability and validity, which can be used as a measuring tool for adolescents' ability of care moral judgment. (2) There are significant differences in the gender variables in adolescents' care moral judgment. The care judgment of girls is significantly higher than that of boys, and there are no significant differences in the variables of grade, one-child status and parents' educational level. (3) There is a significant positive correlation between care moral judgment and prosocial behavior, while justice moral judgment has nothing to do with prosocial behavior. Compared with justice morality, care moral judgment is a more effective predictor of prosocial behavior. (4) Moral identity plays a partial mediating role between the relationship between care moral judgment and prosocial behavior. (5) the care moral judgment - moral identity - prosocial behavior mediation model is moderated by justice moral judgment, and justice moral judgment only plays a moderating role in the latter half of the path.

It can be seen that there is indeed a gender difference in adolescents' care moral judgment. Care moral judgment not only directly predicts prosocial behavior, but also can take the moral identity as an intermediary and work together with justice moral judgment in prosocial behavior.

不同的识别策略：类别化的动物与个体化的人类

蒲玥 韩世辉（通讯作者）

北京大学心理与认知科学学院，北京，100871，通讯作者 E-mail: shan@pku.edu.cn

摘 要 人们面对动物时，通常只需识别其属于哪一类别，而不用区分同一类别的不同个体：种类信息已足够用于绝大部分行为决策。生物分类学中，人类也属于广义的动物，但人类面对同类很少进行“他/她是人类”的类别加工，而更注重区别个体间的不同。本研究试图通过行为实验，证明对动物与人类的这一识别策略差异，并通过脑电实验探究这一认知加工的神经过程。行为实验借鉴了视觉搜索范式：我们假设，若对某一类别倾向于采用不区分个体的分类加工，那么该类别作为搜索分心物时的数量对于搜索速度影响较小；而倾向于对类别内个体进行区分的类别，随着数量增多，作为分心物对搜索的干扰效果更强。实验中我们将人类的轮廓图片与黑猩猩、狗、白头雕三种动物的轮廓图片进行组合，每种组合中人类与动物互为分心物/搜索目标，分心物的数量有 7/11/15 三种水平，形成 3（动物种类）× 3（分心物数量）× 2（人类/动物是搜索目标）的组内设计。结果发现，人类作为分心物时，搜索动物的速度显著受到分心物数量的影响；搜索人类的速度则几乎不受动物分心物的数量影响。脑电实验采用了重复抑制范式：对于被分类加工的类别，类别中的不同个体连续呈现将使类别信息被重复加工，相比非单一类别交替呈现，类别相关的神经过程将被抑制。与行为实验类似，我们将人类与上述三种动物分别组合；动物与人类都有单类别重复呈现序列，以及两种类别交替呈现序列，形成 3（动物种类）× 2（呈现序列）× 2（人类/动物）的组内设计。结果发现，动物均在 P2 这一 ERP 成分上引发显著的重复抑制效应，人类则未引发此效应。我们将图片全部倒置进行对照实验：准确识别客体变得困难，但依然能大致区分不同物种。人类图片则也引发 P2 的重复抑制效应。行为与脑电实验一致证

明了“分类加工动物、差异化加工人类”的这一识别策略差异，并且对人类的差异化加工依赖于有效提取其差异化信息。这一认知过程的对应神经活动大概在目标出现后 200ms 左右发生。

The Distinct Recognition Strategies: Categorical Animals and Individualized Human Beings

Yue Pu, Shihui Han*

School of Psychological and Cognitive Sciences, Peking University, Beijing, 100871

*Correspondence should be addressed to: Shihui Han (shan@pku.edu.cn)

Abstract: When faced with animals, people usually categorize them into certain species, but not individualize them: the category information is enough for decision-making in the most cases. In biological taxonomy, human beings also belong to the generalized animals. We seldom process somebody with the classification of human beings, but prefer to distinguish different individuals. The current study aimed to demonstrate this distinction of recognizing strategies with behavioral and EEG experiments, and in the meantime, explored the temporal neural underpinnings of the processing. The behavioral experiment drew on the paradigm of visual search. We hypothesized that the increase of the number of distractors would not slow down the search performance, if subjects preferred to categorize the distractors rather than individualize them. On the contrary, if people liked to distinguish different individuals within the category, which served as the distractors, the increasing number of distractors would bring more interference to the search task. In the experiment, we paired human beings with chimpanzees, dogs and eagles respectively. All of them were represented by black contours. In each pair, human beings and animals were targets/distractors for each other, and we set 3 levels for the number of distractors, 7, 11, and 15. Therefore, the experiment was a 3 (animal species) $\times$ 3 (levels of the distractor number) $\times$ 2 (humans as targets/distractors) within-subject design. The results showed that when human beings acted as the distractors, the speed of animal searching was slowed down with the increase of the distractor number. In contrast, the human searching was not significantly influenced by the number of animal distractors. The EEG experiment used the repetition suppression paradigm: if individuals within one category were treated only as examples of this category, the repetitive presentation of different individuals belonging to one category would suppress the related categorical processing, compared with the alternative presentation of several categories. Similar to our behavioral design, 3 nonhuman animal species were respectively combined with human beings, each of which included repetitive and alternative sessions for both animals and humans. This EEG experiment was a 3 (animal species) $\times$ 2 (repetitive/alternative sessions) $\times$ 2 (humans/animals) within-subject design. The results demonstrated that 3 kinds of animals evoked significant repetition suppression effect on the P2 component, but this effect didn't come to humans. In addition, we used inverted pictures to conduct one control experiment, with the totally identical design to the above. When observing inverted contours, it was hard for subjects to clearly recognize the objects, but the intact contour information enabled subjects roughly distinguish different species. In the control EEG experiment, human beings also evoked the repetition suppression effect on P2, just like nonhuman animals. To sum up, our behavioral and EEG experiments proved that people take distinct strategies to recognize animals and human beings: categorical for animals, but individualized for human beings. And the corresponding neural processing takes place about 200 ms after the target onset.

时长估计中跨通道整合策略的影响因素研究

俞嘉倩¹ 孙梦丹¹ 高晓卿¹

¹ 浙江大学心理科学研究中心, 杭州, 310028, xiaoqinggao@zju.edu.cn

摘要 多感觉整合在人们对事物形成稳定的知觉并做出准确判断中发挥着重要的作用，但是之前的多感觉整合研究主要集中在以视觉通道占优势的空间相关领域，其中有不少研究发现了多感觉整合符合贝叶斯框架下的最优整合模型。我们的研究将多感觉整合着眼于听觉占优势的时间估计领域。目前已有的少部分多感觉时间估计研究大多以序列呈现的瞬时刺激构建空白时间间隔，导致这类研究的生态性很低。我们的研究利用动态连续的视听刺激构造了非空白持续时间，此外，我们还创造性的将类自然的时间结构信息加入视听刺激中，这种自然环境中的信息在时间知觉上是重要的，特别是考虑到研究的外部效度。除了探究具有时间结构信息的视听多感觉刺激在时间估计领域是否仍具有整合优势及符合的策略模型外，我们的研究还旨在探讨多感觉整合的可能条件，比如，同步性和一致性。

本研究共分为两个实验。实验一通过呈现视、听单通道刺激，具有时间结构一致性且同步的视听多感觉刺激的时间辨别任务探究多感觉输入在时间估计上是否具有整合优势及多感觉整合符合优势通道模型还是最优整合模型。实验二加入了视听刺激在时间结构的一致性和同步性两个因素，探究一致性及同步性对多感觉整合的影响。

研究发现了有趣的现象——大脑在多感觉整合的时间估计上似乎是“聪明的偷懒者”，在不同的视听同步或一致性条件下会灵活的采用不同的策略：在视听一致且同步呈现时没有整合优势，符合优势通道模型，在视听刺激时间结构一致但异步呈现，不一致同步时符合贝叶斯框架下的最优模型，在不一致异步条件下，不同被试在策略选取上似乎有最优整合模型和优势通道模型的不同倾向性，加权模型在该条件下的拟合相对更好。如果视听信息的冲突条件是时间结构不一致，被试似乎倾向于给予优势通道相对于最优整合模型预测更多的权重。

Multisensory Integration in Time Estimation and Its Factors

Jiaqian Yu¹, Mengdan Sun¹, Xiaoqing Gao¹

¹ Center for Psychological Sciences at Zhejiang University, Hangzhou 310028, China

Abstract: Multisensory integration plays an important role in people's stable perception and accurate judgment of objects and things. However, previous studies on multisensory integration mainly focus on spatial related fields dominated by visual modality, and many of them have found that multisensory integration conforms to the Bayesian optimal integration model. Our study focuses on multisensory integration in the time estimation domain where the auditory is dominated modality. Although there have been a small minority of studies on multisensory time estimation, almost all of them only used the instant stimuli presented in the sequence to construct a blank time interval, which leads to the low ecology. However, our research constructed non-blank durations using dynamic continuous audiovisual stimuli. In addition, we creatively added nature-like time-structure information to stimuli. Such information in the natural environment is important for time perception, especially considering the external validity of this research. In addition to exploring whether audio-visual stimuli with time-structured information still have an integration advantage in the field of time estimation and which strategy model it conforms to, our study also aims to explore possible conditions for multisensory integration, such as synchronism or consistency of the multisensory information.

Our study is divided into two experiments. In Experiment 1, we explored whether when presented multisensory stimuli, there would be an integrated advantage in time estimation, and whether multisensory integration conforms to the dominant modality model or optimal integration model by time discrimination task presenting visual-single modality, auditory-single modality, and audio-visual stimuli synchronously and time structure consistently. In experiment 2, we added two factors, the consistency in time structure and synchronism of audio-visual stimuli, to explore the influence of these two factors on multisensory integration.

Our study find an interesting phenomenon -- the brain on multisensory integration of time estimates seems to act as a smart “shirker”, under the different conditions of audio-visual stimuli synchronism and consistency, it will flexibly uses different strategies: when the audio-visual stimuli consistent and synchronous, it shows no integration

advantages, the strategy that the brain adopts conforms to the dominant modality model; when the audio-visual stimuli present asynchronously with the same time structure or present synchronously but with different structure, the brain adopts Bayesian optimal model; under the inconsistent and asynchronous condition, different subjects seems to select different strategies, some tend to adopt optimal integration model, the others tend to adopt the dominant modality model, and under this condition, the weighting model fits relatively better. Compared with asynchronism, if the conflicting condition of audiovisual information is time structure inconsistency, subjects are seemingly inclined to give more weight to the dominant modality than the prediction weight according to the optimal integration model. These results may be related to attention allocation.

Keywords: multisensory integration, multisensory integration advantages, Bayesian optimal integration model, time estimation, synchronism and time structure consistency

词义相似程度对非熟练汉日双语者同形词识别的影响

张骏^{1,2} 江新^{1,2} (通讯作者)

1 北京语言大学心理学院 2 北京语言大学汉语国际教育研究院, 北京, 100083, jiangxin6@163.com

摘要 研究背景: 分布式概念表征模型是双语词汇表征的经典模型。该模型认为, 概念表征由多个概念节点组成, 在两种语言之间重叠的概念节点越多, 词汇通达的速度就越快。在拼音文字研究中发现两种语言的同形同义词(如“lamp”在英语和荷兰语中都表示“灯”)比非同形词(如“book”只在英语中表示“书”, 在荷兰语中“boek”表示“书”)相比识别速度更快, 即具有加工优势。分布式概念表征模型认为这是由于同形同义词比非同形词具有更高的概念重叠。但已有研究主要以拼音文字为实验材料。在汉日两种语言中存在许多同形类义词, 即词形一致而词义部分一致, 部分不一致(如日语单词“爱情”, 既可以指男女爱情, 也表示亲人之爱)。汉日同形类义词是否具有加工优势, 还鲜有研究。

研究问题: 本研究通过两个实验考察词义相似程度对非熟练汉日双语者同形词识别的影响, 并考察汉日同形类义词是否具有加工优势。根据分布式概念表征模型的预测, 同形类义词的概念重叠度比同形同义词低, 加工优势会减小甚至消失。

实验一选取非熟练汉日双语者为被试, 要求被试对汉日同形同义词(例如日语“学校”, 意为“学校”)、同形类义词(例如日语“爱情”意为“爱情”、“亲情”)和非同形词(日语“映画”, 意为“电影”)进行日语词汇判断。结果发现, 词义相似程度影响汉日同形词的加工, 与非同形词相比, 同形同义词具有显著的加工优势, 而同形类义词并没有加工优势。

实验二进一步探究同形类义词为何不存在加工优势。在同形类义词中, 部分意义与汉语相同, 称为共有义(如“爱情”中的男女爱情), 部分意义为日语特有, 称为独有义(如“爱情”中的亲人之爱)。实验二采用掩蔽启动范式, 要求被试在共有义启动(恋爱-爱情)、独有义启动(亲情-爱情)和无关启动(苹果-爱情)三种启动条件下对目标词进行词汇判断。结果发现, 独有义具有显著的启动效应, 而共有义不存在启动效应。

研究结论: 词义相似程度影响非熟练中日双语者同形词的识别, 这也符合分布式概念表征模型的预测。在非熟练汉日双语者对同形类义词的表征中, 同形类义词与独有义的联结比它与共有义的联结强, 由于独有义与汉语词意义重叠程度较低, 这可能导致同形类义词不存在加工优势。

关键词 汉日同形词, 同形同义词, 同形类义词, 词汇识别, 分布式概念表征模型

Influence of word meaning similarity on homograph recognition of unskilled Chinese-Japanese Bilinguals

Jun Zhang^{1,2}, Xin Jiang^{1,2}

1. School of psychology, Beijing Language and Culture University

2 Institute of Chinese international education, Beijing Language and Culture University, Beijing

Abstract: Background: Distributed Representation Model(DRM) is a classical model of bilingual lexical representation. The model holds that concept representation is composed of multiple concept nodes. The more concept nodes overlap between the two languages, the faster lexical access. In the study of alphabetic language, it is found that cognates of the two languages (such as "lamp" means "lamp" in English and Dutch) are faster than noncognates (such as "book" only means "book" in English and "boek" means "book" in Dutch), that is, they have processing advantages. The DRM considers that this is because cognates have higher concept overlap than noncognates. However, the existing research mainly takes alphabetic language as experimental materials. There are many partial cognates in both Chinese and Japanese languages, that is, the word form is consistent, while the word meaning is partially consistent and partially inconsistent (for example, the Japanese word "愛情" can refer to both male and female love and the love of relatives). There is little research on whether Chinese-Japanese partial cognates have processing advantages.

Research questions: two experiments were conducted to investigate the influence of word meaning similarity on homonym recognition of unskilled Chinese and Japanese bilinguals, and whether Chinese-Japanese partial cognates have processing advantages. According to the DRM, the concept overlap of partial cognates is lower than that of cognates, and the processing advantage will be reduced or even disappear.

In Experiment 1, unskilled Chinese Japanese bilinguals were selected as subjects, and the subjects were asked to decision the Japanese lexical of Chinese-Japanese cognates (such as Japanese "学校", which means "school"), partial cognates (such as Japanese "愛情", which means "love" and "family affection") and non-cognates (Japanese "映画", which means "film"). The results show that the degree of word meaning similarity affects the processing of Chinese and Japanese homographs. Compared with non-cognates, cognates have significant processing advantages, while partial cognates have no processing advantages.

Experiment 2 further explored why partial cognates did not have processing advantages. In partial cognates, some of the meanings are the same as those in Chinese, which are called shared meanings (such as the love between men and women in "愛情"), and some of the meanings are unique to Japanese, which are called unique meanings (such as the love of relatives in "愛情"). In Experiment 2, the masked priming paradigm was used, and the subjects were asked to decision the lexical of the target words under three priming conditions: shared meaning priming (恋爱-愛情), unique meaning priming (亲情-愛情) and irrelevant priming (苹果-愛情). The results showed that unique meaning had a significant priming effect, while shared meaning had no priming effect.

Conclusion: the similarity of word meaning affects the recognition of homographs in unskilled Chinese-Japanese bilinguals, which is also in line with the prediction of DRM. In the representation of partial cognates by unskilled Chinese-Japanese bilinguals, the connection between partial cognates and unique meanings is stronger than that between partial cognates and shared meanings. Due to the low degree of overlap between unique meanings and Chinese words, partial cognates may not have processing advantages.

Keywords: Chinese-Japanese homographs, Cognates, Partial cognates, Lexical recognition Distributed Representation Model

如何解决智慧定义之争：素质与情境交互作用式智慧观

张凯丽 汪凤炎（通讯作者）

南京师范大学道德教育研究所，暨 心理学院，南京，210097，通讯作者 E-mail: fywangjx8069@163.com

摘 要 在当代心理学中，对智慧的定义从一系列成熟的人格特质到理性的知识，再至对有关生命的重要且实用的专业知识，再至强调实践或行动和自我超越等，至今已有 20 余种智慧定义。由于成熟的人格特质以及有关生命和过美好生活的重要且实用的专业知识的类型和标准多种多样，因而尚没有一个公认的智慧定义。Sternberg 认为现有智慧定义可概括为四种界定角度：1）将智慧视作人自身的一种功能或属性；2）将智慧视作个体在情境里展现出来的一种属性；3）将智慧视作人与情境互动中的一种属性；4）将智慧视作行动的属性（Sternberg, 2019a）。本文详细评述了这四种智慧界定的优劣。同时，为了避免不必要的争论，更为了看

清智慧的本质，提出素质与情境交互作用式智慧观：个体或群体之所以能在某情境中展现智慧，是因为他或他们身上已具备相应的智慧素质，此情境又恰好有利于其智慧素质的展现。素质与情境交互作用式智慧观和前人提出的人与情境互动型智慧观的相同之处在于：二者都主张个体的智慧受来自个体自身和情境因素的双重影响。二者的不同之处是：素质与情境交互作用式智慧观主张人的智慧素质存在于人身上，而它能否在行动中展现出来则取决于人和情境双重变量；人与情境互动型智慧观主张人的智慧根本不存在于人或情境之中，而是存在于人与情境的互动之中。

How to Resolve the Debate on the Definition of wisdom: The Quality and Context Interactive View of Wisdom

Kaili Zhang, Fengyan Wang

Institute of Moral Education, School of Psychology, Nanjing Normal University, Nanjing 210097, China

Abstract: In contemporary psychology, the definition of wisdom ranges from a set of mature personality traits to rational knowledge, to important and practical professional knowledge about life, to an emphasis on practice or action and self-transcendence. There are more than 20 definitions of wisdom, but there is no accepted definition, because of the variety of mature personality traits and important and practical professional knowledge about life and living a good life. According to Sternberg, the current definition of wisdom can be summarized from four perspectives: 1) wisdom as a function/property of person; 2) wisdom as a property of the situation; 3) wisdom as a property of person x situation interaction; 4) wisdom as a property of action (Sternberg, 2019a). This paper reviews the merits and demerits of these four definitions of wisdom in detail. In order to avoid unnecessary arguments and see the essence of wisdom clearly, this paper puts forward the view of intelligence based on the interaction of quality and situation: the reason why an individual or group can display wisdom in a certain situation is that they already have the corresponding wisdom quality, and the situation is conducive to the display of their wisdom quality. The quality and situation interaction wisdom view is similar to the human and situation interaction wisdom view put forward by predecessors: both advocate that the individual intelligence is influenced by the individual and the situation factors. The differences between the two are as follows: The former holds that human intelligence quality exists in human body, but whether it can be displayed in action depends on the double variables of human and situation; The later holds that human wisdom does not exist in people or situations at all, but in the interaction between people and situations.

Keywords: wisdom, quality, satiation, personality, the style of thinking

动作频率对动作增强效应的影响

郑思琦 孟迎芳（通讯作者）

福建师范大学心理学院，福州，350117，通讯作者 E-mail: 175695016@qq.com

摘要 近期有研究发现，动作可以促进与之无关的背景信息的记忆成绩，表现出动作增强效应(AIME, action-induced memory enhancement; Yebra et al., 2019)。然而，近期有研究者提出双任务交互模型(the dual-task interaction model)，认为仅目标决策就能增强背景信息的记忆成绩(Swallow&Jiang, 2013)。由于在动作增强效应的研究中，动作反应也是被试的行为目标，因此难以区分背景信息所获得的记忆优势是源于动作还是目标决策。为了进一步澄清动作是否会对背景刺激的记忆产生促进作用，实验1在原有范式的基础上通过操纵指导语和增加动作种类的方式（非动作：动作=1:5）将动作与目标决策分离（非目标动作条件），同时设置目标动作条件进行对比以观察在相同决策条件下动作对背景刺激记忆的影响。鉴于目标决策促进作用的存在可能干扰我们对动作效应的观察，而已有研究表明分心拒绝对分心词不会产生额外影响，因此研究主要观察动作对分心词的影响。实验1结果发现，动作不仅没有对分心词的记忆成绩产生促进作用，还产生了抑制作用。

为了进一步检验实验 1 的结果是源于动作促进效应不存在还是动作促进效应受动作频率的调节所致，实验 2 和 3 在实验 1 的基础上，将动作与非动作刺激的呈现比例调整为 1:1（实验 2）和 1:2（实验 3）。结果发现，在 1:1 条件下，动作促进了分心词的记忆成绩；而在 1:2 条件下，动作对分心词的记忆成绩没有产生影响。研究表明，动作对背景刺激存在促进效应，但该效应受动作呈现频率的调节。

关键词 动作增强效应，双任务交互模型，动作，记忆

The impact of action frequency on action-induced memory enhancement effect (AIME)

Siqi Zheng, Yingfang Meng

School of Psychology, Fujian Normal University, Fuzhou, People's Republic of China

Abstract: Recent research has found that action can boost the memory performance of unrelated background information and show the action-induced memory enhancement (AIME; Yebra et al., 2019). However, some researchers have recently proposed the dual-task interaction model, which believes that only target decision-making can enhance the memory performance of background information (Swallow & Jiang, 2013). Because in the AIME study, the action response is also the behavioral goal of the subjects, it is difficult to distinguish whether the memory advantage gained by the background information comes from the action or the target decision. In order to further clarify whether the action will promote the memory of the background stimulus, Experiment 1 separates the action from the target decision by manipulating the instruction and increasing the type of action (non-action: action=1:5) on the basis of the original paradigm (Non-target action conditions), and set the target action conditions for comparison to observe the effect of actions on the background stimulus memory under the same decision-making conditions. Considering that the existence of goal decision-making promotion may interfere with our observation of action effects, and existing studies have shown that distraction rejection does not have an additional effect on distraction words, so the research mainly observes the effect of actions on distraction words. Experiment 1 found that the action did not promote the memory performance of the background stimulus, but instead produced an inhibitory effect. In order to further test whether the result of Experiment 1 is because the boost effect of action does not exist, or because the AIME is regulated by the action frequency. Experiments 2 and 3 adjusted the presentation ratio of action and non-action stimuli to 1:1 (Experiment 2) and 1:2 (Experiment 3) on the basis of Experiment 1. It was found that under the 1:1 condition, the action promoted the memory performance of distracted words; while under the 1:2 condition, the action had no effect on the memory performance of distracted words. The results of the study show that the action has a promoting effect on the memory of the background stimulus, but this effect is regulated by the frequency of the action.

家庭社会经济地位与儿童观点采择的关系：一个有调节的中介模型

白慧慧¹ 王雨晴¹² (通讯作者)

¹ 陕西师范大学心理学院, 西安, 710062

² 陕西省行为与认知神经科学重点实验室, 西安, 710062, wyq1994@snnu.edu.cn

摘要 家庭社会经济地位 (socioeconomic status, SES) 存在差距已经是当前社会的一个客观现实, 它给儿童发展带来的影响引起广泛关注。SES 是家庭经济资源 (如家庭收入)、社会资源 (如教育水平) 的整合, 对儿童认知发展尤其是观点采择能力发展起着重要作用。理论和实证研究表明, SES 与多种家庭特征 (如家庭功能) 密切相关, 家庭功能又对儿童观点采择具有重要影响。基于此, 本研究运用家庭社会经济地位问卷、家庭亲密度与适应性量表以及人际反应指针量表调查了 795 名 (男生 424 名) 二年级至五年级的小学生, 考察 SES 对儿童观点采择的影响、家庭功能在其中的中介作用以及该过程是否受到性别的调节。研究结果表明: (1) 在控制了独生与否、年级后, 家庭社会经济地位能够显著正向预测儿童的观点采择 ($\beta = 0.13, p < 0.001$),

即家庭社会经济地位越高, 儿童观点采择水平也会提高; (2) 家庭功能在家庭社会经济地位和儿童观点采择之间起部分中介作用 ($\beta = 0.02$, 95% CI = [0.01, 0.04]); (3) 性别显著调节直接路径, 即家庭社会经济地位对儿童观点采择的预测作用在女生群体中显著 ($\beta = 0.19$, 95% CI = [0.09, 0.27]), 男生群体中不显著 ($\beta = 0.05$, 95% CI = [-0.04, 0.14])。本研究从个体层面(性别)与微系统层面(家庭社会经济地位、家庭功能)揭示了儿童观点采择的多重影响因素, 对提高儿童观点采择具有一定的现实指导意义。

Socioeconomic Status and Children's Perspective Taking: A Moderated Mediation Model

Huihui Bai¹, Yuqing Wang^{1,2}

1 School of Psychology, Shaanxi Normal University, Xi'an, 710062

2 Provincial Key Laboratory of Behavioral and Cognitive Neuroscience, Xi'an, 710062

Abstract: It has become a harsh reality that there is a gap in family socioeconomic status (SES), and its impact on children's development has attracted widespread attention. SES is the integration of family economic resources (such as family income) and social resources (such as education level), which plays a great role in children's cognitive development, especially on perspective taking. Theoretical and empirical studies have shown that SES was closely related to a variety of family characteristics (such as family function), moreover family function had an important influence on children's perspective taking. Therefore, the present study examines the influence of SES on children's perspective taking, as well as the mediating role of family function, and whether this process is moderated by gender. Based on this, a total of 795 (424 boys) primary school students from second to fifth grade were surveyed, using the Family Socioeconomic Status Questionnaire, the Family Intimacy and Adaptability Scale, and the Interpersonal Response Indicator Scale. The results showed that: (1) after controlling for one child or not and grade, family socioeconomic status significantly predicted children's perspective taking ($\beta = 0.13$, $p < 0.001$); (2) family function played a partial mediating role in the relationship between family socioeconomic status and children's perspective taking ($\beta = 0.02$, 95%CI = [0.01, 0.04]); (3) gender significantly moderated the direct pathway. Specifically, the predictive effect of family socioeconomic status on children's perspective taking was significant for girls ($\beta = 0.19$, 95%CI = [0.09, 0.27]), but not for boys ($\beta = 0.05$, 95%CI = [-0.04, 0.14]). This study reveals the multiple influencing factors of children's perspective taking from the individual level (gender) and microsystem level (family socioeconomic status, family function), which may inform the practice of the improvement of children's perspective taking.

通讯作者 E-mail: lslyzpsy@yangtzeu.edu.cn

摘要 随着移动互联网的发展, 网络已经改变了大学生群体生活和学习的方式, 同时也给传统的心理现象向网络空间中的拓展提供了可能。囤积行为是指个体对没有用处或没有价值的物品表现出过度获取或无法丢弃的行为, “获取”、“堆积”、“难丢弃”是研究者们公认的囤积行为三维度, 它会对个体(如人际关系、负面情绪)和组织(如公共卫生问题、社会福利)带来影响。随着手机等移动互联网工具的普及, 网络空间为囤积行为创造了新的条件。网络空间的跨越性、非同步性、匿名性和去抑制性, 使囤积行为从物理的现实空间迁移到网络的虚拟空间时, 有相似但又独特的表现。①个体在网络空间中会频繁地保存无用或没有价值的网络

资源。②由于过度获取网络资源，导致个体网络存储空间不足手机无法正常使用。③网络囤积行为同样会对个体（如压力）和组织造成损害（如信息共享、知识管理文化）。虽然，网络囤积行为引起了研究者的关注，但其概念内涵尚不清晰且缺乏相应的研究工具。因此，本研究在以往研究的基础上，通过质性研究，获取“网络囤积行为”的相关资料，编制大学生网络囤积行为问卷，并检验该问卷在大学生群体中的信度和效度。首先，在梳理已有囤积行为和网络囤积行为相关研究的基础上，编制结构化访谈问卷并进行质性研究，以编制初步的大学生网络囤积行为量表。其次，以 427 名在校大学生为被试对问卷进行探索性因素分析，并在此基础上以 424 名在校大学生为被试对问卷进行结构效度分析、效标关联效度和信度分析。结果：①探索性因素分析结果表明，大学生网络囤积行为问卷包括“保存”、“堆积”、“难删除”三个因子，每个因子 4 个项目，累计方差贡献率为 72.954%；②验证性因素分析结果表明，该问卷具有较高的结构效度，拟合指标结果如下： $\chi^2/df=3.343$, RMSEA=0.074, GFI=0.935, NFI=0.943, CFI=0.959, IFI=0.959；③该问卷的效标关联效度和信度也符合相关测量学要求。本研究将网络囤积行为定义为个体在网络使用过程中持续保存、堆积且难以删除网络资源的行为倾向。大学生网络囤积行为问卷的信度和信度良好，为日后深入探讨网络囤积行为的影响因素及影响后效提供了良好的测量工具。

Development and validation of Cyber Hoarding Behavior Questionnaire for College Students

Bai Xuqing^{1,2}, Bao Lingling¹, Jiang Huiling¹, Li Xinyi^{1,3}, Lian Shuailei¹

1 College of Education and Sports Science, Yangtze University, Jingzhou Hubei, 434023

2 Key Laboratory of Adolescent Cyberpsychology and Behavior (CCNU), Ministry of Education

School of Psychology, Central China Normal University, Wuhan 430079, China

3 Health in Social Science, The University Of Edinburgh

Abstract: With the development of mobile Internet, the Internet has changed the way of College Students' living and learning, and also provided the possibility for the traditional psychological phenomenon to expand into the cyberspace. Hoarding behavior refers to the behavior of individuals showing over-acquisition or irreplaceability for useless or worthless items. "Acquiring", "Clutter" and "Difficulty discarding" are the three factors of hoarding behavior, which will affect individuals (such as interpersonal relationships, negative emotions) and organizations (such as public health issues, social welfare). With the popularization of mobile Internet tools such as mobile phones, cyberspace has created new conditions for hoarding behavior. Due to the leapfrogging, non-synchronicity, anonymity and disinhibition of the cyberspace, hoarding behavior has similar but unique performance with cyber hoarding behavior when it is transferred from the physical real space to the virtual space. (1) Individuals will frequently save useless or worthless Internet resources in cyberspace. (2) Due to excessive access to cyber resources, cyber storage space is insufficient and mobile phones cannot be used normally. (3) Cyber hoarding can also damage individuals (such as pressure) and organizations (such as information sharing, knowledge management culture). Although the cyber hoarding behavior has attracted the attention on researchers, its concept connotation is still not clear and it lacks the corresponding research tools. Therefore, the purpose of this study was to develop and validate Cyber Hoarding Behavior Questionnaire for College Students. An iterative process based on: (1)structured semi-interview questionnaires based on previous studies of hoarding behavior and cyber hoarding behavior, (2)qualitative data from 33 semi-structured interviews with college students, (3)a preliminary cyber hoarding behavior questionnaires for college students, (4)427 college students were selected as subjects to conduct exploratory factor analysis on the questionnaire, (5)424 college students were selected as subjects to analyze the structural validity, criterion-related validity and reliability of the questionnaire. Results: (1) The results of exploratory factor analysis showed that the college students' cyber hoarding behavior questionnaire included three factors: "Saving", "Stack" and "Difficulty deleting". with 4 items for each factor, and the cumulative variance contribution rate was 72.954%; (2) The confirmatory factor analysis showed that the questionnaire had high structural validity, and the fitting index results

were as follows: $\chi^2 / DF = 3.343$, RMSEA = 0.074, GFI = 0.935, NFI = 0.943, CFI = 0.959, IFI = 0.959; (3) The reliability and validity of the Cyber Hoarding Behavior Questionnaire for College Students are good and meet with the psychometric standard. In this study, cyber hoarding behavior is defined as "the behavior tendency of individuals to save, stack and difficult to delete cyber resources in the process of cyber use". This questionnaire has good reliability and validity, and can be applied to measure the cyber hoarding behavior, which can be used for in-depth study of the influencing factors and the impact of the aftereffect of cyber hoarding behavior in the future.

基本心理需要缺失和青少年自伤行为：一个有调节的中介模型

鲍秀聪¹ 顾红磊^{1,2} (通讯作者)

1 湖南师范大学心理学系, 长沙, 410081

2 认知与行为湖南省重点实验室, 长沙, 410081, GHL@hunnu.edu.cn

摘要 自我决定理论(Self-Determination Theory, SDT)认为, 人类的基本心理需要就像心理上的营养物一样, 对个体心理的健康成长、整合和幸福感受必不可少、至关重要。当基本心理需要受到阻滞时, 个体可能会发展出僵硬、刻板的行为模式(例如, 自伤), 来帮助他们免受需要受阻的伤害。自伤指个体在没有自杀意图的情况下, 故意对自己的身体组织造成伤害或疼痛的行为, 是世界各国青少年普遍存在的一种严重的行为问题。鉴于青少年群体中自伤行为的高发率以及危险性, 有必要了解青少年自伤行为的形成机制。本研究采用问卷调查法, 以基本心理需要缺失量表、抑郁量表、自我同情量表、自伤行为量表对 1691 名青少年进行测试, 基于自我决定理论探讨基本心理需要缺失影响青少年自伤行为的内在心理机制。结果显示: (1) 基本心理需要缺失对青少年自伤行为有显著的正向预测作用; (2) 抑郁在基本心理需要缺失与青少年自伤行为之间起着部分中介作用; (3) 基本心理需要缺失通过抑郁影响自伤行为的间接效应(中介效应的前半段和后半段)受到自我同情的调节, 且间接效应对于自我同情水平较低的青少年显著, 而对于自我同情水平较高的青少年不显著。由此可见, 在青少年成长过程中, 应重视青少年基本心理需要的满足及自我同情能力的培养, 以便更好的预防和干预自伤。

Basic Psychological Need Frustration and Adolescent Non-Suicidal Self-injury: A Moderated Mediation Model

Xiucong Bao¹, Honglei Gu^{1,2}

¹Department of Psychology, Hunan Normal University, Changsha, 410081

²Cognition and Human Behavior Key Laboratory of Hunan Province, Changsha, 410081, GHL@hunnu.edu.cn

Abstract: According to Deci and Ryan's (2000) Self-Determination Theory, basic psychological needs specify the necessary conditions for psychological growth, integrity, and well-being, and the psychological need frustration can lead to nonsuicidal self-injury (NSSI). Based on this theory, the current study tested a moderated mediation model with basic psychological need frustration, depression, self-compassion, and NSSI. Specifically, we examined whether depression mediated the association between basic psychological need frustration and NSSI, and whether this indirect effect was moderated by self-compassion. A total of 1691 Chinese adolescents anonymously filled out questionnaires regarding basic psychological need frustration, depression, self-compassion, and NSSI. The results revealed that basic psychological need frustration was positively associated with NSSI, and this association was mediated by depression. Self-compassion buffered the association between basic psychological need frustration and depression, as well as the association between depression and NSSI. These findings highlight the importance to consider the satisfaction of their basic psychological needs and the cultivation of their self-compassion ability when dealing with risks associated with adolescent NSSI, and have important implications for the prevention and intervention of NSSI.

Keywords: basic psychological need frustration, depression, self-compassion, non-suicidal self-injury

心理弹性中介学业情绪对初中生学习倦怠的影响

卜塔娜¹ 何艳丽¹ 钟建军²

1 内蒙古师范大学, 呼和浩特, 010000

2 内蒙古师范大学心理学院, 呼和浩特, 010000, zhongjj709@163.com

摘要 为揭示学业情绪在心理弹性对学习倦怠的影响所起作用及其是否具有发展的一致性, 以方便抽样方式对某城市一初中的 750 名初中生进行青少年学习倦怠量表、青少年心理韧性量表、青少年学业情绪问卷测量, 使用 lisrel8.8 数据处理, 结果发现: 心理弹性中介学业情绪影响学业倦怠的结构方程模型的各个指数良好, 积极情绪和消极情绪各自的正负向中介效应、心理弹性的负向间接效应均通过 BOOTSTRAP、SE 检验; 心理弹性负向预测学习倦怠的 69.0%, 心理弹性正向预测积极学业情绪的 41.0%、负向预测消极学业情绪的 55.8%, 积极学业情绪、消极学业情绪在心理弹性对学习倦怠影响的中介效应比率分别为 22.0%, 30.9%, 模型内变量路径有跨年级的整体普遍性, 模型内效应量跨年级局部不一致性, 初二心理弹性对学习倦怠影响低于初一和初三, 初一和初三时期, 消极情绪对学业倦怠影响显著大于积极情绪, 经讨论得到的结论是心理弹性部分中介积极、消极学业情绪影响学业倦怠, 心理弹性对消极学业情绪制约作用大于对积极情绪生成作用, 消极学业情绪对学习倦怠行为产生、促进作用比积极情绪对倦怠行为的制约、防范作用大, 初一、初三时期消极学业情绪比积极学业情绪对学习倦怠中介影响更大。

Mediation of Academic Emotion on Psychological Resilience and Learning Burnout in Junior High School Students

BU Tana, HE Yanli, ZHONG Jianjun

School of Psychology, Inner Mongolia Normal University, Inner Mongolia, China

Abstract: To explore the role of academic emotion in the influence of psychological resilience on learning burnout and whether it has a developmental consistency. 750 junior middle school students in Gansu were sampled by convenience method. Adolescent Learning burnout Scale, Adolescent Psychological Resilience Scale and Adolescent Academic Sentiment Questionnaire were measured. The data were processed by LISA 8.8. The indexes of the structural equation model of the effect of psychological resilience on learning burnout were good. The positive and negative mediating effects of positive and negative emotions and the negative indirect effects of psychological resilience were all tested by Bootstrap and SE. Psychological resilience negatively predicted learning burnout 69.0%, positively predicted positive academic emotion 41.0% and negatively predicted negative academic emotion 55.8%. The mediating effect rates of positive academic emotion and negative academic emotion on learning burnout were 22.0% and 30.9%, respectively. The path of variables in the model has the overall universality across grades, and the effect size in the model has the local inconsistency across grades. The impact of psychological resilience on learning burnout in the second year of junior high school is lower than that in the first and third year of junior high school. The impact of negative emotion on learning burnout is significantly greater than that of positive emotion in the first and third year of junior high school. Psychological resilience can not only directly affect learning burnout, but also indirectly influence it through positive and negative academic emotions. The effect of psychological resilience on negative academic emotions is greater than that on positive emotions. The effect of negative academic emotions on the generation of learning burnout behavior is greater than that of positive emotions on the restriction of learning burnout behavior. The effect of negative academic emotions on learning burnout mediation is greater than that of positive academic emotions in the first and third years of junior high school.

Keywords: Junior high school students, Learning burnout, Psychological resilience, Academic emotions

道德认同内化和符号化对大学生亲社会行为的影响： 一个有调节的中介模型

陈灿杰¹

1 四川师范大学心理学院，成都，610066，291553397@qq.com

摘要 采用道德认同量表、人际反应指针量表、亲社会行为倾向量表和五因素正念度量表对 533 名大学生进行调查，随后采用统计软件 SPSS 23.0 和 Mplus8.3 对数据进行整理和结构方程模型分析，探讨道德认同对大学生亲社会行为的影响机制。结果表明：(1)道德认同内化($\beta=.309, p<.001$)和符号化($\beta=.372, p<.001$)均能正向预测大学生亲社会行为；(2)共情在道德认同内化和符号化对大学生亲社会行为的影响过程中起部分中介作用；(3)正念在道德认同内化和符号化通过共情对大学生亲社会行为的影响过程中起调节作用，正念减弱了道德认同符号化对亲社会行为的正向影响($\beta=-.123, p<.01$)，同时增强了共情对亲社会行为的正向影响($\beta=.124, p<.01$)，但正念在道德认同内化对亲社会行为影响中的调节作用不显著($\beta=-.009, p>.05$)。即相对于低正念水平，高正念水平大学生的道德认同内化和符号化对亲社会行为的促进作用都更多地通过较为稳定的共情中介实现，减少了对外界情境激活的依赖。

关键词 亲社会行为，道德认同内化，道德认同符号化，共情，正念

The Effects of Moral Identity Internalization and Symbolization on College Students' Prosocial Behavior: A Moderated Mediation Model

Chen Canjie

Sichuan Normal University, Chengdu, 610066, 291553397@qq.com

Abstract: To explore the mechanism between moral identity internalization/symbolization and college students' prosocial behavior, a sample of 533 college students were recruited to complete moral identity measure, interpersonal reactivity index, prosocial tendencies measure, and five facet mindfulness questionnaire. The results showed that: (1) Both internalization and symbolization positively predicted prosocial behavior of college students. (2) The empathy played partial mediating role between internalization/symbolization and college students' prosocial behavior. (3) More importantly, the structural equation model revealed that the data fit the theoretical moderated mediation model well. Mindfulness played a moderating role in the moderated mediation model. The interaction of symbolization and mindfulness has a significant direct effect on prosocial behavior. Mindfulness weakens the positive effect of moral identity symbolization on college students' prosocial behavior. Besides, the interaction of empathy and mindfulness has a significant direct effect on prosocial behavior. Mindfulness enhances the positive influence of empathy on college students' prosocial behavior. In conclusion, higher mindfulness can reduce the dependence of the symbolization on the activation of external situations, and make the realization of prosocial behavior through empathy, which is more stable.

Keywords: prosocial behavior, moral identity internalization, moral identity symbolization, empathy, mindfulness

校园人际谣言与初中生抑郁的关系研究： 核心自我评价的中介作用和自我同情的调节作用

陈慧玲¹ 亓伊静¹ 王琮²（通讯作者） 胡伟³（通讯作者）

1 郑州大学教育学院，郑州，450001

2 郑州大学教育学院，郑州，450001，wangq@zzu.edu.cn

3 战略支援部队信息工程大学，郑州，450001，psyhuwei@163.com

摘要 遭受校园人际谣言是初中生抑郁的重要风险因素。初中生处在身心发展的重要阶段，对校园负面环境的心理承受能力较弱，更容易受到校园人际谣言的影响，也有着更高的抑郁风险。然而，以往研究大多对校园欺凌整体或者直接欺凌进行研究，校园人际谣言作为间接欺凌的典型形式，因其隐蔽性未得到相应的重

视。因此,本研究以校园人际谣言作为新视角,深入探讨校园人际谣言对初中生抑郁的影响及作用机制,包括核心自我评价的中介作用和自我同情的调节作用。本研究采用校园人际谣言量表、核心自我评价量表、自我同情量表和简版流调中心抑郁量表对 1811 名初中生进行调查。结果发现:(1)校园人际谣言、核心自我评价、自我同情与初中生抑郁之间,均两两显著相关;(2)核心自我评价部分中介了校园人际谣言与初中生抑郁之间的关系;(3)“校园人际谣言→核心自我评价→抑郁”这一中介路径的后半段受到自我同情的调节;个体的自我同情水平越高,核心自我评价对初中生抑郁的负向预测作用越弱。研究结果揭示了校园人际谣言和核心自我评价在初中生抑郁发生过程中的影响机制,发现了自我同情作为保护性因素的作用机制,这不仅有助于深入理解初中生抑郁的发生机制,而且为引导初中生合理面对校园人际谣言、缓解抑郁情绪提供了一定的启示。

关键词 校园人际谣言, 抑郁, 核心自我评价, 自我同情

The Influence of Negative School Gossip on Depression in Junior High School Students: The Mediating Role of Core Self-evaluation and The Moderating Role of Self-compassion

CHEN Hui-ling¹, QI Yi-jing¹, WANG Qiong¹, HU Wei²

1 School of Education, Zhengzhou University, Zhengzhou, 450001

2 PLA Strategy Support Force Information Engineering University, Zhengzhou 450001

Abstract: Exposure to negative school gossip is a significant risk factor for depression among junior high school students. Junior high school students are at an important stage of physical and mental development. They have a weak psychological tolerance for negative school environments, which are vulnerable to negative school gossip and have a higher risk of depression. However, most previous studies have focused on overall or direct bullying, negative school gossip, as a typical form of indirect bullying, has not received corresponding attention due to its concealment. Therefore, we take negative school gossip as a new perspective to explore the mechanisms of negative school gossip on depression, including the mediating role of core self-evaluation and the moderating role of self-compassion. In this study, the Negative School Gossip Questionnaire, Core Self-evaluation Scale, Self-compassion Scale, and short form of the CES-D were used to survey 1811 junior high school students. The results showed that: (1) Negative school gossip, core self-evaluation, self-compassion, and depression were significantly correlated with each other; (2) Core self-evaluation played a partial mediating role between negative school gossip and depression among junior high school students; (3) The second half of this mediating path of “negative school gossip → core self-evaluation → depression” was regulated by self-compassion; The higher the level of individual self-compassion, the lower the predictive effect of core self-evaluation on depression. The results reveal the mechanisms of negative school gossip and core self-evaluation on depression and found the mechanism of self-compassion as a protective factor, which not only helps further understand the mechanism of depression among junior high school students, but also provides certain insights to guide junior high school students to face negative school gossip reasonably and alleviate depression.

Keywords: Negative school gossip, depression, Core self-evaluation, Self-compassion

近 20 年道德认知理论的发展与演进

陈梦一¹ 祝大鹏² (通讯作者)

摘 要 道德认知作为道德的重要组成部分, 会影响个体的道德行为。研究基于理论发展的脉络, 对道德认知理论的现状和最新进展进行了回顾和梳理, 并对发展趋势做了分析。道德认知是个体依据内在道德观念和准则, 对客观存在的道德关系以及对如何处理这种关系的原则和规范的认识, 并集中表现在道德判断上。关

于道德判断中的“理性与情感之争”，即道德判断究竟是一个由认知控制的推理加工过程还是一个由情绪启动的自动的直觉过程，引起了广泛讨论。综合分析以往研究发现，近年来道德认知理论开始由对普遍道德原则的寻求转向对具体情境下个体道德心理特征的探究。道德直觉模型和双加工理论是当前有关道德认知理论的主流理论基础，受到大多数研究者的认同。不过也有学者考虑到以往理论无法解释的情况，基于新的视角和眼光，开始思考具体情境下的道德认知发展状况，进一步丰富了道德认知的理论体系。道德认知理论的发展路径由简单的行为学研究转到认知神经机制研究。早期的道德认知理论的提出是建立在行为观察与分析基础上，而对于具体情境下的道德认知和行为的发生机制，先前的理论并不能清晰地回答，因而不能对个体的道德认知发展与行为进行预测和干预。随着 fMRI、EEG、ERP 等认知神经技术的进步，许多学者得以借助认知技术探寻道德认知的脑机制，为相关理论提供多方面的证据支持。通过利用相关技术探究个体做出道德判断的神经活动特点，从生理机制方面来补充和丰富道德认知的研究。国内也有学者基于当前道德认知研究的现状，开始探索本土文化背景下的道德心理现象和规律，今后需要有更多的研究，立足于本民族的文化优势，推进本土化的道德心理研究，促进本民族道德教育与实践。

The development and evolution of moral cognitive theory in recent 20 years

Chen Mengyi¹, Zhu Dapeng²

1 Graduate School of Wuhan Sports University, Wuhan, 430079

2 School of Health Science, Wuhan Sports University, Wuhan, 430079

Abstract: As an important part of morality, moral cognition influences individual's moral behavior. Based on the context of theoretical development, the study reviewed and sorted out the current situation and latest progress of the theory of moral cognition, and analyzed the development trend. Moral cognition is the individual on the basis of inner moral concept and standard, the objective existence of the moral relations as well as to how to deal with the relationship between the understanding of the principles and practices, and focuses on the moral judgment. The debate between reason and emotion in moral judgment, that is, whether moral judgment is an inferential process controlled by cognition or an automatic intuitive process initiated by emotion, has been widely discussed. After a comprehensive analysis of previous studies, it is found that in recent years, the theory of moral cognition has shifted from the search for universal moral principles to the exploration of individual's moral psychological characteristics under specific circumstances. The moral intuition model and the double-processing theory are the mainstream theoretical basis of the current theories of moral cognition, which are accepted by most researchers. However, some scholars began to think about the development of moral cognition in specific situations based on new perspectives and perspectives, which further enriched the theoretical system of moral cognition, considering the points that previous theories could not explain. The development path of moral cognitive theory has changed from simple behavioral research to cognitive neural mechanism research. The early theory of moral cognition was put forward on the basis of behavior observation and analysis, but for the occurrence mechanism of moral cognition and behavior in specific situations, the previous theory could not clearly answer, so it could not predict and intervene the development of individual's moral cognition and behavior. With the progress of fMRI, EEG, ERP and other cognitive neurotechnologies, many scholars have been able to explore the brain mechanism of moral cognition with the help of cognitive technology, and provide various evidence support for relevant theories. By using these techniques to explore the neural characteristics of individuals making moral judgments, we can supplement and enrich the study of moral cognition from the aspect of physiological mechanism. Based on the current status of moral psychology research, some domestic scholars have begun to explore the phenomena and laws of moral psychology in the context of local culture. In the future, more researches are needed to promote the localization of moral psychology research and promote the moral education and practice based on the cultural advantages of this nation.

3 中国科学技术大学人文与社会科学学院, 合肥, 230022, 通讯作者 E-mail: zhanglin1@nbu.edu.cn

摘要 鉴于校园欺凌的普遍性与危害性, 国内外已开展了许多关于欺凌行为的影响因素和发生机制的研究, 例如从家庭角度、学校角度出发, 但较少研究从个人角度特别是人格特质切入, 系统探讨个人特质与欺凌行为的关系。而从人格特质出发进行研究有助于从源头排查校园中潜在的欺凌者, 进而及时阻断欺凌行为的发生。因此, 本研究将从人格特质角度探讨冷酷无情特质与初中生欺凌行为的关系, 并考察其中可能存在的中介和调节变量。为考察冷酷无情特质(CU 特质)与初中生欺凌行为的关系, 探讨道德推脱和内疚的中介作用和班级氛围的调节作用, 此研究采用整群抽样法, 使用问卷对 522 名初中生进行调查。结果显示: (1) CU 特质显著正向预测欺凌行为, 道德推脱和内疚在该过程中均起部分中介作用, 并且两者的链式中介作用显著; (2) 良好的班级氛围可以降低 CU 特质对欺凌行为的正向预测作用, 也可以通过提高内疚水平从而减少欺凌行为, 亦可以抑制道德推脱对欺凌行为的诱发作用。本研究系统揭示了初中生欺凌行为的内部心理机制, 同时深化了 CU 特质与校园欺凌的研究。以往在校园欺凌研究中同时考察道德认知和道德情绪的研究鲜见, 因此本研究在一定程度上拓展和补充了校园欺凌的相关研究。此外, 本研究的发现还对干预初中生的欺凌行为具有一定的教育意义。首先, 学校心理健康教育工作者应当重视对具有特殊人格学生的筛查, 并给予他们更多的关注和帮助; 其次, 依据道德推脱机制, 学校心理健康教育工作中可以增加对学生开展系统课程的训练, 以帮助他们形成正确的道德观念, 降低道德推脱水平, 培养责任感和担当意识; 最后, 作为预防校园欺凌的保护因子, 教师要注重营造良好的班级氛围。

Abstract: In view of the universality and harmfulness of school bullying, many studies on the influencing factors and mechanisms of bullying behavior have been carried out at home and abroad, such as from the perspective of family and school, but there are few studies from the perspective of individuals, especially personality traits to discuss the relationship between personal traits and bullying behavior systematically. Researching from the perspective of personality traits helps to identify potential bullies on campus from the source, and then block the occurrence of bullying in a timely manner. Therefore, this study will explore the relationship between Callous-Unemotional traits and bullying behavior of junior high school students, and examine the possible mediators and moderators. In order to investigate the relationship between Callous-Unemotional traits (CU traits) and bullying behavior of junior high school students, and to explore the mediating role of moral disengagement and guilt and the moderating role of classroom climate, this study adopted a cluster sampling method and used questionnaires to survey 522 junior high school students. The results show that: (1) The CU traits significantly positively predict bullying. Moral disengagement and guilt both play a part of the mediating role in the process, and the chain mediation role of the two

is significant; (2) A good class climate could reduce the positive predictive effect of CU traits on bullying behaviors, and increase the level of guilt to reduce bullying behaviors, and could also inhibit the inducing effect of moral disengagement on bullying behaviors. . This research system reveals the internal psychological mechanism of bullying behavior of junior high school students, and at the same time deepens the research on CU traits and school bullying. In the past, studies on both moral cognition and moral emotions in the study of school bullying are rare. Therefore, this study expands and supplements the relevant research on school bullying to a certain extent. In addition, the findings of this study also have certain educational significance for intervention in the bullying behavior of junior high school students. First of all, teachers should pay attention to the screening of students with special personalities and give them more attention and help; second, according to the moral disengagement mechanism, teachers can increase the number of systematic courses for students, to help them form correct moral concepts, reduce their level of moral disengagement, and cultivate a sense of responsibility and responsibility; finally, as a protective factor to prevent school bullying, teachers should pay attention to creating a good class climate.

婚姻关系的代际传递——基于变量中心和个体中心的视角

陈子源¹ 方晓义¹ (通讯作者)

¹北京师范大学发展心理研究院, 北京, 100875, 通讯作者 E-mail: fangxy@bnu.edu.cn

摘要 幸福的婚姻对成年个体的生活满意度起着重要的作用, 在过去几十年中, 国内外的研究者一直致力于探究影响婚姻关系的关键因素。在众多影响因素中, 原生家庭的父母婚姻关系的重要影响已经得到了大量理论和研究的支持。但是以往大部分关于婚姻代际传递的研究采用的都是以变量为中心的方法, 并关注于某一特定的婚龄段, 而忽视了群体差异。因此, 本研究根据家庭生命周期理论, 结合以变量为中心的方法——主客体互倚模型 (Actor Partner Interdependence Model, APIM) 和以个体为中心的方法——潜在剖面分析 (Potential Profile Analysis, LPA) 在多个婚龄段的夫妻中再次检验了婚姻的代际传递效应, 以进一步探讨该效应是否存在群体内部的异质性。本研究通过熟人介绍、网上张贴项目广告和社区合作三种形式招募了 674 对夫妻, 其中 122 对新婚期夫妻, 356 对养育期夫妻, 195 对空巢期夫妻。研究采取线下问卷的形式, 每一对夫妻都分别填写了自编《原生家庭情况问卷》, 《婚姻质量问卷(Quality of Marriage Index)》和《婚姻不稳定指数量表简化版(Marital Instability Scale- Short Form)》。以变量为中心的分析结果发现: 1.对于新婚期的夫妻 (N=122 对), 丈夫的原生家庭婚姻关系显著地正向影响自己和伴侣的婚姻质量和稳定性, 妻子的原生家庭婚姻关系则不影响自己和伴侣的婚姻质量和稳定性; 2.对于养育期的夫妻 (N=356 对), 夫妻双方的父母婚姻关系都显著地正向影响自己以及伴侣的婚姻质量和稳定性; 3.对于空巢期的夫妻 (N=195 对), 夫妻双方的父母婚姻关系都不影响自己以及伴侣的婚姻质量和稳定性。以个体为中心的分析结果则表明: 1.根据夫妻来自的原生家庭父母婚姻情况, 可以分为三个剖面: 双方都来自于婚姻幸福的原生家庭 (剖面 1), 妻子来自于婚姻幸福的原生家庭而丈夫来自于婚姻不幸福的原生家庭 (剖面 2), 丈夫来自于婚姻幸福的原生家庭而妻子来自于婚姻不幸福的原生家庭 (剖面 3); 2.三个剖面对应的婚姻质量和稳定性存在显著差异, 属于剖面 1 的夫妻的婚姻质量和稳定性都最高, 其次是剖面 2, 最低的是剖面 3。

The Intergenerational Transmission of Marital Relationship——Integrating Variable-Centered and Person-Centered Approaches

Ziyuan CHEN, Xiaoyi FANG (Corresponding Author)

Institute of Developmental Psychology, Beijing Normal University, Beijing, 100875

fangxy@bnu.edu.cn

Abstract: A happy marriage plays an important role in adult well-being. In the past decades, researchers at home and abroad have been devoted to exploring the key factors affecting marriage. Among the various influencing factors, the important influence of parents in the family of origin on marriage has been supported by a large number of theories and studies. However, most of the previous studies on intergenerational transmission of marriage adopted a variable-centered approach and focused on a specific group of couples, while ignoring group differences. Therefore, this study integrated the variable-centered approach - actor partner interdependence model (APIM) and the person-centered approach - potential profile analysis (LPA) to re-examine the effect of intergenerational transmission of marriage among couples over the family life cycle based on the family life cycle theory to further explore whether there is heterogeneity in the effect. This study recruited 674 couples through introduction of acquaintances, posting project advertisements online and community cooperation, including 122 newly-married couples, 356 parents of minor children and 195 parents of adult children. Each couple filled in the self-composed Questionnaire of the Family of Origin, the Quality of Marriage Index and the Marital Instability Scale-Short Form. The results of the variable-centered approach were as follows: 1. For the newly-married couples (N=122), the husband's family of origin has a significant positive impact on the marital quality and stability of himself and his partner, while the wife's family of origin has no impact on the marital quality and stability of himself or her partner. 2. For the parents of minor children (N=356), the marital relationship of the parents of both couples had a significant positive impact on their own and their partner's marital quality and stability; 3. For the parents of adult children (N=195), the marital relationship of both parents does not affect the marital quality and stability of themselves or their partners. The person-centered analysis results show that: 1. According to couples' parental marital relationship, they can be divided into three profiles: both of wife and husband come from family with happy marriage (profile 1), the wife come from family with happy marriage while her husband come from family with unhappy marriage (profile 2), the husband come from family with happy marriage while his wife come from family with unhappy marriage (profile 3); 2. There are significant differences in the marital quality and stability across the three profiles. The couples belonging to profile 1 rated the highest scores in marital quality and stability, followed by profile 2 and the lowest is Profile 3.

学习习惯对学业成绩的不同影响机制

程欢¹ 田澜²

江汉大学教育学院, 湖北武汉, 430056

江汉大学教育学院, 湖北武汉, 430056, duncantian@163.com

摘要 目的: 运用小学生学习习惯问卷评估小学生的学习习惯, 进而分析小学生学习习惯及其不同维度对小学生学业成绩的不同影响机制。结果: (1) 女生在学习主动性、课堂守纪、课外阅读、听讲专注度、作业承诺、勤奋度以及总体学习习惯上的平均得分显著高于男生; (2) 去拖沓、课堂守纪、课外阅读对三科总成绩具有显著的正向预测效应; 对语文成绩起直接作用是作业承诺、课外阅读、去拖沓习惯; 对数学成绩有直接影响的是去拖沓、课堂守纪习惯; 作业承诺、课外阅读习惯则是英语成绩的预测因子。(3) 在不同年级中, 学习习惯也同样具有不同影响机制, 对三年级学生学业成绩起直接作用的变量是作业承诺、课堂守纪因子; 对四年级学生学业成绩起直接作用的变量是作业承诺因子; 对于五年级而言, 去拖沓、学习主动性则是其学业成绩的预测因子。结论: 众所周知, 良好的学习习惯指向优异的学业成绩, 但往往忽略了学习习惯对学生学业成绩的影响的多种机制, 重点培养与督促关键学习习惯能够促成学生的优化成长, 在学校、教师、家长开展学生的学习习惯养成的多元化教育之中, 根据学科和学生个人特征, 着重不同的学习习惯方面作为重点督促和培养内容是更加合乎学生实际与取得高效结果的方式方法。

The different influence mechanism of study habit on academic achievement

Cheng Huan¹, Tian Lan²

School of Education, Jiangnan University, Wuhan, Hubei, 430056

School of Education, Jiangnan University, Wuhan, Hubei, 430056, duncantian@163.com

Abstract: Objective: to evaluate the learning habit of primary school students by using the learning habit questionnaire, and to analyze the different influence mechanism of learning habit and its different dimensions on the learning achievement of primary school students. Results: (1) the average scores of the female students were significantly higher than that of the male students in learning initiative, discipline, reading after class, listening and speaking attentiveness, homework commitment, diligence and general learning habits (2) procrastination, discipline in class and extra-curricular reading have significant positive predictive effect on the total scores of the three subjects, and homework commitment, extra-curricular reading and the habit of procrastination play a direct role on the Chinese scores; Procrastination and discipline are the most important factors, while homework commitment and reading habit are the most important predictors of English achievement. (3) in different grades, learning habits also have different influence mechanisms. The variables that have direct effect on the third grade students' academic achievement are homework commitment and discipline-abiding factors; For the fourth-grade students, homework commitment is the most important variable, while for the fifth-grade students, procrastination and learning initiative are the most important predictors. Conclusion: It is well known that good study habits refer to excellent academic performance, but the mechanism of the influence of study habits on students' academic performance is often neglected, focusing on the cultivation and supervision of key learning habits can lead to the optimal growth of students. In the diversified education of developing students' learning habits in schools, teachers and parents, in accordance with the discipline and individual characteristics of students, focusing on different learning habits as the focus of supervision and training content is more practical and efficient way to achieve results.

父母心理控制对学前儿童攻击行为影响的追踪研究：儿童抑制控制的中介作用

程雪林 姚力宁 邢淑芬（通讯作者）

首都师范大学心理学院，北京市“学习与认知”重点实验室，北京，100048

通讯作者 E-mail: xsf2986@163.com

摘要 攻击行为会对个体发展和社会稳定产生消极的影响，探究影响儿童早期攻击行为的影响因素及其作用机制，对减少儿童青少年攻击行为的发生，提高其社会适应能力具有重要的现实意义。父母心理控制作为一种典型的侵入式教养方式，对儿童攻击行为的影响受到了研究者的广泛关注。本研究旨在探究父母心理控制对学前儿童攻击行为的独特影响，并重点揭示儿童的抑制控制在其中的中介作用。研究采用整群抽样的方法，对 131 名来自河北邯郸和山东滨州的学前儿童（T1: $M = 4.07$ 岁, $SD = 0.76$ ）及其父母进行间隔 15 个月的两次追踪测查，使用家庭基本信息调查表收集家庭基本信息，采用 Olsen 等人（2002）编制的心理控制问卷测量父母心理控制，采用 Crick 等人（1997）编制的学前儿童社会行为量表（教师版）测量儿童的攻击行为，并使用 NIH Toolbox 中的侧抑制控制和注意任务测量儿童的抑制控制。结果显示：（1）母亲心理控制能直接正向预测儿童的关系、外显攻击，也能通过儿童抑制控制间接预测两种攻击行为，中介作用模型不存在儿童性别差异；（2）父亲心理控制对学前儿童关系攻击、外显攻击的直接和间接预测作用均不显著。本研究结果表明，母亲心理控制比父亲心理控制对儿童的认知和行为发展有更多的消极影响，并且儿童抑制控制是母亲心理控制影响儿童攻击行为的一个中介变量。

关键词 心理控制，关系攻击，外显攻击，抑制控制，学前儿童

A Longitudinal Study of the Influence of Parental Psychological Control on Preschoolers' Aggression: Mediating Effect of Children's Inhibitory Control

Xuelin Cheng, Lining Yao, shufen Xing

School of Psychology, Capital Normal University, Beijing, 100048, China

Email: xsf2986@163.com

Abstract: Aggression in early childhood has been associated with negative outcomes for children and society. It is therefore important to understand better the etiological factors and mechanisms that may shape aggression for reducing the occurrence of aggressive behaviors among children and adolescents and improving their social adaptability. Parental psychological control, a typical intrusive parenting style, has attracted extensive attention from researchers. Therefore, this longitudinal study aims to explore the long-term effects of parental psychological control on preschool children's aggressive behaviors and its mechanism, that is, the mediating effects of children's inhibitory control. Using cluster sampling method, the present study recruited 131 preschoolers ($T1: M_{age} = 4.07, SD = 0.76$) and their parents to participate two waves of assessment with the time interval of 15 months. Questionnaire survey was used to collect the data of family basic information, parents' psychological control, preschool children's relational and overt aggression, and the inhibitory control and attention task in NIH Toolbox was used to measure the inhibitory control ability of children. Results showed: (1) Maternal psychological control not only had direct and positive prediction on children's relational and overt aggression, but also had indirect and positive prediction through children's inhibitory control. There were no significant child gender differences in the mediating effects. (2) Paternal psychological control had no significant direct and indirect effects on children's relational and overt aggression. These results indicated that compared to paternal psychological control, maternal psychological control has more negative effects on children's cognitive and behavioral problems, and children's inhibitory control mediated the predictive effects of maternal psychological control on children's aggression.

Keywords: psychological control, relational aggression, overt aggression, inhibitory control, preschoolers

亲子冲突、同伴侵害与青少年非自杀性自伤的关系：OXTR 基因 rs53576 多态性的调节作用

邓玉婷 李美金 谢琪 喻承甫（通讯作者）

广州大学教育学院心理学系/青少年心理与行为研究中心，广州，510006 yuchengfu@gzhu.edu.cn

摘要 非自杀性自伤（NSSI）是指个体在没有自杀意图的前提下，故意伤害自己的身体，包括咬、切、烧等行为。理论和实证研究表明，亲子关系对青少年 NSSI 的形成和发展具有重要影响，但是目前针对亲子关系与青少年 NSSI 关系的具体机制的研究较少。NSSI 的整合理论认为消极的家庭环境造成个体的人际沟通与交往问题，进而导致 NSSI。此外，来自神经生物学的证据表明，催产素受体基因（OXTR）能够调节个体对人际环境的感知，进而影响个体的人际适应性。据此，本研究采用亲子关系中的亲子冲突分量表、同伴侵害量表、非自杀性自伤量表对 469 名青少年进行调查（ $M_{age}=13.31$ 岁， $SD=0.47$ ；男生占 52.45%），探讨亲子冲突与青少年 NSSI 的关系，以及同伴侵害的中介作用、OXTR 基因的调节作用。结果发现：（1）亲子冲突、同伴侵害均正向预测青少年 NSSI；（2）中介效应表明，亲子冲突可以通过同伴侵害间接影响青少年 NSSI；（3）有调节的中介效应表明，OXTR 基因 rs53576 多态性调节了“亲子冲突→同伴侵害→青少年 NSSI”的后半段路径以及“亲子冲突→青少年 NSSI”这一直接路径。具体而言，携带 AA 基因型的青少年，亲子冲突显著正向预测同伴侵害，并进一步正向预测青少年 NSSI。相反，携带 G 等位基因的青少年，“亲子冲突→同伴侵害→青少年 NSSI”这一中介路径不显著。此外，只有携带 AA 基因型的青少年，其亲子冲突显著预测 NSSI。本研究结果为理解亲子关系影响青少年 NSSI 的内部机制提供了证据，同时为揭示 NSSI 的“基因 X 环境→行为”框架提供了启示。

关键词 亲子冲突，NSSI，同伴侵害，OXTR 基因

Parent-Adolescent Conflict, Peer Victimization and Adolescent NSSI: The Moderating Role of Oxytocin-Receptor Gene.

DENG Yuting, LI Meijin, XIE Qi, Yu Chengfu

School of Psychology, Guangzhou University, Guangzhou 510006

Abstract: Non-suicidal self-injury (NSSI) refers to an individual intentionally injuring his body without suicidal intention, including biting, cutting, burning and other behaviors. The study found that the annual prevalence of NSSI among adolescents in China ranged from 15% to 32.7%. Such behavior is relevant to a variety of adverse adjustment outcomes, such as depression suicide ideation, and suicide attempt. Theoretical and empirical studies have shown that parent-adolescent relationship plays an indispensable role in the formation and development of adolescent NSSI, but there are few studies explore the underlying mechanism. According to the integration theory of NSSI, the negative family environment may causes the interpersonal communication problems of individuals, and then leads to NSSI. Furthermore, neurobiological evidence suggests that the oxytocin receptor gene (OXTR) rs53576 polymorphism may moderate individual's perception of interpersonal environment, which in turn affects individual's interpersonal adjustment.

A total of 469 adolescents (52.45% boys, $n = 246$) ranging in age from 12 to 15 ($M_{age} = 13.31$ years old, $SD = 0.47$) participated in this study. First, we collected saliva from adolescents for DNA. Then, adolescents reported conflict with parents (i.e., conflict frequency, intensity of conflict), frequency of perceived aggression by peers, and rate of NSSI. All the measurement methods have good reliability and validity. In this study, Model 4 and Model 59 of PROCESS for SPSS were used to test the mediating effect and moderated mediating effect, respectively.

The results showed that: (1) parent-adolescent conflict and peer victimization positively predicted NSSI. (2) The mediating effect showed that the effect of parent-adolescent conflict on adolescent NSSI partially mediated by peer victimization. (3) The rs53576 polymorphism of the OXTR gene moderated the mediating role of peer victimization on the relationship between parent-adolescent conflict and adolescent NSSI. Specifically, for adolescents with AA genotype, parent-adolescent conflict significantly positively predicted peer victimization and further positively predicted adolescent NSSI. In contrast, the pathway of parent-adolescent conflict→peer victimization→adolescent NSSI was not significant in adolescents with G allele. In addition, parent-adolescent conflict significantly predicted NSSI only in adolescents with AA genotype. The results of this study provided evidence for understanding the underlying mechanism of parent-adolescent relationship affecting adolescent NSSI, and provide enlightenment for revealing the “gene x environment-behavior” framework of NSSI.

Keywords: parent-adolescent conflict, NSSI, peer victimization, OXTR gene rs53576 polymorphism

自我同一性典型理论述评

董雁鹏¹ 钟建军¹ (通讯作者)

¹ 内蒙古师范大学, 心理学院, 呼和浩特, 010018, 通讯作者 email:zhongjj709@163.com

摘要 继艾里克森提出自我同一性的发展阶段论后, 自我同一性就成为发展心理学研究的重要议题, 众多学者以埃里克森的自我同一性的发展阶段论和玛西亚提出四种独立的同一性状态为基础, 对自我同一性进行操作化, 并对个体的同一性形成过程进行了研究。自我同一性过程是真实自我和客我之间不断统整和建构的过程, 少年期是个体自我同一性形成的关键时期, 个体如何在与外界的接触中不断形成和完善自我同一性, 深化同一性过程, 并将自己的动机、信念、情感、能力、经验等不同心理内容进行整合, 对此研究者相继提出了诸多的理论模型。在阐述同一性形成过程的基础上, 众多学者通过不断整合和改进研究模型, 详细分析了融合科学理智检验的建构与自我表达的发现观点的自我同一性个性化过程模型、承诺之后再行探索的三维模型、对自我决定动力探索的同一性承诺模型, 进一步得出, 所有的承诺行为如何通过良好的自我调整完成自我实现, 达到一种最佳的自我个性化状态。本文主要探讨了同一性过程中个性化过程模型、三维模型、

自我决定动机视角下的同一性过程模型中的发展与路径之间的关系，并总结性的提出了该模型的独特之处及未来发展方向，对同一性的深入探索提供了新的思路。

Author: zhongjj709@163.com

Abstract: After Eriksson proposed the developmental stage theory of self-identity, self-identity has become an important topic of developmental psychology research. Many scholars use Eriksson's developmental stage theory of self-identity and Marcia proposed four kinds of development stages. Based on the state of independent identity, the self-identity is operationalized, and the formation process of individual identity is studied. The process of self-identity is a process of continuous integration and construction between the true self and the objective self. The juvenile period is a critical period for the formation of individual self-identity. How can individuals continue to form and improve self-identity in contact with the outside world, and deepen the identity The process of sex and the integration of different psychological content such as their own motivations, beliefs, emotions, abilities, and experiences, researchers have successively proposed many theoretical models for this. On the basis of elaborating the formation process of identity, many scholars have continuously integrated and improved the research model, and analyzed in detail the self-identity personalized process model that combines the construction of scientific rational inspection and self-expression of discovery viewpoints, and then explores after promises. The three-dimensional model, the identity commitment model for self-determination dynamic exploration, further draws out how all commitment behaviors can achieve self-realization through good self-adjustment and achieve the best state of self-individualization. This article mainly discusses the relationship between the development and path of the identity process model, the three-dimensional model, and the identity process model from the perspective of self-determination motivation, and summarizes the uniqueness and future of the model. The development direction provides new ideas for the in-depth exploration of identity.

摘要 通过两个实验，考察诱发消极情绪后的认知重评对自发和自觉自传体记忆提取的影响。实验1使用自传体记忆的线索词范式，采用2（情绪调节策略：自由观看、认知重评）×3（自传体记忆线索词情绪效价：消极、中性、积极）的混合实验设计，其中情绪调节策略为被试间变量。因变量为自觉提取自传体记忆的具体性和生动性。实验过程为：在视频诱发消极情绪后，由认知重评和自由观看组被试根据情绪线索词进行自觉自传体记忆的提取。结果表明，自传体记忆的生动性不受认知重评策略和线索词效价的影响；认知重评策略能提升自传体记忆的具体性，且对消极情绪自传体记忆的具体性促进更大。实验2使用自发自传体记忆的警戒任务范式，采用2（情绪调节策略：自由观看、认知重评）×3（自发提取自传体记忆效价：消极、中性、积极）的混合实验设计，其中情绪调节策略为被试间变量，因变量为自发自传体记忆提取的数量和生动性。实验过程为：在视频诱发消极情绪后，由认知重评和自由观看组被试在完成“线条任务”的同时，记录自发出现的自传体记忆。结果表明，自传体记忆的数量和生动性不受认知重评策略的影响；情绪性词引比中性词引发了更多数量的自传体记忆。以上结果表明，由于加工方式的原因，自觉自传体更易受到认知重评策略的影响，消极情绪自传体记忆的提取需要更多的认知资源。

A Study on the Influence of Cognitive Reappraisal on Autobiographical Memory

FANG Liting, JIANG Daitai, CHENG Yibo, ZHANG Yunrui

College of Education, Shanghai Normal University, Shanghai, 200234

Abstract: In two experiments, we explored the effect of cognitive reappraisal after inducing negative emotions on involuntary and voluntary autobiographical memory retrieval. Experiment 1, we used a 2 (emotion regulation strategies: simply view/cognitive reappraisal) $\times$ 3 (clue word valence: negative/neutral/positive) mixed experiment design through the clue word paradigm of autobiographical memory. The dependent variable was the specificity and vividness of voluntary autobiographical memory. The experiment process was that participants conducted voluntary autobiographical memory retrieval based on emotional clues after the video induced negative emotions. The results showed that the vividness was not impacted by cognitive reappraisal strategies and clue word valence; cognitive reappraisal strategies can enhance the specificity, especially the specificity of negative emotion autobiographical memory. Experiment 2 used a 2 (emotion regulation strategies: simply view/cognitive reappraisal) $\times$ 3 (clue word valence: negative/neutral/positive) mixed experiment design through the vigilance task paradigm of involuntary autobiographical memory. The dependent variable was the number and vividness of involuntary autobiographical memory retrieval. After the video induced negative emotions, participants recorded the involuntary autobiographical memory while completing the "line task". The results showed that the amount and vividness were not affected by cognitive reappraisal strategies; The amount was higher for emotional than for neutral words. The results suggested that the voluntary autobiography is more prone to cognitive reappraisal strategies due to the processing methods, and the retrieval of negative emotion autobiographical memory requires more cognitive resources.

Keywords: memory, cognitive reappraisal, autobiographical memory, emotion regulation

抑制控制能力对初中生手机依赖的影响：状态焦虑的调节作用

冯坤¹ 程杜漪涵¹ 宋晓蕾^{1,2} (通讯作者)

¹ 陕西师范大学心理学院, 西安, 710062

² 陕西省行为与认知神经科学重点实验室, 西安, 710062, songxiaolei@snnu.edu.cn

摘要 手机依赖(Smartphone dependence, SPD)被定义为个体因频繁使用手机,从而无法控制对手机的使用冲动,出现了明显的上瘾症状,进而影响个体生活和社会功能的一种问题行为。近年来,手机依赖越来越多地出现在初中生群体中,严重干扰了他们的身心健康和学习生活。有研究显示,抑制控制能力的提升能够有效降低个体手机依赖水平。以往的研究主要考察大学生群体中抑制控制对手机依赖的影响,对初中生抑制控制能力对手机依赖的影响的研究却少有报道;此外也有研究表明,焦虑也是手机依赖的形成因素。因此,本研究考察了抑制控制能力对初中生手机依赖的预测作用,以及焦虑对抑制控制与手机依赖的调节作用。

本研究分别采用手机依赖指数量表(MPAI)、状态-特质焦虑量表(STAI)以及经典的标准 Simon 任务测量初中生的手机依赖程度,状态及特质焦虑及其抑制控制能力。结果发现:(1)抑制控制能力显著负向预测初中生手机依赖;(2)状态焦虑、特质焦虑与手机依赖戒断性维度呈显著正相关;但只有状态焦虑的调节作用显著,即状态焦虑水平越高,抑制控制能力对手机依赖的影响越大,高状态焦虑低抑制控制情况下的初中生手机依赖最严重。说明随着抑制控制能力的增强,初中生手机依赖水平降低,佐证了问题性手机使用路径理论模型中的冲动途径;拓宽了前人关于手机依赖形成的理论,并启示我们在教育实际中,为了减少抑制控制能力差对初中生手机依赖的促进,要在进行抑制控制训练的同时辅以降低状态焦虑的辅导,使得训练取得更好的效果。

The influence of inhibitory control ability on Smartphone dependence in middle school students: the moderating effect of state anxiety

Kun Feng¹, Duyihan Cheng¹, Xiaolei Song^{1,2}

1 School of Psychology, Shaanxi Normal University, Xi'an 710062, China

2 Key Laboratory for Behavior and Cognitive Neuroscience of Shaanxi Province, Xi'an 710062, China

Abstract: Smartphone dependence (SPD) is defined as a problem behavior in which the individual cannot control the impulse to use the smartphone due to the frequent use of it, showing obvious symptoms of addiction, and thereby affecting the individual's life and social functions. In recent years, SPD is more and more common among junior high school students, which seriously interferes with their physical and mental health and learning life. Studies have shown that the enhancement of inhibitory control ability can effectively reduce the level of SPD of individuals. Previous studies mainly investigated the influence of inhibitory control ability on SPD in college students, but there are few reports on the influence of inhibitory control ability on SPD among junior high school students. In addition, studies have shown that anxiety is also a contributing factor to SPD. Therefore, this study investigated the predictive effect of inhibitory control ability on SPD of junior high school students, and the moderating effect of anxiety on inhibitory control ability and SPD.

In this study, the Mobile Phone Addiction Index Scale (MPAI), the State-Trait Anxiety Inventory (STAI) and the classic Simon task were used to measure the degree of SPD, state and trait anxiety and their inhibitory control ability of junior high school students. The results showed that: (1) the inhibitory control ability significantly negatively predicted the SPD of junior high school students; (2) the State anxiety and trait anxiety and withdrawal of SPD were significantly positively correlated; But only state anxiety had a significant moderating effect, that is, the higher the level of state anxiety, the greater the influence of inhibition control ability on SPD, And the junior high school students with high state anxiety and low inhibition control had the most severe SPD. This indicates that with the enhancement of inhibitory control ability, the dependence level of junior high school students on smartphones decreases, which proves the impulsive pathway model of problematic smartphone use.; It broadens the previous theories about the formation of SPD, which suggests that in practical education, in order to reduce the promotion of the poor inhibitory control ability on the SPD of junior high school students, the inhibition control training should be supplemented by the guidance to reduce state anxiety, so that the training can achieve better results.

时间来源记忆：情绪效价和加工方式的影响

付思文 邱娟 汤妹婷 沈蕾（通讯作者）

上海师范大学教育学院，上海，200234，sl970905@163.com

摘要 本研究通过两个实验，探究绝对时间来源记忆和相对时间来源记忆在不同情绪效价和加工方式影响下的认知特点和加工机制。实验1采用3（情绪效价：正性、中性、负性）×2（加工方式：控制加工、自动加工）混合实验设计，以绝对时间来源记忆和项目记忆的正确率、反应时为因变量。结果显示，中性图片的项目记忆效果优于情绪性图片，正性图片的绝对时间来源记忆效果优于中性和负性图片，不同加工方式并未对项目记忆表现产生影响，而控制加工的绝对时间来源判断慢于自动加工，正确率无显著差异。实验2采用3（情绪效价：正性、中性、负性）×2（加工方式：控制加工、自动加工）混合实验设计，以相对时间来源记忆的正确率、反应时、得分和项目记忆的正确率、反应时为因变量。结果显示，中性图片的项目记忆效果同样优于情绪性图片，负性图片的相对时间来源记忆得分高于中性和正性图片，不同加工方式的项目记忆表现没有差异，而控制加工相较于自动加工显著提高了相对时间来源记忆表现。根据以上结果可知，情绪性图片在绝对和相对时间来源记忆上存在加工优势，项目记忆和时间来源记忆的加工方式不同，具体表现为项目记忆和相对时间来源记忆是无意识的自动加工，而绝对时间来源记忆更多的是意识参与的控制加工。

关键词 来源记忆, 时间来源记忆, 情绪效价, 加工方式

Temporal Source Memory: the Influence of Emotional Valence and Processing Mode

FU Siwen, QIU Juan, TANG Meiting, SHEN Lei

College of Education, Shanghai Normal University, Shanghai

Abstract: This study explored the cognitive characteristics and processing mechanism of absolutely and relatively temporal source memory under different emotional valence and processing modes through two experiments. Experiment 1 adopted a 3 (emotion valence: positive, neutral, negative) $\times$ 2 (processing mode: control processing, automatic processing) mixed design. The dependent variables were the accuracy rate and the reaction time of absolutely temporal source memory and item memory. The results showed that the memory effect of neutral pictures in item memory was better than that of neutral and negative pictures, and the memory effect of positive pictures in absolutely temporal source memory was better than that of the neutral and negative pictures. There was no impact on the performance of item memory under different processing modes, while the judgement of absolutely temporal source memory under control processing was slower than automatic processing, and the difference in the accuracy rate was not significant. Experiment 2 adopted a 3 (emotional valence: positive, neutral, negative) $\times$ 2 (processing mode: control processing, automatic processing) mixed experimental design. The dependent variables were the accuracy rate, the reaction time and the scores of relatively temporal source memory and the accuracy rate and reaction time of item memory. The results showed that the memory effect of neutral pictures in item memory was also better than that of emotional pictures, and the memory effect of negative pictures in relatively temporal source memory was better than that of emotional pictures. There was no difference in the performance of item memory under different processing modes, while compared with automatic processing, control processing significantly improves the performance of relatively temporal source memory. According to the comparison of above results, the memory advantage of emotional pictures exists in absolutely and relatively temporal source memory processing. There are different processing modes between item memory and temporal source memory. Specifically, item memory and relatively temporal source memory are an automatic processing without consciousness, while absolutely temporal source memory is more of a conscious control processing.

Keywords: source memory, temporal source memory, emotional valence, processing mode

焦虑和抑郁在大学生睡眠质量和亲和动机间的中介作用

付政¹, 顿方圆¹, 肖海雁^{1,2}(通讯作者)

1 山西师范大学教育科学学院, 临汾 041000;

2 山西大同大学心理健康教育与咨询中心, 大同 037009, 346775749@qq.com

摘要 作为人类在社会生存中普遍具有的一种重要动机, 亲和动机 (Affiliation Motivation) 对个体的社会交往、社会适应、身心健康等方面都有着重要的影响。以往研究表明, 睡眠问题及抑郁、焦虑等心理健康问题的出现都会显著降低个体的亲和动机水平 (McAdams, 1987)。而睡眠质量又是焦虑、抑郁的重要影响因素之一 (王道阳, 2016)。本研究以大学生为研究对象, 采用亲和动力量表 (Affiliation Motivation Scale, AFMS)、匹兹堡睡眠质量指数量表 (Pittsburgh Sleep Quality Index, PSQI)、症状自评量表 (Symptom Checklist 90, SCL-90), 对山西省三所高校的 560 名大学生进行调查, 探索焦虑和抑郁在大学生睡眠质量和亲和动机之间的中介作用, 为改善大学生的心理健康状况、提高大学生的亲和动机水平提供依据。采用 SPSS 25.0 和 AMOS 24.0 统计软件进行数据分析和模型验证。各量表的信效度良好, 研究不存严重的共同方法偏差, $\chi^2/df=3.11$, $CFI=0.991$, $NFI=0.986$, $RMSEA=0.042$, 模型拟合良好。结果表明, 大学生睡眠质量与焦虑、抑郁之间均存在显著正相关 (r 值分别为 0.393, 0.379, P 值均 <0.01), 焦虑、抑郁之间呈正相关 ($r=0.831$, $P<0.01$); 亲和动机水平与睡眠质量、抑郁、焦虑之间均呈负相关 (r 值分别为 -0.255、-0.474、-0.382, P 值均 <0.01)。

结构方程模型显示,睡眠质量主要通过三条路径影响亲和动机水平:睡眠质量可以直接对亲和动机产生影响($\beta=-0.24$)抑郁可以独立地中介睡眠质量和亲和动机的关系($\beta=-0.06$),焦虑-抑郁在睡眠质量和亲和动机之间起链式中介作用($\beta=-0.11$)。结论 焦虑和抑郁在睡眠质量预测亲和动机中起多重中介作用。睡眠质量越差,越容易产生焦虑和抑郁情绪,从而导致较低的亲和动机水平。

The mediating effect of anxiety and depression on sleep quality and affiliation motivation in college students

FU Zheng¹, XIAO Hai-yan^{1,2}, DUN Fang-yuan¹

1.College of Education Science, Shanxi Normal University, Linfen, 041000;

2. Mental Health Education and Counseling Center, Shanxi Datong University, Datong,037009

Abstract: As an important motivation in human social survival, affiliation motivation has an important impact on individual social communication, social adaptation, physical and mental health and so on. Previous studies have shown that sleep problems, depression, anxiety and other mental health problems can significantly reduce the level of affiliation motivation (McAdams, 1987). Sleep quality is one of the important influencing factors of anxiety and depression (Wang daoyang, 2016). In this study, 560 college students from three universities in Shanxi Province were investigated by affiliation Motivation Scale (AFMS), Pittsburgh sleep quality index (PSQI) and symptom checklist 90 (SCL-90), To explore the mediating effect of anxiety and depression on College Students' sleep quality and affiliation motivation, so as to provide basis for improving college students' mental health and affiliation motivation. SPSS 25.0 and Amos 24.0 statistical software were used for data analysis and model validation. The reliability and validity of each scale are good, and there is no serious common method deviation in the study, $\chi^2 / DF = 3.11$, CFI = 0.991, NFI = 0.986, RMSEA = 0.042, the model fits well. The results showed that there was a significant positive correlation between sleep quality and anxiety and depression ($r = 0.393, 0.379, P < 0.01$), and there was a positive correlation between anxiety and depression ($r = 0.831, P < 0.01$); The level of affiliation motivation was negatively correlated with sleep quality, depression and anxiety (R values were $-0.255, -0.474, -0.382, P < 0.01$). Structural equation model shows that sleep quality mainly affects the level of affiliation motivation through three paths: sleep quality can directly affect affiliation motivation ($\beta = -0.24$) depression can independently mediate the relationship between sleep quality and affiliation motivation ($\beta = -0.06$), anxiety depression plays a chain mediating role between sleep quality and affiliation motivation ($\beta = -0.11$). Conclusion anxiety and depression play multiple mediating roles in the prediction of sleep quality and affiliation motivation. The worse the sleep quality, the more likely it is to produce anxiety and depression, resulting in a lower level of affiliation motivation.

大学新生心理健康与父母教养方式的关系：人格的中介作用

付政¹ 肖海雁^{1,2}

山西师范大学教育科学学院, 临汾, 041000,

2. 山西大同大学学工部, 大同, 037009, E-mail: 346775749@qq.com

摘 要 近年来大学生的心理健康问题越来越多的受到国家和社会的关注, 加强和改进大学生心理健康教育是新形势下促进大学生健康成长、培养造就拔尖创新人才的重要途径, 是全面贯彻党的教育方针、建设人力资源强国的重要举措, 是推动高等教育改革、加强和改进大学生思想政治教育的重要任务。大一年级新生是大学生中一个特殊的群体, 一方面他们要独自面对一个全新的生活、学习环境, 尽快适应不同角色身份的转变; 另一方面他们的年龄还不成熟, 生活经验明显不足。在这样的矛盾与压力下, 大一年级新生容易产生心理上的失衡, 如果处理不当更容易导致心理问题的产生。为了考察大学新生父母教养方式、人格和心理健康之间的关系。本研究于 2020 年 9 月中旬至 10 月中旬, 采用整群抽样的方法对山西省两所大学 (山西师范大

学、山西大同大学) 1244 名新入学的大学一年级学生进行问卷测试, 回收问卷 1190 份, 有效率 95.6%。其中男生 513 名, 女生 677 名, 平均年龄 (18.4 ± 0.87) 岁。采用父母教养方式评价问卷 (EMBU)、症状自评量表 (SCL-90)、艾森克人格问卷 (EPQ) 作为研究工具, 以 SPSS 25.0 进行数据的分析处理。结果表明: (1) 积极的父母教养方式与大学生的 SCL-90 总分呈显著负相关 ($t = -0.34 \sim -0.28; p < 0.01$), 消极的父母教养方式与大学生 SCL-90 总分呈显著正相关 ($t = 0.41 \sim 0.48; p < 0.01$)。 (2) 精神质、神经质在父母情感温暖与心理健康之间起部分中介作用, 神经质、精神质和内外向性在父亲和母亲拒绝、父亲惩罚、过度保护与心理健康之间起部分中介作用。结论: 父母教养方式会通过大学新生的人格倾向对其心理健康产生影响。

Relationship between freshmen's mental health and parenting style

--The mediating role of personality

FU Zheng, XIAO Hai-yan,

Institution of Education Science, Shanxi Normal University, Linfen, 041000

Abstract: In recent years, the mental health problems of college students have attracted more and more attention from the state and society. Strengthening and improving college students' mental health education is an important way to promote the healthy growth of college students and cultivate top-notch innovative talents under the new situation. It is an important measure to comprehensively implement the party's educational policy and build a powerful country with human resources. It is also an important measure to promote the reform of higher education. Strengthening and improving college students' Ideological and political education is an important task. Freshmen are a special group of college students. On the one hand, they should face a new living and learning environment alone and adapt to the transformation of different roles and identities as soon as possible; On the other hand, their age is still immature and their life experience is obviously insufficient. Under such contradiction and pressure, freshmen are prone to psychological imbalance. If they are not handled properly, they are more likely to lead to psychological problems. In order to investigate the relationship between parental rearing style, personality and mental health of freshmen. From mid September to mid October 2020, cluster sampling was used to test 1244 freshmen from two universities in Shanxi Province (Shanxi Normal University and Shanxi Datong University). 1190 questionnaires were collected, with an effective rate of 95.6%. There were 513 boys and 677 girls, with an average age of (18.4 ± 0.87) years. EMBU, SCL-90 and EPQ were used as research tools, and SPSS 25.0 was used to analyze the data. The results showed that: (1) there was a significant negative correlation between positive parental rearing style and the total score of SCL-90 of college students ($t = -0.34 \sim -0.28; P < 0.01$), the negative parenting style was significantly positively correlated with the total score of SCL-90 ($t = 0.41 \sim 0.48; p < 0.01$). (2) Psychoticism and neuroticism play a partial intermediary role between parents' emotional warmth and mental health, and neuroticism, psychoticism and introversion and introversion play a partial intermediary role between father and mother's rejection, father's punishment, excessive protection and mental health. Conclusion: parental rearing style can affect the mental health of college freshmen through their personality tendency.

摘要 随着创新型国家建设, 促进中学生创造性自我效能感不仅符合新课程改革对培养创新素质的要求, 还关系着祖国的未来, 备受教育界的关注。众多研究者以学校教育为切入点, 探讨教师及各学科教学对培养

中学生创造性自我效能感的影响。而根据生态系统理论,家庭也是学生最直接的教育环境之一,其中父母教育卷入在家庭教育中扮演着重要的角色,但是很少有研究探讨父母教育卷入对培养中学生创造性自我效能感的影响及其内部机制。因此,本研究探讨父母教育卷入与中学生创造性自我效能感之间的关系,并进一步探究掌握目标和批判性思维在其关系中的链式中介作用。本研究采用创造性自我效能感问卷、父母教育卷入问卷、掌握目标问卷、批判性思维倾向问卷对 802 名深圳市中学生进行调查。结果表明:(1)父母教育卷入、创造性自我效能感、掌握目标和批判性思维两两之间呈显著正相关;(2)父母教育卷入对中学生创造性自我效能感具有直接预测作用;(3)掌握目标和批判性思维在父母教育卷入对中学生创造性自我效能感的影响中起链式中介作用。研究结果进一步揭示父母教育卷入对创造性自我效能感的作用机制,为培养中学生创造性自我效能感,提供理论依据。

Parental Involvement and Students' Creative Self-efficacy: The Serial Mediation Role of Mastery Goal and Critical Thinking

Gao Jialin¹, Jia Tianqi¹, Xue Lulu¹, Jiang Yuan², Fang Ping¹

¹ Collage of Psychology, Capital Normal University, Beijing, China, 100048

² Collage of Psychology, Beijing Sport University, Beijing, China, 100084

Abstract: With the construction of an innovative country, promoting the creative self-efficacy of middle school students not only meet the requirements of the new curriculum reform to cultivate innovative quality. Many researchers take school education as the starting point to explore the influence of teachers and various subjects on cultivating students' creative self-efficacy. However, according to ecosystem theory, family is one of the most direct educational environments for students. The core of family education is the involvement of parental education. But, few studies have explored the internal mechanism of parental education involvement affecting the creative self-efficacy of middle school students. Therefore, this study explores the relationship between parental education involvement and creative self-efficacy of middle school students, and further explores the Serial Mediation role of mastery goals and critical thinking. in order to explore the relationship between parental education involvement, creative self-efficacy, mastery of goals and critical thinking, 802 middle school students were investigated by using creative self-efficacy questionnaire, parental education involvement questionnaire, mastery goal questionnaire and critical thinking tendency questionnaire. The results showed that: (1) there was a significant positive correlation between parental involvement, creative self-efficacy, mastery goal and critical thinking; (2) parental involvement directly predicted middle school students' creative self-efficacy; (3) mastery of goal and critical thinking played a chain intermediary role in the influence of parental involvement on middle school students' creative self-efficacy. The results further reveal a positive feedback of parental involvement on creative self-efficacy, and provide theoretical basis for cultivating creative self-efficacy of middle school students.

青少年网络成瘾的三年追踪研究

公娜¹, 黄巧敏², 张孟思³, 刘楚芬³, 迟新丽¹ (通讯作者)

¹ 深圳大学师范学院(教育学部)心理学院, 广东深圳 518060

² 深圳大学法学院, 广东深圳 518060; ³ 福田外国语学院, 广东深圳 518034

通信作者: 迟新丽 xinlich@126.com

摘 要 目的: 调查深圳初中阶段青少年网络成瘾现状、发展变化及其预测因素。方法: 随机选取深圳 5 所中学, 采用青少年网络成瘾量表、中国积极青少年发展量表、中国家庭功能测评量表、青少年学业适应不良量表以及人口学变量调查问卷, 进行为期三年每年一测的追踪研究, 最终有效被试共 1301 人。结果: 深圳初中青少年三年网络成瘾发生率分别为:14.4%、15.5%、14.7%。此外, 积极青少年发展、家庭功能和学业适应

不良与青少年网瘾存在显著地即时性和延时性相关 ($p<0.01$)；青少年积极发展、家庭功能和学业适应不良均在不同程度上显著地预测了青少年初中三年的网络成瘾情况 ($p<0.05$)。结论：深圳初中阶段青少年网瘾现象普遍，且网瘾在青少年初中三年时间内具有相对稳定性。那些自身积极发展、拥有良好功能的家庭且学业适应良好的青少年产生更少的网瘾问题，本研究启示我们解决青少年的网瘾问题要考虑青少年自身的积极发展，青少年的家庭功能以及青少年在校的学业适应问题等多方面因素。

A three-year longitudinal study on Internet Addiction among adolescents

Gong Na, Huang Qiaomin, Zhang Mengsi ,et al

¹Department of Psychology Faculty of Education, Shenzhen University, Shenzhen 518060, China,

Corresponding author: CHI Xinli, xinlich@126.com

Abstract: Objective: The present study investigated the prevalence and psychosocial correlates of Internet addiction in Shenzhen adolescents using a longitudinal design. **Method:** Three waves of data were collected over 3 years from students in 5 secondary schools in Shenzhen. Young's 10-item Internet Addiction Test, Chinese Positive Youth Development Scale, Chinese Family Assessment Instrument, Academic Maladaptation Scale and Demographic variables questionnaire were used. **Results:** ① The adolescents met the criterion of Internet addiction were 14.4% ,15.5% and 14.7% over past three years. ② In addition, positive youth development, family function, and bad academic adaptation are significantly associated with immediacy and latency in adolescent Internet addiction ($p<0.01$). ③ Using different measures at Wave 1 to predict Internet addiction at Wave 3, it was found that positive youth development and good family functioning indicators negatively predicted Internet addictive behaviors over time; bad academic maladaptation predicted higher probability of having Internet addiction ($p<0.05$). More precisely the more positive developmental qualities, the more well-functioning families, and less academic maladaptation, the less likely adolescents to report Internet addiction. **Conclusions:** The phenomenon of internet addiction among teenagers in Shenzhen junior middle school is common and relatively stable. This study enlightens us that paying attention to the academic adaptation of teenagers, promoting their positive development and strengthening their family functions can become the direction of preventing and reducing the Internet addiction of teenagers in Shenzhen.

疫情期间个体注意控制与焦虑水平的关系： 躯体关注和认知关注的中介作用

郭雅雯¹ 杨海波^{1,2}（通讯作者）

¹ 天津师范大学心理学部，天津，300387

² 天津师范大学心理与行为研究院，天津，300387, yhbpsy@163.com

摘要 2020年1月以来，新型冠状病毒肺炎疫情迅速蔓延，作为一种突发性公共卫生事件，此次疫情对民众的心理健康造成较大影响，导致民众出现了焦虑、恐慌、强迫行为等，尤其是引起了较大范围的焦虑。焦虑对个体的日常工作、学习和生活具有重要影响。已有研究表明，个体的注意控制水平与其焦虑水平存在关系，同时注意控制能力也会影响个体的焦虑敏感性。本研究旨在探讨在疫情防控时期个体的焦虑敏感性在注意控制和个体焦虑水平之间的作用，以便深入了解注意控制与焦虑的内在联系，从而为焦虑的预防和干预提供参考。研究采用注意控制量表（ATTC）、焦虑敏感指数量表3版中文版（ASI-3）和抑郁-焦虑-压力量表简本中文版（DASS-21），在2020年2月-3月间通过网络取样选取有效被试464人（平均年龄为21.55，标准差为4.00，其中389名女性）进行施测。结果分析发现：（1）各变量之间均存在显著相关，具体表现为，注意控制与躯体关注、认知关注以及焦虑呈负相关，注意控制能力越低的人躯体关注、认知关注水平越高，同时表现出更高的焦虑程度。（2）躯体关注和认知关注在注意控制与焦虑之间存在显著的中介效应。整个研究

表明, 较好的注意控制能力有助于降低个体在疫情期间的躯体关注与认知关注两个维度的焦虑敏感性, 进而降低个体的焦虑水平。

1 Faculty of Psychology, Tianjin Normal University, Tianjin, 300387

2 Academy of Psychology and Behavior, Tianjin Normal University, Tianjin, 300387,

yhbpsy@163.com

Abstract: Since January 2020, the COVID-19 has spread rapidly. As an emergent public health event, the epidemic has a significant impact on the mental health of the population, it has led to anxiety, panic, compulsive behavior, etc. Especially the epidemic has caused widespread anxiety, which is important to individuals' daily work, study and life. It has been found that the attention control is related to the level of anxiety, and attention control also affects the level of anxiety sensitivity. In order to deeply understand the mechanism of attention control, so as to provide reference for the prevention and intervention of anxiety, this study explored the role of anxiety sensitivity, especially the physical concern and cognitive concern dimensions, between attention control and anxiety level at this particular time. A total of N = 464 valid participants (mean age = 21.55 years, SD = 4.00; n = 389 female) was selected through online sampling between February and March, 2020. They were tested by the Attention Control Scale (ATTC), the Anxiety Sensitivity Index-3 (ASI-3) and the Depression Anxiety Stress Scale (DASS-21) (Chinese Version). The results showed that: (1) There are significant correlations between the different variables. People with lower attention control ability have a higher level of physical concern and cognitive concern, at the same time showed more anxiety. (2) Physical concern and cognitive concern have a significant mediating effect between attention control and anxiety. The results suggest that better attention control helps to reduce anxiety sensitivity in both the physical and cognitive concern dimensions during the epidemic, which in turn reduces an individual's anxiety level. In sum, current study indicates that attention control is negatively correlated with physical concern, cognitive concern and anxiety and physical and cognitive concern play a mediating role between attention control and anxiety.

摘要 背景: 幼儿时期, 父母的育儿行为会显著影响儿童的后续发展。目前已经进行了许多干预研究来改善育儿结局, 包括减少育儿压力, 提高育儿自我效能, 以及防止儿童虐待等强制性育儿行为。然而, 缺乏系统评价来综合这些研究的证据。目的: 本研究的目的是评估教养干预改善育儿结局的有效性。方法: 我们首先在 PubMed、Web of Science、Cochrane Library、Scopus、PsycINFO、CINAHL 等 6 个数据库中进行文献检索, 随后进行系统综述并使用随机效应模型进行 meta 分析。根据不同的亚组分组条件 (父母参与情况、干预计划、干预持续时间、干预结束和干预后第一次测量之间的时间间隔、胎龄) 进行多次亚组分析, 探索结果异质性。结果: 最终, 共 27 项研究符合系统综述的纳入标准, 其中 19 篇文章 (n=2,179) 包含足够可用的 meta 分析数据。与对照组相比, 教养干预减少了育儿压力 (标准化均数差 [SMD]=-0.31, 95%可信区间 [CI]=[-0.58, -0.03], P=0.03, 研究个数=18)。但我们发现干预组与对照组之间的育儿自我效能不存在统计学差异 (标准化均数差 [SMD]=1.22, 95% 置信区间 [CI]=[-0.50, 2.94], P=0.16, 研究个数 = 3)。亚组分析表明, 在针对不同胎龄儿童的父母的干预研究中, 早产儿父母与其他儿童的父母之间的干预效果存在差异。根

据干预结束时与干预后第一次测量时间点之间的时间间隔分组, ≤1 个月的研究的总效应与其他研究之间存在差异, 除此之外, 未发现其他亚组间存在统计学上的显著差异。结论: 教养干预有望改善育儿压力, 其中非早产儿人群可能受益更多。

Effectiveness of interventions on parenting outcomes among parents of very young children: A systematic review and meta-analysis of randomized controlled trials

Yinjun Hao¹, Naixue Cui²

School of Nursing and Rehabilitation, Shan Dong university. 44 wenhua west road, Jinan, Shandong 250000

Abstract: *Background :* Parenting in very early childhood can significantly impact child development. Many intervention studies have been conducted to improve parenting outcomes, including reducing parenting stress, improving parenting self-efficacy, and preventing coercive parenting practice such as child maltreatment. However, there is lack of systematic review to synthesize evidence from such studies.

Objectives: The aim of this study was to assess the effectiveness of interventions on improving parenting outcomes.

Methods: Literature retrieval was carried out in six databases, including PubMed, Web of Science, Cochrane Library, Scopus, PsycINFO and CINAHL. We conducted a systematic review and meta-analysis using random effects model. Subgroup analyses were conducted to test the effect of several moderators (parental involvement, intervention programs, intervention duration, the time lag between the end of intervention and first post-intervention measurement, gestational age) in explaining the heterogeneity of the results.

Results: Twenty-seven studies met the inclusion criteria for the systematic review, of which 19 articles (n=2,179) contained sufficient data for the meta-analysis. Compared to the control groups, parenting interventions reduced parenting stress (standardized mean difference [SMD]=-0.31, 95% confidence interval [CI] = [-0.58, -0.03], P=0.03, studies=18). But we found no difference in parenting self-efficacy between groups (standardized mean difference [SMD]=1.22, 95% confidence interval [CI] = [-0.50, 2.94], P=0.16, studies=3). Subgroup analysis showed that the effectiveness of interventions differed significantly between studies among parents with premature children and the other studies, and between studies of which the first post-intervention measurement was carried out within one month after end of the intervention and the other studies. We did not find statistically significant differences of the pooled effect size across the other moderators.

Conclusion: parenting interventions promise improvement in parenting stress and not premature may benefit more.

Keywords: parenting, stress, self-efficacy, parenting intervention, meta-analysis

青少年文化自信的量表编制 及其在文化社会化与亲社会倾向的中介作用

何晓清¹ 王瀚林¹ 利振华¹ 刘庆奇¹ 聂衍刚¹ (通讯作者) 丘彩霞¹

1 广州大学教育学院青少年心理与行为研究中心, 广州, 510006, nie-yangang@gzhu.edu.cn

摘 要 在当今竞争愈加激烈的国际社会, 文化软实力在国家综合国力中的重要性日益凸显。坚定文化自信, 有助于中华优秀传统文化的传承和创新, 进而增进人民群众对国家的认同和归属。青少年时期是生理和心理快速发展的阶段, 其思想及行为极易受到外部文化的影响, 形成良好的文化自信, 对培养青少年的爱国情怀, 良好的社会适应行为以及社会的稳定发展具有重要作用。文化自信是个体对中华民族文化的积极态度及情感。本研究以青少年为研究对象, 研究一探索了文化自信的结构, 并自编了青少年文化自信量表, 在此基础上, 研究二采用自编的青少年文化自信量表, 考察 617 名青少年文化自信的发展水平和特点, 以及文化自信在文

化社会化与亲社会倾向之间的中介作用。研究一结果显示：（1）探索性因素分析后，量表最终被保留 3 个因子，共 15 道题目。（2）在验证性因素分析中， $\chi^2 = 421.300$ ， $p < 0.001$ ， $\chi^2/df = 4.84$ ，CFI=0.948，TLI=0.937，RMSEA=0.085，文化自信量表三维度模型拟合指标良好。（3）文化自信量表的内部一致性系数为 0.948，文化偏爱、文化认同及文化践行三个分量表的内部一致性系数分别为 0.918、0.926、0.901。研究二结果表明：低年级的青少年文化自信水平显著高于高年级的青少年文化自信水平（ $F=2.659$ ， $p < 0.05$ ），性别、民族身份在青少年文化自信水平上没有显著性差异。文化社会化、文化自信和亲社会倾向三者具有高度相关，在控制了年级、民族身份背景、性别后，青少年文化自信在文化社会化和亲社会倾向之间起显著的中介作用（effect = 0.285，95%CI = [0.163, 0.458]）。鉴于此，可得出：（1）文化自信的结构由文化偏爱、文化认同、文化践行三个因素构成，以此编制的文化自信问卷符合心理测量学标准，可以作为文化自信的有效测量工具。（2）不同年级的青少年在文化自信水平上存在显著差异，在横断数据中呈现出青少年文化自信水平随着年级升高而下降的趋势。（3）文化自信在文化社会化与青少年亲社会倾向之间起着中介作用。该研究结果可为青少年文化自信的量化研究提供可靠的测评工具，为广大教育工作者从文化社会化和文化自信的角度提高青少年亲社会行为提供重要的理论借鉴。

The preparation of adolescents' cultural confidence Scale and its mediating role in cultural socialization and pro-social tendency

Xiaoqing He¹, Hanlin Wang¹, Zhenhua Li¹, Yangang Nie^{1*}

1 Research Center of Adolescent Psychology and Behavior, School of Education, Guangzhou University, Guangzhou, 510006

Abstract: In today's increasingly competitive international society, the importance of cultural soft power in a country's comprehensive national strength is increasingly prominent. Strengthening cultural confidence is conducive to the inheritance and innovation of China's fine history and culture, and thus enhancing the people's identity and belonging to the nation and country. Adolescents is a period of rapid physical and psychological development, and its thoughts and behaviors are easily influenced by external culture. The formation of good cultural confidence plays an important role in the cultivation of adolescents' patriotism, good social adaptation and stable social development. Cultural confidence is an individual's positive attitude and emotion towards Chinese culture. . Adolescents as the research object, the first study would explored the structure of cultural confidence, and the adolescents' cultural confidence scale. On this basis, the second would used the cultural confidence scale to test the 617 adolescents' cultural confidence level and characteristics, and the mediation role of cultural confidence between the cultural socialization and the pro-social tendencies. The results of first study showed that: (1) After exploratory factor analysis, the scale was retained with 3 factors and a total of 15 questions. (2) In the confirmatory factor analysis, $\chi^2 = 421.300$ ， $p < 0.001$ ， $\chi^2/df = 4.84$ ，CFI=0.948，TLI=0.937，RMSEA=0.085，and the fitting indexes of the three-dimension model were good. (3) the α coefficient of the questionnaire on cultural confidence was 0.948, and the internal consistency coefficient of the three sub-scales of cultural preference, cultural identity and cultural practice were 0.918, 0.926 and 0.901. The second study showed that the lower grades' cultural confidence level was higher than higher grades. Gender and ethnic identity had no significant influence on the cultural confidence. Cultural socialization, cultural confidence and pro-social tendency were highly correlated. After controlling grade, national identity background and gender, adolescent cultural confidence played a significant mediating role (effect = 0.285, 95%CI = [0.163, 0.458]) between cultural socialization and pro-social tendency. It could be concluded that : (1) the structure of cultural confidence was composed of three factors: cultural preference, cultural identity and cultural practice. The cultural confidence questionnaire conformed to the standards of psychometric, and could be used as an effective measurement tool for cultural confidence. (2) There were significant differences in the cultural confidence among different grades. The cross-sectional data showed that the cultural confidence of teenagers tended to decline with the rise of grade. (3) Cultural confidence plays an mediation role between cultural socialization and prosocial tendency of adolescents. The

results of this study could provide a reliable evaluation tool for the quantitative research of adolescent cultural confidence, and provided an important theoretical reference for educators to improve adolescents pro-social behavior from the perspective of cultural socialization and cultural confidence.

唐宋杰出科学家的创造力成就及其影响因素——一项历史测量学研究

洪培玲 谌鹏飞 李思嘉 姜兰 王海红 敖选鹏 衣新发（通讯作者）

陕西师范大学现代教学技术教育部重点实验室，西安，710000，yixinfa@snnu.edu.cn

摘要 历史测量法是研究历史人物创造力的首选方法。已有研究采用历史测量法探讨了影响唐宋时期文学家创造力成就的重要因素，结果发现，智力早慧、宗教信仰与移民迁徙是创造力成就的关键因素，但这些影响因素是否具有跨领域的一致性？文学家追求感性而科学家讲究理性，这两类杰出历史人物的发展特征和创造力成就的影响因素是否相同？在前人研究的基础上，我们以 55 名中国唐宋杰出科学家为研究对象，尝试探讨以下问题：（1）中国唐宋科学领域杰出人物的精神疾病与成长逆境等因素对其创造力成就有何预测作用，与文学家的结论是否相同；（2）在中国唐宋杰出科学家身上，可否验证在西方杰出人物中出现的“精神疾病与成长逆境”之间的“均衡”现象；（3）是否存在显著影响唐宋科学家创造力成就的其他变量。结果发现：（1）成长逆境和精神疾病的作用在唐宋科学家身上并不明显，这与文学家身上的结论有所差异；（2）移民迁徙和宗教信仰对唐宋科学家的创造力成就具有显著影响，但在唐朝和宋朝的作用方式不同；（3）在中国唐宋杰出科学家中，并不存在成长逆境与精神疾病对创造力成就影响的“均衡”现象。

Creative Achievement and Factors of Eminent Scientists in Tang and Song Dynasties: A Historiometric Study

Peiling HONG, Pengfei CHEN, Sijia LI, Lan JIANG, Haihong WANG, Xuanpeng AO, Xinfu YI
Key Laboratory of Modern Teaching Technology, Ministry of Education, Shaanxi Normal University
No.112, Chang'an Road, Yanta District, Xi'an City, Shaanxi Province

Abstract: The creative achievements of the eminent genius in Chinese history have become increasingly interested in the domain of creativity, the issue arises of how eminence and creativity is to be measured. Up to now, plenty of studies show that historiometry was precisely appropriate for the scientific study of the genius. Meanwhile, developmental adversity and the “madness-to-genius link” have been hypothesized to relate to creative achievement because they can facilitate unusual cognitive patterns. However, this theory has only been tested on mainly western eminent samples. Do connection between diversifying experiences and creative achievement still exists in the context of eastern culture, or whether there are other factors? In this paper, we applied the historiometric methods to this conjecture, which is examined on a significant sample of 55 eminent scientists in Chinese Tang and Song dynasties. Compared to the western-culture samples, Chinese scientists showed lower mental illness rates and smaller “developmental adversity” effect. Furthermore, mental illness does not significantly predict Chinese scientists’ creative outcome. While other diversifying experiences such as religious beliefs and migration have a positive relation to eminence and creative achievement. The results show that tendencies toward mental illness and developmental adversity predict eminence might not have intercultural consistency, yet the inference warrants further research using other eminent creators in Chinese history.

汉语阅读中词切分研究进展

胡睿¹ 肖少北² (通讯作者)

1,2 海南师范大学心理学院, 海口, 571158

通讯作者 E-mail: xiaoshb@hainnu.edu.cn

摘要 词切分是指读者在文本阅读过程中将词从句子或语篇中切分出来, 以促进文本阅读与加工的过程。由于中文与西文在书写形态和语言学特征上差异巨大, 因此汉语词切分的机制有其独有特点。本文对近 20 年来汉语阅读过程中词切分研究成果进行总结发现: 词间空格作为视觉线索可以帮助读者进行词切分; 词素熟悉性和词素位置作为词素单元层级上的切分依据可以和词间空格共同作用于词切分; 词意识作为读者在长期阅读基础上形成的词切分依据受到词性的调节; 词汇预期作为高水平语言因素可作为词切分的依据影响正常阅读中早期的词汇预览加工; 汉语阅读中存在两种词切分现象, 一种发生在词 n 处, 另一种发生在词 $n+1$ 处, 两种切分过程中字词加工均遵循交互激活假设, 切分词 n 反映注视阶段的字词加工, 在这个过程中字词加工的交互激活特点表现为字词同等相互影响, 符合词汇加工晚期阶段精确识别词汇细节的特点; 切分词 $n+1$ 反映预览阶段的字词加工, 在这个过程中字词加工的交互激活特点更多表现为词汇加工影响字加工, 符合词汇加工早期阶段从整体上粗略识别词汇的特点; 重叠歧义词切分遵循多重激活假设, 其中被激活单词之间的竞争机制符合竞争假设, 左侧词汇在这一竞争中具有优势, 此外, 重叠歧义词的切分受到词频, 语境的影响。

Advances in Word Segmentation During Chinese Reading

Hu Rui, Xiao Shaobei

Academy of Psychology, Hainan Normal University, Haikou, 571158

Abstract: Word segmentation refers to the process by which readers segment words from sentences or sentences in the process of text reading to facilitate text reading and processing. Due to the huge differences in writing morphology and linguistic characteristics between Chinese and Western languages, the mechanism of Chinese word segmentation has its own characteristics. This article summarizes the research results of word segmentation in the process of Chinese reading in the past 20 years and found that spaces between words can help children, adults and international students to learn words as a visual cue; Morpheme familiarity and morpheme position as the basis for segmentation at the morpheme unit level can act together with the space between words in word segmentation; Word consciousness as the basis for word segmentation formed by readers on the basis of long-term reading is adjusted by the syntactic categories of words; Vocabulary expectations, as a high-level language factor, can be used as a basis for word segmentation to affect the early vocabulary preview processing in reading; There are two word segmentation phenomena in Chinese reading, one occurs at word n , and the other occurs at word $n + 1$. The interactive activation feature of word processing in the process of segmenting word n is manifested in that character processing and word processing are equally affected by each other, and the interactive activation feature of word processing in the process of segmenting word $n + 1$ is more manifested as word processing affecting character processing; overlapping ambiguous word segmentation exists on the left Segmentation preference, moreover lapping ambiguous word segmentation is affected by word frequency and context.

测试促进中学生的后续学习：流体智力的调节作用

怀淇琛¹ 党茜茜¹ 陈英和² (通讯作者)

1 北京师范大学心理学部, 北京, 100875

2 北京师范大学心理学部, 北京, 100875, chenyinghe@bnu.edu.cn

摘要 以往研究证明成年人中存在前向测试效应, 即与重复学习相比, 对已学习知识进行测试能够降低该部分知识在新知识学习过程中的前摄干扰, 促进成年人对后续新知识的学习和记忆。但是少有研究探讨初中

生和高中生中是否同样存在前向测试效应，更少有研究考察该效应在青少年阶段的年龄差异以及个体能力对该效应的影响。本研究检验初中生和高中生的前向测试效应，并在两个群体内部探究个体流体智力对该效应的调节作用。共有 132 名初中生和 218 名高中生参与了本研究。所有被试学习四个词表并被告知最后会统一进行自由回忆测试。前三个词表初次学习后，重学条件的被试均再次学习词表，而测试条件的被试则接受了 3 次即时测试；词表 4 初次学习后，两个条件的被试均接受即时测试。词表 4 即时测试的成绩显示，初中生和高中生均表现出前向测试效应，即测试条件的成绩高于重学条件，具体表现为正确回忆率的提升和入侵回忆数的降低，且与高中生相比，初中生的前向测试效应更大。个体的流体智力对该效应存在一定的调节作用，在初中生或高中生群体内部，低流体智力的个体均比高流体智力的个体从测试中获益更多，但是仅表现为更显著的入侵回忆数的降低。本研究以中学生为被试再次验证了测试能够通过前摄干扰的释放促进后续知识的学习、记忆，年龄差异的存在表明初中生获得的增益可能源自认知和动机两个途径。而低流体智力个体从测试中获益更大，对当今的教育实践具有一定的启示。

Testing Enhances Subsequent Learning in Junior and Senior High School Students: The Moderating Role of General Fluid Intelligence

Qichen Huai¹, Xixi Dang¹, Yinghe Chen² (Corresponding author)

¹ Faculty of Psychology, Beijing Normal University, Beijing, 100875

² Faculty of Psychology, Beijing Normal University, Beijing, 100875, chenyinghe@bnu.edu.cn

Abstract: Previous studies have demonstrated that testing enhanced subsequent learning in adults by reducing proactive interference. However, little research focused on whether junior and senior high school students shared the same benefit of testing, and less research examined age differences of this effect in adolescence and the moderating role of individual ability simultaneously. In the current study, we tested forward testing effect in junior ($n = 132$) and senior ($n = 218$) high school students and investigated whether such effect was moderated by general fluid intelligence. All the participants studied four word lists anticipating a final free-recall test. For list 1 to list 3, participants restudied the same list or took an immediate test after first study. For list 4, all the participants were tested immediately when they finished first study. Results revealed that, compared to the restudying condition, immediate testing of list 1 to list 3 enhanced list 4 recall and reduced the number of prior-list intrusions in both junior high school and senior high school students. And the benefit of testing was more significant in junior high school students than senior high school students. Additionally, we verified the moderating role of general fluid intelligence. For both junior high school and senior high school participants, individuals with lower general fluid intelligence benefited more from testing of prior lists, and they reported less list 1 to list 3 intrusions in the immediate test of list 4 if they received tests of prior lists. While the enhancement of testing diminished or even disappeared in the high fluid intelligence participants. These results confirmed release from proactive interference theory of forward testing effect in junior and senior high school students and suggested junior high school students might benefit from testing through both cognitive and motivational approaches. And the moderating role of general fluid intelligence offered some enlightenment to educational practice.

拖延行为、网络囤积行为及网络自我扩展与心理困扰的关系：有调节的中介效应分析

黄贝 傅苗苗 连帅磊（通讯作者）

长江大学教育与体育学院，荆州，434023

通讯作者 E-mail: lslyzpsy@yangtzeu.edu.cn

摘 要 拖延是一个长期存在的普遍心理行为现象,对个体的生活起居和社会活动均存在负面影响。在其众多负面影响中,已有研究表明,拖延行为作为引发个体焦虑、抑郁等心理困扰的潜在因素,威胁着个体的心理健康。拖延行为与个体的心理困扰之间存在密切关系,研究者从网络囤积行为等不同的视角对拖延行为导致个体心理困扰的作用机制进行了研讨,但少有学者从网络自我扩展的视角讨论拖延行为对心理困扰的影响。随着互联网的普及和网络信息的广泛传播,个体的网络囤积行为逐渐引发关注,与现实自我扩展相对应的网络自我扩展概念也为研究者所提出。在深入研究的过程中,研究者认为有必要从多因素整合的视角,同时探讨网络囤积行为和网络自我扩展在拖延行为与心理困扰关系中的作用机制,以进一步揭示拖延行为与焦虑抑郁之间的复杂关联。因此,为探讨拖延行为对心理困扰的影响及其作用机制,本研究构建了一个有调节的中介模型,重点考察了网络囤积行为在二者关系中的中介作用以及网络自我扩展的调节作用。以 789 名大学生为被试($M=20.80$ 岁, $SD=1.72$),采用问卷法对其拖延行为、网络囤积行为、网络自我扩展及心理困扰进行调查。结果表明:(1)拖延行为与网络囤积行为、心理困扰呈显著正相关,与网络自我扩展呈显著负相关,而网络囤积行为与网络自我扩展和心理困扰均呈显著正相关;(2)拖延行为不仅能够显著直接预测心理困扰,而且能够通过网络囤积行为的中介作用对心理困扰产生间接预测作用;(3)拖延行为对心理困扰的作用受到网络自我扩展的调节,低程度网络自我扩展群体更容易因为拖延行为而产生心理困扰,且网络囤积行为的中介作用能够被网络自我扩展调节,即网络囤积行为的中介作用在低程度网络自我扩展群体中更加显著。研究结果有助于揭示拖延行为对心理困扰的影响及其作用机制,对维护和促进个体的心理健康具有积极意义。

The Relationship Between Procrastination, Online Hoarding, and Online Self-expansion and Psychological Distress: Moderated Mediating Effect Analysis

Huang Bei, Fu Miao Miao, Lian Shuailei

School of Education and Physical Education, Yangtze University, Jingzhou 434023, China

Abstract: Procrastination is a common psychological behavior phenomenon which has existed for a long time and has negative effects on individuals' daily life and social activities. Among its many negative effects, existing studies have shown that as a potential factor causing individual anxiety, depression and other psychological disturbances, procrastination behavior threatens individual mental health. There is a close relationship between procrastination behavior and individual psychological distress. Researchers have studied the mechanism of psychological distress caused by procrastination behavior from different perspectives such as online hoarding behavior, but few scholars have discussed the effect of procrastination behavior on psychological distress from the perspective of online self-expansion. With the popularization of the Internet and the wide dissemination of network information, individuals' network hoarding behavior has gradually attracted attention, and the concept of network self-expansion, which corresponds to the real self-expansion, has also been proposed by researchers. In the process of further research, researchers believe that it is necessary to explore the mechanism of online hoarding behavior and online self-expansion in the relationship between procrastination behavior and psychological distress from the perspective of multi-factor integration, so as to further reveal the complex relationship between procrastination behavior and anxiety and depression. Therefore, in order to explore the effect of procrastination on psychological distress and its mechanism, this study constructed a moderated mediating model, focusing on the mediating role of online hoarding behavior and the moderating role of network self-expansion. A total of 789 college students ($M = 20.80$ years old, $SD = 1.72$) were selected to investigate their procrastination behavior, online hoarding behavior, online self-expansion and psychological distress. The results showed that : (1) procrastination was significantly positively correlated with online hoarding and psychological distress, and negatively correlated with online self-expansion, while online hoarding was significantly positively correlated with both online self-expansion and psychological distress; (2) Procrastination not only directly predicted psychological distress, but also indirectly predicted psychological distress

through the mediating effect of online hoarding behavior; (3) procrastination is the function of psychological distress network self-expansion of adjustment, low degree of network self-expansion groups are more likely to produce psychological distress due to procrastination, and hoarding intermediary role can be network self-expansion adjustment, namely network hoarding intermediary role in the low level network self-expansion group is more significant. The results of this study help to reveal the effect of procrastination on psychological distress and its mechanism, which is of positive significance for maintaining and promoting individual mental health.

Keywords: procrastination behavior, psychological distress, online hoarding behavior, network self-expansion

家庭社会经济地位与青少年积极冒险行为：心理资本和自我控制的链式中介作用

贾晓珊¹ 朱海东^{1,2}（通讯作者）

¹ 石河子大学师范学院，石河子，832003

² 石河子大学心理应用研究中心，石河子，832003，通讯作者 E-mail: 86775709@qq.com

摘 要 青少年期是儿童向成年人过渡的一个关键时期，同时也是个体冒险行为的高发期，尤其是消极冒险行为给青少年身心健康造成的负面影响，一直以来是研究者所关注的重点。然而积极冒险行为作为社会可接受的冒险行为，其行为后果轻微，是个体经过一定准备、采取相应保护措施后做出的行为，有益于个体身心健康发展，如登山、滑雪等身体运动、上台表演、参加演讲比赛等公开场合活动。以往研究大多关注消极冒险行为，忽略了积极冒险行为为青少年带来的积极影响，甚至有些行为会被家长、教师视为娱乐而扼杀了青少年的正常发展需要。其实，参与积极冒险行为的体验经历不仅能减轻青少年抑郁、焦虑等内化症状，还能培养青少年抵御挫折、积极面对挑战和克服困难的勇气和毅力，以此提升社会适应能力。因此，本研究基于生态系统理论和家庭投资理论，拟考察家庭社会经济地位与青少年积极冒险行为的关系以及心理资本和自我控制的中介作用。采用 MacArthur 主观社会经济地位量表、积极心理资本问卷、自我控制量表和青少年冒险问卷-冒险行为量表对 1198 名青少年（平均年龄 15.68 岁，男生 587 人）进行调查，结果表明：（1）家庭社会经济地位、心理资本、自我控制和积极冒险行为两两相关显著，且家庭社会经济地位能显著正向预测青少年积极冒险行为；（2）家庭社会经济地位可分别通过心理资本和自我控制的中介作用影响青少年积极冒险行为；（3）心理资本和自我控制在家庭社会经济地位与青少年积极冒险行为之间起链式中介作用。本研究结果揭示了影响青少年积极冒险行为的关键因素及其内部机制，为今后合理引导青少年参与积极冒险行为提供了理论支持和实证依据。

Family Socioeconomic Status and Adolescents' Positive Risk-taking Behavior: The Chain Mediating role of Psychological Capital and Self-control

JIA Xiaoshan¹, ZHU Haidong^{1,2}

¹ Normal College of Shihezi University, Shihezi, Xinjiang 832003

² Application of Psychological Research Center of Shihezi University, Shihezi, Xinjiang 832003

Abstract: Adolescence is a critical period for the transition from children to adults, and it is also a period of high incidence of individual risk-taking behavior. In particular, the negative impact of negative risk-taking behavior on adolescents' physical and mental health has always been the focus of researchers. However, positive risk-taking behavior, as a socially acceptable risk-taking behavior, has relatively minor consequences. It is an individual's behavior after certain preparations and corresponding protective measures. It is beneficial to the adolescents' physical and mental health, such as mountaineering, skiing and other physical sports, perform on stage and participate in speech contests and other public events. Previous studies have mostly focused on negative risk-taking behavior, ignoring the positive impact of positive risk-taking behavior on adolescents, and even some behaviors are regarded as

entertainment by parents and teachers and stifle the normal development needs of adolescents. In fact, the experience of participating in positive risk-taking behavior can not only relieve adolescents' internalized symptoms such as depression and anxiety, but also cultivate the courage and perseverance of adolescents to resist setbacks, positively face challenges and overcome difficulties, thereby enhancing their social adaptability. Therefore, based on the ecosystem theory and family investment theory, this study investigated the relationship between family socioeconomic status and adolescents' positive risk-taking behavior, as well as the mediating role of psychological capital and self-control. The MacArthur subjective socioeconomic status scale, positive psychological capital questionnaire, self-control scale, and adolescent risk-taking questionnaire-risk behavior scale were used to survey 1198 adolescents ($M_{age}=15.68$, 587boys). The results showed that: (1) Family socioeconomic status, psychological capital, self-control are significantly correlated with positive risk-taking behavior, and family socioeconomic status can significantly positively predict adolescents' positive risk-taking behavior; (2) Family socioeconomic status can influence adolescents' positive risk-taking behavior through the independent mediating role of psychological capital and self-control; (3) Family socioeconomic status can influence adolescents' positive risk-taking behavior through the chain mediating role of psychological capital and self-control. These results reveal the important factors and internal mechanisms that influence adolescents' positive risk-taking behavior, and provide theoretical support and empirical evidence for rationally guiding adolescents to participate in positive risk-taking behavior.

Keywords: family socioeconomic status, psychological capital, self-control, positive risk-taking behavior, adolescents

大学生心理健康素养潜在类别及其在心理弹性、应对方式上的差异

贾亚菲 孙斌 刘陈陵（通讯作者）

（中国地质大学（武汉）心理科学与健康研究中心，武汉，430074，1684334583@qq.com）

摘要 目的：心理健康素养是个体在促进自身及他人心理健康，应对自身及他人心理疾病方面所养成的知识、态度和行为习惯。心理健康素养的提升是改善大学生心理健康的重要途径。本研究旨在了解大学生心理健康素养现状，并探索其与心理健康的重要保护性因素如心理弹性、积极应对方式及危险性因素如消极应对方式之间的关系。方法：选取在校大学生 10583 名，使用国民心理健康素养问卷、心理弹性量表（CD-RISC）、简易应对方式问卷（SCSQ）进行测评。采用潜在剖面分析探究心理健康素养的潜在类别，并探讨心理健康素养潜在类别与心理弹性、应对方式的关系。结果：大学生心理健康素养可分为低水平组（7.94%）、中等水平组（62.72%）和高水平组（29.34%）3 种潜在类别。不同潜在类别的大学生在性别、年级、居住地、父母受教育程度、家庭社会经济地位上差异均有统计学意义（ $P<0.01$ ）。心理健康素养潜在类别与心理弹性、应对方式水平密切相关。大学生心理健康素养得分与心理弹性得分（ $r=0.398$, $P<0.01$ ）、积极应对方式得分（ $r=0.419$, $P<0.01$ ）正相关，与消极应对方式得分（ $r=-0.102$, $P<0.001$ ）负相关。不同潜在类别大学生心理弹性、应对方式各维度得分差异均有统计学意义（ $P<0.01$ ）。结论：以个体为中心的潜在剖面分析基于心理健康素养的本质特征将大学生分类，揭示了大学生在不同心理健康素养维度上反应特征的差异及各类别人数的比重，有利于进一步研究不同潜在类别大学生群体的特点，面向不同亚群体提出针对性干预措施，促进大学生心理弹性的提升及积极应对策略的使用。

Latent classes of mental health literacy and its differences in psychological resilience and coping style in college students

JIA Ya-fei, SUN Bin, LIU Chen-ling (Corresponding author)

China University Of Geosciences, Research Center for Psychological Science and Health, Wu Han, 430074, Corresponding author: 1684334583@qq.com

Abstract: Objective: Mental health literacy is the knowledge, attitude and behavior tendency developed by individuals with regard to promoting and coping with their own and others' mental health related issues. The promotion of mental health literacy is an important way to improve the mental health of college students. The purpose of this research is to describe the status of mental health literacy of college students and explore its relationship with protective factors of mental health such as psychological resilience, positive coping style and risk factors such as negative coping style. **Methods:** 10583 college students attend this study. They were assessed with the Mental Health Literacy Questionnaire for Chinese adults, Connor-Davidson Resilience Scale (CD-RISC) and Simplified Coping Style Questionnaire (SCSQ). Latent profile analysis was used to explore the latent classes of mental health literacy. The research also explores the relationship between the latent classes of mental health literacy with psychological resilience and coping style. **Results:** The mental health literacy of college students can be divided into three latent classes: low level group (7.94%), medium level group (62.72%) and high level group (29.34%). There were statistically significant differences in gender, grade, home address, parents' education level and family socioeconomic status among different latent classes of college students ($P < 0.01$). The latent classes of mental health literacy are closely related to psychological resilience and coping style. The scores of mental health literacy were positively correlated with the scores of psychological resilience ($r=0.398$, $P < 0.01$) and positive coping style ($r=0.419$, $P < 0.01$), negatively correlated with negative coping style ($r = -0.102$, $P < 0.01$). There were statistically significant differences of different latent classes in each dimension of psychological resilience ($P < 0.01$) and coping style ($P < 0.01$). **Conclusion:** Latent profile analysis takes individual as the core and divides the college students based on the essential characteristics of mental health literacy, reveals the difference in reaction characteristics of college students in different dimensions of mental health literacy and the proportion of different latent classes, which is beneficial to further research on the characteristics of different latent classes of college students, put forward the targeted intervention for different subgroups and facilitate the promotion of psychological resilience as well as the use of positive coping strategies in college students.

Keywords: College students' mental health literacy, psychological resilience, coping style, latent profile analysis

父母自我概念清晰性、夫妻关系满意度与亲子关系质量： 主客体互倚性分析

贾依凡 戴青梅 邓晓雨 刘学兰（通讯作者）

华南师范大学心理学院，广州，510361

华南师范大学心理学系，广州，510361，liuxuelan@m.scnu.edu.cn

摘 要 依据家庭系统理论，家庭中的任意一方不仅会对自己所处的双人关系产生影响，还会影响另外两方之间的关系。例如，父母自身特质可能会同时影响自己和伴侣的亲子关系。自我概念清晰性是个体自我认知的一致性和稳定性的标志，已有研究发现其对个体内变量及个体间关系都存在显著影响。然而，目前尚未有研究考察父母双方的自我概念清晰性对彼此亲子关系的影响。此外，个体的自我概念清晰性对夫妻关系质量具有显著预测作用，而父母夫妻关系质量会“溢出”至亲子关系或与亲子关系质量互为“补偿”。因此，本研究旨在研究父母自我概念清晰性对亲子关系质量的影响，以及夫妻关系满意度在其中可能的中介作用。

研究采用方便取样法对 368 对广东省中小学学生父母（父亲 $M_{age} = 41.46$, $SD = 5.58$; 母亲 $M_{age} = 38.83$, $SD = 5.34$ ）进行了问卷调查，并采用主客体互倚性模型对这些成对数据进行了分析。结果发现：（1）父母的自我概念清晰性对自己（主体效应）以及对伴侣（客体效应）感知到的亲子关系质量具有显著的正向影响；（2）父亲报告的夫妻关系满意度部分中介父母自我概念清晰性对亲子关系质量的主体效应；（3）父亲对夫妻关系的满意程度完全中介父母自我概念清晰性对亲子关系的客体影响。本研究结果为家庭是一个统合且复杂的系统的主张以及父母夫妻关系对亲子关系存在“溢出”效应的假说提供了支持。同时对家庭干预也具有启示意义——通过提高父母双方的自我概念清晰性，能够提高夫妻关系和亲子关系的质量，从而使家庭功能良性且健康。

Parents' Self-Concept Clarity, Marital Satisfaction and Parent-Child Relationship Quality: Actor-Partner Interdependence Analysis

JIA Yifan, DAI Qingmei, DENG Xiaoyu, LIU Xuelan

School of Psychology, South China Normal University, Guangzhou 510631, China

Abstract: According to the family system theory, any member of the family will not only affect one's own relationships with other members, but also the relationships among the other members. For example, parents' attributes may influence the parent-child relationship of both themselves and their partners. Self-concept clarity, as an indication of the internal consistency and temporal stability of an individual's self-beliefs, has an impact on both intrapersonal and interpersonal variables. However, no studies have examined the associations between parental self-concept clarity and their own and spouses' parent-child relationship yet. In addition, it has been found that people's self-concept clarity was related to the quality of their romantic relationship, and parents' marital relationship would *spill over* to or *compensate* for their relationships with the children. Therefore, the present study aimed to examine whether parents' self-concept clarity was associated with parent-child relationship quality of themselves and their spouses, as well as the mediating role of marital satisfaction playing in these associations.

Using the convenient sampling method, this study conducted a questionnaire survey on 368 pairs of parents of primary and middle school students in Guangdong Province ($M_{age} = 41.46$, $SD = 5.58$ for fathers; $M_{age} = 38.83$, $SD = 5.34$ for mothers). By adopting the Actor-Partner Interdependence Model (APIM) to analyze the dyadic data, the results showed that: (1) parental self-concept clarity had a significant positive impact on the quality of parent-child relationship perceived by themselves (actor effects) and their partner (partner effects); (2) the marital satisfaction reported by father partially mediated the actor effects of parental self-concept clarity on the parent-child relationship quality; (3) the father's marital satisfaction completely mediated the partner effects of parental self-concept clarity on the parent-child relationship quality. These findings support the proposition that family is an integrated and complex system and the hypothesis that parents' marital relationship is positively related to their parent-child relationships. Moreover, the results are also enlightening for family interventions, that practitioners should help parents improve their self-concept clarity to enhance their marital and parent-child relationships and healthy family functioning.

教师自主支持对高中生网络学习投入的影响：自主动机与主动性人格的作用

姜甜甜¹ 曹阳¹ 龚少英^{1,2} (通讯作者)

¹ 华中师范大学心理学院, 武汉, 430079

² 青少年网络心理与行为教育部重点实验室, 武汉, 430079, gongsy@mail.ccnu.edu.cn

摘要 作为一种被大众广泛接受的学习形式, 网络学习不仅打破了传统课堂学习的时空限制, 而且提供了更丰富的学习资源, 因而成为课堂教学的有效补充。但与此同时, 学习者在进行网络学习时存在学习投入少, 学习效果差等问题。在线学习投入不仅有助于提高学习满意度, 减少孤独感, 还能显著预测学习成绩。因此, 探究网络学习投入的影响因素和作用机制, 对改善学生网络学习具有重要意义。本研究基于自我决定理论、自主动机模型和人-环境匹配理论, 考察高中生感知到的教师自主支持对其网络学习投入的影响, 以及自主动机和主动性人格在其中的作用。采用学习气氛量表、学业自我调节量表、主动性人格量表和网络学习投入量表对 1480 名高中生进行施测, 并使用 SPSS 20.0 宏程序构建一个有调节的中介模型。结果发现: (1) 教师自主支持显著正向预测网络学习投入; (2) 自主动机在教师自主支持与学习投入间起部分中介作用; (3) 主动性人格调节教师自主支持→自主动机→学习投入这一中介路径的前半段, 主动性人格水平越高, 教师自主支持对自主动机的预测作用越大; (4) 主动性人格调节教师自主支持对学习投入的直接影响, 教师自主支持能够直接正向预测高主动性人格学生的学习投入, 但不能直接预测低主动性人格学生的学习投入。结果启示

我们：（1）教师的自主支持能够提高高中生的自主动机和网络学习投入；（2）相比于低主动性人格学生，自主支持型的教学环境与高主动性人格的学生更适配，其自主动机和网络学习投入更高。（3）对于主动性人格较低的学生，应给予更具体的学习指导，如教授自我调节的学习策略，指导他们做出选择，鼓励其主动克服困难等。

Effect of Teacher's Autonomy Support on High School Students' Online Learning Engagement: The Roles of Autonomous Motivation and Proactive Personality

Tiantian Jiang¹, Yang Cao¹, Shaoying Gong^{1,2} (Corresponding Author)

¹ School of Psychology, Central China Normal University, Wuhan, China

² Key Laboratory of Adolescent Cyberpsychology and Behavior, Ministry of Education, Wuhan, China, gongsy@mail.ccnu.edu.cn

Abstract: With the development of information technology, online learning has been widely accepted by learners. While bringing us convenience, it also exposed some drawbacks, such as poor learning efficiency, low online learning engagement. Students' online learning engagement associated with learning satisfaction, and significantly predicted their academic performance. So, it is significant for further intervention to explore the predictors and mechanism of online learning engagement. This study constructed a moderated mediation model to examine the effect of teachers' autonomy support on high school students' online learning engagement and the role of autonomous motivation and proactive personality.

Learning climate scale, academic self-regulation scale, proactive personality scale and online learning engagement scale were administered to 1480 high school students. Participants aged from 14 to 19 years old (mean age=16.2 years, SD = 0.86) with 615 boys and 874 girls.

Data analysis was performed using Mplus8.3 and Process macro program of SPSS 20.0. All variables were standardized. The correlation analysis shows that teachers autonomy support, students' autonomous motivation, proactive personality and online learning engagement are positively correlated respectively. We took grade and gender as control variables. The testing of moderated mediation model showed that: (1) Teachers' autonomy support significantly and positively predicted online learning engagement; (2) Autonomous motivation partially mediated the relationship between teachers' autonomy support and learning engagement; (3) Proactive personality moderated the mediating effect of autonomous motivation, with the stronger effect for students with higher level of proactive personality; (4) Proactive personality moderated the direct influence of teacher's autonomy support on learning engagement. For students with high proactive personality, teacher's autonomy support directly and positively predicted their learning engagement, while for ones with low proactive personality, the predictive effect of teacher's autonomy support on learning engagement was not significant.

Keywords: teachers' autonomy support, autonomous motivation, proactive personality, online learning engagement

心理韧性是否有助于减少学生的学业倦怠症状？一项元分析

矫禧念¹ 宫准¹（通讯作者）

¹ 青岛大学师范学院心理系，青岛，266000，通讯作者 E-mail: gongzhun2001@163.com

摘 要 随着社会的发展，学生的学业倦怠已经成为世界各国学校所普遍面临的问题。因此，本研究的目的是通过元分析探讨心理韧性是否有助于缓解我国学生的学业倦怠症状，并研究心理韧性与学业倦怠关系的变化趋势。此外，本研究评估了心理韧性与学业倦怠的性别差异以及以往研究中可能存在的偏倚问题，包括发表偏倚、小研究偏倚、灰色文献偏倚和下降效应。通过文献检索以及筛选流程，本研究最终纳入元分析共 34 项研究，共 81 项效应量，总样本量为 22474 人。研究结果显示，在中国背景下心理韧性与学业倦怠呈负相关。

学生的学业倦怠水平不存在性别差异,而心理韧性水平可能存在性别差异,男生的心理韧性水平高于女生。本研究未发现发表偏倚和小研究偏倚的证据,但发现了学业倦怠的灰色文献偏倚的潜在证据,即发表在期刊的有关学业倦怠的研究所报告的效应量倾向于高于硕博论文所报告的效应量,需后续研究验证。此外,本研究发现,心理韧性领域可能存在下降效应,即心理韧性的效应量随着出版年份的增加而显著下降。这种下降现象可能是由于随着社会和文化的发展,个体更加关注个性发展,而集体行为在减少,导致学生适应集体和环境的能力下降。同时,本研究通过亚组分析发现,在个人层面也存在类似的下降效应,即心理韧性可能随着个体年龄增长而下降,这可能与学生使用不成熟的防御机制来应对压力有关。因此,本研究建议,随着学生的成长和学业压力的增加,家长应更加关注青少年的心理状态,积极引导他们在面对困难时使用成熟的防御机制,并提供家庭支持,这有利于提高学生的心理韧性水平,有助于减少学业倦怠症状。

Does resilience help in reducing burnout symptoms among Chinese students? A Meta-analysis

Xinian Jiao¹, Zhun Gong¹ (Corresponding author)

¹ Department of Psychology, Normal College, Qingdao University, Qingdao, 266000,

Corresponding author E-mail: gongzhun2001@163.com

Abstract: As society has evolved, student burnout has become a common problem in schools around the world, including in China. Therefore, the purpose of the current study is to explore whether resilience is related to student burnout in China and to examine the changing trend of resilience and student burnout. Moreover, we will assess gender differences and possible biases, including publication biases, small-study biases, grey literature biases, and decline effects. This meta-analysis included 34 studies, with a total of 81 effect sizes and a total sample size of 22,474. We found that resilience was negatively correlated with student burnout in the Chinese context. We found evidence of grey literature bias in student burnout, which needs to be verified by subsequent studies. However, we found that there were decline effects in resilience, possibly because as culture evolves, people become more focused on themselves, and collective behaviours are declining, leading to a decrease in their ability to adapt to the collective and the environment. We also found similar decline effects at the individual level; that is, resilience might decrease with individual age stages (from the primary to college stage), which might be related to the use of immature defence mechanisms against stress by students.

Keywords: Student burnout, Resilience, Gender difference, Decline effect, Grey literature bias

基于文献计量分析的认知诊断应用研究述评

金小灵¹ 刘铁川¹ (通讯作者)

¹ 赣南师范大学教育科学学院, 赣州, 341000, Liutiechuan@gmail.com

摘要 认知诊断评估 (Cognitive Diagnosis Assessment, CDA) 作为新一代测量理论的核心,在教育评价中表现出巨大的发展潜力。从理论上讲,CDA 可以获得更具细粒度的诊断信息,从而为补救教学提供更具针对性的指导。但在实际应用方面尚处于萌芽阶段,还存在许多不足。为探究国内外认知诊断应用研究的现状及发展趋势,本研究对收录在国内、国外学术期刊中的 122 篇认知诊断应用研究文献 (1993 年 ~ 2020 年) 进行计量学分析。结果表明: (1) CDA 应用研究的年文献总量呈逐年递增的趋势,英文文献的年发文量自 2009 年开始增多,而中文文献数量从 2016 年起才表现出发展的趋势,且英文文献的年均发文量高于中文文献; (2) CDA 的应用领域较为广泛,具有跨结构域的适用性,文献中最常见的测量结构有数学和英语阅读,分别占 36% 和 26%;此外还涉及临床诊断等新领域的应用; (3) 应用研究中属性数量的差异较大,最少评估 3 个属性,最多评估 27 个属性,平均值为 8.08,标准差为 4.42; (4) 应用研究中样本量的差异也较大,约有 60% 的研究样本量在 500 以上,样本群体较为丰富,包括了从学前儿童到大学生各年龄段的被试; (5) 大多数应用研究采用事后分析获得诊断信息,即 53% 的应用研究所使用的工具是非诊断性测验;测验项目的长度差异较大,

最少有 5 个项目，最多有 87 个项目，平均值为 30.78，标准差为 16.98；（6）项目测量学特征的估计在应用研究中常被忽视，仅有 41% 的研究估计了项目的难度，55% 的研究估计了区分度；其中最常见的指标是通过率和 IDI 指标；（7）构建测验 Q 矩阵的常见方法有专家评定法、文献调查法和口语报告法，分别占 75%、67% 和 27%；（8）测验 Q 矩阵的验证常被忽视，仅 48% 的文献对初始 Q 矩阵进行了定量分析；（9）应用研究中常用的测量模型有 RSM、DINA 和 G-DINA 模型，分别占 28%、16% 和 16%；（10）模型资料的拟合检验被忽视，超过一半的应用研究未检验模型与资料是否匹配；最常见的拟合评估类型是项目拟合，其次是整体绝对和相对拟合，分别占 22%、20% 和 20%；（11）个体诊断结果的报告较少，仅 12% 的文献提供了个体诊断报告单；（12）多数应用研究未对诊断结果的信度和效度进行验证。

关键词 认知诊断评估，应用研究，文献计量分析

Applications of Cognitive Diagnosis Assessment: A Literature Review based on Bibliometric Analysis

Xiaoling Jin¹, Tiechuan Liu¹

¹ School of Education Science, Gannan Normal University, Ganzhou

Abstract: As the core of the new generation of test theory, cognitive diagnosis assessment (CDA) has great potential in educational evaluation. In theory, CDA can provide more fine-grained diagnostic information to guide remedial instruction more specifically. However, it is still in its infancy in practical application, and there are still many deficiencies. In order to explore the present situation and development tendency of cognitive diagnosis application research, the article conducts a bibliometric analysis of the literature amount, subject contents, subject distribution, 122 cognitive diagnosis application research literatures (1993 ~ 2020) collected in domestic and foreign academic journals were analyzed by bibliometric method. The results are as follows. (1) The annual total literature of CDA application research showed a rapid growth, foreign literature began to increase in 2009 and Chinese literature in 2016, the number of foreign literature was higher than that of Chinese literature; (2) CDA is applied in a wide range of fields. Mathematics and English reading are the most common ones in the literature, accounting for 36% and 26% respectively. In addition, it also involves the application of clinical diagnosis and other new fields; (3) There was a large difference in the number of attributes, with a minimum of 3 attributes and a maximum of 27 attributes, the mean value was 8.08 and the standard deviation was 4.42; (4) There is also a large difference in sample size. About 60% of the studies have a sample size of more than 500, and the sample groups are rich, including subjects of all ages from preschool children to college students; (5) The length of test items ranged from at least 5 items to 87 items with a mean value of 30.78 and a standard deviation of 16.98, and 53% of the studies used non-diagnostic tests. (6) The estimation of project measurement characteristics is often neglected in applied research. Only 41% of studies estimated project difficulty and 55% estimated the degree of distinction, the most common indicators are the pass rate and IDI; (7) The common methods to construct test Q matrix include expert evaluation, literature survey and oral report, accounting for 75%, 67% and 27% respectively; (8) The verification of the Q matrix was neglected, and only 48% of the literature conducted quantitative analysis of the initial Q matrix; (9) Commonly used measurement models are RSM, DINA and G-DINA, accounting for 28%, 16% and 16% respectively; (10) Model - data fitting test is ignored, more than half of the applied research did not test whether the model and data fit; The most common type of fit assessment is item fit test, followed by overall absolute fit test and relative fit test, accounting for 22%, 20% and 20% respectively; (11) Individual diagnosis results were rarely reported, only 12% of literatures provided individual diagnosis report cards for students or teachers; (12) The applied researches were carried out in many disciplines but most researches failed to report diagnostic reliability and validity.

“酸葡萄”或“绿草地”？考研失败大学生在目标评估上的差异

康佳¹ 杨博茜¹ 都旭¹ 冯萌萌¹ 白学军¹ (通讯作者)

¹ 天津师范大学心理学部, 天津, 300387, baixuejun@tjnu.edu.cn

摘要 “酸葡萄”心理指个体失败后贬低目标价值的现象; “绿草地”心理指个体失败后提升目标价值的现象。以往研究采用直觉智力任务, 发现成人在失败后会在情绪上产生“酸葡萄”心理, 而非“绿草地”心理。本研究旨在考察考研失败大学生在情绪和认知上是否产生“酸葡萄”心理, 以及耐挫心理是如何影响“酸葡萄”心理的。选取 114 名考研大学生, 在考研前一周填写《大学生耐挫心理量表》(白学军, 都旭, 牛宏伟, 郝嘉佳, 2020), 并报告其对报考院校的评价(即“您对报考院校的评价”, 采用 10 点量表, 0=非常不满意, 9=非常满意)和对将来考研成功的感恩预期(即“如果考研成功, 您的感恩程度”, 采用 10 点量表, 0=一点也不感恩, 9=非常感恩)。在考研结果公布后一周再次邀请被试填写《大学生耐挫心理量表》, 考研成功大学生($n=42$)报告对报考院校的评价(同考研前), 考研失败大学生($n=72$)报告对报考院校的评价(同考研前)和对下次考研成功的感恩预期(即“如果下次考研取得成功, 您的感恩程度”, 采用 10 点量表, 0=一点也不感恩, 9=非常感恩)。

以报考院校评价得分为因变量, 经 2 (考研结果: 成功、失败) $\times 2$ (时间点: 考研前、考研后) 的混合实验设计方差分析, 结果发现: 考研结果和时间点的交互作用显著 ($F_{(1,107)}=8.27, p=0.005$)。对于考研成功大学生, 考研前、后的报考院校评价得分无显著差异。对于考研失败大学生, 考研后的报考院校评价得分低于考研前的。以考研失败大学生的感恩预期为因变量, 经配对样本 t 检验发现: $t_{(71)}=4.01, p<0.001$ 。考研失败大学生在考研后对下次考研成功的感恩预期低于考研前对考研成功的感恩预期。表明大学生在经历考研失败后, 情绪和认知上均会产生“酸葡萄”心理。

将考研失败大学生前、后测感恩预期得分的差值作为“酸葡萄”程度的指标, 考察高、低耐挫大学生的“酸葡萄”心理是否存在差异。经独立样本 t 检验发现: $t_{(70)}=-2.51, p=0.014$ 。高耐挫大学生的“酸葡萄”程度强于低耐挫大学生。表明“酸葡萄”心理受到耐挫心理的影响。

Sour grapes or greener grass? Goal evaluation of undergraduates who failed in the Graduate Entrance Examination

Jia Kang¹, Boxi Yang¹, Xu Du¹, Mengmeng Feng¹, Xuejun Bai¹

¹ Faculty of psychology Tianjin Normal University, Tianjin, 300387, baixuejun@tjnu.edu.cn

Abstract: The "sour grapes" effect refers to the phenomenon that individuals devalue their goals after encountering failure. The "green grass" effect refers to the phenomenon that individuals elevate their goals after failure. Previous study used a cognitive task, and confirmed that adults produced "sour grapes" rather than "greener grass" in emotions after encountering failure. The current study aimed to investigate whether undergraduates who failed in the Graduate Entrance Examination produce "sour grapes" in emotions and cognition, and how perseverance affects "sour grapes" effect. One week before the Graduate Entrance Examination, 114 undergraduates were selected to complete the undergraduate perseverance scale (Bai, Du, Niu, & Hao, 2020). They were asked to report their evaluation of the registered institutions (i.e., "Your evaluation of the registered institutions") on a 10-point scale, (0 = very dissatisfied, 9 = very satisfied) and their gratitude expectations for the future success of the Graduate Entrance Examination (i.e., "How grateful you would be if you succeeded in the Graduate Entrance Examination") on a 10-point scale, (0 = not grateful at all, 9 = very grateful). One week after the outcome of the Graduate Entrance Examination were published, participants were asked to complete the undergraduate perseverance scale again. The participants who succeeded in the Graduate Entrance Examination ($n = 42$) were asked to report their evaluation of the registered institutions (same as the pre-test), while participants who failed in the Graduate Entrance Examination ($n=72$) were asked to report their evaluation of the registered institutions (same as the pre-test) and their gratitude expectations of the success in the

next Graduate Entrance Examination (i.e., "If you succeed in the next Graduate Entrance Examination, how grateful you will be" on a 10-point scale, (0 = not grateful at all, 9 = very grateful).

For the evaluation of the registered institutions, An ANOVA of 2 (outcome of the Graduate Entrance Examination: success, failure) $\times$ 2 (time point: before and after the Graduate Entrance Examination) mixed experimental design was used. The results showed that the interaction was significant ($F_{(1,107)}=8.27, p=0.005$). For the participants who succeed in the Graduate Entrance Examination, there was no significant difference between the scores of evaluation of the registered institutions before the Graduate Entrance Examination and those after the Graduate Entrance Examination. For the participants who failed in the Graduate Entrance Examination, the scores of evaluation of the registered institutions after the Graduate Entrance Examination were lower than those before the Graduate Entrance Examination. For the gratitude expectations for the future success of the Graduate Entrance Examination, the paired sample t test showed that the scores of gratitude expectations after the Graduate Entrance Examination were lower than those before the Graduate Entrance Examination, $t_{(71)}=4.01, p<0.001$. It reveals that undergraduates are "sour grapes" in emotions and cognition after experiencing failure in the Graduate Entrance Examination.

The difference scores of gratitude expectation (i.e., were computed as post-test minus pre-test score) of undergraduates who failed in the Graduate Entrance Examination were used to characterize the degree of sour grapes. The difference in the degree of sour grapes between undergraduates with high and low perseverance was examined. The independent sample t -test showed that the degree of sour grapes of undergraduates with high perseverance was higher than that of undergraduates with low perseverance, $t_{(70)}=-2.51, p=0.014$. The result reveals that the degree of "sour grapes" is affected by undergraduates' perseverance.

留守儿童的情绪与行为状况:基于长处和困难量表的 meta 分析

雷千乐¹、江琴¹、张斌²、熊思成²、贾骏¹、许伽彬¹

1 福建医科大学健康学院 福州 350108

2 湖南中医药大学人文与管理学院心理系 长沙 410208

通讯作者: 江琴 jiangqin@fjmu.edu.cn

摘要 目的: 运用 meta 分析的方法来分析对比中国留守儿童与非留守儿童情绪与行为状况, 及其影响因素。方法: 检索中国知网 (CNKI)、万方数据库、维普、PubMed、Springer、Web of science、EBSCO 等数据库从 2005 年至 2020 年的运用长处和困难量表 (SDQ) 调查中国留守儿童情绪和行为状况的文献, 并进行 meta 分析。结果: 总共纳入 23 篇文献, 总样本量 34310 人, 留守儿童与非留守儿童在长处和困难量表 (SDQ) 总分及各维度的合并效应量达到显著 ($d=0.173, p<0.01$), 表明农村留守儿童情绪与行为水平低于农村非留守儿童。且留守儿童群体间的情绪与行为水平存在性别差异, 留守女童和留守男童在困难总分上不存在显著差异, 但在不同维度上存在显著差异, 相比于留守男孩, 留守女孩更多的是存在情绪问题, 而留守男孩更多的是表现在行为方面的问题, 在亲社会行为维度上, 留守女孩得分显著高于留守男孩。异质性检验提示纳入文献明显异质 ($Q=90.79, I^2=75.8\%$), 进一步亚组分析发现小学留守儿童与初中留守儿童在困难总分与各维度上虽然不存在显著差异, 但小学留守儿童在这些得分上均略高于初中留守儿童。而经济欠发达内陆地区的留守儿童在困难总分及困难维度的得分显著高于经济较发达沿海地区的留守儿童。结论: 留守儿童情绪和行为水平差于非留守儿童, 经济状况作为重要的影响因素。

Abstract: Objective: to analyze and compare the emotional and behavioral status of left behind children and non left behind children in China and its influencing factors by using meta-analysis. Methods: searched CNKI, Wanfang database, VIP, PubMed, Springer, webofscience, EBSCO and other databases from 2005 to 2020 to investigate the studies that focus on emotional and behavioral status of left behind children in China by using the strengths and Difficulties Scale (SDQ). Results: a total of 23 studies were included, with a total sample size of 34310. The combined effect of strengths and Difficulties Scale (SDQ) and dimensions of left behind children and non left behind children was significant ($d = 0.173$, $P < 0.01$), indicating that the emotional and behavioral level of left behind children in rural areas is lower than that of non left behind children in rural areas. Compared with the left behind boys, the left behind girls have more emotional problems, while the left behind boys have more behavioral problems The scores of children were significantly higher than those of left behind boys. The heterogeneity test showed that the included literature was significantly heterogeneous ($q = 90.79$, $I^2 = 75.8\%$). Further subgroup analysis found that the total score and dimensions of difficulties of left behind children in primary school and junior high school were not significantly different, but the scores of left behind children in primary school were slightly higher than those of left behind children in junior middle school. However, the scores of the left behind children in economically underdeveloped inland areas are significantly higher than those in economically developed coastal areas. Conclusion: the level of emotion and behavior of left behind children is worse than that of non left behind children. Economic status is an important influencing factor.

Keywords: left-behind children, emotional problem, behavioral problem, meta-analysis

学龄前儿童对体贴行为的理解及其发展机制

李丹丹¹ 杨向东¹ 赵欣¹ (通讯作者)

¹ 华东师范大学教育心理学系, 上海, 200062, xzhao@dep.ecnu.edu.cn

摘 要 我们生活在一个高度社会化的世界。即便我们没有与他人直接互动, 我们自身的行为也很有可能对他人产生间接的影响, 我们把这种给他人间接地带来收益的行为称作体贴的亲社会行为。以往有关儿童对亲社会行为理解的研究主要探究儿童对于助人、分享等直接的亲社会行为的理解, 尚未有研究探究儿童对间接的亲社会行为的理解和评价。本研究中, 我们探究学龄前儿童对体贴行为的理解: 儿童在评价他人行为的时候, 是否会考虑到行为可能对他人产生的潜在影响? 是否能够分清体贴行为和不体贴行为? 儿童对于体贴行为的理解与其它重要的社会认知能力(如, 心理理论、分享行为、执行功能等)的发展是否存在关系? 本研究共招募 100 名 4-6 岁儿童来探究这些问题。在体贴行为理解任务中, 我们让儿童比较两个故事人物在水果加餐情境中的表现。其中一个人物在自己拿一个水果的时候给排在后面的人留下了一个选择(即, 表现出体贴行为), 而另一个人物在相似的情境中则没有给后面的人留下选择(即, 表现出不体贴行为), 我们询问儿童认为这两个人物哪个更好。除此之外, 儿童还参与了心理理论任务(即, 错误信念)、分享任务(从 5 个贴纸中给他人分享一定数量的贴纸)、和执行功能(日/夜 Stroop 任务)。结果发现, 其一, 随年龄发展, 儿童逐渐理解体贴的亲社会行为, 逐渐认为留给他人选择的人物比没有留给他人选择的人物更好。具体来说, 4 岁和 5 岁儿童的回答与随机水平没有显著差异, 而 6 岁儿童的回答显著高于随机水平。其二, 当控制了年龄之后, 儿童对于体贴行为的理解与其心理理论能力呈显著正相关, 与分享行为和执行功能均没有显著相关。综上所述, 在 4-6 岁之间, 儿童对于体贴行为的理解逐渐成熟, 且其理解受心理理论发展的影响, 但与亲社

会倾向（如，分享）及综合的认知功能（如，执行功能）没有明显的关系。本研究对于探究儿童对于亲社会行为的理解和评价及其发展机制有重要意义。

Preschoolers' Understanding of Considerate Actions and its Developmental Mechanisms

Dandan Li¹, Xiangdong Yang¹, Xin Zhao¹ (Corresponding Author)

Department of Educational Psychology, East China Normal University, Shanghai, 200062

Abstract: We live in a highly interdependent world. Even if we do not directly interact with others, our own behaviors can have an indirect impact on others. Such behaviors that indirectly bring benefits to others are defined as considerate actions. Previous research on children's understanding of prosocial behaviors focused on children's understanding of direct pro-social behaviors such as helping and sharing. Little is known about children's understanding and evaluation of considerate actions. In this study, we explored preschoolers' understanding of considerate actions: Do children consider the potential impact one's behaviors can have on others when making evaluations on such actions? Can they distinguish between considerate behaviors and inconsiderate behaviors? Is children's understanding of considerate actions related to other important social cognitive capacities (e.g. theory of mind, sharing behaviors, and executive functioning)? A total of 100 children aged 4-6 were recruited in this study. In the considerateness understanding task, children were asked to compare two story characters both of whom were to choose snack at the snack time. One of the characters left a choice for the person waiting behind when he took a fruit for herself (i.e., being considerate), while the other character in a similar situation leaves no choice for the person waiting behind (i.e., being inconsiderate). Children were then asked which of these two characters was nicer. In addition, children are also administered theory-of-mind tasks (i.e., false beliefs, hidden emotion), sharing tasks (sharing a certain number of stickers from 5 stickers), and executive functions (i.e., Day/Night Stroop tasks). We found the following findings. First, with age increase, children increasingly understand considerate actions, rating the character who left a choice for others as nicer than the character who left no choice. Specifically, while responses of 4- to 5-year-olds were not different from chance, 6-year-olds significantly favor the considerate character. Second, when controlling for age, children's understanding of considerate actions was significantly positively correlated with their theory-of-mind, but was not correlated with their sharing behaviors or executive functioning. In summary, between the ages 4 and 6, children's understanding of considerate actions gradually develops, and such understanding is influenced by the development of theory of mind, but not by prosociality (e.g., sharing) and general cognitive capacities (e.g., executive function). This research is of great significance to explore children's understanding and evaluation of prosocial behaviors and its developmental mechanism.

“眼见为实”还是“服从权威”？ ——高权威旁观者在场情境下有无结果反馈对幼儿选择性信任的影响

李金涵¹ 陈前¹ 张璟²（通讯作者）

1 江西师范大学心理学院，南昌，330022

2 江西师范大学心理学院，南昌，330022, zhangjingxhx@163.com

摘 要 反馈具有调节功能，反馈信息能够促使学习者证实或调整原有的自我评价,从而调节学习行为。在选择性学习的过程中，给予幼儿一定的反馈信息，将有助于幼儿更好地进行信息选择。但是以往选择性学习的研究中，尤其是基于旁观者在场的有关选择性学习的研究，并未将旁观者的指示信息是否正确这一结果反馈给被试。根据社会影响理论，社会互动中他人的权威性会影响个体在多大程度上受他人影响。因此，本研究拟将高权威性旁观者提示信息的正确性反馈给被试，以进一步探究高权威性旁观者在场情境下结果反馈对不

同年龄幼儿选择性学习的影响。本研究在“玩具屋”游戏模式下,选取了94名3-5岁幼儿,探究高权威旁观者在场且有无结果反馈的情况下对3-5岁幼儿选择性信任的影响。实验结果表明:(1)反馈情境主效应显著,相比于没有反馈的情况,有反馈的情况下幼儿更多的会选择先前信息提供者提供的位置。(2)年龄的主效应显著,4、5岁的儿童更多的会选择去信息提供者选择的位置寻找贴纸,3岁的儿童更多的会选择高权威性旁观者赞同的地点寻找贴纸;(3)年龄和反馈情境的交互作用不显著。实验结论是:“玩具屋”游戏模式下,3-5岁幼儿已经基于结果反馈的正确性来进行选择性信任。4、5岁的幼儿更愿意相信“眼见为实”,而3岁的幼儿更愿意“服从权威”。

关键词 反馈信息,旁观者因素,选择性信任,“玩具屋”游戏模式

"Seeing is believing" or "obeying authority"? ——The influence of outcome feedback on children's selective trust in the presence of high authority bystanders

Li Jin-han¹, Chen Qian¹, ZHANG Jing² (Corresponding author)

¹ School of Psychology, Jiangxi Normal University, Nanchang, 330022, China

² School of Psychology, Jiangxi Normal University, Nanchang, 330022, zhangjingxhx@163.com

Abstract: Feedback has the function of regulation, feedback information can promote learners to confirm or adjust the original self-evaluation, so as to adjust the learning behavior. In the process of selective learning, giving children some feedback information will help them to make better information selection. However, the previous studies on selective learning, especially those based on the presence of bystanders, did not provide feedback to the participants on whether the bystanders' instructions were correct. According to social influence theory, the authority of others in social interaction influences the extent to which individuals are influenced by others. Therefore, this study intends to feedback the correctness of the high authoritative bystander's cue information to the participants, so as to further explore the influence of the result feedback on the selective learning of children of different ages in the presence of high authoritative bystander. In this study, 94 children aged 3-5 years were selected in a "dollhouse" game mode to explore the effect of high authority bystanders with no feedback on their selective trust. The experimental results showed that:(1) the main effect of feedback situation was significant. Compared with the situation without feedback, children were more likely to choose the position provided by the correct information provider in the case of feedback. (2) The main effect of age was significant. Children aged 4 and 5 were more likely to choose the location chosen by the correct information provider to look for stickers, while children aged 3 were more likely to choose the location approved by the authoritative onlookers. (3) The interaction between age and feedback situation was not significant. The conclusion of the experiment is that in the "dollhouse" game mode, children aged 3-5 have already conducted selective trust based on the correctness of the result feedback. Four and five years old were more likely to believe "seeing is believing", while three-year-olds were more likely to "obey authority".

中学生关联感及其与家庭功能、核心自我评价、 主观幸福感的关系研究

李孟瑶¹ 屈燕¹ 胡瑜²

¹ 温州大学教育学院, 温州, 325000

² 温州大学心理与行为研究所, 温州, 325000

摘 要 自心理学产生以来,从精神分析理论到进化心理学理论,不同的心理学理论大多都把自主需要、胜任需要与关联需要视为重要的心理需求。根据自体心理学理论,社会联结感起始于生命早期,发展贯穿一生。然而中学阶段是个体生理和心理(认知,情感,行为)均有比较强烈变化的一个阶段,尤其表现在青少年的自我意识的觉醒。与此同时,人际交往与社会适应也在其生活与学习中扮演着越来越重要的角色,目前在这

几方面也出现一些新变化，与学校、家庭、社会的关联感，核心自我评价以及家庭功能这三大因素在他们的生活与学习中变得日益重要。基于这些变化，青春期个体的关联感和核心自我评价在性质、内容、表现方式上都呈现出与以往显著不同的特点。

本研究采用了 Hawkley 修订过的 UCLA 孤独修订量表、Lee 和 Robbins 编制的《社会联结量表（修订版）》、家庭功能评定量表（FAD）、杜建政等人（2012）修订的中文版《核心自我评价量表》、Diener 等人（1985）编制的《生活满意度》量表和黄丽等人修订的《正性负性情绪量表》对中学阶段的 737 名学生进行问卷发放，回收有效问卷 687 份，对其中这四者关系进行了深入且系统的分析与研究。由于笔者在大学期间对青少年犯罪的关注与资料收集，发现青少年关联感、核心自我评价以及家庭功能等因素，原生家庭以及青少年与周围事物的关联感极大程度影响着个体身心发展与变化，因此，中学生关联感及其与家庭功能、核心自我评价、主观幸福感的关系研究就变得尤其重要。在社会性发展的起始阶段，良好的关联感会带给中学生更多与周围环境的良好互动，满足他们对归属感的需求，同时作为一种人际关系的因素，关联感也能促使中学生更好地适应学习环境。中学生在学校感受到更多的社会联结，就会促进更多的积极参与，进而促进其积极发展，减少其问题行为的出现。

A Study on Middle School Students' Sense of Relevance and Its Relationship with Family Function, Core Self-evaluation, and Subjective Well-being

Mengyao Li¹, Yan Qu¹, Yu Hu²

1 Wenzhou University Education College, Wenzhou, 325000

2 Institute of Psychology and Behavior, Wenzhou University, Wenzhou, 325000

Abstract: Since the emergence of psychology, from psychoanalytic theories to evolutionary psychology, most of the different psychological theories regard the need for autonomy, competence and association as important psychological needs. According to the theory of self-psychology, the sense of social connection starts in the early stage of life and develops throughout the life. However, the middle school stage is a stage where the individual's physiology and psychology (cognition, emotion, behavior) have relatively strong changes, especially in the awakening of adolescents' self-consciousness. At the same time, interpersonal communication and social adaptation are also playing an increasingly important role in their life and study. At present, there are some new changes in these aspects. The sense of connection with school, family and society, core self-evaluation and family function are becoming increasingly important in their life and study. Based on these changes, adolescent individuals' sense of association and core self-evaluation have shown significantly different characteristics from the past in terms of nature, content, and performance.

This study adopted the revised UCLA Loneliness Scale (Revised by Hawkley), the Social Association Scale (revised), the Family Functioning Rating Scale (FAD), the Chinese version of the Core self-assessment Scale (Diener), which was revised by Du Jianzheng et al. (2012) The life Satisfaction Scale compiled by Et al. (1985) and the positive and Negative emotion Scale revised by Huang Li et al. (1985) issued questionnaires to 737 students in middle school, and recovered 687 valid questionnaires. The relationship among these four students was analyzed and studied in an in-depth and systematic way. Due to the author during the period of university focus on juvenile crime and data collection, adolescents' perception of associated core self-evaluation and the functional factors, such as native families and youth involvement with the surroundings are heavily affects the individual body and mind development and change, therefore, high school student association and its core self-evaluation and family function The relationship between subjective well-being becomes particularly important. In the initial stage of social development, a good sense of connection will bring middle school students more good interactions with the surrounding environment and meet their needs for a sense of belonging. At the same time, as a factor of interpersonal

relationship, the sense of connection can also encourage middle school students to become more adapt well to the learning environment. Middle school students feel more social connections in school, which will promote more active participation, thereby promoting their active development and reducing the appearance of problem behaviors.

后疫情时代下幼儿教师生存质量与抑郁的关系：基于潜在剖面分析

李佩瑾¹ 唐辉¹ 邢强¹（通讯作者）

¹ 广州大学，广州，510000，qiang_xingpsy@126.com

摘 要 2020 年的新冠疫情给人们的身心健康以及社会发展都带来了不可逆的影响，许多幼儿教师出现了生活质量下降、焦虑、情绪崩溃、睡眠障碍乃至抑郁等等症状。教师在社会发展中起着至关重要的作用，一个国家的质量取决于教育的质量，而教育的质量又取决于优质的教师。2018 年《关于学前教育深化改革规范发展的若干意见》明确提出要“提升幼儿园教师社会地位”、“待遇保障进一步提高”、“职业吸引力明显增强”。生存质量是指不同个体关于他们的各方面生活状况的一种主观体验。幼儿教师作为小孩子的启蒙者，身上的责任重压力大，关注他们的生存质量以及抑郁的情况至关重要。因此，本研究采用潜在剖面分析的方法来探究幼儿园教师生存质量的潜在类别及其主要的人口学特征，在充分考虑教师群体异质性的情况下，进一步探索生存质量与抑郁的关系并提出相关建议。

本研究采用问卷法对广州市某区幼儿园 4754 名在职幼儿园教师进行了调查。使用潜在剖面分析方法探究幼儿教师生存质量情况的潜在类别及其预测因素，并进一步比较不同潜类别教师在抑郁情况上的差异。结果显示潜在剖面分析得到三种类型：低水平生存质量组（占 27.4%），中等水平生存质量组（占 46.6%）以及高水平生存质量组（占 26.0%）。以“高水平生存质量组”为参照组，使用 R3STEP 程序构建包含预测因子的混合回归模型，发现年龄、教龄、婚姻情况、生育情况、职称和职务是“低水平生存质量”和“中等水平生存质量”的共性负向预测因子，在编情况、是否受高等教育以及抑郁总分是“低水平生存质量”的显著正向预测因子。结论：幼儿教师的生存质量水平具有明显分类特征，且与抑郁得分关系密切。建议应该针对不同类别的人口学特征以及抑郁情况，设计实施分层分类的干预方案，并成立专门的生存质量小组。

The relationship between quality of life and depression of preschool teachers in the post-epidemic era: based on potential profile analysis

Li Peijin, Tang hui, Xing Qiang

Department of Psychology, Guangzhou University, Guangzhou, 510006

Abstract: The COVID-19 epidemic in 2020 has brought irreversible effects on people's physical and mental health as well as social development. Many preschool teachers have suffered from symptoms such as decreased quality of life, anxiety, emotional breakdown, sleep disorders and even depression. Teachers play a vital role in the development of society. The quality of a country depends on the quality of its education, which in turn depends on the quality of teachers. *Several Opinions on Deepening Reform and Standardizing Development of Preschool Education*(2018) emphasized the need to "enhance the social status of kindergarten teachers", "further improve the treatment guarantee" and "enhance the occupational attraction significantly". Quality of life refers to a subjective experience of different individuals about their various aspects of life. As the enlighteners of children, preschool teachers have heavy responsibilities and great pressure on them. It is very important to pay attention to teacher's quality of life and depression. Therefore, this study used the method of potential profile analysis to explore the potential categories of kindergarten teachers' quality of life and its main demographic characteristics, and further explored the relationship between quality of life and depression under the condition of fully considering the heterogeneity of teacher groups, and put forward relevant suggestions.

In this study, 4754 in-service kindergarten teachers in a district of Guangzhou were investigated by questionnaire. Potential profile analysis was used to explore the potential categories and predictors of preschool teachers' quality of life, and to further compare the differences in depression among teachers of different potential categories. The results showed that there were three types of potential profile analysis: low quality of life group (27.4%), medium quality of life group (46.6%) and high quality of life group (26.0%). Taking the "high quality of life" group as the reference group, a mixed regression model containing predictors was constructed by using R3STEP program. It was found that age, teaching age, marital status, procreation status, professional title and position were common negative predictors of "low quality of life" and "medium quality of life". Authorized strength, education background, and total depression score were significant positive predictors of low quality of life. Conclusion: The quality of life of preschool teachers has obvious classification characteristics, and is closely related to depression scores. For different categories of demographic characteristics and depression, It is suggested that hierarchical interventions should be designed and implemented, and special quality of life teams should be established.

高年级小学生共情与社交焦虑的关系： 同伴关系、师生关系的中介作用

李瑞星¹ 詹琦琦¹ 高奇扬¹

¹ 绍兴文理学院, 绍兴, 312000

摘要 前人研究表明共情与社交焦虑密切相关,但两者之间内在机制还不明确。本文对共情和社交焦虑关系做进一步研究,并深入探讨同伴关系、师生关系在二者关系中的潜在中介作用,采用人际反应指数量表(IRI)、青少年社会交往焦虑量表(SAS-A)、同伴关系满意度量表和师生关系问卷对共情、社交焦虑、同伴关系和师生关系进行测量。被试为294名六年级学生($M_{age}=12.44$ 岁, $SD=0.586$,男生139人,女生155人)。研究结果表明:(1)共情与社交焦虑显著负相关($r=-0.219, p<0.001$)。(2)同伴关系完全中介作用($\beta=-0.122, p<0.001$)和师生关系完全中介作用($\beta=-0.089, p<0.001$)。(3)同伴关系在二者关系中的中介效应量(0.555)大于师生关系在二者关系中的中介效应量(0.405)。上述结果表明,提升高年级小学生的共情能有效减少学生的社交焦虑。此外,促进同伴和师生关系可以缓解高年级小学生的社交焦虑。

关键词 共情,社交焦虑,同伴关系,师生关系,中介作用

The relationship between empathy and social anxiety in senior primary school students:the mediating role of peer relationship and teacher-student relationship

LI Ruixing, ZHAN Qiqi, GAO Qiyang

Shaoxing University, 900 Chengnan Avenue, Yuecheng District, Shaoxing City, Zhejiang Province

Abstract: Previous studies have shown that empathy is closely related to social anxiety, but the internal mechanism of the relationship between empathy and social anxiety is not clear. The present study investigated this association more deeply, exploring the potential mediating role played by peer relationship and teacher-student relationship. 294 sixth graders ($M_{age}=12.44$ years old, $SD=0.586$, 139 boys, 155 girls) were investigated by Interpersonal Reactivity Index (IRI), Social Anxiety Scale for Adolescents (SAS-A), peer relationship satisfaction scale and teacher-student relationship questionnaire. The results showed that: (1) there was a significant negative correlation between empathy and social anxiety ($r=-0.219, P<0.001$). (2) The peer relationship plays a complete mediating role ($\beta=-0.122, P<0.001$). The teacher-student relationship also plays a complete intermediary role ($\beta=-0.089, p<0.001$). (3) Comparing the mediating effect of peer relationship and teacher-student relationship in empathy and social anxiety, it is found that the mediating effect of peer relationship (0.555) is greater than that of teacher-student relationship (0.405). The

above results show that the improving empathy can effectively reduce students' social anxiety. In addition, promoting the peer relationship and teacher-student relationship can reduce the social anxiety of senior pupils.

Keywords: empathy, social anxiety, peer relationship, teacher-student relationship, mediation

疫情期间个体注意偏向与心理健康的关系：焦虑敏感性的中介作用

李笑¹ 杨海波^{1,2} (通讯作者)

1 天津师范大学心理学部, 天津, 300047

2 天津师范大学心理与行为研究院, 天津, 300074, yhbpsy@163.com

摘要 新型冠状病毒肺炎席卷全球, 对个体生活的各个方面如安全、健康、福祉等都产生了很大的影响, 进而会对个体的心理造成巨大的影响, 使其产生焦虑、抑郁、恐慌等负面情绪。本研究基于已有研究, 考察了消极注意偏向对焦虑、抑郁情绪的影响, 并进一步探讨焦虑敏感性躯体关注和认知关注在其中的中介作用, 以期对个体的焦虑、抑郁情绪的预防和干预提供理论支持和实证依据, 减轻本次疫情对个体造成的负面情绪。本研究采用中文版积极/消极注意偏向量表、焦虑敏感指数量表 3 版和抑郁—焦虑—压力量表, 对 460 人进行调查, 采用 SPSS22.0 软件对调查结果进行分析。结果显示: (1) 消极注意偏向可显著预测个体的焦虑与抑郁情绪; (2) 消极注意偏向可分别通过躯体关注、认知关注影响个体的焦虑、抑郁情绪。总之, 本研究考察了个体对消极信息注意偏向作用于焦虑、抑郁情绪的中介机制, 探讨了焦虑敏感躯体关注和认知关注的中介作用, 对缓解突发公共卫生事件中个体的负性情绪具有一定的理论和实践意义。在心理健康方面, 可以通过注意偏向训练改善个体对消极信息的注意偏向, 从而帮助缓解个体的焦虑、抑郁情绪, 对个体心理健康管理和负性情绪的缓解都具有重要意义, 为促进个体身心健康发展水平提供了有价值的资料。

关键词 焦虑敏感, 躯体关注, 认知关注, 心理健康

The relationship between attention bias and mental health during the COVID-19 pandemic: the mediating role of anxiety sensitivity

Li Xiao¹, Yang Haibo^{1,2}

1 Faculty of Psychology, Tianjin Normal University, Tianjin 300074

2 Academy of Psychology and Behavior, Tianjin Normal University, Tianjin 300074, China,
yhbpsy@163.com

Abstract: COVID-19 sweeps the world, and has a great impact on all aspects of individual life, such as safety, health, and well-being. These effects will also have a huge impact on the psychopathology, causing anxiety, depression, panic and other negative emotions. In this study, we examined the impact of negative bias on anxiety and depression, and further explored the mediating role of physical and cognitive concerns. Study implications are relevant to intervention for anxiety and depression, and the impact of COVID-19 on negative emotions. In this study, 460 non-clinical participants from China were surveyed during the 2020 COVID-19 pandemic. We administered the Attention to Positive and Negative Information Scale, Anxiety Sensitivity Index-3, and Depression Anxiety Stress-21 Scale to investigate the influence of negative attention bias, physical and cognitive anxiety sensitivity on anxiety and depression symptoms during the pandemic. The results showed that: (1) negative attention bias was associated with anxiety and depression symptoms; (2) physical and cognitive anxiety sensitivity mediated relations between negative attention bias and both anxiety and depression. In conclusion, this study investigated attention to negative information bias applied to the mediation mechanism of anxiety, depression. This paper discussed the mediating effect of physical concerns and cognitive concerns, and it has certain theoretical and practical significance to relieve individual negative emotions in public health emergencies. In terms of mental health, attention bias training can be used to improve attention bias to negative information, so as to help alleviate anxiety and depression. It is of great significance to individual mental health management and the remission of negative emotions, and provides valuable information for the promotion of individual physical and mental health development.

Keywords: anxiety sensitivity, physical concerns, cognitive concerns, mental health

互动问题解决过程中的计划和探索行为——基于潜在剖面分析

李志飞¹ 张佳慧² (通讯作者)

1 北京师范大学统计学院, 北京, 100875

2 北京师范大学中国基础教育质量监测协同创新中心, 北京, 100875

摘要 互动问题解决能力是 21 世纪人类生存的核心素养之一 (OECD, 2014; Binkley et al., 2012)。已有研究分别发现了计划和探索行为在互动问题解决过程中的重要作用 (Eichmann et al., 2019; Eichmann et al., 2020)。本研究将采用“以人为中心”的方法识别学生计划和探索行为的不同模式, 并比较不同模式学生的背景变量、问题解决的开放程度以及问题解决的表现。

本研究采用 PISA2012 中国上海“空调”任务第一小题的过程数据进行分析, 有 262 人 (64.2%) 成功作答, 146 人 (35.8%) 失败。本研究从过程数据中提取动作总次数、控制变量法使用次数占比和问题重置次数占比作为探索行为的指标, 计划行为则通过作答总反应时以及作答记录中的最长间隔时占比、最长间隔时的起始时间占比以及间隔时的变异系数表征。潜在剖面分析方法用以实现学生聚类, 采用 BIC 和 ICL 两个指标确定类别数。

成功解题学生分为高效解决组 (Profile 1, 188 人) 和成功探索组 (Profile 2, 74 人), 在 7 个行为指标上都表现出显著差异。高效解决组学生在更短时间和更少的动作行为中表现出更多的控制变量行为、降低认知负荷的重置行为以及作答初始阶段的计划行为。虽然在背景变量和态度变量上没有显著差异, 但高效解决组学生的问题解决表现 (577.67) 要显著高于成功探索组 (534.73)。成功探索组虽然未能充分展现策略, 但探索过程中可能产生了学习, 从而成功作答该题目。

失败学生可以分为探索组 (Profile 3, 64 人)、策略组 (Profile 4, 68 人) 和消极组 (Profile 5, 14 人), 三组学生的行为指标上也存在显著差异。探索组表现出更多的探索行为但计划时间少, 策略组在失败学生中采用的控制变量法行为、重置行为和初始计划行为的占比更高, 而消极组学生则几乎没有动作记录。三组中策略组学生的问题解决表现最高 (481.85), 其次为探索组 (464.66), 最后为消极组 (415.40)。三组之间不存在显著的背景变量和态度变量差异。

总的来说, 有策略且充分的探索行为以及作答初始阶段的计划行为对互动问题的成功解决起到重要作用。将学生进行聚类可以得到更多诊断信息, 判断学生在互动问题解决过程中的具体薄弱点。

The Planning and Exploratory Behaviors in Complex Problem Solving: A Latent Profile Approach

Li Zhifei¹, Zhang Jiahui²(corresponding author)

1 School of Statistics, Beijing Normal University, Beijing

2 Collaborative Innovation Center of Assessment for Basic Education Quality

Abstract: The ability of complex problem solving (CPS) is one of the essential requirements of the 21st century human (OECD, 2014; Binkley et al, 2012). Previous research has highlighted the roles of planning and strategic exploration as role parts in CPS (e.g., Eichmann et al., 2019; Eichmann, et al., 2020). This study aims to investigate students' profile regarding exploratory and planning behaviors via a person-centered approach. The profiles were compared in terms demographic variables, openness in problem solving and CPS performance.

This study used the Shanghai (China) dataset in PISA 2012 including student survey data, CPS performance data, and log data of “climate control” task. Students were divided into the success group (262 students, 64.2%) and failure group (146 students, 35.8%) depending on whether they received the full credit on the first question of “climate control” or not. The process data was recorded in log data.

Three exploration indicators were derived from the log data to represent different aspects of exploratory behaviors, that is the total click number, the percentage of the VOTAT strategy records out of the total click number, and the percentage of reset number out of the total click number. Four planning indicators were formed: total

response time, the percentage of the longest response time of the total time, the percentage of the time when longest response time occurred of the total time and the coefficient of variance of time. Gender and ESCS were considered as demographic variables, and openness from questionnaire data is regarded as an attitude variable, with CPS performance was represented by the first plausible value. The latent profile analysis (LPA) was conducted. Evaluation criteria for model comparison were BIC and ICL.

Two distinct profiles were identified in the success group and labeled as proficient solvers (Profile 1, $n = 188$) and successful explorers (Profile 2, $n = 74$), respectively, with significant mean differences on all seven indicators. Proficient solvers who had the highest CPS ability level demonstrated multiple exploratory strategies such as VOTAT, the used of resetting to release cognitive load and the initial planning. The CPS score of proficient solvers (577.67) was higher than successful explorers (534.73), however, there were no significant differences in both demographic variables and attitude variable. It seems that learning occurred during successful explorers' exploration, which led to a successful solution.

Three different profiles were found in the failure group and labeled as exploring (Profile 3, $n = 64$), strategic (Profile 4, $n = 68$) and disengaged (Profile 5, $n = 14$) profiles, respectively, with significant mean differences on seven indicators. Among the three profiles, the exploring students were active in exploring but spent less time (in percentage) in planning. Strategic students used more strategies in terms of VOTAT, resetting, and initial planning. Disengaged students barely engaged in problem solving. The strategic profile had the highest CPS score (464.66), followed by the exploring (481.85), and the disengaged (415.40) profile. There were no significant differences in both demographic variables and attitude variable among three profiles.

To sum up, strategic and sufficient explorations as well as initial planning all contributed to the successful solution of the current CPS task. Students' profile membership yields more diagnostic information than the scores on each dimension.

信任感、亲子冲突对青少年抑郁的影响：一项交叉滞后研究

1 刘美美 2 王佶旻（通讯作者）

1 北京语言大学国际学生教育政策与评价研究院，北京，100083

2 北京语言大学国际学生教育政策与评价研究院，北京，100083, wjm903@126.com

摘 要 对 652 名青少年进行间隔两年的追踪研究，通过交叉滞后的方法探讨信任感、亲子冲突和青少年抑郁之间的相互作用。结果发现，基于理论建立的四种模型之中，稳定性模型、症状驱动模型、情感驱动模型及素质-应激模型中，其中修订后的情感驱动模型的拟合最好，意味着先前的信任感可以显著预测随后的信任感和青少年抑郁，先前的抑郁可以显著预测随后的青少年抑郁，而先前的抑郁不能显著地预测随后的信任感，先前的亲子冲突可以预测随后的亲子冲突。研究表明信任感和青少年抑郁的相互关系，揭示了信任感和青少年抑郁间的作用机制。

Trust, Parent-child Conflict and Teenage Depression: A Longitude Study

Liu Meimei, Wang Jimin*(corresponding writer)

Beijing Language and Cultural University, 15 Xueyuan Avenue, Haidian District, Beijing

Beijing Language and Cultural University, 15 Xueyuan Avenue, Haidian District, Beijing*

Abstract: A two-year follow-up study was conducted on 652 adolescents to explore the interaction between trust, parent-child conflict and adolescent depression through a cross-lag method. The results found that among the four models based on theory, among the fundamental model, symptom-driven model, emotion-driven model, and

quality-stress model, the emotion-driven model fits best, meaning the prior trust can significantly negatively predict the subsequent depression of adolescents and the trust, while the prior depression cannot significantly predict the subsequent trust, and the prior parent-child conflict can predict the subsequent parent-child conflict. Studies have shown the causal relationship between trust and depression in adolescents, revealing the mechanism of the network between trust and depression in adolescents.

Keywords: Trust, Parent-child Conflict, Teenage Depression, CFPS, Cross-lag

特岗教师职业认同的性别、任教学段和学历差异：元分析

刘梓艳 李樱楠（通讯作者）

赣南师范大学教育科学学院，江西赣州，341000，通讯作者 E-mail: 1913368518@qq.com

摘要 职业认同是特岗教师做好本职工作的心理基础，是决定特岗教师职业发展质量好坏的关键。特岗教师的职业认同越高，越不会出现职业离职倾向，同时，提高特岗教师的职业认同也有助于缓解特岗教师职业倦怠，降低其离职率，提升其留任率。因此研究特岗教师的职业认同对农村教育持续健康发展具有十分重要的意义。从“特岗计划”提出到如今，十五年时间里，教育学和心理学学者采用实证研究范式开展了特岗教师职业认同及其与职业幸福感、工作投入、离职倾向等关系的研究，也取得了大量研究成果，为“特岗计划”更加科学、理性、有效地实施提供了实证依据。但系统梳理关于特岗教师职业认同领域的研究发现，特岗教师职业认同总体水平高低存在争议，并且相关研究也存在因调查地域、测量工具、数据处理等诸多方面的一致而带来的结果不尽相同的问题。因此本研究，采用元分析技术考察我国特岗教师职业认同总体水平以及与性别、任教学段、学历的关系。在中国知网等数据库以“特岗教师”和“职业认同”为关键词检索 2009 年 1 月-2021 年 5 月的相关文献，共筛选其中 17 篇文献、2755 名特岗教师纳入研究。采用随机效应模型进行数据处理，得到以下结果：（1）我国特岗教师职业认同的整体水平处于较高水平；（2）特岗教师职业认同与性别、任教学段相关显著，与学历相关不显著；（3）男性特岗教师的职业认同水平低于女性特岗教师，小学及以下学段特岗教师的职业认同水平高于小学以上学段特岗教师；（4）特岗教师职业认同与性别、任教学段不受调查地域、测量工具、出版时间的调节。

关键词 特岗教师,职业认同,随机效应模型,元分析

A Meta Analysis of Gender, Teaching Period and Educational Background Differences in Professional Identity of Special Post Teachers

LIU Ziyan, LI Yingnan

Educational Science School, Gannan Normal University, Ganzhou, 341000, e-mail:

1913368518@qq.com

Abstract: Professional identity is the psychological basis for special post teachers to do their job well, and it is the key to determine the quality of special post teachers' professional development. At the same time, improving the professional identity of special post teachers also helps to alleviate their job burnout, reduce their turnover rate and improve their retention rate. Therefore, it is of great significance to study the professional identity of special post teachers for the sustainable and healthy development of rural education. In the past 15 years since the "special post plan" was put forward, educators and psychologists have adopted the empirical research paradigm to carry out the research on the professional identity of special post teachers and its relationship with professional well-being, work engagement, turnover intention, etc., and have also made a lot of research results, which provides an empirical basis for the more scientific, rational and effective implementation of the "Special Post Plan". However, a systematic review of the research in the field of special post teachers' professional identity shows that the overall level of special post teachers' professional identity is controversial, and the results of the relevant research are not the same due to the inconsistency of survey area, measurement tools, data processing and many other aspects. Therefore, this study uses

meta-analysis technology to investigate the overall level of professional identity of special post teachers in China and its relationship with gender, teaching period and educational background. In CNKI and other databases, "special post teachers" and "professional identity" were used as keywords to search the relevant literature from January 2009 to may 2021. A total of 17 articles and 2755 special post teachers were selected for the study. The results are as follows: (1) the overall level of professional identity of special post teachers in China is at a high level; (2) The professional identity of special post teachers is significantly correlated with gender and teaching period, but not with education background; (3) The professional identity level of male special post teachers is lower than that of female special post teachers, and the professional identity level of primary school and below special post teachers is higher than that of primary school and above special post teachers; (4) Professional identity, gender and teaching period of special post teachers are not regulated by survey area, measurement tools and publishing time.

Keywords: Special post teachers, Professional identity, Random effect model, Meta analysis

青少年家庭教养方式对社会适应的影响：情绪智力的中介作用

卢玥辰

中国人民大学心理学系，北京，100872，luyuechen@ruc.edu.cn

摘要 本研究基于中国山东的 274 名中学生，探究了家庭教养方式、情绪智力与社会适应三个变量间的关系，其中社会适应能力，指个体为了与环境取得和谐的关系而产生的心理和行为的变化，它是个体与各种环境因素连续而不断改变的相互作用过程，通过“领域-功能”模型可将社会适应分为四个基本适应领域（自我适应、人际适应、行为适应和环境适应）和积极、消极两种功能状态；家庭教养方式指父母对养育子女的态度和教育方式，包括拒绝、偏爱和过度保护三个维度；情绪智力是一种加工情绪信息的能力，它包括准确地评价自己和他人的情绪，恰当地表达情绪，以及适应性地调控情绪的能力，包括自我情绪评估、他人情绪评估、情绪调节、情绪利用四个维度。在中国山东省德州市乐陵中学初一、初二、初三的中学生中分层随机抽样选择被试，采用 SPSS 26.0 进行数据处理和统计分析，并进行共同方法偏差统计检验，验证了情绪智力对教养方式和社会适应之间的关系的中介作用，并研究了被试所处年级对变量之间关系的影响。研究结果表明，家庭教养方式显著预测情绪智力和社会适应，同时情绪智力与社会适应之间存在显著正相关，情绪智力对教养方式和社会适应的关系起部分中介作用。此外，被试的年级（年龄）在情绪智力和社会适应、教养方式和社会适应的关系中均没有起到显著的调节作用，原因可能为被试仅为 7-9 年级的初中生，年龄在 12-15 岁之间，年龄范围过小，故统计分析的结果不显著。本研究为发展与教育心理学研究领域的后续实验提供了理论基础和研究证据的支持，并且在与年龄相关的研究中，也提供了可供探索的空间，并对未来的研究方向进行了展望。

关键词 家庭教养方式，社会适应，情绪智力，青少年

The Influence of Parenting Styles of Adolescents on Their Social Adjustment: The Mediating Role of Emotional Intelligence

LU Yuechen

Department of Psychology, Renmin University of China, Beijing 100872

Abstract: Based on 274 adolescents in junior high school in Shandong, China, this study examined the relationship among three variables of parenting styles (including three dimensions of rejection, favouritism and overprotection), emotional intelligence and social adjustment, demonstrated the mediating effect of emotional intelligence on the relationship between parenting style and social adjustment, and examined the influence of grade level on the relationship between variables. The results revealed parenting style significantly predicts emotional intelligence and social adjustment, and there is a significant positive correlation between emotional intelligence and social adjustment. Emotional intelligence played a partial mediating role in the relationship between parenting style and social adjustment. This study provides theoretical basis and evidence support for subsequent researches in the field of

development and educational psychology, and also provides space for exploration in age-related studies. Suggestions for future directions were discussed.

Keywords: parenting style, social adjustment, emotional intelligence, adolescents

中小学生过度使用互联网与学业成绩的关系研究

栾晓姣¹ 于晓丹¹ (通讯作者) 王海涛¹ 孙晓峰²

1 中国海洋大学教育系, 青岛, 266100, yuxiaodan@ouc.edu.cn

2 中国海洋大学体育系, 青岛, 266100

摘要 随着信息化时代的到来, 互联网给我们带来了无数的便利, 但与此同时, 也给我们的生活和学习带来了一定的危害。尤其是对于自制力较差的青少年来说, 过度使用互联网对其身心的影响更大。本研究探讨中小学生过度使用互联网与数学成绩的关系, 并进一步分析影响二者相关的影响因素。研究采用整群随机抽样方法, 通过网络形式对青岛市四年级、八年级的学生行问卷调查, 共计抽取全市 18649 名四年级学生、12553 名八年级学生参与研究, 包括三部分。研究问题 1: 使用雷雳、杨洋编制的《青少年病理性互联网使用量表》进行四年级和八年级学生过度使用互联网情况调查, 同时采用一场标准化数学测试对四年级和八年级学生进行测试, 分析中小学生过度使用互联网和数学成绩在人口学变量上的差异; 研究问题 2: 分析四、八年级学生过度使用互联网与学业成绩之间的关系; 研究问题 3: 依据社会认知理论从行为因素、环境因素和个体因素三方面探讨四、八年级学生过度使用互联网对数学成绩影响的主要机制。研究结果表明: 四年级和八年级男女生在过度使用互联网方面均存在显著性差异, 具体表现为男孩的过度使用互联网倾向高于女生; 四年级男女生在数学成绩上存在显著性差异, 具体表现为四年级男孩数学成绩优于女生, 八年级男孩和女生数学成绩不存在显著性差异。1. 四年级和八年级学生过度使用互联网与数学成绩之间均存在显著的负向相关关系, 具体表现为四年级学生二者相关不存在性别差异, 八年级学生二者相关存在性别差异, 男生高于女生。2. 四年级学生过度使用互联网对数学成绩具有独立影响作用, 八年级学生过度使用互联网对数学成绩的影响不具有独立影响作用, 其受到等多种因素的干扰, 环境因素(如人际关系、教师支持等)对八年级女生过度使用互联网与学业成绩的影响更大, 个体因素(如自我效能感)对八年级男生女生的过度使用互联网与数学成绩的关系影响均十分显著。本研究有助于发现中小学生过度使用互联网和学业成绩之间的年级和性别差异, 帮助家长和教师针对不同年龄段的学生采取一定的措施缓解其负面影响。

A Study on the Relationship between Excessive Use of the Internet and Academic Achievements of Primary and Middle School Students

Luan Xiaojiao¹, Yu Xiaodan¹(Corresponding author), Wang Haitao¹, Sun Xiaofeng²

1 Department of education, Ocean University of China, Qingdao, 266100, yuxiaodan@ouc.edu.cn

2 Department of Physical Education, Ocean University of China, Qingdao, 266100

Abstract: With the advent of the information age, the Internet has brought us countless conveniences, but at the same time, it has also brought certain harm to our lives and studies. Especially for young people with poor self-control, excessive use of the Internet has a greater impact on their body and mind. This research explores the relationship between the excessive use of the Internet and mathematics performance of primary and middle school students, and further analyzes the related factors that affect the two. The study adopts a cluster random sampling method and conducts a questionnaire survey of Qingdao City's fourth and eighth grade students through the Internet. A total of 18,649 fourth-grade students and 12,553 eighth-grade students in the city were selected to participate in the research, including three parts. Research question 1: Use the "Adolescent Pathological Internet Use Scale" compiled by Lei Li and Yang Yang to investigate the excessive use of the Internet among students in fourth and eighth grades. At the same time, a standardized math test is used to test students in fourth and eighth grades. Analyze the differences in demographic variables between primary and middle school students' overuse of the Internet and mathematics scores;

Research Question 2: Analyze the relationship between the fourth and eighth grade students' overuse of the Internet and their academic performance; Research Question 3: Based on social cognitive theory from behavioral factors , Environmental factors, and individual factors to explore the main mechanism of the impact of the fourth and eighth grade students' excessive use of the Internet on their mathematics performance. Research indicates: 1. There are significant differences in the overuse of the Internet between male and female students in the fourth and eighth grades. The specific manifestation is that boys have a higher tendency to overuse the Internet than girls; there are significant differences in mathematics performance between male and female students in fourth grade, which is specifically shown in four Boys in grades are better than girls in mathematics, and there is no significant difference in mathematics scores between boys and girls in eighth grade. 2. There is a significant negative correlation between the overuse of the Internet and mathematics scores between the fourth and eighth grade students. The specific performance is that there is no gender difference in the relationship between the fourth and eighth grade students, and there is a gender difference in the relationship between the eighth grade students and boys. Higher than girls. 3. Excessive use of the Internet by fourth-grade students has an independent effect on mathematics performance, and the excessive use of the Internet by eighth-grade students does not have an independent impact on mathematics performance. Support, etc.) has a greater impact on the overuse of the Internet and academic performance of eighth grade girls. Individual factors (such as self-efficacy) have a significant impact on the relationship between the overuse of the Internet and mathematics performance of eighth grade boys and girls. This research helps to discover the grade and gender differences between the excessive use of the Internet and academic performance of primary and secondary school students, and helps parents and teachers take certain measures to alleviate the negative effects of students of different ages.

Keywords: Primary and Middle school students, excessive use of the Internet, academic performance

留守儿童社会支持与心理资本的关系： 亲社会行为与情绪调节的链式中介作用

吕学汝¹ 姚本先¹（通讯作者）

1 合肥师范学院心理学系，合肥，230601，182196480@qq.com

摘要 由于各种原因造成父母双方或一方流动到其他地区，而孩子留在户籍所在地并因此不能和父母双方共同生活的儿童被称为留守儿童。造成留守儿童出现更多心理问题的最大原因是其面对的现实问题，即父母支持的严重缺失。研究发现，与非留守儿童相比，留守儿童感知到的父母关爱更少，对家庭领域的需要得不到满足，被父母所爱的需要更加强烈。所谓积极心理资本是指个体在处理事件和问题时所表现出积极的心理品质或心理状态，是一个综合包容的心理结构，具有可开发、可培育的类状态特质。有研究表明，“积极心理资本能够很好地促进学业成就、心理健康、人际关系和社会适应，具有跨文化特性并适用多种群体”。社会支持与个体心理健康有着直接密切的关系，它在缓解个体心理压力、消除个体心理障碍、增进个体心理健康等方面具有重要的影响作用。本研究旨在探索留守儿童社会支持与心理资本的关系，并进一步考察亲社会行为与情绪调节的中介作用，以探讨其中的影响机制。

本研究在安徽省各地农村地区的中小学进行问卷调查。采用《领悟社会支持量表》（PSSS）、《亲社会行为量表》、《情绪调节量表》、《心理资本量表》作为测量工具。对有效数据进行分析后发现：（1）留守儿童心理资本、社会支持、亲社会行为、情绪调节之间存在显著正相关关系。（2）链式中介效应检验表明，社会支持可以预测留守儿童的心理健康；同时存在三条间接路径：社会支持通过亲社会行为和情绪调节的链式中介作用影响留守儿童的心理健康；社会支持通过亲社会行为影响留守儿童的心理健康；社会支持通过情绪调节影响留守儿童的心理健康。

通过了解社会支持对留守儿童的心理健康的影响，以及亲社会行为与情绪调节的中介机制的作用，未来研究将继续探索促进留守儿童心理健康的方式。同时，研究有利于未来提出留守儿童心理健康发展更有针对性的措施，具有重要的现实意义。

关键词 社会支持，心理资本，亲社会行为，情绪调节，留守儿童

The Relationship between social support and psychological capital of left-behind children: The chain mediating effect of prosocial behavior and emotion regulation

Xueru Lv¹, Benxian Yao¹ (Corresponding author)

¹ Department of Psychology, Hefei Normal University, Hefei, 230601, 182196480@qq.com

Abstract: Children whose parents or parents move to other areas due to various reasons are called left-behind children because their children remain in their registered residence and cannot live with their parents. The biggest reason for left-behind children to have more psychological problems is the real problem they face, namely the serious lack of parental support. The study found that compared with non-left-behind children, left-behind children perceive less care from their parents, have unmet needs in the family field, and have a stronger need to be loved by their parents. The so-called positive psychological capital refers to the positive psychological quality or psychological state displayed by individuals when dealing with events and problems. It is a comprehensive and inclusive psychological structure with developable and cultivated state-like characteristics. Studies have shown that "positive psychological capital can well promote academic achievement, mental health, interpersonal relationships and social adaptation, and has cross-cultural characteristics and is applicable to multiple groups". Social support has a direct and close relationship with individual mental health, which plays an important role in alleviating individual psychological pressure, eliminating individual psychological barriers and improving individual mental health. The purpose of this study is to explore the relationship between social support and psychological capital of left-behind children, and to further investigate the mediating effect of prosocial behavior and emotion regulation, so as to explore the influencing mechanism. This study conducted a questionnaire survey in primary and secondary schools in rural areas of Anhui province. Comprehension Social Support Scale (PSSS), prosocial Behavior Scale, Emotion regulation Scale and psychological Capital Scale were used as measurement tools. After analyzing the effective data, it is found that : (1) there is a significant positive correlation between psychological capital, social support, prosocial behavior and emotional regulation of left-behind children. (2) The chain mediating effect test shows that social support can predict psychological capital of left-behind children; There are also three indirect paths: social support influences the psychological capital of left-behind children through the chain mediating effect of prosocial behavior and emotion regulation; Social support influences the psychological capital of left-behind children through prosocial behaviors; Social support influences the psychological capital of left-behind children through emotional regulation. By understanding the impact of social support on the psychological capital of left-behind children and the role of the mediating mechanism of pro-social behavior and emotion regulation, future research will continue to explore ways to promote the mental health of left-behind children. At the same time, the study will help put forward more targeted measures for the mental health development of left-behind children in the future, which has important practical significance.

Keywords: social support, psychological capital, prosocial behavior, emotional regulation, left-behind children

科学态度与科学成绩的关系：一项三水平元分析

⁵ 香港中文大学教育学院, 香港

摘要 随着科学技术的进步与发展, 科学教育逐渐成为重要的学习领域。除了关注科学成绩外, 培养学生对科学的积极态度也是科学教育的重要目标之一。近年来, 科学态度与科学成绩的关系成为了研究者感兴趣

的主题,但尚未得出一致的结论。一些研究发现科学态度与科学成绩呈显著正相关,而另一些研究则发现科学态度与科学成绩呈弱相关且不显著,甚至两者呈负相关。本研究运用元分析技术探讨了科学态度与科学成绩之间的关系,并通过调节效应分析考察文章发表类型、年级、地区、科学态度类型、科学成绩测量工具及文章发表年份的调节作用。通过系统地文献检索,共纳入 24 篇初始研究,包含 85 个效应量和 51793 名被试。由于大部分初始研究报告了多个相关的效应量,本研究选取三水平元分析对数据进行分析。结果发现科学态度与科学成绩之间总体上存在中等程度的正相关($r = 0.244, p < 0.001$),调节效应分析的结果表明科学态度类型的调节作用显著,科学自我效能感与科学成绩($r = 0.343$)的相关系数显著大于科学兴趣与科学成绩之间的相关($r = 0.194$)、以及与社会方面相关的科学态度与科学成绩之间的相关($r = 0.166$)。但文章发表类型、年级、地区、科学成绩测量工具和文章发表年份的调节作用不显著。研究结果表明科学态度与科学成绩关系密切,对科学态度的干预和科学成绩的提高具有重要意义,未来的研究仍需要关注其它变量在科学态度与科学成绩关系中的调节作用。

3 Chinese University of Hong Kong (Shenzhen), Shenzhen

4 School of Education, Stanford University, CA

5 Faculty of Education, Chinese University of Hong Kong, Hong Kong

Abstract: With the development of science and technology, science education has gradually become an important field of learning. In addition to focusing on academic achievement in science, one of the purposes of science education is to develop a positive attitude towards science. In recent years, researchers have shown an increased interest in the attitude-achievement relationship in science, but there is still no consistent conclusion. Some studies found that the attitude towards science and science achievement correlated positively, while other studies revealed that the relationship between attitude towards science and science achievement was either quite weak, statistically non-significant, or even negative. In this study, we conducted a meta-analysis to investigate the relationship between attitude towards science and academic achievement in learning science, and to explore if some study characteristics (e.g. publication type, grade, region, type of attitude, measures of science achievement and publication year) could have contributed to the inconsistent findings with regard to this relationship as observed in the research literature. As multiple dependent effect sizes were reported in most studies, we used the three-level meta-analysis method to analyze the data. A total of 24 primary studies, 85 effect sizes, and 51,793 participants were identified through systematic literature search. The results revealed that there was an overall positive and moderate relationship between attitude towards science and learning achievement in science ($r = 0.244, p < 0.001$). Furthermore, the results further found that this association was influenced by type of attitude and the strength of the correlation between science performance and self-efficacy about science ($r = 0.343$) was stronger than that of interest ($r = 0.194$), and societal relevance of attitude towards science ($r = 0.166$). However, the moderating effects of publication type, grade, region, measures of science achievement and publication year were not significant. Taken together, the findings clearly indicate that the attitude towards science is closely related to science achievement, and provide insights for the intervention of science attitude and the improvement of science achievement. Other potential moderator variables should be considered in the future to further investigate the heterogeneity across studies.

Keywords: attitude towards science, science achievement, three-level meta-analysis, moderator analysis

基于事后分析的高中生数学学业能力认知诊断

孟凡亭(通讯作者) 冯鑫润 王欣瑜

内蒙古师范大学心理学院, 呼和浩特, 010022, 393466171@qq.com

摘要 高中数学学业水平考试是衡量学生数学学业能力发展水平的重要依据。运用认知诊断技术对高中生数学学业能力进行诊断, 可以从微观层面对学生的数学认知结构、学习策略等进行细致诊断分析。已有相关研究大多集中于顺向的数学能力认知诊断测验 Q 矩阵标定、试卷编制及大规模测评, 但是基于已有学业水平考试的标准化试题与实测数据, 进行逆向的 Q 矩阵标定和知识状态诊断分析的研究还相对较少。

本研究从某省 2019 年 12 月高中数学学业水平考试中随机抽取 5000 名考生为被试, 首先通过试题、教材、课程标准的内容、结构、目标进行一致性分析, 并结合试题双向细目表的考查重点, 确定了包括数学基础知识(A1)、函数初步(A2)、几何直观与空间想象(A3)、数学统计与建模(A4)、三角函数(A5)和函数应用(A6)等 6 个关键数学认知属性的测验 Q 矩阵, 然后采用自编 R 语言程序选择模型-数据拟合较好的 GDINA 模型($\max X^2=115.28$, $rmsea=0.029$)进行测验参数估计、属性掌握概率、知识状态诊断等一系列分析。

结果表明:(1)该省 2019 年 12 月高中数学学业水平考试卷的整体内部一致性信度很好(Cronbach's $\alpha=0.91$), 试题平均难度为中等偏低水平($b=-0.63$), 平均区分度为中等偏高水平($a=2.00$); 考生的数学学业能力 θ 均值为 0.025, 标准差为 0.968, 基本符合正态分布形态(偏度为-0.017, 峰度为-0.673)。(2)考生对关键认知属性的掌握概率依次为 $A1(p=0.70)>A2(p=0.42)>A4(p=0.39)>A3(p=0.37)>A6(p=0.31)>A5(p=0.29)$, 考生最主要的认知模式有“111111(25.8%, 1290 人)”、“000000(30.5%, 1525 人)”、“100000(24.4%, 1220 人)”、“111100(4.0%, 200 人)”、“111101(2.5%, 125 人)”、“100100(2.2%, 110 人)”和“110100(2.1%, 105 人)”, 即考生对数学基础知识的掌握程度最好, 对函数初步、几何直观与空间想象、数学统计与建模等属性的掌握相对较弱, 对三角函数和函数应用等属性的掌握程度是最弱的。基于以上分析, 学校应进一步强化学生的基础性数学学力训练, 并有针对性地对函数初步、函数应用、三角函数等几个关键认知属性进行补救教学。

The Cognitive Diagnosis of High School Students Mathematics Learning Ability Based on Afterward Analysis

Fanting Meng (Corresponding author), Xinrun Feng, Xinyu Wang

School of Psychology, Inner Mongolia Normal University, Hohhot, 010022

Corresponding Author E-mail: 393466171@qq.com

Abstract: High school mathematics proficiency examination is an important basis for measuring the development of students' mathematics learning ability. With cognitive diagnostic technique in diagnosing and analyzing the mathematics learning ability of high school students, it is possible to conduct detailed diagnostic analysis on the students' mathematical cognitive structure and learning strategies from the microscopic level. Most of the existing related researches focus on the forward Q matrix calibration, test paper preparation and large-scale evaluation of the mathematical ability cognitive diagnostic test, but there are relatively few researches on reverse Q matrix calibration and knowledge state diagnosis analysis on the basis of the standardized test questions and measured data of the existing academic proficiency test.

In the study, the sample of 5000 candidates was randomly selected from the high school mathematics academic proficiency test in a certain province in the December of 2019. First, with the analysis of the consistency of the content, structure, and objectives of the test questions, textbooks, and curriculum standards, combined with the examination focus of the two-way detailed list of test questions, the Q matrix of six key mathematical cognitive attributes is settled, which includes basic knowledge of mathematics (A1), preliminary function (A2), geometric intuition and spatial imagination ability (A3), mathematical statistics and modeling ability (A4), trigonometric

function (A5), and function application (A6). Next, the GDINA model with better data fitting(max $X^2=115.28$, rmsea=0.029) is selected by self-made R language program, and the model is used to make a series of analysis on test parameter estimation, attribute mastery probability and knowledge state diagnosis.

The results show that: (1) The overall internal consistency of the provincial high school mathematics test papers in the December 2019 is highly reliable(Cronbach's $\alpha=0.91$), and the average difficulty of the test questions is moderately low ($b=-0.63$), the average discrimination is moderately high($a=2.00$); the average value of candidates' mathematical learning ability θ is -0.007 , and the standard deviation is 0.967 , which basically conforms to the normal distribution (skewness is -0.017 , kurtosis is 0.673). (2) The probabilities of the candidates' mastery of key cognitive attributes are $A1(p=0.70) > A2(p=0.42) > A4(p=0.39) > A3(p=0.37) > A6(p=0.31) > A5(p=0.29)$, the primary cognitive patterns of candidates are "111111 (25.8%, 1291 persons)", "000000 (30.5%, 1524 persons)", "100000 (24.4%, 1218 persons)", "110011 (4.0%, 201 persons)", "110111 (2.5%, 125 persons)", "100001 (2.2%, 109 persons)" and "110001 (2.1%, 105 persons)", that is, the candidates' attribute ability of the basic knowledge of mathematics is the best, the attribute ability of function preliminary, geometric intuition and spatial imagination, mathematical statistics and modeling is relatively weak, and the attribute ability of triangle functions and function application is the weakest. Based on the above analysis, the school should further strengthen the students' basic mathematics training, and provide targeted remedial teaching on the key cognitive attributes of function preliminary, function applications, triangle functions.

肥胖儿童的学业成绩：工作记忆和注意力的作用

穆秀¹ 刘虹茗紫¹ 吴南¹ (通讯作者)

¹ 北京联合大学, 北京, 100101

¹ 北京联合大学大学心理学系, 北京, 100101, wunantom@126.com

摘要 近年来, 儿童肥胖增长趋势迅猛。肥胖不仅影响儿童的身心健康, 造成焦虑、抑郁等不良心理倾向, 同时也对其学业成绩造成极大影响。本文通过 2 个研究来考查不同体重儿童的学业成绩差异以及工作记忆和注意力在其中的作用。研究 1 选取北京市某小学 4-6 年级学生 316 名, 使用问卷来调查儿童的人口学变量、学业成绩、身高体重、饮食情况等, 以探查不同体重儿童学业成绩之间存在的差异。研究 2 从研究 1 的 316 名被试中选取肥胖、超重以及正常体重儿童共 144 名作为研究对象, 使用《工作记忆量表》、《注意力测验》来测量被试的工作记忆和注意力。考察工作记忆以及注意力在不同体重儿童上存在的差异, 以及工作记忆和注意力对肥胖儿童学业成绩产生的影响。本研究得到如下结论,

- 1、肥胖儿童学业成绩、工作记忆以及注意力显著低于正常体重儿童。
- 2、儿童每周体育活动时长与学业成绩呈正相关, 儿童每周食用快餐频率与学业成绩呈负相关。
- 3、肥胖儿童工作记忆和注意力对学业成绩存在显著影响。其中, 肥胖通过影响儿童的注意力, 进而作用于儿童的学业成绩。

Academic achievement of obese children: the roles of work memory and attention

Mu Xiu, Liu Hongmingzi, Wu Nan

Beijing Union University, Bei Jing 100101

Abstract: In recent years, childhood obesity has increased rapidly. Obesity not only affects children's physical health, and causes anxiety, depression, and other unhealthy psychological tendencies, but also greatly affects children's academic performance. Therefore, this study uses two empirical studies to examine the difference between the

academic performance of children of different weights and the impact of working memory and attention on the academic performance of obese children. Study 1 selected 316 primary students in Beijing from grades 4 to 6 and used a self-compiled questionnaire to investigate demographic variables, academic performance, height and weight, and diet of children to explore the differences in the academic performance of children of different weights. Study 2 explored the differences in working memory and attention of children of different weights, and the effect of working memory and attention on the academic performance of children. This research has the following conclusions,

1. The academic performance, working memory, and attention of obese children are significantly lower than those of normal-weight children.

2. The length of children's weekly physical activity is positively correlated with academic performance, and the frequency of children's weekly fast-food consumption is negatively correlated with academic performance.

3 Working memory and attention of obese children have a significant impact on academic performance. Among them, obesity affects children's attention, which in turn affects children's academic performance.

Keywords: obese children, academic performance, working memory, attention

大学生网络成瘾变迁的横断历史研究

彭琳璐¹ 郑显亮¹ (通讯作者)

¹ 赣南师范大学教育科学学院, 赣州, 341000, zxl2004@sina.com

摘要 网络是一把双刃剑, 网络的迅速普及给人们带来便利, 也带来了一些不利影响, 比如网络成瘾。纵观以往研究, 研究者对大学生网络成瘾率进行了考察, 但不同时段不同地域的横断研究可能导致各个研究结果的差异, 也可能存在年代效应, 即大学生网络成瘾水平可能会随着年代的变迁而发生变化。可见, 以往研究忽略了大学生网络成瘾的年代差异, 无法回答大学生网络成瘾水平随着年代变迁是加剧还是降低这一变化趋势。因此, 为探讨我国大学生网络成瘾的纵向发展趋势, 本研究拟采用横断历史研究法来考察近 15 年来我国大学生网络成瘾的整体变迁情况。此外, 大量研究表明, 男生比女生更容易发生网络成瘾行为, 本研究将从宏观纵向的角度对大学生网络成瘾的性别差异进行验证。研究者指出, 根据横断历史研究得出的定量数据确定心理变迁趋势, 借助每年公布的社会发展指标, 可以确定社会变迁对心理量的影响。因此, 本研究拟采用互联网普及率和国家经济发展状况来考察社会因素对大学生网络成瘾水平的影响。通过筛选, 对 2004-2018 年间 48 篇采用台湾学者陈淑慧等人编制的中文网络成瘾量表 (CIAS-R) 测量我国大学生网络成瘾的研究报告进行分析, 考察网络成瘾水平随年代的整体变化趋势及其性别差异, 以及社会变迁与网络成瘾水平之间的关系。结果显示, 从整体变化来看, 近 15 年来大学生网络成瘾水平的得分大致上升了 0.30-0.85 个标准差, 大学生网络成瘾总分及各因子得分均呈现上升趋势, 变化幅度大致为中等程度; 大学生网络成瘾的变化趋势存在显著的性别差异, 即女大学生网络成瘾水平的变化趋势显著上升, 男大学生网络成瘾水平变化不显著; 大学生网络成瘾与互联网普及率、国家经济发展状况存在显著相关, 社会变迁能有效预测大学生网络成瘾水平。

A Cross-temporal Meta-analysis of Changes in College Students' Internet Addiction

Peng Linlu¹ Zheng Xianliang¹ (Corresponding author)

¹ School of Educational Science, Gannan Normal University, Ganzhou, 341000

Abstract: The Internet is a double-edged sword. While the Internet brings convenience to people, it also brings some adverse effects, such as Internet addiction. In the present study, a lot of researchers are investigating the rate of Internet addiction. However, cross-sectional studies in different periods and different regions may lead to differences in the results of various studies, and there may also be a chronological effect. The level of college students' Internet addiction may change with time. It can be seen that previous studies have ignored the chronological differences of

college students' Internet addiction and cannot answer the changing trend of whether the level of college students' Internet addiction increased or decreased with the change of time. Therefore, in order to explore the longitudinal development trend of Internet addiction among college students, this study intends to use a Cross-temporal Meta-analysis method to investigate the overall changes in Internet addiction among college students in the past 15 years. In addition, studies have shown that male students are more likely have Internet addiction behaviors than female students. This study will verify the gender differences in Internet addiction among college students from a longitudinal perspective. The researchers pointed out that according to the quantitative data from Cross-temporal Meta-analysis to determine the psychological change trend, with the help of the social development indicators published every year, the influence of social changes on the psychological quantity can be determined. Therefore, this study intends to use the Internet penetration rate and the level of economic development to investigate the impact of social factors on the level of Internet addiction among college students. Through screening, there were 48 papers using the Chinese Internet Addiction Scale (CIAS-R) compiled by Taiwan scholar Chen Shuhui to measure Internet addiction among college students from 2004 to 2018. The results show that, the total scores of college students' Internet addiction levels and various factors have shown an upward trend, with a roughly moderate degree of change. There are significant gender differences in the changing trend of Internet addiction among college students, the changing trend of female students' Internet addiction level has increased significantly, while the level of male students' Internet addiction has not changed significantly; The Internet addiction of college students is significantly related to the Internet penetration rate and the state of national economic development, and social change can effectively predict the level of Internet addiction of college students.

感觉寻求对中学生欺凌行为的影响：一个有调节的中介模型

钱诚 王磊（通讯作者）

武汉体育学院研究生院，武汉，430079，378299706@qq.com

摘要 校园欺凌事件日益受到社会的关注，了解校园欺凌发生的内在机制对于预防校园欺凌有着重要意义。感觉寻求是个体是对多变化的、新异的、复杂的和强烈的感觉和体验的寻求，感觉寻求是导致中学生问题行为的一个重要原因，校园欺凌作为中学生问题行为的一种，感觉寻求在中学生欺凌行为中的作用值得关注；同时，班级氛围也会影响校园欺凌，集体效能感作为衡量班级氛围的一个重要指标，它在欺凌行为中的影响同样值得关注。本研究主要探讨中学生感觉寻求、集体效能感以及欺凌行为之间的关系，同时对性别在其中的调节作用进行检验。

采用整体抽样的方法，选取云南省某地三所中学初一至初三年级 825 名学生，其中男生 386 人，女生 439 人，使用《感觉寻求量表》、《集体效能信念量表》、《主动性攻击与反应性攻击问卷》等工具收集数据，利用 SPSS、MPLUS 统计软件对数据资料进行分析，主要检验集体效能感在感觉寻求与中学生欺凌行为之间的中介作用，以及该作用是否受到性别因素的调节。结果表明：（1）感觉寻求、集体效能感与校园欺凌三个变量之间存在显著相关，其中感觉寻求与校园欺凌呈显著正相关（ $r=0.287$ ， $p<0.05$ ），集体效能感与校园欺凌呈显著正相关（ $r=0.204$ ， $p<0.05$ ），感觉寻求与集体效能感之间呈现显著正相关（ $r=0.138$ ， $p<0.05$ ）；（2）集体效能感在感觉寻求与中学生欺凌行为之间起部分中介作用；（3）性别对集体效能感的中介作用具有调节效应，性别调节了中介作用的后半路径。感觉寻求对中学生欺凌行为的影响是有调节的中介效应，感觉寻求直接影响中学生欺凌行为，也通过集体效能感进而影响校园欺凌，男生群体中感觉寻求通过集体效能影响校园欺凌的效应更大。

Influence of sensation seeking on bullying in middle school students: a moderated mediation model

Cheng Qian, Lei Wang

Graduate School , Wuhan Sports University, Wuhan, 430079, 378299706@qq.com

Abstract: School bullying is attracted more and more attention from the society. It is important for us to understand the internal mechanism of school bullying, then we can prevent it. Sensation seeking means the person want to find varied, new and different, complex and strong feelings and experiences. Sensation seeking is an important cause for middle school students' problem behavior. As a kind of problem behavior in middle school students, the role of sensation seeking in bullying deserves our attention; At the same time, class atmosphere also affects school bullying. As an important indicator to measure class atmosphere, collective efficacy also deserves our attention. The purpose of this study is to investigate the relationship among sensation-seeking, collective efficacy and bullying in middle school students, and to examine the moderating effect of gender.

825 students are selected from grade one to Grade three in three middle schools in Yunnan Province, including 386 boys and 439 girls, we collect data by using Sensation Seeking Scale, Collective Efficacy Belief Scale and Proactive and Reactive Aggression Questionnaire. SPSS and MPLUS software are used to analyze the data. The research mainly examines the mediating effect of collective efficacy between sensation-seeking and bullying in middle school students, and whether the effect is regulated by gender factors. Results show that: (1) the correlation among sensation seeking, collective efficacy and bullying are significant, sensation seeking has positive correlation with bullying($r=0.287, p<0.05$), the collective self-efficacy has positive correlation with bullying($r=0.204, p<0.05$), sensation seeking has positive correlation with the collective efficacy($r=0.138, p<0.05$). (2) Collective efficacy plays a partial mediating role between sensation-seeking and bullying in middle school students; (3) the mediation of collective efficacy is moderated by gender, and gender regulates the latter half path of mediating effect. The influence of sensation seeking on the bullying in middle school students is a moderated mediation effect. Sensation seeking directly affects the bullying in middle school students, and also it affects the bullying through collective efficacy. In the group of male students, the influence of sensation seeking on the bullying is greater through collective efficacy.

团体箱庭游戏对小学流动儿童情绪调节能力的干预

屈燕¹ 孙倪明¹ 潘玉进¹

1 温州大学教育学院, 温州, 325000, 769368648@qq.com

1 温州大学教育学院, 温州, 325000

1 温州大学心理与行为研究中心, 温州, 325000

摘要 随着现代社会的不断发展, 流动儿童越来越成为社会瞩目的一个研究目标, 在流动儿童的背后, 有家庭因素也有社会因素, 通过问卷调查探索这种“流动”会对小学阶段儿童的情绪调节产生什么影响。研究发现这些流动儿童进入小学后, 会产生学校适应问题, 这些适应有来自老师的、有来自同伴的、也有来自于自己本身的, 那么笔者关注的就是这部分儿童自身内部的情绪调节问题。根据皮亚杰认知发展阶段性理论, 这部分年龄阶段的孩子处于具体形象阶段, 表现为以自我为中心, 并且借助象征物等具体事物表达自己, 因此我们借助了心理学中的重要治疗工具——团体箱庭, 来对这部分儿童进行干预, 游戏是儿童的天性, 达到小学低年级后, 儿童逐渐转为规则性游戏阶段, 因此借助箱庭游戏的方式, 对他们在学校里的的情绪调节能力进行干预, 透过儿童在箱庭上的操作看儿童心理的本质, 对流动儿童的情绪调节能力产生影响。情绪是伴随人们的思维产生的, 情绪上或者心理上的困扰是由于不合理的、不合逻辑的思维所造成的, 为此, ABC 理论的提出者艾利斯宣称: “人的情绪不是由某一诱发事件的本身所引起, 而是由经历了这一事件的人对这一事件的解释和评价所引起的。”在了解流动儿童的基本情况过程中, 我们也会根据这个理论来反观儿童对于自己所经历事件的看法, 在后续运用对流动儿童情绪调节能力做干预的时候, 会将这个理论融入箱庭游戏中。在这

过程中, 我们也会发现什么样的箱庭游戏主题可以对目标儿童的情绪调节能力产生积极影响, 通过箱庭给儿童设置不同的主题, 让儿童参与进箱庭游戏中, 让他们在自定或者固定的环境里摆放材料, 从材料中可以推理出他们对学校的态度以及对周边同学、老师的看法, 然后根据儿童箱庭游戏阶段特点和成人的有效参与互动, 发现问题解决问题。这是本次研究的第二个重点所在。

The Intervention of Group Box Game on the Emotional Regulation Ability of Primary School Migrant Children

Yan Qu

Wenzhou University

Abstract: With the continuous development of modern society, migrant children have increasingly become a research target of social attention. Behind migrant children, there are family factors and social factors. Through questionnaire surveys, we will explore how this kind of "mobility" affects primary school children. What effect does the adjustment have. Research has found that these migrant children will have school adaptation problems after entering elementary schools. These adaptations come from teachers, peers, and themselves. Then the author is concerned about the internal emotional regulation of these children. According to Piaget's theory of stages of cognitive development, children at this age are in the stage of concrete images, behave as self-centered, and express themselves with the help of specific things such as symbols. Therefore, we use important therapeutic tools in psychology. ——Group box courts to intervene in this part of children. Play is the nature of children. After reaching the lower grades of elementary school, children gradually turn to the regular game stage. Therefore, with the help of box court games, they can regulate their emotions in school. Intervention is performed to see the nature of children's psychology through children's operations on the box court, which has an impact on migrant children's ability to regulate emotions. Emotions are generated with people's thinking. Emotional or psychological distress is caused by irrational and illogical thinking. For this reason, Ellis, the proponent of the ABC theory, declared: "People's emotions are not caused by certain A precipitating event is caused by itself, but caused by the interpretation and evaluation of the event by the people who have experienced it. "In the process of understanding the basic situation of migrant children, we will also reflect on this theory. Children's views on the events they have experienced will incorporate this theory into the box garden game when they are subsequently used to intervene in the ability of migrant children to regulate their emotions. In this process, we will also discover what kind of box garden game themes can have a positive impact on the target child's emotional regulation ability. Through the box garden, children can be set up with different themes, so that children can participate in the box garden game, allowing them to decide on their own or The materials are placed in a fixed environment. From the materials, they can infer their attitudes toward the school and their views toward the surrounding students and teachers. Then, according to the characteristics of children's box game stage and the effective participation and interaction of adults, problems can be found and solved. This is the second focus of this research.

儿童害羞对内化问题行为的预测：父母教养行为的调节作用

邵凡依¹ 王莉¹ (通讯作者)

¹ 北京大学心理与认知科学学院, 北京, 100871

摘 要 害羞是发展心理学家研究的重要气质特征之一, 是内化问题行为的风险因素, 儿童的害羞常与一些消极的发展结果正相关。同时, 发展是个体与情境动态互动的结果, 家庭作为儿童早期社会化的主要场所, 通过父母日常与孩子的互动, 父母教养行为对于儿童内化问题行为的发展有着重要的影响。本研究采用追踪设计, 希望能够探究儿童 2 岁时的害羞气质对于 4 岁时内化问题行为的预测, 并且探索父母教养行为是否能够

调节害羞对内化问题行为的预测关系。本研究的被试为 66 名儿童，分别在儿童 2 岁和 4 岁通过问卷收集儿童害羞、父母教养行为和儿童内化问题行为信息。结果显示，2 岁时儿童害羞、教养行为中的保护性、拒绝性维度可以显著预测 4 岁时的内化问题行为。保护性和拒绝性的教养行为调节了害羞气质对内化问题行为的影响，并且二者的调节模式相似：对于高保护性组和高拒绝性组来说，害羞对于内化问题行为有显著影响；对于低保护性组和低拒绝性组来说，害羞对于内化问题行为没有显著影响。研究结果能为儿童早期害羞的发展干预及教养行为的选择方面提供指导，例如对害羞儿童给予更多的关注，父母可以选择更加支持性的积极教养行为，在日常育儿实践中减少过度保护性、拒绝性的态度、过分苛责的行为等。

关键词 害羞，内化问题行为，父母教养行为，父母保护性，父母拒绝性

The prediction of children's shyness to internalizing problems: The moderating role of parenting behaviors

Fanyi Shao¹, Li Wang¹

¹ School of Psychological and Cognitive Sciences and Beijing Key Laboratory of Behavior and Mental Health, Peking University, Beijing, China, 100871

Abstract: Shyness is one of the important temperament characteristics studied by developmental psychologists, and it is a risk factor for internalizing problems. Children's shyness is often positively correlated with some negative development results. Meanwhile, development is the result of dynamic interaction between individual and situation. Family environment is the main place of early socialization of children. Through parents' daily interaction with their children, the parenting behavior plays an important role in the development of children's internalizing problems. In this study, we used the longitudinal design to explore the prediction of shyness at the age of 2 for internalizing problems at the age of 4, and to explore whether the parenting behavior plays a moderating role in this prediction process. The subjects of this study were 66 children. The information about shyness, parenting behaviors and internalizing problems of the children was collected by questionnaire at the time when the children were 2 and 4 years old. The results showed that shyness at the age of 2, protection and rejection dimensions in parenting behaviors could significantly predict internalizing problems at the age of 4. The influence of shyness on internalizing problems is significantly moderated by the parental protection and rejection, and their moderating models are similar: for the high protective group and the high rejective group, shyness has a significant influence on the internalizing problem; for the low protective group and the low rejective, shyness has no significant influence on the internalizing problem. The results can provide guidance for the developmental intervention of shyness in early childhood and the choice of parenting behaviors. For example, pay more attention to shy children, and parents can choose more supportive and positive parenting behavior, and reduce excessive protective, rejective attitude and overly critical behavior in daily parenting practice.

Keywords: shyness, internalizing problems, parenting behavior, parental protection, parental rejection

认知重评影响前瞻记忆的实验研究

沈蕾 沈倩 江黛苔 付思文（通讯作者）

上海师范大学教育学院，上海，200234，1394278578@qq.com

摘要 本研究通过两个实验，确定认知重评对基于时间和基于事件前瞻记忆加工的影响。实验一为 2（图片情绪效价：正性、负性）× 2（情绪调节策略：自由观看、认知重评）的混合实验设计，探究认知重评对基于事件的前瞻记忆的影响。其中情绪调节策略为被试间变量。因变量为背景任务和基于事件前瞻任务的正确率与反应时。结果显示，图片情绪效价对基于事件前瞻记忆的成绩有不同的影响，与负性效价相比，正性效价的前瞻记忆成绩更好；不同的情绪调节策略对基于事件前瞻记忆的表现影响不同，与自由观看组相比，认知重评组的前瞻记忆成绩更低。实验二为 2（图片情绪效价：正性、负性）× 2（情绪调节策略：自由观看、认知重评）的混合实验设计，探究认知重评对基于时间的前瞻记忆的影响。其中情绪调节策略为被试间变量。

因变量为背景任务和基于时间前瞻任务的正确率与反应时。结果显示,正负性效价图片对基于时间前瞻记忆的成绩影响不同,与负性效价相比,正性效价的前瞻记忆成绩更好;两种不同的情绪调节策略对基于时间前瞻记忆的表现影响不同,自由观看组的前瞻记忆成绩优于认知重评组。

研究结果支持了前瞻记忆的预备注意加工与记忆加工理论,为明确前瞻记忆的加工机制提供了进一步的证据。

A study on the Influence of Cognitive Reappraisal on Prospective Memory

SHEN Lei, SHEN Qian, JANG Daitai, FU Siwen

College of Education, Shanghai Normal University, Shanghai

Abstract: This study explored the impact of cognitive reappraisal on event-based prospective memory and time-based prospective memory through two experiments. Experiment 1 was a mixed design of 2 (emotion valence: positive, negative) $\times$ 2 (emotion regulation strategy: simply view, cognitive reappraisal), to explore the impact of cognitive reappraisal on event-based prospective memory. Emotion valence is between-subject variables. The dependent variables were the accuracy rate and the reaction time of background tasks and event-based prospective tasks. The results showed that emotional valence had different effects on prospective memory performance. Compared with negative valence, positive valence had better prospective memory performance. Different emotion regulation strategies had different effects on the performance of prospective memory. Compared with the simply-view group, the cognitive reappraisal group had a lower prospective memory performance. Experiment 2 was a mixed design of 2 (emotion valence: positive, negative) $\times$ 2 (emotion regulation strategy: simply view, cognitive reappraisal), to explore the impact of cognitive reappraisal on time-based prospective memory. Emotion valence is between-subject variables. The dependent variables were the accuracy rate and the reaction time of background tasks and time-based prospective tasks. The results showed that emotional valence had different effects on prospective memory performance. Compared with negative valence, positive valence had better prospective memory performance. Emotion regulation strategies had different effects on the performance of prospective memory. The simply-view group had a better prospective memory performance than the cognitive reappraisal group.

The above results support preparatory attentional processes and memory processes theory, and confirm further evidence for exploring the mechanism of prospective memory.

Keywords: cognitive reappraisal, prospective memory, emotion, emotion regulation strategy

特质焦虑对中学生学业成绩的影响： 生命意义感和自我控制的中介作用

石耀慧¹ 麻超^{1,2} (通讯作者)

¹ 石河子大学师范学院, 石河子, 832003

² 石河子大学心理应用研究中心, 石河子, 832003, 通讯作者 E-mail 1056797139@qq.com

摘要 焦虑是个体即将面临某种威胁或不利后果时所产生的紧张、忧虑、烦躁等不愉快的情绪,特质焦虑是焦虑倾向稳定且持久的人格特征,高特质焦虑个体倾向将接受任务感知为威胁。特质焦虑普遍存在于中学生群体中,阻碍了情绪调节能力的发展、加速了拖延行为的产生、削弱了抑制控制功能。已有研究探讨了学科学业焦虑、状态焦虑与学业成绩之间的关系,但特质焦虑作为人格特质对学业成绩影响可能更为持久。注意偏向理论指出高特质焦虑个体倾向于将更多的注意力资源分配给对厌恶性后果的担忧和无关刺激,这不仅导致较低的生命意义感,还降低对学业任务的自我控制。生命意义感是个体感知生活意义、觉察生命内涵的程度,其功能之一是加强自我控制能力,生命意义使个体能够依据文化标准思考长远目标,进而调整自身的情绪和行为应对学业任务。自我控制是个体通过调控情绪、行为和思维而对不恰当行为施加影响的一种能力。

鉴于目前缺乏特质焦虑对学业成绩影响及作用机制的相关研究。本研究探讨特质焦虑“如何影响”中学生的学业成绩，重点考察生命意义感和自我控制在二者关系中的链式中介作用。本研究采用特质焦虑、生命意义感、自我控制问卷对 1412 名中学生进行调查，并收集近两次的考试成绩。结果显示：（1）特质焦虑、生命意义感、自我控制、学业成绩两两之间显著相关；（2）生命意义感和自我控制在特质焦虑与学业成绩的关系中分别起部分中介作用；（3）生命意义感和自我控制在特质焦虑与学业成绩之间起链式中介作用。研究结果强调了特质焦虑不仅可以直接影响学业成绩，还可以通过生命意义和自我控制的间接作用施加影响，有助于为特质焦虑中学生提升学业成绩制定科学方案。

关键词 中学生，特质焦虑，学业成绩，自我控制，生命意义感

Trait Anxiety and Middle School Students' Academic Achievement: Mediating Effects of Self-control Meaning in Life

SHI Yaohui¹, MA Chao^{1,2},

1 Normal College, Shihezi University, Shihezi 832003;

2 Psychological Application Research Center, Shihezi University, Shihezi 832003

Abstract: Anxiety is an unpleasant emotion such as tension, anxiety and irritability when an individual is about to face some threat or adverse consequences. Trait anxiety is a stable and lasting personality characteristic of anxiety tendency. Individuals with high trait anxiety tend to perceive task acceptance as a threat. Trait anxiety generally exists in middle school students, which hinders the development of emotion regulation ability, accelerates the generation of procrastination behavior and weakens the function of inhibition and control. Studies have explored the relationship between academic anxiety, state anxiety and academic achievement, but trait anxiety, as a personality trait, may have a more lasting impact on academic achievement. Attention bias theory points out that individuals with high trait anxiety tend to allocate more attention resources to worry about the malignant consequences of aversion and irrelevant stimuli, which not only leads to a lower meaning in life, but also reduces their self-control over academic tasks. The meaning in life is the degree to which individuals perceive the connotation of life. One of its functions is to strengthen self-control. The meaning in life enables individuals to think about long-term goals according to cultural standards, and then adjust their emotions and behaviors to deal with academic tasks. Self-control is the ability which influence inappropriate behavior by regulating emotion, behavior and thinking. There is lacking that trait anxiety affects academic performance.

The present research explores how trait anxiety "affects" middle school students' academic performance, focusing on the chain mediating role of meaning in life and self-control. A sample of 1412 subjects was enrolled in the present research to fill out the Trait Anxiety Inventory, Meaning Life Questionnaire and Middle School Students' Self-control Ability Questionnaire. trait anxiety, sense of meaning of life and self-control questionnaire, and the test scores of nearly two times were collected. The results showed that: (1) trait anxiety, meaning in life, self-control and academic achievement were significantly correlated; (2) meaning in life and self-control played a partial mediating role in the relationship between trait anxiety and academic achievement; (3) meaning in life and self-control had a chain-mediated effect between trait anxiety and academic achievement. The results emphasize that trait anxiety can not only directly affect academic performance, but also exert influence through the indirect effect of meaning in life and self-control, which is helpful to formulate a scientific plan for improving academic performance of middle school students with trait anxiety.

摘要 目的:了解中学生儿童期逆境的潜在类别,并探讨各类别在性别、父亲受教育程度、母亲受教育程度等人口学变量上的分布差异及与抑郁、焦虑敏感和生活满意度的关系。方法:选取中部地区某省多个县市的初中、普高、中职、职高共计12所学校,每个学校每个年级随机抽取一个班发放线上问卷,共收集4909份问卷,其中有效问卷共4807份,回收有效率为97.92%。被试年龄在12~18岁,平均为14.80±1.47岁。采用修订的儿童期逆境问卷(ACE-IQ)、儿童抑郁障碍自评量表(DSRSC)、儿童中文版焦虑敏感性指数量表(CASI-C)和生活满意度问卷(SWLS)进行调查。对儿童期逆境进行潜在类别分析,对不同类别在性别、父亲受教育程度等人口学变量上的分布差异进行检验,比较不同儿童期逆境中学生在情绪指标上得分的差异。结果:①中学生的儿童期逆境可分为多重逆境组(6.15%),家庭内暴力组(7.61%),低逆境组(51.88%),家庭外暴力组(6.30%)和家庭缺失组(28.06%)5个潜在类别。②不同儿童期逆境类型在性别、父亲受教育程度、母亲受教育程度和长期居住地上的分布比例存在显著差异($P<0.001$)。家庭内暴力组 and 多重逆境组中男生的分布比例均高于女生(9.0% vs. 6.3%, $P<0.001$; 6.9% vs. 5.4%, $P<0.001$)。低逆境组中女生的分布比例高于男生(53.0% vs. 50.8%, $P<0.001$)。低逆境组中父亲受教育程度更高的中学生的分布比例高于父亲受教育程度更低的中学生(62.8% vs. 58.8%, $P<0.001$; 58.8% vs. 48.3%, $P<0.001$)。低逆境组中母亲受教育程度更高的中学生的分布比例高于母亲受教育程度更低的中学生(59.2% vs. 58.2%, $P<0.001$; 58.2% vs. 50.2%, $P<0.001$)。低逆境组中长期居住地在城市的中学生所占比例高于长期居住地在乡镇的中学生(58% vs. 52.1%, $P<0.001$),长期居住地在乡镇的中学生的分布比例高于长期居住地在农村的中学生(52.1% vs. 44%, $P<0.001$)。③不同儿童期逆境类型中学生在抑郁、焦虑敏感和生活满意度得分上差异均有统计学意义(均 $P<0.001$),与其他4组相比,多重逆境组中学生的抑郁和焦虑敏感指数得分均较高,生活满意度得分均较低。结论:中学生的儿童期逆境具有明显分类特征;不同类别的中学生在部分社会人口学变量的分布上存在差异,且与抑郁、焦虑敏感和生活满意度关系密切,应当根据不同类别制定针对性干预措施。

关键词 儿童期逆境, 中学生, 潜在类别分析, 情绪问题

Prevalence of adverse childhood experiences in Chinese middle school students: Based on latent class analysis

SONG Weiling, ZHOU Chunyan

Research Center for Psychological and Health Sciences, China University of Geosciences, Wuhan, 430074, China

Abstract: Objective: To investigate the potential types of in middle school students, and distribution difference of different types on variables such as gender, father's level of education, mother's level of education and the relationship with depression, anxiety sensitivity and life satisfaction. Methods: A total of 12 schools including junior middle schools, general high schools, secondary vocational schools and vocational high schools were selected from a province in central China. A class was randomly selected from each grade of each school to issue online questionnaires. A total of 4909 questionnaires were collected, of which a total of 4807 were effective, with a recovery efficiency of 97.92%. A total of 4861 middle school students from 12 schools in a province of Central China were recruited and assessed with the revised Adverse Childhood Experiences – International Questionnaire (ACE-IQ), Depression Self-Rating Scale for Children (DSRSC), Childhood Anxiety Sensitivity Index in Children (CASI-C) and Satisfaction with Life Scale (SWLS). Latent class analysis was used to identify adverse childhood experiences class, and then analyzed the distribution of latent class among gender, father's level of education, mother's level of education and long-term residence, and the scores of sentiment indicators were compared between groups. Results: ① The results revealed that the adverse childhood experiences of middle school students could be divided into five types: multiple adversity group (6.15%), domestic violence group (7.61%), low adversity group (51.88%), outside

family violence group (6.30%) and family absence group (28.06%). ② There were significant differences in distribution of different types on gender, father's level of education, mother's level of education and long-term residence ($P<0.001$). The proportion of boys in the domestic violence group and the multiple adversity group was higher than that of girls (9.0% vs. 6.3%, $P<0.001$; 6.9% vs. 5.4%, $P<0.001$). The distribution of girls in the low adversity group was higher than that of boys (53.0% vs. 50.8%, $P<0.001$). The distribution of middle school students whose father's level of education was higher in the low adversity group was higher than that of middle school students whose father's level of education was lower (62.8% vs. 58.8%, $P<0.001$; 58.8% vs. 48.3%, $P<0.001$). The distribution of middle school students whose mother's level of education was higher in the low adversity group was higher than that of middle school students whose father's level of education was lower (59.2% vs. 58.2%, $P<0.001$; 58.2% vs. 50.2%, $P<0.001$). In the low adversity group, the proportion of middle school students whose long-term residence was in cities was higher than that in towns (58% vs. 52.1%, $P<0.001$), and the proportion of middle school students whose long-term residence was in towns was higher than that in rural areas (52.1% vs. 44%, $P<0.001$). ③ The five types exhibited significant differences in the scores of depression, anxiety sensitivity and life satisfaction ($P<0.001$). Compared with the other four groups, the scores of depression and anxiety sensitivity of middle school students with multiple adversity were higher, and the scores of life satisfaction were lower. Conclusion: The adverse childhood experiences of middle school students has obvious classification characteristics. There are differences in the distribution of some social demographic variables among different categories of middle school students, and they are closely related to depression, anxiety sensitivity and life satisfaction. Therefore, targeted intervention measures should be formulated.

Keywords: the adverse childhood experiences, middle school students, potential category analysis, emotional problems

初一年级学生数学焦虑与父母内隐智力观的关系

苏伟 郝嘉佳（通讯作者）

天津师范大学心理学部，天津，300387, haojiajia@tjnu.edu.cn

摘 要 学业发展与个体发展息息相关，父母及个体的内隐智力观皆是个体学业发展的影响因素。数学是一门重要学科，其为个体学业发展的一个重要方面，数学焦虑能够影响个体的数学成绩。以往研究关注了内隐智力观与学业成就的关系，父母内隐智力观与个体数学焦虑的关系还需进一步探讨。因此本研究采用问卷法探讨初一年级学生数学焦虑与其父母内隐智力观的关系，并考察学生内隐智力观的中介作用以及性别的调节作用。研究以 179 名初一年级学生（男 85 人，女 94 人）为被试，使用《儿童数学焦虑量表》中文版（MASC）与自译的《个体智力观念量表》（PCI）分别考察学生数学焦虑、学生及父母（父亲或母亲）的内隐智力观。结果显示：（1）初一年级男生与女生的学生数学焦虑、学生内隐智力观、父母内隐智力观差异不显著；（2）在初一女生中，父母内隐智力观显著正向预测学生内隐智力观，学生内隐智力观显著负向预测学生数学焦虑；（3）在初一男生中，父母内隐智力观显著正向预测学生内隐智力观、显著负向预测学生数学焦虑，学生内隐智力观显著负向预测学生数学焦虑，其中学生内隐智力观起部分中介作用。以上结果表明：（1）初一年级学生内隐智力观能够对学生数学焦虑产生影响；（2）在初一年级男生中，父母内隐智力观能够通过学生内隐智力观对学生数学焦虑产生影响。

关键词 数学焦虑，内隐智力观，青少年

The Relationship between Math Anxiety of the First Grade of Junior High School Students and Their Parents' Implicit Theories of Intelligence

Su Wei, Hao Jiajia (Corresponding Author)

Faculty of Psychology, Tianjin Normal University, Tianjin, 300387, haojiajia@tjnu.edu.cn

Abstract: Academic development is closely related to individual development. Parents and the individual's implicit theories of intelligence are all influencing factors for individual's academic development. Math is an important subject. It is an important aspect of individual academic development. Math anxiety can affect individual mathematics performance. Previous studies have focused on the relationship between implicit theories of intelligence and academic achievement. The relationship between parents' implicit theories of intelligence and individual mathematical anxiety needs to be further explored. Therefore, this study uses a questionnaire method to explore the relationship between the first grade of junior high school students' math anxiety and their parents' implicit theories of intelligence. This study also examines the mediating role of students' implicit theories of intelligence and the moderating role of gender. The study took 179 first-year students (85 males and 94 females) as the participants. The Chinese version of the Mathematics Anxiety Scale for Children (MASC) and the self-translated Personal Conceptions of Intelligence Scale (PCI) were used to investigate separately. Students' math anxiety, students and parents (father or mother)'s implicit theories of intelligence. The results showed that: (1) There was no significant difference in math anxiety, students' implicit theories of intelligence, and parents' implicit theories of intelligence between boys and girls in the first grade of junior high school; (2) Among the girls in the first grade of junior high school, the parents' implicit theories of intelligence was significantly positively predicted students' implicit theories of intelligence, students' implicit theories of intelligence significantly negatively predicts students' math anxiety; (3) Among the boys in the first grade of junior high school, parents' implicit theories of intelligence significantly positively predicts students' implicit theories of intelligence, and significantly negatively predicts students' math anxiety, the students' implicit theories of intelligence view significantly negatively predicts students' math anxiety, and the students' implicit theories of intelligence view plays a part of the mediating role. The above results show that: (1) the implicit theories of intelligence view of the first grade of junior high school students can affect the students' math anxiety; (2) among the boys in the first grade of junior high school, the parents' implicit theories of intelligence can affect the students' math anxiety through the students' implicit theories of intelligence.

Keywords: math anxiety, implicit theories of intelligence, adolescents

被欺凌者的应对方式及影响因素

苏晓¹ 施长君¹ (通讯作者)

¹ 哈尔滨师范大学教育科学学院, 哈尔滨, 150025, 通讯作者 E-mail: hsd.scj@126.com

摘 要 近年来, 校园欺凌现象越来越普遍, 这已经成为全社会亟待解决的问题。根据 2016 年教育部政策法规司对全国 29 个县 104825 名中小学生的抽样调查发现, 校园欺凌发生率为 33.36%。2017 年, 联合国教科文组织《校园暴力和欺凌》中的数据显示, 32.5% 的学生遭到过校园欺凌。其中, 30% 的人选择沉默, 全球每年都有 2.46 亿学生因欺凌而痛苦。已有研究表明遭受欺凌对青少年的生理、认知、情绪、行为等有消极作用, 多种压力已经对青少年心理健康水平产生了较大影响, 如若再遭受校园欺凌, 那对他们而言犹如雪上加霜, 不利于其健康成长。应对方式又称为应对机制, 作为应激事件与身心反应的中间环节, 对个体心理健康有不容忽视的重要影响。当校园欺凌发生时, 应对方式起着至关重要的作用。因此, 本研究从被欺凌者的应对机制及表现、影响被欺凌者应对方式的 因素研究入手, 探讨被欺凌者的合理应对方式, 以为欺凌受害者提供自我应对水平。被欺凌者面对欺凌的应对方式有: 积极的应对方式 (问题解决、求助)、消极的应对方式 (逃避、发泄、幻想、忍耐、自责)、中性的应对方式 (合理化)。影响被欺凌者应对欺凌的因素除年龄、性别等人口学变量外, 主要包括: 乐观、自尊、心理复原力、归因方式、生活满意度、社会支持等。本文从提升自信, 树立正确的自我认知; 引导宣泄, 学会积极的情绪调节; 及时求助, 与他人建立信任关系; 加强防范, 培养应对能力与沟通技巧四个方面提出建议, 使被欺凌者学会合理的应对策略, 为进一步防治校园欺凌提供新视角。

Coping Styles and Influencing Factors of Victims in Bullying

Su Xiao, Shi Changjun

College of Education Science, Harbin Normal University, Harbin, 150025, China

Abstract: In recent years, campus bullying is becoming more and more common, which has become an urgent problem for the whole society. According to a sample survey of 104825 primary and secondary school students in 29 counties of China in 2016, the department of policies and regulations of the Ministry of Education found that the incidence of bullying on campus was 33.36%. In 2017, data from UNESCO's *School Violence and Bullying* showed that, 32.5% of students have been bullied on campus. Among them, 30% choose to be silent, and 246 million students around the world feel pain because of bullying every year. Studies have shown that being bullied has negative effects on adolescents' physiology, cognition, emotion and behavior. A variety of pressures have had a great impact on the mental health level of teenagers. If they are bullied on campus, it will be worse for them, which is not conducive to their healthy growth. Coping style, also known as coping mechanism, as an intermediate link between stress events and physical and mental reactions, has an important impact on individual mental health. When campus bullying occurs, coping style plays a crucial role. Therefore, this study starts from the coping mechanism and performance of the bullied and the factors influencing the coping style of the bullied to explore the reasonable coping style of the bullied in order to provide the level of self-coping for the victims of bullying. The coping styles of bullied people are as follows: positive coping style (problem solving, help seeking), negative coping style (retreat, vent, fantasy, endure, self blame), neutral coping style (rationalization). In addition to demographic variables such as age and gender, the factors that influence the victim's coping with bullying include optimism, self-esteem, resilience, attribution style, life satisfaction and social support. This paper puts forward suggestions from four aspects: improving self-confidence, establishing correct self-recognition; guiding catharsis and learning positive emotion regulation; timely seeking help and establishing trust relationship with others; strengthening prevention, cultivating coping ability and communication skills, so as to make the victims learn reasonable coping strategies and provide a new perspective for further prevention and control of campus bullying.

初中生积极心理资本、应对方式与校园欺凌的关系研究

苏晓¹ 施长君¹ (通讯作者)

¹ 哈尔滨师范大学教育科学学院, 哈尔滨, 150025, 通讯作者 E-mail: hsd.scj@126.com

摘要 2020年两会,李亚兰、李贤义等多位代表提出议案,呼吁社会关注校园欺凌。中国青年报社社会调查中心于2018年1月对2022名受访者进行的一项调查显示,59.4%的受访者都经历或目睹过中小学生欺凌事件。由此可见,对校园欺凌现象的防治是全社会的一个重要课题。应对方式作为应激事件与身心反应的中间环节,对个体心理健康有不容忽视的重要影响。当校园欺凌发生时,学生的应对方式起着至关重要的作用。此外,积极心理学与组织行为学的研究,促进了积极心理资本理论的诞生,而积极心理学理论体系的具体、科学和现实性等都对欺凌行为的预防和矫治研究起重要作用。因此,本研究旨在明确当前初中生积极心理资本、应对方式与校园欺凌的现状,分析三者间的潜在关系,并探讨积极心理资本和应对方式对校园欺凌的作用,为校园欺凌的防治及提出切实可行的教育建议提供理论指导。通过问卷调查法,采用Olweus儿童欺负问卷(初中版)、青少年学生心理资本问卷、中学生应对方式问卷,以四所中学的500名初中生作为研究对象进行调查。研究结果表明:(1)初中生积极心理资本、应对方式与校园欺凌在人口统计学变量上存在差异;(2)初中生积极心理资本、应对方式、校园欺凌三个变量,两两之间存在相关关系。初中生校园欺凌水平与其积极应对方式呈负相关,与其消极应对方式呈正相关;初中生校园欺凌水平与其积极心理资本水平(及各个因子间)呈负相关;初中生积极应对方式与其积极心理资本水平(及各个因子间)呈正相关,而消极应对方式与其积极心理资本水平(及各个因子间)呈负相关;(3)初中生的应对方式在积极心理资本和校园欺凌之间起中介作用,即:积极心理资本既可以直接影响校园欺凌,也可通过应对方式间接影响校园欺凌。

凌。建议从帮助学生提高积极心理资本和运用正确应对方式的角度,开展心理健康教育课程与活动,进一步预防校园欺凌的发生,确保学生健康快乐的成长。

A Study on the Relationship Between Positive Psychological Capital, Coping Style and School Bullying of Junior High School Student

Su Xiao, Shi Changjun

College of Education Science, Harbin Normal University, Harbin, 150025, China

Abstract: In 2020, Li Yalan, Li Xianyi and other representatives put forward a motion calling on the society to pay attention to school bullying in Two sessions. A survey of 2022 respondents conducted by the social survey center of China Youth Daily in January 2018 showed that 59.4% of the respondents had experienced or witnessed bullying incidents among primary and secondary school students. Therefore, the prevention and control of campus bullying is an important issue for the whole society. As an intermediate link between stress events and physical and mental reactions, coping style has an important impact on individual mental health. When campus bullying occurs, students' coping style plays an important role. In addition, the research of positive psychology and organizational behavior has promoted the birth of the theory of positive psychological capital. The concrete, scientific and realistic theoretical system of positive psychology plays an important role in the prevention and treatment of bullying behavior. Thus, this study aims to clarify the current situation of junior high school students' positive psychological capital, coping style and campus bullying, analyze the potential relationship among the three, and explore the role of positive psychological capital and coping style on campus bullying, so as to provide theoretical guidance for the prevention and treatment of school bullying and put forward practical educational suggestions. Through the questionnaire survey method, using the Olweus Bully/Victim Questionnaire (junior high school version), Psychological Capital Questionnaire for Adolescent Students (PCQAS), Coping Style Scale of Middle School Students (CSSMSS), 500 junior high school students from four middle schools were investigated. The results show that: (1) Positive psychological capital, coping style and campus bullying among middle school students are differences in demographic variables; (2) Positive psychological capital, coping style and campus bullying of junior high school students are correlated. The results show that the level of campus bullying is negatively correlated with positive coping styles, and positively correlated with negative coping styles; the level of campus bullying is negatively correlated with the level of positive psychological capital (and various factors); the positive coping style of junior high school students is positively correlated with the level of positive psychological capital (and various factors), while the level of negative coping style is negatively correlated with the level of positive psychological capital (and various factors); (3) The coping style of junior high school students plays a mediating role between positive psychological capital and campus bullying, that is, positive psychological capital can not only directly affect campus bullying, but also indirectly affect campus bullying through coping styles. It is suggested to carry out mental health education courses and activities from the perspective of helping students improve their positive psychological capital and using correct coping styles, so as to further prevent the occurrence of campus bullying and ensure the healthy and happy growth of students.

Keywords: Junior high school students, Positive psychological capital, Coping style, School bullying

校园受欺凌与中学生外化问题行为的关系：冷酷无情特质的中介作用和亲子亲合的调节作用

孙瑞悦¹ 刘致宏¹ 张珊珊¹（通讯作者） 于欣怡¹

¹ 沈阳师范大学教育科学学院, 沈阳, 110034, zhangxiaobai2@163.com

摘 要 青少年期是个体由儿童阶段向成人阶段过渡的关键时期,相较于儿童期,它是个体吸烟、饮酒、逃学等外化问题行为急剧增加的时期。相关调查显示,国内青少年外化问题行为的检出率已达 6.9%,而且还呈现出逐渐上升的趋势。为了切实保护青少年的身心健康发展,本研究基于校园欺凌背景下,探讨中学生外化问题行为的产生机制,以期为中学生心理健康促进工作提供理论依据。本研究采用校园欺凌行为量表、青少年问题行为自评量表、亲子亲合量表和冷酷无情特质量表,对辽宁省 362 名学生进行问卷调查。采用 SPSS 25.0 对数据进行分处理和分析,探讨校园受欺凌与中学生外化问题的关系以及冷酷无情特质和亲子亲合的作用。在控制性别和年级后,研究结果表明:(1)校园受欺凌对中学生的外化问题行为具有正向预测作用,即受校园欺凌越多的学生越容易出现外化问题行为。(2)冷酷无情特质在校园受欺凌与外化问题行为之间起中介作用,即校园受欺凌通过影响中学生的冷酷无情特质进而影响其外化问题行为(3)母子亲合调节该中介模型的直接路径。具体而言,中学生的母子亲合水平越低,校园受欺凌对中学生外化问题行为的正向预测作用越强。本研究验证了校园受欺凌对中学生外化问题行为的负面影响,并基于交互作用模型揭示了外化问题行为产生的心理机制。研究结果提示教师和家长针对遭受校园欺凌的学生及时进行心理疏导,防止其形成消极人格,进而削弱校园受欺凌对外化问题行为的影响。

关键词 校园受欺凌,外化问题行为,冷酷无情特质,亲子亲合

The relationship between campus bullying and externalizing problem behaviors of middle school students: the mediating role of callous-unemotional trait and the moderating role of parent-child affinity

Sun Ruiyue¹, Liu Zhihong¹, Zhang Shanshan¹, Yu Xinyi¹

1 School of Education Shenyang Normal University No. 253, Yellow River North Street, Huanggu District, Shenyang City, Liaoning Province

Abstract: Adolescence is a key period for individuals to transition from childhood to adulthood. Compared with childhood, it is a period when individuals' externalized problem behaviors such as smoking, drinking and truancy increase sharply. According to the survey, the detection rate of externalizing problem behavior among Chinese teenagers has reached 6.9%, and is on the rise. In order to effectively protect the physical and mental health development of adolescents, this study explored the mechanism of externalizing problem behavior of middle school students in the context of school bullying, in order to provide theoretical basis for the mental health promotion of middle school students. In this study, 362 students in Liaoning province were surveyed by the school bullying Behavior Scale, self-rating Adolescent problem Behavior Scale, Parent-child Affinity Scale and callousness Trait Scale. SPSS 25.0 was used for data processing and analysis to explore the relationship between bullying in school and externalization problems of middle school students, and the role of callousness and parent-child affinity. After controlling for gender and grade, the results showed that : (1) being bullied in school positively predicted the externalizing problem behaviors of middle school students, that is, the more students were bullied in school, the more likely they were to externalize problem behaviors. (2) The trait of callousness mediates the relationship between bullying in school and externalizing problem behaviors, that is, bullying in school influences the externalizing problem behaviors of middle school students through the trait of callousness. (3) The direct path of mother-child bonding moderates the mediation model. Specifically, the lower the mother-child bonding level of middle school students, the stronger the positive prediction effect of bullying on middle school students' externalizing problem behavior. This study verifies the negative impact of bullying on externalizing problem behaviors of middle school students, and reveals the psychological mechanism of externalizing problem behaviors based on the interaction model. The results suggest that teachers and parents should provide psychological counseling to the bullied students in time to prevent them from forming negative personality and thus weaken the influence of bullying on externalizing problem behaviors.

Keywords: campus bullying, externalized problem behavior, callous-unemotional trait, parent-child affinity

运动兴趣对留守学生心理健康的重要性及提升策略

覃绍兵¹ 张肖¹ (通讯作者)

¹ 湖北师范大学体育学院, 湖北黄石, 435000, 522771777@qq.com

摘要 目前留守学生心理健康问题逐年加重, 而体育锻炼对心理问题的治疗和心理健康的促进作用与效果已得到大量的证实, 如今更是成为国内外对心理问题治理的常用手段。运动兴趣的提升对留守学生心理健康水平的促进有着直接的影响, 运动兴趣可以让留守学生对体育锻炼富有积极性, 促进他们形成运动习惯, 增加运动量, 从而提升他们的心理健康水平。对留守学生运动兴趣的提升可以从教师、校园环境、家庭和社会等多方面着手。教师与学校及家庭必须在思想上重视学生对运动兴趣的培养, 给予学生更多体育锻炼的课外时间。教师要提升自身素质和创新意识, 创新教学形式, 对体育课程内容加以游戏性和竞赛性。对运动的表现, 老师要给学生多加肯定与表扬及鼓励。校园要对体育氛围做出渲染, 大力对体育运动进行宣传, 广泛开展思想教育, 让学生了解到运动的重要性。多举办竞技和趣味性运动, 让体育运动变得游戏化和趣味化, 使学生从中获取愉快的体验。在体育课程中, 让学生拥有获得感和成就感, 从而让学生产生运动兴趣。在体育设施上, 学校要对运动场地和体育器材进行充足的保障, 改善与完善体育运动的条件。体育锻炼对促进留守学生心理健康具有十分重要的意义, 对留守学生应采用不同的方法, 从多个视角出发, 多措并举地使学生的运动兴趣浓厚起来, 从而提高他们的体育锻炼量, 促进留守学生的心理健康发展。

大学生对人工智能机器人的态度:基于心智感知理论

谭凤娥¹ 吴艳¹ 朱旭¹ (通讯作者) 胡祥恩²

¹ 华中师范大学心理学院, 武汉, 430079, E-mail: xzhu@ccnu.edu.cn

² 孟菲斯大学心理学院, 孟菲斯, 38152

摘要 随着科学技术的腾飞, 人工智能机器人 (以下简称机器人) 作为人工智能的主要载体在人们日常生活中的应用领域越来越广泛。未来几年, 人与机器人的互动将会像现在的人与人互动一样, 成为我们日常生活的一部分。那么人们对机器人的态度到底如何? 什么因素影响人们态度的动态变化呢? 心智感知是指人们对其他实体心理能力的感知, 包括两个维度, 即感受性和能动性。心智感知理论整合了经典的恐怖谷理论、媒体等同理论和拟人化理论, 对机器人感受性、能动性的感知会对消极态度产生不同影响。本研究基于心智感知理论, 旨在探讨大学生对机器人心智感知的基本情况, 及其对对机器人态度的影响并进一步探讨了解程度和专业类别的调节作用。本研究采用心智感知问卷(Mind perception Scale)、对机器人消极态度量表(Negative Attitudes towards Robots Scale)、人工智能的了解程度访谈和心智感知二维坐标模型, 对 339 名大学生进行问卷调查及访谈。使用 SPSS 进行数据处理与分析, 通过简单斜率分析进一步对调节效应进行检验。在控制了性别、年龄等因素后, 结果发现: (1) 对人工智能有中等程度了解的人最多, 有 283 人, 占 83.5%; (2) 对机器人的心智感知负向预测消极态度; (3) 对人工智能的了解程度和专业类别在对机器人感知与消极态度的关系中起调节作用, 高了解程度缓解了两者的关系; 与理工科相比, 文史类对机器人的心智感知对消极态度的预测作用更大; (4) 大学生对期待的及未来的机器人感知水平存在矛盾认知, 被试期望的机器人在能动性($M_{X1}=9.82$)、及被试认为未来的机器人在能动性($M_{X2}=9.50$)上可以与人类能动性($M_{X3}=10$)媲美, 但被试期望的机器人在感受性($M_{Y1}=7.19$)、及被试认为未来的机器人在感受性($M_{Y2}=7.64$)要比人类感受性($M_{Y3}=10$)低一些, 且低于相应机器人的能动性。研究结果表明对机器人的心智感知水平和对人工智能的了解程度都会影响对机器人的态度, 人们对未来人工智能机器人不同方面的发展存在矛盾的态度, 未来研究应该更加关注个体因素对对机器人态度的影响以及人与人工智能机器人的关系。

College Students' attitude towards artificial intelligence robots: Based on the theory of mind perception

Fenge Tan¹, Yan Wu¹, Xu Zhu¹, Xiangen Hu²

1 School of Psychology, Central China Normal University, Wuhan China, 430079

2 Department of psychology, Institute for Intelligent System, Electrical & Computer Engineering, and Computer Sciences, The University of Memphis, Memphis, TN 38152

Abstract: With the science and technology to take off, as the main carrier of artificial intelligence, artificial intelligence robot (later referred to as robot) is more and more widely in the field of the application of the people's daily life. In the next few years, the interaction between human and robots will become a part of our daily life just like the current human interaction. Then what's people's attitude towards robots? What factors influence the dynamic change in attitudes? Mental perception refers to the perception of the psychological ability to other entities, there are two dimensions, they are experience and agency. Mind perception theory of integration of the classic theory of the uncanny valley, media equivalent theory and the theory of anthropomorphic, Perception of the experience and the agency of robots will have different influence on negative attitude. Based on the theory of mind perception, this study aimed to explore the basic situation of College Students' mind perception of robots and its impact on their attitude towards robots, and further explored the moderator effect of understanding degree and professional category. In this study, 339 college students were investigated and interviewed by using the Mind perception Scale, Negative Attitudes towards Robots Scale, interviewed on the understanding of artificial intelligence and two-dimensional coordinate model of mind perception. Using SPSS for data processing and analysis, through a simple slope analysis further regulating effect on inspection. After controlling for factors such as gender, age, and the results showed that: (1) Most people had a moderate understanding of AI, 283, accounting for 83.5%; (2) The mind perception level of robots negatively predicted the negative attitude towards robots. (3) The results showed that the degree of understanding of AI and professional category played a moderating role in the relationship between robots' mind perception and negative attitude, and high degree of understanding alleviated the relationship between them. Compared with science and engineering, the mind perception of arts and history on robots had a greater predictive effect on negative attitude; (4) College students had contradictory cognition to the mind perception level of robots that they expected and robots in the future. The participants expected that the robots' agency ($M_{X1} = 9.82$) and future robots' agency ($M_{X2} = 9.50$) could be comparable to human's agency ($M_{X3} = 10$), but the participants expected that the robots' experience ($M_{Y1} = 7.19$) and future robots' experience ($M_{Y2} = 7.64$) were lower than human's experience ($M_{Y3} = 10$), and lower than the corresponding robots' agency. The results showed that the level of mind perception of robots and the level of understanding of AI will affected the attitude towards AI robots, people had contradictory attitudes towards the future development of artificial intelligence robots in different aspects, future research should pay more attention to the influence of individual factors on robot attitude and the relationship between human and artificial intelligence robots.

Keywords: artificial intelligence (AI), robot, understanding level, attitudes towards robots, mind perception

亲子间教育期望差异对临考学生积极情感的影响： 亲子沟通与学业自我效能感的中介作用

汤彩云 吴文峰 卢永彪（通讯作者）

贵州师范大学心理学院，贵阳，550025，lybhsd@sohu.com

摘要 目的：探究亲子间教育期望差异对临考学生积极情感的影响，以及亲子沟通和学业自我效能感在其中的作用。**方法：**选取积极情感量表、亲子沟通量表和学业自我效能感量表，对 545 名初三、高三学生进行问卷调查。**结果：**（1）初三、高三学生感知到的父母教育期望与自我教育期望存在差异，感知父母教育期望略高于自我教育期望（ $t = 2.79, df = 544, p < 0.01$ ）；（2）在控制了性别、年级、独生状况、父母最高受教育水平之后，亲子间教育期望差异不能直接预测积极情感，但可以通过亲子沟通、学业自我效能感间接预测积极

情感；（3）亲子间教育期望差异的方向不同，其影响积极情感的路径也不同。具体而言，当感知父母教育期望低于自我教育期望时，可通过学业自我效能感的独立中介作用正向预测学生的积极情感，效应量为 44.28%；当感知父母期望高于自我教育期望时，可通过亲子沟通的独立中介作用、学业自我效能感的独立中介作用以及亲子沟通和学业自我效能感的链式中介作用负向预测学生的积极情感，效应量分别为 34.72%、61.80%及 10.42%。**结论：**亲子间教育期望差异可通过亲子沟通、学业自我效能感的中介作用影响学生的积极情感，且差异的方向对于亲子间教育期望差异是增加还是减少学生的积极情感具有关键性作用，这对临考学生亲子互动及考前心理调适具有一定的指导意义。

关键词 亲子间教育期望差异，积极情感，亲子沟通，学业自我效能感

The Relationship between Parent-child Discrepancies in Educational Expectations and Middle School Students' Positive Affection: Mediating Roles of Parent-child Communication and Academic Self-efficacy

TANG Cai-Yun, WU Wen-Feng, LU Yong-Biao

Department of Psychology, Guizhou Normal University, Guiyang, 550025, lybhsd@sohu.com

Abstract: Objective: In order to explore the relationship between parent-child discrepancies in educational expectations and candidates' positive affection and the mediating role of parent-child communication and academic self-efficacy in it. **Methods:** The Positive Affection Scale, Parent-Child Communication Scale and Academic Self-Efficacy Scale were selected to conduct a questionnaire survey on 545 Junior 3 and 3 Senior students. **Results:** (1) There is a difference between the parents' educational expectations and self-education expectations perceived by junior 3 and senior 3 students, and the perceived parents' educational expectations are slightly higher than the self-education expectations. (2) After controlling students' gender, grade, only child status and parents' highest level of education, parent-child discrepancies in educational expectations cannot directly predict positive affection, but can indirectly predict positive affection through parent-child communication and academic self-efficacy. (3) The direction of the difference in educational expectations between parents and children is different, and the path that affects positive affection is also different. Specifically, when perceived parental expectations are lower than students' own expectations, it may positively predict students' positive affection through the independent mediating role of academic self-efficacy; In contrast, when perceived parental expectations are higher than students' own expectations, it may negatively predict students' positive affection through the independent mediating role of parent-child communication, the independent mediation role of academic self-efficacy, as well as the chain mediating role of parent-child communication and academic self-efficacy. **Conclusion:** Parent-child discrepancies in educational expectations can affect the candidates' positive affection through the mediating effect of parent-child communication and academic self-efficacy, and the direction of the difference plays a key role in whether the difference in educational expectations between parents and children increases or decreases their positive affection. This result has some guiding significance for parent-child interaction and psychological adjustment of students in Junior 3 and Senior 3 in China.

Keywords: Parent-child discrepancies in educational expectations, Positive affection, Parent-child communication, Academic self-efficacy

疫情防控下青少年体育锻炼与运动友谊质量的关系研究

田维维

淮北师范大学体育学院 淮北市 邮编：235000 邮箱：1453811248@qq.com

摘要 研究目的：疫情防控工作经过全国各族人民、各行各业共同努力下，得到了有效的控制。在不放松疫情防控工作的前提下，探讨疫情防控下青少年参加体育锻炼对运动友谊质量的发展的影响。习近平总书记

多次强调体育锻炼对提高青少年身心健康的重要意义,号召广大青少年积极参与体育锻炼来增强体质、锻炼意志、规范文明行为,提升个人修养。运动友谊质量作为学生身心发展的重要方面,增强其友谊质量水平,也是培养学生与人交往能力得关键。体育不仅能够育体,还能育心,通过体育锻炼可以促进青少年身心发展推动友谊质量不断提高。

研究方法: 问卷调查法、文献资料法、访谈法。

研究结果: (1) 疫情下的体育锻炼更有利于产生较高的友谊质量。锻炼者的锻炼积极性得到提高,对体育锻炼的认知得到了极大的改观,锻炼强身健体目的性有所加强。(2) 参加体育锻炼会使锻炼者产生更多社会性交流,使锻炼者的交往能力不断提高,从而体育锻炼能带来良性交往和互动能更好促进运动友谊质量的提高。(3) 疫情下的心理状态容易情绪化、产生焦虑感等不良情绪,通过体育锻炼的带来良好氛围文化和快乐体验开始慢慢冲淡不良情绪,运动友谊质量也不断加强和改善。(4) 参加体育锻炼能加强青少年的体育道德、体育精神和体育品格,可以多元化端正青少年的三观,促进心理健康发展。

研究建议: 鼓励青少年积极参与体育锻炼,帮助青少年在体育锻炼过程中提高友谊质量水平,不仅可以增强青少年的体质健康,更可以提高青少年的身心健康,缓解学业压力。既增加了青少年之间的交往,也增进了友谊,同时还拓展了自身的人际交往能力,让青少年学习和生活中的压力和负面情绪得到宣泄,增添了创造和分享身边快乐的事情的机会,进而带动青少年在日常生活中积极帮助他人人与人和睦共处,对改善青少年的友谊质量具有重要意义。

儿童期心理虐待与大学生婚姻期待的关系: 生命史策略的中介作用

田野 刘爱书(通讯作者) 潘锦

哈尔滨师范大学心理系, 哈尔滨, 150025, liuaishu@163.com

摘要 面对“快餐式爱情”、持续上涨的离婚率等现象,分析问题成因,探究解决措施,使大学生树立正确的婚恋观、良好地指导自己的婚恋行为显得尤为重要。许多家庭治疗师实践证明,通过感知个体的婚姻期待可以对未来婚姻质量进行预测或调整,因此,婚姻期待的研究对大学生的婚恋观的引导以及婚姻质量的预测有着重要的实践意义。同时,婚姻期待受多方面因素的影响,其中个体早期经历的影响不容忽视,如父母冲突、父母离异等。此外,童年经历影响个体生命史策略的形成,塑造个体在成年后的适应性行为。不同的生命史策略的繁衍生育行为不同,伴侣行为包括伴侣个数、性行为次数等也不同。

本研究旨在探讨儿童期心理虐待与大学生婚姻期待的关系以及生命史策略的中介作用。采用儿童心理虐待量表、Mini-K 量表、大学生婚姻期待问卷对 486 名大学生进行测试,用 SPSS26.0, Amos21.0 进行分析,结果发现:(1) 大学生的儿童期心理虐待分别与生命史策略和关系期待存在显著负相关。大学生的生命史策略与婚姻期待存在显著正相关,与伴侣期待和关系期待均存在显著正相关。(2) 儿童期心理虐待对关系期待的直接效应显著。(3) 儿童期虐待通过生命史策略对婚姻期待间接效应显著。最后得出结论:儿童期心理虐待与生命史策略对关系期待有着显著的预测能力,生命史策略在其中起中介作用。

关键词 儿童期心理虐待, 进化心理学, 生命史策略, 婚姻期待, 关系期待

Childhood psychological abuse and marriage expectation of college students: the mediating role of life history strategy

TIAN Ye, LIU Aishu, PAN Jin

Harbin Normal University

Abstract: In the face of the phenomenon of "fast food love" and the continuously rising divorce rate, it is particularly important to analyze the causes of the problems and explore the solutions so as to make the college students establish a correct view of love and marriage and guide their own love and marriage behavior. The practice of many family therapists has proved that the future marriage quality can be predicted or adjusted by perceiving the individual's marriage expectation. Therefore, the study of marriage expectation has important practical significance to guide

college students' view of marriage and love and predict marriage quality. At the same time, marriage expectation is influenced by many factors, among which the influence of individual's early experience can not be ignored, such as parental conflict, parental divorce and so on. In addition, childhood experiences influence the formation of life history strategies and shape the adaptive behavior of individuals in adulthood. Different life history strategies have different reproductive behaviors, as well as different partner behaviors, including the number of partners and the number of sexual behaviors.

The purpose of this study was to explore the relationship between childhood psychological abuse and marital expectation of college students and the mediating role of life history strategies. The child psychological abuse scale, mini-k scale and marriage expectation questionnaire were used to test 486 college students, and SPSS26.0 and Amos21.0 were used to analyze the results. The results showed that : (1) there was a significant negative correlation between childhood psychological abuse and life history strategy and relationship expectation, respectively. The life history strategy of college students is significantly positively correlated with marriage expectation, partner expectation and relationship expectation. (2) The direct effect of childhood psychological abuse on relationship expectation is significant. (3) The indirect effect of childhood abuse on marriage expectation through life history strategy is significant. The results showed that childhood psychological abuse and life history strategy had significant predictive power on relationship expectation, and life history strategy played a mediating role.

Key words: childhood psychological abuse, evolutionary psychology, life history strategy, marriage expectation, relationship expectation

多级评分认知诊断题组模型

童望望¹ 周文杰¹ 郭磊² (通讯作者)

¹ 西南大学心理学部, 重庆, 400715

² 西南大学心理学部, 重庆, 400715, happygl1229@swu.edu.cn

摘 要 当前, 在各种心理与教育测验中, 常常使用多个项目隶属于同一个材料的题组形式来考察被试能力, 如阅读理解题、完型填空题以及数学测验中的解答题, 题组附属的项目一般由二级评分项目、多级评分项目, 或二者混合构成。但是现有的认知诊断题组模型都是二级评分模型, 对二级评分题组项目有较好的处理能力, 但是倘若仍然使用二级评分模型拟合多级评分数据, 却会导致信息的丢失, 造成被试能力估计有误。为了满足现实测验考察需求, 提高对多级评分题组估计准确性, 弥补现有模型对多级评分题组数据处理的不足, 本文尝试将多维题组效应引入一般化分部评分认知诊断模型(GPCDM), 开发出多级评分诊断题组模型(PCDTM), 并基于贝叶斯 MCMC 算法实现参数估计。通过模拟研究, 探究 PCDTM 在作答数据中是否包含题组效应、样本容量、题目数量、题目质量四种条件下的表现, 研究结果表明: (1)忽视题组效应, 会降低题目参数估计精度和被试判断率; (2)随着样本容量增加, 题目数量增加, 题目质量提高, 被试参数估计精度提升与题目参数估计精度提高; (3)PCDTM 能有效处理题组效应参数; (4)无论作答数据是否含有题组效应, PCDTM 均能提供较好的参数估计结果。再分别使用两个模型处理 2012 年数学大规模测评数据, 结果表明带题组的实证数据与 PCDTM 的拟合与参数估计结果更好。总体而言, PCDTM 具有普适性。

Polytomous Cognitive Diagnosis Testlet Model

Tong Wangwang, Zhou Wenjie, Guolei

Department of Psychology, Southwest University, Chongqing 400715, China

Abstract: Testlet have been widely used in various educational tests, such as National College Entrance Examination, SAT, TOEFL, PISA to examine participants' ability. The existing cognitive diagnosis models (CDM) that can handle the effect of testlet effect are only suitable for dichotomous responses data only, while there are many polytomous responses data in psychology, pedagogy and sociology, such as short answer questions, reading comprehension, essays, Likert scales, etc. Especially in China, many dichotomous responses data are often mixed with polytomous

responses data. Although researchers have proposed a variety of polytomous CDMs, such as Sequential GDINA model, General Polytomous Diagnosis Model (GPDM); General Partial Credit Diagnostic Model (GPCDM). However, none of the above-mentioned polytomous models can deal with testlet effects, making it impossible to analyze polytomous data contains testlets. It can be seen that the current CDMs that can process testlets are not suitable for polytomous data, and the existing polytomous CDMs cannot handle the testlet effect. The polytomous diagnostic models and the testlet response models are still in the independent research stage.

To solve this issue, the present research proposed the Polytomous Cognitive Diagnosis Testlet Model (PCDTM), was developed based on GPCDM. This new integrated model not only suitable for dichotomous responses data and polytomous responses data, but also can handle within-item multidimensional testlet effects.

One study based on simulated data and one empirical study based on a large-scale assessment data which has 7 testlets, some items were loaded on more than one testlets, indicating within-item multidimensional testlet effects were existed. In simulation study 1, we considered sample size (1000, 2000), item quality (high, low), number of items (20, 40) and whether the response data includes testlet effect would affect the accuracy of item and person parameter estimation. In addition, compare the parameter estimation results of PCDTM and GPCDM. Simulation study uses average attribute correct classification rate (AACCR) and pattern correct classification rate (PCCR) to evaluate the accuracy of the subjects, and uses RMSE and Bias to estimate the parameter estimation results. In empirical study 2 which analyzed real large-scale math test results, PCDTM and GPCDM were modeled and estimated. All analysis was conducted by R, using Markov Chain Monte Carlo estimation (MCMC), which is convenient, easy to operate and widely used in cognitive diagnosis.

Results of simulation 1 indicated that: (1) ignoring testlet effect would result in biased item parameter estimations and worse person classification rates. (2) As the sample size, the number of items, and the quality of items improves, the estimation bias of the PCDTM participant parameters and parameter estimation increases. (3) PCDTM can deal with the testlet effect effectively. (4) Regardless of whether the response data contains testlet effects, PCDTM can provide better parameter estimation results with little difference, indicating that PCDTM has strong universality. And the empirical research results show that PCDTM fits better to the testlet assessment, and can also obtain the testlet effect value of the test.

In conclusion, PCDTM is feasible and flexible. Using PCDTM can not only be suitable for polytomous data, but can also effectively deal with testlet effects, and even if items are all independent, the model can still obtain decent parameter estimation results similar to GPCDM. But when the test does not include testlet effect, it is best to use GPCDM, which can reduce the number of parameter estimation time.

儿童期心理虐待对青少年手机依赖的影响： 表达抑制与孤独感的链式中介

涂威宇¹ 傅丽萍¹（通讯作者）

¹ 贵州师范大学心理学院，贵阳，550025, pinglif2000@163.com

摘 要 儿童期心理虐待是指监护人对儿童采取的一种长期的、具有损害性的不当行为，遭受过儿童期心理虐待的个体更易产生焦虑抑郁等内化情绪问题、也更易产生攻击行为与手机依赖等外化问题。许多研究表明，儿童期心理虐待会导致个体手机依赖倾向增加，但是儿童期心理虐待具体是如何影响青少年手机依赖尚未完全明了。本研究探索了儿童期心理虐待对青少年手机依赖的影响及表达抑制策略与孤独感在二者关系中的作用机制。研究采用儿童期心理虐待量表、手机依赖量表、情绪调节量表、孤独感量表，对 873 名中学生进行调查。结果表明：（1）在控制了无关变量后，儿童期心理虐待与手机依赖呈显著正相关（ $r=0.395$, $p<0.001$ ），与表达抑制、孤独感呈显著正相关（ $r=0.273$, $r=0.354$, $p<0.001$ ），表达抑制、孤独感与手机依赖呈显著正相关（ $r=0.259$, $r=0.262$, $p<0.001$ ），表达抑制与孤独感呈显著正相关（ $r=0.323$, $p<0.001$ ）。（2）儿童期心理虐待能通过表达抑制和孤独感的中介作用对青少年手机依赖产生影响，且该中介作用包含了三条路径：表达抑制的

单独中介作用($\beta=0.12$, BootLLCI=0.0587, BootULCI=0.204), 孤独感的单独中介作用($\beta=0.09$, BootLLCI=0.0343, BootULCI=0.1884) 以及表达抑制-孤独感的链式中介作用($\beta=0.02$, BootLLCI=0.0077, BootULCI=0.0456)。结论: 儿童期心理虐待可以显著正向预测青少年手机依赖; 儿童期心理虐待对青少年手机依赖的影响包含三条路径: 表达抑制的单独中间作用、孤独感的单独中介作用、表达抑制与孤独感的链式中介作用。

关键词 儿童期心理虐待, 手机依赖, 孤独感, 表达抑制

Effect of Childhood psychological abuse on Mobile phone dependence in adolescents: The chain mediation of Expressive suppression and Loneliness

TU Weiyu¹, FU Liping^{1*}

¹ School of Psychology, Guizhou Normal University, Guiyang, Guizhou 550025, China

Abstract: Childhood psychological abuse is a kind of long-term and harmful improper behavior taken by guardians to children. Individuals who have suffered from childhood psychological abuse are more likely to have internalized emotional problems such as anxiety and depression, it is also easier to generate externalization problems such as attack behavior and mobile phone dependence. Many studies have shown that childhood psychological abuse can lead to the increase of individual mobile phone dependence. However, it is still unclear how childhood psychological abuse affects adolescents' mobile phone dependence. This study explored the influence of childhood psychological abuse on adolescents' mobile phone dependence and the mechanism of expression inhibition strategy and loneliness in their relationship. 873 middle school students were investigated with childhood psychological abuse scale, emotion regulation scale, middle school students' mobile phone dependence scale and UCLA loneliness scale. Results: (1) After controlling for unrelated variables, there was a significant positive correlation between childhood psychological abuse and mobile phone dependence($r=0.395$, $p<0.001$), was a significant positive correlation with expression inhibition and loneliness($r=0.273$, $r=0.354$, $p<0.001$), there was a significant positive correlation between expression inhibition, loneliness and mobile phone dependence($r=0.273$, $r=0.354$, $p<0.001$); (2) By the mediating model analyzing, expression suppression and loneliness play a chain mediating role in childhood psychological abuse and mobile phone dependence. Conclusions: Childhood psychological abuse experience can increase adolescents' mobile phone dependence, and it can also increase adolescents' mobile phone dependence through the indirect effects of expression suppression and loneliness.

Keywords: childhood psychological abuse, mobile phone dependence, loneliness, expressive suppression

受欺负对初中生主动性和反应性攻击的影响：道德推脱和性别的作用

汪悦 熊昱可 任萍（通讯作者） 杨柳

北京师范大学中国基础教育质量监测协同创新中心, 北京, 100875, renping@bnu.edu.cn

摘要 青少年的攻击行为是备受研究者关注的社会现象。攻击行为会对青少年的身心健康造成短期或长期的负面影响。已有研究发现, 青春期攻击行为的峰值出现在初中时期。因此, 有必要对攻击行为的产生机制进行探讨, 从而为初中生攻击行为的预防和干预提供实证支持和理论依据。本研究基于广义紧张理论和一般攻击模型, 探讨受欺负和初中生主动性与反应性攻击之间的关系, 道德推脱在这一关系中的中介作用以及性别的调节作用。研究采用追踪研究设计, 选取我国中部地区某城市七所学校的 2533 名八年级学生, 开展了间隔半年的两次测查。结果表明: (1) 在控制了 T1 的攻击行为后, 受欺负可以显著正向预测 T2 的主动性攻击($p<0.001$)和反应性攻击($p<0.001$)。(2) 道德推脱在受欺负和主动性、反应性攻击之间均起到部分中介作用, 道德推脱的中介作用分别占总效应的 50.47%和 43.96%。(3) 主动性攻击的中介模型还受到性别的调节, 在女生中受欺负对道德推脱的预测作用更强, 在男生中道德推脱对主动性攻击的预测作用更强。在反应性攻击的中介模型中, 性别的调节作用不显著。本研究的结果提示, 相关教育工作者要特别关注受欺负青

少年的道德推脱水平,对这些青少年在道德认知方面进行有效的疏导和干预,有利于切断受欺负和攻击行为之间的联系。

Effects of bully victimization on proactive and reactive aggression in early adolescence: The role of moral disengagement and gender

WANG Yue, XIONG Yuke, REN Ping*, YANG Liu

Collaborative Innovation Center of Assessment for Basic Education Quality, Beijing Normal University, Beijing

Abstract: Aggression in adolescence is a widespread problem. It can have a short-term or long-term negative impact on adolescents' physical and mental health. The peak of adolescents' aggressive behavior occurs in junior high school. It is necessary to explore the mechanism of aggressive behavior, so as to provide empirical support and theoretical basis for the prevention and intervention of aggressive behavior in junior high school. Based on general strain theory and general aggression model, the current study aimed to investigate the relationship between bully victimization and proactive/reactive aggression in early adolescence, the mediating effect of moral disengagement and the moderating effect of gender. A sample of 2533 middle students was followed up for six months and examined for two waves. The results showed that: (1) Bully victimization at wave 1 could significantly and positively predict proactive aggression($p < 0.001$) and reactive aggression($p < 0.001$) at wave 2. (2) Moral disengagement mediated the relationship between victimization and proactive/reactive aggression. The mediating effects of moral disengagement account for 50.47% and 43.96% of the total effects, respectively. (3) The mediating effect of moral disengagement in the link between victimization and proactive aggression was moderated by gender. For girls, the relationship between victimization and moral disengagement was stronger. For boys, the relationship between moral disengagement and proactive aggression was stronger. The results of the present study suggest that relevant educators should pay attention to the level of moral disengagement of adolescents. Intervening adolescents' moral cognition will help cut off the link between bully victimization and aggressive behavior.

Keywords: bully victimization, proactive aggression, reactive aggression, moral disengagement, gender

中国大学生智能手机成瘾的风险因素：基于 GEE 模型的纵向研究

王安琪 石绪亮(通讯作者)

河北大学教育学院,保定,071002,通讯作者 shixl163@163.com

摘要 背景:随着现代科学技术的进步,智能手机的使用越来越普遍。大学生智能手机成瘾已经成为当代社会的一大公共健康问题。本研究旨在探讨中国大学生智能手机成瘾的潜在风险因素并提出有针对性的干预措施和建议。方法:本研究于2019年3月至2020年9月在中国广东省某高校进行,共有11704名大学生参与了基线调查,并在6个月和18个月以后进行了第二次和第三次追踪调查。自评问卷用于评估智能手机成瘾、社交焦虑、抑郁症状、孤独感、学业压力、专业兴趣、家庭冲突和人口统计学特征。采用广义估计方程(GEE)模型来确定与智能手机成瘾相关的风险因素。结果:总体而言,65.9%的大学生在基线时报告有智能手机成瘾,58.0%和52.7%的大学生在T2和T3时报告有智能手机成瘾。单因素分析结果显示,智能手机成瘾与性别、独生子女、居住地、抑郁症状、社交焦虑、孤独感和专业兴趣有关。GEE模型的结果显示,居住地(OR=0.909, $p<0.025$)、抑郁症状(OR=1.593, $p<0.001$)、社交焦虑(OR=2.435, $p<0.001$)、孤独感(中:OR=2.555, $p<0.001$ 高:OR=5.232, $p<0.001$)、学业压力(OR=1.192, $p=0.018$)、专业兴趣(OR=1.113, $p=0.008$)和家庭冲突(中:OR=1.333, $p<0.001$ 高:OR=1.596, $p<0.001$)均是中国大学生智能手机成瘾的风险因素。结论:我国大学生智能手机成瘾与多种社会人口学因素和心理因素有关。针对大学生群体提出有效的心理干预有助于降低智能手机成瘾的风险。而智能手机成瘾与其风险因素之间特定的关联的潜在机制有待深入探讨。

Risk factors of smartphone addiction among Chinese college students: A prospective longitudinal study based on GEE model

Anqi Wang, Xuliang Shi

School of Education, Hebei University Hebei, Baoding 071000

Abstract: Background: Smartphone addiction in college students has been a major public health concern in modern society, which may also lead to adverse health outcomes. The current study aimed to examine the potential risk factors of smartphone addiction in Chinese college students. Methods: A longitudinal study was conducted between March 2019 and September 2020 in Guangdong, China. A total of 11,704 college students who participated in the baseline survey and were followed up 6 months or 12 months later were included in the analyses. Self-administered questionnaires were used to assess smartphone addiction, social anxiety disorders, depressive symptoms, loneliness, academic stress, professional interests, family conflicts and demographic characteristics. Generalized estimating equation (GEE) model was performed to determine the risk factors associated with smartphone addiction. Results: Overall, 65.9% of college students reported smartphone addiction at baseline, and 58.0% and 52.7% reported similar behavior at T₂ and T₃. The bivariate analysis indicated that smartphone addiction was associated with gender, number of children in family, residence, depression, social anxiety, loneliness and professional interests at both survey time points. The GEE results showed the residence (OR=0.909, p=0.025), depression (OR=1.593, p<0.001), social anxiety (OR=2.435, p<0.001), loneliness (moderate: OR=2.555, p<0.001 severe: OR=5.232, p<0.001), academic stress (OR=1.192, p=0.018), professional interests (OR=1.113, p=0.008) and family conflicts (moderate: OR=1.333, p<0.001 severe: OR=1.596, p<0.001) were risk factors of smartphone addiction in Chinese college students. Conclusions: Smartphone addiction in Chinese college students was related with several socio-demographic and mental factors. Psychological interventions targeting to students in college are helpful for reducing the risk of smartphone addiction. And the potential mechanisms for the specific associations between smartphone addiction and its risk factors should be further investigated.

Keywords: College students, smartphone addiction, risk factors, GEE model

歧视知觉与青少年问题性网络使用的关系： 学校联结、自尊的中介作用

王帆，鲍振宙（通讯作者）

赣南师范大学教育科学学院，赣州，341000, baozhenzhou0819@163.com

摘要 近年来，网络已成为当代青少年重要的信息获取途径、沟通交流的桥梁及休闲娱乐的平台。然而过度的网络使用行为可能引发问题性网络使用的风险。问题性网络使用（Problematic Internet Use, PIU）是指对个体心理健康、社会适应、学习或工作等方面造成消极后果的网络使用行为。问题性网络使用者通常会感到无法控制和强迫性的使用网络，这一行为可能导致青少年出现认知功能受损、社交困难、抑郁焦虑等情绪障碍，也可能增加其出现攻击等外化问题的风险。研究数据显示，青少年群体中问题性网络使用的现象十分普遍。因此，有必要对问题性网络使用的影响因素及具体发生机制进行全面深入探讨。广义紧张理论认为，同伴交往中感知的歧视很可能作为压力源诱发个体产生多种消极的情绪反应，并导致个体出现各类非适应性的行为（如问题性网络使用）去应对上述消极情绪体验。心理（自尊）或社会资本（学校联结）水平较低的青少年可能选择过度使用网络作为应对歧视的不良适应策略。因此，歧视知觉可以认为是青少年问题性网络使用的预测指标。此外，歧视知觉与问题性网络使用之间的潜在机制尚未得到充分研究。本研究旨在探讨歧视知觉与青少年问题性网络使用的关系以及学校联结、自尊在其中的中介作用。

采用歧视知觉问卷、问题性网络使用诊断工具、学校联结问卷与 Rosenberg 自尊量表对广东省某地两所中学共 1052 名青少年（ $M_{age}=14.95$, $SD=1.66$, 男性占 45.30%）进行施测。结果显示：（1）青少年的问题性网络使用检出率为 12.64%；（2）由低家庭经济收入引发的歧视知觉可显著正向预测青少年的问题性网络使用；（3）歧视知觉通过学校联结和自尊的中介作用对青少年问题性网络使用产生作用，这一中介作用包含

了三条路径：学校联结和自尊的单独中介作用以及二者的链式中介作用。研究揭示了歧视知觉与青少年问题性网络使用的关系及潜在的中介机制，结果对青少年问题性网络使用的干预具有一定参考价值。

关键词 歧视知觉，问题性网络使用，学校联结，自尊，中介作用

The Relationship between Perceived Discrimination and Problematic Internet Use: The Mediating Effects of School Connectedness and Self-esteem

Wang Fan, Bao Zhenzhou

School of Educational Science, Gannan Normal University, Ganzhou, 341000,

baozhenzhou0819@163.com

Abstract: In the last decade, Internet is becoming an important access to information, a bridge for communication, and a platform for entertainment to adolescents. However, excessive Internet use may lead to the occurrence of Problematic Internet Use (PIU). PIU refers to excessive use of the internet that causes psychological, social, school and/or work difficulties in a person's life. The negative consequences of PIU on adolescents' adjustment are clear. Specifically, PIU is related to adolescents' academic problems, social withdrawal, depressive or anxiety symptoms, and externalizing problems. Previous research has also indicated that the incidence of PIU is relatively high among Chinese adolescents. Thus, exploring the influencing factors and underlying mechanisms of adolescents' PIU are necessary for targeted intervention to reduce PIU. According to the general strain theory, perceived discrimination is a kind of pressures for adolescents, which may lead to a variety of stress reactions (e.g., negative emotions, social alienation). For adolescents with low levels of psychological or social capital, excessive use of internet is a maladaptive strategy to cope with discrimination. Thus, perceived discrimination was hypothesized to be a predictor of adolescents' PIU. Furthermore, the underlying mechanisms linking perceived discrimination to adolescents' PIU have not fully examined. The present study aimed to test the potential mediating effects of school connectedness and self-esteem on the association between perceived discrimination and adolescents' PIU.

A total of 1052 adolescents ($M_{age} = 14.95$, $SD = 1.66$) in Guangdong Province was recruited to participate in this study. Adolescents' perceived discrimination was measured by the perceived discrimination questionnaire. The revised school connectedness questionnaire was used to assess adolescents' school connectedness. The self-esteem scale (SES) developed by Rosenberg was used to measure adolescents' self-esteem. Adolescents' problematic Internet use was assessed with questionnaire for screening of PIU. All the measures have good reliability and validity. Data was analyzed using SPSS 23.0 and *Mplus* 8.0. A bias-corrected bootstrapping method was used to calculate the mediating effects of school connectedness and self-esteem in the relationship between perceived discrimination and adolescents' PIU.

The prevalence of adolescents' PIU was 12.64% in our study. Perceived discrimination was positively associated with PIU, supporting our hypothesis. A bias-corrected bootstrapping analyses have indicated that the indirect effects of perceived discrimination on PIU through school connectedness and self-esteem were significant. The indirect paths included: (I) Perceived discrimination $\rightarrow$ school connectedness $\rightarrow$ adolescents' PIU, (II) Perceived discrimination $\rightarrow$ self-esteem $\rightarrow$ adolescents' PIU, and (III) Perceived discrimination $\rightarrow$ school connectedness $\rightarrow$ self-esteem $\rightarrow$ adolescents' PIU. The mediating effects were .02, .04, and .01, respectively. These mediation effects were accounted for 58.93% of the total effect.

In summary, our results suggested that perceived discrimination is a risk factor of adolescents' PIU. Furthermore, school connectedness and self-esteem might be potential mediators on the association between perceived discrimination and adolescents' PIU. These findings provide preliminary evidence to indicate how perceived discrimination and PIU are associated during adolescence and highlight further effective interventions for adolescents'

PIU. Programs that aim to decrease discrimination among peer interaction and improve adolescents' school connectedness and self-esteem are crucial for preventing PIU.

Keywords: perceived discrimination, problematic Internet use, school connectedness, self-esteem, mediator

大学生抑郁水平对网络去抑制的影响： 网络社会支持的中介和网络自我效能感的调节作用

王刚¹ 刘赛凤¹ 李放¹（通讯作者）

¹ 四川师范大学心理学院，成都，610068，lifang_sicnu@126.com

摘要 近年来，网络已成为人们日常交流的重要渠道。网络去抑制指个体在网络上可自由地表现出面对面对交往中较少或不会出现的言行。在消极情绪下，个体极有可能使用网络进行倾诉分享等良性行为或谩骂攻击等恶性行为，以此来减轻负性体验或补偿心理需要。抑郁作为一种严重的消极情绪表现，以往研究证实，与网络去抑制呈显著正相关。而两者间具体的影响机制有待进一步探究。同时，在网络互动中，外在因素会对个体的言行产生重要影响。其中，网络社会支持指个体在网络活动中感受到他人给予支持性力量的情况。本研究推测，具有抑郁倾向的个体在网络活动中通过获取他人的支持性力量进一步提升了网络去抑制程度。此外，网络自我效能感是个体网络使用行为的重要促进因素。高网络自我效能感的个体在抑郁体验下会更可能使用网络进行情绪宣泄。因此，本研究将考察网络社会支持在抑郁和网络去抑制间的中介作用，及网络自我效能感在抑郁对网络去抑制影响上的调节作用。

在四川多所高校共选取 461 名在读大学生参与研究。使用流调抑郁量表、网络社会支持量表、网络自我效能感量表和网络去抑制量表调查了被试的抑郁水平、网络社会支持、网络自我效能感和网络去抑制程度。其中，网络去抑制量表分为良性去抑制和恶性去抑制两个维度。对所得数据使用 SPSS 22.0，及其插件 PROCESS 3.5 中的 Model 5 进行数据分析与处理。

结果：（1）独立样本 t 检验表明，农村生源大学生的抑郁水平显著高于城市大学生。（2）抑郁对网络去抑制起显著正向预测作用。（3）网络社会支持在抑郁对网络去抑制的影响中起中介作用。（4）对高网络自我效能感的个体来说，抑郁水平对网络去抑制的正向预测作用更大。

研究结果有助于解释抑郁影响网络去抑制的作用机制。结果提示，对大学生的抑郁水平，尤其是农村生源的大学生，仍需加强关注。同时，干预网络社会支持是有效影响抑郁预测网络去抑制的重要途径。另外，对高网络自我效能感的个体来说，更要关注抑郁水平对网络去抑制的正向影响。

The Influence of Depression Level of College Students on Online Disinhibition: The Mediation Effect of Internet Social Support and the Moderating Effect of Internet Self-efficacy

Wang Gang¹, Liu Saifeng¹, Li Fang¹

¹ College of Psychology, Sichuan Normal University, Chengdu, 610068

Abstract: In recent years, the Internet has become an important way for people's daily communication. Online disinhibition means that individuals can freely say and do things in cyberspace that they would not ordinarily say and do in the face-to-face situation. Under negative emotions, individuals are likely to use the Internet to perform benign behaviors such as confiding and sharing or toxic behaviors such as verbal abuse, in order to alleviate negative experiences or compensate for psychological needs. Previous studies have confirmed that depression is positively correlated with online disinhibition. However, the specific mechanism of college students' depression on online disinhibition needs to be further explored. At the same time, in the Internet interaction, external factors will have an important impact on the words and deeds of individuals. Internet social support refers to the situation that an individual feels the supportive power given by others in network activities. This study speculates that depressive level can positively predict online disinhibition through Internet social support. In addition, internet self-efficacy is a

promoting factor of individual Internet use behavior. Individuals with high Internet self-efficacy are more likely to use the Internet for emotional venting when experiencing depression. Therefore, this study will examine the mediating effect of Internet social support on depression and online disinhibition, and the moderating effect of Internet self-efficacy on depression and online disinhibition.

A total of 461 college students were selected from different universities in Sichuan to participate in the study. Using the epidemiological depression scale, the Internet social support scale, the Internet self-efficacy scale, and the online disinhibition scale to investigate the participants' depression level, Internet social support, Internet self-efficacy and the degree of online disinhibition. Among them, the online disinhibition scale is divided into two dimensions: benign disinhibition and toxic disinhibition. SPSS 22.0 and model 5 in PROCESS 3.5 were used for data analysis.

Results: (1) Independent sample t-test showed that the depression level of college students living in rural areas was significantly higher than that of urban students. (2) Depression has a significant positive predictive effect on online disinhibition. (3) Internet social support plays a mediating role in the effect of depression on online disinhibition. (4) For individuals with high Internet self-efficacy, the positive predictive effect of high depression level on online disinhibition is greater.

The results help to explain the mechanism of depression affecting online disinhibition. The results suggest that more attention should be paid to the depression level of college students, especially those from rural areas. At the same time, the intervention of Internet social support is an important way to effectively affect the relationship of depression on online disinhibition. In addition, for individuals with high Internet self-efficacy, we should pay more attention to the positive effect of depression on online disinhibition.

Keywords: depression, online disinhibition, internet social support, internet self-efficacy, college students

读英文更容易走神：阅读模式和语言对心智游移的影响

王婧茹 江新（通讯作者）

北京语言大学心理学院，北京，100101 jiangxin6@163.com

摘要 心智游移（mind wandering）是指阅读时注意从当前外部任务转移到内部体验的过程。已有研究证明心智游移对阅读理解有消极作用，采用朗读模式可能会减少心智游移现象。本研究采用探针检测方法，考察在不同的阅读模式下，中国大学生阅读中英文文本时的心智游移现象。实验采用 2（阅读模式：朗读，默读）×2（语言：中文，英文）混合实验设计，其中，阅读模式为被试间变量，语言为被试内变量。因变量是心智游移频率和阅读理解正确率。在中国日报的双语新闻栏目选择 4 篇中文新闻文章及其对应的英文文章（共 8 篇）作为实验材料，37 名非英语专业的中国大学生参与实验。结果发现：（1）无论是朗读模式还是默读模式，阅读的语言影响心智游移频率，即阅读英文材料比阅读中文材料更容易发生心智游移；但是，阅读模式不影响心智游移频率。（2）阅读模式和阅读理解成绩的关系受语言的影响，对于英文材料，朗读组的阅读理解正确率高于默读组，对于中文材料，默读组的阅读理解正确率高于朗读组；（3）与阅读中文材料相比，阅读英文材料更容易在文本的开头位置报告自己发生了与内容有关的心智游移，但是这种与内容有关的心智游移并不能促进阅读理解。研究结果表明，对于英语不熟练的中国大学生，阅读英文材料比阅读中文材料更容易出现心智游移现象；朗读不能降低中英文阅读时的心智游移频率；朗读可以促进对英文文本的理解，但妨碍中文文本的阅读理解。

关键词 阅读模式，中文，英文，心智游移，文本阅读

More Mind Wandering when reading English: The Effects of Reading Modes and Language on Mind wandering

Jingru Wang, Xin Jiang

School of Psychology, Beijing Language and Culture University, Beijing

Abstract: Mind Wandering is the process of shifting attention from the current external task to the internal experience during reading. Previous studies have shown that mind wandering has a negative effect on reading comprehension, and reading aloud may reduce mind wandering. The purpose of this study is to investigate the mind wandering of Chinese college students under different reading models. The experiment adopted a 2 (reading mode: oral reading, silent reading) $\times$ 2 (language: Chinese, English) mixed design, in which the reading mode was the between-subjects factor, and the language was the within-subjects factor. The dependent variables were the frequency of mind wandering and the accuracy of reading comprehension. In the bilingual news column of China Daily, four Chinese news and their corresponding English news (8 news in total) were selected as experimental materials, and 37 Chinese college students who were not English majors participated in the experiment. The results showed that : (1) no matter reading aloud or silently, the language affected the frequency of mind wandering, that is, English reading was more prone to mind wandering than Chinese reading. However, reading modes did not affect the frequency of mind wandering. (2) The relationship between reading modes and reading comprehension scores was influenced by language. For English materials, the reading comprehension accuracy of the oral reading group was higher than that of the silent reading group. For Chinese materials, the reading comprehension accuracy of the silent reading group was higher than that of the oral reading group. (3) Compared with reading Chinese news, reading English news is more likely to report that they had content-related mind wandering at the beginning of the text, but the content-related mind wandering does not promote reading comprehension. The results show that for Chinese college students who are not proficient in English, reading English materials is more likely to have mind wandering than reading Chinese materials. Reading aloud can't reduce the frequency of mind wandering both in Chinese and English; Reading can promote the comprehension of English text, but hinder the comprehension of Chinese text.

正念减压训练对优秀运动员睡眠质量的干预研究：不执著的中介作用

王俊杰¹

1 沈阳体育学院，沈阳，110000

摘要 目的：良好的睡眠质量能让大脑和身体得到充分的休息、恢复。睡眠不足容易引起注意力、专注力及记忆力减退等症状的发生，严重者甚至诱发精神错乱等疾病。对于优秀运动员而言，睡眠质量的好坏会影响其身体机能的状态与竞技能力的发挥。正念减压训练作为一种新型心理干预方式，已在治理临床心理疾病、改善生活品质等方面得到广泛的应用。本研究旨在探明正念减压训练改善优秀运动员睡眠质量，以及不执著在其中的中介作用，以期优秀运动员的身体恢复、心理调节等提供理论参考。方法：本研究招募沈阳体育学院大学生运动员（二级及二级以上）84名被试，采取随机对照实验设计，将被试随机分为干预组与对照组。最终有76名被试完成本研究（正念训练组37名、对照组39名），其中正念减压组每周进行一次正念减压训练，共持续8周，对照组不采取干预措施。干预前后，两组被试填写五因素正念度量表（FFMQ）、简版不执著量表（NAS）、匹兹堡睡眠指数量表（PSQI）。结果：8周干预后，FFMQ、PSQI、NAS总分干预后 (134.51 ± 18.51) 分， (4.20 ± 2.08) 分， (74.65 ± 18.86) 分均低于干预前 (123.67 ± 13.57) 分， (5.63 ± 2.57) 分， (83.35 ± 21.03) 分]，（均 $P < 0.01$ ），而对照组干预前后各项得分差异均无统计学意义（均 $P > 0.05$ ）。结论：正念减压训练对优秀运动员睡眠质量的改善有显著效果，不执著是二者关系的中介变量。

关键词 正念减压训练，优秀运动员，睡眠质量，不执著

Intervention of mindfulness stress reduction training on sleep quality of excellent athletes: the intermediary role of non-attachment

Jun Jie Wang

Shenyang Sport University Shenyang

Abstract: Objective: Good sleep quality can let the brain and body get full rest and recovery. Lack of sleep is easy to cause the occurrence of attention, concentration and memory loss and other symptoms, serious people and even induce insanity and other disorders. For excellent athletes, the quality of sleep will affect their physical function and the play of competitive ability. As a new psychological intervention mode, mindfulness stress reduction training has been widely used in the treatment of clinical psychological diseases and improving the quality of life. The purpose of this study is to explore the stress reduction training to improve the sleep quality of outstanding athletes and the intermediary role of not persistent in them, in order to provide theoretical reference for the physical recovery and psychological adjustment of outstanding athletes. Methods: This study recruited 84 students (Grade II and above) and controlled subjects into intervention and control groups. Finally, 76 subjects completed the study (37 in the mindfulness training group and 39 in the control group), of which the mindfulness decompression group was trained once a week for 8 weeks. Before and after intervention, both groups completed the five-factor mindfulnessMetric (FFMQ), Brief Non-persistence Scale (NAS), and Pittsburgh Sleep Quantity Table (PSQI). Results: After 8 weeks of intervention, FFMQ, PSQI, NAS total score $[(134.51 \pm 18.51), (4.20 \pm 2.08), (74.65 \pm 18.86)]$ were all below pre-intervention $[(123.67 \pm 13.57), (5.57), (83.35 \pm 21.03)]$, ($P < 0.01$), with no statistical difference (both $P > 0.05$). Conclusion: mindfulness stress reduction training improves the sleep quality of excellent athletes. Nonpersistence is the intermediary variable of the relationship.

Keywords: mindfulness decompression training, excellent athletes, sleep quality, non-attachment

家庭内部冲突与青少年心理健康问题的关系： 睡眠问题的纵向中介作用

王硕¹ 石绪亮¹（通讯作者）李媛媛² 陈小燕² 朱亚³

1 河北大学教育学院，保定，071002，通讯作者 shixl163@163.com

2 华南师范大学心理学院/华南师范大学心理应用研究中心，广州，510631

3 广东科技学院心理健康教育与辅导中心，东莞，523083

摘 要 目的：家庭内部冲突会影响青少年的心理健康，但其内部机制尚不清楚。为了解决这一问题，本研究采用追踪设计探讨家庭内部冲突与青少年内外化问题的关系，同时考察睡眠质量在两者间的作用机制。方法：本研究采用家庭环境量表-亲密度分量表（FES-CV）、匹兹堡睡眠质量指数量表（PSQI）、儿童抑郁障碍自评量表（DSRS）、儿童焦虑情绪障碍筛查量表（SCARED）、长处与困难问卷学生版（SDQ）及一般人口学变量对广东省 932 名初中生（ $M = 13.25, SD = 0.66$ ）进行为期三年的 3 次追踪调查。每次调查的时间间隔为 12 个月。结果：①相关分析发现：T1 阶段的家庭内部冲突与 T3 阶段的内化问题（抑郁和焦虑）和外化问题相关显著；T2 阶段的睡眠质量与 T1 阶段的家庭内部冲突、T3 阶段的内化问题（抑郁和焦虑）和外化问题相关显著。②在控制了 T1 阶段的睡眠质量、内外化问题与人口学变量后，T1 阶段的家庭内部冲突正向预测 T2 阶段的睡眠质量，并且 T2 阶段的睡眠质量在 T1 阶段的家庭内部冲突和 T3 阶段的内化问题（抑郁和焦虑）和外化问题间起完全中介作用。此外，睡眠质量中介作用并无明显的性别差异。结论：睡眠质量在家庭内部冲突和青少年心理健康关系中发挥着重要作用。当青少年卷入家庭内部冲突时，通过改善其睡眠质量，可有效降低其内外化问题的发生风险。

The Influence of Intra-family Conflict on Mental Health Problems in Chinese Adolescents: the Longitudinal Mediating Role of Sleep Problems

Shuo Wang¹, Xuliang Shi¹, Yuanyuan Li², Xiaoyan Chen², Ya Zhu³

1 College of Education, Hebei University, Baoding, Hebei, P.R. China

2 South China Normal University, Guangzhou, Guangdong

3 Center for Mental Health Education and Counseling, Guangdong University of Science and Technology, Dongguan, China

Abstract: Objectives: This study investigated the mediating role of poor sleep quality in the effect of intra-family conflict on mental health problems for adolescents using three-years longitudinal study. Methods: In this study, we recruited 932 (M_{age} at baseline=13.25 years, $SD=0.66$) adolescents from two junior high school in Guangzhou city. The Family Environment Scale Chinese Version (FES-CV), the Pittsburg Sleep Quality Index (PSQI), the Depression Self-Rating Scale (DSRS), the Screen for Child Anxiety Related Emotional Disorders (SCARED) and the Strengths and Difficulties Questionnaire (SDQ) were used as research tools. The intervals were 12 months apart. Results: After adjusting for sleep quality, mental health problems and family demographics at wave 1 (T_1), ①The T_1 intra-family conflict was correlated with internalizing symptoms (including anxiety symptoms and depression symptoms) at wave 3 (T_3) and externalizing symptoms at wave 3 (T_3). The T_2 sleep quality was related to intra-family conflict at Wave 1 (T_1), internalizing symptoms (including anxiety symptoms and depression symptoms) at wave 3 (T_3) and externalizing symptoms at wave 3 (T_3). ②The T_1 intra-family conflict significantly positively predicted sleep quality at wave 2 (T_2), and T_2 sleep quality played a complete mediating role in the influence of T_1 intra-family conflict and internalizing symptoms (including anxiety symptoms and depression symptoms) at wave 3 (T_3). ③ T_2 sleep quality completely mediated the association between T_1 intra-family conflict and externalizing symptoms at wave 3 (T_3). In addition, this mediation of sleep quality was consistent across gender. Conclusions: Sleep quality was an important mediator in explaining the relationship between intra-family conflict and mental health problems in adolescents. Prevention and intervention programs aimed at improving their sleep quality may be critical to prevent mental health problems when adolescents are involved in family conflict.

Keywords: intra-family conflict, sleep quality, mental health, longitudinal study, adolescent

累积家庭风险对学前儿童外化问题的影响及机制：跨性别一致性检验

王文慧¹ 白荣¹ 王国鑫¹ 邢淑芬¹ (通讯作者)

¹ 首都师范大学, 北京, 100048, xsf2986@163.com

摘要 选取 182 名学前儿童 (111 名男孩) 及其母亲为研究对象, 考察累积家庭风险对学前儿童外化问题的影响及其函数关系, 揭示执行功能在两者关系中的认知机制以及性别在上述路径中的调节效应。结果发现:

(1) 累积家庭风险正向预测儿童的外化问题, 二者呈线性关系; (2) 执行功能的中介作用显著, 即累积家庭风险通过儿童的执行功能进而影响其外化问题; (3) 性别在累积家庭风险对儿童外化问题的直接效应以及执行功能的中介效应中的调节作用不显著。另外, 累积风险方法的使用和线性结果的发现有利于我们更精准地识别出高风险儿童, 并提示应该对威胁儿童发展的家庭风险进行全面干预, 因为消除儿童学前阶段的任何风险, 都有利于减少外化问题的产生。同时, 未来研究应该进一步探究累积家庭风险与儿童严重的外化问题 (如犯罪行为) 之间可能的非线性模式及其触发点或阈值, 揭示压倒儿童心理健康的最后一根稻草, 以期为高风险儿童针对性的干预工作提供更丰富的理论与实践指导。最后, 累积家庭风险对于不同性别学前儿童的外化问题具有相同的影响路径, 因此为减少儿童的外化问题, 除了全面干预儿童家庭中的风险因素, 也要注重加强所有儿童自身层面的执行功能发展。研究结果为相关理论模型提供了证据, 并为有效预防与干预学前儿童的外化问题提供了现实指导。

关键词 累积家庭风险, 外化问题, 执行功能, 性别一致性

The Effects of Cumulative Family Risk on Externalizing Problem in Preschool Children and its Mechanism: A Cross-gender Congruence Test

Wang Wenhui¹, Bai Rong¹, Wang Guoxin¹, Xing Shufen¹

¹ Capital Normal University, BeiJing, 100048, xsf2986@163.com

Abstract: This study, which included 182 preschoolers (111 boys) and their mothers, investigated the effects of cumulative family risk on externalizing problem and its functional relationship. We not only revealed the cognitive mechanism of executive function, but also the moderating effect of gender on the above pathway. The results showed that: (1) The prediction of children's externalizing problem on cumulative family risk is linear and positive; (2) Executive function played a significant mediating role, and it meant the children's externalizing problem is affected by cumulative family risk because of executive function; (3) Gender had no significant moderating effect on the direct effect of cumulative family risk on children's externalizing problem and the mediating effect of executive function. In addition, the use of the cumulative risk method and the discovery of linear results help us more accurately identify high-risk children, and suggest that we should conduct comprehensive interventions on family risks that threaten children's development, because eliminating any risks in children's preschool stage is beneficial to reducing the appearance of externalizing problem. At the same time, future research should further explore possible non-linear patterns and trigger points or thresholds between cumulative family risks and children's serious externalizing problem (such as criminal behavior). Finally, cumulative family risk has the same influence path on the externalizing problem of different genders. Therefore, in order to reduce children's externalizing problem, in addition to comprehensive interventions in children's family risk factors, we should also focus on strengthening the executive functions of all children. The results of this study provided evidence for relevant theoretical models, and provided practical guidance for effective prevention and intervention of preschool children's externalizing problem.

Keywords: Cumulative Family Risk, Externalizing Problem, Executive Function, Transgender Consistency

中学教师胜任力、心理授权与职业幸福感的关系研究

王云霞¹ 宋莉莉¹ 卢家楣¹ (通讯作者)

¹ 上海师范大学教育学院, 上海, 200234

通讯作者: 卢家楣 E-mail: lujiamei@vip.163.com

摘要 时代的发展和教育本身运行的规律,使得教师承担的角色日趋复杂,其心理健康状态与生活质量水平日益受到人们的关注,而其职业幸福感是衡量心理状态与生活质量的重要因素。教师的职业幸福感是指教师在教育教学中,对实现自己的职业理想、体味人生价值并获得自身发展的精神愉悦状态的主观体验。不仅影响教师个人的教学质量、自身发展、心理健康水平等方面,更潜移默化地影响着学生的学习热情、人格品质、价值观等诸多方面。但是,教师的职业幸福体验并不乐观。造成教师“不幸福”的原因既包括外在因素,也涉及到内部因素:如教师胜任力有待提高,难以产生工作绩效,教师的胜任力是指教师的人格特征、知识和在不同教学背景下所需要的教学技巧及教学态度的综合,已有研究表明教师的胜任力不仅对职业幸福感产生重要影响,而且对其具有一定的预测作用。从更大的范围来分析,社会、学校文化大背景下的教师难以感受到足够的属于自己角色的自主和决定的权力,即心理授权不足,心理授权是个体对授权所体验到的心理状态或认知过程,这个过程包括工作意义、自我效能感、自我决定力和工作影响四个方面。以往研究发现教师职业幸福感与心理授权相关显著。本研究为了解中学教师胜任力、心理授权与职业幸福感的现状,探讨三者之间的关系,并有针对性提出有效的建议。通过方便取样的方法,选取280名中学教师作为测试对象,采用《教师胜任力调查问卷》、《心理授权量表》和《教师职业幸福感问卷》进行测试。研究结果显示:(1)中学教师的胜任力、心理授权和职业幸福感处于中等水平;(2)中学教师的胜任力、心理授权和职业幸福感在性别、年龄、教龄等人口学变量上均存在显著差异;(3)胜任力、心理授权与职业幸福感存在显著的两两相关关系($p < 0.01$);(4)分析中介检验模型,发现中学教师胜任力作用于职业幸福感的过程中,心理授权起完全中介作用。结论:中学教师胜任力会影响心理授权,心理授权进而影响中学教师职业幸福感。本研究致力于对教师的人文关怀,有助于增强教师整体素质,促进教师专业化发展,对于如何促使教师最大限度地发挥个体潜在力量、获得最佳工作绩效的同时,获得更高的职业幸福感具有非参考价值。

A study on the Relationship Between Competency, Psychological Empowerment and Professional Well-being of Middle School Teachers

Yunxia Wang, Lili Song, Jiamei Lu (Corresponding author)

Department of psychology, Shanghai Normal University, Shanghai, China

Abstract: With the development of The Times and the law of the operation of education itself, the role of teachers is becoming more and more complex, and their mental health and quality of life are attracting more and more attention, and their occupational happiness is an important factor to measure their psychological state and quality of life. The professional happiness of teachers refers to the subjective experience of teachers to realize their career ideal, appreciate the value of life and obtain the spiritual pleasure state of their own development in education and teaching. It not only affects teachers' teaching quality, self-development, mental health level and other aspects, but also influences students' learning enthusiasm, personality quality, values and other aspects subtly. However, the occupational happiness experience of teachers is not optimistic. The cause of teachers "not happy" includes both external factors, also involves the internal factors: such as teachers' competency, difficult to produce performance, teachers' competence is refers to the teacher's personality, knowledge and under the background of different teaching need comprehensive teaching skills and teaching attitude, existing research shows that teachers' competence is not only important influence on vocational happiness, but also for its role has certain prediction. According to the analysis of larger scope of society, school culture against the background of teachers feel hard enough belongs to his role of autonomy and decision power, namely the psychological authorization, psychological authorization is an individual's psychological state to authorized by experience or cognitive process, this process includes work significance, self-efficacy, self-determination and impact from four aspects. Previous studies have found that teachers' occupational happiness is significantly related to psychological empowerment. In order to understand the status quo of middle school teachers' competence, psychological empowerment and occupational happiness, this study discussed the relationship among the three and put forward effective Suggestions. Through the convenient sampling method, 280 middle school teachers were selected as the test subjects, and the teacher Competence Questionnaire, Psychological Authorization Scale and Teacher Occupational Happiness Questionnaire were used for the test. The results show that : (1) the competence, psychological empowerment and occupational happiness of middle school teachers are in the middle level; (2) There are significant differences in the competency, psychological empowerment and occupational happiness of middle school teachers in demographic variables such as gender, age and teaching age; (3) There were significant pair correlation between competence and psychological empowerment and occupational happiness ($P < 0.01$); (4) By analyzing the mediation test model, it is found that psychological authorization plays a completely mediating role in the process of applying the competence of middle school teachers to occupational happiness. Conclusion: The competence of middle school teachers will affect psychological authorization, and psychological authorization will affect the occupational happiness of middle school teachers. This study is devoted to the humanistic care of teachers, which can help to improve the overall quality of teachers and promote the professional development of teachers. It has non-reference value for how to make teachers give full play to their individual potential strength, obtain the best job performance and obtain higher professional happiness.

Keywords: Middle school teachers, Competence, Psychological empowerment, Professional well-being

马基雅维利主义对成人初显期学生的关系攻击的影响： 控制感的中介作用

乌妮尔

内蒙古师范大学心理学院，呼和浩特，010000，747400875@qq.com

摘 要 关系攻击是指以控制或伤害他人为目的，操纵或破坏同伴之间的人际关系或情感的行为。例如，使用孤立某个人、散布谣言破坏他人名声等方式来达到伤害或控制他人的目的。媒体报道、学校或生活环境的

风气 and 干预、社会认知、规范信念、个体在团体中的被接纳程度都是影响关系攻击的主要因素。18 至 29 岁是向成人时期的过度，更是探索自我、充满变化性的独特时期，学者将这段时期命名为“成人初显期”，尤其是处于这个年龄段的学生群体，他们建立人际关系及维护方式都还处于不完全成熟阶段。以往研究关系攻击针对的大多为未成年人，因此，对成年学生群体的关系攻击特征进行探索还是非常值得的。关系攻击的操纵关系伤害他人这一特性与马基雅维利主义人格善于控制、操纵的特性相吻合，马基雅维利主义的标志性特征就是操纵他人、对他人没有太多的同情心和情感、讲究实用主义、狡猾甚至是没有道德的。由于马基雅维利主义个体善于使用人际操纵策略，所以，为了达到自己的目的，会采用恶意的策略去进行人际交往。控制感是个体对自身能力、努力程度等内部因素作用于事件发展及其结果的一种评估和判断过程中感知控制感是引起攻击行为不可忽视的原因，以往研究发现马基雅维利主义人格特质明显的个体，其关系攻击水平更高，因此，在此基础上，进一步探索控制感在马基雅维利主义对成人初显期学生群体的关系攻击影响起到的作用。在本研究中，使用《马基雅维利主义人格量表》、《控制感中文修订版量表》、《关系攻击量表》对 600 名 18-29 岁的学生群体进行测量发现：（1）处于成人初显期的学生群体，女生的关系攻击水平显著高于男生；（2）个体受教育程度越高，其关系攻击水平越低；（3）个体马基雅维利主义水平越高，控制感降低时，其关系攻击水平显著提高。

关键词 马基雅维利主义，关系攻击，控制感，成人初显期

The Influence of Machiavellianism on the Relational Aggression of Students in the Emerging Adulthood: The Mediating Role of Control

Wu Nier

Inner Mongolia Normal University, Hohhot

Abstract: Relationship aggression refers to the behavior of manipulating or destroying interpersonal relationships or emotions between peers for the purpose of controlling or harming others. For example, use methods such as isolating a certain person, spreading rumors to damage the reputation of others to achieve the purpose of harming or controlling others. Media reports, school or living environment ethos and interventions, social cognition, normative beliefs, and the acceptance of individuals in groups are all major factors affecting relationship attacks. The age of 18 to 29 is a transition to adulthood, and it is a unique period of self-exploration and full of change. Scholars named this period as "the first stage of adulthood", especially for students in this age group. They establish interpersonal relationships. Relationships and maintenance methods are still in the incompletely mature stage. In the past, most researches on relationship attacks targeted minors. Therefore, it is worthwhile to explore the characteristics of relationship attacks among adult students. The characteristic of manipulating relationships and hurting others is consistent with the character of Machiavellianism, which is good at controlling and manipulating. The hallmark feature of Machiavellianism is manipulating others, not having much sympathy and emotion for others, and being practical Doctrine, cunning and even immoral. Since Machiavellian individuals are good at using interpersonal manipulation strategies, they will use malicious strategies to carry out interpersonal communication in order to achieve their own goals. The sense of control is an assessment and judgment process of the individual's own ability, effort level and other internal factors on the development of the event and its consequences. Perceived control is the cause of aggressive behavior that cannot be ignored. Previous studies have found that Machiavellianism has obvious personality traits. Individuals have a higher level of relationship attack. Therefore, on this basis, we will further explore the role of control in Machiavellianism's influence on the relationship attack of the early adult students. In this study, using the "Machiavellian Personality Scale", "Chinese Revised Control Sense Scale", and "Relational Attack Scale" were used to measure 600 18-29 year-old students and found that: (1) In the initial stage of adult students, the level of relational aggression of girls is significantly higher than that of boys; (2) the higher the level of individual education, the lower the level of relational aggression; (3) the higher the level of individual Machiavellianism, the lower the sense of control At that time, the level of relationship attack increased significantly.

Keywords: Machiavellianism; Relational Aggression; Control; Emerging Adulthood

青少年智能手机成瘾引起获得感“钝化”？： 公正世界信念与感恩的序列中介作用

吴晨阳¹ 何安明¹(通讯作者)

¹ 信阳师范学院教育科学学院, 信阳, 464000, anming.he@163.com

摘要 “获得感”一词是由习近平总书记在2015年中央全面深化改革领导小组第十次会议中首次提出,并且在之后会议和报告中被多次强调的重要概念。获得感是指个体在获取某种利益之后,内心深处所产生的一系列主观感受,是一种满足和幸福的积极情绪体验。然而青少年群体中依然存在获得感“钝化”现象,即俗语中所说的“身在福中不知福”。对于青少年来说,智能手机成瘾是该群体中普遍存在的行为问题。探讨青少年智能手机成瘾对获得感的影响,对青少年的心理以及社会化发展具有重要意义。

本研究主要基于社会认知理论,探讨青少年智能手机成瘾与获得感的关系,并在此基础上建构了序列中介效应模型,考察公正世界信念与感恩的中介作用。采用整群随机抽样的方法对广东省、山西省、河南省、江苏省、湖南省的11所高校及河南省和湖南省的6所中学共3104名学生进行问卷调查,结果显示:(1)智能手机成瘾、公正世界信念、感恩与获得感两两显著相关;(2)在控制了性别、年龄、家庭社会经济地位、主观社会经济地位后,智能手机成瘾对获得感具有显著的负向预测作用;(3)公正世界信念和感恩在智能手机成瘾与获得感之间起中介作用。具体而言,智能手机成瘾通过三条路径影响获得感,一是公正世界信念的中介作用;二是感恩的中介作用;三是公正世界信念与感恩的序列中介作用。以上结果表明,智能手机成瘾对获得感具有一定影响,是引起获得感“钝化”的重要因素,并且这种影响是通过公正世界信念和感恩的共同作用形成的。

Does Adolescent Smartphone Addiction cause "Passivation" of Sense of Gain?: Serial Mediating Effect of Belief in a Just World and Gratitude

Wu Chenyang, He Anming

School of Education Science, Xinyang Normal University, Xinyang 464000, China

Abstract: The term "sense of gain" was first proposed by General Secretary Xi Jinping at the 10th meeting of the Central Leading Group for Comprehensively Deepening Reform in 2015, and has been emphasized many times in subsequent meetings and reports. The sense of gain refers to a series of subjective feelings generated deep inside an individual after obtaining certain benefits, which is a positive emotional experience of satisfaction and happiness. However, there is still a phenomenon of "passivation" of the sense of gain among adolescents, which is a popular saying that they do not know the blessing when they are in it. For adolescents, smartphone addiction is a common behavioral problem in this group. It is of great significance for adolescents' psychological and social development to explore the influence of adolescents' smartphone addiction on their sense of gain.

Based on social cognition theory, the present study aimed to explore the effect of adolescents' Smartphone addiction on sense of gain, and the mediating role of belief in a just world and gratitude. The cluster random sampling method was used to conduct a questionnaire survey on 3104 students from 11 universities in Guangdong, Shanxi, Henan, Jiangsu and Hunan provinces and 6 middle schools in Henan and Hunan provinces. Results indicated that :(1) There were significant correlations among smartphone addiction, belief in a just world, gratitude and sense of gain; (2) At the control of gender, age, family socioeconomic status, and subjective socioeconomic status, smartphone addiction could predict sense of gain. (3) Just world belief and gratitude played mediating roles between smartphone addiction and sense of gain. In particular, smartphone addiction affected sense of gain through three paths: the separate mediation effect of just world belief; the separate mediation effect of gratitude; the serial mediation effect of belief in a just world and gratitude. These findings suggest that smartphone addiction has a certain influence on the

sense of gain, which is an important factor causing the "passivation" of the sense of gain, and this influence is formed through the joint effect of belief in a just world and gratitude.

Keywords: smartphone addiction; belief in a just world; gratitude; sense of gain; adolescents

家庭累积风险对学前儿童攻击行为的影响及内在机制

吴国婧 邢淑芬（通讯作者）

首都师范大学心理学院，北京，100048，E-mail: xsf2986@163.com

摘要 儿童早期攻击行为（包括关系攻击和外显攻击）与家庭中风险因素密切相关。依据累积风险模型，风险因素具有协同发生性；儿童经历的家庭风险因素越多，出现攻击行为的可能性越高。因此，了解累积家庭风险对学前儿童关系攻击和外显攻击的影响是十分必要的。此外，依据生命史理论，经历累积家庭风险的儿童更倾向于采取“快策略”，这将降低其执行功能水平，进而导致儿童出现更多的攻击行为。基于此，本研究以129名（男78名， $M_{\text{年龄}} = 5.45$, $SD = 0.75$ ）学前儿童及其父母为研究对象，采用了间隔1年的追踪设计考察了T1时累积家庭风险对T2时儿童关系攻击和外显攻击的影响，及T2时儿童执行功能的中介作用和儿童性别的调节作用。数据采用SPSS25.0和Amos24.0进行分析。结果发现：（1）累积家庭风险能够显著正向预测男孩的关系攻击及外显攻击，且累积家庭风险与两种攻击行为之间函数关系均为线性模式；但累积家庭风险对女孩的预测作用并不显著。（2）家庭累积风险显著降低学前期男孩执行功能水平，进而增加其外显攻击和关系攻击。研究表明，学前期男孩面对的累积家庭风险因素越多，出现关系攻击和外显攻击的可能性越高，并且执行功能会在上述关系中起到中介作用。因此，全面地降低学前儿童面对的家庭风险因素，提高执行功能水平是减少学前期男孩出现关系攻击和外显攻击的重要着手点。

The Effect and Mechanism of Cumulative Family Risks on Preschoolers' Aggressive Behavior

Guojing Wu, Shufen Xing (Corresponding author)

Department of Psychology, Capital Normal University, Beijing, 100048, E-mail: xsf2986@163.com

Abstract: Family risk factors play important role in preschoolers' aggression (including relational and overt aggression). According to the cumulative risks model, family risk factors are always co-occurring, and the greater the number of risk factors, the greater the prevalence of aggression. Therefore, it is necessary to examine the effect of cumulative family risks on preschoolers' aggression. Additionally, based on life history strategy theory, children who face multiple family risks prefer fast strategies, which hinder the development of their executive functions. And it has been proved that lower executive functions lead to more aggression. Based on the above background, a total of 129 preschoolers (78 boys, $M_{\text{age}} = 5.45$, $SD = 0.75$) and their parents were recruited as participants, and a one-year longitudinal study was used to explore the effect of cumulative family risks at T1 in children's relational and overt aggression at T2, and the mediating role of children's executive functions at T2 as well as the moderating role of child gender. SPSS25.0 and Amos 24.0 were used to analyze the data. Results showed that: (1) cumulative family risks significantly predicted relational and overt aggression of boys, rather than that of girls, and the functional forms of cumulative family risks and two types of aggression fitted liner model. (2) children's executive functions mediate the relations between cumulative family risk and boys' relational and overt aggression. These findings indicate that the more cumulative family risks boys confront, the more relational and overt aggression they will have, and that cumulative family risks can indirectly affect boys' aggression through their executive functions in their preschool years. As a result, it could be effective to reduce boys' aggression in preschool years by reducing family risk factors globally, and improve their executive functions.

Keywords: cumulative family risks, executive functions, relational aggression, overt aggression, gender

大学生网络受欺负与内化问题的关系：一个有调节的中介作用

谢如月¹ 刘连忠² 黄海³ (通讯作者)

1 中国地质大学 武汉, 430000; 2 武汉市精神卫生中心, 430000

3 中国地质大学应用心理系, 武汉, 430000, huanghai76@163.com

摘要 随着信息化的迅速发展,大学生群体使用网络非常普遍。有研究发现,有很多大学生在电子信息交流过程中反复受到其他个体的欺负,网络受欺负会对受欺负者的身心状态产生诸多负面影响。大学时期正是脱离家庭,走向自主与独立的阶段,易出现心理适应问题,因此大学生网络受欺负现状及其负面影响备受关注。本研究使用网络受欺负量表、应对自我效能感量表、中国大学生心理健康筛查量表、情绪调节问卷对来自武汉市两所高校共 1454 名大学生进行问卷调查,删除不认真作答和不完整问卷,共删除 39 份,最终得到有效问卷 1415 份。目的在于探讨大学生网络受欺负、应对自我效能感、认知重评和内化问题的关系,并探索应对自我效能感在大学生网络受欺负和内化问题之间的中介效应,认知重评在大学生网络受欺负和应对自我效能感之间的调节效应。使用 SPSS 24.0 和 Mplus 7.4 对数据进行统计分析,得出以下结论:(1)大学生网络受欺负能正向预测内化问题。(2)加入应对自我效能感作为中介变量后,大学生网络受欺负的预测作用依然显著:应对自我效能感在大学生网络受欺负与内化问题间具有部分中介作用。(3)认知重评在大学生网络受欺负和应对自我效能感之间的调节作用显著,当遭受网络欺负事件时,相比认知重评水平低的大学生,认知重评水平高的大学生在经历了网络欺负事件后,其应对自我效能感水平下降地更加缓慢,缓冲了网络受欺负对于大学生自我效能感的影响。本研究探究了大学生网络受欺负正向预测内化问题的内在机制,并从大学生自身方面、学校方面和家庭方面提出了相应的对策和建议,目的在于降低大学生遭受网络欺负事件后的内化问题,促进他们的身心发展。

The relationship between College Students' Cyber-Victimization and internalization problems: A moderating mediator

Ruyue Xie¹, Lianzhong Liu², Hai Huang³

1 China University of Geosciences, Wuhan 430000, China; 2 Wuhan Mental Health Center, 430000, China

3 psychotechnics, China University of Geosciences, Wuhan, 430000, China; corresponding author huanghai76@163.com

Abstract: With the rapid development of information technology, it is very common for college students to use the Internet. Some studies have found that many college students are repeatedly bullied by other individuals in the process of electronic information communication. Cyber-Victimization will have many negative effects on the physical and mental state of the bullied. College is the stage of leaving the family and moving towards autonomy and independence, and psychological adaptation problems are easy to occur. Therefore, the current situation of college students being bullied online and its negative effects have attracted much attention. This study used the Internet bullying Scale, coping self-efficacy scale, Chinese College Students' Mental Health Screening Scale and emotional regulation questionnaire to conduct a questionnaire survey on 1454 college students from two universities in Wuhan. A total of 39 incomplete and unserious questionnaires were deleted, and 1415 valid questionnaires were obtained. The purpose of this study is to explore the relationship between cyber-victimization, coping self-efficacy, cognitive reappraisal and internalization, and explore the mediating effect of coping self-efficacy between cyber-victimization and internalization, and the moderating effect of cognitive reappraisal between cyber-victimization and coping self-efficacy. SPSS 24.0 and Mplus 7.4 were used to statistically analyze the data, and the following conclusions were reached :(1) cyber-victimization of college students positively predicted internalization problems. (2) After the inclusion of coping self-efficacy as a mediating variable, the prediction effect of cyber-victimization was still significant: coping self-efficacy partially mediated the relationship between cyber-victimization and internalization

problems. (3) The moderating effect of cognitive reappraisal on the relationship between cyber-victimization and coping self-efficacy of college students was significant. When subjected to cyber-victimization, college students with high cognitive reappraisal level experienced a slower decline in coping self-efficacy than those with low cognitive reappraisal level. Cushioning the influence of online bullying on college students' self-efficacy. This study explored the internal mechanism of college students' internalization problems positively predicted by cyber-victimization, and put forward corresponding countermeasures and suggestions from the aspects of college students themselves, school and family, aiming at reducing the internalization problems of college students suffering from online bullying and promoting their physical and mental development

2 布鲁塞尔自由大学心理学院神经科学中心，比利时

摘要 近些年来，互联网理财行业快速发展，人们的经济意识日渐增强，对互联网使用较为熟练的年轻人正成为互联网理财消费的重要群体。年轻用户虽然在数量上占据优势，但在实际收益方面的表现却逊于中老年投资者，这在一定程度上反映了年轻投资者在理性决策方面存在的不足。以往研究表明，眼睛注视作为极其常见的社会线索之一，对促进理性决策具有一定作用。因此，为更好地了解年轻用户在线上投资的决策偏好与影响因素，探索降低年轻人在风险情境下非理性决策的方法，本研究采用改编自“亚洲疾病问题”的基金购买框架任务，在北京地区招募 133 名平均年龄 23.50 岁的年轻被试参与实验，考察不同情绪类型的眼睛注视与框架类型（获益框架，损失框架）对年轻人框架效应及风险倾向的影响。结果发现，所有被试均表现出框架效应，且消极注视增强了被试的框架易感性，即消极眼睛组被试的框架效应显著强于非消极眼睛组。同时，所有被试在损失框架下的风险寻求倾向均高于获益框架条件，消极注视仅在损失框架下促进了被试的风险寻求行为。上述结果表明，不同情绪类型的眼睛注视线索会与框架类型对个体的风险决策产生共同作用。这也为促进个体的理性决策提供了新的思路，即通过适当操纵社会线索影响投资者的风险决策，从而达到降低框架效应，促进投资者理性消费的目的。

Influence of eye gaze on risky decision-making in fund investment

Hui Xu¹, Meijia Li², Huamao Peng¹

1 Institute of Developmental Psychology, Beijing Normal University, Beijing, 100875

2 Faculty of Psychology and Center for Neuroscience, Vrije Universiteit Brussel, Belgium

Abstract: In recent years, the rapid development of online financial management attracts lots of new investors to join in, especially young people. How to make rational decisions in fund investment remains an unsolved problem. Previous studies have suggested that eye gaze made sense in sustaining prosocial behavior and promoting rational decision making. However, most studies focused on the effect of the watching eye, ignoring the fact that eye gaze often comes with emotion in real life. Given the importance of emotion in the decision-making process, in the present study, we hypothesized that 1) comparing to the control group, eye gaze might decrease ones' framing effect, especially positive eye gaze; 2) emotional eye gaze might influence ones' decision-making process, decision makers preferred deliberative processes when being watched; 3) emotional eye gaze might affect ones' risk-seeking tendency under different frames, being related to sensitivity to loss, positive eye gaze might decrease ones' risk-seeking behavior under the loss frame, and negative eye gaze was just the opposite.

To test above the hypotheses and explore how emotional eye gaze influences young investors' framing effect in fund investment, 133 healthy young participants with a mean age of 23.50 years were recruited and randomly assigned to four groups to perform the fund decision-making task. The present study created fund decision scenarios

adopted from the “Asian Disease Problem” paradigm, and further explored the possible influence of emotional eye gaze on risk-seeking tendency and different frame (e.g., gain/loss). Eye movement measures, such as the number of fixations, were used to explore participants’ attention allocation to decision materials.

The results on framing effect showed that the main effect of eye gaze was significant, which suggested that the framing effect was influenced by emotional eye gaze. Follow-up analyses revealed that the framing effect of the negative eye gaze group was significantly larger than that of the non-negative eye gaze groups (i.e., positive and neutral eye gaze group). Neutral eye gaze would significantly reduce the frame susceptibility comparing to the negative eye gaze group and the control group. In addition, there was no significant difference between the control group and the positive eye gaze group and negative eye gaze group, respectively. Considering participants’ risk-seeking tendency, the main effect of the frame was significant, suggesting that all participants exhibited framing effect. Moreover, the interaction between eye gaze (negative/positive/neutral eye gaze group and control group) and frame (gain/loss) was significant. Moreover, negative eye gaze nudged participants towards risk-seeking behaviors, and non-negative eye gaze decreased risk-seeking relatively in the loss frame, and there was no difference among the four groups in the gain frame.

In conclusion, the present study confirmed that social cues (e.g., eye gaze) would interact with frame type to influence ones’ rational decision-making and risk-seeking behaviors. To be more specific, neutral eye gaze and positive eye gaze led to relatively congruent decision-making and more risk aversion behaviors, but negative gaze raised risk-seeking behaviors. Our findings highlight the importance of emotional social gaze in decision making.

电子媒体使用与 3-5 岁儿童社交-情绪发展的关系

徐婧雯¹ 许清凝¹ 刘少英¹ (通讯作者)

¹ 浙江理工大学理学院心理系, 杭州, 310018, syliu@zstu.edu.cn

摘要 社交-情绪发展是指儿童与他人进行积极互动所需技能的发展和有效调节情绪的能力的发展。儿童早期是情绪和行为问题发生的关键时期,应及时对儿童社交-情绪发展进行筛查并确定影响儿童社交-情绪问题行为发生的因素。根据 Sameroff 交互作用模型,儿童社会-情绪发展受到儿童自身特征、家庭因素、科技微环境等因素持续动态交互作用的影响。随着科技的发展,电子媒体(电视、手机、电脑等)的出现正逐渐改变着亲子交互的环境,并对儿童的发展产生着重要的影响。本研究旨在探究不同电子媒体使用习惯与 3-5 岁儿童社交-情绪发展的关系。采用自编一般人口学问卷、儿童电子媒体使用调查问卷和《年龄与发育进程问卷:社交-情绪(第 2 版)》,由儿童父母报告完成,调查儿童 1069 名,结果发现:1) 3~5 岁儿童社交-情绪发展可疑迟缓率 20.9%,其中 3、4、5 岁组迟缓率分别为 30.9%、21.8%、17.7%,3 岁组迟缓率显著低于 5 岁组($\chi^2=11.699$, $P=0.003$),男生迟缓率显著高于女生(23.9% vs 17.5%; $\chi^2=6.545$, $P=0.011$),低 SES 组迟缓率显著高于高 SES 组(27.4% vs 15.4%; $\chi^2=8.919$, $P=0.012$);2) 儿童电子媒体使用率 99.4%,5 岁组每天平均使用时间>1 小时人数显著高于 3 岁组(31.9% vs 18.5%; $\chi^2=10.966$, $P=0.004$),高 SES 组比低 SES 组更多观看教育类内容的视频(73.6% vs 49.5%; $\chi^2=25.147$, $P<0.000$)、更常针对观看内容进行亲子互动(49.0% vs 32.1%; $\chi^2=11.915$, $P=0.003$)、更少同时使用多台媒体(10.6% vs 19.4%; $\chi^2=7.146$, $P=0.028$);3) 电子媒体使用影响儿童社交-情绪发展,使用时间>1 小时/天组的迟缓率高于<1 小时/天组(28.5% vs 17.6%; $\chi^2=15.457$, $P<0.000$)、同时使用多台媒体组迟缓率高于不同时使用组(31.3% vs 19.0%; $\chi^2=11.670$, $P=0.001$),常观看教育类内容组迟缓率低于不常观看组(16.1% vs 28.5%; $\chi^2=23.292$, $P<0.000$)、常针对观看内容与父母进行亲子互动组迟缓率低于不常互动组(12.8% vs 26.2%; $\chi^2=27.768$, $P<0.000$)。

Electronic media use and social-emotional development in children aged 3-5 years

Jingwen Xu¹, Qingning Xu¹, Shaoying Liu¹ (corresponding author)

¹ Zhejiang Sci-Tech University, HangZhou, Zhejiang

Abstract: Social-emotional development refers to the development of skills necessary for children to interact positively with others and the ability to regulate emotions effectively. Early childhood is a critical period for the onset of emotional and behavioral problems.. It is necessary to screen the social and emotional development of children in time and determine the factors affecting the occurrence of social and emotional problems in children. According to the Sameroff interaction model, children's social-emotional development is influenced by the continuous dynamic interaction of children's characteristics, family factors, and science and technology microenvironment. With the development of science and technology, the appearance of electronic media (TV, mobile phone, computer, etc.) is gradually changing the parent-child interaction environment, and has an important impact on children's development. The purpose of this study was to explore the relationship between different electronic media use habits and social-emotional development of children aged 3-5 years. Using the self-compiled general demographic questionnaire, the Children's Electronic media use questionnaire and the Ages & Stages Questionnaires: Social-Emotional (ASQ:SE-2), the survey was completed by the parents of 1069 children. The results showed that:1) The suspected social-emotional developmental delay of children aged 3 to 5 was 20.9%, among which the delay rate of 3, 4 and 5 years group was 30.9%, 21.8% and 17.7%, respectively. The retardation rate of 3 years old was significantly lower than that of 5 years old ($\chi^2=11.699$, $P=0.003$), more boys than girls had scores above the cut-off (23.9% vs 17.5%; $\chi^2=6.545$, $P=0.011$), the delay rate of low SES group was significantly higher than that of high SES group (27.4% vs 15.4%; $\chi^2=8.919$, $P=0.012$);2) Electronic media usage rate of children is 99.4%, average daily use time of 5-year-old group more than 1-hour was significantly higher than the 3-year group (31.9% vs 18.5%; $\chi^2=10.966$, $P=0.004$), the high SES group watched more educational videos than the low SES group (73.6% vs 49.5%; $\chi^2=25.147$, $P<0.000$), more frequent parent-child interaction for watching content (49.0% vs 32.1%; $\chi^2=11.915$, $P=0.003$), less use of multiple media at the same time (10.6% vs 19.4%; $\chi^2=7.146$, $P=0.028$);3) Electronic media use affects children's social-emotional development, use time more than 1 hour/day group had a higher delay rate than less.1 hour/day group (28.5% vs 17.6%; $\chi^2=15.457$, $P<0.000$), the delay rate of the group using multiple media at the same time was higher than that of the group not using media at the same time (31.3% vs 19.0%; $\chi^2=11.670$, $P=0.001$), the delay rate of the group who often watched educational content was lower than that of the group who rarely watched educational content (16.1% vs 28.5%; $\chi^2=23.292$, $P<0.000$), the delay rate of the group who frequently interact with their parents for watching content was lower than that of the group who rarely interact with their parents (12.8% vs 26.2%; $\chi^2=27.768$, $P<0.000$).

大学生人际关系与社交能力的关系：一个多重中介模型

徐文希¹ 张文渊² (通讯作者)

¹ 长江大学教育与体育学院, 荆州, 434000

² 长江大学教育与体育学院心理系, 荆州, 434000, E-mail: 184404997@qq.com

摘要 人际关系是指人在交往过程中心理上的直接联系和距离, 是社会人群因交往而构成的相互依存和相互联系的社会关系, 反映了个人寻求满足及社会需求的心理状态, 同样也是当代大学生社会交往的基础, 是其日常生活必不可少的一环。大学时期是社会性及心理逐渐成熟的重要时期, 对于人际关系的需要尤为强烈。更重要的是, 人际关系问题也是当代大学生在自身发展过程中面临的主要困扰之一, 与大学生的社交能力的发展紧密相连。人际关系是否影响大学生的社交能力以及如何影响的问题引起研究者的关注。对此, 研究者认为积极心理资本是解释人际关系对社交能力影响作用机制的切入点, 积极心理资本可以为大学生社交能力

的发展提供心理支持。基于此,本研究拟深入探究人际关系与社交能力发展之间的关系机制,以及积极心理资本在其中的作用。研究者采用人际关系综合诊断量表、青年学生社交能力评定问卷、积极心理资本问卷,对济南的 633 名大学生进行调查。结果表明:(1)大学生人际关系对其社交能力有正向预测作用;(2)大学生人际关系、积极心理资本及社交能力之间均存在显著的正相关关系;(3)在大学生人际关系与社交能力的关系中,积极心理资本存在多重中介效应,大学生人际分别通过自我、韧性和乐观间接预测社交能力水平。具体而言,在大学生人际关系对社交能力的预测关系中,积极心理资本扮演着多重中介角色。研究结果强调了人际关系不仅能直接影响大学生社交能力的水平,还可以通过积极心理资本的间接作用对大学生社交能力产生影响;不仅有助于揭示大学生人际关系与社交能力关系中的内在影响因素,还能为促进大学生社交能力发展提供了新的发展路径与参考意见,为缓解大学生社交焦虑提供了心理干预指导。

The Relationship between Interpersonal Relationship and Social Ability of College Students: A Parallel Mediation Model

Wenxi Xu¹, Wenyuan Zhang²

1 School of Education and Physical Education, Yangtze University, Jingzhou, 434000

2 Department of Psychology, School of Education and Physical Education, Yangtze University, Jingzhou, 434000, E-mail: 184404997@qq.com

Abstract: Interpersonal relationship refers to the direct psychological contact and distance between people in the process of communication. It is an interdependent and interrelated social relationship formed by social groups due to communication, which reflects the psychological state of individuals seeking satisfaction and social needs. It is also the foundation of contemporary college students' social communication and an indispensable part of their daily life. College is an important period for social and psychological maturity, and the need for interpersonal relationships is particularly strong. More importantly, interpersonal relationship is also one of the main problems faced by contemporary college students in their own development process, which is closely related to the development of college students' social ability. Whether interpersonal relationship affects college students' social ability and how to influence it has attracted researchers' attention. Therefore, researchers think that positive psychological capital is the starting point to explain the mechanism of interpersonal relationship's influence on social ability, and positive psychological capital can provide psychological support for the development of college students' social ability. Based on this, this study intends to deeply explore the relationship mechanism between interpersonal relationship and social ability development, and the role of positive psychological capital in it. The researcher investigated 633 college students in Jinan by using the Comprehensive Diagnostic Scale of Interpersonal Relationship, Social Ability Assessment Questionnaire of Young Students and Positive Psychological Capital Questionnaire. The results show that: (1) college students' interpersonal relationship can positively predict their social ability; (2) There is a significant positive correlation among interpersonal relationship, positive psychological capital and social ability of college students; (3) In the relationship between college students' interpersonal relationship and social ability, positive psychological capital has multiple mediating effects, and college students' interpersonal relationship indirectly predicts the level of social ability through self, resilience and optimism. Specifically, positive psychological capital plays multiple mediating roles in the predictive relationship between interpersonal relationship and social ability of college students. The results emphasize that interpersonal relationship can not only directly affect the level of college students' social ability, but also have an impact on college students' social ability through the indirect effect of positive psychological capital. It not only helps to reveal the internal influencing factors in the relationship between interpersonal relationship and social ability of college students, but also provides a new development path and reference for promoting the development of college students' social ability, and provides psychological intervention guidance for relieving college students' social anxiety.

父母教育期望、领悟社会支持、学业情绪 对高中生学习投入的影响研究

许楠¹ 施长君²

1 哈尔滨师范大学, 哈尔滨, 150025

2 哈尔滨师范大学教育科学学院, 哈尔滨, 150025, E-mail:1821524565@qq.com

摘 要 中国人向来注重家庭, 注重子女教育, 望子成龙是中国家庭的普遍期待。家长对子女的未来发展充满希望, 对子女的教育有许多期盼。调查表明, 目前我国有超过三分之一的中学生学习投入不足, 学习投入的不足会直接影响学习质量和效率。高中生正处于青春期, 父母、教师和同伴是对其发展产生关键影响的重要他人, 家庭、社会等因素是影响青少年身心发展的重要方面, 个体在遇到困境或者情绪困扰时, 也经常会向其寻求帮助。

本研究从父母教育期望的角度对高中生的学习投入进行一系列调查, 采用父母教育期望量表、领悟社会支持量表、学业情绪量表与学习投入量表对 550 名高一至高三的学生进行问卷调查, 考察高中生父母教育期望、领悟社会支持、学业情绪与学习投入的状况, 检验高中生父母教育期望与学习投入的关系, 并进一步探究领悟社会支持与学业情绪在其中所起的链式中介作用, 以阐述父母教育期望对学习投入的影响机制。通过 SPSS22.0、Mplus7.4 对数据进行统计处理与分析, 得出如下研究结果: (1) 高中生的父母教育期望、领悟社会支持、学业情绪与学习投入的整体水平较好; (2) 父母教育期望、领悟社会支持、学业情绪、学习投入在性别、年级、是否独生、以及父母文化教育程度等人口学变量上存在差异; (3) 高中生父母教育期望可以正向预测学习投入; (4) 领悟社会支持、学业情绪在父母教育期望对学习投入上起链式中介作用。

通过对研究结果分析得出以下结论: (1) 父母教育期望的适度提高有助于高中生学习投入的提升; (2) 合理范围内, 提高父母教育期望, 可以增强学生的领悟社会支持与学业情绪, 进而提升高中生的学习投入。

A Study on the Influence of Parents' Educational Expectation, Perceived Social Support and Academic Emotion on High School Students' Study Engagement

Xu Nan¹, Shi Changjun²

Harbin Normal University of China

Abstract: Chinese people always pay attention to family and their children's education. It is the common expectation for parents to hope their children can become dragon and phoenix. Parents are full of hope for their children's future development, so they naturally have many expectations for their children's education. The survey shows that more than one third of middle school students have insufficient investment on learning, which will inevitably affect the quality and efficiency of learning. Senior high school students are in adolescence, and parents, teachers and peers are important others who have a key impact on their development. Family, society and other factors are important aspects that affect teenagers' physical and mental development. When individuals encounter difficulties or emotional distress, they often seek help from them.

This study makes a series of investigations on high school students' study investment from the perspective of parents' educational expectations. A questionnaire survey was conducted among 550 students from Grade One to Grade Three by using Parent Education Expectation Scale, Perceived Social Support Scale, Academic Emotion Scale and Study Engagement scale to investigate the status of parents' education expectation, perceived social support, academic emotion and study engagement of senior high school students, to test the relationship between parents' education expectation and study engagement, and to further explore the chain intermediary role of perceived social support and academic emotion, so as to explain the influence mechanism of parents' education expectation on study

engagement. Through SPSS22.0 and Mplus7.4, the data are statistically processed and analyzed, and the following research results are obtained:

The overall level of high school students' parents' educational expectation, perceived social support, academic emotion and study engagement study engagement is good; (2) Parents' educational expectation, perceived social support, academic emotion, and study engagement are different in demographic variables such as gender, grade, whether they are only children, and parents' cultural education level; (3) High school students' parents' educational expectation can positively predict their study engagement; (4) Comprehension of social support and academic emotion play a chain mediating role in parents' educational expectation and study engagement.

Through the analysis of the research results, the following conclusions are drawn: (1) Moderate improvement of parents' educational expectation is helpful to the promotion of high school students' learning investment; (2) In a reasonable range, raising parents' educational expectations can enhance students' understanding of social support and academic emotions, and then enhance high school students' study engagement.

Keywords: parents' educational expectation, perceived social support, academic emotion, study engagement

大学生敬畏感对冒险行为的影响：自我控制的中介作用

杨毅博¹ 周炎根²

2 常熟理工学院师范学院，苏州，215500，通讯作者 E-mail: 502296489@qq.com

摘 要 冒险行为对大学生身心健康的发展十分不利，会阻碍其个性、社会性的发展。敬畏感作为一种重要的积极情绪，它对于冒险行为的影响机制尚未得到充分研究。近些年来，随着对自我控制的研究逐渐深入，研究者发现敬畏感与自我控制、自我控制与冒险行为之间存在着紧密联系。所以，本研究用问卷调查和实验法探讨敬畏感对冒险行为的影响，并考察了自我控制在其中的中介作用。预实验要求在实验室条件下，选取30名被试观看9段视频，选取了能够有效诱发敬畏感的实验材料。研究一以553名大学生为研究对象，用包含有敬畏情绪的特质性积极情绪量表、自我控制量表、特定领域风险评估成人版问卷进行了问卷测量；研究二在实验室中，采用2(自我控制：高自我控制 vs 低自我控制) × 3(情绪：高敬畏感 vs 低敬畏感 vs 中性情绪)组间实验设计，因变量为气球冒险任务下所测量的得分，对被试的行为进行了测量。结果发现(1)敬畏感与自我控制之间呈显著性正相关，敬畏感与自我控制、冒险行为之间呈显著负相关，(2)自我控制在敬畏感与冒险行为之间起部分中介作用，具体来说，敬畏感通过自我控制影响大学生冒险行为。上述研究结果显示，敬畏感作为一种积极情绪，可以通过自我控制的中介作用，减少大学生的冒险行为。

关键词 敬畏感，冒险行为，自我控制

The Influence of Awe on the risk-taking behavior in College Students: The Mediating role of the Self-control

Yang Yibo¹, Zhou Yangen²

Nanjing Normal University, Nanjing, 210024

Normal College of Changshu Institute of Technology, Suzhou, 215500

Abstract: The risk-taking behavior is very harmful to the development of physical and mental health of college students, and will hinder their personality and social development. As an important positive emotion, the influence mechanism of awe on the risk-taking behavior has not been fully studied. In recent years, with the deepening of the research on the self-control, researchers have found a close relationship between awe and the self-control, and between the self-control and the risk-taking behavior. Therefore, this paper explored the influence of awe on risky behavior by questionnaire and experiment, and examined the mediating role of self-control. In the pre-experiment, 30 subjects were selected to watch 9 videos under laboratory conditions, and experimental materials that could effectively induce the sense of awe were selected. In the first study, 553 college students were selected as the study

subjects, and the questionnaires were measured by Dispositional Personality Emotions Scales (DPES), Self-control Scale (SCS), and Domain-Specific Risk-Taking (Adult)Scale—RT scale. In study 2, participants' behavior was measured in a 2 (the self-control: high self-control vs low self-control) x 3 (emotion: high awe vs low awe vs. neutral emotion) intergroup design in the laboratory. The dependent variable was the score measured under the balloon adventure task. The results showed that (1) there was a significant positive correlation between the sense of awe and self-control, and a significant negative correlation between the sense of awe and self-control and risk-taking behavior. (2) the self-control played a partial mediating role between the sense of awe and risk-taking behavior. Specifically, the sense of awe influenced the risk-taking behavior of college students through self-control. The above research results show that the sense of awe, as a positive emotion, can reduce the risk-taking behavior of college students through the mediation of self-control.

Keywords: awe, risk-taking behaviors, self-control

高中生家庭教养方式、亲子依恋、心理弹性与手机依赖的关系研究

叶冬娇¹ 施长君²

1 哈尔滨师范大学, 哈尔滨, 150025

2 哈尔滨师范大学教育科学学院, 哈尔滨, 150025, E-mail:hsd.scj@126.com

摘要 中国互联网络信息中心第45次调查报告显示,截止到2020年3月,我国网民规模为9.04亿,手机网民规模达到8.97亿,占比高达99.3%。截止到2019年,我国未成年网民规模为1.75亿。研究显示,青少年的手机依赖比率在30%以上。高中生处于青春期后期并且面临着人生重要转折的高考,因此,高中生的手机使用和手机依赖成了全社会关注的议题。手机依赖是个体由于过度使用手机,对其心理、生理和社会功能等造成负面影响的不良行为。如长时间使用手机会造成颈椎受伤、睡眠困难、视力下降等生理问题,也会产生对手机强烈的、持续的渴求感与依赖感,进而发展为成瘾行为。研究表明,手机依赖的影响因素包括人口学、家庭、社会、学校等外部因素,也包括内在的个体心理因素,发生机制是外部因素通过内在的个体心理因素影响手机依赖。本文的核心是寻找影响高中生手机依赖的决定性外部因素和起桥梁作用的心理因素及其作用机制。研究表明,家庭教养方式是影响个体问题行为形成和发展主要因素之一,且家庭教养方式通过依恋风格间接影响手机依赖。良好的家庭教养方式造就了优质的亲子依恋,进而促进青少年心理弹性的发展,心理弹性水平高的个体更不容易出现手机依赖等问题行为。本研究综合家庭因素、个体心理因素对高中生手机依赖行为的影响,采用中学生手机依赖量表、父母教养方式量表、心理弹性问卷、亲子依恋问卷对某省4所学校的600名高中生进行问卷调查,找出高中生家庭教养方式、亲子依恋、心理弹性和手机依赖四者间的关系及作用机制。结果表明:(1)不同类型的家庭教养方式对高中生手机依赖有直接影响(2)亲子依恋能负向预测高中生手机依赖(3)心理弹性能负向预测高中生手机依赖(4)亲子依恋、心理弹性在高中生家庭教养方式与手机依赖间存在链式中介作用。这一结果证明,家庭和学校应该关注当今手机低龄化社会背景下的高中生手机依赖情况,注重从家庭和学生个体两方面来降低高中生的手机依赖程度,养成正确的手机使用习惯,促进其身心健康发展。

Research on the relationship among senior high school students' family parenting style, parent-child attachment, resilience and mobile phone dependence

Ye Dongjiao, Shi Changjun

Harbin Normal University, Harbin

Abstract: According to the 45th survey report of China Internet Network Information Center, as of March 2020, the number of Internet users in our country was 904 million, and the number of mobile Internet users reached 897 million, accounting for 99.3%. As of 2019, the number of underage Internet users in our country is 175 million. Studies have

shown that teenagers' mobile phone dependence rate is over 30%. High school students are in the late adolescence and are facing the college entrance examination of an important turning point in their lives. Therefore, high school students' mobile phone use and mobile phone dependence have become issues of concern to the whole society. Mobile phone dependence is an unhealthy behavior that causes negative effects on the psychological, physical and social functions of individuals due to excessive use of mobile phones. For example, long-term use of mobile phones can cause physical problems such as cervical spine injury, sleep difficulties, and decreased vision. It will also produce a strong and continuous sense of craving and dependence on mobile phones, and then develop addictive behaviors. Studies have shown that the influencing factors of mobile phone dependence include external factors such as demography, family, society, and school, as well as internal individual psychological factors. The mechanism is that external factors affect mobile phone dependence through internal individual psychological factors. The core of this article is to find the decisive external factors that affect high school students' mobile phone dependence and the psychological factors that act as bridges and their mechanisms. Researches showed that family parenting style is one of the main factors that affect the formation and development of individual problem behaviors, and family parenting styles indirectly affect mobile phone dependence through attachment style. Good family parenting style create high-quality parent-child attachment, which in turn promotes the development of adolescents' resilience. Individuals with high resilience levels are less likely to have problem behaviors such as mobile phone dependence. This study integrated family factors and individual psychological factors on the mobile phone dependence behavior of high school students. The Mobile Phone Dependence Questionnaire for middle school students, Parenting Style Questionnaire, Resilience Scale for Chinese Adolescents, and the Parent-child Attachment Questionnaire were used to survey 600 high school students in 4 schools in a Province. To find out the relationship and mechanism of family parenting style, parent-child attachment, resilience, and mobile phone dependence among high school students. The results showed that: (1) Different types of family parenting style have a direct impact on high school students' mobile phone dependence (2) Parent-child attachment can negatively predict high school students' mobile phone dependence (3) Resilience can negatively predict high school students' mobile phone dependence (4) Parent-child attachment and resilience have a chain mediating role between the family parenting style and mobile phone dependence of high school students. This result proved that under the social background of the younger age of mobile phones, families and schools should pay attention to the mobile phone dependence of high school students, reducing the mobile phone dependence of high school students from both the family and individual two sides. Develop correct mobile phone usage habits and promote their physical and mental health.

2 赣南师范大学教育科学学院, 江西, 341000, 949065921@qq.com

摘 要 近年来, 中小学心理健康教育已经引起国家高度重视, 青少年问题行为也受到许多研究者的关注。据已有的文献可知, 青少年问题行为产生的影响因素及其干预措施, 对我们了解这一问题具有非常重要的意义。因此本文主要从青少年问题行为的概念起源及相关概念界定、分类、相关影响因素、干预措施等方面对青少年问题行为进行了综述。自 20 世纪 20 年代美国学者 Wickman 提出“问题行为”这一概念以来, 就受到国内外的普遍关注。国外的青少年问题行为主要指的是不健康的、危险的, 甚至对生命构成威胁的行为, 国内则指的是青少年在社会化过程中, 由于社会适应不良而出现偏离社会规范的行为。这些在青少年群体中出现的问题行为一般可以分为两类: 内隐性问题行为(如焦虑、抑郁等心理性行为)和外显性问题行为(如违纪、攻击等扰乱性行为)。根据生态系统理论来看, 导致青少年问题行为产生的原因与其微系统和中系统有很大关系。研究证明, 青少年的问题行为受其性别、人格特征、家庭环境、学校环境、社区环境的影响。目前对于青少年问题行为的干预研究主要集中在认知行为疗法、人本主义疗法和家庭系统治疗中。但是已有的研究

中仍旧存在一些不足,例如,国内在研究青少年问题行为的影响因素时多聚焦于家庭和学校方面,而关于社区方面的研究甚少,我们在未来的研究中可以深入该方面的研究,以此为我们在做青少年工作时提供思路,有针对性地促使青少年群体身心健康发展。

Literature Review of Adolescent Problem Behavior

Yu Qian¹, Gan Lin²

1 School of Educational Sciences, Gannan Normal University, Ganzhou, 341000

2 School of Educational Sciences, Gannan Normal University, Jiangxi, 341000, 949065921@qq.com

Abstract: In recent years, mental health education in primary and secondary schools has attracted great attention of the state, and adolescent problem behavior has also attracted the attention of many researchers. According to the existing literature, the influencing factors and intervention measures of adolescent problem behavior are of great significance for us to understand this problem. Therefore, this paper summarizes the concept origin, definition, classification, related influencing factors and intervention measures of adolescent problem behavior. Since the American scholar Wickman put forward the concept of "problem behavior" in the 1920s, it has attracted widespread attention at home and abroad. Foreign teenagers' problem behaviors mainly refer to unhealthy, dangerous and even life-threatening behaviors, while domestic ones refer to teenagers' behaviors that deviate from social norms due to poor social adaptation in the process of socialization. These problem behaviors in adolescent groups can generally be divided into two categories: implicit problem behaviors (such as psychological behaviors such as anxiety and depression) and explicit problem behaviors (such as disturbing behaviors such as discipline violation and attack). According to the ecosystem theory, the causes of adolescent problem behavior are closely related to its micro system and mesosystem. Research shows that adolescents' problem behavior is affected by their gender, personality characteristics, family environment, school environment and community environment. At present, the intervention research on adolescent problem behavior mainly focuses on cognitive behavior therapy, humanistic therapy and family system therapy. However, there are still some deficiencies in the existing research. For example, when studying the influencing factors of adolescent problem behavior in China, most of them focus on family and school, while there is little research on community. We can go deep into this research in future research, so as to provide ideas for us to work with adolescents, Promote the physical and mental health development of young people.

2004 至 2018 年青少年孤独感变迁的横断历史研究

占坤明¹ 郑显亮² (通讯作者)

1 赣南师范大学教育科学学院, 赣州, 341000

2 赣南师范大学教育科学学院, 赣州, 341000, zxl2004@sina.com

摘要 随着改革开放, 中国政治、经济和文化都发生了翻天覆地的变化, 青少年的孤独感也可能随之发生改变。孤独感是指自己所期望的交往水平与实际的交往水平产生差距时的一种主观心理感受或体验。而青少年期是孤独感发生、发展的高危期, 青少年的孤独感体验要比其他任何年龄阶段更为常见。那么在过去几十年中我国青少年孤独感到底发生了怎样的变化呢? 通过对青少年孤独感研究的文献进行分析和整理, 有助于我们把握青少年孤独感产生发展的影响因素, 厘清青少年孤独感变迁的基本发展模式。然而现有研究缺少针对青少年孤独感的纵向比较, 为了探讨我国青少年孤独感水平随年代变化的趋势及其与社会指标之间的关系, 本研究采用横断历史研究的方法, 对 2004 至 2018 年间的 33 篇采用邹泓编制的青少年孤独感量表测量我国青少年孤独感的有关文献 (共 25933 名青少年) 进行元分析。结果发现: (1) 孤独感均值在 2004 至 2018 年间增加了 8.15 (效果量 d 为 0.48), 这说明我国青少年孤独感水平有明显的上升趋势; (2) 对样本量进行加权后, 年代可以解释我国青少年孤独感均值 42% 的变异; (3) 城镇化水平 ($r=0.65, p<0.01$)、消费水平指数 ($r=0.64, p<0.01$)、网络普及率 ($r=0.61, p<0.01$)、离婚率 ($r=0.67, p<0.01$) 和犯罪率 ($r=0.66, p<0.01$) 与青少年孤独

感呈显著正相关,这说明高城镇化水平、高消费指数、高网络普及率、高离婚率和高犯罪率都有可能是青少年孤独感变化的预测因子。

A Cross-Temporal Meta-Analysis of changes in adolescents' loneliness in 2004-2018

Zhan Kunming¹, Zheng Xianliang²

1 School of Educational Sciences, Gannan Normal University, Ganzhou, China,341000

2 School of Educational Sciences, Gannan Normal University, Ganzhou, China,341000,
zx12004@sina.com

Abstract: With the reform and opening up, China's politics, economy and culture have undergone tremendous changes, and the loneliness of adolescents may also change. Loneliness is a kind of subjective psychological feeling or experience when there is a gap between the expected level of communication and the actual level of communication. The adolescence is a high-risk period for the occurrence and development of loneliness, and the experience of loneliness of adolescents is more common than any other age. So in the past few decades, what changes have taken place in the sense of loneliness of adolescents in China? Through the analysis and collation of the literature on adolescent loneliness, we can grasp the influencing factors of the generation and development of adolescent loneliness, and clarify the basic development mode of adolescent loneliness. However, there is a lack of longitudinal comparison on adolescent loneliness. In order to explore the changing trend of adolescents' loneliness level with age and its relationship with social indicators, by utilizing the cross-temporal meta-analysis, the present study analyzed 33 studies (25933 adolescents) which investigated Chinese adolescent loneliness with the Zou Hong's adolescent loneliness scale during 2004-2018. The results show that: (1) the average loneliness increased by 8.15 from 2004 to 2018 (the effect d is 0.48), which indicates that the loneliness level of Chinese adolescents has an obvious upward trend; (2) After weighting the sample size, age can explain 42% of the variation in the mean loneliness of Chinese adolescents; (3) The level of urbanization ($r=0.65, P<0.01$), consumption level index ($r=0.64, P<0.01$), internet penetration rate ($r=0.61, P<0.01$), divorce rate ($r=0.67, P<0.01$) and crime rate ($r=0.66, P<0.01$) were significantly positively correlated with adolescents' loneliness, which indicated that high urbanization level, high consumption index, high internet penetration rate, high divorce rate and high crime rate may be the predictors of the change of adolescents' loneliness.

快乐表情影响婴儿面孔种族偏好

张冰冰¹ 王安琪¹ 陈佳丽¹ 赵斌¹ 刘少英 (通讯作者)¹

¹ 浙江理工大学理学院心理系, 杭州, 310018, syliu@zstu.edu.cn

摘要 面孔信息既包括变化特质(如表情),也包括不变特质(如种族、性别)。成人研究中发现,面孔加工中两类属性会相互影响,存在同时加工。而在婴儿期面孔加工发展研究中,这两类面孔属性加工发展研究大多是分别进行探讨,两者之间的关系研究探讨较少。已有研究发现,3个月婴儿偏好本族面孔,9个月婴儿偏好他族面孔,婴儿在1岁以内表现出面孔种族识别的知觉窄化现象。也有研究发现,婴儿对本族和他族面孔的知觉加工偏向与情绪效价相联结。例如,9个月婴儿将本族面孔与积极情绪相关联,他族面孔与消极情绪相关联,3个月婴儿对种族和情绪效价之间则不存在这种联结。然而,表情是否影响婴儿面孔种族的知觉加工尚不清楚,本研究期望探讨快乐表情是否影响婴儿面孔种族偏好的发展。本研究采用视觉配对比较范式,配对呈现亚洲和非洲的女性面孔,分为中性表情和快乐表情两个条件。两个条件的材料选用相同身份的面孔,招募3个月和9个月的中国婴儿各32名,随机分配到中性表情和快乐表情条件。以婴儿的注视时间比例为指标,采用单样本 t 检验,考察婴儿对本族面孔的注视比例是否与随机水平存在显著差异。结果发现,在中性表情条件下,3个月婴儿偏好本族面孔,9个月婴儿偏好他族面孔,与以往研究一致;而在快乐表情条

件下, 3 个月和 9 个月婴儿均未表现出种族偏好。研究结果表明, 快乐表情会影响婴儿的面孔种族偏好, 面孔的变化属性与不变属性的加工在婴儿期存在联系。

The Influence of Happy Expression on Race Preferences in Infancy

Bingbing Zhang¹, Angie Wang¹, Jiali Chen¹, Bin Zhao¹, Shaoying Liu¹

¹ Institute of Psychology, Zhejiang Sci-Tech University, Hang Zhou, 310018, sylu@zstu.edu.cn

Abstract: Face information includes variant attributes (e.g., emotional expression) and invariant attributes (e.g., race and gender). Many studies have found that the two types of attributes interact with each other in face processing in adult. However, little is known about the interaction between the two kinds of attributes in infant. Previous studies have found that 3-month-old infants demonstrate a significant preference for own-race faces, 9-month-old infants demonstrate a preference for other-race faces. And there are associations between face race and music emotional valence in the first year of life. 9-month-old infants can associate own-race faces with positive emotions, and other-race faces with negative emotions, while 3-month-old infants have no such association between race and emotional valence. But it is not clear whether facial expressions can change the perceptual processing of facial race in infants. This study aims to explore whether happy expressions can change the development of facial race preference in infants by a visual preference paradigm. We used Asian and African female faces displaying neutral or happy expression to test 3- and 9-month-old Chinese infants' preference to faces of different race in two expression conditions. The results showed that in the neutral expression condition, 3-month-old infants preferred own-race faces and 9-month-old infants preferred other-race faces, which was consistent with previous studies; However, in the happy expression condition, 3-month-old and 9-month-old infants did not show racial preference. The results show that happy expression can influence the infants' racial preference, and the processing of variant and invariant attributes of faces is related in infancy.

Keywords: infant, face processing, happy expression, race preference

课程学习经历提升青少年社会参与素养：链式中介效应

张畅¹ 丁玉婷¹ 程立春² 陈宁¹（通讯作者）

¹ 上海师范大学心理系, 上海, 200233, chenning323@163.com

² 上海市奉贤区曙光中学, 上海, 201411

摘要 社会参与素养是学生发展核心素养的一部分, 集中反映了社会对学生发展的要求与指向。培养学生的社会参与素养, 旨在培养学生应具备的, 能够适应终身发展和社会发展需要的必备品格和关键能力。依据各国学生发展核心素养的要求, 利他品格和社会参与能力是社会参与素养的重要组成部分。对于青少年来说, 以培养社会参与素养为核心的特色课程学习是提高其社会参与品格和能力的重要途径。而课程实践经验及其效果检验更是核心素养培育是否具有生命力的关键所在。依据发展资源的堆积假设, 课程学习数量（外部资源）的累积效应是促进社会参与素养的基础, 同时课程情感体验（内部资源）是课程学习数量累积效应实现的有效支撑, 继而成为激发个体公共服务动机, 提升社会参与素养的关键。因此本研究基于学校的研究范式, 以上海市某中学为样本学校, 以全部在读高中生为研究对象, 采用自编课程学习经历问卷、公共服务动机问卷、利他行为问卷以及青少年领导力问卷, 考察社会参与特色课程学习经历对青少年社会参与素养的影响机制。结果显示: (1) 利他行为和领导力两问卷二阶因子模型指标拟合良好, 可合并为社会参与素养得分; (2) 修学的特色课程门数（量）、情感体验（质）、公共服务动机和社会参与素养两两显著正相关; (3) 情感体验和公共服务动机在课程学习数量和社会参与素养间发挥完全中介作用; (4) 未能发现基础课程成绩在链式中介中起调节作用。研究为通过加强课程情感体验进而提升青少年核心素养提供了积极启示。

Course Experience Improving Social Participation Competencies: A Chain Mediation Analysis

Zhang Chang, Ding Yuting, Cheng Lichun, Chen Ning
Shanghai Normal University, Shanghai

Abstract: Social participation competencies is a part of core competencies. To develop students' social participation competencies refers to the project to develop the necessary qualities and key capacities of students in the life-long sense of development required by society. For teenagers, learning characteristic courses which aimed at cultivating social participation competencies is an important way to enhance the attitude and abilities of social participation. And examining the effectiveness of the courses is the key to cultivate social participation competencies. A high school in Shanghai offers characteristic courses of social participation competencies for the whole school which provides a vivid sample for this study. Therefore, this study adopts the school-based research paradigm and takes a high school in Shanghai as a sample to explore the specific mechanism of emotional experience (quality) and public service motivation between the number of characteristic courses studied (quantity) and social participation competencies.

A total of 1115 students participated in this survey. There were 528 males and 587 females. They filled out questionnaires regarding course experience, public service motivation and social participation competencies. All of the measures showed good reliability and validity. Among them, the questionnaire of social participation competencies which covered two questionnaires of altruistic behavior and leadership. We analyzed the second order factors, the results showed that the model fitted well ($\chi^2/df=11.58$, $NFI=.87$, $IFI=.88$, $CFI=.88$, $RMSEA=.09$).

Data were analyzed with SPSS 22.0 and PROCESS. Results showed there was no obvious common methods bias using the confirmatory factor analysis. The Process plug-ins was used to analyze the chain mediating effect of emotional experience and public service motivation.

The results indicated that (1) there was a statistically significant positive relationship between the number of characteristic courses studied and emotional experience($r = .08$, $p < .05$), the number of characteristic courses studied and public service motivation($r = .10$, $p < .05$), the number of characteristic courses studied and social participation competencies($r = .19$, $p < .01$). Furthermore, there was a statistically significant positive relationship between emotional experience and public service motivation($r = .37$, $p < .01$), emotional experience and social participation competencies($r = .29$, $p < .01$). In addition, there was a statistically significant positive relationship between public service motivation and social participation competencies($r = .68$, $p < .01$). (2) Emotional experience and public service motivation played a fully mediating role in the relationship between the quantity and social participation competencies. The chain mediating effect accounted for 5.72% of the total effect, 95% *CI*: [.00, .12]. (3) Academic achievement did not play a moderating role in the chain mediation.

These findings suggest that learning characteristic courses can improve students' social participation competencies. At the same time, emotional experience and public service motivation play an important role in this process. The learning of characteristic courses of social participation competencies requires the accumulation of courses and the mobilization of the deep emotional experience, so as to promote the promotion of public service motivation, and provide the cognitive source, emotional source and power source for the formation of social participation competencies.

摘 要 自我建构是自我领域的重要概念, 指个体从自我和他人之间关系的角度来理解自我的认知结构。自我至少包括个体、关系和集体自我三种基本形式, 即三重自我建构。三重自我建构会对个体的认知方式、情绪反应等产生影响, 可见系统考察大学生的三重自我建构具有重要的现实意义。截止 2020 年 3 月, 数字技术的普及率达 64.5%, 数字原住民和数字移民是在数字技术时代下产生的典型且相对普遍的两类人群。数字原住民假说指出, 数字原住民和数字移民在数字技术环境中具有不同的反应模式, 具体表现为数字原住民积极适应并逐渐发展出与环境相匹配的认知和行为特质, 而数字移民被动适应数字化新环境并且仍继续保持原来的认知、思维习惯等。数字原住民和数字移民具有的不同反应模式是否会塑造不同的自我建构呢? 目前数字技术对自我的影响引起研究者关注, 但是少有研究从三重自我建构的视角去考察数字技术对自我的影响。同时, 情境性假设指出, 不同的环境会影响个体的自我建构, 而数字技术作为一种环境变量, 对个体的三重自我建构有何影响呢? 为回答以上问题, 本研究首先采用数字原住民量表对 642 名大学生进行筛选, 最终选取数字原住民 (行为实验: 20 名; ERP 实验: 24 名) 和数字移民 (行为实验: 20 名; ERP 实验: 24 名) 为研究对象, 并采用内隐启动范式从行为和脑电活动上考察数字技术如何影响大学生的三重自我建构及其神经机制。研究表明: (1) 三重自我建构中, 个体自我始终占优势地位; 关系自我和集体自我的相对加工优势取决于加工阶段, 早期阶段关系自我比集体自我更具加工优势, 晚期阶段两者间没有显著差异。 (2) 数字技术影响三重自我建构: 与数字移民相比, 数字原住民可以更快地获取自我相关信息; 数字技术会削弱个体对个体自我相关刺激的识别和加工。总之, 本研究证实并丰富了三重自我建构理论, 同时在情境性假设的基础上丰富了数字原住民假说。

Abstract: Self has been one of the important and intensive research topic in psychology. Among this topic, Self-construction is an important concept, which refers to an individual's understanding of the cognitive structure of self from the perspective of the relationship between self and others. According to the tripartite model of self-construal, self includes individual self, relational self and collective self and they have different effects on cognition, emotion, motivation and social behavior. Therefore, it is of great significance to systematically investigate the tripartite self-construct of individuals. As of March 2020, the penetration rate of digital technology has reached 64.5%. Digital natives and digital immigrants are two typical and relatively common groups in the digital age. Digital natives hypothesis indicated there were different response patterns between digital natives and immigrants: digital natives actively adapted and gradually developed cognitive and behavioral traits that matched the environment, while digital immigrants passively adapted to the new digital environment and still maintained their original cognitive and

thinking habits. Did the different response patterns of digital natives and digital immigrants shape different self-construct? The researchers pay more attention to the digital technology's impact on self-construct, but few researchers examined digital technology's impact on self from the perspective of the tripartite self-construct. Situational primacy hypothesis indicated that different environment will affect the self-construct, and digital technology is a kind of environment variables. How did it affect the individual's the tripartite self-construct? Therefore, 642 participants completed the Chinese version of the Digital Natives Assessment Scale (C-DNAS) firstly, and finally recruited 44 digital natives (behavioral experiment: 20; ERP experiment: 24) and 44 digital immigrants (behavioral experiment: 20; ERP experiment: 24) in the present study. The implicit priming paradigm was adopted to test the differences on tripartite self-construct between digital natives and digital immigrants from the perspective of behavior and ERP. The results showed: (1) Individual self is always dominant while the comparative advantage of the relational self and the collective self depends on the processing stage. In the early stage, the relational self has an advantage over the collective self in the early stage, while there is no significant difference between them in the later stage. (2) Digital technology influences the tripartite self-construct. Digital natives reached self-related information more quickly than digital immigrants and digital technology weakened the recognition and processing of individual self-related stimuli. In conclusion, the present study confirmed and enriched the tripartite self-construct and enriched the digital native hypothesis on the basis of the situational hypothesis.

Keywords: Digital Technology, The Tripartite Self-construct, Implicit Priming Paradigm, Situational Primacy Hypothesis

专制型教养方式对儿童执行控制的影响：基于静息态脑电的研究

张佳贺 严芷璇 蔡丹（通讯作者）

上海师范大学教育学院心理学系，上海，200234，psych911@126.com

摘要 在不同的教养方式中，专制型教养反映出父母提供较少的温暖和支持，且加以更多控制和监管，这种行为约束了儿童的认知发展，对儿童的执行控制能力产生不良影响。以往研究较为充分地探讨了父母教养方式对儿童认知的影响，但对其背后的神经生物学机制知之甚少，尤其是缺乏大脑静息状态神经活动的电生理证据。在定量脑电图参数中，个体 α 峰值频率（iAPF）是人类放松清醒状态下的主要振荡频率，被认为是大脑结构和认知功能成熟的最佳标志。目的：本研究旨在利用行为学方法和脑电技术，从认知心理学和神经生物学两个方面考察父母教养方式与儿童执行控制的关系。方法：研究采用注意网络测试（ANT）范式和父母教养方式问卷，对 40 名 8-11 岁儿童的执行控制网络及其父母的专制型教养方式进行评估，并选取与认知能力相关的静息状态脑电指标：iAPF，对儿童的脑电数据进行分析 and 验证。结果：分层回归分析发现，在控制了孩子的年龄和父母的社会经济地位之后，专制型教养方式显著负向预测儿童的执行控制网络得分和 iAPF。结论：父母专制型教养方式对儿童的执行控制能力产生消极影响，同时在脑电中反映出儿童大脑神经结构发育的相对迟缓。研究扩展了以往关于父母教养方式对儿童认知能力影响的研究，并提供了神经机制水平的证据，具有启发性意义。

关键词 专制型教养，注意网络测验，执行控制，静息态脑电

The effect of authoritarian parenting on children's executive control: a study based on resting EEG

Jiahe Zhang, Zhixuan Yan, Dan Cai

College of Education, Shanghai Normal University, Shanghai, 200234

Abstract: Among different parenting styles, authoritarian parenting reflects that parents provide less warmth and support, and more control and supervision. This behavior restricts children's cognitive development and has a negative impact on children's executive control ability. Although previous studies have fully explored the effect of parenting styles on children's cognitive abilities, little is known about the neurobiological mechanisms behind it,

especially the lack of electrophysiological evidence of neural activity in the resting state of the brain. Among the quantitative EEG parameters, the individual alpha peak frequency (iAPF) is the dominant oscillation frequency during relaxed wakefulness, and is considered to be the best signature of brain architectural and cognitive functional maturation. Purpose: The purpose of this study is to investigate the relationship between parenting styles and children's executive control from two aspects of cognitive psychology and neurobiology by using behavioral methods and electroencephalography technology. Methods: The study used the Attention Network Test (ANT) paradigm and the parenting questionnaire to evaluate the executive control network of 40 children aged 8-11 and the authoritarian parenting style of their parents, and select the resting state EEG index related to cognitive ability: iAPF to analyze and verify children's EEG data. Results: Hierarchical regression analysis found that after controlling for the children's age and parents' socioeconomic status, the authoritarian parenting significantly negatively predicts the children's executive control network and iAPF. Conclusion: The study shows that the authoritarian parenting style of parents has a negative impact on children's executive control, and at the same time exhibits a developmental lag of children's brain neural structure in EEG. This study extends previous studies on the effect of parenting styles on children's cognitive abilities and provides evidence on the level of neural mechanisms.

青少年目睹父母婚姻暴力与网络欺凌： 自我控制的中介作用和父母心理控制的调节作用

张嘉瑛 蒋索（通讯作者）

温州医科大学应用心理学系，温州，325035，jsbnu@163.com

摘要 婚姻暴力是全球性的社会问题，对个体和家庭具有重要影响，青少年目睹父母婚姻暴力与其内外化问题密切相关。本文采用问卷法对 1670 名中小學生进行调查，运用结构方程模型考察自我控制在目睹父母婚姻暴力与网络欺凌间的中介作用和父母心理控制的调节作用，同时等组比较了该模型的性别和年级差异。结果发现：（1）在控制了性别和年级后，目睹父母婚姻暴力能够显著正向预测青少年的网络欺凌；（2）自我控制能够显著中介目睹父母婚姻暴力与网络欺凌的关系；（3）父母心理控制能够显著地调节目睹父母婚姻暴力与网络欺凌的关系，即父母心理控制增加了目睹父母婚姻暴力对网络欺凌的正向预测作用；（4）自我控制和父母心理控制的有调节的中介模型存在显著的性别和年级差异，男生比起女生更容易受到目睹父母婚姻暴力的影响。因此，一方面揭示了目睹父母婚姻暴力对青少年个体的不良影响，同时也为家庭教育提供指导，为了青少年个体的身心健康发展，婚姻暴力的社会治理和干预十分必要。

Witnessing Parental Marital Violence and Cyberbullying in Adolescents: Self-control as a Mediator and Parental Psychological Control as a Moderator

Zhang Jiaying, Jiang Suo (corresponding author)

School of Psychiatry, Department of Psychology, Wenzhou Medical University, Wenzhou, 325035

Corresponding author E-mail: jsbnu@163.com

Abstract: Marital violence is a globally social problem, which has an important impact on individuals and families. Teenagers' witnessing parental marital violence is closely related to internalized and externalized problems. This study examined whether self-control mediated the relation of witnessing parental marital violence and cyberbullying and the moderating role of psychological control. 1670 primary and middle school students participated in the cross-sectional investigation. The results showed that: (1) After controlling gender and grade, witnessing parental marital violence significantly and positively predicted cyberbullying; (2) Self-control partially mediated the relation between witnessing parental marital violence and cyberbullying; (3) Parental psychological control moderated the

relationship between witnessing parental marital violence and cyberbullying. Specifically, parental psychological control increased the positive predictive effect of witnessing parental marital violence on cyberbullying; (4) Structural equation multi-group analysis showed a significant gender and grade differences of the model. Boys are more vulnerable to witnessing marital violence than girls. On the one hand, this study reveals the impact of marital violence on adolescents, on the other hand, it provides guidance for family education. For the physical and mental health of adolescents, it is necessary to intervene marital violence.

父母严厉管教对儿童内化问题行为的影响：自尊的中介作用及友谊质量的调节作用

张伟然 齐冰（通讯作者）

河北大学教育学院，保定，071002

通讯作者 E-mail: qibing@hbu.edu.cn

摘 要 目的：探讨父母严厉管教对儿童内化问题行为的影响及其内在作用机制。方法：采用亲子冲突解决策略量表、儿童行为核查量表、自尊量表以及友谊质量问卷，在石家庄市某公立学校抽取 973 名四到六年级儿童及其父母进行测试。结果：（1）父母心理攻击和体罚与儿童自尊呈显著负相关，与儿童内化问题行为均呈显著正相关，儿童自尊与其内化问题行为均呈显著负相关；（2）父母心理攻击和体罚均显著正向预测儿童内化问题行为；（3）儿童自尊在父母心理攻击和体罚与儿童内化问题行为之间起中介作用；（4）友谊质量在父亲严厉管教对儿童内化问题行为的影响中起调节作用，但不能调节母亲严厉管教对儿童内化问题行为的影响。结论：父母严厉管教能直接预测儿童内化问题行为，也能通过自尊的中介作用影响儿童内化问题行为。在高友谊质量下，父亲心理攻击和体罚对儿童内化问题行为的影响更大。

总之，本研究同时考虑父亲和母亲两种严厉管教方式（心理攻击、体罚）对儿童的影响，较为全面地探讨了父母严厉管教对儿童内化问题行为的作用机制，对改进父母教养方式、预防和减少儿童内化问题行为的发生提供启示。

关键词 父母严厉管教，内化问题行为，自尊，友谊质量

Parental Harsh Discipline and Children's Internalizing Problem Behavior: The Mediating Effect of Self-Esteem and the Moderating Effect of Friendship Quality

ZHANG Wei-ran, QI Bing

College of Education, Hebei University, Baoding 071002, China

Abstract: Objective: This study aims to explore the relationship between parental harsh discipline and children's internalizing problem behavior and uncover its underlying mechanism. Method: The Chinese version of the Parent-Child Conflict Resolution Strategy Scale, the Child Behavior Checklist, the Self-esteem Scale and the Friendship Quality Questionnaire have been performed to investigate 973 children from grade 4 to grade 6 in a public school in Shijiazhuang City and their parents. Results: (1) Paternal and maternal harsh discipline (psychological aggression and corporal punishment) are negatively correlated with children's self-esteem, and are positively correlated with children's internalizing problem behavior. Child self-esteem is negatively correlated with children's internalizing problem behavior. (2) Parental psychological aggression and corporal punishment positively predict children's internalizing problem behavior. (3) Children's self-esteem mediates the relationship between parental harsh discipline and children's internalizing problem behavior. (4) Friendship quality moderates the relationship between fathers' harsh discipline and children's internalizing problem behavior, but doesn't moderate the relationship between mothers' harsh discipline and children's internalizing problem behavior. Conclusions: Parental harsh discipline not

only directly predicts children's internalizing problem behavior, but also affects children's internalizing problem behavior through the mediating effect of self-esteem. For cases with high friendship quality, fathers' harsh discipline (psychological aggression and corporal punishment) has a stronger influence on children's internalizing problem behavior.

In this research, the effects of both paternal and maternal harsh discipline (psychological aggression and corporal punishment) on children have been considered. It may contribute to a better understanding of the effect of parental harsh discipline. Moreover, it can also provide constructive suggestions for preventing and reducing children's internalizing problem behavior.

Keywords: Harsh discipline, Internalizing problem behavior, Self-esteem, Friendship quality

儿童的声誉理解及声誉对其社会行为的影响研究综述

张欣媛 丁芳（通讯作者）

苏州大学教育学院心理学系，苏州，215123, dingfang@suda.edu.cn

摘要 不同领域的成人声誉研究已经取得了一些成果，随着儿童社会性发展研究的深入，声誉与儿童社会行为之间的关系也逐渐受到关注。儿童会依据情境中有关自己的声誉线索，采用声誉管理策略以进行印象管理；也会依据他人的声誉调整自己对于他人的态度和行为。若能利用声誉使得儿童的社会行为更加规范，这将对儿童人际关系、自我管理等方面的发展具有重要意义。因此，本文主要从声誉的概念起源及相关概念辨析、儿童声誉理解的发展规律、声誉的作用、研究不足与展望等方面进行综述。声誉是指个体给外界留下的与道德有关的印象，个体也会在这一过程中得到他人共同的评价、态度和期望。儿童对声誉的理解有一个发展过程：2岁初露声誉理解的萌芽，3岁形成初步声誉理解，5岁能够基本形成声誉理解并为声誉管理做出努力，8岁儿童才能够明确声誉管理意识。声誉线索可以在一定程度上促进儿童的亲社会行为，如合作行为、分享行为等；声誉可促进儿童的公平行为的发展，改善和规范儿童行为。但已有研究存在一些不足，例如，声誉研究少有不同民族及跨文化研究，声誉线索的呈现较少考虑到儿童也存在不同的社会关系。另外，随着认知心理学和认知神经科学的发展，可以使用脑电、眼动这些精密的实验设备来对声誉理解与管理的内在机制进行探究，以及从不同角度入手探究声誉理解与管理的心理机制。

关键词 声誉，声誉理解，亲社会行为，公平，行为规范

A Review of Children's Reputation Understanding and the Influence of Reputation on Their Social Behaviors

Zhang Xinyuan, Ding Fang

Department of Psychology, School of Education, Soochow University, Suzhou

Abstract: Some results have been achieved in different fields of adult reputation researches, with the deepening of the children's social development researches, the relationship between the behavior and reputation has also been paid more and more attention gradually. Children will use reputation management strategies to manage impressions according to their own reputation cues in the situation; they also adjust their attitudes and behaviors towards others according to their reputation. It is significantly meaningful for children's development of interpersonal relationship and self-management, if we could utilize reputation to make children's social behaviors more normative. Therefore, this paper mainly reviews the origin of the concept of reputation and the discrimination of related concepts, the law of the development of children's understanding of reputation, the roles of reputation, and the shortages and prospects of the existing researches. Reputation is defined as the impression related to morality left to the outside world, and individuals acquire others' common evaluations, attitudes and expectations as well. Children's understanding of reputation spans a long period of childhood, from the beginning of reputation understanding at the age of 2, to the initial formation of reputation understanding at the age of 3, to the basic formation of reputation understanding and efforts for reputation management at the age of 5, and until the age of 8, children could make clear awareness of

reputation management. Reputation cues can promote children's prosocial behaviors to some extent, such as cooperative behaviors, sharing behaviors and so on. Reputation can promote the development of children's fair behavior, improving and regulating children's behaviors. However, there are some shortcomings in the existing researches. For example, there are few researches on reputation of different nationalities and cross-cultures, and the presentation of reputation clues is less considering that children also have different social relations. In addition, with the development of cognitive psychology and cognitive neuroscience, delicate experimental equipment such as EEG and eye movement can be used to explore the internal mechanism of reputation understanding and management, as well as the psychological mechanism of reputation understanding from different perspectives.

Keywords: reputation, reputation understanding, prosocial behaviors, fairness, behavior norms

农村初中生领悟社会支持与心理韧性的关系： 一般自我效能感的中介作用

赵寒冰

江汉大学教育学院，武汉，430000

摘 要 埃里克森的发展阶段表明，初中生正处于学龄前期向青年期的过渡阶段，此时他们在面对环境适应、人际关系、学业压力等应激事件时往往无所适从，不知道该如何处理往往会影响他们的心理健康。而且，社会上关于初中生“自杀”及“校园暴力”等事件层出不穷，使得人们不断加强对初中生心理健康的重视。未成年人是祖国的希望，是社会不断进步的力量，他们的健康成长和文化水平对于国家及社会的发展意义重大，因此如何有效提高初中生应对困难和危险的能力一直受到人们的关注。而农村初中生处于社会的边缘地带，正值生理和心理迅猛发展的关键期，更容易出现各种心理问题，提高心理韧性则对他们今后成长、成才作用重大。以往的研究发现，领悟社会支持、一般自我效能感与心理韧性之间存在两两相关的关系，这三者的结合，对青少年度过“关键时期”的作用方式发挥着非常大的作用。因此，为了考察领悟社会支持、一般自我效能感与心理韧性之间的关系，采用领悟社会支持量表、一般自我效能感量表和青少年心理韧性量表，对河南省310名农村初中生进行问卷调查。结果：(1)农村初中生在一般自我效能感上存在显著性别差异。(2)农村初中生在领悟社会支持、一般自我效能感和心理韧性两两之间均存在显著正相关。(3)一般自我效能感在领悟社会支持和心理韧性中起到部分中介作用。结论：农村初中生领悟社会支持和一般自我效能感对心理韧性有正向预测作用。

关键词 农村初中生，领悟社会支持，一般自我效能感，心理韧性

Rural Junior Middle School students' understanding of the relationship between Social support and Psychological resilience: the mediating role of General self-efficacy

Abstract: Sven-goran eriksson's stage of development shows that junior high school students is in the transition from preschool to adolescent phase, they in the face of environmental adaptation relationship academic pressures often disoriented when stress events, such as don't know how to deal with tend to influence their mental health Moreover, about suicide in junior high school students and campus violence in society Events such as emerge in endlessly, make people continuously strengthen to the attention of the junior middle school students mental health Minors is the hope of the motherland, is the power of social progress, countries for their healthy growth and culture level and the development of the society is of great significance, so how to improve the junior middle school students the ability to cope with difficulties and danger has been attracting the attention of people The countryside junior middle school students in the fringes of society, during the critical period of physical and psychological rapid development, more prone to all kinds of psychological problems, improve the mental toughness to their future growth up relevant previous studies have found that understanding social support General self-efficacy and mental toughness between two the relationship between the two related, the combination of all three for teenagers The way the critical period

works plays a very big role .So in order to investigate the relationship between perceived social support, general self-efficacy and resilience, 310 rural middle school students were randomly investigated by using the perceived social support scale, general self-efficacy scale and resilience scale. Results: (1) There were significant gender differences in the general sense of self-efficacy among rural middle school students. (2) There was a significant positive correlation between rural middle school students in perceived social support, general self-efficacy and resilience. (3) The general self-efficacy plays a partial intermediary role between perceived social support and resilience. Conclusion: Rural middle school students understand that perceived social support and general self-efficacy have positive predictive effects on resilience.

Keywords: Rural middle school students; Perceived social support; General self-efficacy; Resilience

童年期受虐个体对消极情绪面孔注意偏向及神经机制

赵文成¹ 刘爱书¹

¹ 哈尔滨师范大学教育科学学院, 哈尔滨 150025, liuaishu@163.com

摘要 儿童虐待包括了在亲密关系中的各种关于身体、情感或性的虐待与忽视。受虐待的儿童会经历一系列的社会情感破坏, 会导致对情绪和社会刺激的处理方式发生变化, 在识别情绪面孔时表现出对愤怒、恐惧等消极情绪面孔的高敏感性和过度关注。相对于其他情绪面孔, 消极情绪面孔会更快地捕获个体的注意, 即对消极情绪面孔的注意偏向。回顾以往研究发现, 相较于正常个体, 有童年期虐待经历的儿童和成人均存在对消极情绪面孔的过度注意偏向, 尤其是对愤怒面孔。这说明在受虐个体成长的每个阶段, 对消极情绪面孔的注意偏向都可能存在。本文分析了受虐个体产生这种注意偏向的心理因素和神经机制。在心理因素方面, 有童年期虐待经历的个体在情绪调节上出现困难以及注意控制水平较低。在神经机制方面, fMRI 研究显示, 受虐个体对消极情绪面孔的注意偏向与杏仁核、前额叶皮层、前扣带回皮层和胼胝体的结构、功能以及脑去结构之间的连接性异常有关, 涉及情感的脑区普遍表现为体积的减小以及对消极情绪信息过于敏感, 有较大幅度的激活。经历童年期虐待的个体对消极情绪面孔的注意偏向增加了其患心理障碍的风险, 但目前有关童年期受虐个体的注意偏向机制的研究还比较少, 对其注意偏向在时间进程上的变化还不太清楚。未来研究应多关注受虐个体注意偏向在时间进程上的特点, 以及这种特点和未来可能产生的心理疾病之间的关系。另外, 目前大多数的神经影像学研究采用的是感兴趣区域的方法, 未来研究应采用全脑分析的方法, 更为全面的了解童年期虐待所导致的神经发育异常。最后, 对消极情绪面孔的注意偏向作为童年期受虐个体产生心理疾病的一个途径, 在个体产生心理疾病之前采取一定的早期干预措施, 改善注意偏向, 会降低受虐个体患上这些心理疾病的可能性。因此未来研究可以从这方面入手, 引导个体多关注生活中的积极事物, 为预防童年期虐待后可能产生的心理疾病发展新的干预方向。

中学生学业支持与学业投入的关系：一个有调节的中介模型

郑泽卿¹ 姜媛² 田丽¹ 方平¹ (通讯作者)

¹ 首都师范大学心理学院, 北京, 100048, pfang2007@126.com

² 北京体育大学心理学院, 北京, 100084

摘要 中学生正处于发展的关键时期, 此时青少年最主要的一个任务是学习, 学业投入的程度可以预测中学生的学习成绩, 提升学生的学业成就, 可见学业投入对于中学生的发展至关重要的。总结文献综述, 国内外对于学业投入的研究已经相对成熟, 均表明来自环境的支持与学业投入存在显著相关, 也会呈现正向预测作用。随着心理学的发展尤其是积极心理学的产生及国内学生发展核心素养的推进, 充足的学业支持为中学生营造一个良好家庭、班级和同学的心理和物理环境, 有利于中学生的自尊水平, 增加对学业的投入程度, 因而研究学业投入的内在影响机制对于中学生的身心健康和学业进步具有重要意义。本研究根据文献综述假设班级氛围调节学业支持、自尊和学业投入中介模型的后半路径, 不同的班级氛围会影响自尊和学业投入的程度, 以河北石家庄市和衡水市的 648 名中学生为被试, 采用问卷调查法验证潜调节结构方程模型。结果发现: (1) 中学生的学业支持对学业投入显著相关, 且学业支持正向预测学业投入。(2) 自尊与学业支持和

学业投入显著相关,且学业支持正向预测自尊,自尊正向预测学业投入,同时自尊在学业支持和学业投入的关系中起中介作用。(3)班级氛围可以正向预测中学生的学业投入水平,且班级氛围调节学业支持、自尊和学业投入这一中介模型的后半路径。

关键词 学业支持,学业投入,自尊,班级氛围

The Relationship Between Academic Support and Academic Engagement of Middle School Students: A Moderated Mediation Model

ZHENG Zeqing¹, JIANG Yuan², TIAN Li¹, FANG Ping¹ (Corresponding Author)

1 School of Psychology, Capital Normal University, Beijing 100048, China

2 College of Psychology, Beijing Sport University, Beijing 100084, China

Abstract: Middle school students are in a critical period of development. At this time, one of the most important tasks of teenagers is learning. The degree of academic engagement can predict the academic performance of middle school students and improve their academic achievements. It can be seen that academic engagement is crucial for the development of middle school students. Summarizing the literature review, the research on academic engagement at home and abroad has been relatively mature, which shows that there is a significant correlation between environmental support and academic engagement, and it will also present a positive predictive effect. With the development of psychology, especially the emergence of positive psychology and the promotion of the core quality of domestic students' development, adequate academic support creates a good psychological and physical environment for middle school students' families, classes and classmates, which is conducive to the self-esteem level of middle school students and increases the degree of investment in their studies. Therefore, the research on the internal influence mechanism of academic engagement has an impact on the physical and mental health of middle school students And academic progress is of great significance. Based on the literature review, this study assumes that class climate regulates the second half path of the mediating model of academic support, self-esteem and academic engagement, and different class atmosphere will affect the degree of self-esteem and academic engagement. 648 middle school students from Shijiazhuang and Hengshui in Hebei Province were selected as subjects, and the latent regulatory structural equation model was verified by the questionnaire survey. The results show that: (1) academic support of middle school students is significantly related to academic engagement, and academic support positively predicts academic engagement. (2) Self-esteem was significantly correlated with academic support and academic engagement, and academic support positively predicted self-esteem and self-esteem positively predicted academic engagement. Meanwhile, self-esteem played a mediating role in the relationship between academic support and academic engagement. (3) Class climate can positively predict the level of middle school students' academic engagement, and class climate regulates the second half of the mediating model of academic support, self-esteem, and academic engagement.

自恋、自尊和攻击行为的中介模型：内隐自尊的调节作用

钟沁玥 殷恬静 刘梦婷 吴和鸣（通讯作者）

中国地质大学（武汉）心理科学与健康研究中心

摘 要 **目的** 了解中小学生的内隐自尊、外显自尊、自恋与攻击行为的现状,并根据精神动力学面具模型和自我中心被威胁学说探讨自恋、内隐自尊及外显自尊和攻击行为之间的关系。**方法** 抽取四川省三座城市进行问卷发放和内隐联想测试,共 117 名 10—16 岁的中小学生完成问卷和实验。研究工具采用自恋人格问卷、自尊量表和中文版 Buss & Perry 攻击量表以及 E-Prime 编写的内隐联想测验。**结果** (1)根据自尊量表得分判断,低自尊者占 35.6%,高自尊者占 11.9%。内隐自尊 D 值得分低于 0 分者占 13.9%,高于 1 分者占 10.9%。(2)

男性攻击行为量表得分高于女性 ($p<0.05$)。(3)内隐自尊与外显自尊、自恋、显性自恋、隐性自恋以及攻击行为所有维度均不相关($p>0.05$)。外显自尊与显性自恋显著正相关($p<0.01$),与隐性自恋相关不显著($p>0.05$),与攻击行为部分维度显著负相关($p<0.01$)。自恋所有维度和攻击行为所有维度显著正相关($p<0.01$)。(4)外显自尊在自恋和攻击行为之间的中介作用显著($p<0.01$),95%置信区间为[-0.461, -0.102]。(5)内隐自尊在自恋和外显自尊的关系上起调节作用($p<0.05$),Index 的95%置信区间为[-0.148, -0.017]。**结论** 自恋通过外显自尊影响攻击行为,内隐自尊在自恋和外显自尊中起到调节作用,并且在内隐自尊较高的情况下调节作用显著。自恋、外显自尊和内隐自尊共同构成的不稳定、不一致的自我评价是影响攻击行为的主要因素。

关键词 内隐自尊,外显自尊,自恋,攻击行为

The mediating model of narcissism, self-esteem and aggressive behavior: the moderating effect of implicit self-esteem

Zhong Qinyue, Yin Tianjing, Liu Mengting, Wu Heming

Research Center for Psychological and Health Sciences, China University of Geosciences

Abstract: Objective The study aimed to investigate the current situation of narcissism, implicit self-esteem, explicit self-esteem and aggressive behavior of adolescents, according to the psychodynamic mask model and the threatened egotism model, to explore the influence of gender on the relationship among the four variables. **Methods** A sample of 117 students aged 10-16 was recruited to complete the questionnaire and the experiment. Narcissistic personality questionnaire, self-esteem scale, Chinese version of buss Perry aggression scale and implicit association test written by E-Prime were used as research tools. **Results** (1) According to the score of self-esteem scale, low self-esteem accounted for 35.6%, high self-esteem accounted for 11.9%. The implicit self-esteem D score was lower than 0 in 13.9% and higher than 1 in 10.9%. (2) The score of male aggressive behavior scale was higher than female ($p<0.05$). (3) Implicit self-esteem was not correlated with explicit self-esteem, narcissism and aggressive behavior ($p>0.05$). There was a significant positive correlation between explicit self-esteem and overt narcissism($p<0.01$), but no significant correlation between explicit self-esteem and implicit self-esteem($p>0.05$), and a significant negative correlation between explicit self-esteem and some dimensions of aggressive behavior($p<0.01$). There was a significant positive correlation between all dimensions of narcissism and all dimensions of aggressive behavior ($p<0.01$). (4) The mediating effect of explicit self-esteem between narcissism and aggression was significant($p<0.01$), and the 95% confidence interval was [-0.461, -0.102]. (5) Implicit self-esteem moderates the relationship of narcissism and explicit self-esteem($p<0.05$), the 95% confidence interval of index was [-0.148, -0.017]. **Conclusion** Narcissism affects aggressive behavior through explicit self-esteem, implicit self-esteem plays a moderating role in narcissism and explicit self-esteem, and the moderating role is significant when the implicit self-esteem is high. The unstable and inconsistent self-evaluation composed of narcissism, explicit self-esteem and implicit self-esteem is the main factor influencing aggressive behavior.

变革认知与情绪、变革管理对教师参与学校变革行为的影响

朱静 丁文字 李冉冉 陈宁(通讯作者)

上海师范大学, 上海, 200233, chenning323@163.com

摘要 教育系统的可持续变化在很大程度上依赖于学校组织变革的能力,教师作为实施学校变革的关键群体必须随着组织变革而改变。学校变革对教师是一个典型的情感事件,而教师积极参与变革是学校变革的关键因素之一。对变革的意义认知和情绪体验是教师变革参与行为的重要决定因素,变革认知和变革情绪在引导、促进或抑制变革参与行为方面同等重要。根据情感事件理论和认知评价理论教师变革情绪活动受到变革认知活动的指导,这使得教师可以了解学校变革的意义,从而做出适当的有价值变革行为。学校管理者对教师的变革沟通、支持和授权以及为教师营造一个良好的组织氛围,从而能够从认知上和情感上影响教师,是

调节组织变革中教师主动变革行为的主要途径。本研究以 615 名中国上海教师为对象,考察了变革认知与情绪、变革管理对中国教师参与学校变革行为的影响。结构方程模型分析表明:(1)变革认知对教师主动变革行为具有显著的正向预测作用。(2)中介效应检验表明,积极情绪和消极情绪在变革认知和主动变革行为之间存在双重中介作用。(3)有调节的中介效应检验进一步表明,变革管理调节了双重中介的前半段。本研究验证了教师个体层面、学校组织层面因素对主动变革行为的联合作用,对教师的主动行为的干预具有一定的指导意义。

The influence of change cognition and emotion and change management on teachers' participation in school change behavior

Zhu Jing, Ding Wenyu, Li Ranran, Chen Ning

Shanghai Normal University, Shanghai

Abstract: Sustainable changes in the education system rely heavily on the ability of the school to organize change, and teachers as a key group to implement school change must change with organizational change. School change is a typical emotional event for teachers, and their active participation in change is one of the key factors in school change. Cognition of change and emotional experience are important determinants of teacher change participation behavior, and changing cognition and changing emotions are equally important in guiding, promoting or inhibiting change participation behavior. According to emotional event theory and cognitive evaluation theory, Teachers' emotional activities are guided by change cognitive activities, which enables teachers to understand the meaning of school change and so as to make appropriate valuable change behavior. School managers 'communication, support and authorization of teachers and create a good organizational atmosphere for teachers, so that they can cognitive and emotionally influence teachers, which is the main way to adjust teachers' active change behavior in organizational change. Based on 615 teachers in Shanghai, China, this study examined the effects of change cognition and emotion, and change management on Chinese teachers' participation in school change behavior. Structural equation model analysis shows that :(1) change cognition has a significant positive predictive effect on teachers' active change behavior. (2) The mediating effect test showed that positive emotions and negative emotions had dual mediating effects on change cognition and active change behavior. (3) Moderated mediating effect test further shows that change management moderates the first half of dual mediating. This study verifies the combined effect of the factors at the individual level of teachers and the school organization level on the active change behavior, and has a certain guiding significance for the intervention of teachers' active behavior.

Keywords: school change, teacher change participation, change cognition, teacher emotions, change management

疫期从网络受欺负到网络欺负他人： 自我构念的中介作用及孤独感的调节作用

方勇^{1,2} 范翠英^{1,2} (通讯作者) 崔佳^{1,2}

1 青少年网络心理与行为教育部重点实验室, 武汉, 430079

2 华中师范大学心理学院, 武汉, 430079

摘 要 新冠肺炎疫情常态化阶段,大学生使用互联网的时间相对增多,网络欺负这一新型欺负问题也变得更多。本研究旨在探讨网络受欺负和网络欺负之间的关系以及自我构念在其中的中介作用和孤独感在其中的调节作用。以武汉市 1125 名大学生为研究对象,采用问卷法对其网络受欺负、网络欺负、自我构念(互依自我和独立自我)、孤独感进行调查。结果表明:①网络受欺负正向预测网络欺负;②只有互依自我在网络受欺负对网络欺负的影响中起部分中介作用;③网络受欺负对网络欺负的直接作用和互依自我在二者中的

中介作用均会受到孤独感的调节,相对于孤独感水平低的个体,直接效应和中介效应在孤独感水平高的个体中更强。本研究揭示了疫情期间网络受欺负与网络欺负的部分作用机制,有助于有针对性地制定网络欺负的干预和预防措施。

关键词 网络受欺负,网络欺负,自我构念,孤独感

The Relationship Between Cybervictimization and Cyberbullying among College Students under the Svere Epidemic Situation: The Mediating Role of Self-Construals and the Moderating Effect of Loneliness

Fang Yong^{1,2}, Fan Cuiying^{1,2} (Corresponding author), Cui Jia^{1,2}

1.Key Laboratory of Adolescent CyberPsychology and Behavior (CCNU), Ministry of Education, Wuhan 430079

2.School of Psychology, Central China Normal University, Wuhan 430079

Abstract: As COVID-19 prevention and control becomes more regular, college students spend more time using the Internet, and cyberbullying, a new type of bullying, becomes more and more problematic. This study aims to investigate the the relationship between cybervictimization and cyberbullying as well as the the mediating effect of self-construals and the moderating effect of loneliness in this relation. One thousand one hundred and twenty-five college students from some universities in Wuhan, China, were investigated to examine this hypothetical model. They were asked to complete the cyberbullying scale, loneliness scale, interdependent and independent self-construal. The results indicate the following: (1)cybervictimization significantly positively predict their cyberbullying;(2)only interdependent self-construal partially mediated the relationship between cybervictimization and cyberbullying; and(3)the direct effect of cybervictimization on cyberbullying and the mediation effect of interdependent self-construal were moderated by loneliness, with these effects being much stronger among college students high on loneliness. This study reveals some mechanisms of cybervictimization and cyberbullying during the epidemic period, which is helpful to develop targeted intervention and prevention measures for reducing the occurrence of cyberbullying.

Keywords: cybervictimization, cyberbullying, self-construal, loneliness

导师支持与研究生学习投入的关系：链式中介分析

付萌萌 张建卫（通讯作者） 郑文峰 叶志慧

北京理工大学人文与社会科学学院, 北京, 100081, jianweizhang@bit.edu.cn

摘 要 学习投入(learning engagement)是指学生为了表现好并取得预期成果所付出的努力,对研究生学术生涯的成长和发展具有不可忽视的重要作用。研究者们发现影响学习投入的因素有许多,其中包括个体因素(如学术激情)和成长过程中的学校环境(如导师支持)。但已有研究仅考察了导师支持对学习投入的直接作用,导师支持对学习投入的内在作用机制尚不清楚。针对已有研究的不足,同时基于合作学习理论,本研究构建了一个链式中介模型,以考察导师支持和学习投入的关系及同伴互助学习与和谐学术激情的中介作用。本研究以 567 名研究生为被试,采用问卷法对个体感知到的导师支持、学习投入、同伴互助学习与和谐学术激情进行测查。结果发现:(1)导师支持、学习投入、同伴互助学习与和谐学术热情均存在显著正相关。(2)控制性别和教育背景后,研究生感知到的导师支持显著正向预测学习投入。(3)同伴互助学习与和谐学术激情在导师支持与学习投入的关系间起中介作用,且该中介作用包含三条路径:同伴互助学习的单独中介作用、和谐学术激情的单独中介作用以及同伴互助学习-和谐学术激情的链式中介作用。本研究不仅有助于深化关于研究生学习投入的认识,而且有助于更全面地了解学生学习投入的作用机制,并对研究生学习投入的培养有一定的指导意义。

关键词 导师支持,学习投入,同伴互助学习,和谐学术激情,研究生

The Effect of Perceived Supervisor Support on Postgraduate's Learning Engagement: A Chain Mediating Model

Mengmeng Fu, Jianwei Zhang (corresponding author), Wenfeng Zheng, Zhihui Ye

School of Humanities and Social Sciences, Beijing Institute of Technology, Beijing 100081, China

Abstract: Previous research has documented the critical effect of perceived supervisor support on learning engagement. However, few studies have focused on the mediating mechanisms underlying this relationship. Drawing on cooperative learning theory, this study constructs a chain mediating model to examine whether peer-assisted learning and harmonious academic passion mediates the relationship between perceived supervisor support and learning engagement among Chinese postgraduates. A total of 567 postgraduates [female = 52.0% (n = 295); male = 48.0% (n = 272)] were recruited to participate in this study and completed self-report measures of perceived supervisor support, learning engagement, peer-assisted learning and harmonious academic passion. The results suggest that there was a significantly positive correlations among perceived supervisor support, learning engagement, peer-assisted learning and harmonious academic passion. After controlling for the effect of gender and education background, perceived supervisor support still had a significantly positive effect on learning engagement. Postgraduate's learning engagement was affected by perceived supervisor support partly through 3 different pathways: a) the mediating role of peer-assisted learning, b) the mediating role of harmonious academic passion, and c) the chain mediating role of both peer-assisted learning and harmonious academic passion. The present research contributes to a more comprehensive insight into the mechanism of learning engagement. Finally, we discuss important theoretical and practical implications of these findings.

Keywords: perceived supervisor support, learning engagement, peer-assisted learning, harmonious academic passion, postgraduates

开放性人格与社交网站使用的关系： 感知媒介丰富性的中介作用与自我监控的调节作用

宫剑¹ 牛冰钰¹ 刘晓飞² 李晔¹ (通讯作者) 周兵平¹ 海曼¹

1 华中师范大学心理学院, 武汉, 430079, liye@mail.ccun.edu.cn

2 内蒙古师范大学心理学院, 呼和浩特, 010022

摘要 使用社交网站沟通交流、维系人际关系是现代生活的重要组成部分,然而社交网站使用存在“双刃剑”效应,主动性使用和被动性使用常常导致截然相反的后果。由于社交网络本质上是由人与人之间的互动驱动的,若想真正理解这一“双刃剑”效应就必须明确社交网站用户的人格光谱。作为大五人格模型中代表对经验的开放性的基本人格特质,开放性人格与广义的互联网使用有着稳定的关联模式,但以往研究显示其与社交网站使用低相关甚至不相关。这可能是因为先前研究者未考虑到开放性人格对主、被动社交网站使用可能存在方向相反的影响。此外,以往研究也忽视了近年来社交网站使用终端与使用情景发生的重大变革,对社交网站“媒介”功能的更新迭代缺乏关注,鲜少将其视为开放性人格影响社交网站使用的关键环节。因此,本研究基于媒介丰富性理论,采用主、被动社交网站使用的分类概念对 563 名大学生进行了问卷调查,解答了开放性人格“能否影响”、“如何影响”社交网站使用以及“何时影响更大”这三个问题。结果显示:(1)开放性人格显著正向预测主动社交网站使用、负向预测被动社交网站使用;(2)感知媒介丰富性在开放性人格与主动社交网站使用之间起部分中介作用(中介效应占比为 48.73%),但未在开放性人格与被动社交网站使用之间发挥中介作用;(3)自我监控可以调节“开放性人格→感知媒介丰富性→主动社交网站使用”这一中介效应的后半段,高自我监控者的中介效应强于低自我监控者。(4)自我监控还可以调节开放性人格与被动社交网站使用之间的关系,高自我监控者的开放性人格显著负向预测被动社交网站使用,低自我监控者则不显著。研究厘清了高开放性群体从社交网站使用中获益的具体方式,又阐明了该方式背后蕴含的心理机制——即感知媒介丰富性所起的中介作用,还从社会认知视角考察了自我监控在上述机制中作为边界条件的重要作用,兼具理论和实践意义。

关键词 开放性人格, 感知媒介丰富性, 自我监控, 主动社交网站使用, 被动社交网站使用

Openness Personality and Social Networking Sites Use: the Mediating Role of Perceived Media Richness and the Moderating Role of Self-monitoring

GONG Jian¹, NIU Bingyu¹, LIU Xiaofei², LI Ye¹, ZHOU Bingping¹, HAI Man¹

¹ School of Psychology, Central China Normal University, Wuhan 430079, China

² School of Psychology, Inner Mongolia Normal University, Hohhot 010022, China

Abstract: Using social networking sites to communicate and maintain interpersonal relationships is an important part of modern people's life. However, the use of social networking sites is a double-edged sword that the active and passive use will lead to opposite consequences. Since social networks are essentially driven by human interaction, a true understanding of this phenomenon requires a clear understanding of the personality structure of users on social networking sites. As the basic personality trait representing openness to experience in the Big Five personality model, openness to experience has a stable correlation pattern with generalized Internet use, but previous studies have shown that it has low correlation or even no correlation with the use of social networking sites. This may be illustrated by previous researchers did not consider that openness may have opposite effects on active and passive use. In addition, previous studies have also ignored the significant changes that the terminals and usage scenarios of social networking sites in recent years, and have insufficient understanding of the "media" attribute of social networking sites. Therefore, based on the media richness theory, this study conducted a questionnaire survey among 563 college students to explore whether, how and when openness affects the use of social networking sites. The results showed that : (1) Openness significantly positively predicted active social networking sites use, and negatively predicted passive social networking sites use. (2) Perceived media richness played a partial mediating role in the relationship between openness and active social networking sites use (the mediating effect ratio was 48.73%). (3) Self-monitoring moderated the second half path of the mediating effect of "openness - perceived media richness - active social networking sites use", and the mediating effect of high self-monitoring participants is stronger than of low self-monitoring participants. (4) Self-monitoring moderates the relationship between openness and passive social networking sites use. Openness of high self-monitoring participants significantly negatively predicted passive social networking sites use, while low self-monitoring participants did not. This study not only clarifies the specific ways in which high openness groups benefit from the use of social networking sites, but also clarifies the internal psychological mechanism by which openness influences the use of social networking sites. It also examines the important role of self-monitoring as a boundary condition in the above mechanisms from the perspective of social cognition.

Keywords: openness, perceived media richness, self-monitoring, active social networking sites use, passive social networking sites use

睡眠质量对大学生创造力的影响：执行功能的中介作用

郭伯堂¹ 马瀚泽¹ 杨艳杰¹ (通讯作者)

哈尔滨医科大学心理科学与健康管理中心, 哈尔滨, 150078

摘要 创新型人才是我国建设社会主义现代化强国的重要资源, 提升大学生的创造力水平作为当前我国教育体系的重要任务, 备受教育领域及全社会的关注。**目的** 了解大学生创造力水平, 探索睡眠质量与大学生创造力的相关性及其执行功能的中介作用。**方法** 采用方便抽样方法, 于2020年12月~2021年3月间抽取哈尔滨市某医科大学在读本科生进行调查。采用威廉斯创造力倾向量表(WCS)评估被试创造力水平。睡眠质量采用失眠严重程度指数量表(ISI)进行测量。More-odd shifting任务被用来测量被试的执行功能。**结果** 研究共纳入68名被试, 其中男21人, 女47人, 年龄20.33±1.08岁。大学生创造力得分为111.74±16.47, 转换代价为72.23±41.93。睡眠质量、执行功能与创造力负相关($r=-0.656$, $p<0.001$; $r=-0.565$, $p<0.001$) ;

睡眠质量与执行功能呈正相关 ($r=0.486$, $p<0.001$)。中介效应检验显示, 执行功能在大学生睡眠质量与创造力间起部分中介作用, 中介效应值为 -0.668 , $95\%CI[-1.417, -0.192]$, 中介效应占比 23.9% 。**结论** 睡眠质量并非直接影响创造力, 而是通过降低执行功能间接抑制创造力。执行功能与创造力有着密切的关系, 提高大学生主观睡眠质量以及注重执行功能训练是提升创造力的重要手段, 本研究不仅为改善大学生创造力提供了实验证据, 还丰富了积极心理学相关理论。

The relationship between sleep quality and Creativity on College Students: the mediating role of executive function

Botang GUO¹, Hanze MA¹, Yanjie YANG¹

Psychological science and health management center, Harbin Medical University, Harbin, Heilongjiang 150078, China

Abstract: **Background** Innovative talents are an important resource for China to build a socialist modern power. As an important task of China's current education system, improving the creativity level of college students has attracted much attention in the field of education and the whole society. **Objective** To understand the creativity level of college students, and explore the correlation between sleep quality and college students' creativity and the intermediary role of executive function. **Methods** Used the convenient sampling method, undergraduates from a Medical University in Harbin were selected for investigation from December 2020 to March 2021. Williams Creativity Tendency Scale (WCS) was used to evaluate the creativity level of the subjects. Sleep quality was measured by insomnia severity index (ISI). The more odd shifting task was used to measure the subjects' executive function. **Results:** A total of 68 subjects were included in the study, including 21 males and 47 females, aged 20.33 ± 1.08 years. The score of College Students' creativity was 111.74 ± 16.47 and the conversion cost was 72.23 ± 41.93 . Sleep quality and executive function were negatively correlated with creativity ($r=-0.656$, $P<0.001$; $r=-0.565$, $p<0.001$); There was a positive correlation between sleep quality and executive function ($r=0.486$, $P<0.001$). The mediating effect test showed that executive function played a partial mediating role between College Students' sleep quality and creativity. The mediating effect value was -0.668 , $95\% CI [-1.417, -0.192]$, and the mediating effect accounted for 23.9% . **Conclusion** Sleep quality does not directly affect creativity, but indirectly inhibits creativity by reducing executive function. Executive function is closely related to creativity. Improving college students' subjective sleep quality and paying attention to executive function training are important means to improve creativity. This study not only provides experimental evidence for improving college students' creativity, but also enriches the relevant theories of positive psychology.

成长型心智模式对研究生心理繁荣和学习投入的影响

滑卫军, 张建卫 (通讯作者), 周愉凡, 冯亚群

北京理工大学人文与社会科学学院, 北京, 100081, jianweizhang@bit.edu.cn

摘要 尽管大量研究表明成长型心智模式能对个体表现产生积极影响, 但成长型心智模式对个体心理状态和学习表现的内在作用机制尚不明确。基于自我决定理论, 构建了成长型心智模式影响个体表现的整合模型, 尤其考察了成长型心智模式影响个体心理繁荣和学习投入的中介机制及边界条件。研究1采用问卷研究, 通过分析研究生的调查数据 ($N=544$), 研究结果表明: (1) 心理资本和自主动机分别在成长型心智模式与心理繁荣、成长型心智模式与学习投入之间存在显著的中介作用; (2) 导师支持感正向调节了成长型心智模式与心理资本、自主动机的关系, 即当学生感知到更高水平的导师支持时, 成长型心智模式与心理资本、自主动机的正向关系更强; (3) 导师支持感还正向调节了心理资本和自主动机的中介作用, 即当学生感知到更高水平的导师支持时, 心理资本和自主动机的中介作用更强。研究2采用质性研究, 搜集了不同学段学生的访谈资料 ($N=15$), 不仅再次支持了研究1中的部分研究发现, 还进一步揭示了成长型心智模式对个体心理繁

荣和学习投入更为复杂的影响过程。本研究从自我决定理论视角揭示了成长型心智模式影响学生心理状态和学习表现的作用机制，为成长型心智模式与个体表现的关系研究提供了更加全面的视角。

I Think, Therefore I Am: Exploring the Effect of Growth Mindset on Postgraduate's Psychological Flourishing and Learning Engagement

Weijun Hua, Jianwei Zhang (Corresponding Author), Yufan Zhou, Yaqun Feng

School of Humanities and Social Sciences, Beijing Institute of Technology, Beijing 100081, China

Abstract: Although research has shown that a growth mindset exerts a positive impact on individual performance, it remains unclear why and how growth mindset influences one's psychological state and learning. Specifically, drawing on self-determination theory, we hypothesize that a growth mindset is positively related to individuals' psychological flourishing via enhancing their psychological capital. Furthermore, a growth mindset also stimulates individuals' autonomous motivation, which is associated with higher levels of learning engagement. We further propose that supervisor support will moderate the positive relationship between growth mindset and (a) psychological capital and (b) autonomous motivation, such that the positive relationship will be stronger (vs. weaker) when students perceive higher (vs. lower) levels of perceived supervisor support. Moreover, we also argue that the indirect relationship between growth mindset and (a) psychological flourishing and (b) learning engagement through (a) psychological capital and (b) autonomous motivation may be moderated by supervisor support, such that the indirect effects may be stronger when perceived supervisor support is higher than when it is lower. Results from a survey (study1) of 544 postgraduates support these hypotheses. We also conduct a qualitative study (study2) with 15 students from different degrees; results provide a more nuanced understanding of how growth mindset shapes individuals' subsequent psychological flourishing and learning engagement. This study enriches the literature of mindset-performance link by theorizing and empirically validating the complex effects of growth mindset on individual performance and recommends future research directions.

Keywords: growth mindset, perceived supervisor support, psychological capital, autonomous motivation, psychological flourishing, learning engagement

农村小学生数学元认知对学业成绩的影响： 学业倦怠与主观生活质量的链式中介作用

蒋霞霞¹²³ 杨红霞²³ 张雪晨¹ 胡祥恩¹

1 华中师范大学心理学院青少年网络心理与行为教育部重点实验室，武汉，430079

2 湖北省高校人文社会科学重点研究基地农村教育与文化发展研究中心，咸宁，437100

3 湖北科技学院教育学院，咸宁，437100

摘要 城乡义务教育发展落差是我国教育领域发展不平衡和不充分的重要体现，也是当前推动城乡基本公共服务均等化亟待解决的重大问题。由于城乡二元结构体制，我国各地经济社会发展不平衡，致使不同地区教育发展不均衡，学生学业成绩存在较大差异，尤以城乡差异最为突出，严重制约社会公平与正义的实现，影响和谐社会的建设与发展。数学元认知，个体对数学认知活动的自我意识和自我监控，它以元认知知识为基础，并在对数学认知过程的评价、控制和调节中显示出来，对数学认知过程发挥知晓、支配、决策、监控的作用，是影响学业成绩的认知变量。本研究拟探索学业倦怠和主观生活质量在数学元认知和学习成绩之间的中介作用，了解农村小学生数学元认知对成绩影响的可能机制。本研究使用小学生数学元认知问卷、学业倦怠问卷和主观生活质量问卷对 1600 名农村小学生进行调查。采用 process 方法考察学业倦怠和主观生活质量在之间的链式中介作用。结果发现小学生数学元认知能正向预测学业成绩 ($\beta=0.15, p<0.001$)，负向预测学业倦怠 ($\beta=-0.41, p<0.01$)，也能正向预测主观生活质量 ($\beta=0.34, p<0.001$)；学业倦怠能负向预测主观生活质量 ($\beta=-0.48, p<0.001$)，也能负向预测学业成绩 ($\beta=-0.11, p<0.001$)。在控制了性别、地区后，学

业倦怠和主观生活质量分别中介了在小学生数学元认知和学业成绩之间的关系，且两者在数学元认知和学业成绩间起着链式中介作用。学业倦怠和主观生活质量可以揭示小学生数学元认知和学业成绩的内在机制。

关键词 农村小学生,数学元认知,学业倦怠,主观生活质量

The effect of Mathematical meta-cognition on achievement of rural primary school students: The chain-mediating role of academic burnout and subjective quality of life

1 Ministry of Education-Affiliated Key Laboratory of Adolescents Cyber psychology and Behavior, School of Psychology, Central China Normal University, Wuhan, 430079

2 Research Center of Rural Education and Culture Development, Key Research Base of Humanities and Social Sciences in Universities of Hubei Province, Xianning, 437100, China

3 School of Education, Hubei University of Science and Technology, Xianning, 437100, China

Abstract: The gap in the development of compulsory education between urban and rural areas is an important embodiment of the imbalance and inadequacy of the development of education in China. It is also a major issue that needs to be solved to promote the equalization of basic public services between urban and rural areas. Due to the urban-rural dual structure system, the economic and social development in different parts of our country is not balanced, resulting in the uneven development of education in different regions, and there are great differences in students' academic performance, especially in urban and rural areas, which seriously restricts the realization of social fairness and justice, and affects the construction and development of a harmonious society. Mathematical meta-cognition, the self-awareness and self-monitoring of individuals' mathematical cognitive activities, is based on the meta-cognitive knowledge, and is shown in the evaluation, control and adjustment of mathematical cognitive process. It plays the role of knowing, controlling, decision-making and monitoring of mathematical cognitive process, and is a cognitive variable that affects academic achievement. This study aims to explore the mediating role of academic burnout and subjective quality of life between mathematical meta-cognition and academic performance, and to understand the possible mechanism of the influence of mathematical meta-cognition on academic performance of rural pupils. In this study, 1600 rural primary school students were investigated by mathematical meta-cognition questionnaire, academic burnout questionnaire and subjective quality of life questionnaire. The process method was used to investigate the chain mediating effect between academic burnout and subjective quality of life. The results showed that mathematical meta-cognition could positively predict academic achievement ($\beta=0.15, p < 0.001$), negatively predict academic burnout ($\beta=-0.41, p < 0.01$), and positively predict subjective quality of life ($\beta=0.34, p < 0.001$). Academic burnout was a negative predictor of subjective quality of life ($\beta=-0.48, p < 0.001$) and of academic achievement ($\beta=-0.11, p < 0.001$). After controlling for gender and region, academic burnout and subjective quality of life mediated the relationship between mathematical meta-cognition and academic achievement of primary school students, respectively, and they played a chain mediating role between mathematical meta-cognition and academic achievement. Academic burnout and subjective quality of life can reveal the internal mechanism of elementary students' mathematical meta-cognition and academic achievement.

Keywords: Rural primary school students, Mathematical meta-cognition, Academic burnout; Subjective quality of life

中国听力障碍者心理研究进展

1 Palacky University, Olomouc, 77711

2 Palacky University 特殊教育学系, 77711, Olomouc, 18381687837@163.com

摘要 为了更好的帮助听力障碍者克服听力减退带来的困难,促进其康复与融入主流社会,以及为今后的研究提供参考思路,本文以在特殊教育学与心理学领域最具影响力的5本中文核心期刊----《中国特殊教育》、《心理学报》、《心理科学》、《心理科学进展》与《心理发展与教育》作为文献检索来源,以询证研究路径对国内听力障碍者心理研究相关的文献进行检索与筛选,最后得到51篇目标文献。为了解当前中国听力障碍者心理研究的信息,本文从文献的分布与发展趋势、文献研究方法、研究被试、研究内容与结果四个方面对目标文献进行了分析,并提出笔者的建议。文献分析后发现听力障碍者心理相关文献数量不足,分布不均,发表量波动大;研究类型以实证研究为主,研究多为量化研究,但量化与质性结合的研究严重不足;研究被试社会角色单一,几乎全为学生,而且对幼儿与中老年听力障碍者心理关注不足;研究内容丰富,但听力障碍相关人员的心理健康未得到足够关注。在总结与分析25年的中国听力障碍者心理研究文献的基础上,今后的研究者应该更关注中国听力障碍者的心理,理论与实践相结合,拓展研究对象的社会角色与年龄跨度,在关注听力障碍者本身的心理的同时,也关注听力障碍相关人员的心理健康。

Advances in the Research into Psychology of People with Hearing Impairment

LI Lin^{1,2}

1 Palacky University, Olomouc, 77711

2 Palacky University Special Education Department, 77711, Olomouc, 18381687837@163.com

Abstract: In order to help the people with hearing impairment to overcome the difficulties caused by hearing loss better, promote their rehabilitation and integration into the mainstream society, and provide reference ideas for future research, this article is based on the five most influential Chinese core journals----*Chinese Journal of Special Education*, *Acta Psychologica Sinica*, *Journal of Psychological Science*, *Advances in Psychological Science*, *Psychological Development and Education* in the field of special education and psychology as the source of literature search. In this paper, the literature related to the psychological research of hearing impairment in China was searched and screened with the approach of evidence-based path, and 51 target literature were obtained. In order to understand the current information of the psychological research on the hearing impairment in China, this paper analyzed the target literature from four aspects: the distribution and development trend of the literature, the research method, the participants, the research content and the results, and putted forward the author's suggestions. After literature analysis, it was found that the number of literature related to hearing impairment is insufficient, the distribution is uneven, and the published quantity fluctuates greatly. The research type is mainly empirical research, most of the research is quantitative research, but the combination of quantitative and qualitative research is seriously insufficient; The social role of the participants is single, almost all of them are students, and the psychological attention of preschool children and middle-aged and old people with hearing impairment is insufficient. The research content is rich, but the psychological health of people related to the people with hearing impairment has not been paid enough attention. In summary and analysis of 25 years' psychological research of people with hearing impairment in China, researchers should pay more attention to China's psychology of people with hearing impairment, combine theory with practice, to expand the research participants of social role and age span, focusing on the psychology of people with hearing impairment, also pay attention to the psychological health of people related to the people with hearing impairment in the future.

父母反应方式与儿童幸福感的关系：有调节的中介模型

李薇娜^{1,2} 周宗奎¹（通讯作者） 谷传华¹

1 青少年网络心理与行为教育部重点实验室暨华中师范大学心理学院, 武汉, 430079, zhouzk@mail.ccnu.edu.cn

2 湖南警察学院管理系, 长沙, 410138

摘要 父母反应方式是指父母面对孩子成功或失败时的反应方式, 可以分为两种: 一是失败导向反应——当孩子表现不佳时, 父母可能会很重视这次失败, 行动上会鞭策孩子努力学习, 以求改进; 当孩子表现很好时, 父母可能认可他们的成功, 但会关注孩子的失误之处。另一种是成功导向反应——无论孩子表现怎样, 父母都会强调孩子的成就, 即无论孩子成绩好坏, 父母都会关注孩子答对的题目。父母对孩子成败的反应方式属于父母教养方式中的行为范畴, 是学习相关的父母教养方式, 属于儿童发展的重要微观系统——家庭环境。有研究发现父母面对孩子成败的反应方式, 会影响孩子的情绪适应和成绩。为进一步探讨父母反应方式对儿童幸福感的影响及其内在机制, 本研究基于生态系统理论和家庭系统理论, 使用父母反应方式量表、亲子亲密度量表、友谊质量问卷、幸福感指数量表, 对 686 名小学生进行调查。结果表明: (1) 失败导向反应能直接负向预测儿童幸福感, 成功导向反应能直接正向预测幸福感, 且两者都能通过亲子关系的中介作用对其产生影响; (2) 亲子关系的中介作用(后半段路径)受到友谊质量的调节, 即随着友谊质量水平的提高, 亲子关系在两种父母反应方式对幸福感的影响中的中介效应都降低。友谊质量与亲子关系对儿童幸福感的共同作用符合“补偿”模型。研究结果揭示了父母反应方式对儿童幸福感的影响及其作用机制, 对儿童幸福感的提升也有一定的指导意义。我们既可以通过增进亲子关系的良性发展来提升儿童幸福感, 也可以通过提高儿童同伴关系质量来促进儿童幸福感。

关键词 父母反应方式, 幸福感, 亲子关系, 友谊质量, 儿童

Parents' Response style and Well-being among Children: Moderated Mediation Effect

Weina Li^{1,2}, Zongkui Zhou¹(Corresponding Author), Chuanhua Gu¹

1 Key Laboratory of Adolescent Cyber Psychology and Behavior, Ministry of Education and School of Psychology, Central China Normal University, Wuhan, 430079

2 Department of Management, Hunan Police Academy, Changsha, 410138

Abstract: Parents' Response style refers to the way parents respond to children's performance which include failure-oriented and success-oriented responses to children's performance. Failure-oriented parents may make a big deal out of children's failure, including urging them to work harder when children do poorly. They may also endorse their success but concentrate on what children missed when children do well. Success-oriented parents may emphasize children's accomplishments, regardless of their performance (e.g., highlight what children did correctly when they have done well or poorly). Parents' responses to children's performance belong to the behavior of parenting style which is the parenting related to learning, also belong to the important microsystem of children's development, namely family environment. Some studies found that parents' responses to children's performance can affect children's emotional adaptation and performance. In order to further explore the influence of parents' response style on children's well-being and its internal mechanism, using Parents' Responses to Children's Performance Scale, Buchanan scale of closeness to parents, Friendship Quality Questionnaire and Campbell Index of Well-being, our study investigated 371 pupils based on ecological systems theory and family system theory. The results showed that: (1) failure-oriented responses negatively predicted children's well-being and success-oriented responses positively predicted well-being, significantly. The testing of mediation effect suggested that parent-child relationship played a partial mediating role between parents' responses and children's well-being. (2) The testing of moderated mediation effect further indicated that friendship quality regulated the second half of "failure-oriented responses or success-oriented responses → parent-child relationship → well-being". That is, with the improvement of the quality of friendship, the mediating effect of parent-child relationship on the influence of the two ways of parents' responses

on well-being reduced. The influence of parent-child relationship and peer relationship on children's well-being conformed with the compensation model. The results revealed how the parents' response style influenced children's well-being which had some inspiration on cultivating children's well-being. We could improve children's well-being by promoting the benign development of parent-child relationship, or improving the quality of peer relationship.

摘要 目的: 探究创伤经历对农村留守儿童创伤性反应的影响作用以及领悟社会支持的中介效应和应对方式的调节效应。方法: 采用埃森创伤问卷、领悟社会支持量表、应对方式量表和创伤事件影响量表对 1030 名农村留守儿童进行调查。结果: ①创伤经历与领悟社会支持($r=-0.15, p<0.001$)、应对方式($r=-0.06, p<0.001$)显著负相关、与创伤性反应($r=0.34, p<0.001$)显著正相关, 创伤经历对创伤性反应具有显著正向影响效应($\beta=0.35, p<0.001$); ②中介效应检验表明, 领悟社会支持中介作用的置信区间为 $[0.01, 0.03]$; ③应对方式对领悟社会支持在创伤经历与创伤性反应的中介后半段具有调节作用($\beta=0.35, t=-2.50, p<0.05$)。结论: 创伤经历对留守儿童创伤性反应的影响受到领悟社会支持的中介作用, 同时应对方式调节了领悟社会支持与创伤性反应之间的关系。

The Effect of Traumatic Experience on Traumatic Response of Left-behind Children in Rural Areas

Tu Wei^{1,2}, Li Yuan¹, Li Zhenhua², Nie Yangang²

1Hunan University of Science and Technology, Yongzhou, Hunan, 425199, China 2Adolescent Psychology and Behavior Research Center, School of Education, Guangzhou University, Guangzhou, Guangdong, 510006, China

Abstract: Objective: To explore the influence of traumatic experience on traumatic response of left-behind children in rural areas and the mediating effect of understanding social support and the moderating effect of coping style. **Methods:** 1030 left-behind children in rural areas were investigated by Essen Trauma Questionnaire, Comprehending Social Support Scale, Coping Style Scale and Impact Scale of Traumatic Events. **Results:** ①Traumatic experience was significantly negatively correlated with perceived social support ($r=-0.15, p<0.001$) and coping style ($r=-0.06, p<0.001$), and positively correlated with traumatic response ($r=0.34, p<0.001$). Traumatic experience had a significant positive effect on traumatic response ($\beta=0.35, p<0.001$). ②The mediating effect test showed that the confidence interval of perceiving the mediating effect of social support was $[0.01, 0.03]$. ③Coping style had a moderating effect on perceived social support in the second half of the mediator between traumatic experience and traumatic response ($\beta=0.35, t=-2.50, p<0.05$). **Conclusion:** The influence of traumatic experience on left-behind children's traumatic response is mediated by perceived social support, and coping style moderates the relationship between perceived social support and traumatic response.

摘要 积极应对人口老龄化, 事关我国经济社会的和谐稳定。加快养老服务工作, 需要各级政府、社会各界付出更多的热情和精力。目前我国养老机构多停留在解决老人看管和衣食温饱的初级水平, 面对空巢老人不断增多、老年心身疾病不断增加的现实, 如何针对老年人的精神需求提供高质量的养老服务, 有待于更深入的探索。

有调查表明, 当前我国老年疾病患者中 50%-80% 是源自于心理疾病, 而约 70% 的心理疾病是由于老年人缺少精神关怀所引起的。关注老年人心身健康, 对导致老年心身疾病的心理社会因素进行准确有效的探索、并对心身健康的概念进行科学界定已经成了社会发展的客观刚需。以心养身, 拥有蓬勃向上的精气神, 以心养心, 涵养时代发展所需要的知情意, 顺势而为, 顺势作为, 心身一元, 身心和合, 已然成了心身健康的盎然意蕴。

呵护老年人的幸福晚年, 满足老年人日益增长的文化、精神和自我价值的追求, 让他们安享晚年、体面地老去, 把他们的冷暖挂在心头, 知老尊老, 创造一个老年友好型社会, 让老有所乐、老有所为的愿望照进现实, 不仅有助于推动我国老年人“五老政策”在医疗、养老、教育、休闲、作为等方面的建设, 切实有效的提高老年人的生活质量, 而且可以极大地延长老年人口红利的收获期, 减轻社会保障的压力, 使老年人成为“银色产业”发展的动力和社会进步的积极推力。同时, 也可以让后来人有可期的未来, 让亿万正在奋斗的人们可以感受到奋斗的价值。

Abstract: Actively dealing with the problem of aging population makes great difference to the harmony and stability of China's economy and society. To speed up the work of the elderly care service needs more enthusiasm and energy from governments at all levels and from all walks of life. At present, China's elderly care institutions mostly stay at the primary level of providing care, clothing and food. In the face of the increasing number of empty nesters and the increasing psychosomatic diseases of the elderly, how to provide high-quality elderly care services for the spiritual needs of the elderly needs to be further explored.

Some surveys show that 50% to 80% diseases of the elderly patients in our country are related to the psychological problems, and about 70% of which are caused by the lack of spiritual care. It has become an objective requirement of social development to pay attention to the psychosomatic health of the elderly, to explore the psychosocial factors leading to psychosomatic diseases of the elderly accurately and effectively, and to scientifically define the concept of psychosomatic health. Cultivating one's healthy body with healthy mind and developing vigorous spirit contribute to harmonizing body and mind and have become the natural implication of mental and physical health.

It is of great importance to take care of the elderly people's happiness and meet their growing pursuit of culture, spirit and self-worth so that they can enjoy their old age in peace and dignity. Keeping their warmth and cold in mind,

knowing about and respecting the elderly, creating an elderly friendly society and turning their wishes into reality will not only help to promote the construction of "five policies" for the elderly in medical treatment, pension, education, leisure, as well as other aspects, but also can effectively improve the life quality of the elderly, and can extend the harvest period of the elderly demographic dividend, reduce the pressure of social security, and make the elderly become the driving force of the development of "silver industry" and the positive thrust of social progress. At the same time, it can also make future generations have a promising future so that hundreds of millions of people who are struggling can feel the value of struggle.

家庭仪式对青少年的心理价值及其效能提升

张孝义^{1 2} 任俊（通讯作者）¹

1 浙江师范大学教师教育学院, 金华, 3210041 邮箱: E-mail: renj@zjnu.cn

2 黄山学院教育科学学院, 黄山, 245041

摘 要 随着时代发展, 生活节奏较快, 个体面临许多挑战性的安排, 例如新冠疫情, 但如果家庭成员仍然有机会聚在一起共进餐, 一起计划假期, 并接纳生命周期的转变, 这些活动都会对青少年的发展带来积极的影响。这些活动是发展家庭仪式的背景, 是有意义的特殊事件, 并具有一个家庭共享的象征意义。家庭仪式是家庭成员按照一定规范, 在家庭内部开展的较为稳定的互动行为模式, 包括了语言和行动的重复, 反映了家庭过程的共同结构。

家庭仪式对于青少年心理健康、家庭凝聚力以及家庭价值观的传递都有积极意义, 还可以抵抗焦虑、抑郁等不良情绪, 抵御贫穷、患病等负面事件的影响。家庭仪式可以促进青少年的心理健康, 当青少年感到与家庭有联系, 但不受家庭约束时, 与心理社会成熟相关的发育过程会蓬勃发展, 在家庭仪式上的低投入导致了青少年更多的使用心理健康服务。家庭共有的仪式往往被视为一种社交活动, 这种社交活动可以连接家庭成员之间的关系, 家庭仪式可以维持家庭秩序, 形成稳定感, 提升青少年对家庭的归属感、认同感、凝聚力。家庭仪式可以向下一代灌输孝道和教育的价值观。家庭仪式有助于青少年抵御焦虑、抑郁等不良情绪, 抵抗外在诱惑, 有助于青少年情绪调节能力的发展。团聚的家庭仪式可以支撑外出务工家庭度过压力和不规律的时期, 患病的家庭成员、贫穷的家庭, 酗酒的父母, 以及父母离婚等事件对家庭成员的影响都是负面的, 但家庭仪式可以作为保护因子, 缓解、稀释这些负面的家庭事件。要提升家庭仪式的效能, 首先要设定明确的家庭仪式目标, 并要发挥组织者和参与者的主体性, 家庭仪式的形式和方法要丰富, 而且要追求家庭仪式背后的深层内涵。

The Psychological Value and Efficacy Enhancement of Family Rituals to Youth

Zhang xiaoyi^{1 2}, Ren Jun¹

College of Teacher Education, Zhejiang Normal University, 321004, E-mail: renj@zjnu.cn

School of Education Science, Huangshan University, Huangshan, 245041

Abstract: With the development of the times and the rapid pace of life, individuals are faced with many challenging arrangements, such as the new crown epidemic, but if family members still have the opportunity to gather together to eat together, plan vacations together, and accept life cycle changes, these activities will be beneficial. The development of young people has a positive impact. These activities are the background of the development of family rituals, are meaningful special events, and have a symbolic meaning of family sharing. Family rituals are relatively stable interactive behavior patterns carried out by family members within the family in accordance with certain norms, including the repetition of language and actions, reflecting the common structure of the family process.

Family rituals have positive meanings for the transmission of adolescents' mental health, family cohesion and family values. They can also resist negative emotions such as anxiety and depression, and resist the influence of negative events such as poverty and illness. Family rituals can promote the mental health of adolescents. When adolescents feel connected to the family but are not restricted by the family, the developmental process related to psychosocial maturity will flourish. The low investment in family rituals leads to more use by the adolescents Mental health services. The ritual shared by the family is often regarded as a kind of social activity. This social activity can connect the relationship between family members. Family rituals can maintain family order, form a sense of stability, and enhance the youth's sense of belonging, identity and cohesion to the family. Family ceremonies can instill the values of filial piety and education to the next generation. Family rituals help young people resist anxiety, depression and other bad emotions, resist external temptations, and help young people develop their emotional regulation ability. Family reunion ceremonies can support migrant families through stressful and irregular periods. Sick family members, poor families, alcoholic parents, and parental divorce have a negative impact on family members, but family rituals It can be used as a protective factor to alleviate and dilute these negative family events. To enhance the effectiveness of family rituals, we must first set clear goals of family rituals, and give play to the subjectivity of organizers and participants. The forms and methods of family rituals should be enriched, and the deep connotations behind family rituals should be pursued.

团体活动对射击运动员心境状态和流畅状态的影响

巴一¹ 张禹¹ (通讯作者) 李杰²

1 北京体育大学心理学院, 北京, 100084, E-mail: btzy1973@126.com

2 杭州师范大学心理科学研究院, 杭州, 311121

摘要 本研究以安徽省射击运动管理中心的 33 名射击运动员为研究对象, 在 2020 年冬训期间, 开展 8 周的团体活动课, 研究团体活动对射击运动员心境状态和流畅状态的影响。团体活动参照《团体心理辅导》等(樊富珏, 2010), 内容包括团体信任和凝聚力的培养, 自信心训练, 自我成长与探索等。使用《POMS 心境状态量表》和《流畅状态量表 FSS》对运动员的心境状态和流畅状态进行测量。在团体活动进行的第一周、第四周和最后一周进行前中后三次的测试。所得数据结果运用 spss22.0 统计软件进行统计分析。同时, 为了确定团体活动的对射击运动员的适用性, 在活动进行的第二周和最后一周, 邀请运动员填写活动的感受和建议, 大部分运动员都表示团体活动很有趣, 对自己的心理有一定的帮助。最终, 有 29 名队员完整参加了活动并完成了心理测试。

结果: 经过对心境状态三次测验结果进行单因素方差分析后发现, 队员在愤怒 ($F(2, 81), P=0.022$)、疲劳 ($F(2, 81), P=0.038$) 以及总体心境状态 (TMD) ($F(2, 81), P=0.023$) 的三次测量结果差异显著, 自信测量结果的差异边缘显著 ($F(2, 81), P=0.059$), 紧张、抑郁、精力、慌乱得分差异不显著。队员在行为-意识融合 ($F(2, 86), P=0.001$), 准确的反馈 ($F(2, 86), P=0.026$), 控制感 ($F(2, 86), P=0.020$), 总体流畅状态差异显著 ($F(2, 86), P=0.008$)。挑战-技能平衡、清晰的目标、注意力集中于当前任务、自我意识丧失、时间变换、享受的体验差异不显著。

结论: 经过 8 周的团体活动, 证明团体活动可以降低运动员的愤怒, 疲劳, 提升运动员的自信, 最终改善运动员的心境状态。在行为-意识融合、准确的反馈、控制感方面得分增加, 整体流畅状态有所提升。团体活动是一种简单, 高效的心理辅导方式, 今后可以在运动队进行推广。

The influence of team activities on the state of mind and fluency of shooting athletes

BaYi¹, ZhangYu¹, LiJie²

1 School of Psychology, Beijing Sport University, BeiJing, 100084, E-mail: btzy1973@126.com

2 Institute of Psychological Science, Hangzhou Normal University, HangZhou, 311121

Abstract: To research the influence of team activities on the state of mind and fluency of shooting athletes, this study took 33 shooting athletes from Anhui Shooting Sports Management Center as the research object. During the winter training in 2020, an 8-week team activity class was carried out. Group activities include the cultivation of group trust and cohesion, self-confidence training, self-growth and exploration, etc. POMS Mood State Scale and Fluency State Scale FSS were used to measure the mood state and fluency state of the athletes. Three tests were conducted during the first, fourth and final week of group activities. The obtained data were analyzed by SPSS22.0 statistical software. At the same time, in order to determine the applicability of team activities to shooting athletes, athletes were invited to fill in their feelings and suggestions during the second and last week of the activities. Most of the athletes said that team activities were interesting and helpful to their psychology to some extent. In the end, 29 of the team members took the full course and completed the psychological test.

Results: Through one-way ANOVA on the results of three tests of mood state, it was found that the three measurements of anger ((F (2,81), P=0.022), fatigue ((F (2,81), P=0.038) and general mood state (TMD) ((F (2,81), P=0.023) were significantly different. The difference margin of confidence measurement results was significant (F (2,81), P=0.059), but there were no significant differences in scores of nervousness, depression, energy and fluster. There were significant differences in players' overall fluency ((F (2,86), P=0.008) in behavior-consciousness fusion ((F (2,86), P=0.001), accurate feedback ((F (2,86), P=0.026), and sense of control ((F (2,86), P=0.020). Challenges - balance of skills, clear goals, focus on the task at hand, loss of self-awareness, time shifts, no significant differences in experience enjoyment.

Conclusion: after 8 weeks of group activities, it is proved that group activities can reduce athletes' anger, fatigue, improve their self-confidence, and finally improve their state of mind. Scores increased in behavior-consciousness integration, accurate feedback, and sense of control, and overall fluency improved. Group activity is a simple and efficient way of psychological counseling, which can be popularized in sports teams in the future.

恐慌在焦虑-抑郁症状网络中的重要性： 新冠疫情调查的纵向网络分析

包佳敏¹ 王宇轩² 臧寅垠¹ (通讯作者)

1 北京大学心理与认知科学学院和行为与心理健康北京市重点实验室, 北京, 100871

2 中国科学院心理研究所, 北京, 100101

摘要 目的: 新冠肺炎疫情给人们带来了巨大的心理冲击, 焦虑和抑郁情绪并存现象普遍。网络分析认为心理障碍的症状之间存在复杂的交互作用, 将心理障碍看作症状之间相互作用的结果, 为理解焦虑和抑郁共病提供了新的视角。本研究拟采用网络分析的方法 (包括正则化偏相关网络和有向无环图), 考察新冠肺炎疫情期间一般人群中焦虑和抑郁症状网络的结构及变化。**方法:** 本研究采用医院焦虑抑郁量表, 在新冠肺炎疫情的高峰期 (2020.2.7-2020.3.13) 和高峰后期 (2020.5.8-2020.6.24) 对 533 名国内普通民众进行了网络匿名问卷调查。**结果:** 在疫情高峰期和疫情高峰后期, 分别有 22.3% 和 17.8% 的被试处于焦虑-抑郁状态 (焦虑和抑郁分量表得分均 ≥ 8 分)。从疫情高峰期到疫情高峰后期, 被试焦虑、抑郁得分显著下降 ($p < .001$, $d = 0.15$)。正则化偏相关网络显示, 焦虑和抑郁症状在疫情高峰和高峰后期均高度交织, 网络结构和整体强度随时间保持稳

定。在网络中,恐慌具有高中心性,情绪低落具有高中心性和高桥梁中心性。在有向无环图中,恐慌位于网络最顶端,引发了其他症状;心境低落也位于网络中因果关系的上游。**讨论:**在新冠肺炎疫情期间,恐慌和低落情绪在焦虑-抑郁情绪的产生和维持中可能发挥了重要作用。及时缓解恐慌与低落情绪,可能有助于抑制焦虑-抑郁共病的发生和发展,可能是未来突发公共卫生事件早期的重要干预目标。

关键词 新冠肺炎疫情,焦虑,抑郁,恐慌,网络分析

The Importance of Panic in Comorbid Anxiety-Depression Symptoms among Chinese General Population during COVID-19 Pandemic: Two Longitudinal Network Analyses

Jiamin Bao¹, Yuxuan Wang², Yinyin Zang^{1*},

¹ School of Psychological and Cognitive Sciences and Beijing Key Laboratory of Behavior and Mental Health, Peking University, Beijing, China, 100871

² Institute of Psychology, the Chinese Academy of Sciences, Beijing, China, 100101

Abstract: Anxiety and depression symptoms commonly occurred together during COVID-19 pandemic. The network approach provided a novel perspective to explore anxiety-depression symptoms as a causal system of interacting symptoms. The current study examined the associations between anxiety and depression symptoms in 533 participants at the peak of pandemic (February 7th, 2020, to March 13rd, 2020) and the post-peak stage (May 8th, 2020, to June 24th, 2020), respectively, by the Hospital Anxiety and Depression Scale. Two complementary network models (i.e., graphical LASSO and directed acyclic graph, DAG) were utilized. The results showed that anxiety and depression were highly intertwined both at outbreak and after peak, and the structure as well as overall strength of network were stable across time. Meanwhile, *panic* was central in graphical LASSO and lied at the top of DAG. *Sad mood* emerged as both a central and bridge node. These findings indicated that *panic* and *sad mood* may play an important role in the development and maintenance of anxiety-depression symptoms during COVID-19 pandemic. Reducing *panic* and *sad mood* may assist with preventing anxiety and depressive symptoms and may be an important early intervention target for public health emergencies in the future.

Keywords: COVID-19, anxiety, depression, panic, network analysis

负性认知偏向对医学生自杀意念的短期纵向影响： 需要挫败和自杀行为态度的中介调节效应

毕婧华¹ 闫丹凤¹ 薛朝霞¹ (通讯作者)

¹ 山西医科大学心理学系, 山西, 030001

摘要 目的: 探讨负性认知偏向对医学生自杀意念的影响, 以及需要挫败和自杀行为态度在二者关系中的作用机制。方法: 采用负性认知加工偏向问卷、需要挫败量表、自杀意念量表以及自杀行为态度问卷, 先后间隔一个月对 4231 名在校医学生进行分批调查。结果: (1) 负性认知偏向能够显著正向预测医学生的自杀意念; (2) 需要挫败部分中介负性认知偏向与医学生自杀意念间的关系; (3) 自杀行为态度调节了医学生负性认知偏向通过需要挫败影响自杀意念的中介过程。对自杀行为持反对态度时, 负性认知偏向和需要挫败对自杀意念的影响较小, 对自杀行为持赞同态度时, 负性认知偏向和需要挫败对自杀意念的影响较大。结论: 负性认知偏向既可以直接影响医学生的自杀意念, 也可以通过需要挫败对其产生间接影响, 对自杀行为抱持的赞同态度增强了负性认知偏向和需要挫败对医学生自杀意念的影响。

关键词 负性认知偏向, 自杀意念, 需要挫败, 自杀行为态度

Short term longitudinal effects of negative cognitive bias on suicide ideation of medical students: mediating and moderating effects of need frustration and attitude towards suicidal behavior

BI Jing-hua, YAN Dan-feng, XUE Zhao-xia

School of Humanities and Social Sciences, Shanxi Medical University, Taiyuan 030001, China

Abstract: Objective: To explore the effect of negative cognitive bias on suicidal ideation of medical students and the mechanism of need frustration and attitude towards suicidal behavior in their relationship. Methods: A total of 4231 medical students were investigated by using the negative cognitive processing bias questionnaire, the need frustration scale, the suicide ideation scale and the attitude towards suicide behavior questionnaire. Results: (1) Negative cognitive bias can significantly and positively predict medical students' suicidal ideation; (2) Need frustration partially mediates the relationship between negative cognitive bias and medical students' suicidal ideation; (3) Attitude toward suicidal behavior moderates the mediating process of medical students' negative cognitive bias influencing suicidal ideation through need frustration. When medical students hold a negative attitude towards suicide, negative cognitive bias and need frustration have less influence on suicide ideation; When medical students hold a positive attitude towards suicide, negative cognitive bias and need frustration have more influence on suicide ideation. Conclusion: Negative cognitive bias can not only directly affect medical students' suicidal ideation, but also indirectly affect it through need frustration. The positive attitude towards suicide behavior enhances the influence of negative cognitive bias and need frustration on medical students' suicidal ideation.

Keywords: Negative cognitive bias, suicidal ideation, need frustration, attitude towards suicidal behavior

出柜与 LGB 群体的心理健康：一项基于全国样本的研究

蔡济民^{1,2} 陈祉妍¹ 郭菲¹（通讯作者）

1 中国科学院心理健康重点实验室[中国科学院心理研究所]，北京，100101

2 中国科学院大学心理学系，北京，100049, guof@psych.ac.cn

摘要 相比正常的异性恋群体，LGB 群体（即男同性恋、女同性恋和双性恋群体）的心理健康状况往往处于更高的风险之中。过往的研究表明，出柜（即向他人袒露自己的性取向）或能够让 LGB 群体更好地整合自我认知，接受来自外界的真挚反馈和支持，从而更好地自我接受，提升其心理健康水平。然而，出柜带来的影响与个体选择出柜的环境息息相关，在支持程度较差的环境中，出柜反而可能带来更为负面的心理疾病风险。在过去的研究中，较少有研究关注中国 LGB 群体在不同环境中出柜的影响。因此，本研究首先旨在探索不同日常情境中，中国 LGB 群体出柜带来的心理健康影响。其次，有鉴于过往文献指出性取向会带来不同心理健康影响，尤其是同性恋群体和双性恋群体存在明显差异，本研究也旨在比较同性恋群体和双性恋群体在出柜及其影响因素的异同。本研究通过滚雪球问卷法，通过国内各大性少数平台和社群，在全国范围内收集了 8093 份有效问卷，对出柜对象、抑郁水平、孤独水平、自杀意念等因素进行了调查。结果发现，中国 LGB 群体倾向于向密友出柜，在家庭和外部环境中出柜意愿较低。在密友圈和在学校中出柜对 LGB 群体的心理健康有更好的保护性作用。在工作环境中出柜更多是对同性恋群体的心理健康有保护作用，而对双性恋群体没有显著影响。在家庭环境出柜对同性恋群体，尤其是男同性恋群体的心理健康有明显的负面作用，但同样对双性恋群体没有显著影响。研究结果表明，出柜与中国 LGB 群体的心理健康存在相关关系，需要更多的努力来营造支持性环境，从而更好地促进 LGB 群体的心理健康。

关键词 同性恋，双性恋，出柜，心理健康，出柜环境

Disclosure and LGB's mental health: A Chinese nation-wide study

Jimin Cai^{1,2}, Zhiyan Chen¹, Fei Guo¹

1 CAS Key Laboratory of Mental Health, Institute of Psychology, Beijing, 100101, China

2 Department of Psychology, University of Chinese Academy of Sciences, Beijing, 100049, China

Abstract: Background: Research suggested that disclosure is one of the key factors influencing LGB's mental health, while less was known about the association between disclosure and mental health in Chinese context. **Objective:** This study aimed to explore the association between disclosure in different social contexts and mental health outcomes in Chinese LGB individuals. **Methods:** From 31 Chinese provinces/municipalities, 8,093 LGB individuals (Mage=22.04) were recruited to completed an online survey regarding disclosure and their mental health. **Result:** Disclosing to close friends and in school was positively associated with better mental health status of LGB individuals. Disclosing in workplace was also positively associated with better mental health, but for homosexuality only; no such significant association was found among bisexual people. However, disclosing to family could bring out negative outcomes in mental health for homosexuality, especially for gay individuals. **Conclusions:** The association between disclosure and mental health in Chinese LGB individuals largely varied by the daily contexts and sex orientations.

高中生未来时间态度与学习投入： 过去时间态度与学业自我效能感链式中介作用

曹呈旭¹ 七十三¹（通讯作者）

1 内蒙古师范大学心理学院，呼和浩特，010022，通讯作者 E-mail: qshisan@126.com

摘要 近年来，越来越多的研究开始关注个体时间洞察力如何影响个体的心理变量。时间洞察力是指个体对时间的认知、情感体验和行动倾向表现出的人格特征。它与学习动机、学业表现等心理现象存在着密切的相关。学习投入是高中生学习的重要指标之一，它不仅能够正向预测学生学业成绩，还能够预测个体未来在职业的发展。目前有研究发现未来时间洞察力能够正向预测学习投入，但对未来时间洞察力是如何影响当下的学习投入的心理机制尚不清楚。学习自我效能感是影响学习投入的核心因素。而自我效能感的发展又是基于时间框架中进行的。因此，本文采用中文版时间态度量表、学业自我效能感量表和学习投入量表，对 450 名在校高中生进行测量，以探讨未来时间态度与学习投入的关系以及过去时间态度和学业自我效能感的作用。结果发现：首先，过去积极时间态度和学业自我效能感在未来积极时间态度与学习投入间的链式中介作用显著，具有统计学意义。但过去消极时间态度和学业自我效能感在未来消极时间态度与学习投入中的链式中介作用不显著；其次，学业自我效能感在未来时间态度与学习投入间的中介作用均显著。但过去时间态度在未来时间态度与学习投入间的中介作用不稳定。最后，未来的研究可以深入探讨过去时间态度是如何影响学业效能感，并进一步探讨两者如何在未来时间态度与学习投入中起作用的。

关键词 未来时间态度，过去时间态度，学习投入，学业自我效能感，链式中介

The Role of Past Time Attitude and Academic Self-efficacy in the Relationship between Future time Attitude and Study Engagement in High School: A Serial Mediation Model

Cao Chengxu¹, Qi Shisan¹

School of Psychology, Inner Mongolia Normal University, Hohhot, 010022

Abstract: In recent years, more and more researches have focused on how individual time perception affects individual psychological variables. Time insight refers to the personality characteristics of individuals' cognition, emotional experience and action tendency towards time. It is closely related to learning motivation, academic

performance and other psychological phenomena. Learning engagement is one of the important indicators of high school students' learning. It can not only positively predict students' academic performance, but also predict individuals' future career development. At present, some researches have found that future time insight can positively predict learning engagement, but the psychological mechanism of how future time insight influences present learning engagement is still unclear. Learning self-efficacy is the core factor that affects learning engagement. And the development of self-efficacy is based on the time frame. To explore the relationship between future time attitude and learning engagement, as well as the role of past time attitude and academic self-efficacy, 450 high school students were measured by the Chinese version of Time Attitude Scale, Academic Self-efficacy Scale and Learning Engagement Scale. The results showed that: first, the total indirect effect of future positive through past positive time attitude and academic self-efficacy on learning engagement had a significant link between future positive time attitude and learning engagement was statistically significant. However, the total indirect effect of negative positive through past negative time attitude and academic self-efficacy on learning engagement was not significant. Secondly, academic self-efficacy has a significant mediating effect on the relationship between future time attitude and learning engagement. However, the mediating effect of past time attitude on future time attitude and learning engagement was not significant. Finally, future research can explore how past time attitude affects academic efficacy, and further explore how past time attitude and academic efficacy play a role in future time attitude and learning engagement.

反刍思维对大学生网络游戏成瘾的影响：抑郁和化身认同的中介作用

常远 王一帆 齐冰（通讯作者）

河北大学教育学院，保定，071002，E-mail: qibing@hbu.edu.cn

摘要 网络游戏成瘾会给个体的身心健康带来负面影响，目前已经成为世界性公共卫生问题。网络游戏成瘾的风险因素包括反刍思维、抑郁、化身认同等，但是其具体作用机制尚不明确。探讨大学生网络游戏成瘾的成因，对未来控制和干预网络游戏成瘾具有重大的理论和实践意义。本研究基于认知-行为模型和自我差异理论，构建了链式中介模型，采用反刍思维量表、游戏成瘾量表、抑郁量表、化身认同量表对 648 名在校大学生（平均年龄 20.09 岁，男生 346 人）进行测试，探讨了反刍思维对网络游戏成瘾的影响及其作用机制。结果表明：（1）网络游戏成瘾的性别差异显著，男生得分显著高于女生；（2）反刍思维、抑郁、化身认同和网络游戏成瘾两两呈显著正相关；（3）在控制了性别、年龄和平均每周玩网络游戏时间后，反刍思维仍显著正向预测网络游戏成瘾；（4）反刍思维可以通过三条路径的间接作用影响网络游戏成瘾：一是抑郁情绪的独立中介作用，二是化身认同的独立中介作用，三是抑郁和化身认同的链式中介作用。所以，反刍思维不仅可以直接影响大学生的网络游戏成瘾，还可以通过抑郁、化身认同的多重中介对网络游戏成瘾产生影响。本研究揭示了反刍思维与大学生网络游戏成瘾的关系及其作用机制，为大学生网络游戏成瘾的预防和干预提供了新视角。

关键词 网络游戏成瘾，反刍思维，抑郁，化身认同

The Impact of Rumination on College Students' Internet Game Addiction: The Mediation of Depression and Avatar Identification

CHANG Yuan, WANG Yifan, QI Bing

College of Education, Hebei University, Baoding 071002, China

Abstract: Internet game addiction (IGA) will have negative effects on individuals physical and mental health, and has become a worldwide mental health problem. Research has indicated that rumination, depression and avatar identification are the risk factors of IGA, but little know about the mechanisms underlying. Therefore, this paper discusses the causes and the formation mechanism of IGA, which can effectively prevent and intervene the problems

of the IGA. It can also provide theoretical and practical value to IGA. Based on cognitive-behavior model and self-discrepancy theory, this study constructed a chain mediation model to test the mediating effects of depression and avatar identification in the association between rumination and IGA. Data were collected using RRS, IGA Questionnaire, SDS, Player-Avatar Identification (PAI). A sample of 648 college students ($M_{age}=20.09$ years, 346 males) anonymously responded to questionnaires. Results showed that: (1) Male students score significantly higher than female students in IGA. (2) There was a significant positive correlation between rumination, depression, avatar identification and IGA. (3) In the control of gender, age and average number of hours per week spent playing online games, rumination could still positively predict IGA. (4) Rumination affects IGA through three paths: the independent mediation of depression, the independent mediation of avatar identification, and the chain mediation of depression and avatar identification. Therefore, rumination not only directly affects IGA of college students, but also affects IGA through the multiple mediation of depression and avatar identification. This study uncovered the mechanism underlying the relationship between rumination and IGA. Our results may provide new perspective for the prevention and intervention of college students' IGA.

Keywords: Internet game addiction (IGA), Rumination, Depression, Avatar identification

医院内部服务补救现状 及其对医护人员工作倦怠和离职意愿的影响研究

陈晴¹ 郑雨晴² 刘鲁蓉¹ (通讯作者)

¹ 成都中医药大学管理学院, 成都, 610075

² 成都市第三人民医院, 成都, 610031, 通讯作者 E-mail:liulurong68@163.com

摘要 内部服务补救是指组织通过一系列努力消除承担外部服务补救工作的内部员工可能产生的负面情绪,使其对未来抱有希望和处理顾客抱怨。已有文献缺乏对医疗卫生行业内部服务补救的相关研究。目的:调查医院内部服务补救现状,探讨医院内部服务补救对医护人员工作倦怠和离职意愿的影响,为稳定医院优质人才队伍提供依据。方法:以自编医院内部服务补救调查问卷、工作倦怠量表(通用版)、离职意愿量表为工具,采用分层方便抽样法在四川省抽取不同等级医院共610名医护人员进行问卷调查,运用单因素分析、相关分析和路径分析进行统计分析。结果:1)医院内部服务补救总平均得分为(3.30±0.77),各维度平均得分分别为医院支持(3.39±0.86),抱怨管理(3.47±0.88),决策授权(3.03±0.85);2)医护人员医院内部服务补救得分在职业、性别、医院等级、年龄、学历、工作年限和聘用形式上差异具有统计学意义($P<0.05$),护士总分及各维度得分高于医生,女性抱怨管理维度得分高于男性,三级医院医护人员抱怨管理维度得分低于其他医院医护人员,40-49岁和≥50岁医护人员医院支持维度得分高于20-29岁医护人员,专科和本科学历医护人员总分及医院支持、抱怨管理维度得分高于硕士及以上医护人员,工作年限高的医护人员总分及各维度得分高于工作年限较低的医护人员,正式聘用的医护人员总分及抱怨管理、决策授权维度得分高于未定聘用形式的医护人员;3)医院内部服务补救各维度与工作倦怠、离职意愿呈负相关($r=-0.112\sim-0.431$, $P<0.01$),工作倦怠各维度与离职意愿呈正相关($r=0.291\sim0.579$, $P<0.01$);4)工作倦怠在医院内部服务补救和离职意愿之间起部分中介作用,中介效应为0.28,占总效应的57.2%。结论:医院内部服务补救整体处于中等水平,职业、性别、医院等级、年龄、学历、工作年限和聘用形式是医护人员感知医院内部服务补救的影响因素,医院内部服务补救能直接负向影响工作倦怠和离职意愿,还能以工作倦怠为中介间接影响离职意愿。

关键词 医护人员, 医院内部服务补救, 工作倦怠, 离职意愿

Research on the status quo of internal service recovery in hospitals and its impact on job burnout and turnover intention of medical staff

Chen Qing¹, Zheng Yuqing², Liu Lurong¹ (corresponding author)

¹ School of Management, Chengdu University of Traditional Chinese Medicine, Chengdu, 610075

² Chengdu Third People's Hospital, Chengdu, 610031

Abstract: Internal service remediation refers to the organization through a series of efforts to eliminate the possible negative emotions of internal employees who undertake external service remediation work, so that they can hope for the future and deal with customer complaints. The existing literature lacks relevant research on internal service remediation in the medical and health industry. Purpose: To investigate the status quo of hospital internal service remediation, explore the impact of hospital internal service remediation on job burnout and willingness to quit of medical staff, so as to provide a basis for stabilizing the hospital's high-quality talent team. Methods: Using self-compiled hospital internal service recovery questionnaire, job burnout scale (universal version), and turnover intention scale as tools, a stratified convenience sampling method was used to select a total of 610 medical staff from different levels of hospitals in Sichuan Province to conduct a questionnaire survey. Use single factor analysis, correlation analysis and path analysis for statistical analysis. Results: 1) The total average score of hospital internal service recovery was (3.30 ± 0.77) , and the average scores of each dimension were hospital support (3.39 ± 0.86) , complaint management (3.47 ± 0.88) , decision-making authorization (3.03 ± 0.85) ; 2) The medical staff's hospital internal service recovery scores differed statistically in terms of occupation, gender, hospital grade, age, education, working years, and employment form ($P<0.05$). The total score of nurses and the scores of all dimensions were higher than those of doctors, and women complained about management. The dimensional score is higher than that of males. Medical staff in tertiary hospitals complain that the management dimensional score is lower than that of other hospitals. Medical staff aged 40-49 and ≥ 50 have higher scores on the hospital support dimension than medical staff aged 20-29, as well as specialist and undergraduate medical staff. The total score of staff and hospital support and complaint management dimensions are higher than that of medical staff with a master's degree or above, the total scores of medical staff with high working years and the scores of all dimensions are higher than those of medical staff with low working years, and the total scores and complaints of officially hired medical staff. The scores of management and decision-making authorization are higher than those of medical staff with undetermined forms of employment; 3) The various dimensions of hospital internal service remedy are negatively correlated with job burnout and willingness to quit ($r=-0.112\sim-0.431$, $P<0.01$), and various dimensions of job burnout It is positively correlated with turnover intention ($r=0.291\sim0.579$, $P<0.01$); 4) Job burnout plays a partial mediating role between the hospital's internal service recovery and turnover intention. The mediating effect is 0.28, accounting for 57.2% of the total effect. Conclusion: The hospital's internal service recovery is at a medium level as a whole. Occupation, gender, hospital grade, age, education, working years and employment form are the influencing factors of medical staff's perception of the hospital's internal service recovery; the hospital's internal service recovery can directly negatively affect job burnout And the willingness to leave, but also indirectly affect the willingness to leave with job burnout as an intermediary.

Keywords: medical staff, hospital internal service recovery, job burnout, willingness to leave

体型负面评价对女大学生限制性饮食的影响:肥胖恐惧的中介作用

陈艺华¹ 乌云特娜² (通讯作者)

¹ 内蒙古师范大学, 呼和浩特, 010022

² 内蒙古师范大学心理学系, 呼和浩特, 010020, wuyuntena@163.com

摘要 由于近年来,在社交媒体,新闻报道,广告等对“减肥”“瘦身”理念的过度营销下,女性被社会压力和媒体信息淹没,减肥成为年轻女性日常交流中常见的话题之一,为减肥而出现的少食、节食以及由此可能引发的过度饮食、暴饮暴食等饮食失调行为问题也接踵而来。饮食失调中最常见的适应不良行为就是限制性饮食,因此本研究选取限制性饮食为因变量。大量研究表明体型外表受到负面评价,会让个体知觉到沮丧与焦虑,为避免这些负面感受,个体通常会采取极端手段(如运动过量、节食)以减少他人对自己的批评。因此本研究选择体型负面评价作为自变量。同时选取肥胖恐惧为中介变量,以期进一步考察体型负面评价与女大学生限制性饮食之间的内在作用机制。

本研究拟采用随机取样法,选取内蒙古、山西,辽宁,黑龙江四省的1000名女大学生为被试进行问卷调

查。预计发放问卷 1000 份,拟选取被试的平均年龄在 18~24 岁之间。研究工具将使用限制性饮食问卷,并修订体型负面评价问卷,修订肥胖恐惧问卷。探究体型负面评价对女大学生限制性饮食行为的影响,并进一步探究肥胖恐惧在体型负面评价对女大学生限制性饮食影响中的中介作用。并基于研究结果,对女大学生问题饮食行为以及饮食障碍的预防和干预提出建议和意见。

The influence of body shape negative evaluation on restrictive diet of female college students: the mediating effect of fear of fat

Chen Yihua¹, WuYuntena¹

College of Psychology, Inner Mongolia Normal University, Hohhot, 010022

Abstract: In recent years, due to the excessive marketing of the concept of "weight loss" and "weight loss" in social media, news reports, advertisements, etc., women have been overwhelmed by social pressure and media information. Weight loss has become one of the common topics in the daily communication of young women. Eating disorder behavior problems such as undereating, dieting, overeating and overeating that may be caused by this have also followed one after another. The most common maladaptive behavior in eating disorders is restrictive diet, so this study selected restrictive diet as the dependent variable. A large number of studies have shown that negative evaluations of body appearance can make individuals feel frustrated and anxious. To avoid these negative feelings, individuals usually take extreme measures (such as excessive exercise, dieting) to reduce others' criticism of themselves. Therefore, this study chooses the negative evaluation of body shape as the independent variable. At the same time, the obesity fear is selected as an intermediary variable, in order to further investigate the internal mechanism of the negative evaluation of body shape and the restrictive diet of female college students. This study intends to use random sampling to select 1,000 female college students from Inner Mongolia, Shanxi, Liaoning, and Heilongjiang as the subjects to conduct a questionnaire survey. It is estimated that 1,000 questionnaires will be distributed, and the average age of the subjects to be selected will be between 18 and 24 years old. Research tools will use restrictive diet questionnaires, revised body shape negative evaluation questionnaires, and revised obesity fear questionnaires. To explore the influence of negative body shape evaluation on restrictive dietary behaviors of female college students, and further explore the mediating role of obesity fear in the influence of negative body shape evaluation on restrictive dietary behaviors of female college students. Based on the results of the research, suggestions and opinions on the prevention and intervention of problematic eating behaviors and eating disorders of female college students are put forward.

Keywords: body shape negative evaluation, restrictive diet, female college students, fear of fat

情绪加工对基于动作预期的结果加工的影响

陈奕衡¹ 赵祁伟¹ 陆颖之² (通讯作者)

1 上海体育学院心理学院, 上海, 200438, luyingzhi@sus.edu.cn

摘要 目的: 基于动作预期的结果加工是指个体利用线索对动作结果进行预期, 在实际结果出现时, 将先前预期与实际结果进行比较的过程。预期反应-结果模型(predicted response-outcome, PRO)解释了内侧前额叶皮层(medial prefrontal cortex, mPFC)和前扣带回皮层(anterior cingulate cortex, ACC)在整个过程中的预测、评估、冲突监控的作用, 而情绪加工的脑区也会涉及 mPFC 和 ACC 的参与。基于动作预期的结果加工本质上是一种认知控制, 研究发现, 负性情绪会损害认知控制, 但该影响会随着情绪在整个任务中得到的认知资源多少而发生变化。根据两者加工存在相同的脑区以及情绪影响认知控制, 本研究旨在探讨情绪刺激与动作结果同时呈现时, 情绪效价对基于动作预期的结果加工的影响, 并预测该影响可能会随着情绪加工得到的认知资源多少而不同。方法: 38 名(女性 24 名, $M = 21.32$, $SD = 0.44$)来自上海体育学院的在校生观看一段乒乓球发球视频(终止到“球-拍”接触后一帧, 50 帧率)后, 形成球落点的预期, 之后同时呈现情绪与结果

刺激,要求被试判断结果刺激与先前预期是否一致。采用 2(线索视频与结果刺激落点一致性:一致、不一致) $\times$ 3(情绪效价:负性、中性、正性)被试内设计,记录正确率与反应时,比较不同情绪效价对于结果加工的影响。结果:不一致相对于一致条件引起更大的反应时($p < 0.001$),负性情绪相对于中性刺激会引起更大的反应时($p = 0.01$),说明负性情绪会削弱结果加工绩效。同时,一致性与效价发生交互作用,一致条件下,主任务认知负荷小,情绪分配到较多资源时,负性情绪相对于中性引起更大的反应时($p = 0.011$),即负性情绪损害结果加工表现,而在不一致条件下,主任务认知负荷大,情绪分配到较少认知资源时,负性与中性引起的反应时无差异,这说明情绪对结果加工的影响会受到认知资源的调控。结论:当情绪刺激得到足够多的认知资源时,情绪加工才会影响基于动作预期的结果加工。

The influence of emotion on the outcome processing based on action anticipation

Yiheng Chen, Qiwei Zhao, Yingzhi Lu

Shanghai University of Sport, Shanghai

Abstract: Purpose: The outcome processing based on action anticipation refers to the process in which individuals use clues to anticipate the action outcome, and when the actual outcome appears, the previous anticipation is compared with the actual outcome. The predicted response-outcome (PRO) model explains the prediction, evaluation, and conflict monitoring of the medial prefrontal cortex (mPFC) and anterior cingulate cortex (ACC) throughout the process. The role of the emotional processing brain areas will also involve the participation of mPFC and ACC. The outcome processing based on action anticipation is essentially a kind of cognitive control. Researchers have found that negative emotion can impair cognitive control, but this effect will change with the amount of cognitive resources that emotion obtains in the entire task. Based on the overlapping brain areas in the two processes and emotional effect on cognitive control, this study aims to explore the effect of emotional valence on the processing of outcome based on action anticipation when emotional stimuli and action outcome are presented simultaneously, and predict that the impact may vary with the amount of cognitive resources obtained from emotional processing. Method: 38 students (24 females, $M = 21.32$, $SD = 0.44$) from the Shanghai University of Sport watches a table tennis serve video (terminated one frame after the "ball-bat" touch, 50 frame rate) to form the anticipation of the ball's landing point then presented with emotion and outcome stimulus simultaneously. Subjects are required to judge whether the outcome stimulus is consistent with the previous anticipation. Using 2 (the congruency of cue video and outcome stimulus: congruent, incongruent) $\times$ 3 (emotional valence: negative, neutral, positive) within the subject design, when recording the correct rate and RT, compare the effects of different emotional valence on outcome processing. Results: When incongruency causes a greater RT than congruency condition ($p < 0.001$), negative emotion causes a greater RT than neutral stimuli ($p = 0.01$), indicating that negative emotion will weaken the outcome processing performance. At the same time, congruency interacts with valence. Under congruency condition, when the cognitive load of the main task is small, and emotion is allocated more resources, negative emotion causes a greater RT than neutral ($p = 0.011$), that is negative emotion impairs the performance of outcome processing. Under incongruency condition, the cognitive load of the main task is large and emotion is allocated to fewer cognitive resources, there is no difference between the RT caused by negative and neutral, which shows that the influence of emotion on outcome processing will be regulated by cognitive resources. Conclusion: When emotional stimuli is obtained enough cognitive resources, emotional processing will affect the outcome processing based on action anticipation.

幼师情绪对疾病症状和工作满意度的影响：情绪枯竭的中介作用

崔鑫鑫¹ 王润东¹ 牟晨晨¹ 张克顺² (通讯作者)

1 青岛大学师范学院心理系, 山东青岛, 266071

2 青岛大学师范学院心理系, 山东青岛, 266071, keshun.zhang@qdu.edu.cn

摘要 以往的研究表明, 幼儿教师感知到的职业压力比其他学段教师感知到的职业压力更大。就幼师而言, 作为一个特殊的教育行业工作者, 高压、重负荷的工作影响着幼师的情绪, 过多的情绪资源消耗催化幼师产生情绪枯竭, 同时也成为教师身心健康逐渐恶化的重要原因。这也恰恰说明幼师的情绪对他们的身心健康至关重要, 情绪枯竭可能在其中起着中介作用。然而, 目前尚不清楚情绪如何通过情绪枯竭影响幼儿教师的疾病症状和工作满意度。因此本研究旨在探讨幼师情绪对幼师疾病症状和工作满意度的影响机制, 尤其关注情绪枯竭的中介作用。本研究采用教师情绪量表(TES)、职业情绪枯竭量表、疾病症状量表和工作满意度量表对 1997 名幼师进行了调查。结果发现: (1) 幼儿教师的快乐情绪负向影响疾病症状、正向影响工作满意度, 这些影响作用可以通过降低情绪枯竭这一中介实现; (2) 幼儿教师的愤怒情绪正向影响疾病症状, 负向影响工作满意度, 这些影响作用可以通过提高情绪枯竭的中介实现; (3) 幼儿教师的焦虑情绪正向影响疾病症状并完全通过提高情绪枯竭实现, 但不影响工作满意度。研究结果说明常伴有愤怒、焦虑情绪的幼师更有可能出现身体上的疾病症状, 出现身体功能的恶性循环。此外, 焦虑对工作满意度没有显著的影响可能是由于在幼师中发现的整体焦虑水平较低以及焦虑的独特性质。本研究结果对幼儿教师身心健康有重要意义, 因此本研究结果启示幼儿教育工作者可以通过增加幼师的快乐, 减少幼师的愤怒和焦虑, 从而有效地降低情绪枯竭的程度, 提高幼师的身体健康和工作满意度。

The influence of kindergarten teachers' emotions on illness symptoms and job satisfaction: The mediating role of emotional exhaustion

Xinxin Cui¹, Rundong Wang¹, Chenchen Mu¹, Keshun Zhang²

¹Department of Psychology, Normal College, Qingdao University, Qingdao, China

²Department of Psychology, Normal College, Qingdao University, Qingdao, China,
keshun.zhang@qdu.edu.cn

Abstract: Previous studies have shown that the occupational pressure perceived by kindergarten teachers is greater than the occupational pressure perceived by teachers in other stages. As far as kindergarten teachers are concerned, as a special education industry worker, high-pressure and heavy-duty work affects kindergarten teachers' emotions. Excessive consumption of emotional resources catalyzes kindergarten teachers' emotional exhaustion, at the same time, it has also become an important reason for the gradual deterioration of teachers' physical and mental health. This also precisely shows that the emotions of kindergarten teachers are crucial to their physical and mental health, and emotional exhaustion may play an intermediary role among them. However, it is not clear how emotions affect preschool teachers' illness symptoms and job satisfaction through emotional exhaustion. Therefore, the current study aims to examine the effects of kindergarten teachers' emotions on their illness symptoms and job satisfaction, focusing particularly on the mediating role of emotional exhaustion. We measured 1,997 kindergarten teachers by using Teacher Emotion Scale (TES), Occupational Emotional Exhaustion Scale, Illness Symptoms Scale, and Job Satisfaction Scale. Results revealed that enjoyment negatively related to illness symptoms and positively associated with job satisfaction, which was mediated by depressing emotional exhaustion. Anger positively related to illness symptoms and negatively related to job satisfaction, which was mediated by increasing emotional exhaustion. Anxiety positively related to illness symptoms, which was mediated by increasing emotional exhaustion, but it showed no impact on job satisfaction. We found teachers' emotions influence kindergarten teacher's illness symptoms and job satisfaction, which mediated by emotional exhaustion. These results highlight the functions of the emotions in teacher's physical and mental health.

The results of the study indicate that kindergarten teachers who are often accompanied by anger and anxiety are more likely to have physical disease symptoms and a vicious circle of physical function. In addition, the insignificant effect of anxiety on job satisfaction may be due to the lower overall anxiety level found in kindergarten teachers and

the unique nature of anxiety. The results of this research are of great significance to the physical and mental health of kindergarten teachers. Therefore, the results of this research enlighten that preschool educators can increase the happiness of kindergarten teachers and reduce their anger and anxiety, thereby effectively reducing the degree of emotional exhaustion and improving kindergarten teachers' Physical health and job satisfaction.

中国跨性别与性别未定者自杀意念的影响因素：一项全国性研究

翟婧雅¹² 郭菲（通讯作者） 陈祉妍¹

1 中国科学院心理健康重点实验室，北京，100101

2.中国科学院大学心理学系，北京，100101，guof@psych.ac.cn

摘要 背景:以往研究发现，跨性别和性别未定者(以下简称跨性别者)是自杀意念的高风险人群，基于此，考察该群体自杀意念的风险因素至关重要。本研究旨在探究中国跨性别者过去一年自杀意念的发生率及相关影响因素，并且从中国文化背景出发，探索婚姻压力对跨性别者自杀意念的影响。

方法:本研究数据来源于中国性与性别少数群体心理健康与亲密关系调查的数据，对来自全国 31 个省市共 9238 名被试进行分析，其中跨性别者为 977 人。本研究考察人口学变量、心理健康、自杀意念、身份认同冲突、对无法变更身份证件性别的焦虑和婚姻压力等自杀意念的影响因素，并通过多因素 logistic 回归模型，发现跨性别者自杀意念的风险因素。

结果:总体来看，中国性与性别少数群体自杀意念的发生率为 53.8%，其中跨性别者自杀意念的发生率为 69.4%。在控制人口学因素后，跨性别者比顺性别性倾向少数群体有更高的抑郁风险和自杀意念。logistics 回归分析发现，跨性别者自杀意念的风险因素有抑郁风险、对生理性别的厌恶、对无法变更身份证件性别的焦虑和拥有被迫进入婚姻的经历。而随着年龄增大，跨性别者的自杀意念有显著降低。

结论:本研究首次从社会文化角度考察中国跨性别者的自杀意念及其相关因素。研究以期为心理和临床干预提供有用的理论基础。

What Are the Risk Factors for Suicidal Ideation among Transgender and Gender Non-conforming Individuals? A Chinese National Population Study

Zhai Jingya¹², Fei Guo^{1*}, Chen Zhiyan¹

Key Laboratory of Mental Health, Institute of Psychology, Chinese Academy of Science, Beijing 100101, China; 2. University of Chinese Academy of Science, Beijing 100049, China

Abstract: Background: It was found that transgender and gender non-conforming (TGNC) individuals are at high risk of suicidal ideation. Therefore, it is critical to examine risk factors for their suicidal ideation, especially from a cultural-specific perspective. The present study aimed to understand the prevalence of past-year suicidal ideation and the related risk factors in a nationwide sample of Chinese TGNC people.

Methods: The data was obtained from Chinese Sexual Minority Psychological Health Survey (CSMPHS), a national online survey of sexual minority in China. Totally 9,238 participants across 31 provinces and municipalities of China were analyzed in this study, and 977 of them were TGNC individuals. Participants' demographic information, mental health, suicidal ideation, inner sexuality conflict, anxiety about gender-concordant identity documents and coercive marriage experience were collected. Logistic regression was used to explore the potential risk factors for suicidal ideation.

Results: First, of the full sample, the rate of past-year suicidal ideation was as high as 53.8% among the Chinese sexual minority individuals. The prevalence of suicidal ideation was 69.4% among the Chinese TGNC individuals. After controlling for demographic factors, TGNC individuals were more likely to report higher rates of depression symptoms and suicidal ideation than their cisgender sexual minority counterparts. For TGNC people, depression,

aversion to the biological sexuality, anxiety about gender-concordant identity documents and coercive marriage experience were significantly associated with increased risk of suicidal ideation, while older age were negatively associated with suicidal ideation.

Conclusions: This is the first nationwide study to examine Chinese TGNC individuals' suicidal ideation and related factors from a sociocultural perspective. The findings are expected to provide a useful theoretical basis for psychological and clinical intervention.

孕产妇抑郁认知反应水平发展轨迹的潜类别增长模型及其影响因素的研究

扶燕青¹ 黄菲菲² (通讯作者)

1 福建医科大学附属协和医院, 福建福州, 350001

2 福建医科大学护理学院, 福建福州, 350122, pt860315@163.com

摘要 目的 初步探索孕产妇抑郁认知反应变化水平的潜在类别, 并考察不同潜在类别的发展轨迹和群体异质性, 及影响认知反应水平发展轨迹亚群体分类的影响因素, 从而为孕产妇制定个性化的干预及抑郁风险管理策略奠定基础。**方法** 选取 2020 年 9 月至 2021 年 3 月在福建省福州市、莆田市、泉州市 4 所三级甲等医院产科门诊及产科住院部就诊的符合纳排标准的 344 例孕妇作为研究对象。将第一阶段 344 例 EPDS 总分 ≤ 12 分的孕晚期妇女在产后 1 周、产后 6 周分别 2 次随访后, 具有完整资料的 321 例作为纵向研究的研究对象。调查工具为自制的孕晚期、产后 1 周、产后 6 周的一般情况调查问卷、LEIDS-RR-CV 和 EPDS。采用问卷星在线调查方法收集资料。应用 Mplus 7.0 软件对数据进行分析, 采用潜类别增长模型分析 LEIDS-RR-CV 总分变化趋势; 应用 SPSS 26.0 软件对 LEIDS-RR-CV 潜在类别分布影响因素进行统计分析; 其中, 计量资料用均数 $\pm$ 标准差 ($\bar{x} \pm s$) 描述, 计数资料用频数和百分比 (%) 描述, 不同组别的孕产妇 LEIDS-RR-CV 潜在类别分布比较的单因素分析采用 χ^2 检验和 Mann-Whitney 检验, 孕产妇 LEIDS-RR-CV 潜在类别分布的多因素分析采用无序多分类 Logistic 回归分析。以 $P < 0.05$ 为差异有统计学意义。**结果** 潜类别分析结果显示孕产妇存在 3 种不同的抑郁认知反应发展变化轨迹, 即“一般增长组”(17.2%)、“快速增长组”(22.1%)和“稳定组”(60.7%)。无序多分类 Logistic 回归分析结果显示, 文化程度、独生女、妊娠合并糖尿病 3 个变量是抑郁认知反应潜类别的影响因素 ($P < 0.05$)。在模型 1 中, 大学及以上文化组比初中及以下文化组的“一般增长组”比例较高, “稳定组”比例较低; 伴发妊娠合并糖尿病比未伴发妊娠合并糖尿病的“一般增长组”比例较高, “稳定组”比例较低。在模型 2 中, 独生女比非独生女的“快速增长组”比例较高, “稳定组”比例较低。**结论** 福建省孕产妇在围生期认知反应发展趋势存在群体异质性, 可分为“一般增长组”、“快速增长组”和“稳定组”。受教育程度较高、独生女、妊娠合并糖尿病是孕产妇认知反应水平增高的危险因素。提示医务工作者须尽早筛查孕产妇认知反应并针对孕产妇不同类别的反应水平制定个体化、分层次干预方案, 以降低认知脆弱, 避免不良健康结局的出现。

Abstract: Objective: To explore the potential categories of the CR level of postpartum depression, and to investigate its development trajectory and group heterogeneity of different potential categories, and their influencing factors. Both of which provide the reference for the development of tailoring intervention or risk management strategies. **Methods:** From September 2020 to March 2021, a total of 344 pregnant women who met the standard of discharge

were recruited by the convenient sampling method, from the obstetrical clinic and obstetrical inpatient department of four Tertiary (level 3) hospitals in Fuzhou, Putian, and Quanzhou, Fujian Province, China. Late pregnant women with EPDS score less than or equal to 12 in the first stage ($n=344$) were followed up twice at 1 week and 6 weeks after delivery. Finally, 321 women completed the following tools through the Wenjuanxing online platform, including the self-made socio-demographic or clinical characteristic questionnaire (including late pregnancy, 1-week, and 6-week postpartum respectively), the LEIDS-RR-CV, and EPDS. The Mplus7.0 and SPSS26.0 software were used to analyze the data. The potential category growth model was used to analyze the changing trend of the total score of LEIDS-RR-CV. The measurement data were described by mean $\pm$ standard deviation ($\bar{x} \pm s$), and counting data were described by frequency and percentage (%). The Chi-square test and Mann-Whitney test were used to analyze the potential categories of CR among different characteristics of women. The disordered multiple classification Logistic regression analysis was used to analyze the influencing factors of potential categories of CR. The difference was statistically significant ($P < 0.05$). **Results:** The results of latent category analysis showed that there were three different developmental tracks of CR in pregnant women, namely, "general growth group" (17.2%), "rapid growth group" (22.1%), and "stable group" (60.7%). The results of disordered multi-classification logistic regression analysis showed that education level, an only child, and gestational diabetes mellitus were the influencing factors of latent categories of depression CR. In model 1, the proportion of the "general growth group" in the university and above education group was higher than that in junior high school and below education group, and the proportion of "stable group" was lower than that in junior high school and below education group. The proportion of the "general growth group" with pregnancy with diabetes was higher than that without pregnancy with diabetes, and the proportion of the "stable group" was lower. In model 2, the proportion of the "fast growth group" of an only child is higher than that of a non-only child, while the proportion of the "stable group" is lower. **Conclusions:** There is group heterogeneity in the development trend of perinatal CR of pregnant women in Fujian Province, which can be divided into "general growth group", "rapid growth group" and "stable group". Higher level of education, an only child, and pregnancy complicated with diabetes are the risk factors for the increase of CR level of pregnant women. It is suggested that medical workers should screen the CR of pregnant women as soon as possible and develop tailoring intervention programs according to the different CR types of pregnant women, so as to reduce cognitive vulnerability and avoid the occurrence of adverse health outcomes.

不合规任务对小学教师群体工作疏离的影响：领导成员交换关系与情感承诺的链式中介作用

高正端¹ 金青青¹ 曾练平¹(通讯作者)

¹ 贵州师范大学心理学院, 贵阳, 550025, 通讯作者 E-mail: zenglianping@163.com

摘要 随着教育的改革, 教师的工作压力越来越大, 过大的压力会使个体对工作产生疏远、隔离的状态。目的: 研究不合规任务对于小学教师群体工作疏离的影响以及领导成员交换关系和情感承诺在其中的链式中介作用。方法: 采用不合规任务量表、工作疏离量表、领导成员交换关系量表和组织承诺当中的情感承诺分量表对贵州省 40 多所小学与初中各科的 900 名教师进行调查。结果: ①不合规任务与领导成员关系、情感承诺呈显著负相关, 与工作疏离呈显著正相关, 领导成员交换关系与情感承诺呈显著正相关, 与工作疏离呈显著负相关, 情感承诺与工作疏离呈显著负相关。②回归分析显示, 不合规任务显著正向预测工作疏离、负向预测领导成员交换关系, 领导成员交换关系正向预测情感承诺, 负向预测工作疏离, 情感承诺负向预测工作疏离。③用 bootstrap 对链式中介模型进行检验显示, 领导成员交换关系与情感承诺的链式中介效应显著[0.01, 0.04]。结论: 不合规任务通过领导成员交换关系和情感承诺的链式中介作用对工作疏离产生影响, 其中领导成员交换关系能提高员工的情感承诺进而缓解不合规任务对工作疏离的影响。

关键词 不合规任务, 领导成员交换关系, 情感承诺, 工作疏离

The impact of non-compliant tasks on the Work alienation: Chain mediation of leader-member exchange relationships and emotional commitments

Gao Zhengduan¹ Qin Qingqing¹, Zeng Lianping¹

School of Psychology, Guizhou Normal University, Guiyang 550025, China

Abstract: With the reform of education, teachers' work pressure is increasing. Excessive pressure will cause individuals to become alienated and isolated from work. Purpose: To study the influence of non-compliant tasks on the work estrangement of primary school teachers and the chain-like mediating role of leadership exchange relationships and emotional commitments. Methods: Using the non-compliant task scale, the job distancing scale, the leader-member exchange relationship scale, and the emotional commitment subscale among organizational commitments, a survey of 900 teachers in various subjects in more than 40 elementary and junior high schools in Guizhou Province was conducted. Results: ① Non-compliant tasks were significantly negatively correlated with leader-member relationships and emotional commitments, and significantly positively correlated with work alienation. Leadership-member exchange relationships were significantly positively correlated with emotional commitments, and significantly negatively correlated with work alienation. There is a significant negative correlation between work alienation. ② Regression analysis shows that non-compliant tasks significantly positively predict work estrangement and negatively predict the exchange relationship between leaders and members. Leadership exchange relationships positively predict emotional commitment, negatively predict work estrangement, and emotional commitment negatively predict work estrangement. ③ Testing the chain mediation model with bootstrap shows that the chain mediation effect of the exchange relationship and emotional commitment between leaders and members is significant [0.01,0.04]. Conclusion: Non-compliant tasks have an impact on work alienation through the chain-like intermediary effect of leader-member exchange relationships and emotional commitments. Leader-member exchange relationships can increase employees' emotional commitments and thereby alleviate the impact of non-compliant tasks on work alienation.

Keywords: Non-compliant tasks, leader-member exchange relationships, emotional commitments, Work alienation

高中生互联网使用偏好的潜剖面分析

高正端¹ 曾小叶¹ 曾练平¹(通讯作者)

¹ 贵州师范大学心理学院, 贵阳, 550025, 通讯作者 E-mail:zenglianping@163.com

摘要 我国学生网民群体激增, 互联网有利也有弊, 使用方式和特点是其产生积极效益的重要保障。目的: 了解高中生互联网使用的潜在类别及其与人口学变量的关系。方法: 选取 1804 名高中生(男 805 人, 女 999 人, 年龄 16-19 岁), 采用互联网使用偏好问卷(IUP)进行测试, 对高中生互联网使用偏好特征进行潜剖面分析。采用 R3STEP 法的 logistic 回归分析探讨高中生互联网使用偏好与人口学变量的关系。结果: 潜剖面分析结果支持 2 个潜类别的模型, 分别定义为“高频率类别”(C1, 36.25%)和“低频率类别”(C2, 63.75%); 多组潜剖面分析结果显示男女的互联网使用偏好剖面图差别不大, 进一步差异分析显示, 男生和女生在高频率组的得分差异显著($t=2.11, P<0.05$)。以高频率类别为参照组, 进行多项式 Logistic 回归, 显示年级($OR=1.51, P<0.001$), 是否单亲($OR=1.38, P<0.05$), 是否重点班($OR=1.31, P<0.05$)是高中生低频率类别的共性预测因子。结论: 高中生互联网使用偏好存在不同特征的亚类别群体, 年级、是否单亲, 是否重点班是其重要的预测因素, 应重点关注“高频率类别”高中生的互联网使用偏好, 进行及时的干预。

A latent profile analysis of Internet use preferences of high school students

Gao Zhengduan¹, Zeng Xiaoye¹, Zeng Lianping¹

School of Psychology, Guizhou Normal University, Guiyang 550025, China

Abstract: The group of student netizens in our country has proliferated, and the Internet has both advantages and disadvantages. Ways and characteristics of using the Internet are important guarantees for its positive benefits.

Purpose: To understand the potential profiles of Internet use by high school students and their relationship with demographic variables. **Methods:** 1804 high school students (805 males and 999 females, aged 16-19 years) were selected and tested using the Internet Usage Preference Questionnaire (IUP), and the latent profile analysis of the characteristics of high school students' Internet usage preferences was carried out. Logistic regression analysis using R3STEP method was used to explore the relationship between high school students' Internet use preference and demographic variables. **Results:** The results of the latent profile analysis support two latent categories, which are defined as "high frequency category" (C1, 36.25%) and "low frequency category" (C2, 63.75%); the results of multiple sets of latent profile analysis show that men and women are There is little difference in the profile of Internet use preference. Further analysis of the difference shows that the scores of boys and girls in the high frequency group are significantly different ($t=2.11, P<0.05$). With the high frequency category as the reference group, a polynomial logistic regression was performed to display grade ($OR=1.51, P<0.001$), whether it was single parent ($OR=1.38, P<0.05$), and whether it was a key class ($OR=1.31, P<0.05$). Common predictors of low frequency categories(C1) for high school students. **Conclusion:** There are subcategories with different characteristics of high school students' Internet usage preferences. Grade, single parent, and key class are important predictors. We should focus on the Internet usage preferences of high school students in the "high-frequency category" and carry out timely intervention.

School adaptation situation of junior high school students in relocation site in a county in Guizhou Province

Gao Zhengduan¹, Wang Yuyan¹, Song Xiang¹, Zeng Lianping¹

School of Psychology, Guizhou Normal University, Guiyang 550025, China

Abstract: Objective: The Poverty-alleviation relocation has achieved preliminary success. How to make the relocation follow-up assistance work to obtain a long-term effect mechanism is a more important, more difficult task. The school adaptation of the relocated students is related to their academic and physical and mental health. Pay attention to the school adaptation of the relocated junior high school students, and provide a strong empirical reference for the follow-up education guarantee work after the relocation. Methods: Using demographic information and school adaptation scales to sample a cluster of schools in a relocation site in a county in Guizhou Province, 741 valid data were obtained, including 355relocated students (male=166, female=189) and 386 non-relocated students (Male=221, Female=165). Results: ①The mean and standard deviation of the total school adaptation of relocated students and non-relocated students are 3.43 ± 0.56 and 3.33 ± 0.56 respectively. ②Relocated students are significantly higher than non-relocated students in total school adaptation, learning adaptation, and teacher-student adaptation ($t=2.27, 2.60, 2.71, P<0.05$). ③The level of environmental adaptation of relocated female students was significantly higher than that of male students ($t=-3.44, P<0.001$), and the self-evaluation adaptation was significantly lower than that of male students ($t=3.53, P<0.001$). ④The total and dimensional school adaptation level of the relocated students in the first grade is significantly higher than that of the relocated students in the second grade ($t=4.10, 4.29, 3.07, 3.85, P<0.001, 2.08, 2.10, P<0.05$). ⑤There is no significant difference in the school adaptation of the relocated students in whether they are only children; ⑥The teacher-student adaptation of the relocated students from half a year to one year is significantly higher than that of the students relocated less than half a year, and the teacher-student adaptation of the students relocated for more than two years is significantly higher than Students who are relocated for less than half a year and one to two years ($F=3.94, P<0.01$). Conclusion: The school adaptation level of Poverty-alleviation relocation junior high school students is at the upper-middle level. The school adaptation level of relocated students is higher than that of non-relocated students. The environmental adaptation level of relocated girls is significantly better than that of boys. The school adaptation level of relocated students in the first grade is higher than that in the second grade relocated students. The longer the relocation period, thebetter the teachers-students adaptation.

Keywords: School adaptation, differences between relocation and non-relocation, differences in grades and relocation time, The Poverty-alleviation relocation junior high school student

双职工夫妻的工作/家庭个人网络使用态度对工作家庭平衡的影响： 基于行动者-对象互依性模型

高正端¹ 王语嫣¹ 曾练平¹(通讯作者)

¹ 贵州师范大学心理学院, 贵阳, 550025, 通讯作者 E-mail:zenglianping@163.com

摘 要 移动互联网的普及使得人们在生活中越来越依赖各式各样的移动通讯工具来处理工作领域与非工作领域中的各项事务,从而出现了跨领域的心理与行为。随着积极心理学的兴起,在工作中使用通讯工具处理非工作事宜逐渐被意识到是一个建设性的行为。工作/家庭个人网络使用态度是指职工对在工作中使用通讯工具等个人网络处理与当下工作无关的非工作活动时所持有的一种态度倾向,主要包括处理个人私事或是家庭领域突发状况和未完成的家庭事务等与个人及家庭相关的活动。有研究推测,职工在工作中使用通讯工具处理个人或家庭事务能够促进工作与家庭角色的整合。同时,作为一种新兴的工作行为,工作/家庭个人网络使用态度的后续效应并不局限于个体层面,还可能影响员工重要他人的生活。对于双职工夫妻而言,夫妻双方同时工作并采取在工作中使用通讯工具处理非工作事宜是一种常见的现象,他们的工作家庭平衡更有可能是一种相互影响的结构。因此,本研究基于行动者-对象互依性模型,以双职工夫妻为研究对象,考察工作/家庭个人网络使用态度对自身以及配偶工作家庭平衡的影响。采用工作/家庭个人网络使用态度量表和工作家庭平

衡量表对 260 对中国职工进行问卷调查, 运用 SPSS24.0 和 Mplus8.0 对数据进行统计分析。研究发现: (1)夫妻双方的工作/家庭个人网络使用态度($r=0.53, p < 0.001$)和工作家庭平衡($r=0.57, p < 0.001$)分别具有一致性; (2)夫妻各自的工作/家庭个人网络使用态度($a_{\text{丈夫}}=0.25, a_{\text{妻子}}=0.32, p < 0.001$)均对自身工作家庭平衡有正向预测效应; (3)丈夫的工作/家庭个人网络使用态度对配偶工作家庭平衡有积极效应($p_{\text{丈夫对妻子}}=0.07, p < 0.05$)。结论: 个体、组织和社会都应该重视工作/家庭个人网络使用态度所带来的积极后效, 从而提高双职工夫妻平衡工作与家庭的能力, 进而帮助该群体的心理健康发展和积极社会适应。

The Influence of Dual-Employee Couples' Attitudes towards Work/Family Personal Web Usage on Work Family Balance: Based on The Actor-Partner Interdependence Model

Gao Zhengduan¹, Wang Yuyan¹, Zeng Lianping¹

School of Psychology, Guizhou Normal University, Guiyang 550025, China

Abstract: The popularization of the mobile Internet makes people increasingly rely on various mobile communication tools in their lives to process various affairs in the work and non-work fields, resulting in psychological behaviors that cross fields. With the rise of positive psychology, the use of communication tools to deal with non-work matters at work has gradually been realized as a constructive behavior. Work/family personal web usage attitudes refers to the attitude that employees have when they use communication tools and other personal web at work to handle non-work activities that are not related to the current work, mainly including handling personal private affairs or family emergencies or personal and family-related activities such as unfinished family affairs. Studies have speculated that the use of communication tools to handle personal or family affairs by employees at work can promote the integration of work and family roles. At the same time, as an emerging work behavior, the follow-up effect of work/family personal web usage attitudes is not limited to the individual level, but may also affect the lives of important others of employees. For dual-employee couples, it is a common phenomenon that both spouses work at the same time and use communication tools to deal with non-work matters at work, and their work family balance is more likely to be a structure of mutual influence.

Therefore, this study extended the work/family personal web usage attitudes framework from the individual to couple, and examined the actor and partner effects of work/family personal web usage attitudes on work family balance in dual-employee couples based on the actor-partner interdependence model. A total of 260 dual-employee couples completed measures of the work/family personal web usage attitudes, and work family balance. SPSS 24.0 and software Mplus8.0 were used to analyze the data. The results showed that (a)the dyad had significant congruence in work/family personal web usage attitudes ($r=0.53, p < 0.001$)and work family balance ($r=0.57, p < 0.001$), respectively;(b) work/family personal web usage attitudes ($a_h = 0.25, a_w = 0.32, p < 0.001$) had significant actor effects on work family balance within the dyad;(c) husband's work/family personal web usage attitudes had a significant partner effect on wife's work family balance ($p_h = 0.07, p < 0.05$), while wife's work/family personal web usage attitudes did not show a significant partner effect on husband's work family balance ($p > 0.05$).Conclusion: Individuals, organizations, and society should pay attention to the positive after-effects of work/family personal web usage attitudes, so as to improve the ability of dual-employee couples to balance work and family, thereby helping the group's mental health development and positive social adaptation.

Keywords: work/family personal web usage attitudes, work family balance, dual-employee couples, the actor-partner interdependence model

一般营养知识问卷 (GNKQ) 的本土化修订及有效性检验

高致冰¹ 庄想灵¹ 马国杰²

¹ 陕西师范大学心理学院, 西安, 710000

² 陕西师范大学心理学院, 西安, 710000, magj@snnu.edu.cn

摘要 营养知识被定义为营养教育者创建的一种科学结构, 表示“个体对食物与营养信息的认知过程”, 且被证实是影响健康饮食的一个重要决定因素。当今中国居民因饮食模式错误而导致的肥胖问题日益严峻。为响应《健康中国 2030 规划》, 评估居民膳食模式, 提高全民健康素养的任务迫在眉睫。本研究旨在编定一份适用于中国成人居民的一般营养知识问卷, 并检验其心理统计学的信效度。从而为提高全民健康素养的紧迫任务提供一个科学、有效的中国居民营养知识评估工具。

本研究采用文献综述、翻译-回译、专家评估、和评价表面效度的方式修订原版问卷, 通过条目难度和区分度删除无效条目, 最后通过结构效度、聚合效度、内部一致性和重测信度检验中文版一般营养知识问卷的信效度。

278 名 18 岁以上成人完成中文版 GNKQ 问卷, 其中 71 名大学生完成两周后的重测任务。根据题目难度和区分度删除题目后, 中文版 GNKQ 包含 32 题, 68 个条目, 总体内部一致性系数为 0.885, 重测信度为 0.769。营养相关专业组得分显著高于非营养相关专业组。各人口学变量的聚合效度与已有研究一致, 女性、教育水平较高的被试得分显著高于男性和教育水平较低的被试。修订后的中文版 GNKQ 有良好的信效度, 符合测量学要求。除此以外, 结果表明, 体重控制组与无体重控制组得分差异不显著, 说明目前我国成年居民营养知识有限, 在选择食物时无法有效参考《中国居民膳食指南》, 因此有必要评估我国成年居民的营养知识水平, 进而提高全民健康素养, 达成《健康中国 2030 规划》。

Development and Validity of a General Nutrition Knowledge Questionnaire (GNKQ) for Adults in China

Zhibing Gao¹, Xiangling Zhuang¹, Guojie Ma²

School of Psychology, Shaanxi Normal University, Xi'an, 710000

School of Psychology, Shaanxi Normal University, Xi'an, 710000, magj@snnu.edu.cn

Abstract: Nutrition knowledge is defined as a scientific structure created by nutrition educators, which means "the individual's cognitive process of food and nutrition information", and it has been proven to be an important determinant of healthy eating. Nowadays, the obesity problem of Chinese residents due to wrong dietary patterns is becoming more and more serious. In response to the "Healthy China 2030 Plan", the task of evaluating residents' dietary patterns and improving the health literacy of the whole people is urgent. The purpose of this study is to compile a general nutritional knowledge questionnaire suitable for Chinese adult residents and test the reliability and validity of its psychological statistics. So as to provide a scientific and effective nutritional knowledge assessment tool for Chinese residents for the urgent task of improving the health literacy of the whole people.

This study revised the original questionnaire using literature review, translation-back translation, expert evaluation, and surface disinfection evaluation. Invalid entries were deleted through entry difficulty and discrimination. Finally, structural validity, aggregate validity, internal consistency and retesting were used to test the reliability and validity of the Chinese version of the General Nutrition Knowledge Questionnaire.

278 adults over the age of 18 completed the Chinese version of the GNKQ questionnaire, of which 71 college students completed the retest task two weeks later. After deleting the questions based on the difficulty and discrimination of the questions, the Chinese version of GNKQ contains 32 questions and 68 items. The overall internal consistency coefficient is 0.885 and the test-retest reliability is 0.769. The score of nutrition-related professional group was significantly higher than that of non-nutrition-related professional group. The aggregate validity of each demographic variable is consistent with existing studies. The scores of women and subjects with

higher education levels are significantly higher than those of men and subjects with lower education levels. The revised Chinese version of GNKQ has good reliability and validity and meets the requirements of metrology. In addition, the results show that there is no significant difference in the scores between the weight control group and the weight uncontrol group, indicating that the current adult residents in our country have limited nutritional knowledge and cannot effectively refer to the "Chinese Residents Dietary Guidelines" when choosing food. Therefore, it is necessary to evaluate the adult residents in my country To improve the health literacy of the whole people and reach the "Healthy China 2030 Plan".

癌症患者失志的影响因素：系统评价

洪玉婷¹ 林雨安¹ 潘宇昕¹ 张娟² 黄菲菲¹ (通讯作者)

1 福建医科大学护理学院, 福州, 350122, pt860315@163.com

2 中国人民解放军联勤保障部队第900医院心胸外科, 福州, 350003

摘要 背景: 失志是癌症患者常见但未被解决的心理困扰。研究表明, 失志对癌症患者自杀意念的预测效力强于抑郁, 且可能会降低其生活质量。目前关于癌症患者失志影响因素的研究呈逐渐增长趋势, 但研究结论尚存在争议。**目的:** 本研究旨在对癌症患者失志影响因素进行系统综述。**方法:** 系统检索 PubMed, Ovid, EMBASE, PsycINFO, CINAHL, Cochrane Library, Web of Science, Scopus, 中国生物医学数据库, 中国知网和万方数据库 11 个中英文数据库, 检索时间截止至 2020 年 12 月 31 日。补充搜索 Google Scholar 及相关参考文献。研究纳入使用失志量表报告的癌症患者失志影响因素的文献。由三名受过培训的研究人员使用澳大利亚 JBI 循证卫生保健中心对现况调查类研究的真实性评价表独立评估研究质量。以 Engel 的生物-心理-社会模式为框架提取数据。因纳入研究中研究结果的异质性, 只进行了定性描述而非定量综合。该系统评价已在 PROSPERO 注册 (CRD42021251155)。**结果:** 共检索出 968 篇文章, 最终纳入 50 项研究, 含 10723 名癌症患者; 其中 75% 为混合癌症类型, 其余为乳腺癌、肝癌等类型。70% 研究发表于近 5 年。高质量研究 9 项, 中等质量研究 37 项。共提取了 69 个失志影响因素, 其中, 生理因素 (n=13) 中, 生理症状数量是失志常见的影响因素; 心理因素 (n=25) 中, 包括消极心理因素 (如抑郁、焦虑、心理痛苦、尊严、自杀意念) 和积极心理因素 (如希望); 社会因素 (n=20) 中, 社会支持和生活质量是失志的负向预测因子; 其他因素中 (n=11), 术后时长会影响失志。年龄、性别、文化程度等 18 个因素尚存争议。治疗类型、并发症等 14 个因素与失志无关。另外 27 个因素如生命意义、加速死亡态度等虽被报告与失志有关, 但均仅有 1~2 篇文献报道。**结论:** 本综述提示癌症患者的失志是生理、心理和社会因素相互作用的结果。在制定与开展关于癌症患者失志的干预措施时, 需要考虑癌症患者的生理症状数量、抑郁、焦虑、心理痛苦、尊严、自杀意念、希望、社会支持、生活质量和术后时长。需要更多高质量的证据来明确癌症患者的影响因素, 尤其是积极心理因素。

Corresponding author: HUANG Feifei, pt860315@163.com

2 Department of Cardiothoracic Surgery, Logistic support forces of the Chinese people's liberation army 900 hospital, Fuzhou, 350003

Abstract: Background: Demoralization is a common and unsolved psychological distress encountered by cancer patients. Studies showed that demoralization has a strong prediction power on suicidal ideation than depression and may worsen the quality of life for cancer patients. At present, there is a growing trend of study on the influencing factors of demoralization in cancer patients. However, these studies' conclusions are controversial. **Purpose:** This

systematic review aims to identify the influencing factors for demoralization in cancer patients. **Methods:** PubMed, Ovid, EMBASE, PsycINFO, CINAHL, Cochrane Library, Web of Science, Scopus, Chinese Biomedical Medicine Database, Chinese National Knowledge Infrastructure, and Wanfang Database were systematically searched from database inception to 31 December 2020. Supplementary searches were also performed on Google Scholar and relevant references. Studies reported the influencing factors for demoralization measured by Demoralization Scale in cancer patients were included. The quality of studies was independently evaluated by three trained researchers using the JBI Critical Appraisal Checklist for Studies Reporting Prevalence Data. The data extraction was based on the Bio-Psycho-Social Model proposed by Engel. Given the heterogeneity of the study outcome, a qualitative synthesis was conducted rather than a quantitative synthesis. This study has registered on PROSPERO (CRD42021251155). **Results:** Of 968 records identified, 50 studies were finally included in the systematic review with a total of 10723 participants. 75% of studies were mixed cancer types, the rest were breast cancer, liver cancer and so on. 70% of studies were published in recent five years. Regarding study quality, nine studies have high quality, and 37 studies have moderate quality. The results showed that a total of 69 factors were extracted finally. Among the biological factors(n=13), the number of physical symptoms was the common influencing factor for demoralization. Among the psychological factors(n=25), negative psychological factors (includes depression, anxiety, psychological pain, dignity, suicidal ideation) and positive psychological factors (includes hope) were crucial factors that influenced cancer patients' level of demoralization. Among the social factors(n=20), social support and quality of life were negative predictors of demoralization. Among the other factors(n=11), postoperative time could affect demoralization. It is controversial that the 18 factors (e.g. age, gender, educational level etc.) are influencing factors for demoralization. 14 factors (e.g. type of treatment, complication etc.) were not associated with demoralization. 27 factors (e.g. global meaning, attitudes toward hastened death etc.) were associated with demoralization, but all reported by one or two studies. **Conclusions:** The review indicates that demoralization is a product interactive influenced by physical, psychological, and social factors of cancer patients. That is, when design demoralization-reducing intervention, we need to take the number of physical symptoms, depression, anxiety, psychological pain, dignity, suicidal ideation, hope, social support, quality of life and postoperative time into account. Therefore, more high-quality evidence needs to further confirm the influencing factors for demoralization in cancer patients, especially the limited evidence of positive psychological factors.

摘要 目标: COVID-19 对心理健康有着前所未有的负面且持久影响。体育锻炼(PE)对抑郁症状有明显的影
响, 但国内很少有研究考察 COVID-19 期间 PE 对抑郁症状的长期影响。因此, 本研究旨在探讨中国大学生在
COVID-19 期间 15 个月 4 次运动的成长轨迹, 这有助于阐明不同群体轨迹对抑郁症状的不同影响。 **方法:** 从
2020 年 3 月到 2021 年 6 月对中国大学生进行了 4 次重复测量, 收集参与者 (N=10762) 的运动和抑郁症状信
息 (使用病人健康问卷抑郁量表, PHQ-9)。采用混合增长模型 (GMM) 研究参与者在 4 波的 PE 变化轨迹,
并使用运动轨迹组来识别不同亚组的抑郁症状变化。通过 Kruskal-Wallis 检验确定运动轨迹组之间人口统计学
变量的差异, 通过重复测量方差分析确定不同运动水平下抑郁症状的差异。 **结果:** 共有 10762 名中国大学生
完成了所有调查。通过 GMM 确定了四个运动轨迹组: 低水平组 (7%)、中等水平组 (60%)、高水平组 (31%)

和高增长组（2%）。在低水平组中，所有四次调查的运动水平都较低。在中等水平组中，该组的发展轨迹相对稳定。在高水平组中，参与者锻炼的时间较长。在高增长组中，运动轨迹呈现持续上升的趋势。社会人口学变量中的性别、心理咨询史、COVID-19 的预防信念、COVID-19 的预防措施与潜在轨迹组的预测因素有关。高水平组的个体更可能有较少的抑郁症状。与低水平组相比，高增长组更有可能报告更少的抑郁症状。**结论：**在紧张的公共卫生事件的长期影响下，这些发现可以从运动的角度为大学生的心理健康干预提供参考。具体来说，抑郁症状较少的人可能受益于较高的运动水平。

Abstract: Objective: COVID-19 has unprecedented negative and lasting effects on mental health. Physical exercise (PE) has a significant effect on depressive symptoms, yet few studies in China have examined the long-term effects of PE on depression symptoms during COVID-19. Therefore, the current study aims to explore exercise growth trajectories of Chinese college students during COVID-19 in 15 months 4 waves, which help to clarify the different impact of distinct groups trajectories on depression symptoms. **Methods:** A 4 time repeated measurement was conducted from March 2020 to June 2021 among Chinese college students, which collects participants (N=10762) information on PE and depressive symptoms (using the Patient Health Questionnaire, PHQ-9). Growth mixture modelling (GMM) were employed to examine changes in PE of participants in 4 waves and the exercise trajectory group was used to identify subgroups of individuals with different trajectories of change in depression symptoms. Differences in demographic variables between exercise trajectory group were determined by Kruskal-Wallis tests and differences in depression at different exercise levels were determined by repeated measures ANOVA. **Results:** A total of 10762 College Students in China completed all the surveys. Four exercise trajectory classes were identified by GMM: the low level group (7%), the mid-average group (60%), the high level group (31%), and the highly increased group (2%). In the low level group, the level of exercise was lower in all four surveys. In the mid-average group, the development trajectory of this group is relatively stable. In the high level group, participants exercised for a longer period of time. In the highly increased group, the exercise trajectory showed a continuous upward trend. The sociodemographic variables of males, Psychological Counseling History, prevented belief of COVID-19, preventive measures of COVID-19 were associated with predictors of the latent trajectory groups. Individuals in high level group were more likely to have less depression symptoms. The highly increase group were more likely to report slight depression symptoms compared with the low level group. **Conclusion:** These findings can inform mental health interventions for college students from a exercise perspective under the long-term impact of stressful public health events. Specifically, people with fewer depressive symptoms may benefit from higher levels of exercise.

摘要 参与及识别欺骗是重要的社会交往手段和技巧, 以往研究发现自闭症谱系障碍患者 (Autism Spectrum Disorder, ASD) 一般难以习得该技巧。由于 ASD 的谱系性质, 我们推测高自闭特质 (Autistic traits, ATs) 个体可能在欺骗决策过程和反馈的奖赏加工中表现出非典型性。为了验证该假设, 本研究采用主动欺骗的抛硬币范式, 以 18 名高自闭特质个体 (包括 6 个男生, 12 个女生) 和 18 名低自闭特质个体 (包括 7 个男生和 11 个女生) 为研究对象, 通过一组脑电实验, 旨在对高自闭特质个体进行人际交互情境下欺骗决策和反馈奖赏加工的电生理机制的非典型进行考查。实验一开始前通过假被试和指导语的方式为被试设置人际交互的实验情境, 实验开始后要求被试通过按键的方式向对手传递真实或虚假的信息, 使对手无法准确预测硬币的位置从而获得奖励 (对手猜对则造成损失)。实验二则要求被试与对手进行合作, 诚实地向对手指出硬币所在的位置, 从而获得奖励。研究重点关注反馈相关负波 (Feedback-related negativity) 和 P3。ERP 结果显示: (1) 与欺骗决策相比, 无论高自闭特质个体还是低自闭特质个体, 在诚实决策时都诱发了振幅更高的 P3; (2) 在进行欺骗决策时, 高自闭特质个体的 P3 振幅显著低于低自闭特质个体; (3) 与低自闭特质个体相比, 高自闭特质个体在反馈阶段诱发了更高的 FRN, P3 则显著低于低自闭特质个体。研究结果表明, 高自闭特质个体在面对欺骗决策时经历了更大的认知资源消耗, 且在面对损失和奖赏时表现出更低的敏感性。研究结果对于解释高自闭特质个体社交层面的损伤机制和促进 ASD 个体的社会化、提高社会适应能力和社会互动的质量等方面均有一定的参考价值。

Abstract: Participation and identification of deception are important means and skills for social interaction. Previous studies have found that it is generally difficult for patients with Autism Spectrum Disorder (ASD) to acquire this skill. Due to the spectrum nature of ASD, we speculate that individuals with highly autistic traits (ATs) may be atypical in the process of deceptive decision-making and reward processing of feedback. To test this hypothesis, a coin-toss paradigm of active deception was used in this study. 18 individuals with high autistic traits (including 6 male and 12 female) and 18 individuals with low autistic traits (including 7 male and 11 female) were selected as subjects. A group of ERPs experiments were conducted to examine the atypical electrophysiological mechanisms of deception decision-making and feedback reward processing in the context of interpersonal interaction among individuals with high autistic traits. Before the beginning of the experiment, the experimental situations of interpersonal interaction were set for the subjects through the sham subjects and instruction words. After the beginning of the experiment, the subjects were required to transmit real or false information to the opponent by pressing the key, so that the opponent could not predict the position of the coin accurately and thus received the reward (the subject would lose if opponent guessed correctly). In the second experiment, the subjects were required to cooperate with their opponents and honestly point out the position of the coin to the opponent, so as to obtain a reward. The research focuses on

Feedback-related negativity and P3. The results of ERP showed that: (1) Compared with decision-making stage of deception, no matter high autistic or low autistic individuals, they induced P3 with higher amplitude in honest decision-making; (2) When making deception decisions, the P3 amplitude of individuals with high autistic traits is significantly lower than that of individuals with low autistic traits; (3) Compared with the individuals with low autistic traits, the individuals with high autistic traits induced higher FRN in the feedback stage, while P3 was significantly lower than that of the individuals with low autistic traits. The results show that individuals with high autistic traits experience greater consumption of cognitive resources when facing deception decisions, and show lower sensitivity when facing loss and reward. The results of the study have certain reference value in explaining the injury mechanism of individuals with high autism spectrum traits at the social level, promoting the socialization of individuals with ASD, and improving the social adaptability and the quality of social interaction.

摘要 背景: 身体活动水平(PA)和自我关怀(SC)与个体的心理健康密切相关。然而, 大多数研究单独探究其各自与心理健康的关系, 这可能会忽略它们的交互作用。本研究旨在探讨 PA 和 SC 对抑郁症状的独立、联合和加性交互作用。方法: 采用横断面研究, 线上招募 1846 名中国大学生填写国际体育活动问卷简表、自我关怀量表简表和病人健康问卷抑郁量表。采用 logistic 回归模型研究低 PA (LPA) 和低 SC (LSC) 对抑郁症状的独立和联合作用, 并评估 LPA 和 LSC 对抑郁症状的加性相互作用。结果: 在控制 PA 和 SC 彼此的影响后, LPA (OR = 1.47 [1.16-1.86]) 和 LSC (OR = 5.74 [3.89-8.45]) 均独立与抑郁症状的发生相关。同时具有 LPA 和 LSC 会产生加性交互作用, 带来相对超额风险, 大大增加了患抑郁症状的几率 (OR = 10.95 [6.15, 19.49]; RERI = 2.92 [0.37, 5.47]; AP = 0.27 [0.08, 0.46])。结论: LPA 和 LSC 同时存在可能会产生更高的抑郁症状风险。未来的研究和临床干预可以结合 PA 和 SC 来开发更好的方法来减少抑郁症状。

Abstract: Background: Physical activity and self-compassion were closely related to individual's mental health. However, most existed researches studied them independent relationship with mental health, which might omit their interaction towards outcome variable. This study aimed to investigate the independent, combined, and additive interaction associations of physical activity (PA) and self-compassion (SC) with depression symptoms. Methods: In a cross-sectional study, 1846 Chinese college students completed the International Physical Activity Questionnaire

Short Form, the Self-compassion Scale-Short Form, and the 9-item Patient Health Questionnaire. Independent and combined roles of a low level of PA (LPA) and SC (LSC) on depression symptoms were examined by logistic regression models. Additive interaction between LPA and LSC was estimated. Results: Both LPA (OR = 1.47 [1.16-1.86]) and LSC (OR = 5.74 [3.89-8.45]) were independently associated with higher probability of having depression symptoms. Combining LPA and LSC led to an additive interaction and greatly increased the odds of depression symptoms (OR = 10.95 [6.15, 19.49]; RERI = 2.92 [0.37, 5.47]; AP = 0.27 [0.08, 0.46]). Conclusions: Having LPA and LSC concurrently may develop profoundly higher risk for depression symptoms. Future research and clinical intervention could integrate PA and SC to find a better way to resist depression symptoms.

摘要 背景和目的: 人际关系能力对青少年的心理健康和积极发展具有重要的作用, 然而评估青少年人际能力的问卷, 尤其简版问卷仍较为缺乏。因此, 本研究旨在检验简版人际关系能力量表 (ICQ-15) 在中国青少年群体中的信效度, 为评估青少年人际关系能力研究提供有效工具。方法: 用简版人际关系能力量表中文版对 1708 名青少年进行测试。采用幸福感量表 (WHO-5)、简版心理韧性量表 (CD-RS)、广泛性焦虑量表 (GAD-7)、抑郁量表 (PHQ-9) 作为简版人际关系能力量表的效标。对数据进行项目分析、验证性因素分析、效标效度、信度分析以及多群组分析。结果: 项目分析的结果显示 ICQ-15 中文版题总相关和区分度良好。验证性因素分析结果显示, 五因子 (即主动性、自我维护、坦诚、冲突管理以及情感支持) 拟合的所有指标均达到可接受水平 (CFI=0.948, TLI=0.932, RMSEA=0.075)。总量表的 Cronbach's α 系数为 0.926, 各分量表的 Cronbach's α 系数在 0.731~0.926 之间, 分半信度为 0.892。效标效度分析结果显示, 中文版 ICQ-15 与 WHO-5 以及 CD-RS 呈显著正相关 ($r = 0.511, r = 0.528, ps < 0.001$), 与 PHQ-9 呈显著负相关 ($r = -0.323, p < 0.001$)。多群组分析结果显示, 在增加限定条件后, 在男女、成年人与未成年人群组中, 拟合指标 CFI、TLI 和 RMSEA 的变化值均小于 0.03, 可以认为中文版 ICQ-15 在这些群体中具有测量不变性。结论: 简版人际关系能力量表具有良好的心理测量学指标, 可以在中国青少年群体中使用, 作为青少年人际关系能力研究的科学工具。

Abstract: Background and objectives: interpersonal competence plays an important role in the mental health and positive development among youth, but validated scales for the assessment of youth's interpersonal competence, especially brief ones, remain scanty. Therefore, the purpose of this study is to test the reliability and validity of the Brief Interpersonal Competence Questionnaire (ICQ-15) in Chinese adolescents and provide scientific tools for the study of youth' interpersonal competence. Methods: A sample of 1708 adolescents finished the Chinese version of the Short Interpersonal Competence Questionnaire, the WHO-Five Well-Being Index (WHO-5), 10-item

Connor-Davidson Resilience Scale (CD-RS-10) and Patient Health Questionnaire-9 (PHQ-9) were used as the criterion. The data were analyzed by item analysis, confirmatory factor analysis, criterion validity, reliability analysis and multi-group analysis. Results: The results of project analysis showed that the total correlation and discrimination of the Chinese version of ICQ-15 were good. Confirmatory factor analysis showed that all indicators fitted by the five factors (Initiation of relationship, Negative assertion, Disclosure of personal information, Emotional support, Conflict management) with acceptable index fit (CFI = 0.948, TLI = 0.932, RMSEA = 0.075). The Cronbach's α coefficient of ICQ-15 is 0.926, and the split-half reliability was 0.892. The Cronbach's α coefficient of the five subscales ranged from 0.731 to 0.926. The results of criterion validity analysis showed that the Chinese version of ICQ-15 was positively correlated with WHO-5 and CD-RS ($r = 0.511$, $r = 0.528$, $ps < 0.001$), and negatively correlated with PHQ-9 ($r = -0.323$, $p < 0.001$). The results of multi-group analysis showed that, after adding the limiting conditions, the change values of the fit indexes CFI, TLI and RMSEA are less than 0.03 between men and women, adults and non-adults suggesting the measurement invariance of the Chinese version of ICQ-15 was acceptable. Conclusion: The Interpersonal Competence Questionnaire - Short Form displayed good psychometric properties, and can be used in Chinese youth as a scientific tool for the interpersonal competence assessment.

摘要 自我关怀与心理健康关系密切, 近年来对自我关怀的研究快速增加, 但以往评估自我关怀的量表在青少年群体中适用性较差。本研究旨在将新近开发的英文版青少年自我关怀量表(SCS-Y)翻译成中文, 并在中国青少年中进行信效度检验, 以期丰富青少年自我关怀的评估工具。共有 1708 名被试填写了中文版的 SCS-Y 量表、简版 Connor-Davidson 心理韧性量表(CD-RISC-10)、世界卫生组织幸福感指数量表(WHO-5)、病人健康问卷抑郁量表(PHQ-9)、广泛性焦虑障碍量表(GAD-7)、简版人际关系能力量表(ICQ-15)及罗森伯格自尊量表(RSES)。本研究依次对数据进行了题总相关、区分度、效标效度、结构效度和一致性信度的分析。使用验证性因素分析(CFA)与探索性结构方程模型(ESEM)对 SCS-Y 量表的结构进行验证。依次建立一阶六因子 CFA、一阶六因子 ESEM、双因子 CFA、双因子 ESEM、二重双因子 CFA、二重双因子 ESEM 六个模型进行对比。统计分析结果表明, 中文版 SCS-Y 的题总相关($r = 0.27 \sim 0.63$, $ps < 0.001$)与区分度($t = 8.5 \sim 31.33$, $ps < 0.001$)均良好。中文版 SCS-Y 量表得分与 CD-RISC-10 ($r = 0.61$)、WHO-5 ($r = 0.54$)、ICQ-15 ($r = 0.42$)、RSES ($r = 0.65$)得分呈显著正相关($ps < 0.001$); 与 PHQ-9 ($r = -0.56$)及 GAD-7 ($r = -0.55$)得分呈显著负相关($ps < 0.001$)。CFA 和 ESEM 模型结果表明, 由原量表的六个分量表(自我善待、自我评判、共通人性、隔离、正念、过度沉迷)作为六个组因子, 同时由自我关怀作为一般因子的双因子探索性结构方程模型(bifactor ESEM)的拟合最佳(CFI = 0.992, TLI = 0.972, RMSEA = 0.052, SRMR = 0.009, 一般因子平均载荷 $\lambda = 0.42$)。总量表 Cronbach's α 系数为 0.82。研究结果表明 SCS-Y 的中文版具有较高的效标关联效度、结构效度以及内部一致性信度, 具有良好的心理测量学属性, 能够作为评估青少年自我关怀水平的有效工具。

Abstract: Self-Compassion is closely related to mental health. Recent studies on self-compassion witnessed a rapid growth, whereas the validated assessment tool of self-compassion among youth is still limited. The purpose of this study is to translate the newly developed English version of the Self-Compassion Scale for Youth (SCS-Y) into Chinese and conduct validity and reliability tests, to enrich the assessment tools for self-compassion in youth. A total of 1,708 participants filled out the Chinese version of SCS-Y, brief form of Connor-Davidson Resilience Scale (CD-RISC-10), WHO-5 Well-being Index (WHO-5), Patient Health Questionnaire-9 (PHQ-9), General Anxiety Disorder Questionnaire-7 (GAD-7), brief form of Interpersonal Competence Questionnaire (ICQ-15) and Rosenberg Self-Esteem Scale (RSES). This study analyzed the item-total correlation, discrimination, concurrent validity, structural validity and internal consistency reliability. The structural validity of the SCS-Y is examined by confirmatory factor analysis (CFA) and exploratory structural equation modelling (ESEM). Six models of first-order six-factor CFA and ESEM, bifactor CFA and ESEM, and two-bifactor CFA and ESEM are established for comparison. Statistical analysis shows that the item-total correlation of SCS-Y ($r = 0.27\sim 0.63$, $ps < 0.001$) and differentiation ($t = 8.5\sim 31.33$, $ps < 0.001$) are acceptable. The scores of SCS-Y significantly positively correlated with the scores of CD-RISC-10 ($r = 0.61$), WHO-5 ($r = 0.54$), ICQ-15 ($r = 0.42$) and RSES ($r = 0.65$) ($ps < 0.001$), and negatively correlated with the PHQ-9 ($r = -0.56$) and GAD-7 ($r = -0.55$) ($ps < 0.001$), indicating satisfactory concurrent validity. The bifactor ESEM with a general self-compassion factor and six subscale factors (self-kindness, self-judgment, common humanity, isolation, mindfulness and over-identification) fits SCS-Y the best (CFI = 0.992, TLI = 0.972, RMSEA = 0.052, SRMR = 0.009, mean of general factor loadings is 0.42). The findings demonstrate that the Chinese version of SCS-Y has good psychometric properties, and can be used as an effective measure to assess youth's self-compassion.

新冠疫情后大学生抑郁情绪变化及影响因素

黄柳玥¹ 迟新丽¹ (通讯作者)

¹ 深圳大学心理学院, 深圳, 518061, 通讯作者 E-mail: xinlich@126.com

摘要 新冠疫情的爆发给人民群众的心理健康带来了极大的影响, 其中抑郁问题较为严重。以往对于新冠疫情后大学生心理健康的研究多局限于横断描述, 纵向研究尚为缺乏。因此, 本研究旨在通过对 717 名大学生的抑郁情绪进行为期半年的追踪调查, 探究其抑郁情绪的变化, 并基于生态系统理论探究其影响因素。研究于 2020 年 5 月 (T1) 和 2020 年 11 月 (T2) 采集了参与者的人口统计学信息, 如年龄、性别、是否独生子女、家庭结构, 主观家庭社会经济地位 (SES)、居住地等。此外使用病人健康问卷抑郁量表 (PHQ-9), 简版国际身体活动水平问卷 (IPAQ-SF), 简版自我关怀问卷 (SCS-SF), 心理韧性量表 (CD-RISC-10) 来评估被试的抑郁、身体活动、自我关怀和心理韧性水平。本研究对两次测量的抑郁的分值和依据不同截断值划分的抑郁程度进行相关样本 t 检验和卡方检验。使用分层回归的方式, 探究个体因素、家庭社会因素和生理心理因素对抑郁症状及其变化的影响。研究结果表明, T2 抑郁显著较 T1 抑郁分值低, 总体抑郁检出下降。横向上, 更高的 SES, 居住在城市, 高心理韧性、自我关怀和身体活动水平对 T1 抑郁有负向预测作用。纵向上, 在控制 T1 抑郁后, 女性, 低心理韧性, 和低自我关怀水平正向预测 T2 抑郁; 低 SES 和低身体活动水平边缘显著预测 T2 抑郁。研究结果提示女性, 低 SES 可能是大学生抑郁的风险因素, 而高心理韧性, 自我关怀和身体活动水平或为其保护因素。本研究结果对相关抑郁干预方案的设计和开展提供一定的启示。

Depressive symptoms among Chinese college students after the outbreak of COVID-19: Prevalence, changes, and correlates

Liuyue Huang, Xinli Chi

Institute of Mental Health, School of Psychology, Shenzhen University 518061.

Correspondence: Xinli Chi, xinlichichi@szu.edu.cn

Abstract: The outbreak of COVID-19 has affected people's psychological well-being, and the problem of depression is especially prominent. Previous researches regarding the mental health of college students after COVID-19 were mostly limited to cross-sectional descriptions, with longitudinal studies limited. Therefore, the purpose of this study is to explore the changes of depression through a six-month follow-up survey of 717 college students, and to investigate its correlated factors based on ecosystem theory. The study collected the data of participants in May 2020 (T1) and November 2020 (T2), such as demographic information (age, gender, whether they are the only child, family structure, subjective family socio-economic status (SES), place of residence, etc). In addition, the Patient Health Questionnaire-9 (PHQ-9), the short version of the International Physical Activity Questionnaire (IPAQ-SF), Self-Compassion Scale-short form (SCS-SF) and the 10-item Connor-Davidson Resilience Scale (CD-RISC-10) were used to assess depression, physical activity, self-compassion and psychological resilience. Relevant sample *t*-test and Chi-square test were performed to examine the difference of PHQ-9 scores and the prevalence of various severity of depression measured two time points. Hierarchical regression was used to explore the effects of individual factors, family social factors as well as physiological and psychological factors on depressive symptoms and their changes. The results showed that the depression score of T2 was significantly lower than that of T1, with the incidence of overall depression decreased. Concurrently, higher SES, living in cities, high psychological resilience, self-compassion and physical activity level negatively predict T1 depression. Longitudinally, after controlling T1 depression, women, low psychological resilience, and low level of self-compassion positively predicted T2 depression. Besides, low SES, and low physical activity level marginally predicted T2 depression. The findings suggest that being female and low SES may be risk factors for depression among college students, while high psychological resilience, self-compassion and physical activity levels may protective factors against depression.. The results of this study provide some enlightenment for future design and implementation of depression intervention programs.

摘 要 心理虐待是全球较为普遍的公共卫生问题，然而目前国内关于针对青少年心理虐待的研究仍然有限。本研究基于大样本，探讨有心理虐待经历青少年抑郁症状、焦虑症状和网络成瘾的患病率及其相关因素。研究通过广西青少年心理健康调查（线上）收集资料。参与者报告了其社会人口学信息（包括性别、年龄、是否独生子女、居住地、家庭结构等），以及其社会支持、自我关怀、儿童期不良经历、抑郁、焦虑和网络成瘾的情况。本研究中，3877 名中国青少年（平均年龄 13.96 岁，标准差 1.71，年龄范围 10~18 岁，女性占 59.4%）在是否频繁经历过心理虐待（情感虐待和情感忽视）的题项上做肯定性回答，纳入后续统计分析。接着，以社会人口和心理因素为自变量，抑郁症状、焦虑症状和网络成瘾（作为二元变量）为因变量，使用二元 Logistic 回归检验其之间的关系。结果显示，抑郁症状、焦虑症状和网络成瘾的患病率分别为 66.5%、54.9%和 45.1%。与男性相比，女性出现抑郁和焦虑症状的几率更高。学业不良和家庭结构不完整是抑郁症状、焦虑症状和网络成瘾的主要危险因素。值得注意的是，自我关怀和社会支持对抑郁症状、焦虑症状和网络成瘾有显著的保护作用。与城市中的同龄人相比，受到心理虐待的农村青少年有更高的网络成瘾可能性。本研究发现有心理虐待经历的青少年抑郁症状、焦虑症状和网络成瘾的发生率较高，应予以重视。提升其自我关怀和社会支持水平可能为这一特殊群体的有效干预方式。

Unseen wounds: The prevalence and correlates of mental health problems among 3877 psychologically maltreated Chinese adolescents

Liuyue Huang, Xinli Chi

Institute of Mental Health, School of Psychology, Shenzhen University 518061.

Correspondence: Xinli Chi, xinlich@szu.edu.cn

Abstract: Background: Psychological maltreatment (PM) was highly prevalent around the world, being a serious public health concern. Studies remain limited pertaining to Chinese adolescents with PM. This study aimed to investigate the prevalence and correlates of depression symptoms, anxiety symptoms, and internet addiction among psychologically maltreated Chinese adolescents based on large sample size. **Methods:** Data were collected through the Guangxi Youth Mental Health Survey (online). Participants were invited to their sociodemographic information (i.e., gender, age, sibling[s], residence, family structure). The Chinese Social Support Rating Scale and Self-compassion Scale - Short Form were applied to access social support and self-compassion. The Chinese version of Adverse Childhood Experiences was utilized to measure life adversities. Depression symptoms, anxiety symptoms, and internet addiction were assessed by Patient Health Questionnaire - 9, General Anxiety Disorder - 7, and Young's 10-item internet addiction scale, respectively. 3877 Chinese adolescents (mean age = 13.96 years, SD = 1.71, age range: 10~18, 59.4% female) who answer affirmatively on items whether frequently or very frequently experienced PM were selected for further analysis in the present study. Logistic regressions (depression symptoms, anxiety symptoms, and internet addiction as binary variable, respectively) were used to examine the association between sociodemographic and psychological factors and mental health problems. **Results:** The prevalence of depression symptoms, anxiety symptoms and internet addiction were 66.5%, 54.9%, and 45.1%, respectively. Logistic regression results show that compared with males, females are associated with a higher odds of depression and anxiety symptoms. Low academic performance and from non-intact family are significant risk factors for the onset of depression symptoms, anxiety symptoms, and internet addiction. Notably, self-compassion and social support are significant protective factors against depression symptoms, anxiety symptoms and internet addiction. Compared with peers in the urban areas, psychologically maltreated adolescents in the rural areas showed a higher likelihood of having internet addiction. **Conclusions:** The prevalences of depression symptoms, anxiety symptoms, and internet addiction were high among adolescents with psychological maltreatment experiences, which should be addressed properly. Self-compassion and social support were protective factors and could be a way of intervention towards this unique group.

Keywords: Psychological maltreatment, adolescents, depression symptoms, anxiety symptoms, internet addiction.

正念训练对注意控制的影响：心智游移的中介作用

黄思嘉 刘曙 张国礼（通讯作者）

北京体育大学心理学院，北京，100084 通讯作者 E-mail: guoli_zhang@126.com

摘要 研究目的：正念训练是一种有目的将注意力集中于当下感受、情绪等觉察状态的心理调节方式，可以引导个体对身体当下的感觉、思绪等保持觉知。目前比较常见的观呼吸和身体扫描相结合的正念训练方式有助于增强个体的注意功能，心智游移作为中介变量可以起到关键作用。正念训练通过增加在对当下任务的投入，可以有效减少心智游移程度从而提升注意力。线下正念训练无法明确适合不同人群的训练时长和类型，且缺乏统一的正念训练程序，限制了正念训练的推广性和可重复检验性。移动健康采用在线方式进行干预打破传统正念训练时间、经验不统一的限制。前人经随机对照试验得出正念软件 Headspace 的在线干预效果较好。

本文将采用易用性和干预效果更好的正念软件 Headspace 进行干预，结合不同类型、不同时间的正念训练方式检验正念训练的效果，便于人们选择更适合自己的正念训练。

研究方法：采用随机实验法检验正念训练对注意控制影响及心智游移的中介作用。实验 1 探究不同类型的短期正念训练对心智游移和注意控制的影响；实验 2 探究长期正念训练对心智游移和注意控制的影响。

研究结果：（1）短期观呼吸正念训练比身体扫描更能增加个体的注意控制：简单效应分析发现观呼吸组在心智游移和注意控制任务上的错误率均显著低于身体扫描组， $p < 0.05$ ；（2）长期正念训练比短期正念训练对个体注意控制的改善更为显著：长期正念训练组 Stroop 任务上正确数 69.19 ± 1.80 ，反应时 552.62 ± 82.12 ，均优于短期正念训练 Stroop 任务正确数 69.13 ± 1.06 ，反应时 551.17 ± 111.00 ；（3）正念训练可以减少个体心智游移程度，进而提升注意控制功能。本研究探讨了正念训练对注意控制的改善作用，检验了不同类型、不同时长正念干预效果的差异性；验证心智游移在正念训练和注意控制间的中介作用，正念训练能减少个体的心智游移程度进一步提升注意控制功能。

关键词 正念训练，注意控制，心智游移

The effect of mindfulness training on attention control: the mediating role of mind wandering

Huang Sijia¹, Liu Shu¹, Zhang Guoli²

Beijing Sport University, Beijing, 100084

guoli_zhang@126.com

Abstract: Mindfulness training is a kind of psychological adjustment method which aims to focus on the current feelings, emotions and other awareness states. It can guide individuals to maintain awareness of the current feelings and thoughts of the body. At present, mindfulness training combined with breath observation and body scanning is more common, which helps to enhance the attention function of individuals. Mind wandering, as a mediating variable, can play a key role. Mindfulness training can effectively reduce the degree of mind wandering and improve attention by increasing the investment in the current task. Offline mindfulness training can't define the training duration and type suitable for different groups, and lacks a unified mindfulness training procedure, which limits the popularization and repeatability of mindfulness training. Mobile health uses online intervention to break the limitation of traditional mindfulness training time and experience. Previous randomized controlled trials showed that the online intervention effect of mindfulness software headspace was better.

In this paper, the mindfulness software headspace, which is easy to use and has better intervention effect, will be used to intervene. Different types of mindfulness training methods with different duration will be used to test the effect of mindfulness training, so as to facilitate people to choose more suitable mindfulness training.

Methods: a randomized experiment was conducted to examine the mediating effect of mindfulness training on attention control and mind wandering. Experiment 1 explored the effects of different types of short-term mindfulness training on mind wandering and attention control; Experiment 2 explored the effects of long-term mindfulness training on mind wandering and attention control.

Results: (1) Short-term mindfulness training can increase individual attention control more than body scanning: simple effect analysis showed that the error rate of mind wandering and attention control tasks in the breathing group was significantly lower than that in the body scanning group ($P < 0.05$) (2) Long term mindfulness training improved individual attention control more significantly than short-term mindfulness training: the correct number of Stroop task and response time in long-term mindfulness training group were 69.19 ± 1.80 and 552.62 ± 82.12 , which were better than those in short-term mindfulness training group (3) Mindfulness training can reduce the degree of individual mental wandering, and then improve the function of attention control. This study explored the effect of mindfulness training on attention control, and tested the differences of the effects of different types and different times of long mindfulness intervention; To verify the intermediary role of mental migration between mindfulness training and attention control. Mindfulness training can reduce the degree of individual mental migration and further improve the function of attention control.

Keywords: mindfulness training, Pay attention to control, mind wandering

正念训练对不同人群的心理效益的系统综述和神经机制研究

姜学敏（孙延林）

天津体育学院，天津，301617

摘要 正念训练是心理学名称，随着学者们对其的不断探讨，正念训练的研究结果不仅仅是停留在口头上或是直观表述，而是更多结合 ERP、fMRI 等技术进行数据采集；相比于前人对于专业领域运动员的研究或是将正念训练应用于临床的康复治疗，本文通过总结归纳正念训练对于不同人群（专业运动员、器质性疾病人群、心理性疾病人群、普通锻炼人群）的心理效益，以及相关的大脑神经机制的改变，进而形成更加系统的正念训练对于不同人群的系统综述。

正念训练对于不同人群的心理效益：正念训练对于专业领域运动员可以显著提升运动员的身体流畅性、增加自我的唤醒水平、以及帮助运动员获得最佳的运动表现力。相比于专业运动领域运动员，正念训练对于器质性疾病人群，正念训练可以帮助他们减轻对自身疾病的疲乏感；对于心理性疾病人群，正念训练可以作为心理疾病康复治疗的一个适当补充，降低心因疾病的发病率和复发率；正念训练对于体育锻炼者而言，可以帮助锻炼人群，提升运动过程中愉悦感、降低心理惰性。

正念训练对于神经机制影响：正念训练所带来的改变有大脑结构上的改变，也有大脑功能上的改变。随着正念训练的进行，正念经验越丰富的受试者大脑皮层厚度越厚，正念训练可以引起右侧前脑导、右侧海马和左侧皮层厚度的改变。全脑分析发现后扣带回皮层、颞叶-顶叶交界处和小脑等脑区灰质也明显增加。此脑区涉及学习、记忆加工、情绪调节、观点采择等功能；正念训练可以激活与注意过程相关的脑区；增强与正性情绪相关的左侧前额叶活动性；减少与抑郁、焦虑、压力有关的杏仁核灰质密度，即便是短期的训练者，也会存在相应脑区的改变。

关键词 正念训练，心理效益，神经机制

A systematic review of the psychosocial benefits of mindfulness training in different populations and a study on the neural mechanisms

Xuemin Jiang (Yanlin Sun)

Tianjin Sports University, Tianjin, 300617

Abstract: Mindfulness training is the name of psychology. With the continuous discussion of scholars on it, the research results of mindfulness training are not only kept in oral or intuitive expression, but also more combined with ERP fMRI and other technologies for data collection. Compared with previous studies on professional athletes or the application of mindfulness training in clinical rehabilitation treatment. This paper summarized the effects of mindfulness training on different groups of people (Professional athlete, People with organic diseases, People with psychological diseases,) General exercise group, General exercisers), and related changes in brain neural mechanisms, thus forming a more systematic review of mindfulness training for different groups.

Psychological benefits of mindfulness training for different populations: For professional athletes, mindfulness training can significantly improve their physical fluency, increase their self-arousal level and help athletes to achieve the best athletic performance. For people with organic illnesses, mindfulness training can help them feel less fatigued about their illness than professional sports athletes. For people with mental illness, mindfulness training can be used as an appropriate supplement to the rehabilitation treatment of mental illness and reduce the incidence and recurrence rate of psychogenic disease. For physical exercisers, mindfulness training can help exercise people, improve their feelings of pleasure during exercise and reduce mental inertia.

Effects of mindfulness training on neural mechanisms: Changes brought by mindfulness training include brain structure changes and brain function changes. With the practice of mindfulness training, the subjects with more experience in mindfulness training had thicker cerebral cortex. Mindfulness training could cause changes in the thickness of right hippocampus and left cortex of the right forebrain. Whole brain analysis showed that there was also significant increase in gray matter in the temporal-parietal junction of the posterior cingulate cortex and in the

cerebellum, an area of the brain involved in learning, memory, processing, emotion regulation, idea selection and other functions. Mindfulness training can activate brain regions related to attention process. Increased activity in the left prefrontal lobe associated with positive emotions. Reducing the density of gray matter in the amygdala, which is associated with depression, anxiety and stress, was associated with changes in the same brain region even in short-term exercisers.

基于列线图构建护生非自杀性自伤风险预测模型

解子惠 张云雪 厉萍(通讯作者)

山东大学护理与康复学院, 济南, 250012, pingli12@sdu.edu.cn

摘要 目的: 非自杀性自伤 (non-suicidal self-injury, NSSI) 行为在青少年群体中多发, 已成为严重的公共健康问题。关注 NSSI 行为, 进一步了解 NSSI 的危险因素对提供有效的预防和早期干预策略至关重要。然而在以往的研究中, NSSI 行为的高危因素多是采用 Logistic 回归分析的方法筛选, 无法提供更直观、更快捷的 NSSI 行为风险评价指标。而列线图可以解决这一问题。护生作为护理行业后备军, 与今后护理行业的发展密切相关, 关注其心理健康对个人发展乃至对护理质量的提高均具有重要意义。因此, 本研究旨在调查护生非自杀性自伤的发生率, 构建预测护生 NSSI 行为发生风险的列线图模型。方法: 采取便利抽样的方法, 对山东省某三所高职院校 1965 名在校护生进行问卷调查, 问卷内容包括自编社会人口学调查问卷、青少年自我伤害行为问卷、父母教养方式问卷、多伦多述情障碍量表中文版、Rosenberg 自尊量表。采用 1:3 倾向评分匹配来平衡有 NSSI 组与无 NSSI 组的协变量, 应用逐步二元 Logistic 回归探究产生 NSSI 行为的相关因素, 并基于列线图构建护生 NSSI 发生风险预测模型。结果: 本研究中护生的 NSSI 行为检出率为 14.9%。Logistic 回归分析表明识别情感障碍 ($OR=1.077, P<0.001$)、描述情感障碍 ($OR=1.094, P=0.025$)、外向性思维 ($OR=1.071, P=0.013$) 对护生的 NSSI 行为有正向预测作用, 母亲鼓励自主 ($OR=0.917, P<0.001$)、父亲关爱 ($OR=0.941, P<0.001$)、自尊 ($OR=0.954, P=0.007$) 负向预测护生的 NSSI 行为。构建的列线图经验证区分度和可靠性良好 (校准曲线与标准曲线接近, ROC 曲线下面积为 0.76)。结论: 识别情感障碍、描述情感障碍及外向性思维是护生 NSSI 行为的危险因素, 父亲关爱、母亲鼓励自主及自尊是护生 NSSI 行为的保护因素。构建的风险预测列线图模型有助于直观评价护生出现 NSSI 行为的危险, 有利于尽早制定预防干预策略, 减少 NSSI 发生。

Development of Nomogram Model for Prediction of Non-suicidal Self-injury in Nursing Students

Xie Zihui, Zhang Yunxue, Li Ping (Corresponding author)

School of Nursing and Rehabilitation, Shandong University

No.44 Wenhuxi Road, Jinan, Shandong, China

Abstract: Objective Non-suicidal self-injury (NSSI) is common among adolescents and has become a serious public health problem. Focusing on NSSI and understanding the risk factors for NSSI is critical to providing effective prevention and early intervention strategies. However, in previous studies, most of the high-risk factors of NSSI behavior were screened by Logistic regression analysis method, which could not provide more intuitive and faster risk assessment indicators for NSSI behavior. The nomogram can solve this problem. Nursing students, as the reserve force of nursing industry, are closely related to the development of nursing industry in the future. It is of great significance to pay attention to their mental health for their personal development and even for the improvement of nursing quality. Therefore, this study aims to investigate the incidence of non-suicidal NSSI in nursing students and build a nomogram model to predict the risk of the occurrence of NSSI behavior in nursing students. Method The survey of 1965 nursing students was conducted by convenience sampling method. The questionnaire contents

included adolescent self-injurious behavior questionnaire, Parental Bonding Instrument, Toronto Alexithymia Scale-20 and Rosenberg Self-Esteem Scale. According to NSSI questionnaire cutoffs, participants were divided into the NSSI group and the non-NSSI group. Propensity score matching was used to balance covariates between the two groups. Stepwise binary logistic regression was used to explore the correlative factors of NSSI. The nomogram model for prediction the occurrence of NSSI was constructed based on the regression coefficients of the correlative factors. Results The detection rate of NSSI in nursing students was 14.9%. Logistic regression analysis showed that difficulty in identifying feelings (OR = 1.077, $P < 0.001$), difficulty in describing feelings (OR = 1.094, $P = 0.025$) and external oriental thinking (OR = 1.071, $P = 0.013$) were risk factors for the occurrence of NSSI behavior of nursing students, and maternal encourage autonomy (OR = 0.917, $P < 0.001$), the paternal care (OR = 0.941, $P < 0.001$) and self-esteem (OR = 0.954, $P = 0.007$) were the protective factors for the occurrence of NSSI of nursing students. The established nomogram model had good discriminability and reliability (calibration curve close to the standard curve, area under the ROC curve 0.76). Conclusion Difficulty in identifying feelings, difficulty in describing feelings and external oriental thinking were risk factors for NSSI behavior of nursing students. Maternal encourage autonomy, the paternal care and self-esteem were protective factors for NSSI behavior of nursing students. The established risk prediction nomogram model is helpful to directly evaluate the risk of the occurrence of NSSI behavior in nursing students, and is conducive to the early formulation of preventive intervention strategies to reduce the occurrence of NSSI.

“恩威并施型”领导对员工创新绩效的跨层影响： 员工韧性和权力距离取向的作用

李春琴¹ 宫准¹ (通讯作者)

¹ 青岛大学心理学系, 青岛, 266000, gongzhun2001@163.com

摘要 由于当今复杂多变的内外部环境, 领导者需要采取双元矛盾策略以平衡组织内部的不同需求。仁慈与威权两个维度来源于我国源远流长的历史积淀——家长式领导, 这种既聚仁慈又富威权的领导模式则称之为“恩威并施型”领导。当仁慈与威权两种领导风格都呈现适度水平时, 这种作为根植于中国本土文化的特色双元领导模式, 能够成为改善员工工作行为以及提高员工工作绩效的积极因素。但以往的研究表明, “恩威并施型”领导对下属创新绩效的影响机制并不明确, 为了弥补这些不足, 本研究通过引入工作需求-资源模型, 探索了中国特色文化情境下的“恩威并施型”领导对员工创新绩效的跨层次影响路径。采用多层线性模型(HLM)对两个时间点的数据进行分析, 发现: (1) “恩威并施型”领导与员工创新绩效呈正相关; (2) 员工韧性在“恩威并施型”领导和员工创新绩效之间承担中介作用; (3) 权力距离取向在“恩威并施型”领导和员工创新绩效之间承担调节作用。研究结果表明, 领导者采取恩威并施的管理行为能够使下属产生积极的认知评价, 并相应地调整自己的心理状态, 提高韧性水平, 从而提升员工的创新绩效。同时, 低权力距离取向的员工, “恩威并施型”领导与员工创新绩效的正相关关系越强。以上结果丰富了“恩威并施型”领导跨层作用的认识, 对双元领导、员工韧性和创新绩效等研究领域都有一定的启发意义。

关键词 “恩威并施型”领导, 员工创新绩效, 员工韧性, 权力距离取向

The multilevel influence of authoritarian-benevolent leadership on employee innovative performance: The role of employee resilience and power distance orientation

Chunqin Li¹, Zhun Gong¹ (Corresponding author)

¹ Department of Psychology, Qingdao University, Qingdao, 266000, gongzhun2001@163.com

Abstract: Due to today's complex and changing internal and external environment, leaders need to adopt a dual and contradictory strategy to balance the different needs within the organization. The two dimensions of benevolence and

authoritarianism are derived from China's long history of paternalistic leadership, which can be called authoritarian-benevolent leadership. And when both benevolent and authoritative leadership styles are at the right level, this dual leadership model, which is rooted in Chinese culture, can be a positive factor in improving employee behavior and performance. However, previous studies have shown that the mechanism of authoritarian-benevolent leadership on the innovative performance of subordinates is not clear. In order to remedy these deficiencies, this study explores the multilevel influence of authoritarian-benevolent leadership on employees' innovative performance in a Chinese cultural context by introducing the job demand-resource model. A hierarchical linear model (HLM) was used to analyze the data at two time points and it was found that: (1) authoritarian-benevolent leadership is positively related to employee innovative performance; (2) Employee resilience plays a mediating role between authoritarian-benevolent leadership and employee innovative performance; (3) Power distance orientation moderates the relationship between authoritarian-benevolent leadership and employee innovative performance. The results of this study show that leaders who adopt the management behaviors of authoritarian-benevolent can make subordinates have positive cognitive evaluation, adjust their psychological state accordingly, and improve their resilience level, thus enhancing their innovative performance. At the same time, for employees with low power distance orientation, the positive correlation between authoritarian-benevolent leadership and employee innovative performance is stronger. The above results enrich the understanding of the multilevel influence of authoritarian-benevolent leadership, and have some enlightening significance for the research fields of ambidextrous leadership, employee resilience and innovative performance.

不同类型毒品成瘾者风险决策特点

李珊珊¹ 谢中焄²

1 李珊珊, 中国政法大学社会学院心理学系 18810538952 lss950210@126.com

2 谢中焄, 中国政法大学 138 1009 4091 cuplpsy@163.com

摘要 毒品一直以来不论是对个体的身心健康还是对社会的安定都有着极大的危害。毒品虽然可以给人带来短暂的虚无的无上快感, 而同时带来的巨大损失也是显而易见的。当个体需要在多个既有一定概率带来收益又有一定概率带来损失的选项中做出决策时, 这就是客观条件不能完全确定的情况, 而这项决策也就带有风险性, 在这种情况下做出的决策也就是风险决策。是否要冒着身心受损甚至是被抓入狱的严重后果吸毒, 就是一种风险决策。本研究对于风险决策特点的研究, 可以对毒品成瘾者为何选择吸毒这一问题的解答提供新的思路, 为毒品成瘾者的循证矫治提供科学证据。本次调研共收集到 233 名强制戒毒的毒品成瘾者, 以及 116 名正常人作为对照组的实验数据资料, 使用多种实验范式, 即河内塔任务、气球模拟风险任务、GO-GO 任务、杯子任务四种实验范式, 更加客观准确地对不同类型毒品的成瘾者抑制控制能力, 以及在收益和风险情境下会做出的不同风险决策进行测试。研究发现, 不同种类的毒品成瘾者在抑制控制能力上存在显著差异, 冰毒组的抑制控制能力显著低于对照组, 甲卡西酮组和海洛因组则无显著差异; 在收益情境下, 各成瘾组与对照组相比表现出显著的风险偏好, 风险中性和风险不利试次中, 各成瘾组的被试选择风险选项的比例显著高于对照组, 在损失情境下则无显著差异。

父母心理控制与青少年寻求意义感的关系： 学校联结的中介作用

李怡葳 张野

沈阳师范大学教育科学学院, 辽宁沈阳, 110136, 1293368901@qq.com

摘要 青少年阶段是一个特殊阶段, 在这个阶段的学生不仅生理在成熟, 心理也在慢慢发展, 尤其是自我意识正在逐渐成型, 他们希望能够自己去探索人生的意义和价值, 但在家长、老师、学业和升学等各方面的压力下, 学生的心理承受能力面临着巨大的挑战, 任何改变都能让学生产生焦虑、不安情绪, 甚至还会出现生命感危机, 生命意义感是维持个体心理健康的保护因子, 能够有效预测身体健康, 生活满意度和幸福指数, 相反缺失生命意义感将会给个体带来迷茫、抑郁, 甚至损害社会功能。本研究基于自我决定理论以及意义感维持模型考察父母心理控制、青少年寻求意义感和学校联结的关系, 采用父母心理控制量表、生命意义感量表和学校联结量表对 327 名初中生进行问卷调查。结果显示: (1) 父母心理控制、寻求意义感和学校联结两两相关显著, (2) 学校联结在父母心理控制与寻求意义感之间具有中介作用。研究结果揭示了父母心理控制对青少年寻求意义感的作用机制, 并为对青少年寻求意义感的干预有一定指导意义。

Relationship between parental psychological control and adolescents seeking sense of meaning: The intermediary role of school connections

Li Yiwei, Zhangye

Shenyang Normal University, 253 Huangbei Avenue, Shenbei New District, Shenyang

Abstract: The adolescent stage is a special stage, in this stage of students not only physiological maturity, psychology is also slowly developing, especially self-consciousness is gradually taking shape, they hope to explore the meaning and value of life, but under the pressure of parents, teachers, academic and higher education, students' psychological tolerance is facing great challenges, any change can make students anxious, restless, and even life sense crisis, life sense is the protection factor to maintain individual mental health, Being able to effectively predict physical health, life satisfaction and happiness index, on the contrary, the lack of sense of meaning in life will bring confusion, depression, and even damage to social function. Based on the theory of self-decision and the maintenance model of sense of meaning, this study examined the relationship between parents' psychological control, teenagers' search for sense of meaning and school connection, and surveyed 327 junior high school students using parents' psychological control scale, life significance scale and school connection scale. The results showed that: (1) parental psychological control, sense of seeking meaning and school connection are significantly related, and (2) school connection has an intermediary role between parental psychological control and seeking sense of meaning. The results reveal the mechanism of parents' psychological control in seeking sense of meaning for adolescents, and have some guiding significance for the intervention of adolescents seeking sense of meaning.

Keywords: parental psychological control, seeking sense of meaning, school connection, adolescents

社会规范对选择性信息偏差的影响

练金晶¹ 刘永芳¹ (通讯作者)

¹ 华东师范大学心理与认知科学学院, 上海市心理健康与危机干预重点实验室, 上海 200062,

yfliu@psy.ecnu.edu.cn

摘要 选择性信息偏差(selective exposure bias)指的是个体倾向于偏好那些与自己的立场相同的信息, 同时贬低相悖的信息, 其主要以信息选择和信息评价的差异作为指标。尽管对选择性信息偏差的心理动机有丰富的讨论, 但却缺少了从人们所处的社会情景去考虑这个问题。

本研究通过两个实验操纵描述性社会规范(即多数人的行为), 使用造句任务启动合作或竞争心态, 探究社会规范对选择性信息偏差的影响和合作心态的调节作用, 同时进一步探索选择性信息偏差对态度极端度的影响。实验一从网络招募被试 164 名, 发现一致性信息寻求不符合社会规范时, 个体选择一致性信息的倾向减少, 同时选择性信息偏差使个体的态度更加两极分化; 实验二招募网络被试 144 名, 发现只在合作心态下, 非社会规范才会减少信息选择的选择性信息偏差, 而社会规范和合作心态都不影响个体信息评价的选择性信息偏差。研究表明: 1)当寻求一致信息不符合社会规范时, 处于合作心态的个体会减少选择一致性信息的偏好; 2)无论寻求一致性信息是否符合社会规范, 个体都会产生信息评价的选择性信息偏差; 3)选择性信息偏差会增强态度的两极分化。本研究试图将社会影响为一种新的动机来解释选择性信息偏差产生的原因。

Abstract: Selective exposure bias refers to the tendency to predominantly seek out attitude-consistent information and avoid attitude-inconsistent information. It mainly takes the difference of information selection and information evaluation as the index. Although researchers have proposed and tested several underlying psychological factors that

might contribute to this tendency, the potential role of social influence has not been addressed. Two studies investigated how and when descriptive social norms (the behavior of the majority of people) influenced people's selective exposure bias, and the cooperative or competitive mindset was primed by the sentence-making task in order to explore the moderating effect of cooperative mindset, as well as further explore the effect of selective information bias on the attitude extremity. In Study 1, 164 participants were recruited from the Internet, and it was found that participants' selective exposure bias was reduced when the bias was portrayed as non-social normative (vs. social normative), while selective information bias would make individuals' attitudes more polarized. In Study 2, 144 participants were recruited from the Internet, and the results showed that only under cooperative mindset, non-social norms could reduce the selective information bias of information selection, while social norms and cooperative mindset did not have an effect on the selective information bias of individual information evaluation. The results show that: 1) non-social norms could reduce the preference of cooperative individuals to choose consistent information; 2) the preference of evaluating consistency information didn't affected by social norms ;3) selective information bias could enhance the polarization of attitudes. This study regarded social influence as a new motive of selective exposure bias.

Keywords: selective information bias, descriptive social norms, cooperative mindset, information evaluation

抑郁症外显和内隐情绪性反应抑制缺损及其与快感缺失的关系

摘要 反应抑制常用于抑制功能的研究,是指个体抑制不符合当前情境需要的反应能力。抑制控制与情绪加工能力可能会相互竞争认知资源。一方面,抑制功能缺损可能会使抑郁症患者处于持续性的负性心境状态;另一方面,抑郁情绪以及快感缺失也可能使抑郁症患者对情绪刺激的抑制能力下降。研究发现,抑郁患者对非情绪性刺激的反应抑制功能的缺损。但抑郁症患者对情绪性刺激的反应抑制能力,由于实验范式和刺激材料的不同,研究结论不一。另外,情绪刺激的加工除了外显加工,还有在前注意阶段的内隐加工。它比外显加工更能体现对情绪信息自动化加工的早期过程。因此,从内隐加工的视角探究个体对情绪性刺激的反应抑制能力,可能更有助于抑郁高危个体的早期识别和干预。然而,目前对抑郁症患者在内隐条件下的反应抑制能力如何,是否有不同于外显加工的特点,相关研究尚少。为弥补当前研究的不足,本研究拟对抑郁症患者外显、内隐情绪性反应抑制的特点及其与快感缺失的关系进行系统的考察。

本研究采用情绪面孔停止信号任务(SST)测评38名MDD患者及40名健康个体在外显及内隐条件下的反应抑制能力。采用Chapman社会和躯体快感缺失量表(CSAS&CPAS)评估快感缺失程度,采用汉密尔顿抑郁量表(HRSD-24)评估患者抑郁程度。采用混合模型方差分析统计组内和组间的差异。在SST中,停止信号延迟时间(SSD)随被试按键成绩自动调整,成功抑制则下一个SSD增加50ms来提高抑制难度,失败则减少50ms来降低抑制难度。停止信号延迟时间(SSRT)是SST的核心指标,其值越大表明反应抑制能力越差。

结果显示,在外显任务中,抑郁症组的SSRT大于对照组,而成功抑制率(PI)、SSD、正确按键反应时(GoRT)均小于对照组。在内隐任务中,抑郁症组的SSRT大于对照组,而PI、SSD均小于对照组;相关分析显示,抑郁症组外显、内隐条件下的SSRT与快感缺失得分呈正相关。

所以,抑郁症患者在外显和内隐条件下的情绪性反应抑制能力均存在缺损,该缺损可能与其快感缺失的严重程度有关。

Abstract: Response inhibition is commonly used in the study of inhibitory functioning and refers to an individual's ability to inhibit responses that do not match the needs of the current situation. Previous studies have found that inhibitory control and emotional processing capacity may compete with each other for cognitive resources. On the one hand, deficits in inhibitory function may leave depressed individuals in a persistent negative state of mind; on the other hand, depressed mood as well as pleasure deficits may also leave depressed individuals with reduced inhibitory capacity to respond to emotional stimuli. Previous studies have found deficits in response inhibition to non-emotional stimuli in depressed individuals. However, the ability of depressed individuals to inhibit responses to emotional stimuli has been studied with varying findings due to differences in experimental paradigms and stimulus materials. In addition, the processing of emotional stimuli has implicit processing in the preattentive phase in addition to the extrapyramidal processing. It is more representative of the early processes that automate the processing of emotional information than is the case for episodic processing. Therefore, exploring an individual's ability to inhibit responses to emotional stimuli from the perspective of implicit processing may be more useful for early identification and intervention of individuals at high risk of depression. However, there is a paucity of research on how depressed individuals' response inhibition capacity under implicit conditions differs from that of extrapolated processing. To address the gaps in current research, the present study proposes to systematically examine the characteristics of extrapersonal and implicit emotional response inhibition in depressed patients and its relationship with pleasure deficits.

Our study used the emotional face stop signal task (SST) to measure response inhibition in 38 patients with MDD and 40 healthy individuals in both explicit and implicit conditions. The Chapman Social and Somatic pleasure deficit scales (CSAS & CPAS) were used to assess the degree of pleasure deficit and the Hamilton Depression Scale (HRSD-24) was used to assess the degree of depression in patients. A mixed-model ANOVA was used to count the differences within and between groups. In the SST, the stop signal delay (SSD) was automatically adjusted with the subject's keystroke performance, with successful inhibition increasing the next SSD by 50ms to increase inhibition difficulty, and failure decreasing it by 50ms to decrease inhibition difficulty. The stop signal reaction time (SSRT) is the core metric of the SST, with larger values indicating poorer response inhibition.

The results showed that in the episodic task, the SSRT of the depression group was greater than that of the control group, while the probability of inhibition (PI), SSD, and go signal reaction time (GoRT) were all smaller than those of the control group. In the implicit task, the SSRT of the depression group was greater than that of the control group, while PI and SSD were smaller than those of the control group; correlation analysis showed that SSRT in the depression group was positively correlated with pleasure deficit scores in the extrapyramidal and implicit conditions.

Our study found that patients with major depression disorder have deficits in emotional response inhibition in both the extrapersonal and implicit conditions, and this deficit may be related to the severity of their pleasure deficits.

深圳中小學生 24 小時活動水平及其與內外化問題的關係

梁凱欣¹ 陳思同² 遲新麗¹ (通訊作者)

1 深圳大學心理學院, 深圳, 518060, 通訊作者 E-mail (xinlich@126.com)

2 維多利亞大學運動與健康研究院, 墨爾本, 8001

摘要 目的: 一天的時間由各種強度的身體活動組成, 包括睡眠、靜態行為和身體活動, 由於不同類型的活動分別會給身心帶來不同的影響, 不同的時間分配模式可能會對處於發展關鍵期的兒童青少年的身心健康有著重要影響。根據得到多國認可的加拿大兒童青少年 24 小時活動指南, 本研究旨在調查國內兒童青少年活動水平, 並探討其與內外化問題的關係, 以期為我國完善符合國情的活動指南提供依據。**方法:** 本研究採用分層抽樣方法選取來自深圳 9 個學區 135 所學校的中小學生進行問卷調查, 收集中高強度身體活動、屏幕使用和睡眠的時長、抑鬱和焦慮症狀 (內化問題)、抽煙喝酒打架行為 (外化問題) 和社會人口學資料, 最終獲得包含 67281 名中小學生 (平均年齡 13.0 歲; 51.9% 男生, 48.1% 女生; 41.5% 小學生, 40.3% 初中生, 18.1% 高中生) 的有效樣本。採用廣義線性模型分析 24 小時活動水平與內外化問題的關係, 並探究兩者關係是否因性別和學段而異。**結果:** 基於總體樣本, 我們發現 (1) 只有 1.7% 的學生同時達到三條指南, 沒有达标和仅达标 1 條的比例最多, 分別為 28.7% 和 54.6%; (2) 指南达标數與抑鬱症狀、焦慮症狀、喝酒和打架行為的關係呈現出劑量效應, 即达标數越多, 被試報告相應內外化問題的可能性越小; (3) 相比於沒有达标任一指南, 仅达标 1 條指南時, 仅达标睡眠或屏幕時長指南均與抑鬱症狀、焦慮症狀呈顯著負相關, 仅达标中高強度身體活動或屏幕時間指南均與抽煙、打架行為呈顯著負相關, 仅达到任一指南均與喝酒行為呈顯著負相關; 仅达标 2 條指南時, 达标任意兩條指南均與抑鬱症狀呈顯著負相關, 达标睡眠和屏幕時間指南均與焦慮症狀、抽煙、喝酒、打架行為呈顯著負相關; 同时达标 3 條指南與本研究中五種內外化問題的发生均呈顯著負相關。此外, 24 小時活動水平及其與內外化問題的具体關係因性別和學段而異。**結論:** 完全達到 24 小時活動指南推薦量的深圳中小學生極少, 而達到指南的活動水平與內外化問題的发生总体上呈顯著負相關, 具体關係因性別和學段而異。

Abstract: Objective: A typical day consists of various intensity activities, including sleep, sedentary behavior, and physical activities, and different types of activities have different associations with health outcomes. For children and adolescents in the critical period of development, time allocation patterns may have important impacts. Based on the Canadian 24-hour movement guideline for children and adolescents recognized by many countries, this study aimed to investigate the prevalence of meeting recommendations in the guideline among Chinese children and adolescents and explore associations between meeting the guideline with internalizing and externalizing problems, and thus to provide certain implications for improving the physical activity guideline in line with national conditions in China. **Methods:** 135 primary and middle school students from 9 school districts in Shenzhen were selected by stratified sampling to conduct a questionnaire survey. Data of moderate- and high-intensity physical activity, screen use and sleep time, depression and anxiety symptoms (internalizing problem), smoking, drinking, and fighting behavior (externalization problem), and sociodemographic variables were collected. Finally, 67281 primary and middle school students were obtained (average age 13.0 years old; 51.9% boys and 48.1% girls; 41.5% primary school students, 40.3% junior middle school students, and 18.1% high school students). Generalized linear models were used to

analyze the associations between meeting the guideline with internalizing and externalizing problems, and to explore whether the associations varied according to gender and grade. **Results:** Based on the overall sample, we found that (1) only 1.7% of the students met three recommendations at the same time, and the students who met none or only one recommendation accounted for the largest proportion, 28.7% and 54.6%, respectively; (2) The associations between the number of recommendations met and depression symptoms, anxiety symptoms, drinking and fighting behavior showed a dose-response pattern, that is, the more the number of recommendations met, the less likely the students were to report the corresponding internalizing and externalizing problems; (3) Compared with meeting none recommendation, when only one recommendation was met, meeting only the sleep or screen time recommendation were significantly correlated with lower odds of depression symptoms and anxiety symptoms, and meeting only the moderate- and high-intensity physical activity or screen time recommendation were significantly correlated with lower odds of smoking and fighting, and meeting any one recommendation was significantly correlated with drinking; when only two recommendations were met, any two guidelines were significantly correlated with lower odds of depression symptoms, and meeting sleep and screen time recommendations were significantly correlated with lower odds of anxiety symptoms, smoking, drinking and fighting; meeting all three recommendations was significantly correlated with lower odds of five internalizing and externalizing problems in this study. Furthermore, the associations between meeting the guideline with internalizing and externalizing problems varied between genders and grades. **Conclusion:** Few students in Shenzhen fully meet the 24-hour movement guideline, while meeting the 24-hour movement guideline was significantly correlated with lower odds of internalizing and externalizing problems generally, and the specific relationships varied with gender and grade.

摘要 目的: 新冠疫情期间, 公众的心理健康问题突显, 尤以抑郁症状较为典型。持续的抑郁症状可能导致一系列更为严重的后果, 如自伤和自杀行为。已有研究表明, 处于发展关键期的青年大学生是抑郁症状的高发人群。然而, 目前关于大学生在疫情期间不同阶段的抑郁症状的发展轨迹研究仍十分有限。因此, 本研究旨在考察自新冠疫情爆发以来大学生抑郁症状的发展轨迹, 并探究自我关怀和心理韧性的保护作用。**方法:** 于 2020 年 2 月邀请国内大学生被试进行线上问卷调查, 收集抑郁症状、自我关怀、心理韧性和社会人口学等信息。随后分别在 5 月、8 月、11 月及 2021 年 2 月邀请同一批大学生完成抑郁症状的测量。最终共有来自 23 个省(市)的 494 名大学生完成了 5 次测量(基线年龄为 20.41 ± 1.74)。首先采用重复测量方差分析对抑郁症状的总体轨迹进行分析。然后采用潜变量增长混合模型探究抑郁症状发展轨迹中的亚群组。最后采用 logistic 回归模型, 控制社会人口学因素, 检验自我关怀和心理韧性水平对抑郁轨迹发展轨迹的预测效应。**结果:** (1) 5 次测量中, 抑郁症状的总体水平呈现先升高后降低的发展趋势, 其中 2020 年 8 月的抑郁症状水平最高, 2020 年 11 月的抑郁症状水平显著下降; (2) 存在三个轨迹亚群组: 高危组(占比 15.8%, 抑郁症状的初始水平较高且不断升高)、好转组(占比 4.9%, 抑郁症状的初始水平较高但持续下降)和健康组(占比 79.4%, 抑郁症状保持稳定的低水平); (3) 与健康组相比, 自我关怀水平较低的被试更可能归于高危组和好转组, 心理韧性水平较低的被试更可能归于高危组。**结论:** 疫情期间大学生的抑郁轨迹具有群体异质性, 提高自我关怀和心理韧性的水平可预防和缓解抑郁症状的发生。

The authors contributed equally to this study.

Abstract: Purpose: During the COVID-19 pandemic, mental health problems have been a public health concern, especially depression symptoms. Persistent depression symptoms may lead to a series of detrimental outcomes and are highly related to self-injury and suicidal behavior. College students, in the critical period of development, are a high incidence group of depression symptoms. There is growing evidence supporting a clear association between the COVID-19 pandemic and mental health (e.g., depression) among young adults, such as college students. However, little is known about the trajectories of depression symptoms among young adults at different stages of the pandemic. Therefore, the purpose of this longitudinal study is to investigate the development trajectories of depression symptoms and explore the protective effects of self-compassion and resilience on college students since the outbreak of the pandemic. **Methods:** In February, we invited domestic college students to participate in the online survey to collect depression symptoms, self-compassion, resilience, and sociodemographic information. Then, the same group of college students was invited to complete the measurement of depressive symptoms in May, August, November, and February 2021. Finally, a total of 494 college students from 23 provinces (cities) completed five measurements (baseline age 20.41 ± 1.74). Firstly, the overall trajectory of depression symptoms was analyzed by repeated measurement analysis of variance. Then, the latent growth mixed model was used to explore the subgroups in the development trajectory of depression symptoms. Finally, a logistic regression model was used to test the predictive effect of self-compassion and resilience on the development track of depression after adjusting for sociodemographic factors. **Results:** (1) Among the five measurements, the level of depression symptoms increased first and then decreased. The level of depression symptoms was the highest in August 2020 and decreased significantly in November 2020; (2) There are three subgroups: high-risk group (accounting for 15.8%, the initial level of depression symptoms was high and rising), recovery group (accounting for 4.9%, the initial level of depression symptoms was high but declining) and healthy group (accounting for 79.4%, and the depression symptoms remained at a stable low level); (3) Compared with the healthy group, the participants with a lower level of self-compassion were more likely to belong to the high-risk group and the recovery group, and the participants with a lower level of resilience were more likely to belong to the high-risk group. **Conclusions:** Group heterogeneity exists in the depression trajectories of college students during the pandemic. Improving the level of self-compassion and resilience can help to prevent and alleviate the development of depression symptoms.

具身情绪启动对抑郁倾向个体注意偏向的影响

黄玲¹ 陈建新¹ (通讯作者) 魏柳青¹

¹ 湖北大学教育学院心理学系, 武汉, 430062, CHY_990802@163.com

摘要 对负性刺激的注意偏向是抑郁症状产生、持续和发展的重要认知因素。如果能够采取一定的方式改变抑郁个体对消极刺激的注意偏向, 就有可能缓解抑郁个体的抑郁症状。来自临床和日常生活的观察, 抑郁个体存在着悲伤的面部表情(愁眉苦脸)和消极的身体姿势(身体蜷缩), 而这种特殊的面部表情和身体姿势又进一步加重了抑郁个体的抑郁情绪体验和对外界的消极认知, 即更倾向于注意负性刺激。具身情绪的观

点为情绪调节引入了新的思路, 具身情绪是在个体无意识的情况下产生的, 不需要耗费认知资源, 无需意志

努力, 因此其对情绪的调节作用更为有效。当个体感到愉快时, 会面带笑容, 手舞足蹈, 身体扩张, 这种面部表情的变化(笑逐颜开)和身体姿势的改变(身体扩张)可能会进一步加强个体的愉快情绪体验和对外界的积极认知, 即可能使其对负性刺激的注意偏向减弱。基于以上的分析, 本研究在探讨抑郁倾向个体的注意偏向特点的基础上, 进一步研究面部具身启动和姿势具身启动对抑郁倾向个体注意偏向的影响。实验 1 通过点探测范式探讨抑郁倾向个体的注意偏向特点, 结果发现, 和对照组相比, 抑郁倾向个体存在对悲伤面孔的注意偏向, 表现为对悲伤面孔的反应时更长, 更难解除注意。实验 2 和 3 在实验 1 基础上, 考察了具身情绪启动对抑郁倾向个体的注意偏向的影响。实验 2 和 3 分别采用面部表情和身体姿势操控范式, 考察启动的具身情绪对抑郁倾向个体注意偏向的影响。结果均发现: 消极具身情绪启动组的平均反应时均显著长于无启动组, 表明消极的面部表情和身体姿势操控均使抑郁倾向被试的探测反应显著变慢。并且在消极情绪启动条件下, 被试表现出了对负性情绪刺激的注意偏向。本研究证明了具身情绪启动可以改变抑郁倾向个体对负性悲伤刺激的注意偏向。

关键词 抑郁倾向, 注意偏向, 具身情绪启动

Influence of embodied emotion priming on attentional bias of individuals with depression tendency

Huang Ling¹, Chen JianXin¹, Wei LiuQing¹

¹ Department of Psychology, Institute of Education, Hubei University, Wuhan 430062

Abstract: Individuals' attentional bias to negative stimuli plays an important role in the occurrence, maintenance and development of their depressive symptoms. Depressive individuals often exhibit sad facial expressions and negative body postures (e.g. body curling) in daily life. The negative facial expressions and body postures further aggravate their depressive emotional experience and negative cognition. That is, they are more inclined to pay attention to negative stimuli. The research of embodied emotion introduces a new idea for emotional regulation. Embodied emotion is at the level of unconsciousness, without consuming cognitive resources and needing no effort, so it may be effective to regulate emotion. For example, when an individual feels happy, he/she may smile, dance and expand his/her body. The change of facial expression and body posture (body expansion) may further strengthen his/her happy emotional experience and positive cognition, that is, may weaken his/her attention bias to negative stimuli. Thus, this study first explored the attentional bias to negative stimuli in individuals with depressive tendencies, and further studied the effects of facial and postural embodied priming on attentional bias of individuals with depressive tendencies.

In the present study, participants were screened using the Depression Scale (CES-D) and the Beck Depression Scale-2 Chinese (BDI-II-C). The participants with BDI-II-C scores equal to or above 15 and having not meet the diagnostic criteria of depression were selected as the depressive tendency group. The participants with BDI-II-C scores less than 15 and CES-D scores less than 20 were as the control group. In Experiment 1, there were 61 participants, among which 31 in the depressive tendency group and 30 in the control group. All participants completed the emotional detection task. In Experiment 2, 90 participants with depressive tendencies were recruited and randomly assigned to three groups. In each group, an embodied emotion priming (positive priming / negative priming / no priming) was manipulated. In Experiment 3, 60 subjects with depressive tendency were recruited and randomly assigned to two groups with two different types of embodied emotion priming (positive priming / negative priming) manipulating. All subjects completed the face or body posture control paradigm and the emotion detection task.

The results of Experiment 1 showed that the depressive tendency individuals inclined to pay attention to sad faces, indicated by their responses to sad faces being longer and shifting attention from sad faces more difficultly. Experiments 2 and 3 further investigated the effects of facial embodied emotion priming and postural embodied emotion priming on depressive individuals' attentional bias. The results of both experiments consistently showed that the depressive tendency participants' reaction time under the negative embodied emotion priming condition was

significantly longer than that of the no-priming group, suggesting that the negative facial expression and body posture manipulation significantly slowed down the detection reaction of the depressive tendency participants. Participants showed attentional bias to negative emotion stimuli.

In conclusion, this study found that depressive individuals had attentional bias to negative stimuli. Both facial expression manipulation and body posture manipulation can affect the attentional bias of depressive individuals.

摘要 近些年, 公众精神疾病的患病率不断上升, 治疗负担也日益加重。以往的研究发现, 公众对心理知识了解不够、对待心理疾病态度消极以及寻求心理帮助的意愿薄弱, 都会导致实际求助行为的减少, 这也是心理健康素养缺失的体现。心理健康素养是人们维护心理健康、正确应对心理疾病的能力, 对于个人和社会都有重要意义。由于大多数心理疾病都可以在 25 岁前发现及早干预治疗, 提高青年人心理健康素养显得尤为重要。

教学干预是提高心理健康素养的有效方式, 但目前国内在此方面的实证研究较少。为检验大学生心理健康素养课程对大学生心理健康素养的教学干预效果, 选取武汉某高校 1574 名大一新生, 分为实验组和对照组。实验组学生接受为期八周教学干预, 对照组学生不接受教学干预, 在教学开始前及结束后对两组学生的心理健康素养水平进行问卷调查及数据分析。自变量为是否实施以提升心理健康素养为目的的心理健康教育课程, 因变量为学生自我报告的心理健康素养水平, 同时将心理问题的自我效能、心理求助态度作为效标变量, 确认教学干预的有效性。

结果发现: 以提升心理健康素养为目的的心理健康教育课程可以有效提升大学生的心理健康素养水平、处理心理问题的自我效能感以及心理求助态度。研究结果证实了心理健康素养的教学干预的有效性, 为完善大学生心理健康素养的课程建设提供参考和实证依据。

Research on intervention of college students' mental health literacy based on mental health courses

LIU Chang¹, XU Aijing¹, LI Fenglan², YU Lixia³, Jiang Guangrong³

1 School of Psychology, Central China Normal University, Wuhan 430079

2 College of Marxism, Huazhong Agricultural University, Wuhan 430070, China

3 Mental Health Service Center, Central China Normal University, Wuhan 430079, China

Abstract: In recent years, the prevalence rate of public mental illness is rising, the cost and the burden of treatment is increasing. Previous studies have found that insufficient public understanding of psychological knowledge, the negative attitude towards mental illness and the weak willingness to seek psychological help all lead to the decrease of actual help-seeking behavior, which is also a reflection of the lack of mental health literacy. Mental health literacy is the ability to maintain their mental health and correctly deal with mental illness, which is of great significance to both individuals and society. Since most mental disorders can be identified and treated by age 25, it is important to improve the mental health literacy of young people.

Teaching intervention is an effective way to improve mental health literacy, however, there are few empirical studies in China. In order to test the teaching intervention effect of college students' mental health literacy experiment course on college students' mental health literacy, 1574 freshmen from a university in Wuhan are selected, divided

into the experimental group and the control group. Students in the experimental group received an eight-week teaching intervention, while students in the control group did not receive the teaching intervention. Before and after the teaching, the mental health literacy level of students in the two groups was measured by questionnaires. The independent variable is whether to implement the mental health education course teaching intervention for the purpose of improving mental health literacy, and the dependent variable was the level of self-reported mental health literacy. Meanwhile, the self-efficacy of psychological problems and the attitude towards psychological help-seeking are taken as the standard variables to confirm the effectiveness of the teaching intervention.

The results show that mental health education courses aimed at improving mental health literacy could effectively improve the level of mental health literacy, the self-efficacy in dealing with psychological problems and the attitude towards psychological help-seeking. The results of the study confirmed the effectiveness of the teaching intervention of mental health literacy, and provide a reference and empirical basis for improving the curriculum construction of college students' mental health literacy.

锻炼对情绪调节能力影响的元分析研究

刘洁 高淑青（通讯作者）

天津体育学院 竞技运动心理与生理调控重点实验室，天津，301617

摘要 目的：通过量化分析系统地评价锻炼对情绪调节能力的影响，探讨锻炼的物理要素与情绪调节能力之间的关系，进而为情绪调节困难人群提供合理的运动方案，为今后基于情绪效益的运动处方的制定提供理论参考。方法：计算机检索国内外数据库，搜索所有体育锻炼与情绪调节的相关文献，由两位研究人员按照纳入和排除标准独立筛选文献、提取资料 and 评价文献质量，二者出现分歧时由第三方进行判定，保证所得结果的客观有效性。利用元分析软件 Review Manager 5.3 进行数据分析。结果：锻炼可以有效提高情绪调节的能力，效果量接近中等[$SMD=0.45, 95\%CI(0.32, 0.57), P=0.00$]；锻炼对情绪调节的三个维度（反刍调节、感觉唤醒、感觉评价）均有积极影响，其中对感觉唤醒的影响最大，[$SMD=0.49, 95\%CI(0.33, 0.64), P=0.00$]；亚组分析显示，在锻炼周期方面，单次锻炼和长期锻炼均能有效改善情绪调节能力且差异不显著；在锻炼强度方面，中等强度和低强度的体育锻炼均能有效改善情绪调节能力且差异不显著；在锻炼人群方面，健康和亚健康人群的情绪调节能力均受到锻炼的积极影响且差异不显著；在单次运动时长方面，30min 及以下时，对情绪调节能力的影响没有显著意义，而锻炼达 30min 以上时，可以明显改善个体情绪调节能力。结论：体育锻炼可以提高情绪调节能力，运动强度、周期以及不同人群均无显著调节效应。这提示我们体育锻炼对大多数人群情绪调节能力的提高都有积极作用，个体可以根据自身情况选择合适的锻炼周期及强度，但单次运动时间最好达 30min 效果才更加显著。

A Meta-analysis Research on the Influence of Exercise on Emotion Regulation Ability

Liu Jie, Gao Shutian (corresponding author)

Key Laboratory of Psychological and Physiological Control of Competitive Sports, Tianjin Institute of Physical Education, Tianjin, 301617

Abstract: Objective: To systematically evaluate the influence of exercise on emotion regulation ability through quantitative analysis, explore the relationship between physical elements of exercise and emotion regulation ability, and then provide a reasonable exercise plan for people with difficulty in emotional regulation, and provide future exercise prescriptions based on emotional benefits. The formulation provides theoretical reference. Methods: Computer searched domestic and foreign databases, searched all related literatures on physical exercise and emotion

regulation, two researchers independently screened the literature according to the inclusion and exclusion criteria, extracted the data and evaluated the quality of the literature. When the two diverged, the third party would make judgments, To ensure the objective validity of the results obtained. Meta-analysis software Review Manager 5.3 was used for data analysis. Results: Exercise can effectively improve the ability of emotion regulation, and the effect is close to medium [SMD=0.45, 95%CI (0.32, 0.57), P=0.00]; the three dimensions of exercise on emotion regulation (rumination regulation, sensory arousal, sensation Evaluation) have positive effects, of which the greatest impact on sensory arousal, [SMD = 0.49, 95% CI (0.33, 0.64), P = 0.00]; subgroup analysis shows that in terms of exercise cycle, single exercise and Long-term exercise can effectively improve the ability of emotional regulation and the difference is not significant; in terms of exercise intensity, both medium- and low-intensity physical exercise can effectively improve the ability of emotional regulation and the difference is not significant; in the exercise population, the difference between healthy and unhealthy people Emotion regulation ability is positively affected by exercise and the difference is not significant; in terms of the duration of a single exercise, 30 minutes or less has no significant effect on the emotional regulation ability, while exercise for more than 30 minutes can significantly improve the individual's emotional regulation ability . Conclusion: Physical exercise can improve the ability to regulate emotions, and exercise intensity, cycle, and different groups of people have no significant regulating effect. This suggests that physical exercise has a positive effect on the improvement of the emotional regulation ability of most people. Individuals can choose the appropriate exercise cycle and intensity according to their own conditions, but the effect of a single exercise time of 30 minutes is more significant.

Keywords: Physical exercise, emotion regulation ability, rumination regulation, sensory arousal, sensory evaluation

被动性社交网站使用与攻击的关系： 错失焦虑与自我控制的作用

刘蕾¹ 李放¹（通讯作者）

¹ 四川师范大学心理学院，成都，610068, lifang_sicnu@126.com

摘 要 近年来随着社交网站的普及，其使用方式受到了研究者广泛的关注。被动性社交网站使用被证明是一种消极的使用方式，会带来消极的结果，如错失焦虑、攻击行为等。攻击是指有意的指向他人的伤害或破坏性行为，在大学生群体中较为常见。攻击行为会对大学生的心理社会适应产生消极影响，且大学生攻击行为已经成为公共卫生问题之一。错失焦虑是被动性社交网站使用的显著后果，且会导致自我控制能力的下降，进而产生攻击行为。以往研究多数关注的是被动性社交网站使用与心理健康的关系，很少有与行为有关的研究。本研究基于问题行为理论和有限自制力理论，探讨被动性社交网站使用与攻击的关系以及错失焦虑和自我控制的中介作用。采用被动性社交网站使用量表、错失焦虑量表、自我控制量表和攻击量表对 822 名大学生进行施测。结果发现：（1）被动性社交网站使用与错失焦虑和攻击呈显著正相关，与自我控制呈显著负相关，错失焦虑与自我控制呈显著负相关，与攻击呈显著正相关，自我控制与攻击呈显著负相关；（2）被动性社交网站使用对攻击具有显著的正向预测作用；（3）错失焦虑和自我控制分别在被动性社交网站使用对攻击的预测中起中介作用；（4）错失焦虑和自我控制在被动性社交网站使用对攻击的预测中起链式中介作用。研究结果强调了错失焦虑和自我控制在被动性社交网站使用预测攻击行为中的重要作用，为被动性社交网站使用影响攻击行为提供了实证支持。在实践上，对减少被动性社交网站使用对大学生产生的消极影响具有重大意义，启发大学生正确使用社交网站，客观看待社交网站上的信息，减少通过社交网站中社会比较导致的消极情绪，提高自我控制能力，引导大学生树立正确的社交网站使用观。

关键词 被动性社交网站使用，错失焦虑，自我控制，攻击

The relationship between passive social network site use and attack:the mediating effect of fear of missing out and self-control

Liulei¹, lifang¹(Corresponding author)

Institute of psychology of Sichuan normal university, chengdu, 610068, lifang_sicnu@126.com

Abstract: In recent years, with the popularity of social network site, its usage has attracted wide attention from researchers. Passive use of social network site has been proved to be a negative way of use, which will bring negative results, such as fear of missing out, aggressive behavior, etc. Attack refers to intentionally hurtful or destructive behavior directed at others, which is common among college students. Aggressive behavior will have a negative impact on the college students' psychosocial adaptation, and the aggressive behavior of college students has become one of the public health problems. Fear of missing out is a significant consequence of the use of passive social network site, and it can lead to a decline in self-control, which in turn leads to aggressive behavior. Most previous studies have focused on the relationship between passive social network site use and mental health, and there are few behavior-related studies. Based on the problem-behavior theory and the theory of limited self-control, this study explores the relationship between passive social network site use and attack, and the mediating effect of fear of missing out and self-control. The passive social network site use scale, the fear of missing out scale, the self-control scale, and the Buss-Perry scale were used to test 822 college students. The results showed that: (1) Passive social network site use was significantly positively correlated with fear of missing out and aggression, and significantly negatively correlated with self-control; fear of missing out was significantly negatively correlated with self-control, and significantly positively correlated with aggression, self-control is significantly negatively with aggression; (2) Passive social network site use has a significantly positively predictive effect on attack; (3) Fear of missing out and self-control respectively play an intermediary role in the prediction of attack by passive social networking site use; (4) Fear of missing out and self-control play a chain-like intermediary role in the prediction of attacks on passive social networking sites. The results of the study emphasize the important role of fear of missing out and self-control in predicting aggressive behavior when using passive social network site, and provide empirical support for the influence of passive social network site use on aggressive behavior. In practice, it is of great significance to reduce the negative impact of passive social network site usage on college students. Inspired college students to use social network site correctly, view the information on social network site objectively, reduce negative emotions caused by social comparisons in social network site, improve self-control ability, and guide college students to establish a correct view of using social network site.

摘要 随着我国人口红利消失、土地红利下降以及环境问题日益突出, 劳动密集型的传统制造产业面临许多挑战, 在产业结构水平、自主创新能力、资源利用效率、信息化程度等方面与发达国家尚存在明显差距。我国制造业面临低成本国家和发达国家的双重挤压。传统制造业要想保持可持续发展和维持竞争优势, 必须进行转型升级, 在“中国制造”向“中国智造”转型和发展过程中, 传统制造业必须要与人工智能进行深度融合, 制造业与人工智能的融合在各细分行业形成了领军者、追赶者和探索者三大梯队的基本格局。人工智能的应用能大大提高生产效率, 也可以将员工从程序化的工作和繁重的体力劳动中解放出来, 但是人工智能的应用从不同程度上给员工带来某些压力和困扰, 甚至对使用人工智能产生心理焦虑。本文章从组织行为学角度理清了人工智能焦虑的概念, 从媒体宣传、工作替代、工作挑战、学习挑战、情感交流以及机器人主体地位诉求等几个方面探究了员工人工智能焦虑产生的原因, 并从成因预防这个角度提出了重新分配工作任务, 提供人工智能相关培训等措施, 另外还专门从EAP角度提出了具体的对策和建议, 帮助制造业的员工减轻人工智能焦虑, 减少企业在转型过程中带来的不必要的损失, 帮助经济和社会快速发展。

Study on the Causes and Intervention of Artificial Intelligence Anxiety in Manufacturing Employees

LIU Song¹, WU ShaoHao¹, ZENG HaiYang²

1 School of Education Science, MinNan Normal University, Zhangzhou, Fujian, 363000, China

2 School of Business, MinNan Normal University, Zhangzhou, Fujian, 363000, China

Abstract: With the disappearance of demographic dividend, the decline of land dividend and the increasingly prominent environmental problems in China, labor-intensive traditional manufacturing industries are facing many challenges, and there is still an obvious gap between China and developed countries in terms of industrial structure level, independent innovation ability, resource utilization efficiency and informationization degree. Our country's manufacturing industry faces double squeeze from low cost country and developed country. To maintain sustainable development and competitive advantage, the traditional manufacturing industry must undergo transformation and upgrading. In the process of transformation and development from "made in China" to "Intelligent manufacturing in China", the traditional manufacturing industry must be deeply integrated with artificial intelligence. The integration of manufacturing and artificial intelligence has formed a basic pattern of three echelons of leaders, catchers and explorers in each subsector. The application of artificial intelligence can greatly improve production efficiency and liberate employees from programmed work and heavy manual labor. However, the application of artificial intelligence brings some pressure and trouble to employees to varying degrees and even produces psychological anxiety about using artificial intelligence. This article figures out the concept of artificial intelligence anxiety from the perspective of organizational behavior, explores the causes of artificial intelligence anxiety of staffs from several aspects such as media publicity, work substitution, work challenges, learning challenges, emotional communication, and the robot subjectivity demands, and puts forward some countermeasures such as reassigning work tasks and providing artificial intelligence-related training. In addition, specific countermeasures and suggestions are put forward from the perspective of EAP to help manufacturing employees reduce AI anxiety, reduce unnecessary losses brought by enterprises in the process of transformation, and promote the rapid development of the economy and society.

摘要 当今世界仍然处于 COVID-19 大流行疫情下, 疫情不仅对人类生命安全造成严重威胁, 而且带来了巨大的经济社会成本。接种疫苗是预防病毒传播最有效的途径, 然而, 新冠疫苗在世界范围的接种覆盖率仍不足以建立对病毒的群体免疫屏障。本研究将默认选项设置及其变式应用于疫苗接种政策中, 以期寻找增强民众疫苗接种意愿的有效助推手段。本研究采用组间设计, 在全国范围内通过网络问卷的方式收集数据, 被试 ($N = 2215$) 被随机分配至 7 种疫苗接种的政策情境(不设置默认选项的选择参加政策, 默认接种的选择退出政策及其五种变式), 探究不同政策情境下人们的接种意愿和态度评价。结果发现: (1) 默认接种政策及其四种变式(教育变式、机会变式、反馈渠道变式、社会规范变式)比传统选择参加政策提高了接种意愿, 教育变式下被试的接种意愿最高; (2) 与不设置默认选项相比, 设置默认选项的接种政策并没有降低人们对该政策的态度评价, 其中教育变式还增加了人们对政策的信任评价、道德评价、感知选择自由, 降低了感知操纵性。 (3) 进一步的研究显示, 受教育水平调节了疫苗接种政策与接种意愿间的关系, 但性别、年龄和新冠疫情的风险知觉则没有起到调节作用, 即对于受教育水平低的人群, 教育变式和机会变式比不设置默认选项更有效。综上所述, 默认选项设置及其变式能有效提升接种意愿, 其中教育变式对疫苗接种意愿的助推效果最好, 而

且还能在一定程度上提升人们对于助推政策的评价。本研究的开展对公共卫生管理者有针对性地制定疫苗接种政策、促进民众接种意愿提供了较好的心理学理论依据。

2 Department of Psychology, University of Chinese Academy of Sciences, Beijing 100049, China

Abstract: The world today is still under the COVID-19 pandemic, which threatens human life and costs a lot socially and economically. Vaccine uptake is the most effective method to prevent infection and transmission of the virus. However, global vaccination coverage has not been sufficient to achieve herd immunity. The present study applied standard default setting and its variants on vaccination policy, in order to identify the effective nudge of promoting COVID-19 vaccinations. Adopting a between-subjects design, we conducted data online through a network questionnaire nationwide. A total of 2215 participants were randomly assigned to one of the seven vaccination policies, including an opt-in policy without default option, an opt-out policy with vaccination as the default option, and five variants of opt-out policy. The results showed that: (1) there was higher vaccination willingness in standard opt-out condition and other four variants (education variant, social norm variant, feedback channel variant, opportunity variant) than that in opt-in condition; among all the policies, participants had the highest willingness to vaccinate under the education variant. (2) Policies with default settings did not weaken people's attitude towards vaccination policies and policymakers, compared with opt-in policy. Besides, the education variant even increased people's trust in policymakers, ethical evaluation, perceived freedom of choice, and decreased perceived manipulation. (3) Further analysis revealed that education level moderated the relationship between the vaccination policy and vaccination willingness, but gender, age, and risk perception of COVID-19 did not play moderating roles. The education variant and the opportunity variant were more effective than the policy without default options for the group with a low level of education. In conclusion, default Setting and its variants can effectively promote vaccination uptake, in which the education variant has the best effect on increasing willingness to vaccinate, and it can also improve people's attitude towards nudging policies to a certain extent. Our findings provided new psychological evidence for public health managers to formulate vaccination policies and promote COVID-19 vaccinations in a targeted manner.

工作投入对家庭幸福感的影响：基于溢出-交叉视角

何辉¹（通讯作者） 刘彦宏¹ 赵小玲¹

1 北京工商大学商学院, 北京, 100048, 通讯作者 E-mail: herhui2006@126.com

摘要 现有研究中, 学者们对于工作投入对员工自身的幸福感造成何种影响并未达成共识。同时工作投入对工作家庭互动的影响并不局限于个体层面, 还可能影响员工重要他人(比如配偶)的生活。从夫妻乃至整个家庭层面考察工作投入的后续效应, 有助于更全面地认识工作对员工家庭生活的影响。溢出-交叉模型(spillover-crossover model)为探讨上述问题提供了很好的视角。本研究基于溢出-交叉模型, 从夫妻二元体角度探讨个体的工作投入体验如何通过工作→家庭冲突感受溢出至家庭领域, 影响员工自身的家庭幸福感, 并通过社会互动交叉影响配偶的家庭幸福感, 进一步配偶的家庭幸福感又会影响员工的家庭幸福感, 较好地解释了工作投入对员工自身及其配偶家庭幸福感的影响与发生机制。

本研究收集了来自北京、上海、重庆、杭州等多个内地发达城市的 98 对双职工夫妻的有效配对数据, 采用 SPSS26.0 和 AMOS24.0 进行数据分析。结构方程模型分析结果显示: (1)工作投入对员工自身家庭幸福感具有显著正向影响; 但工作投入对配偶家庭幸福感的正向影响不显著。(2)工作投入通过抑制工作→家庭冲突

进而提升其自身的家庭幸福感。(3)家庭幸福感在夫妻之间存在显著的直接交叉影响。(4)夫妻任何一方的工作投入均可通过积极影响自身的家庭幸福感进而提升另一方的家庭幸福感。研究揭示了员工从高度工作投入中体验到的积极情绪,不仅能在个体内(intra-individual)溢出到家庭领域从而改善生活质量,而且能通过个体间(inter-individual)的直接交叉效应进一步提升夫妻双方对整个家庭系统功能的积极评价。结论既是对工作投入之于双职工夫妻家庭幸福感重要意义的实证揭示,也是对资源-获取-发展观(resource-gain- development)的有益补充。

The impact of employee work engagement on family happiness: A spillover - crossover perspective

Hui He¹, Yanhong Liu¹, Xiaoling Zhao¹

¹ School of Business, Beijing Technology and Business University, Beijing 100048, China

Abstract: In existing studies, scholars do not reach a consensus on the impact of work engagement on employees' own family happiness. At the same time, the influence of work engagement on work-family interaction is not limited to the individual level, but may also affect the life of significant others (such as spouse) of the employee. Studying the follow-up effects of work engagement from the perspective of husband and wife and even the whole family is helpful to understand the influence of work on employees' family life more comprehensively. Spillover-crossover model provides a good perspective for discussing the above problems. This study aims to explore how the individual experience of work engagement spillovers to the family domain through work to family conflict, affect employee's own family happiness, and further influence the spouse's family happiness through social interaction, in turn, spouse's family happiness will affect employee family happiness. This paper better explains the influence and mechanism of work engagement on the family happiness of employees and their spouses from the perspective of dual-earner couples.

In this study, valid matching data of 98 pairs of dual-earner couples from Beijing, Shanghai, Chongqing, Hangzhou and other developed cities in mainland China were collected, and SPSS26.0 and AMOS24.0 were used for data analysis. The results of structural equation model analysis indicated that : (1) work engagement had a significant positive impact on employees' family happiness; in contrast, the positive effect of work engagement on spouse's family happiness was not significant. (2) Work engagement can improve its own family happiness by inhibiting work to family conflict. (3) There is a significant direct crossover effect of family happiness between husbands and wives. (4) Work engagement of either spouse can positively affect their own family happiness and thus improve the spouse's family happiness. The research reveals that the positive emotions experienced by employees from high work engagement can not only spillover into the intra-individual and improve the quality of life in the family. Moreover, the inter-individual crossover effect can further enhance the positive evaluation of the whole family system function of the couple. The conclusion is not only an empirical revelation of the significance of work engagement to the family happiness of dual-earner couples, but also a beneficial supplement to the resource-gain-development theory.

超越自然：虚拟现实中的恢复性环境

刘振驰¹ 侯志军¹ (通讯作者)

¹ 中国地质大学(武汉)心理科学与健康研究中心, 武汉, 430074, zjhou@cug.edu.cn

摘要 恢复性环境指对人类不断消耗的身心资源和能力有恢复与更新效果的环境设置。自上个世纪 80 年代起, 恢复性环境的研究逐渐走入人们的视野, 并广泛应用于环境心理学、环境设计、城市规划等领域。近年来, 随着虚拟现实技术的拓展, 国内外研究者们已尝试在虚拟现实环境中构筑人工的恢复性环境, 并利用核磁共振

(fMRI)、心电传感器 (ECG)、皮电传感器 (SC) 等现代医疗客观检测技术及恢复性感知量表 (PRS) 等主观评价手段探究了虚拟现实环境的恢复性效果。

本文从 (1) 恢复性环境的经典理论及研究进展 (2) 虚拟现实环境中恢复性环境的恢复性效果 (3) 真实恢复性环境与虚拟现实环境中恢复性环境的比较 (4) 虚拟现实环境中恢复性环境的影响因素 (5) 评价与展望入手, 对各类虚拟现实环境中恢复性环境的研究做了回顾和梳理。

结果发现 (1) 虚拟现实环境中恢复性环境对情绪、压力、定向注意等同样具有良好的恢复效果。在沉浸感、存在感等变量得以控制的精细化条件下, 恢复效果与真实环境接近。(2) 恢复性环境并不局限于经典恢复性环境理论中的自然环境, 部分城市环境同样具有较好的恢复性, 场景的恢复性效果与知觉时长、场景依恋等变量呈相关关系。(3) 虚拟现实环境中恢复性环境与正念训练、情景暴露等心理治疗技术结合后, 恢复效果良好。但现有研究所应用的场景主要集中于单一的自然环境和城市环境, 而虚拟现实环境可先于现实环境进行构筑, 可设置超越现实场景的环境, 未来的研究可着重于探究此类场景是否具有恢复性, 这对揭示恢复性环境的核心因素有着帮助。

关键词 恢复性环境, 虚拟现实, 压力, 注意

Beyond Nature: Restorative Environments in virtual reality

Liu Zhen-chi, Hou Zhi-jun (Corresponding author)

Research Center for Psychological Science and Health Sciences, China University of Geosciences,
Wuhan, 430074, zjhou@cug.edu.cn

Abstract: Restorative environment refers to the environment setting that has the effect of restoring and renewing the physical and mental resources and abilities that human beings constantly consume. Since the 1980s, the research on restorative environment has gradually come into people's view, and has been widely applied in environmental psychology, environmental design, urban planning and other fields. In recent years, with the expansion of virtual reality technology, researchers at home and abroad have tried to build artificial recovery environment in virtual reality. The restorative effect of virtual reality environment was investigated by using modern medical objective detection techniques such as fMRI, ECG, SC and subjective evaluation methods such as PRS.

Restorative environment this paper (1) the classic theory and research progress of restorative (2) virtual reality environment of the restorative effect (3) the real restorative environment compared with virtual reality restorative environment (4) the influence factors of recovery in the virtual reality environment (5) evaluation and prospect of the study of all kinds of virtual reality restorative environment do the review and comb.

The results show that (1) the restorative environment in virtual reality also has a good recovery effect on emotion, stress, directed attention, etc. Under the fine-grained conditions under which variables such as immersion and presence can be controlled, the recovery effect is close to the real environment. (2) Restorative environment is not limited to the natural environment in the classical restorative environment theory. Some urban environments also have good restorative, and the restorative effect of scenes is correlated with variables such as perceptual duration and scene attachment. (3) The restorative environment in virtual reality combined with psychological therapy techniques such as mindfulness training and situational exposure has a good recovery effect. But institute of existing application scenario is mainly focused on a single natural environment and city environment, the virtual reality environment can be used to build ahead of realistic environment and can be set up beyond the reality environment, manage to make do in the future study is more important than explore whether such scenarios have restorative, it has a help to reveal the core element of the restorative environment.

完美主义对抑郁水平的影响：以目标调整为中介

陆娟¹ 董嘉慧¹ 赵梦晗¹ 宫火良¹（通讯作者）

¹ 河南大学教育学部，开封，475004

¹ 河南大学教育学部，开封，475004，ghl1976@163.com

摘要 根据自我调节理论(Carver & Scheier, 1999,2000)，人们为实现个人目标而奋斗，目标会增强人们的生命意义感，因此目标对心理健康非常重要。有研究表明目标调整与更高的幸福感水平、更少的抑郁感和更强的人生目标感相关(Wrosch et al.,2003)。完美主义是一种在学习工作生活中总是追求十全十美，并且经常会对自己有批判性负面评价的人格特质。通常来说，当完美主义倾向的个体一味追求定下的高目标，却不考虑如果无法实现该目标需要承担的不良后果时，就更容易出现心理不适，如焦虑抑郁等负面的情绪。有研究发现，在抑郁患者症状的出现、维持和迁移过程中，完美主义在其中都是一个重要原因(张斌等,2013)。

本研究探究目标调整在完美主义和抑郁水平之间的关系，并通过改变完美主义倾向者的目标调整策略，以降低抑郁情绪的不良影响。被试来自两个样本：样本一以班为单位对 500 名学生进行间隔两个月的集体调查；样本二依据自愿原则对 570 名学生进行调查。使用贝克抑郁量表第 2 版、Slaney 近乎完美主义量表修订版、目标调整量表构建中介模型。

结果显示：（1）目标脱离对抑郁的主效应不显著，目标再参与的主效应显著，目标再参与高的个体抑郁程度低，目标脱离和目标再参与的交互作用显著；（2）大学生的目标调整能力与抑郁倾向是相互影响，互为因果的；（3）完美主义能显著预测抑郁，目标调整在完美主义和抑郁之间起部分中介作用。

因此，目标再参与对个体的抑郁水平起着至关重要的作用，高目标脱离且低目标再参与的大学生与抑郁关系最密切。另外，大学生的目标调整能力与抑郁倾向是相互影响，互为因果的。目标调整在完美主义与大学生抑郁之间起中介作用。

关键词 自我调节理论，目标调整，完美主义，抑郁水平

The Effect of Perfectionism on Depression level: Mediated by Goal Adjustment

LU Juan, DONG Jiahui, ZHAO Menghan, GONG Huoliang

Henan University, Kaifeng 475004

Abstract: According to self-regulation theory (Carver & Scheier, 1999,2000), goals are important for mental health because they enhance people's sense of meaning in life as they strive to achieve personal goals. Studies have shown that goal adjustment is associated with higher levels of happiness, less depression and a stronger sense of purpose in life (Wrosch et al.,2003). Perfectionism is a kind of personality trait that always pursues perfection in study, work and life, and often has a critical and negative evaluation of oneself. Generally speaking, when individuals with perfectionism tendency blindly pursue a high goal without considering the negative consequences they will bear if they fail to achieve the goal, they are more likely to suffer from psychological discomfort, such as anxiety and depression. Studies have found that perfectionism plays an important role in the occurrence, maintenance and migration of symptoms in patients with depression (Zhang Bin et al.,2013).

This study explored the relationship between goal adjustment and depression level, and reduced the negative effects of depression by changing the goal adjustment strategies of perfectionist tendencies. The participants came from two samples: Sample one conducted a collective survey of 500 students in a class at a two-month interval; and sample two conducted a survey of 570 students on a voluntary basis. The mediation model was constructed using baker Depression Scale (2nd edition), Slaney Near-Perfectionism Scale (revised edition), and Goal Adjustment Scale.

The results showed that : (1) The main effect of goal disengagement on depression was not significant, but the main effect of goal reengagement was significant. Individuals with high goal reengagement had low depression, and the interaction between goal disengagement and goal reengagement was significant. (2) The goal adjustment ability and depression tendency of college students are mutually influenced and mutually cause-and-effect; (3) Perfectionism

can significantly predict depression, and goal adjustment plays a partial mediating role between perfectionism and depression.

Therefore, goal reengagement plays a critical role in an individual's depression level, high goal disengagement and low goal reparticipation college students are most closely related to depression. In addition, the goal adjustment ability and depression tendency of college students are mutually influenced, and each other is causal. Goal adjustment plays a mediating role between perfectionism and depression in college students.

关系型领导如何带来员工建言？双过程模型检验

马芳¹（通讯作者） 武晓宇¹

¹ 北京工商大学商学院，北京，100048 通讯作者 E-mail mfl017@126.com

摘要 随着数字化时代的到来,企业的外部环境在不断地变化,仅仅依靠管理层的智慧往往无法解决所有问题,因此员工的建言显得尤为重要。近几年如何激发员工的建言行为颇受学术界的关注,而关于员工建言行为形成机制的理论研究亟需进一步完善。本研究基于刺激-有机体-反应(stimulus-organism-re-sponse)经典理论框架,结合自我决定理论和社会交换理论构建员工建言行为内在机制理论模型。运用 SPSS.23 和 Amos.24 对 407 名员工的两阶段时间滞后问卷调查分析表明:关系型领导既能直接对员工的促进型建言行为和抑制型建言行为产生正向显著作用,同时能通过显著影响员工的角色宽度自我效能感,进而间接显著影响员工促进型建言和抑制型建言行为的形成。另外,感知资质过剩仅在关系型领导与员工的促进型建言行为之间具有中介作用。中介效应检验显示:关系型领导到员工的促进型建言行为产生过程中,角色宽度自我效能感和感知资质过剩均存在部分中介作用,包括四条具体影响路径;关系型领导到员工的抑制型建言行为产生过程中,仅角色宽度自我效能感存在部分中介作用,包括两条具体影响路径。本研究验证了员工建言行为(促进型建言和抑制型建言)的影响机制,拓展了员工建言行为影响机制的整合理论研究。最后,为激发员工的建言行为提供了理论和实践指导。

关键词 关系型领导,感知资质过剩,角色宽度自我效能感,促进型建言,抑制型建言

How does Relational Leadership lead to Employee's Voice Behavior? A Dual-Process Model Examination

Ma Fang¹, Wu Xiaoyu¹

Beijing Technology and Business University, Beijing, China

Abstract: With the advent of the digital era, the external environment of enterprises is constantly changing. It is often impossible to solve all problems only by relying on the wisdom of manager. Therefore, employee's voice behavior is particularly important. In recent years, how to stimulate employee's voice behavior has attracted academic attention, and the theoretical research on the mechanism of employee's voice behavior needs to be further improved. Based on the classical framework of stimulus-organism-response theory, this study combined the self-determination theory and social exchange theory to construct a theoretical model of the mechanism of employee's voice behavior. A two-wave time-lag questionnaire survey of 407 employees using SPSS.23 and AMOS.24 shows that: Relational leadership not only has a positive and significant effect on employees' promotive voice and prohibitive voice behavior, but also has a significant impact on employee's role breadth self-efficacy, and then indirectly significantly affects the formation of employee's promotive voice and prohibitive voice. In addition, perceived overqualification only mediates the relationship between relational leadership and promotive voice of employee. The mediating test further proves that both role breadth self-efficacy and perceived overqualification play an important part mediating role in the process from relational leadership to promotive voice, including four specific influence pathways. And only role breadth self-efficacy has partial mediating effect in the process from relational leadership to prohibitive voice, including two specific influence pathways. This study verifies the mechanism of employee's voice behavior (promotive voice and

prohibitive voice), expands the theoretical research on the mechanism of employee's voice behavior. provides theoretical and practical guidance for stimulating employee's voice behavior. At last, this study provides theoretical and practical guidance for stimulating employee's voice behavior.

Keywords: relational leadership, perceived overqualification, role breadth self-efficacy, promotive voice, prohibitive voice

摘要: 1) 研究目的: 冬季两项运动是越野滑雪与射击运动的有机结合, 动静联动造就了冬季两项运动的独特魅力, 也让这项比赛极具观赏性。冬季两项运动独特的规则使得心理素质成为了其极为重要的制胜因素, 要求着运动员有着极强的心理自控能力, 在面对滑行能力不占优势的情况, 能够稳定情绪, 在射击中反败为胜。因此, 怎样提升心理素质, 进行一定的心理干预成为了现下冬季两项运动发展中需研究的重点, 探寻正确有效且与冬季两项运动特点相契合的心理训练方法, 成为了当前亟待解决的问题。正念训练走入竞技体育视野恰好能很好的解决这一问题, 正念训练是近年来在临床医学、临床心理学及运动竞技比赛中都逐渐兴起的心理干预疗法, 众多实验表明正念训练有很好的提高运动员有效注意及抵抗外界干扰能力的效果, 在竞技比赛中使运动员在赛场上优秀发挥, 提高竞技成绩。2) 研究方法: 文献资料法: 主要通过知网等学术网站以及校图书馆, 查阅关于正念、心境、冬季两项运动等相关文献为此次论文的撰写打好的基础。问卷调查法: 根据实验设计内容的需要, 选取需要使用到的权威量表, 在实验开始之前, 首先对被试运动员进行问卷调查, 正念训练之后再对实验组和对照组进行问卷调查, 最后剔除漏课、量表不全等学生的数据。本文使用量表共有 2 个, 《正念五维度量表》、《BFS 心境量表》实验法: 被试运动员分为两组, 实验组和对照组, 实验组的射击训练融入正念训练干预, 为期八周; 对照组进行正常的射击训练, 得出结果进行分析。数理统计法: 用 SPSS17.00 对收集到的实验数据和问卷进行独立样本 T 检验、配对样本 T 检验、相关分析和回归分析。3) 研究结果: 通过八周的实验发现 1.正念训练有助于冬季两项运动员在射击训练过程中达到心境平和的状态, 有利于增进心境积极因子的作用, 降低消极因子的作用, 从而使心境水平得到提高, 心境状态得到平和有效的降低了竞赛焦虑。2.在正念训练干预下心境水平有所提高, 竞赛焦虑明显得到了缓解, 运动员射击成绩在心境的变化下有所提高, 从而可以获得技能的学习和成绩的提高, 这对运动员在射击运动的训练中有很大的帮助。3.经过正念干预后运动员在滑行之后明显减少了射击失误率。4) 研究结论: 1.正念训练能够使运动员心境水平有所提高, 从而获得更加平和的心态。2.正念训练有效缓解竞赛焦虑, 提高射击成绩。3.正念训练能有效提高心理素质从而减少射击失误率。

Research on Intervention of Mindfulness Training on Competition Anxiety of Biathlon Athletes in Shooting Sports

Ma Luyao

Shenyang Institute of Physical Education Shenyang

Abstract: 1) Research purposes: Biathlon is an organic combination of cross-country skiing and shooting. The dynamic and static linkage creates the unique charm of biathlon, and also makes this competition very enjoyable. The unique rules of biathlon make the psychological quality an extremely important winning factor, requiring athletes to have strong psychological self-control ability, and be able to stabilize their emotions in the face of the situation where the sliding ability is not dominant, and turn defeat into victory in shooting. Therefore, how to improve the psychological quality and carry out certain psychological interventions has become the focus of research in the development of biathlon. The search for a correct and effective psychological training method that is compatible with

the characteristics of biathlon has become a problem that needs to be solved urgently. Mindfulness training can solve this problem well in the field of competitive sports. Mindfulness training is a psychological intervention therapy that has gradually emerged in clinical medicine, clinical psychology and sports competitions in recent years. Numerous experiments have shown that mindfulness training is very good. The effect of improving the ability of athletes to effectively pay attention and resist external interference, make athletes perform well on the field in competitive competitions, and improve athletic performance. 2) Research method: literature method: mainly through academic websites such as CNKI and school libraries, to consult related literature on mindfulness, mood, biathlon, etc., to lay a good foundation for the writing of this paper. Questionnaire survey method: According to the needs of the experimental design content, select the authoritative scale that needs to be used. Before the experiment starts, first conduct a questionnaire survey on the tested athletes, and then conduct a questionnaire survey on the experimental group and the control group after mindfulness training, and finally eliminate Data of students who missed classes, incomplete scales, etc. There are two scales used in this article, the "Five Dimensions of Mindfulness Scale" and the "BFS Mood Scale" experimental method: the athletes are divided into two groups, the experimental group and the control group. The shooting training of the experimental group is integrated into the mindfulness training intervention for a period of time. Eight weeks; the control group received normal shooting training, and the results were analyzed. Mathematical statistics: Use SPSS17.00 to perform independent sample T test, paired sample T test, correlation analysis and regression analysis on the collected experimental data and questionnaires. 3) Research results: Through an eight-week experiment, it was found that 1. Mindfulness training can help biathlon athletes achieve a state of peace of mind during shooting training, which is conducive to enhancing the role of positive mood factors, reducing the role of negative factors, and so on. The mood level is improved, and the mood state is calmed and effectively reduces competition anxiety. 2. Under the intervention of mindfulness training, the level of mood has been improved, competition anxiety has been obviously alleviated, and the shooting performance of athletes has been improved under the change of mood, so as to obtain skill learning and performance improvement. It is of great help in sports training. 3. After the intervention of mindfulness, the athletes significantly reduced the shooting error rate after sliding. 4) Research conclusions: 1. Mindfulness training can improve the athlete's mood level, thereby obtaining a more peaceful state of mind. 2. Mindfulness training effectively relieves competition anxiety and improves shooting performance. 3. Mindfulness training can effectively improve mental quality and reduce shooting errors.

Keywords: mindfulness training, winter biathlon, competition anxiety

大学生佛系心理与其学业投入的关系研究

毛江凌 杜庆 杨小洋（通讯作者）

四川师范大学心理学院，成都，610066，31835218@qq.com

摘 要 佛系心理是当代大学生常见的一种心理现象，与其学业投入联系紧密。近年来，学术界对佛系心理研究逐渐关注，但对于佛系心理内涵、维度及测量方法仍缺乏标准的认识。**目的** 编制大学生佛系心理评定量表，探究大学生佛系心理与其学习投入和学业倦怠的关系。**方法** 本文首先通过对文献的系统梳理和对 14 名大学生的半结构化访谈，根据 Nvivo12 Plus 三级编码，提炼出佛系心理内涵及维度，开发相应的测量量表。其次，采用方便取样法，在西南地区的 8 所高校对 806 名大学生进行问卷调查，通过对调查数据进行描述性统计、相关分析和回归分析，探究大学生佛系心理与其学习投入和学业倦怠的关系。**结果** （1）最终的《大学生佛系心理量表》由遵从自我性、随缘性、目标与渴望、压力调节四个维度，17 个条目组成，各因子平均值均介于 0.40~0.53，均大于该因子与其他因子相关系数，Cronbach's α 系数为 0.86；（2）大学生佛系心理在性别和年级方面差异显著，男生比女生整体上更佛系($t=7.84, p<0.01$)，大四的学生比其他几个年级更加佛系($F=11.48, p<0.01$)；（3）佛系心理整体上与学习投入相关不显著，但其四个维度均能显著预测学习投入，目标与渴望维度负向预测学习投入，其他三个维度均正向预测学习投入（学习投入= $47.400-1.325*$ 目标与渴望 $+0.804*$ 压力调节 $+0.365*$ 遵从自我性 $+0.428*$ 随缘性）；（4）佛系心理与学业倦怠呈显著正相关($r=.139, p<0.01$)，目标与渴望、压力调节和随缘性对学业倦怠的影响都是显著的，但遵从自我性对学业倦怠影响不显著。**结论** （1）

利用大规模问卷调查数据进行探索性因子分析与验证性因子分析,结果表明,开发的测量量表具有较好的信效度;(2)大学生佛系心理对其学业投入具有一定影响,既有积极影响又有消极影响。本研究结果启示我们应辩证地看待大学生佛系心理,对待那些“佛系青年”注重引导积极的“佛系”亚文化传播方向的同时,需要为他们提供自由的思想空间。

关键词 佛系心理,学习投入,学业倦怠

情感自主性对青少年抑郁的影响:父母教养方式的调节作用

倪冰¹ 李晓茹¹ (通讯作者)

¹ 复旦大学心理系,上海市,200433,通讯作者 E-mail: lixiaoru@fudan.edu.cn

摘要 青少年抑郁是一个值得研究的重要问题。情感自主性指青少年设法摆脱对家庭的婴儿式纽带联系的程度,被认为是青少年在青春期发展过程中“个体化”的一个重要方面。在青春期这一特殊发展阶段,伴随着明显的生理发展,情感自主性也随之快速发展,并对青少年心理适应产生重要影响。本研究旨在探讨青少年抑郁与情感自主性之间的关系,以及在情感自主性和抑郁症状的关系中,父母教养方式是否起到了调节作用及其调节模式。本研究使用了上海市Y区青少年心理健康研究数据库中2017、2018两年配对数据,涵盖50所中学的初高中生,其中初中每个年级随机抽取2个自然班,高中每个年级随机抽取1个自然班。最终有效配对数据为3152,基于2018年数据,平均年龄为13.99岁($SD = 1.23$),其中女生占51.2%,男生占48.8%。研究采用青春期内源性压力量表中的情感自主性量表、病人健康问卷抑郁量表(PHQ-9)和父母教养方式问卷进行评估。结果显示:(1)青少年抑郁症状呈现出明显的年级和性别差异,高中生抑郁程度显著高于初中生,女生抑郁程度显著高于男生;(2)抑郁症状与情感自主性呈显著正相关,与父母关爱、鼓励自主均呈显著负相关,与父母控制呈显著正相关;(3)纵向数据的回归和调节分析结果表明,情感自主性对青少年抑郁症状有显著的正向预测作用,且该作用会受到父母教养方式的调节,母亲鼓励自主和父亲关爱在情感自主性对青少年抑郁症状的影响中都有显著的负向调节作用,即母亲鼓励自主程度越高,父亲关爱程度越高,情感自主性对青少年抑郁的负面影响越小。研究表明,情感自主性的发展会对青少年心理适应造成负面影响,使抑郁症状更严重,而母亲鼓励自主和父亲关爱两种教养方式是情感自主性对青少年抑郁负面影响中的保护性因素。青少年追求情感自主性是身心发展到该阶段的必然现象,但对父母所习惯的教养方式和亲子相处模式是一种挑战。母亲适当减少约束,鼓励孩子自主发展,父亲更多承担家庭教养责任,多关爱孩子,都有助于预防青少年抑郁的产生。

The Effect of Emotional Autonomy on Adolescent Depression: The Moderating Role of Parenting Styles

Bing Ni¹, Xiaoru Li¹ (Corresponding Author)

Department of Psychology, Fudan University, Shanghai, China, 200433,

Email: lixiaoru@fudan.edu.cn

Abstract: Adolescent depression is an important issue worth studying. Emotional autonomy refers to the extent to which an adolescent manages to break away from infant-like ties to his or her family and is considered an important aspect of “individualization” during adolescent development. During this particular developmental stage of adolescence, emotional autonomy develops rapidly along with significant physical development and has important implications for adolescent psychological adjustment. The purpose of this study was to investigate the relationship between adolescent depression and emotional autonomy, and whether parenting styles play a moderating role in the relationship between emotional autonomy and depressive symptoms and the pattern of moderation. This study used the paired data of 2017 and 2018 from the Adolescent Mental Health Research Database in Y District of Shanghai, covering middle and high school students from 50 schools. Two administrative classes were randomly selected from each grade of middle school and one administrative class from each grade of high school. The final valid matching

data was 3152. Based on the data in 2018, the average age was 13.99 ($SD = 1.23$), among which 51.2% were female and 48.8% were male. The study was used the Emotional Autonomy Subscale of Adolescent Endogenous Stress Scale, the nine-item Patient Health Questionnaire depression scale (PHQ-9), and the Parental Bonding Instrument (PBI) to make assessment. The results showed that (1) adolescent depressive symptoms showed significant grade and gender differences, with high school students being significantly more depressed than middle school students and girls being significantly more depressed than boys; (2) depressive symptoms were significantly positively related to emotional autonomy, negatively related to parental care and encouragement of autonomy, and positively related to parental control; (3) the regression and moderating analyses of the longitudinal data showed that emotional autonomy had a significant positive predictive effect on adolescent depressive symptoms, and this effect was moderated by parenting styles, and both maternal encouragement of autonomy and paternal care had a significant negative moderating effect on the effect of emotional autonomy on adolescent depressive symptoms. The findings suggest that the development of emotional autonomy negatively affects adolescents' psychological adjustment and makes depressive symptoms more severe, and that two parenting styles, maternal encouragement of autonomy and paternal care, are protective factors in the negative impact of emotional autonomy on adolescents' depression. The pursuit of emotional autonomy by adolescents is an inevitable phenomenon at that stage of physical and mental development, but it is a challenge to the parenting style and parent-child relationship pattern that parents are used to. Mothers should reduce the constraint of their children appropriately and encourage them to develop autonomously, and fathers should take more responsibility for family parenting and care more for their children. Both of which can help prevent adolescent depression.

大学生人际关系敏感影响因素的元分析

宁欣^{1,2} 张军华² 康冠兰¹ (通讯作者)

1 北京体育大学心理学院, 北京, 100084

2 盐城师范学院教育科学学院, 盐城, 224002

通讯作者 email: kangguanlan_33@163.com

摘要 **研究背景:** 已有大量学者围绕大学生人际关系敏感进行相关研究, 然而众多研究结果并不一致。某些因素(如性别、认知方式等)的作用大小及作用方向存在差异, 缺乏理论剖析框架。为此, 本研究试图通过元分析对已有的研究进行定量综合分析, 以期进一步明晰各影响因素的作用大小及其之间的关系。**研究方法:** 使用中国知网、维普和万方数据库, 以“大学生”、“人际关系敏感”为关键词, 共检索文献 207 篇, 最终纳入 59 篇。纳入标准: (1) 人际关系敏感的测量为 SCL-90; (2) 同一影响因素的研究数量 2 项及以上; (3) 提供相关系数或可转化为 r 的参数, 如 t 、 p 等; (4) 未使用干预措施。本研究选取的影响因素包括人口学变量(性别、独生、专业、生源地、贫困、留守经历)、个体认知方式(使用 Frost 多维完美主义量表和特质应对方式问卷分别测量完美主义和应对方式)以及人格(使用 EPQ 测量), 使用 Comprehensive Meta-Analysis 3.0 软件中的随机效应模型, 选取效果量 r 进行分析。**研究结果:** (1) 人口学变量的结果显示, 性别、独生与大学生人际关系敏感呈显著相关, 其中女生、非独生子女得分更高; 与贫困呈显著正相关, 即贫困程度越高, 其人际关系越敏感; (2) 个体认知方式的结果显示, 大学生人际关系敏感与 Frost 多维完美主义量表维度的担心错误、疑虑性、父母期望和个人标准得分均呈显著正相关, 与条理性得分呈负相关; 与特质应对方式问卷的消极应对方式得分呈显著正相关, 积极应对方式得分呈显著负相关; (3) 人格的结果显示, 大学生人际关系敏感与精神质、神经质得分呈显著正相关, 与内外向得分呈显著负相关。**结论及建议:** (1) 性别、独生、贫困和人格等因素对大学生人际关系敏感有显著影响, 因此对女生、非独生子女、贫困生及内向、精神质和神经质得分较高的学生, 教师应予以更多积极关注; (2) 完美主义和应对方式属于个体认知方式, 教师可通过传授学生积极应对冲突、降低错误担忧和疑虑等心理辅导策略, 以及适当调整父母期望和个人标准来改善其人际关系敏感。

College students' interpersonal relationship sensitivity: A meta-analysis of its influencing factors

Ning Xin^{1,2}, Zhang Junhua², Kang Guanlan¹

1 School of Psychology, Beijing Sport University, Beijing

2 School of Education Science, Yancheng Teachers University, Yancheng

Abstract: **Background:** Many researchers have conducted related studies on interpersonal sensitivity of college students, but no consistent results have been obtained. Some factors (such as gender, cognitive style) are different in the effect sizes and directions, and lack of theoretical analysis framework. Therefore, this study attempted to make a quantitative synthesis of existing studies with meta-analysis to further clarify the effect sizes and relationship between these factors. **Method:** Using "college students" and "interpersonal sensitivity" as the key words to search literatures in the CNKI, CQVIP and WAN-FANG databases, 207 literatures were searched and 59 literatures were included in the meta-analysis. The inclusion criteria were that: (1) Interpersonal sensitivity was measured by SCL-90; (2) More than 2 studies of the same influencing factor; (3) Provide correlation coefficients or parameters that can be transformed into r , such as t , p ; (4) No intervention was used. The research select influencing factors include demographic variables (i.e., gender, only-child, major, origin, poverty, left-behind experience), individual cognitive style (CFMPS and TCSQ were used to measure perfectionism and coping style, respectively) and personality (measured by the EPQ). The random effect model of Comprehensive Meta-Analysis 3.0 was used for analysis, and the effect size is r . **Results:** (1) The results of demographic variables found that interpersonal sensitivity was significantly correlated with gender and only-child, among which female students and the only-child students with higher scores; poverty was significantly positive correlated with interpersonal sensitivity, i.e., the higher the poverty degree, the more sensitive the interpersonal relationship. (2) The results of individual cognitive style showed that interpersonal sensitivity was significantly positive correlated with the score of worry error, doubt, parental expectation and personal standard, and negatively correlated with the score of organization. There was a significant positive correlation with the score of negative coping style, and a significant negative correlation with the score of positive coping style. (3) The results of personality showed that interpersonal sensitivity was positively correlated with the score of EPQ-P and EPQ-N, and negatively correlated with the score of EPQ-E. **Conclusion and Suggestions:** (1) Some factors such as gender, only-child, poverty and personality have significant influence on interpersonal sensitivity of college students. Therefore, teachers should pay more positive attention to female students, non-only-child, poor students and students with higher scores of introversion, psychoticism and neuroticism. (2) For the individual cognitive style, teachers can teach students some psychological counseling strategies to improve their interpersonal sensitivity, such as positive ways to deal with conflicts, reducing false worries and doubts, appropriately adjust parents' expectation and personal standards.

“溢出”还是“特异”？上行社会比较对跨期决策的影响

潘超¹ 邢小莉²（通讯作者）

1 河南大学教育科学学院，开封，475000

2 河南大学教育科学学院心理与行为研究所，开封，475000，349177030@qq.com

摘要 通过三个研究探讨了上行社会比较对跨期决策的影响，并发现了金钱领域跨期决策的特异效应。此外大量社会信息都有可能影响我们的决策结果，而这些上行社会比较大多都是被动、状态性的，本研究则希望进一步验证在主动的、特质性的层面是否有相似的结果。研究1通过问卷初步探讨了上行社会比较和跨期决策的影响，并发现相对剥夺感在两者间的中介作用；研究2通过实验室研究对上行社会比较对不同领域跨期决策的影响进行因果性推论，发现上行社会比较对跨期决策的影响仅限于金钱领域（域内），对食物、

环境等领域（域外）没有影响，即特异效应，并发现了特质性和状态性上行社会比较的交互作用；研究3通过单词评定和回忆任务试从不同角度进行探讨金钱领域的特异效应，发现比于没有启动上行社会比较的个体来说，那些进行启动了的个体对于金钱领域词汇（域内）表现出了更多的注意和记忆，但在非金钱领域（域外）没有发现这一现象，同时也发现了特质性和状态性上行社会比较的交互作用，即上行社会比较仅仅影响金钱领域的跨期决策，可能是个体在上行社会比较后对金钱的敏感性更强导致的。三个研究逐层递进，发现了上行社会比较也是跨期决策的影响因素之一，为未来社会治理及干预，从而改善个体跨期决策能力提供了一定的理论依据。

Spillover or Specificity ?

The impact of upward social comparison on Intertemporal decision

PAN Chao, XING Xiaoli

Henan University, Kaifeng, 475000

Keywords: In this paper we explored the impact of upward social comparison on intertemporal decision, and discovered the specificity effects of intertemporal decision in the money field. In addition, a large amount of social information may affect our decision-making results, and most of these upward social comparisons are stateful. This study hopes to further verify whether there are similar results at the trait level. Study 1 preliminarily explores the influence of upward social comparison and intertemporal decision through questionnaires, and finds the mediating effect of relative deprivation between the two; Study 2 conducted a causal inference on the influence of upward social comparison on intertemporal decision in different fields through laboratory research, and found that the influence of upward social comparison on intertemporal decision is limited to the money domain (in-domain), but this influence has an impact on the food and environmental domains (out-of-domain) has no effect, that is specificity effect, and found the interaction of trait and state of upward social comparison; Study 3 explored the specificity effects of the money field from different perspectives through word assessment and recall tasks. We found that compared with the individuals who were not primed the upward social comparison, those individuals who were primed showed more attention and memory for the word of the money domain (in-domain), but this phenomenon was not found in the non-money domain (out-of-domain). At the same time, the interaction of trait and state of upward social comparisons has also been discovered. Because of the stronger sensitivity of individuals to money after the upward social comparison, upward social comparison only affects intertemporal decision in the monetary field. The three studies progressed step by step, and found that upward social comparison is also one of the influencing factors of intertemporal decision, providing a certain theoretical basis for future social governance and intervention, thereby improving individual intertemporal decision-making ability.

大学生相对剥夺感对网络欺负的影响： 反刍思维和道德推脱的作用

潘超¹ 赵梦晗¹ 高冬东²（通讯作者）

¹ 河南大学教育科学学院，开封，475000

² 河南大学教育科学学院心理与行为研究所，开封，475000, 727835634@qq.com

摘 要 当代大学生是网络使用最频繁的一个群体，且大多数研究者关注相对剥夺感对于传统欺负行为的影响，因此本研究欲将传统攻击行为的研究进一步推广至网络欺负的层面，探讨大学生相对剥夺感对于网络欺负的影响及其作用机制，从而增加其普适性。本研究采用相对剥夺感量表、网络欺负量表、反刍思维量表以及道德推脱量表对 630 名大学生进行施测。结果表明：(1)相对剥夺感对于网络欺负有直接的显著正向影响，并间接通过反刍思维对网络欺负产生影响，即反刍思维起中介作用；(2)道德推脱可以调节这一中介作用的后

半路径, 以及相对剥夺感影响网络欺负的直接路径。具体来说, 高道德推脱水平时, 相对剥夺感和反刍思维均可以显著正向预测网络欺负行为, 但是在低道德推脱水平时, 相对剥夺感和反刍思维对网络欺负行为的预测均不显著。总之, 四者构成了一个有调节的中介模型。本研究的研究结果进一步印证了网络欺凌模型, 即相对剥夺感产生的消极情绪及认知体验, 会影响个体反刍思维的过程及结果, 当个体对反刍思维持续沉浸时, 会富有攻击性, 对这种攻击性行为正向的态度不断习得并强化, 最终进一步导致网络欺负行为的增加, 且这一过程中道德推脱起到了调节作用。该结果有助于了解网络欺负的影响因素, 从而加强未来的干预, 减少或改善网络欺负这一社会问题。

The impact of relative deprivation of college students on cyberbullying:

The role of rumination and moral disengagement

PAN Chao ZHAO Menghan GAO Dongdong

Henan University, Kaifeng, 475000

Abstract: Nowadays, college students are the group that uses the Internet most frequently, and most researchers pay attention to the influence of relative deprivation on traditional bullying behavior. This research intends to further extend the research of traditional aggressive behavior to the level of cyberbullying, thereby increasing its universality. This present study aimed to explore the relationship among relative deprivation, rumination, moral disengagement and cyberbullying, by surveying 630 college students with Relative Deprivation Scale, Rumination Scale, Cyberbullying Scale and Moral Disengagement Scale. The results showed that: (1) Relative deprivation had a significant direct effect on cyberbullying and rumination played a mediating role between them; (2) Moral disengagement moderated the relation between relative deprivation and cyberbullying students, and also moderated the relation between rumination and cyberbullying, that is, there was a significant positive relation between relative deprivation and cyberbullying or rumination and cyberbullying under the high moral disengagement level, however, there was a non-significant relation between relative deprivation and cyberbullying or rumination and cyberbullying under the low moral disengagement level. The results of this study further confirm The Barlett Gentile cyberbullying model, that is, the negative emotions and cognitive experience produced by the relative deprivation will affect the process and results of the individual's rumination. When the individual continues to be immersed in the rumination, the individual will be aggressive and negative. This positive attitude towards aggressive behavior is continuously learned and strengthened, which eventually leads to an increase in cyberbullying behavior, and moral disengagement plays a moderating role in this process. Research reveals the impact of relative deprivation on cyberbullying and its internal mechanism, which helps to understand the influencing factors of cyberbullying, so as to strengthen future intervention and reduce or improve the social problem of cyberbullying.

Keywords: Relative deprivation, Cyberbullying, Rumination, Moral disengagement

正负性情绪抑制加工对抑郁发作的预测作用

彭依敏¹ 杨文辉² (通讯作者)

1 湖南师范大学心理学系, 长沙, 410081

2 湖南师范大学心理学系, 长沙, 410081, yangwh110@163.com

摘要 背景: 认知理论推测负性情绪刺激的抑制损害可能是抑郁发作的核心机制。抑郁个体的负性情绪抑制特征, 及其对抑郁发作是否有预测作用尚不清楚。研究目的: 探讨抑郁当前发作、完全缓解以及从未有过抑郁发作的亚临床抑郁个体正、负性情绪抑制加工能力特征及差异, 该能力对抑郁发作的预测作用。

方法: 通过两阶段抑郁障碍病例筛查法, 从 7333 名大学生中筛选出: (1) 抑郁障碍 (n=41)、(2) 完全缓解 (n=34) 和 (3) 亚临床抑郁 (n=64), 完成词-面孔 Stroop 任务, 要求被试对叠加在情绪面孔上的情绪词进行反应, 并完成抑郁、焦虑量表。随后半年、一年完成临床访谈和追踪。情绪抑制加工能力通过情绪 Stroop

效应量衡量, 包括 (a) 促进效应 (相对于中性面孔, 一致的情绪面孔对反应的加快) 和 (b) 干扰效应 (相较于中性面孔, 冲突的情绪面孔对反应的干扰), 采用 logistic 回归分析该能力对抑郁发作史的判别、抑郁发作的预测。

结果: (1) 一般指标: (a) 情绪 Stroop 效应显著, 不一致条件下反应时变慢 ($F=33.63, p<0.001$), 正确率降低 ($F=26.11, p<0.001$); (b) 正常个体中出现的积极情绪偏向未观察到 ($F=2.11, P>0.05$); (c) 抑郁障碍组反应时显著较慢 ($F=96.08, p<0.001$)。 (2) 情绪 Stroop 效应: (a) 愉快词条件下促进效应差异边界显著 ($F=2.52, P=0.085$), (b) 愉快词条件下悲伤面孔干扰效应差异显著 ($F=3.96, p=0.021$); 两两比较提示, (a) 指标完全缓解组 ($31.63\text{ms} \pm 45.88$) 大于亚临床组 ($10.21\text{ms} \pm 46.35$), (b) 指标 (-10.12 ± 53.62) 小于亚临床组 (24.81 ± 54.45); 比较愉快词条件下反应时, 愉快词-中性面孔条件完全缓解组慢于亚临床组, 其他条件无显著差异。 (3) 判别和预测作用: (a) 愉快词条件下悲伤面孔干扰效应能识别有无抑郁发作史 ($OR=0.992, P=0.019$) (b) 悲伤词条件下愤怒面孔干扰效应可预测一年后的抑郁发作 ($OR=1.006, P=0.035$)。

结论: 抑郁个体的积极情绪加工缺失? ; 抑郁当前发作个体情绪抑制加工能力相对受损; 完全缓解个体对积极目标刺激的关注弱于亚临床个体, 抑制中性干扰刺激的能力降低; 负性情绪的抑制加工损害可预测抑郁的发作。

关键词 抑郁, 情绪抑制加工, 词-面孔 Stroop 范式

The Predictive Effect of Positive and Negative Emotion Inhibition Processing on Depressive Episode

PENG Yi-min, YANG Wen-hui

Hunan Normal University, Changsha 410081, China

Abstract: Background: Cognitive theory speculates that the inhibition and control impairment of negative emotional stimuli may be the core mechanism of depressive episodes. However, the control characteristics of negative emotion inhibition in depressed individuals and whether it has a predictive effect on depressive episodes is still unclear. Purpose: To explore the characteristics and differences of positive and negative emotion inhibitory processing ability in depressed individuals with current onset, complete remission individuals and subclinical depressed individuals who never had a depressive episode, and the predictive effect of this ability on depressive episodes.

Methods: Through the two-stage depressive disorder case screening method, 7333 college students were screened out: (1) depressive disorder ($n=41$), (2) complete remission ($n=34$) and (3) subclinical depression ($n=64$). Participants are required to complete the word-face Stroop task, respond to emotional words superimposed on emotional faces, and complete the depression and anxiety scale. Complete the clinical interview and follow-up after half a year and one year later. Emotion suppression processing ability is measured by the amount of emotional Stroop effect, including (a) facilitation effect (compared to neutral faces, consistent emotional faces speed up the reaction) and (b) distraction effects (compared to neutral faces, conflicting emotional faces interfere with reactions). Logistic regression was used to analyze the ability of Emotion suppression processing ability to discriminate the history of depressive episodes and predict depressive episodes.

Results: (1) General indicators: (a) The emotional Stroop effect is significant, the reaction time becomes slower under inconsistent conditions ($F=33.63, p<0.001$), and the accuracy rate is reduced ($F=26.11, p<0.001$); (b) The positive emotional bias that occurs in healthy individuals has not been observed ($F=2.11, P>0.05$); (c) The reaction time of the depression group was significantly slower ($F=96.08, p<0.001$). (2) Emotional Stroop effect: (a) The facilitation effect is boundary significant different under the happy word condition ($F=2.52, P=0.085$), (b) The sad face distraction effect is significantly different under the happy word condition ($F=3.96, p=0.021$); pairwise comparison suggests that (a) index in the complete remission group ($31.63\text{ms} \pm 45.88$) is greater than the subclinical group ($10.21\text{ms} \pm 46.35$), (b) index (-10.12 ± 53.62) is less than the subclinical group (24.81 ± 54.45); Comparing the response time under the happy word condition, the happy word-neutral face condition complete remission group was

slower than the subclinical group, and there was no significant difference in other conditions. (3) Discrimination and prediction: (a) The distraction effect of the sad face under the happy word condition can identify the history of depression ($OR=0.992$, $P=0.019$) (b) The distraction effect of angry faces under the condition of sad words can predict a depressive episode one year later ($OR=1.006$, $P=0.035$).

Conclusion: Depressed individuals have a lack of positive emotional processing; individuals with current episodes of depression have relatively impaired emotional suppression processing capabilities. Completely remission individuals' attention to positive target stimuli is weaker than that of subclinical individuals, and their ability to inhibit neutral interference stimuli is reduced; the inhibitory processing damage of negative emotions can predict the onset of depression.

Keywords: Depression, Word-Face Stroop task, Emotional inhibition processing

自我控制与决策：自我损耗对决策行为的影响及补偿

彭卓¹ 刘晓红² 刘桂麟³ 温静⁴ 甘露⁵

摘 要 个体决策过程涉及了许多复杂的高级认知活动，是多种信息共同加工后表现在行为上的结果。其中自我损耗对决策的影响已受到广大学者的关注。目前已有许多研究关注自我损耗与决策行为之间的关系，当个体处于自我损耗状态时，个体不会进行复杂的认知加工，心理能量大大减弱，个体自我控制能力下降，从而更倾向于直觉决策风格，其决策的理性程度下降。本文通过对国内外关于自我损耗与决策的相关研究文献进行整理和总结，归纳自我损耗的理论模型、现有研究范式、影响后效、心理机制及其他因素在自我损耗对决策行为影响的补偿作用。经过梳理分析，得出以下结论：（1）现有研究发现从自我损耗对决策的影响主要存在于：冲动决策、风险决策以及跨期决策当中。（2）现有研究发现积极情绪的诱发、自我肯定的启动、动机水平的激发以及榜样启动都能有效补偿自我损耗对决策行为的影响。（3）未来研究可增加一定时间间隔的追踪后测并结合眼动技术精确探索其作用时间以及探究自我损耗对不同决策情景的影响的一致性。（4）未来可基于资源分配理论、过程模型理论、机会成本理论进行研究。（5）未来研究不仅要控制情绪动机的影响，还应排除人格特质的影响并且扩展被试群体尝试进行跨文化研究。（6）未来研究应提高生态效度，结合VR技术模拟真实决策情景。

摘 要 目的：探究有无留守经历大学生的防御机制和焦虑是否存在差异。并探究防御机制和焦虑的关系，在有留守经历大学生中防御机制是否为焦虑的危险因素。**方法：**选取有留守经历被试 71 人，无留守经历大学生 200 人进行防御机制量表(Defense Style Questionnaire, DSQ)和焦虑自评表(Self-rating Anxiety Scale, SAS)，进行对比研究有无留守经历大学生焦虑和防御机制间的差异和防御机制对焦虑的影响。**结果：**有无留守经历大学生在焦虑和成熟防御方式上存在差异(焦虑： $t=6.848$ ；成熟防御机制： $t=2.689$ ， p 均 <0.01)。在防御方式的差异比较中有无留守经历大学生在防御方式中的幻想、压抑、升华、解除和期望上存在显著差异(依次为 $t=2.279$ ； $t=2.558$ ； $t=1.966$ ； $t=2.326$ ； $t=3.795$ ， p 均 <0.05)。在有留守经历大学生中，解除这一防御机制对焦虑存在显著正相关关系，并且解除是焦虑的预测因素($\beta=0.248$ ， $p<0.05$)。**结论：**留守经历对大学生焦虑和

成熟防御机制有影响,有留守经历的大学生越易焦虑,且成熟型防御机制使用较少。有无留守经历大学生使用防御机制的不同主要集中在幻想、压抑、升华、解除和期望这五种方式上。在防御机制和焦虑的关系上,大学生使用解除这一种防御机制是焦虑的危险因素。

Effects of left behind experience on defense mechanism and anxiety of College Students

Qi Meng^{1,2}, Song Tianhe^{1,2}, Chen Jingxu²

Department of Psychology, Chengde Medical College, Chengde, Hebei Province, China, 067000

Beijing Huilongguan Hospital / Peking University HuiLongguan Medical School, Beijing, 100096

Corresponding author: Chen Jingxu, chenjx1110@163.com

Abstract: Objective: To explore whether there are differences in defense mechanism and anxiety among college students with or without left behind experience. And explore the relationship between defense mechanism and anxiety, and whether defense mechanism is a risk factor of anxiety among college students with left behind experience. Methods: 71 subjects with left behind experience and 200 college students without left behind experience were selected for Defense Style Questionnaire (DSQ) and self rating Anxiety Scale (SAS). The differences between anxiety and defense mechanism of college students with or without left behind experience and the influence of defense mechanism on anxiety were compared. Results: there were differences in anxiety and mature defense style between college students with and without left behind experience (anxiety: $t = 6.848$; Mature defense mechanism: $t = 2.689$, $p < 0.01$). In the comparison of the differences of defense styles, there are significant differences in fantasy, depression, sublimation, release and expectation of college students with or without left behind experience ($t = 2.279$ in turn; $t = 2.558$; $t = 1.966$; $t = 2.326$; $t = 3.795$, $p < 0.05$). Among the college students with left behind experience, the release of this defense mechanism has a significant positive correlation with anxiety, and release is a predictor of anxiety ($\beta = 0.248$, $p < 0.05$). Conclusion: left behind experience has an impact on College Students' anxiety and mature defense mechanism. College students with left behind experience are more likely to be anxious, and mature defense mechanism is less used. The differences of defense mechanisms used by college students with or without left behind experience mainly focus on five ways: fantasy, depression, sublimation, release and expectation. In the relationship between defense mechanism and anxiety, the use of this defense mechanism by college students is a risk factor of anxiety.

Keywords: left behind experience, college student, defense mechanism, anxious

大学生英语自我效能感与英语成绩的关系研究

乔雯

首都体育学院研究生部,北京市,100191

摘要 研究目的:对某高校大学生的英语自我效能感与英语成绩之间的关系进行调查研究,旨在理论上进一步丰富英语自我效能感与英语成绩的相关性研究,实践上更深刻地了解大学生的英语学习状况并有针对性地提出提高英语自我效能感的有效措施。

研究方法:研究主要采用心理测验法。选取某高校大学生300人,填写英语自我效能感量表,收回295份有效问卷(其中男生90人,女生205人;大一152人,大二143人)。该问卷主要涉及5个维度,即积极信念维度、消极信念维度、自我信念策略维度、方法应用策略维度和外部环境策略维度。通过相关分析和回归分析方法分析他们在性别、年级和专业特征上的英语自我效能感差异,以及英语自我效能感与英语成绩间的相关性。统计软件选用SPSS20.0。

研究结果:(1)大学生的英语自我效能感($p < 0.05$)和信念策略维度($p < 0.01$)在性别上呈差异显著,男生均低于女生;(2)大学生的积极信念维度($p < 0.05$)和方法应用策略维度($p < 0.05$)在年级上呈差异显著。

著,大二均高于大一;(3)大学生的英语自我效能感和各维度在专业上无显著差异;(4)大学生的英语自我效能感及各维度与英语成绩均呈显著正相关(P 值均 <0.001);(5)经逐步一元回归分析表明,英语学习主要受到英语自我效能感、信念策略和积极信念策略的影响(预测力分别为21.6%、15.2%、14.3%)。

研究结论:大学生的英语自我效能感及各维度对英语成绩具有积极的相关性。可以通过设置合理的学习目标,采用多样化的英语学习策略,营造积极的家庭环境,培养学生积极的归因方式和榜样示范鼓励大学生的途径来提高大学生的英语自我效能感。

A Study on the Relationship between English Self-efficacy and English Achievement of College Students

Qiao Wen

Postgraduate Department of Capital Institute of Physical Education, The Beijing municipal,100191

Abstract: Research purpose: For a university students' English self-efficacy and the relationship between the English study, aims to further enrich theoretically English self-efficacy and the correlation of English study, practice more deeply understand the status of the college students' English learning and puts forward effective measures to improve English self-efficacy.

Methods: Psychological test was adopted in this study.300 college students from a certain university were selected to fill in the English self-efficacy scale, and 295 valid questionnaires were collected (90 male students and 205 female students;152 as a freshman and 143 as a sophomore).The questionnaire mainly involves five dimensions, namely positive belief dimension, negative belief dimension, self-belief strategy dimension, method application strategy dimension and external environment strategy dimension. Correlation analysis and regression analysis were used to analyze their differences in English self-efficacy in terms of gender, grade and major characteristics, as well as the correlation between English self-efficacy and English performance. SPSS20.0 was used as the statistical software.

The results showed that:(1) College students' English self-efficacy ($p<0.05$) and belief strategy ($p<0.01$) there was a significant difference between male and female, and male was lower than female;(2)The positive belief dimension of college students ($p<0.05$) and method application strategy dimension ($p<0.05$) showed significant difference in grades, and sophomore was higher than freshman;(3)There is no significant difference in college students' English self-efficacy and various dimensions.(4)College students' English self-efficacy and its various dimensions are significantly positively correlated with their English scores ($P<0.001$);(5)The stepwise regression analysis shows that English learning is mainly influenced by English self-efficacy, belief strategy and positive belief strategy (the predictive power is 21.6%, 15.2% and 14.3%, respectively).

Conclusion: College students' English self-efficacy and various dimensions have a positive correlation with their English scores. It is suggested that students' English self-efficacy can be improved by setting reasonable learning goals, adopting diversified English learning strategies, creating a positive family environment, cultivating students' positive attribution style and encouraging students by example.

因子分析中先验方差对局部依赖性检测的影响

乔欣宇¹ 潘俊豪¹ (通讯作者)

¹中山大学心理学系, 广州, 510006, panjunh@mail.sysu.edu.cn

摘要 在心理学、教育学和组织行为学等领域,研究者常用问卷方式测量个体的人格、智力等潜在变量。但由于问卷内容的设置(如,测量条目相似的表述)以及施测环境的局限(如,测试时间过短)等因素的影响,对样本数据建模时,不可避免会违反潜变量建模的局部独立性假设,即给定了潜变量的取值后,仍存在其他因素

导致条目存在相关关系,存在局部依赖性问题。贝叶斯结构方程模型(Bayesian Structural Equation Modeling, BSEM)的方法可以释放残差协方差矩阵非对角线元素严格为0的假设,为检测局部依赖性问题提供了思路,避免了传统使用修正指数(Modification Index, MI)时,模型容易过拟合、修正过程繁琐等一系列问题。目前关于BSEM检测局部依赖性的研究仍相当有限,针对局部依赖性问题,研究者通常对残差协方差参数设置逆Wishart分布,关于如何选择先验方差以及不同先验方差设置对参数估计结果的影响都有待进一步的探索。

本研究基于单因子验证性因子分析模型,通过蒙特卡洛模拟研究的方法,探究当数据类型为连续和二分时,在测量条目数量、样本量、因子载荷参数设置的不同条件下,针对残差协方差参数,不同先验方差的逆Wishart分布对BSEM检测不同程度的局部依赖性问题的影响。研究结果显示,对于连续数据,先验方差越大,局部依赖性检测的一类错误就越低;对于二分数数据,先验方差的设置主要影响真实存在局部依赖性问题的残差协方差参数的估计准确性。此外,两个实证研究的结果进一步具体展示和验证了模拟研究结果的有效性。本研究深入地探究了不同先验方差的BSEM模型在检测局部依赖性问题时的表现,并基于模拟研究的结果,针对不同的数据条件,为研究者在实际应用中的先验方差选择提供了一定的参考与建议。

The Influence of Prior Variance on the Detection of Local Dependence in Factor Analysis

Qiao Xinyu¹, PAN Junhao¹

¹ Department of Psychology, Sun Yat-sen University, Guangzhou, China

Abstract: Questionnaires are often applied to measure individual's personality, intelligence, and other latent variable on the research fields of psychology, education and organization behavior. Confirmatory factor analysis (CFA) is often conducted to investigate the relationships between items in the questionnaire and the latent factors. Local independence is an essential assumption in latent variable modeling. But in reality, due to the settings of questionnaires' content and restriction of testing environment, there are other factors influencing the relations between items, which is referred as local dependence. Bayesian structural equation modeling (BSEM) is a newly developed method, which can be used to deal with local dependence. It avoids the problems caused by modification index, which is used to free strict restriction, such as overfitting and awkward model modifications. Inverse Wishart distribution is a commonly used prior for the covariance matrix. The research about how to select proper prior variances and the influence of different prior variances on the results of parameter estimation is still limited.

To explore the effects of different prior variances in detecting the different levels of local dependence, a series of simulation studies are conducted for continuous data and dichotomous data respectively under the one-factor model with different sample sizes, item numbers and factor loadings. To sum up, for continuous data, larger prior variance of residual covariance results in less Type I error in detecting the local dependence. And for dichotomous data, prior variance of residual covariance mainly affects the estimation accuracy of the residual covariance parameters with real local dependence. Two real data sets were analyzed to verify the simulation results again. In applied researches, different prior variances should be chosen cautiously according to different situations. The present study investigates the effect of BSEM with different prior variance in detecting different local dependence in depth, in the hope of providing a guidance for applied researchers.

急性高强度间歇运动对抑郁症状大学生的影响研究

裘莎丽 王相 王兴(通讯作者)

上海体育学院, 上海, 200438

摘要 抑郁是目前全世界共同关心的公共卫生问题，是大学生常见的心理健康问题。大学生长期处于抑郁症状下，会导致工作效率下降、情绪低落、学习能力下降等，且易产生自杀等消极想法。运动相较于药物治疗，具有成本低、抗抑郁效果好的多靶点治疗效果。目前，长期运动对抑郁大学生的影响研究较多，但急性运动的实证研究相对较少。目的：通过急性高强度间歇运动，通过观察抑郁症状大学生实验前、后抑郁评分量表（SDS）得分及各脑区功率值的变化，以探究急性运动对抑郁症状大学生情绪及偏侧化的影响效果，以期为抑郁大学生进行长期运动提供依据。方法：采用抑郁自评量表（SDS）筛选出抑郁症状大学生学生共 50 名，随机分为实验组（25 人）和对照组（25 人），实验组进行急性高强度间歇跑台运动（90%HRmax，高强度 2min；70%HRmax 慢跑或快走 3min；交替 4 组，共 20min），对照组不进行任何运动干预，分别采集实验前、后两组大学生 SDS 量表评分及静息态脑电地形图，比较运动干预前后得分及脑区功率值变化。结果：急性高强度间歇运动对抑郁症状大学生抑郁评分降低存在显著效益（ $t=4.03$ ， $p<0.01$ ），对照组无显著性差异（ $t=1.69$ ， $p=0.11$ ）；抑郁症状大学生大脑左侧 α 频段功率值下降，右侧 α 频段功率值上升，额叶左右偏侧化得到改善； β 频段总功率值下降； θ 频段功率值下降，左侧顶区和枕区功率值上升。结论：急性高强度间歇运动可有效改善大学生的抑郁症状，且能诱导大脑正性情绪的激发，降低负性情绪的加工。

Study on the effect of acute high-intensity interval exercise on college students with depressive symptoms

Qiu Shali, Wang Xiang, Wang Xing (Corresponding Author)

Shanghai Institute of Physical Education, Shanghai, 200438

Abstract: Depression is currently a public health problem of common concern all over the world, and a common mental health problem for college students. Undergraduates suffering from depressive symptoms for a long time can lead to decreased work efficiency, depression, decreased learning ability, etc., and are prone to negative thoughts such as suicide. Compared with drug therapy, exercise has low cost and good antidepressant effect. At present, there are many studies on the effect of long-term exercise on depressed college students, but there are relatively few empirical studies on acute exercise. Purpose: Through acute high-intensity intermittent exercise, by observing the changes in the Depression Rating Scale (SDS) scores and the power values of each brain area of college students with depressive symptoms before and after the experiment, to explore the effect of acute exercise on the mood and lateralization of college students with depressive symptoms. The effect is expected to provide a basis for long-term exercise for depressed college students. Method: A total of 50 college students with depressive symptoms were selected using the Self-Rating Depression Scale (SDS), and they were randomly divided into an experimental group (25 students) and a control group (25 students). The experimental group performed acute high-intensity intermittent treadmill exercises (90 %HRmax, high-intensity 2min; 70%HRmax jog or brisk walking for 3min; alternate 4 groups, 20min in total), the control group did not undergo any exercise intervention, and the SDS scale scores and resting EEG of the two groups of college students were collected before and after the experiment. Topographic maps, compare the scores and brain power changes before and after exercise intervention. Results: Acute high-intensity interval exercise has a significant effect on the reduction of depression scores of college students with depressive symptoms ($t=4.03$, $p<0.01$), but there is no significant difference in the control group ($t=1.69$, $p=0.11$); the left side of the brain of college students with depressive symptoms is α . The power value of the frequency band decreases, and the power value of the alpha band on the rear side increases, and the lateralization of the frontal lobe is improved; the total power value of the β band decreases; the power value of the θ band decreases, and the power value of the left top and occipital regions increases. Conclusion: Acute high-intensity interval exercise can effectively improve the depressive symptoms of college students, and can induce the stimulation of positive emotions in the brain and reduce the processing of negative emotions.

发展性阅读障碍儿童 Stroop 任务的事件相关电位 (ERP) 研究

沈成威¹ 姜琦² 骆艳³

1 贵州医科大学医学人文学院, 贵阳, 550004

2 华中科技大学同济医学院, 武汉, 430074

3 贵阳市妇幼保健院儿童保健科, 贵阳, 550003, 通讯作者 E-mail: Luoyan_15@163.com

摘要 目的: 发展性阅读障碍 (developmental dyslexia, 简称 DD) 是由神经系统问题导致的特殊的学习障碍, 其主要表现为在字词的解码、阅读和拼写方面的困难。以前的研究发现了 DD 儿童的抑制性缺陷, 但我们对 DD 儿童 (尤其是对汉语发展性阅读障碍儿童) 的神经机制了解较少。因此我们采用双盲对照试验, 研究 DD 儿童和典型发育儿童在进行 Stroop 颜色词测试时的 ERP 成分的差异。方法: 采用瑞文推理测验、小学生识字量测验、《学习困难筛查量表》和《儿童阅读障碍量表》筛查 17 名 DD 儿童 (其中 9 名男童, 8 名女童, 平均年龄为 11.41 ± 0.93 岁) 组成实验组; 在同一所学校选取 17 名典型发育儿童 (其中 9 名男童, 8 名女童, 平均年龄为 11.47 ± 0.52 岁) 作为控制组。选用 2 (被试) $\times$ 2 (刺激类型) 混合实验设计, 分别进行 Stroop 任务 (共 240 个试次, 其中色词一致任务为 120 个试次, 色词不一致任务为 120 个试次) 同时记录行为数据及脑电 EEG 数据。结果: 行为数据显示两组儿童在 Stroop 任务上的反应时和正确率存在显著差异, 控制组的正确率高于实验组, 控制组的反应时短于实验组。在 ERP 结果中, DD 儿童在一致的试次上显示较大的 P2 (Fz、FCz、Cz) 和 P3b (CPz、Pz、Oz) 波幅, 而典型发育儿童在不一致的试次上显示较大的 P2 和 P3b 波幅, 两组儿童在 Stroop 任务上显示出了相反的大脑激活模式。结论: 发展性阅读障碍儿童的抑制能力较差, 这种较差的抑制能力可能与他们的大脑激活模式异常有关。

Abstract: OBJECTIVE: Developmental dyslexia (DD) is a specific learning disability caused by neurological problems that manifest as difficulties in word decoding, reading, and spelling. Previous studies have identified inhibitory deficits in DD children, but we know less about the neural mechanisms of DD children (especially in children with developmental dyslexia in Chinese). We therefore used a double-blind controlled trial to investigate the differences in ERP components between DD children and typically developing children when performing the Stroop Color Word Test. METHODS: Seventeen DD children (9 boys and 8 girls, mean age 11.41 ± 0.93 years) were screened by the Raven's Standard Progressive Matrices, the Elementary School Literacy Test, the Pupil Rating Scale Revised Screening for Learning Disabilities (PRS), and the Dyslexia Checklist for Chinese Children (DCCC) as the experimental group; 17 typically developing children (9 boys and 8 girls, mean age 11.47 ± 0.52 years) as the control group. A mixed experimental design of 2 (subjects) $\times$ 2 (stimulus types) was selected, and the Stroop test was performed separately (a total of 240 trials, including 120 congruence trials and 120 incongruence trials.) Behavioral data and EEG data were also recorded. RESULTS: The behavioral data showed significant differences in response time and accuracy between the two groups on the Stroop test, with typically developing children having a higher accuracy and shorter response time than DD children. In ERP results, DD children showed larger P2 (Fz, FCz, Cz) and P3b (CPz, Pz, Oz) waveforms on the congruence trials, whereas typically developing children showed larger P2 and P3b waveforms on the incongruence trials, and the two groups showed opposite patterns of brain activation on

the Stroop task. CONCLUSION: DD children have poor inhibitory function, and this poor inhibition may be related to their abnormal brain activation patterns.

成长型思维对银行职工心理健康的影响：工作激情的中介效应

史崔蕾¹ 王磊²（通讯作者）

1 武汉体育学院研究生院，武汉，430079

2 武汉体育学院心理学系，武汉，430079，3329626544@qq.com

摘 要 新冠肺炎（COVID-19）是一次重大突发性公共卫生事件，除了对人的躯体健康造成的巨大威胁外，也会对人的心理健康造成不同程度的影响。疫情常态化使银行职工长期处于慢性应激状态，严重影响其心理健康。成长型思维是影响个体心理健康的关键要素，具有成长型思维的个体在面对挫折或挑战时，具有更强的恢复性。员工的心理健康可能也与工作激情有关，企业员工全身心投入其负责的工作任务中，可有效缓解自身的心理健康。本研究将探讨工作投入、成长型思维对银行员工心理健康的影响。

采用整体抽样的方法，选取中国人民银行湖北省分行的 1648 名员工为对象，进行问卷调查。平均年龄 42.7 岁，其中疫情期间本人感染新冠肺炎 12 名，家人感染新冠肺炎 16 名。问卷主要包含《思维模式量表》、《工作投入度量表》和《心理健康量表》，使用 Spss、Mplus 软件对数据进行整理分析。

研究表明：（1）疫情期间本人感染新冠肺炎和疫情期间家人感染新冠肺炎的员工心理健康水平显著低于普通员工。（2）心理健康、工作投入和思维模式三个变量之间存在显著相关关系。其中心理健康与工作投入存在显著正相关（ $r=0.457$, $p<0.01$ ）；思维模式与心理健康（ $r=-0.384$, $p<0.01$ ）和工作投入（ $r=-0.435$, $p<0.01$ ）存在显著负相关。（3）工作投入的子维度工作热情在思维模式与心理健康之间起部分中介作用，即思维模式既可以直接影响银行员工的心理健康，也通过工作热情对银行员工心理健康产生影响。

企业管理者注重员工心理健康，可以从增加工作热情及培养成长型思维模式来促进员工的心理健康，提升企业凝聚竞争力。

关键词 银行职工，心理健康，成长型思维，工作激情

The Influence of Growth Mindset on the Mental Health of Bank Employees: The Mediating Effect of Work Passion

SHI Cuilei

Wuhan Sports University, Wuhan

Abstract: Covid-19 is a major public health emergency. In addition to the great threat to people's physical health, it will also have varying degrees of impact on people's mental health. The normalization of the epidemic situation makes bank employees in a state of chronic stress for a long time, which seriously affects their mental health. Growth Mindset is a key element that affects an individual's mental health. Individuals with Growth Mindset are more resilient when faced with setbacks or challenges. The mental health of employees may also be related to their work passion. Employees of an enterprise can devote themselves to their work tasks, which can effectively relieve their mental health. This research will explore the impact of work engagement and growth-oriented thinking on the mental health of bank employees.

Using the overall sampling method, 1648 employees of the Hubei branch of the People's Bank of China were selected as subjects to conduct a questionnaire survey. The average age is 42.7 years old. During the epidemic, 12 people were infected with new coronary pneumonia and 16 from their family members were infected with new coronary pneumonia. The questionnaire mainly includes the "Thinking Mode Scale", "Work Involvement Scale" and "Mental Health Scale". The data are sorted and analyzed using SPSS and Mplus software.

Studies have shown that: (1) The mental health of employees who were infected with COVID-19 during the epidemic and their family members were infected with COVID-19 during the epidemic was significantly lower than

that of ordinary employees. (2) There is a significant correlation between the three variables of mental health, work engagement and thinking mode. Among them, mental health is significantly positively correlated with work engagement ($r=0.457$, $p<0.01$); thinking patterns are significantly correlated with mental health ($r=-0.384$, $p<0.01$) and work engagement ($r=-0.435$, $p<0.01$) Negative correlation. (3) The sub-dimension of work engagement. Work enthusiasm plays a part of the mediating role between thinking mode and mental health. That is, thinking mode can directly affect the mental health of bank employees, and it can also affect the mental health of bank employees through work passion.

Business managers pay attention to the mental health of employees. They can increase their work enthusiasm and cultivate a growth mindset to promote the mental health of employees and enhance the company's cohesive competitiveness.

Keywords: Bank employee, mental health, growth mindset, work passion

大学生人格特征与学业拖延的关系：手机依赖的中介作用

摘要 目的:调查当代大学生手机依赖和学业拖延的现状,探讨大学生人格特质、手机依赖及学业拖延三者之间的关系,并进一步研究手机依赖在人格特质对学业拖延的中介效应。**方法:**采用中国“大五”人格问卷简版(CBF-PI-B)、手机依赖指数量表(MPAI)和Aitken学业拖延量表(API)对河北省内某高校大学生以班级为单位进行整体施测。**结果:**本次共调查共收回问卷455份,男性182例,女性273例,均为大一到大四的在校生,其中,78.02%的大学生表现出手机依赖的倾向,手机依赖平均分为 46.09 ± 0.461 ,学业拖延的平均分为 50.03 ± 0.381 ,其中,手机依赖和学业拖延分别在在性别(50.15 ± 0.636 vs 49.67 ± 0.466) (51.29 ± 0.656 vs 50.37 ± 0.461)、独生子女(50.37 ± 0.658 vs 49.62 ± 0.462)、(50.48 ± 0.713 vs 50.88 ± 0.441)生源地(50.55 ± 0.631 vs 449.38 ± 0.466) (50.01 ± 0.661 vs 51.30 ± 0.439)三个因素上差异不显著($P>0.05$),在专业方面差异显著,手机依赖和学业拖延方面,文史均显著高于理工和医学(49.56 ± 1.277 vs 45.17 ± 0.913 vs 45.74 ± 0.579) (53.39 ± 1.013 vs 50.71 ± 0.788 vs 50.23 ± 0.477) ($P<0.05$);手机依赖和学业拖延神经质以及宜人性维度存在显著正相关(均 $P<0.05$),其中,具有手机依赖倾向的大学生在学业拖延和神经质维度得分显著高于非手机依赖组(均 $P<0.05$);学业拖延和神经质维度存在显著正相关($P<0.05$),学业拖延与宜人性、严谨性、开放性、外向性维度存在显著负相关(均 $P<0.05$)。手机依赖在神经质对学业拖延的关系中起完全中介作用,在严谨性对学业拖延的关系中起部分中介作用,中介效应为2.2%。**结论:**(1)手机依赖在神经质维度对学业拖延的关系中起完全中介作用。(2)手机依赖在严谨性维度对学业拖延的关系中起部分中介作用。

The relationship between College students' Personality characteristics and academic procrastination: the mediating role of Mobile phone dependence

Abstract: Objective: To investigate the current situation of mobile phone addiction and academic procrastination among contemporary college students, explore the relationship among personality traits, mobile phone addiction and academic procrastination, and further study the mediating effect of mobile phone addiction on personality traits on academic procrastination. **Methods:** The Chinese "Big Five" Personality Questionnaire (CBF-PI-B), the Mobile Phone addiction Index (MPAI) and the Aitken Academic Prohibition Scale (API) were used to measure the students in a college in Hebei Province. **Results:** A total of 455 questionnaires were collected in this survey, including 182 males and 273 females, all of whom were freshmen to seniors. Among them, 78.02% of college students showed a tendency to rely on mobile phones, with an average score of 46.09 ± 0.461 for mobile phone addiction and 50.03 ± 0.381 for academic delay. Mobile phone addiction and academic procrastination were significantly higher in gender (50.15 ± 0.636) Vs 49.67 ± 0.466) (51.29 ± 0.656 vs 50.37 ± 0.461), the only child (50.37 ± 0.658 vs 49.62 ± 0.462), (50.48 ± 0.713 vs 50.88 ± 0.441), the place of origin (50.55 ± 0.631) Vs 449.38 ± 0.466) (50.01 ± 0.661 vs

51.30±0.439), there was no significant difference in the three factors ($P>0.05$), there was significant difference in the major, mobile phone dependence and academic procrastination, Literature and history were significantly higher than science and technology (49.56±1.277 vs45.17±0.913 vs45.74±0.579) and science and medicine (53.39±1.013vs50.71±0.788 vs50.23±0.477) ($P<0.05$). There was a significant positive correlation between mobile phone addiction and academic procrastination, neuroticism and agreeability (all $P<0.05$). The scores of academic procrastination and neuroticism of college students with mobile phone addiction tendency were significantly higher than those of non-mobile phone addiction group (all $P<0.05$). There was a significant positive correlation between academic procrastination and neuroticism ($P<0.05$), and a significant negative correlation between academic procrastination and agreeableness, conscientiousness, openness and extraversion (all $P<0.05$). Mobile phone addiction was a complete mediator for neuroticism and a partial mediator for conscientiousness, with a mediating effect of 2.2%. **Conclusion:** (1) Mobile phone addiction was a complete mediator in the relationship between neuroticism and academic procrastination. (2) Mobile phone addiction played a partial mediating role in the relationship between conscientiousness and academic procrastination.

心理健康素养与积极应对方式的关系：有调节的中介

孙斌¹ 贾亚菲¹ 侯金波² 刘陈陵^{1,2} (通讯作者)

1 中国地质大学(武汉)心理科学与健康研究中心, 湖北, 430074, 通讯作者 E-mail: Liuchl@cug.edu.cn

2 中国地质大学(武汉)学生心理健康教育中心, 湖北, 430074

摘 要 目的: 近年来, 心理健康素养的议题在国家政策层面和学术探讨的层面得到了广泛的关注。与此同时, 之前的研究提示, 心理健康素养与其他变量之间的关系研究较少; 在维持和促进心理健康过程中, 哪些变量发挥了调节或中介作用, 作用效果如何, 有待进一步探讨。因此, 结合国内外相关研究进展, 本文旨在探索心理弹性在心理健康素养与积极应对方式之间的中介作用, 以及性别在其中起到的调节作用。方法: 采用整群抽样法, 以武汉某高校 10579 名大学生和研究生为研究对象, 使用一般人口学资料调查问卷、国民心理健康素养问卷、简易应对方式量表、Connor-Davidson 心理弹性量表中文版进行问卷调查, 通过 Mplus8.3 构建结构方程模型。结果: ①男女两性在心理健康素养、心理弹性和积极应对方式方面均存在显著差异。②心理健康素养与心理弹性、积极应对方式呈显著正相关, 心理弹性与积极应对方式呈显著正相关。③心理健康素养显著正向预测积极应对方式; 心理弹性在心理健康素养与积极应对方式之间起部分中介作用, 中介效应占总效应的比重为 55.56%; 性别在心理健康素养→心理弹性的路径中起调节作用, 相比于男性, 心理健康素养的提升能更好地提升女性的心理弹性。结论: 心理健康素养既能直接影响积极应对方式, 也能通过提升心理弹性间接作用于积极应对方式; 该中介模型存在显著的性别差异, 未来的心理健康教育工作应对男性有所侧重。**关键词** 心理健康素养, 应对方式, 心理弹性, 结构方程模型

The Relationship between Mental Health Literacy and Positive Coping Style: Moderated Mediating Effect

SUN Bin¹, JIA Yafei¹, HOU Jinbo², LIU Chenling^{1,2}

1 Research Center for Psychological and Health Sciences, China University of Geosciences, Wuhan, 430074, China

2 Student Mental Health Education Center, China University of Geosciences, Wuhan, 430074, China

Abstract: Objective: In recent years, the issue of mental health literacy has been widely concerned both in national policy and in academic discussions. However, few previous studies focus on the relationship between mental health literacy and other factors. In the process of maintaining and promoting mental health, which factor plays a moderating or mediating role, and what the effect is, remains to be further explored. Therefore, based on relevant research, this paper aims to explore the mediating role of resilience between mental health literacy and positive

coping style, and the differences caused by gender. Method: By using cluster-sampling method, 10579 college students and postgraduates from a university in Wuhan were collected. The structural equation model was constructed by means of MPLUS8.3, using general demographic questionnaire, National Mental Health Literacy Questionnaire, Simple Coping Style Scale and Connor-Davidson Resilience Scale. Results: ① There are significant differences between men and women in mental health literacy, resilience and positive coping style. ② Mental health literacy is positively correlated with resilience and positive coping style, and resilience is positively correlated with positive coping style. ③ Mental health literacy significantly positively predicts positive coping style. Resilience partially mediates the relationship between mental health literacy and positive coping style, and the mediating effect accounts for 55.56% of the total effect. Gender plays a moderating role in the path from mental health literacy to resilience. Compared with men, the promotion of mental health literacy can better promote women's resilience. Conclusion: Mental health literacy can not only directly affect positive coping style, but also indirectly affect positive coping styles by improving resilience. There are significant gender differences in this model, and the future work of mental health education should focus on men.

Keywords: mental health literacy, coping style, resilience, structural equation model

陶行知教育理论在心理学方向的应用

孙梦雅¹ 毛宇轩² 郑轶男³ 杨晓峰⁴ (通讯作者)

内蒙古师范大学心理学院, 呼和浩特, 010022, yangxf@imnu.edu.cn

摘要 陶行知的教育理论一直在教育学当中被广泛的探讨与实践, 且收获颇丰, 具有现实意义。从近些年各大高校尤其是各大名校频发的自伤及自杀事假, 以及居高不下的抑郁现状来看, “空心病”是当下教育及心理学科所面临的巨大挑战。“空心病”的形成与社会及经济快速发展, 学校及家庭教育模式没有及时根据社会现状做出调整, 导致学生主体情感需要及学习根本目标及意义模糊或缺失息息相关, 这就要求教育工作者必须重新考虑教育的模式要符合当下社会的需求。陶行知在 1945 年发表的《创造的社会教育论纲》, 曾提出“社会教育与学校教育要打成一片”, 但这一理论在当时并未引起重视。从社会需要的角度出发, 探讨学习的意义和目的, 是解决“空心病”的有效手段。这就要求我们从社会心理学及心理学的基础相关理论来探讨陶行知教育理论符合现代层面的应用方法与理论意义, 并且对于中国本土教育理论的科学化和学科交叉的应用有着重要的影响。本文将从基础心理学中主要的四大流派理论, 行为主义、精神分析、认知心理以及人本主义的主要理论, 以及社会心理学层面班杜拉的相关学习理论, 结合陶行知的社会教育论及社会教育论, 探讨陶行知教育理论的可行性及应用, 旨在更好的使心理学与教育学相结合, 提高教育质量与心理应用。

Application of Tao Xingzhi's educational theory in psychology

Sunmengya¹, Maoyuxuan², Zhengyinan³, Yangxiaofeng⁴

School of Psychology, Inner Mongolia Normal University, Huhhot, 010022

Abstract: Tao Xingzhi's educational theory has been widely discussed and practiced in pedagogy, and it has a lot of harvest and practical significance. In recent years, the frequent NSSI, suicide and personal leave in universities, especially in prestigious universities, as well as the current situation of high depression, "hollow disease" is the biggest challenge facing education and psychology. The formation of the hollow "disease" and social and economic rapid development, school and family education mode without timely according to the situation of social adjustment, cause the students emotional needs and learning fundamental goal and the significance of fuzzy or missing, this requires education workers must reconsider education mode to conform to the current needs of society. Tao Xingzhi proposed that "social education and school education should be integrated" in his "Outline of Creative Social Education" published in 1945, but this theory did not attract attention at that time. To explore the meaning and purpose of learning from the perspective of social needs is an effective means to solve the "hollow disease". This requires us to explore the application method and theoretical significance of Tao Xingzhi's education theory in

accordance with the modern level from the basic theories of social psychology and psychology, and has an important impact on the scientific and interdisciplinary application of Chinese local education theory. This article will mainly from the basic psychology of four schools theory, behaviorism, psychoanalysis, cognitive psychology, and the main theory of humanism, and the level of social psychology bandura relevant learning theory, combined with the tao xingzhi's life education deals with society, so to explore the feasibility and application of tao's education theory, aims to better make the combination of psychology and pedagogy, Improving the quality of education and psychological application.

善良人格对择偶偏好的影响： 社会支配倾向和矛盾性别偏见的链式中介作用

孙鑫龙 廖俊东 周蜀溪¹（指导教师）

¹ 四川师范大学心理学院，成都，610066，通讯作者 E-mail: 352173614@qq.com

摘 要 人格在择偶中被认为是最重要的因素之一，人们对人格特质的重视也逐年呈上升趋势。同类匹配理论认为个体在择偶中更容易选择与自己相似的伴侣，但研究大多集中于外部因素，少有关于择偶中人格方面的研究。本研究拟在同类匹配理论背景下探讨中国人善良人格对择偶个性偏好的影响，并考察社会支配倾向和矛盾性别偏见的中介作用机制。以川渝等地八所高校共 1537 名在校大学生为研究对象，其中男大学生 395 人，女大学生 1142 人；文史类大学生 822 人，理工类大学生 715 人；独生子女 647 人，非独生子女 890 人；生源是城市 719 人，非城市 818 人，并使用中国人善良人格量表、择偶个性偏好量表、社会支配倾向量表、矛盾性别偏见量表进行问卷调查。结果发现，中国人善良人格、择偶个性偏好、社会支配倾向、矛盾性别偏见两两显著相关。中国人善良人格可以显著预测择偶个性偏好，也可以通过社会支配倾向和矛盾性别偏见的链式中介作用预测择偶个性偏好。个体在择偶中对个性的重视程度受到自身特质的影响：中国人善良特质越高，其在择偶中对伴侣个性就越重视；且个体的择偶个性偏好也受到社会支配倾向和矛盾性别偏见的影响，丰富了同类匹配理论中关于择偶中人格特质相似性的影响机制，为未来关于人格和择偶之间研究提供了实证基础。

关键词 善良人格，社会支配倾向，矛盾性别偏见，择偶个性偏好

The Impact of Virtuous Personality on University Students ' Personality Dimension of Mate Preferences: Chain Mediating Effect of Social Dominance Orientation and Ambivalent Sexism

Sun Xinlong, Liao Jundong, Zhou Shuxi¹ (instructor)

¹ School of Psychology, Sichuan Normal University, Chengdu, 610066,
corresponding author E-mail: 352173614 @ qq. com

Abstract: Personality is considered to be one of the most important factors in mate preference, and people's attention to personality traits is also increasing year by year. Similar matching theory believes that individuals are more likely to choose partners similar to themselves in mate preference, but most studies focus on external factors, and there are few studies on personality in mate preference. This study intends to explore the impact of Chinese virtuous personality on mate preference under the background of similar matching theory, and examine the mediating mechanism of social dominance orientation and ambivalent sexism. A total of 1537 college students from eight universities in Sichuan and Chongqing were studied, including 395 males and 1142 females. 822 students majoring in arts and 715 students majoring in science. Only child 647, non-only child 890. The Chinese Virtuous Personality Scale, Personality Dimension of Human Mate Preferences Scale, Social Dominance Orientation Scale and Ambivalent Sexism Inventory were used for questionnaire survey. The results show that Chinese virtuous personality, personality dimension of human mate preferences, social domination orientation and ambivalent sexism are

significantly correlated. Chinese virtuous personality can significantly predict personality dimension of human mate preferences, and can also predict personality dimension of human mate preferences through the chain mediating effect of social dominance orientation and ambivalent sexism. Individuals' attention to personality in mate selection is affected by their own characteristics: the higher the Chinese virtuous personality, the more attention they pay to partner personality in mate preference. The individual's personality preference is also affected by social dominance orientation and ambivalent sexism, which enriches the influence mechanism of personality traits similarity in mate selection in similar matching theory, and provides an empirical basis for future research on personality and mate preference.

Keywords: Chinese virtuous personality, Social dominance orientation, Ambivalent sexism, Personality dimension of mate preferences

迎难而上还是贬低目标？ 高低自我威胁情境下自尊和感恩对预期幸福的影响机制

汪钰婷¹ 李林¹ 宋静静¹ 侯志军¹（通讯作者）

¹ 中国地质大学（武汉）心理科学与健康研究中心，武汉，430074，zjhou@cug.edu.cn

摘要 在与其他人共同面对未来目标时，人们是倾向于像阿 Q 一样运用“精神胜利法”来自我安慰嘲弄、贬低可能无法实现的未来目标？还是“得不到的永远在骚动”、“物以稀为贵”，迎难而上、目标越难以实现越能增加这一目标的预期价值？

幸福是个“比较级”，根据社会比较理论，现实中缺少自我评价的标准时，个体倾向于通过与相似他人进行比较来减少不确定感。根据认知失调理论，态度与行为不一致时会引起个体的心理紧张，即自我受到威胁的一种体现，即使比较对象在特定属性上与自我相似，竞争感和比较对象隐含的标准也可能使个体倾向于关注自我与比较对象之间的能力差异，使个体知觉到自我与标准是相异的，从而引发自我威胁。个体在不同程度的自我威胁下对自我价值的评估、对社会和他人恩惠的感知以及对完成未来目标的预期幸福并不会完全一致，因此高低自我威胁情境下自尊、感恩和预期幸福会有哪些差异？产生这些差异的机制又是什么？

本文通过 2 个研究探讨高低自我威胁情境下个体对未来目标的评价以及自尊和感恩对预期幸福的影响机制。研究一通过错误反馈操纵自我威胁，进行 2（错误反馈情境：高成绩、低成绩）×3（预期幸福水平：较高、中等、较低）列联表的卡方检验，结果发现：低自我威胁情境下，个体会保持对未来目标的高评价，并且对难度的感知与完成任务后的预期幸福成正比；研究二对在高低自我威胁情境下分别通过虚拟的智力测验成绩反馈操纵自我威胁，结果发现：（1）高自我威胁情境下，个体对于难度的感知与自身成绩不相关，而低自我威胁情境下对难度的感知与自身成绩显著负相关；（2）高自我威胁情境下，自尊在错误反馈与预期幸福之间起中介作用、感恩能够调节“错误反馈-自尊-预期幸福”中介机制的前半路径，而低自我威胁情境下不存在自尊的中介作用和感恩的调节作用。上述结果为认识高低自我威胁情境下自尊和感恩对预期幸福的影响机制，并在此基础上探究如何摆脱社会比较带来的认知失调提供了新的证据和思路。

Rise to the challenge or belittle the goal? The effect mechanism of self-esteem and Gratitude on expected happiness in high and low self-threat situations

Wang Yuting, Li Lin, Song Jingjing, Hou Zhijun*

China University of Geosciences, Wuhan

Abstract: When facing future goals with others, do people tend to use the Mr.Q spirit-satisfied method to comfort themselves, ridicule, and belittle future goals that may not be achieved? Or "can't get forever in turmoil", "A thing is valued if it is rare.", the more difficult to achieve the goal can increase the expected value of this goal?

Happiness comes from comparison. According to social comparison theory, when there is no standard for self-evaluation in reality, individuals tend to reduce their uncertainty by comparing themselves with others who are similar to them. According to the theory of cognitive dissonance, the inconsistent attitude and behavior can cause individual psychological tension. Even if more objects on the specific properties similar to self, implied in the sense of competition and comparative object standard might make individuals tend to focus on ability differences between self and comparative object, make the individual perceived self and standard is different, which can lead to self-threat. Under different levels of self-threat, individuals' assessment of self-worth, their perception of social and other people's benefits, and their expected happiness to achieve future goals are not completely consistent. So what are the differences in self-esteem, gratitude, and expected happiness between high and low self-threat situations? What are the mechanisms that produce these differences?

In this study, two studies were conducted to investigate the effects of self-esteem and gratitude on expected happiness in high and low self-threat situations. The results of study 1 indicated that under the low self threat situation, individuals keep goal for the future high evaluation, and the perceived difficulty is proportional to the expected after happiness. The results of study 2 indicated that (1) In the high self-threat situation, the perception of difficulty was not correlated with the individual's own achievement, while in the low self-threat situation, the perception of difficulty was significantly negatively correlated with the individual's own achievement; (2) In the high self-threat situation, Self-esteem mediated the association between error feedback and predicted happiness, and gratitude moderated the first half of the "error feedback - self-esteem - predicted happiness" mediation, while in the low self-threat situation, there is no such effects. These results provide new evidence and ideas for understanding the mechanism of self-esteem and gratitude on expected happiness and exploring how to get rid of cognitive dissonance caused by social comparison.

The effect of sensation seeking on pedestrians crossing in a VR street: A developmental perspective

Anni Wang, Huarong Wang (Corresponding author)

Traffic Psychology, Institute of Special Environmental Medicine, Nantong University, Nantong,
China

Abstract: The relationship between sensation seeking and risk-taking behavior has been generally confirmed. However, it still keeps unknown about what is the effect of sensation seeking on pedestrian behaviors and whether there is consistency across ages. This study explored the effects of sensation seeking on pedestrian crossing among children, adolescents and adults. 209 children (10-13 years old), adolescents (14-17 years old) and adults (20-24 years old) with high and low level of sensation seeking were selected according to their sensation seeking scores. A 3 (age groups: children, adolescents, adults) $\times$ 2 (sensation seeking groups: high, low) $\times$ 2 (vehicle speed: fast, slow) $\times$ 2 (vehicle distance: far, near) mixed experimental design was used. The dependent variables were the decision-making and behaviors of crossing in the virtual traffic situation. The results showed that children's start delay was significantly longer than that of adults and adolescents. Children returned back more frequently when vehicles were travelling fast while adolescents and adults returned more frequently when vehicles were travelling slowly. Children low in sensation seeking missed more opportunities than adolescents and adults when the vehicles traveled quickly; adolescents high in sensation seeking missed more opportunities than that of children and adults when vehicles were travelling slowly; regardless of the speed of the vehicle, pedestrians low in sensation seeking tended to miss more opportunities than those high in sensation seeking; children missed more opportunities to cross when vehicles were travelling quickly, while adolescents and adults missed more opportunities to cross when the vehicles were travelling slowly. Adolescents low in sensation seeking ran more often than those who high in sensation seeking, no matter when vehicles were travelling quickly or slowly; children ran more frequently when vehicles were travelling fast than

were travelling slowly; adults low in sensation seeking ran more often when they faced vehicles travelling more slowly than when they faced vehicles travelling more quickly. In high sensation seeking group, adolescents were nearly hit more frequently than children when the vehicles travelled quickly from close distance apart, and adolescents and adults suffered more nearly hits in this traffic situation than when the vehicles travelled slowly from close distance apart, while children high in sensation seeking suffered more nearly hits when the vehicles travelled quickly further apart than when the vehicles travelled slowly at greater distance apart. Adolescents were more likely to be hit than children and adults, adolescents high in sensation seeking were hit more frequently than those low in sensation seeking. The conclusions are as follows: pedestrian's skill improves with age increasing, and the effect of sensation seeking on pedestrian behaviors across age groups was different. Sensation seeking level would have more significant effect on children and adolescents' pedestrian behavior, but has little effect on adults.

罪犯自杀的内隐态度测量及干预

王海鹏

西北师范大学心理学院、湖北省襄北监狱，兰州，730070，通讯作者:xbjuwhp@126.com

摘要 基于罪犯自杀的预防在中国监狱有着重要作用，当前研究通过测量罪犯被试自杀的内隐态度，进行结构化认知行为干预，达到进一步降低罪犯自杀风险的目的。研究1利用Beck自杀意念量表筛查被试，然后进行自我伤害想法和行为访谈，将被试分为自杀态度积极组和正常组，进行死亡/自杀内隐联想测验，结果发现，自杀态度积极组被试对死亡/自杀属性词与自我的关系更敏感；研究2针对研究1中的自杀态度积极组被试采用12周的结构化认知行为干预之后，进行死亡/自杀内隐联想测验，结果显示，与小组干预之前的效应D值差异显著。实验结果表明，死亡/自杀内隐联想测验和结构化的认知行为干预能够更加有效的降低罪犯的自杀风险发生。

Measurement of Implicit Suicide Attitudes and Intervening Among Criminals

WangHaipeng

School of Psychology Northwest Normal University/XiangBei Prison Hubei Province

Abstract: The prevention of criminal suicide plays an important role in Chinese prisons. The current research aims to further reduce the risk of criminal suicide by measuring the implicit attitude of criminal subjects towards suicide and conducting structured cognitive behavior intervention. In Study 1, Beck suicidal ideation scale was used to screen subjects, and then self injury thoughts and behaviors were interviewed. The subjects were divided into positive suicidal attitude group and normal group. The implicit association test of death / suicide was carried out. The results showed that the subjects in positive suicidal attitude group were more sensitive to the relationship between death / suicide attribute words and self; In Study 2, after 12 weeks of structured cognitive behavioral intervention, the subjects in the positive suicide attitude group in Study 1 were tested for death / suicide implicit association test. The results showed that the effect D value was significantly different from that before the group intervention. The results show that death / suicide implicit association test and structured cognitive behavior intervention can more effectively reduce the risk of suicide.

自我控制与欺诈脆弱性关系的元分析

王洁¹ 钱秀莹¹ (通讯作者)

¹ 浙江大学心理与行为科学系，杭州，310028，xqian@zju.edu.cn

摘要 欺诈是全球范围内普遍存在且日益严重的问题，个人和社会都为此承担了巨大的成本。已有研究表明，欺诈行为影响了数百万人，每年给消费者造成上百亿元的损失。而欺诈本身的隐蔽性，使得研究者很难发现或直接触及诈骗者。因此，针对受害者的欺诈脆弱性研究近年来受到了广泛关注。此外，自 Schreck (1999) 提出自我控制是受害脆弱性的来源后，越来越多的研究试图从犯罪学的一般理论——自我控制理论出发，探讨自我控制在解释欺诈脆弱性中的作用。尽管多项研究显示自我控制对于解释欺诈脆弱性确实具有重要作用，但也有部分研究发现了不一致的结果。考虑到现有关于自我控制与欺诈脆弱性关系的研究已经趋于成熟，本研究通过元分析的方法对相关文献进行了综合评估。我们把 28 篇原始研究纳入元分析，产生了 32 个独立样本，93 个效应值，样本总量为 45863。结果显示，自我控制与欺诈脆弱性之间存在显著的负相关 ($r = -0.080$, $p < 0.01$)，并且这种相关性具有极强的稳健性，不受关键变量测量、研究特征（研究设计、发表状态等）、样本特征（样本类型、年龄、性别分布、国家）等因素的影响。这表明自我控制能够显著负向预测欺诈脆弱性，即自我控制能力越低的个体，其欺诈脆弱性更高（越容易遭受欺诈），并且这种关系是相当“普遍”的。此外，我们发现部分调节变量的观察数仍不足，因此未来研究可以重点关注特定欺诈类型、欺诈脆弱性的衡量方式、自我控制影响欺诈脆弱性的机制、自我控制与重复欺诈受害的关系等方面。综上，本研究系统性地揭示了自我控制与欺诈脆弱性的关系，发现了未来研究可能的方向；从实践角度也为欺诈预防提供了重要的参考。

A Meta-Analysis on the Relation Between Self-Control and Fraud Vulnerability

WANG Jie¹, QIAN Xiuying¹

¹ Department of Psychology and Behavioral Sciences, Zhejiang University, HangZhou 310028

Abstract: Fraud is a widespread and increasingly serious problem across the globe. Both individuals and society bear huge costs for it. Studies have shown that fraud affects millions of people and causes billions of dollars in losses to consumers every year. The concealment of fraud makes it difficult for researchers to detect or directly contact fraudsters. Therefore, research on the vulnerability of victims to fraud has received extensive attention in recent years. In addition, since Schreck (1999) proposed that self-control was the source of vulnerability to victimization, more and more studies have attempted to explore the role of self-control in explaining fraud vulnerability from the perspective of the general theory of criminology -- the theory of self-control. Although multiple studies have shown that self-control does play an important role in explaining fraud vulnerability, some studies have found inconsistent results. Considering that the existing research on the relationship between self-control and fraud vulnerability has become mature, this study used meta-analysis to comprehensively evaluate the relevant literatures. We included 28 original studies into the meta-analysis, resulting in 32 independent samples, 93 effect sizes, and a total sample size of 45863. The results show that there is a significant negative correlation between self-control and fraud vulnerability ($r = -0.080$, $p < 0.01$). This correlation has strong robustness and is not affected by the key variable measurement and research characteristics (e.g., research design, publication status), sample characteristics (e.g., sample type, age, gender distribution, country) and other factors. It suggests that self-control can significantly negatively predict fraud vulnerability, that is, the individuals with lower self-control ability have higher fraud vulnerability (the more vulnerable to fraud), and this relationship is quite "universal". In addition, we found that the number of observations of some moderator variable is still insufficient. Therefore, specific types of fraud, the measurement method of fraud vulnerability, the mechanism by which self-control affects fraud vulnerability, and the relationship between self-control and repeated fraud victimization can be the focus of future research. In summary, this study systematically reveals the relationship between self-control and fraud vulnerability, and discovers possible directions for future research. It also provides an important reference for fraud prevention from a practical perspective.

摘要 如何更好的为国家培养出德才兼备、全面发展、具有创造性水平的大学生, 是每一个教育者在努力思考与探索的主题。作为高校培养人才的思政课程, 《思想道德与法治》在引领大学生树立正确世界观、人生观、与价值观的同时, 也对大学生所应具备的创造性提出了明确的要求, 是德育与创造性培育的统一。但在具体的教学实践中, 却往往存在着对创造性关注较弱、重思想轻方法等现实问题。为此, 本研究拟将德育教育与大学生的创造性培养相融合, 采用教学实验的方法, 探索思政课堂教学下的大学生创造力培养的路径。研究假设: 思政课堂教学是大学生创造性培养的良好路径。思政课堂教学对大学生创造力的培养不仅能显著提升大学生的创造性水平, 还能进一步增加学生德育水平的提升。研究内容: 本研究由两个实验部分组成。实验一, 采用调查法分别从教师与学生的角度, 对当前《思想道德与法治》课程教学的内容、方法、技术、效果等进行了详细的考察。实验二, 在对实验一的调查结果进行总结分析的基础上, 采用教学实验的方法, 按照控制组、实验组, 前测、后测教学实验设计进行教学干预。在教学任务完成后, 对学生的教学效果进行评估。研究结果: 在学期末的课程学业测试与创造力测试总分中, 实验组成绩显著高于对照组。实验组与对照组被试在创造性意识维度差异不显著, 但实验组被试具有更高的创造性技巧与创造性潜移能力。实验组被试在对道德与创造力的关系协调中更加灵活。研究结论: 融入创造力培养的《思想道德与法治》课程的教学模式会影响大学生创造力以及课程的实效性, 这一研究结论为提升大学生创造力水平以及增强高校《思想道德与法治》课程实效性提供新的思路和方法。

Research on the Path of Cultivating College Students Creativity under Ideological and Political Course

Wang Lingxiao¹, Zhang Yueming¹, Wang Botao², Wei Ping²

1 School of Marxism, Xidian University, Xi 'an, 710071

2 Mental Health Center, Xidian University, Xi 'an, 710071

Abstract: It is a question that how to cultivate college students with good quality, morality and creativity, lots of educators are thinking and exploring. *Ideology, Morality and Rule of Law* not only guides college students to establish a correct world outlook, outlook on life and values, but also puts forward clear requirements for the creativity that college students should have. *Ideology, Morality and Rule of Law* is the unity of moral and creative cultivation. However, there are often some practical problems in the concrete teaching practice, for example, teachers pay weak attention to students' creativity. They emphasis on thought ,but neglect methods. Therefore, the study intends to integrate moral education with creative cultivation. Adopting to the method of teaching experiment to study the means to promote college students' creativity under the Ideological and Political course. Research Hypothesis: Ideological and Political course is a good path for cultivating creative ability of college students. Ideological and Political course not only can significantly improve the creative level of college students, but also further enhance the level of moral education of students. Research Content: This study consists of two experimental parts. Experiment 1 adopt to survey method, making a detailed investigation on the contents, methods, techniques and current effects of *Ideology, Morality and Rule of Law* from the perspectives of teachers and students. Experiment 2 based on the summary and analysis of Experiment 1, using the method of teaching experiment to divide students into the control group and the experimental group, and carrying out experiment of the pretest and post-test. After completing the teaching task, evaluating the effect of teaching result. Results: The scores of the experimental group are significantly higher than those of the control group in the academic test and creative test. There was no significant difference between the experimental group and the control group in the dimension of creative consciousness, but the

experimental group have higher creative skills and creative latent ability. Students in the experimental group are more flexible in coordinating the relationship between morality and creativity. Research conclusion: The teaching mode of *Ideology, Morality and the Rule of Law* with creativity training will affect the creativity of college students and the effectiveness of the course. This research conclusion provides new ideas and methods for improving the creativity of college students and enhancing the effectiveness of *Ideology, Morality and the Rule of Law*.

权力感影响自我控制：心理机制与边界条件

王荣¹ 李林² (通讯作者)

¹ 中国地质大学心理学系, 武汉, 430000

² 中国地质大学心理研究所, 武汉, 430000, lilin@cug.edu.cn

摘要 权力感是指个体对影响他人和避免他人影响的能力的感知, 自我控制指的是个体有意识控制冲动行为、抵制满足直接的需要和愿望、执行能带来长期利益的目标指向行为的能力。研究表明权力感会影响自我控制, 但影响的方向和机制却不尽相同。本研究通过梳理相关研究, 归纳出权力感对自我控制包括目标导向活动、情绪调节、越轨行为、消费行为、坚持和健康行为方面的影响和心理机制及边界条件。一方面在目标导向活动、情绪调节、越轨行为、坚持和健康行为方面, 权力感有助于自我控制的提高, 权力感对自我控制的促进存在两种潜在认知机制: 一是权力感提高个体的解释水平, 降低个体对即时回报的偏好, 从而克服暂时诱惑, 实现延迟满足, 有利于实现长远目标; 二是权力感提高个体的认知灵活性, 降低因为分心带来的自我资源损耗程度, 提高了认知效率, 促进自我控制的实现。但另一方面, 权力感对个体的消费行为影响却存在不一致的结论, 权力感高的个体对享乐品表现出理性消费, 然而当享乐目标被激活时其更容易出现非理性消费。权力感对自我控制的影响可能受到权力动机、社会价值取向、自我构念、权力的稳定性和合法性、权力的期望等因素的调节。另外, 权力的趋近-回避理论和社会距离理论, 在解释权力感和自我控制关系时出现了相矛盾的结论, 未来需要进一步的研究和探讨, 不断检验和完善权力的相关理论。

Effect of Power on Self-Control: Psychological Mechanism and Boundary conditions

RONG Wang¹, LI lin²

¹Department of psychology, China University of Geosciences, Wuhan, 430000

²Institute of psychology, China University of Geosciences, Wuhan, 430000

Abstract: The sense of power refers to the individual's perception of the ability to influence others and avoid the influence of others. Self-control refers to the individual's ability to consciously control impulsive behavior, resist meeting direct needs and wishes, and implement goal oriented behavior that can bring long-term benefits. Research shows that the sense of power will affect self-control, but the direction and mechanism of influence are different. By combing the relevant studies, this study summarizes the impact of the sense of power on self-control, including goal oriented activities, emotional regulation, deviant behavior, consumption behavior, persistence and health behavior, as well as the psychological mechanism and boundary conditions. On the one hand, in terms of goal oriented activities, emotion regulation, deviant behavior, persistence and healthy behavior, the sense of power contributes to the improvement of self-control. There are two potential cognitive mechanisms for the promotion of self-control by the sense of power: first, the sense of power improves the individual's interpretation level and reduces the individual's preference for immediate return, so as to overcome the temporary temptation and achieve delayed satisfaction, Conducive to achieving long-term goals; Second, the sense of power improves individual cognitive flexibility, reduces the loss of self resources caused by distraction, improves cognitive efficiency and promotes the realization of self-control. On the other hand, there are inconsistent conclusions about the impact of a sense of power on individual consumption behavior. Individuals with a high sense of power show rational consumption of hedonic goods. However, when the hedonic goal is activated, they are more prone to irrational consumption. The influence of power sense on self-control may be regulated by power motivation, social value orientation, self construction, power stability and legitimacy, power expectation and so on. In addition, the approach-avoidance theory and social distance theory of power have contradictory conclusions in explaining the relationship between sense of power and self-control. Further research and discussion are needed in the future to constantly test and improve the relevant theories of power.

新高考视域下的高中生生涯认知特征及提升路径探析

王纳晴¹ 曾天德^{1,2} (通讯作者)

1 闽南师范大学教育科学学院, 福建漳州, 363000

2 闽南师范大学教育科学学院, 漳州, 363000, zengtd65@163.com

摘要 随着我国新高考改革持续推进,生涯规划教育受到社会各界的广泛关注,广大中学师生面临着诸多有关生涯教育与规划辅导的理论和实践问题,诸如学校如何主动适应新高考改革?如何引导学生探索自我,发现并发展自身优势与特长?学生如何规划学业?如何选择选考科目?如何报考什么专业和大学?未来如何发展?等等,而要解决这些重大困惑或事项,亟需有一种科学的生涯发展理论来指导,学校也亟需构建内外部、多主体协同的生涯教育指导体系。为推动高中学校主动适应新高考改革,有效开展高中生生涯教育,促进学生生涯健康发展,本文通过文献研究方法和对学校生涯教育情况的调研,对生涯认知理论进行拓展,阐释了生涯认知与新高考改革的关系及其重要意义,从理论上探讨高中生生涯认知内涵,创新性地提出并阐述了高中生生涯认知的五大结构,即自我认知、学业认知、专业认知、职业认知和生涯规划元认知等,揭示五大认知的本质与形成特征。在此基础上从学校内外部、社会多主体协同的视角阐述了实现高中生生涯认知能力提升的五大路径:(1)加强家校合力与专业引领,提升高中生的自我认知能力;(2)融合学科教学与生涯教育,增强高中生的学业规划能力;(3)建立大学专业信息咨询服务平台,提高高中生的专业认知程度;(4)强化职业生涯规划辅导,提高高中生的职业认知能力;(5)重视元认知技能训练,促进高中生的生涯规划元认知。以期为学校开展生涯教育,促进学生生涯发展提供理论依据与实践路径,为高校培养和输送更多的多元化创新人才,推进基础教育转向素质教育,实现基础教育高质量发展,促进教育公平。

Analysis on the Career Cognitive Characteristics and Its Improvement Paths of High School Students from the Perspective of New College Entrance Examination

WANG Ruiqing¹, ZENG Tiande¹

1 School of Education Science, Minnan Normal University, Zhangzhou, Fujian 363000, China

Abstract: With the continuous progress of China's new college entrance examination reform, career planning education has attracted wide attention from all walks of life. Most middle school teachers and students are faced with many theoretical and practical problems related to career education and planning counseling, such as how do schools actively adapt to the new college entrance examination reform? How to guide students to explore themselves, discover and develop their own advantages and strengths? How do students plan their studies? How to choose elective subjects? How to enter oneself for an examination what major and university? What about the future? And so on. To solve these major perplexities or issues, it is urgent to have a scientific career development theory to guide students, and schools also need to build an internal and external, multi-agent collaborative career education guidance system. To promote high schools actively adapt to the new college entrance examination reform, effectively develop high school career education, promoting the healthy development of students' career in this article, through the method of literature research and investigation on school career education, to expand career cognitive theory, explain the relationship between career cognitive and new college entrance examination reform and its significance, theoretically discusses high school career cognitive connotation, This paper innovatively proposes and expounds five structures of high school students' career cognition, namely self-cognition, academic cognition, professional cognition, career cognition and career planning metacognition, and reveals the essence and forming characteristics of these five cognitions. On this basis, from the perspective of the cooperation between the internal and external bodies of the school and the society, the paper expounds five ways to realize the improvement of high school students' career cognitive ability :(1) strengthening the cooperation between the home and school and the professional guidance to improve the self-cognitive ability of high school students; (2) Integrating subject teaching and career education to

enhance the academic planning ability of high school students;(3) Establishing a professional information consulting service platform in universities to improve the professional awareness of high school students;(4) Strengthening career planning guidance to improve the vocational cognitive ability of high school students;(5) Paying attention to metacognition skills training, promote high school students' career planning metacognition. It is expected to provide theoretical basis and practical path for schools to carry out career education and promote students' career development, train and transport more diversified and innovative talents for colleges and universities, promote basic education to turn to quality-oriented education and realize high-quality development of basic education and promote educational equity.

社交焦虑和歧视知觉对留守儿童青少年生活满意度的影响：自尊、抑郁和孤独的链式多重中介作用

王瑞珩¹ 罗佳荟¹ 刘芳¹（通讯作者）

¹ 昆明医科大学第一附属医院，昆明，650032，yd926lf@163.com

摘要 目的：由于长期的亲子分离及社会支持系统的不完善，留守儿童青少年较非留守儿童青少年更容易出现心理问题。生活满意度作为积极心理学研究领域主观幸福感的重要组成部分，是评价一个人心理健康的有效指标，现有研究尚缺乏对留守儿童青少年生活满意度潜在影响机制的探讨。本研究基于生物—社会—认知理论模型、心理健康压力模型、社会比较理论等已有理论及研究成果，试图探究留守儿童青少年的自尊、抑郁和孤独在社交焦虑、歧视知觉与生活满意度间的链式中介效应，并验证该模型对留守儿童青少年群体的适用性。方法：本研究采用儿童社交焦虑量表（SASC）、儿童自尊量表（CSES）、儿童孤独量表（CLS）、抑郁自评量表（SDS）、个体歧视知觉量表、多维度学生生活满意度量表（MSLSS）对云南省 789 名留守儿童青少年进行问卷调查，采用 Harman 共同方法偏差检验、Pearson 相关分析、潜变量结构方程模型等统计分析方法，以 SPSS21.0 和 AMOS23.0 统计分析软件对数据进行整理和分析。结果：（1）留守儿童青少年生活满意度的链式中介模型均拟合良好且没有结构差异（ $\chi^2/df=4.27$, $p>0.05$ ）。（2）留守儿童青少年抑郁和孤独感在社交焦虑对生活满意度影响中均起到完全中介作用，在留守儿童青少年的社交焦虑对生活满意度之间，通过抑郁和孤独感产生的总间接效应为-0.24，总效应为-0.25，间接效应占总效应的 96%。（3）留守儿童青少年抑郁和孤独感在歧视知觉对生活满意度影响中均起到完全中介作用，在留守儿童青少年的歧视知觉对生活满意度之间，通过抑郁和孤独感产生的总间接效应为-0.23，总效应为-0.24，间接效应占总效应的 95.8%。结论：（1）抑郁和孤独感在社交焦虑对生活满意度的影响的链式中介作用模型均成立，并在留守儿童青少年中均适用。（2）抑郁和孤独感在歧视知觉对生活满意度的影响的链式中介作用模型均成立，并在留守儿童青少年中均适用。（3）抑郁和孤独感在留守儿童青少年群体中社交焦虑和歧视知觉对生活满意度影响的模型中均起到完全中介。

The Influence of Social Anxiety and Perception of Discrimination on Left-behind Teenagers' Life Satisfaction: The Chained Multiple Mediation of Self-esteem, Depression and Loneliness

Wang Ruiheng¹, Luo Jiahui¹, Liu Fang¹

¹ The First Affiliated Hospital of Kunming Medical University, Kunming Yunnan, yd926lf@163.com

Abstract: With the long-term separation of parents and children and the imperfect social support system, left-behind teenagers are more likely to have psychological problems than non-left-behind teenagers. Life satisfaction is an important part of subjective well-being in the field of positive psychology research, and it is an effective indicator to evaluate a person's mental health. However, existing research still lacks the exploration of the potential impact mechanism of left-behind teenagers' life satisfaction. Therefore, based on the biological-social-cognitive theory

model, mental health stress model, social comparison theory and other existing theories and research results, this research attempts to explore the chain mediation effect of self-esteem, depression and loneliness of left-behind teenagers between social anxiety, perception of discrimination and life satisfaction. It also tries to verify the applicability of the model to left-behind teenagers. This study uses the Social Anxiety Scale for Children(SASC), Child Self-esteem Scale (CSES), Child Loneliness Scale (CLS), Self-rating Depression Scale (SDS), Individual Discrimination Perception Scale, and Multidimensional Student Life Satisfaction Scale (MSLSS) to conduct a questionnaire survey of 789 left-behind teenagers in Yunnan Province, using Harman common method bias, Pearson correlation analysis, latent variable structural equation model and other statistical analysis methods on statistical analysis software SPSS21.0 and AMOS23.0 to organize and analyze the data. The results showed that: (1) The chain mediation models of life satisfaction of left-behind teenagers all fit well and have no structural difference ($\chi^2/df=4.27$, $p>0.05$). (2) Both depression and loneliness of left-behind teenagers play a completely mediating role in the impact of social anxiety on life satisfaction. Between the social anxiety of left-behind teenagers and their life satisfaction, the total indirect effect through depression and loneliness is -0.24, the total effect is -0.25, and the indirect effect accounts for 96% of the total effect. (3) Both depression and loneliness of left-behind teenagers play a completely mediating role in the impact of perception of discrimination on life satisfaction. Between the discrimination perception of left-behind teenagers and their life satisfaction, the total indirect effect produced by depression and loneliness is -0.23, the total effect is -0.24, and the indirect effect accounts for 95.8% of the total effect. Through the results, the conclusion can be drawn that: (1) The chain mediation models of both depression and loneliness in the influence of social anxiety on life satisfaction are established, and both are applicable to left-behind teenagers. (2) The chain mediation models of both depression and loneliness in the impact of perception of discrimination on life satisfaction are established, and both are applicable to left-behind teenagers. (3) Both depression and loneliness play a completely mediating role in the model of the impact of social anxiety and perception of discrimination on life satisfaction among left-behind teenagers.

净脏启动对负性道德情绪词加工的影响：具身隐喻视角

王小芳 丁凤琴（通讯作者） 张蓉 吴静 马小红

宁夏大学教育学院，银川，750021，通讯作者：dingfqin@nxu.edu.cn

摘 要 具身隐喻理论整合具身认知理论和概念隐喻理论(王继瑛, 叶浩生, 苏得权, 2018), 认为隐喻根植于人类的躯体感知觉(Sheikh, et al., 2013)。“愁眉苦脸”、“笑得很甜”是人们基于感知觉形成的情绪隐喻表征; “君子洁白无瑕”“小人肮脏恶臭”则是个体在净脏感知与道德品质之间架构的隐喻联结。以往研究发现, 道德概念与净脏体验的隐喻表征存在心理现实性(丁凤琴, 王喜梅, 刘钊, 2017)。道德情绪作为道德概念的组成部分(Zhai, Guo, & Lu, 2018), 既属于情绪在道德领域的延伸(王博韬, 魏萍, 2021), 又与环境及个体自身净脏有密切联系。当个体回忆自身不道德事件后, 洗手能够减轻内疚、羞愧等负性道德情绪(Zhong & Liljenquist, 2006)。当个体置身于脏乱、恶臭的环境中时, 负性道德情绪如厌恶会增强(Schnall, Haidt, Clore, & Jordan, 2008)。但以往研究只考察了负性道德情绪与净脏的伴随效应, 并未从具身隐喻视角对二者的联系进行深入探究。本研究基于具身隐喻视角, 采用 2 个实验探讨环境与自身净脏启动对负性道德情绪词加工的影响及其差异。实验 1 采用 Stroop 句子启动范式探讨环境净脏启动对负性道德情绪词加工的影响。结果显示: 相比环境洁净启动, 环境肮脏启动下被试对负性道德情绪词加工更快; 而非道德情绪词在两类启动下的反应时无显著差异。实验 2 采用相同的实验范式考察自身净脏启动对负性道德情绪词加工的影响。结果发现: 相比自身洁净启动, 自身肮脏启动后被试对负性道德情绪词加工更快; 而自身净脏启动对非道德情绪词的反应时没有明显影响。整合实验 1、2 的结果显示, 自身肮脏启动比环境肮脏启动显著加快了负性道德情绪词的反应, 主要表现在羞愧、内疚和尴尬情绪方面。上述结果表明, 肮脏启动促进负性道德情绪词的加工, 使得肮脏身体体验与负性道德情绪概念产生隐喻联结, 且当肮脏体验指向个体自我时, 这种联结效应会更强。该结果可为学校道德情绪干预提供一定的借鉴意义。

Influence of clean-dirty priming on the processing of negative moral emotion words: Perspective of embodied metaphor

WANG Xiaofang, DING Fengqin, ZHANG Rong, WU Jing, MA Xiaohong

School of Education, Ningxia University, Yinchuan 750021, dingfqin@nxu.edu.cn

Abstract: Embodied metaphor theory, which integrates embodied cognitive theory and conceptual metaphor theory (Wang Jiyong, Ye Haosheng, & Su Dequan, 2018), indicates that metaphor is rooted in people's somatosensory perception (Sheikh, et al., 2013). The idioms "*a weebegone expression*" and "*a sweet smile*" are metaphorical representations of emotions based on individuals' sense of physical experience. "*As pure as confucian ideal (Junzi)*" and "*as dirty as villain*" are metaphorical associations between clean dirty experiences and moral qualities. Previous studies have found that there is psychological reality about the metaphorical representation between moral concepts and clean dirty experiences (Ding Fengqin, Wang Ximei, & Liu Zhao, 2017). As an important factor of moral concept (Zhao, Guo, & Lu, 2018), moral emotion is not only an extension of emotion in the field of morality (Wang Botao & Wei Ping, 2021), but also closely related to the environment and the people's own cleanliness. Studies have shown that washing hand could reduce negative moral emotions, such as guilt and shame, after individuals recalling their immoral deeds (Zhong & Liljenquist, 2006). On the contrary, negative moral emotions such as disgust could be enhanced when making individuals expose to dirty and smelly environment (Schnall, Haidt, Clore, & Jordan, 2008). It can be seen that previous studies have examined the concomitant effect of negative moral emotions and cleanliness, the metaphorical relationship between the two, however, remains unknown. Based on the embodied metaphor view, two experiments of this study were conducted to investigate the effects and differences of environment and self clean-dirty priming on the processing of negative moral emotional words. Experiment 1 was aimed to probe the effect of environment clean-dirty priming on the processing of negative moral emotion words by using stroop sentence priming paradigm. The results showed that participants processed negative moral emotion words faster after environment dirty priming comparing to environment clean priming, while there was no significant difference on the reaction time of nonmoral emotion words under the two primes. Experiment 2 was to explore the effect of self clean-dirty priming on the processing of negative moral emotional words. As predicted, compared with self clean priming, participants processed negative moral emotional words faster after self dirty priming, there was no obvious difference on the reaction time of nonmoral emotional words under both the prime types. We had a comparative analysis of the results of the two experiments and found that self-dirty priming significantly accelerated the response time of negative moral emotion words, which mainly manifested in shame, guilt and embarrassment, compared with environmental dirty priming. The above results indicate that dirty priming promotes the processing of negative moral emotion words that results in metaphorical connection between dirty physical experience and negative moral emotion concept, importantly, the association effect is even stronger when the dirty experience is directed at the individual self. This study may provide a theoretical basis moral emotion intervention in schools.

自悯训练对抑郁症状的干预：效果及其影响因素元分析

王晓航¹ 刘取芝²（通讯作者）

¹ 河海大学教育与心理研究所，南京，210098

² 河海大学心理健康教育与研究中心，南京，210098，通讯作者 E-mail: 6812930@qq.com

摘 要 背景：大量研究发现，自悯训练能够对缓解抑郁情绪和症状有一定的作用。然而，由于自悯训练的形式多种多样，研究方法不同，使得自悯训练对于抑郁的干预效果量以及哪些因素能够起到效果尚不明确，

为此，本研究通过元分析的方法合并各研究的效果量，揭示自悯训练对抑郁情绪和症状的干预效果，并对影响干预效果的因素进行分析。

方法：在中文数据库（中国知网 CNKI 数据库、万方数字化期刊数据库、维普中文期刊数据库）与英文数据库（Web of Science、Embase、the Cochrane Library、PubMed）中检索 2021 年 5 月之前发表的自悯训练干预抑郁症状的随机对照实验。文献的纳入标准为：（1）所选研究应为随机对照实验设计（RCT），排除单组前后测、多基线设计、个案研究等非 RCT 研究；（2）干预内容应为正念自悯疗法、自悯焦点疗法、慈心禅等以培养自悯为主的方法，将自悯干预成分较低或无自悯训练成分的研究予以排除，如正念认知疗法、接纳承诺疗法等；（3）纳入的文献应为期刊论文，排除会议论文、学位论文等未经同行审议的研究；（4）研究应该报告所使用测量工具，数据报告完整，可提取抑郁测量的效果量，多测量结果的研究也纳入；（5）文章语言为中文和英文。

结果：最终，28 篇研究符合纳入标准。合并效应量发现，自悯训练对于抑郁症状的干预效果 $g=0.423$ （填补发表偏倚后 $g=0.3$ ）。Meta 回归结果表明，当仅考虑单个变量的调节作用时，干预效果受到国家地域、参与者女性比例、对照组类型、脱落率 4 个变量的影响；在多元回归模型中，对照组类型、研究质量对干预效果的调节作用显著。

结论：自悯训练项目对于抑郁症状的干预效果较好，干预效果的差异受到文化、性别、对照组类型、被试脱落率、研究质量的影响。后续研究可以探讨各变量之间存在的交互作用。

Effectiveness of Self-compassion Training in Intervention for Depression: A Meta-analysis of Effects and Influencing Factors

Wang Xiaohang¹, Liu Quzhi²

1 Institute of education and psychology, Hohai University, Nanjing, 210098, China

2 Mental Health Education and Research Center, Hohai University, Nanjing, 210098, China

Abstract: Background: A large number of studies have found that self-compassion training can have a certain effect on alleviating depression and symptoms. However, due to the various forms of self-compassion training and the different research methods, the intervention effect of self-compassion training on depression and which factors can have an effect is still unclear. For this reason, through meta-analysis, this study combined the effect of each study, revealed the intervention effect of self-compassion training on depression and symptoms, and analyzed the factors influencing the intervention effect. **Methods:** randomized controlled trials of self-compassion training on depressive symptoms published before May 2021 were searched in Chinese database (CNKI database, Wanfang digital journal database, VIP Chinese Journal Database) and English database (web of science, EMBASE, the Cochrane Library, PubMed). The inclusion criteria of the literature are: (1) The selected study should be a randomized controlled experimental design (RCT), excluding non-RCT studies such as single-group pre-test, multiple baseline design, and case studies; (2) The intervention content should be Mindfulness Self-compassion therapy, Self-compassion-focused therapy, Loving-Kindness Meditation and other methods that focus on cultivating self-compassion, and exclude studies with low self-compassion intervention components or no self-compassion training components, such as mindfulness cognitive therapy, acceptance-commitment therapy, etc.; (3) The included literature should be journal papers, excluding conference papers, dissertations and other studies that have not been peer reviewed; (4) The research should report the measurement tools used, the data report is complete, the effect of depression measurement can be extracted, and the results of multiple measurement Research is also included; (5) The language of the article is Chinese and English. **Results:** Finally, 28 studies met the inclusion criteria, and the combined effect size found that the intervention effect of self-compassion training on depressive symptoms was $g=0.423$ ($g=0.3$ after filling in the publication bias). Meta regression results show that when only the moderating effect of a single variable is considered, the intervention effect is affected by four variables: the country, the proportion of female participants, the type of control group, and the dropout rate; in the multiple regression model, the type of control group and the quality of

research had significant moderating effect on the intervention effect. **Conclusion:** The self-compassion training program has a good intervention effect on depressive symptoms. The difference in intervention effect is affected by culture, gender, type of control group, dropout rate of subjects, and research quality. Subsequent research can explore the interactions that exist between the variables.

负性情绪对中学生网络过度使用行为的影响：行为抑制和消极应对的链式中介作用

文岱¹ 李放² (通讯作者)

¹ 四川师范大学心理学院, 成都, 610068, lifang_sicnu@126.com

摘要 网络过度使用行为会对中学生的身心健康、学业功能、人际关系等产生严重消极影响, 负性情绪体验是网络过度使用行为的重要风险因素之一。一方面, 负性情绪可能会降低个体的行为抑制能力, 导致其上网行为失去合理抑制; 另一方面, 个体在负性情绪下, 更有可能采用消极应对方式来回避情绪困扰, 频繁的上网行为便是其做法之一。同时, 行为抑制与消极应对之间也有着密切的联系, 行为抑制能力越低的个体, 其行为冲动性就越强, 应对方式也就越趋于消极。因此, 本研究将重点探讨行为抑制和消极应对在负性情绪对网络过度使用行为影响中的独立中介作用和链式中介作用, 以期深入揭示负性情绪对网络过度使用行为的影响机制, 为减少中学生网络过度使用行为提供有益建议。本研究采用抑郁-焦虑-压力量表、BIS-11 冲动量表-运动冲动性分量表、简易应对方式量表和中文网络成瘾量表, 对 1013 名中学生被试进行问卷调查, 得到有效问卷 896 份。结果表明: (1) 负性情绪、行为抑制、消极应对以及网络过度使用, 所有变量间均存在显著的正相关; (2) 负性情绪对网络过度使用的直接效应显著, 行为抑制和消极应对在负性情绪与网络过度使用之间的中介效应显著, 且行为抑制-消极应对的链式中介作用也显著; (3) 行为抑制的中介效应显著高于消极应对的中介效应和行为抑制-消极应对的链式中介效应, 占比总中介效应的 85.74%。研究结果揭示了负性情绪、行为抑制等心理因素影响青少年网络过度使用行为的内在机制, 并提醒我们除了直接干预青少年负性情绪体验以外, 还可以通过提高他们的行为抑制能力来有效减少其网络过度使用行为的发生。

The Effect of Negative Emotion on Internet Overuse Behavior among Middle School Students: The Chain Mediating Role of Behavioral Inhibitory and Negative Coping

Wen Dai¹, Li Fang¹

¹ College of Psychology, Sichuan Normal University, Chengdu, 610068

Abstract: The Internet overuse behavior will have a seriously negative impact on middle school students' physical and mental health, academic function, interpersonal relationship and so on. Specially, negative emotional experience is one of the important risk factors of the Internet overuse behavior. On the one hand, negative emotion may reduce individuals' ability to inhibit behavior, resulting in the loss of reasonable inhibition of Internet behavior; On the other hand, people who experience negative emotion are more likely to use negative coping methods to avoid emotional distress, such as frequently surfing the Internet. Therefore, this study will focus on the independent and chain mediating roles of behavioral inhibitory and negative coping, which in the influence of negative emotion on Internet overuse behavior, so as to deeply reveal the influence mechanism of negative emotion on Internet overuse behavior, and provide useful suggestions for reducing Internet overuse behavior of middle school students. 1013 middle school students were investigated by using Depression, Anxiety and Stress Scale (DASS-21), Barratt Impulsiveness Scale (BIS-11), Simplified Coping Style Questionnaire (SCSQ) and Chinese Internet Addiction Scale (CIAS-R), and 896 valid questionnaires were used. The results revealed that: (1) There were significant positive correlations between any two of these factors among negative emotion, behavioral inhibitory, negative coping and Internet overuse; (2) The

direct effect of negative emotion on Internet overuse was significant, the mediating effect of behavioral inhibitory and negative coping was significant, and the chain mediating effect of behavioral inhibitory and negative coping was also significant; (3) The mediating effect of behavioral inhibitory was significantly higher than mediating effect of negative coping and the chain mediating effect of behavioral inhibitory-negative coping, accounting for 85.74% of the total mediating effect. The results reveal the internal mechanism of the influence of psychological factors such as negative emotion and behavioral inhibitory on adolescents' Internet overuse behavior, and it also reminds us that we can reduce the occurrence of the Internet overuse behavior not only by directly intervening negative emotional experience of adolescents but also improving their behavioral inhibitory ability.

摘 要 高校的心理健康工作一直是学生工作的重要组成部分, 而其中对精神障碍大学生的干预工作又是心理危机干预的重要内容。近年来, 随着大学生精神障碍发病率的增加, 越来越多的大学生在精神障碍的康复期重新进入校园学习, 高校患精神疾病复学学生的适应问题也开始受到越来越多的关注。大学阶段是学生从青春晚期过渡到成年期的关键时期, 此阶段人群的精神疾病患病率高、患病后对学业的影响大, 由于精神疾病和心理因素而休学的人数占因病休学人数的比例很高。其复学率随着疾病的种类和干预措施的不同而变化。他们在复学后将会面临许多问题: 1.精神症状和生理不适感 2.污名和歧视 3.学业受挫 4.社交与校园活动参与问题。这些问题会产生很大的痛苦, 增加他们的退学风险, 因此如何帮助这些精神障碍复学生提高其个人应对技巧及外部支持力度以重新适应并融入校园生活成为值得关注的问题, 本文围绕患精神障碍(包括抑郁症、双相障碍、焦虑症、强迫症、精神分裂症等)的大学生复学后面临的问题和应对措施, 梳理国内外已有文献, 明确问题现状, 提出应对和解决建议。

Abstract: Psychological intervention is an important part of College Students' mental health work. In recent years, with the increasing incidence rate of mental disorders, more and more college students have entered the campus learning in the rehabilitation period of mental disorders. The prevalence of mental illness in the university population is high and has a great impact on their studies. The number of people who suspend school due to mental illness and psychological factors accounts for a high proportion of the number of people who suspend school due to illness. The return to school rate varies with the types of diseases and intervention measures. These people will face many problems after returning to school: 1.Mental symptoms and physical discomfort 2.Stigma and discrimination 3.Academic problems 4.Social and campus participation problems. These problems will make them at greater risk of drop out from school, So how to help these students improve their personal coping skills and external support to adapt and integrate into campus life has become a problem worthy of attention. This paper focuses on the problems

and Countermeasures Faced by college students with mental disorders (including depression, bipolar disorder, anxiety disorder, obsessive-compulsive disorder, schizophrenia, etc.) after returning to school, combs the existing literature at home and abroad, in order to clarify the current situation of the problems and put forward countermeasures and solutions.

Abstract: Objective: to analyze the depression, anxiety, insomnia, psychological trauma and the incidence of post-traumatic stress disorder of the victims of Zhashan tornado disaster in Caidian District, Wuhan on May 14, 2021, so as to provide basis for relevant personnel to provide psychological intervention for the victims after the disaster. **Methods:** after grouping according to the disaster severity rating, the affected villagers in three villages of Zhashan were investigated by random sampling questionnaire. The questionnaires are patient health Questionnaire-9 (PHQ-9); Generalized anxiety disorder-7 (GAD-7); Insomnia severity index (ISI); Essen trauma Inventory (ETI), The diagnostic tool of PTSD is SCID. The survey data were analyzed by spss21.0 statistical software. **Results:** the detection rate of depression, anxiety, insomnia and post-traumatic stress disorder in tornado victims was 39.6%, 47.4%, 27.4% and 13.6%, respectively. Among the samples with the highest disaster rating, the detection rate of post-traumatic stress disorder was 28.4%. Depression, anxiety, insomnia and trauma were significantly correlated with the severity of the disaster ($P < 0.01$). **Conclusion:** the tornado disaster has a great impact on the psychological aspects of the victims, suggesting that psychological intervention should be carried out in the process of post disaster reconstruction, and attention should be paid to the worst affected areas.

*zengyong@kmmu.edu.cn

Abstract: Objective The present study constructed a moderated mediation model to examine the effect of Family Socioeconomic Status (FSES) on satisfaction with life for college students. Specifically, the present study examined the mediating role of learning burnout in the relation between FSES and satisfaction with life of college students, and tested whether the indirect effect was moderated by gender. **Methods** A random sample of 550 college students from a key medical university in Yunnan Province was investigated using the Family Socio-economic Status Questionnaire, Learning Burnout Scale and Satisfaction With Life Scale. Data were analyzed using SPSS 23.0 and the SPSS macro-PROCESS. **Results** (1)The FSES, satisfaction with life and learning burnout were both significantly related; The FSES of male families is higher than that of girls ($M_{males}=0.442$, $M_{females}=-0.230$, $t=2.098$, $p=0.036$), and learning burnout is higher than girls ($M_{males}=2.829$, $M_{females}=2.742$, $t=2.203$, $p=0.028$); (2) FSES significantly exerted direct effect on satisfaction with life, and there was indirect effect on satisfaction with life through the mediation of learning burnout as well, which effect value is 10.764%; (3) The indirect effect of learning burnout was moderated by gender, and the effect was stronger for female adolescents ($\beta=-0.289$, $t=-5.447$, $p<0.001$). **Conclusion** The study highlighted the mediating role of learning burnout and the moderating role of gender in the effect of FSES on satisfaction with life. Parents and educators should increase the input of family resources to improve the learning burnout of female college students, and focus on the problem of learning burnout of female college students with low FSES.

父母教养方式对大学生社会适应性的影响： 拒绝敏感性的中介作用

武艳钦

首都体育学院，北京 100191

摘要 大学生社会适应性是指大学生对不断变化着的社会要求、学习方式、人际关系、外部环境等做出的反应，不断进行心理和行为调整，以顺利完成学业，为步入社会做好充分的准备。已有研究表明，高拒绝敏感性不仅妨碍与人的沟通，还会影响身心健康，同时，也会对个体的社会适应能力产生一定的影响。本研究以拒绝敏感性为中介变量，通过采用父母教养方式问卷（PBI）、拒绝敏感性量表和大学生社会适应性量表对山西省高校的 600 名大学生进行抽样调查，探讨父母教养方式对大学生社会适应性的影响。研究发现：

（1）大学生社会适应性在性别、专业和地域三个方面存在显著差异（ $P < 0.05$ ），具体表现为：男大学生的社会适应能力显著低于女大学生，农村大学生的社会适应能力显著低于城市大学生，工科类大学生的社会适应能力显著低于理科类大学生；（2）父母教养方式各维度均与大学生社会适应性呈负相关，其中过度保护维度和冷漠拒绝维度与大学生社会适应性呈显著负相关，拒绝敏感性与社会适应性呈显著负相关；（3）母亲过度保护教养方式对大学生社会适应性具有负向预测作用（ $r = -0.156$ ），拒绝敏感性和母亲过度保护教养方式的共同作用对大学生社会适应性具有负向预测作用，交互作用显著；母亲关怀教养方式对大学生社会适应性负向预测作用不显著（ $r = -0.082$ ），拒绝敏感性和母亲关怀教养方式的共同作用对大学生社会适应性负向预测作用显著（ $r = -0.100$ ），交互作用显著；（4）引入拒绝敏感性中介变量，母亲过度保护和关怀教养方式对大学生社会适应性的预测作用显著。结论：家庭教养方式中父母过度保护和父亲冷漠拒绝与大学生社会适应性呈显著负相关，母亲过度保护和关怀与拒绝敏感性呈显著正相关；拒绝敏感性在母亲过度保护教养方式与社会适应之间起部分中介作用，在母亲关怀教养方式与社会适应之间起完全中介作用。

关键词 社会适应性，拒绝敏感性，父母教养方式

The influence of parenting style on College Students' social adaptability: the intermediary effect of rejection sensitivity

Yanqin Wu

Capital Institute of Physical Education, Beijing, 100191

Abstract: College Students' social adaptability refers to the response of college students to the changing social requirements, learning methods, interpersonal relationships and external environment, and constantly make psychological and behavioral adjustments, so as to successfully complete their studies and make full preparations for entering the society. Previous studies have shown that high rejection sensitivity not only hinders communication with people, but also affects physical and mental health. At the same time, it will also have a certain impact on individual social adaptability. Taking rejection sensitivity as the intermediary variable, this study conducted a sample survey of 600 college students in Colleges and universities in Shanxi Province by using parental rearing style questionnaire (PBI), rejection sensitivity scale and college students' social adaptability scale to explore the impact of parental rearing style on College Students' social adaptability. The study found that: (1) there were significant differences in college students' social adaptability in gender, major and region ($P < 0.05$). Specifically, male college students' social adaptability was significantly lower than female college students, and rural college students' social adaptability was significantly lower than urban college students, The social adaptability of engineering students is significantly lower than that of science students. (2) All dimensions of parental rearing style were negatively correlated with college students' social adaptability, among which the dimensions of over protection and indifference rejection were significantly negatively correlated with college students' social adaptability, and the sensitivity of rejection was significantly negatively correlated with social adaptability. (3) The overprotective parenting style of mother has a negative predictive effect on College Students' social adaptability ($r = -0.156$). The combined effect of rejection

sensitivity and overprotective parenting style of mother has a negative predictive effect on College Students' social adaptability, and the interaction is significant; Mother's caring parenting style had no significant negative predictive effect on College Students' social adaptability ($r = -0.082$), and the combined effect of rejection sensitivity and mother's caring parenting style had significant negative predictive effect on College Students' social adaptability ($r = -0.100$), with significant interaction. (4) By introducing the mediating variable of rejection sensitivity, maternal overprotection and caring parenting style have a significant predictive effect on College Students' social adaptability. Conclusion: there is a significant negative correlation between parental overprotection and father's indifferent refusal and college students' social adaptability, and a significant positive correlation between mother's overprotection and care and refusal sensitivity; Rejection sensitivity plays a partial intermediary role between mother's overprotective rearing style and social adaptation, and a complete intermediary role between mother's caring rearing style and social adaptation.

新零工经济时代按需服务平台的劳动控制 对劳动者的心理影响及其应对

边晓宁（通讯作者） 殷恬静 武泰民 杨琴

中国地质大学应用心理学研究所，武汉，430074，lamanbobian@163.com

摘要 在新的零工经济时代，按需服务平台作为一种劳动者从业或兼职的重要选择逐渐发展壮大。随着传统就业机会有所减少，劳动者对平台经济的依赖也在进一步地增加。分析这一新颖且快速发展的就业方式给劳动者带来的影响，有利于更加合理地维护劳动者权益并指导平台建立与平台劳动者的和谐关系，从而促进大数据时代网络零工经济的良性发展，对于促进中国零工经济的发展也具有实践启迪。本文以通过应用程序提供服务的按需劳动作为研究对象，对其新的控制特点进行了梳理，并从劳动者层面出发，探讨了这种新的控制特点对劳动者造成的心理影响和劳动者的应对方式。首先，与传统的临时工作相比，所有在线平台公司都具备的一个重要特征是对电子信誉机制的依赖并以此作为劳动控制的重要方式，这使得其对劳动者的控制呈现出新的特点，主要包括算法管理、评价机制和权力不对称三个方面；其次，在分析平台通过新的控制形式实现其管理目标的前提下，本文从公平感下降、情绪劳动加剧、情感支持不足和心理契约构建困难四个方面出发对平台劳动控制给劳动者带来的心理影响进行分析；再次，在总结不同劳动者应对差异的基础上，依据劳动过程理论，本文探讨了平台劳动者通过个人和集体行动应对劳动控制的措施以及所面临的阻碍；最后，本文提出了按需服务平台对劳动者造成的心理影响的未来研究方向，包括平台劳动者多重心理契约的构建等。

Labors' Psychological Impacts and Their Countermeasures under Labor Control of Demand Service Platform in the New Casual Economy Era

BIAN Xiao-ning, YIN Tian-jing, WU Tai-min, YANG Qin

Applied Psychology Institute of China University of Geosciences, No. 388 Lumo Road, Wuhan, P.R.
China

Abstract: In the new era of casual work economy, as an important choice for workers to work or part-time, on-demand service platform is gradually growing. With the decrease of traditional employment opportunities, labor dependence on platform economy is increasing further. Analysis of the impact of this new and rapid development of employment form on workers is conducive to more reasonable protection of workers' rights and interests, and guide the platform to establish a harmonious relationship with platform workers, so as to promote the benign development of network casual work economy in the era of big data, and also has important practical enlightenment for promoting

the development of China's casual work economy. This paper takes the on-demand labor that provides services through applications as the research object, combs its new control characteristics, and discusses the psychological impact of this new control characteristics on workers and workers' coping styles. Firstly, compared with the traditional temporary work, an important feature of all online platform companies is their dependence on the electronic reputation mechanism as an important way of labor control, which makes their control over workers show new characteristics, mainly including algorithm management, evaluation mechanism and power asymmetry. Secondly, on the premise that the platform achieves its management objectives through the new control form, this paper discusses the psychological impact of the new control form on workers from four perspectives: the decline of sense of fairness, the intensification of emotional labor, the lack of emotional support and the difficulty of constructing psychological contract. Thirdly, on the basis of summarizing the coping differences of different workers, according to the labor process theory, this paper sorts out the measures and obstacles for platform workers to deal with labor control through personal action and collective action. Finally, this paper puts forward the future research direction of the psychological impact of on-demand service platform on workers, including the construction of multiple psychological contracts for platform workers.

延长哀伤障碍的诊断评估与治疗研究进展

熊婉婷¹ 吴和鸣¹ 陈静² (通讯作者)

1 中国地质大学(武汉)心理科学与健康研究中心, 武汉, 430074

2 中国地质大学(武汉)附属武汉心理医院, 武汉, 430012, 455093481@qq.com

摘要 延长哀伤障碍是一种由挚爱的亲人去世引发的病理性哀伤反应, 即丧亲发生6个月后, 丧亲者对逝者长期持久的哀伤, 表现为内疚、愤怒、难以接受死亡、情感麻木、社交回避和退缩等不同的哀伤反应, 这些反应与其所处的文化习俗和宗教传统不相符; 此外, 个体还伴随着剧烈的情感痛苦, 导致社会功能严重受损。本文首先简要回顾了延长哀伤障碍的概念提出及后续发展, 哀伤最先从抑郁当中独立出来, 病理性的哀伤反应开始受到广泛关注, 延长哀伤障碍作为目前最普遍使用的术语之一, 更具有总结性。随后, 本文综述了延长哀伤障碍独立的诊断标准和评估工具, 发现它们都经历了从零散到统一的发展过程, 本文还讨论了不同诊断系统之间的区别与联系, 及其各自的适应性和效用性, 无论是从临床效用还是国际适应性来说, 延长哀伤障碍及其诊断标准都是更具优势的。接下来, 本文对延长哀伤障碍的治疗方法的理论思考和实证研究进行了探讨, 治疗方法有药物治疗和心理治疗, 其中心理治疗包括个体形式和团体形式, 主要以认知行为流派的核心思想为理论指导, 辅以心理动力学疗法。最后, 本文指出, 未来研究应从以下几个方面推进: 1、在循证基础上统一延长哀伤障碍的概念定义与诊断标准, 致力于解决相关争议, 提出标准化的概念界定及一系列诊断指南, 为临床诊断提供依据; 2、诊断评估的跨文化适用性, 结合我国文化和宗教背景探索更具适应性的评估工具; 3、开发和完善治疗方法, 增加其他理论流派在治疗延长哀伤障碍中的应用, 关注个体差异, 提高疗法的普适性和特异性, 或与其他新的技术相结合。

Prolonged Grief Disorder: Diagnostic, Assessment, and Treatment

Xiong Wanting¹, Wu Heming¹, Chen Jing²

1 Research Center for Psychological and Health Sciences, China University of Geosciences, Wuhan, 430074

2 Wuhan Psychological Hospital, China University of Geosciences, Wuhan, 430012

Abstract: Prolonged grief disorder is a kind of pathological grief reaction caused by loved ones died, the loss occurred after six months, the bereaved of the long lasting sorrow, characterized by guilt, anger, difficult to accept death, emotional numbness, social avoidance. These reactions are not consistent of their culture and customs; In addition, individuals are also accompanied by intense emotional pain, resulting in severe impairment of social

functioning. This paper briefly reviewed the concept of prolonged grief disorder and its subsequent development. Grief was first separated from depression, and pathologic grief began to receive widespread attention. Prolonged grief disorder, as one of the most commonly used terms at present, is more summative. Next, we reviewed the independent diagnostic criteria and assessment tools for prolonged grief disorder, and found that they have all experienced the development process from scattered to unified. We also discussed the differences and connections between different diagnostic systems, as well as their adaptability and effectiveness. Prolonged grief disorder and its diagnostic criteria are more advantageous, both clinically and internationally. Then, we discussed the theoretical thinking and empirical research on the treatment methods of prolonged grief disorder. The treatment includes drug therapy and psychotherapy. The psychotherapy includes individual form and group form, which is mainly guided by cognitive behavior therapy and supplemented by psychodynamic therapy. Finally, this paper points out that future research should be carried out in the following aspects: 1. The concept definition and diagnostic criteria of grief disorder should be extended on an evidence-based basis, and relevant disputes should be resolved. A standardized definition and a series of diagnostic guidelines should be proposed to provide a basis for clinical diagnosis; 2. Cross-cultural applicability of diagnostic assessment, exploring more adaptive assessment tools combined with Chinese cultural and religious background; 3. Develop and improve therapeutic methods, increase the application of other theoretical schools in the treatment of prolonged grief disorder, pay attention to individual differences, improve the universality and specificity of therapy, or combine with other new technologies.

企业行为对核电公众接受度影响初探

徐中^{1,2} 马剑虹¹

1 浙江大学心理与行为科学系, 杭州, 310028, xvzhongsf@126.com

2 中核核电运行管理有限公司, 浙江海盐, 314300

摘要 核电作为一种清洁能源受到广泛重视, 然而日本福岛事故以来, 国内核电行业发展因公众接受度低受到限制, “邻避”现象显著。国内外以往研究指出信任、公众认知、风险感知、收益感知等因素能够影响核电公众接受度, 而这些研究成果对核电企业的指导性不足, 核电企业在公众沟通过程中不能识别出能够改善公众接受度的信息, 更无法开展针对性的优化。企业社会责任理论认为, 消费者愿意给履行社会责任较多的企业以更多的支持。

本研究基于 Carroll 的分类, 将企业社会责任分为四种类型: 经济责任、法律责任、伦理责任和慈善责任, 使用 Maignan 消费者支持社会责任企业意愿量表, 并征求核电公众沟通领域专家意见, 扩展为 21 个题项, 测量公众对核电企业社会责任履行的感知; 以 McAllister 认知与情感信任量表、Slovic 风险感知量表、RijnsoeverFJV 公众认知量表以及国内相关研究成果为基础, 编制了核电公众接受度量表。以秦山核电站周边公众为样本, 共收回有效问卷 211 份, 使用 SPSS 软件进行信效度分析后, 得出公众对核电企业社会责任履行的认知分为法律责任、经济与道德责任两个维度, 核电公众接受度分为信任、公众认知、恐慌风险感知、未知风险感知、收益感知、支持度六个维度。以修正后的量表为依据, 制作了与法律责任、经济与道德责任两个维度相对应的测试视频, 对被试在观看不同视频前后各维度测量结果进行比较。结果显示核电企业履行社会责任对核电公众接受度有正向影响, 其中履行经济与道德责任对核电公众接受度影响更显著。

A Preliminary Study on the Influence of Corporate Behavior on Public Acceptance of Nuclear Power

Xu Zhong^{1,2}, Ma Jianhong¹

1 Department of Psychology and Behavioral Science, Zhejiang University, Hangzhou, 310028

2 CNNP Nuclear Power Operation Management Co. Ltd, Haiyan Zhejiang, 314300

Abstract: As a clean energy, nuclear power has been widely valued. However, since the Fukushima accident in Japan, the development of nuclear power industry has been restricted due to the low public acceptance, and the phenomenon of "NIMBY" is remarkable. Previous studies have shown that trust, public cognition, risk perception, benefit perception can influence public acceptance of nuclear power. But these research results can't guide nuclear power corporate locate helpful information, or carry out targeted optimization. According to the theory of corporate social responsibility, consumers are willing to give more support to enterprises that fulfill more social responsibilities.

Based on the classification of Carroll, this study divided CSR into four types: economic responsibility, legal responsibility, ethical responsibility and charitable responsibility, used Consumers' Perceptions of Corporate Social Responsibilities scale by Maignan, and expanded it to 21 items according experts's opinions, measured public perception of nuclear power corporate social responsibility. Based on McAllister's affect-and-cognition-based trust scale, Slovic's Risk perception Scale, RijnsoeverFJV's public cognition scale and relevant research results, a scale of public acceptance of nuclear power has been prepared. Around Qinshan NPP, a total of 211 effective questionnaires were taken back, which were analysed by SPSS, It is concluded that the public perception of CSR can be divided into two dimensions: legal responsibility, economic and moral responsibility, and the public acceptance of nuclear power can be divided into six dimensions: trust, public perception, panic risk perception, unknown risk perception, benefit perception and support. Based on the revised scale, 2 test videos corresponding to the two dimensions of CSR were produced, and the measurement results of each dimension before and after watching different videos were compared. The results show that the SCR of nuclear power corporate has a positive impact on the public acceptance of nuclear power, and the economic and moral responsibility has a more significant impact on the public acceptance of nuclear power.

摘 要 目的: 探究医学生心理弹性在人格特质与应对方式关系中的中介作用。方法: 随机抽样法抽取福建省某医学院校 432 名大学生作为研究样本, 使用《Connor-Davidson 心理弹性量表中文版》, 《简易应对方式量表》和《中国大五人格问卷简式版》进行施测, 回收问卷并使用 SPSS 进行数据分析。结果: (1) 在医学生人格特质方面, 男生在严谨性和宜人性维度上得分显著低于女生($t=-3.04, P<0.05$)($t=-5.55, P<0.05$)。 (2) 在应对方式倾向上, 男生显著低于女生 ($t=-3.88, P<0.05$)。 (3) 人格特质、应对方式和心理弹性三者两两相关, 人格特质中神经质分维度与应对方式和心理弹性呈现显著负相关, 宜人性、严谨性、外向性和开放性分维度都与应对方式和心理弹性呈现显著正相关。 (4) 人格特质分维度中的严谨性、外向性、开放性显著正向预测心理弹性 ($t=9.03, 6.64, 7.50, P<0.05$), 神经质显著负向预测心理弹性 ($t=5.73, P<0.05$); 人格特质分维度中的宜人性和严谨性正向预测应对方式倾向 ($t=6.49, 4.80, P<0.05$), 神经质负向预测应对方式倾向 ($t=-6.391, P<0.05$); 心理弹性正向预测应对方式倾向 ($t=10.47, P<0.05$)。 (5) 心理弹性在医学生人格特质和应对方式之间起到显著的部分中介作用, 中介效应为 0.29, 占总效应 49.63%。结论: 医学生人格特质方面, 女生相比男生更容易对他人表现出的同情心和人文关怀, 在大学生活中, 女生也更擅于制定任务和目标、遵守规范和纪律等行为。在应对方式倾向上, 女生相比于男生更容易采取积极应对方式。神经质得分较高的个体其心理弹性较低, 应对方式倾向较为消极。宜人性和严谨性得分较高的个体其心理弹性较高, 应对方式倾向也较为积极。此外, 心理弹性在医学生人格特质和应对方式之间起到显著的部分中介作用。即不同程度的人格特质能直接对应对方式倾向产生影响, 也能通过心理弹性间接影响应对方式倾向。

The Mediating effect of mental resilience on personality traits and coping styles of medical students

XU Jiabin¹, Jiang Qin¹, Liao Meiling¹

¹ School of Health, Fujian Medical University, Fuzhou, China 350122

Abstract: **Objective:** To explore the mediating role of psychological resilience in the relationship between personality traits and coping style of medical students. **Methods:** a total of 432 college students from a medical college in Fujian province were selected as samples by random sampling. The connor-Davidson Resilience Scale (Chinese Version), The Simple Coping Style Scale (SIMPLE Version) and the Big Five Personality Questionnaire (Chinese Version) were used for testing. Questionnaires were collected and data were analyzed by SPSS. **Results:** (1) in the personality traits of medical students, male students scored significantly lower than female students in the dimensions of conscientiousness and agreeableness ($t = -3.04, P < 0.05$)($t = -5.55, P < 0.05$).(2) In terms of coping style tendency, boys were significantly lower than girls ($t = -3.88, P < 0.05$).(3) Personality traits, coping style and mental resilience were correlated in pairs. Neuroticism was negatively correlated with coping style and mental resilience, and agreeableness, conscientiousness, extraversion and openness were positively correlated with coping style and mental resilience.(4) Conscientiousness, extraversion and openness in personality traits significantly positively predicted resilience ($t = 9.03, 6.64, 7.50, P < 0.05$), and neuroticism significantly negatively predicted resilience ($t = 5.73, P < 0.05$). Agreeableness and conscientiousness positively predicted the tendency of coping style ($t = 6.49, 4.80, P < 0.05$), and neuroticism negatively predicted the tendency of coping style ($t = -6.391, P < 0.05$). Mental resilience positively predicted coping style tendency ($t = 10.47, P < 0.05$).(5) Mental resilience played a significant part of the mediating role between personality traits and coping styles of medical students, with the mediating effect of 0.29, accounting for 49.63% of the total effect. **Conclusions:** Female medical students are more likely than male medical students to show empathy and humanistic care for others. In college life, female medical students are better at setting tasks and goals, and observing norms and disciplines. In terms of coping style tendency, girls are more likely to adopt positive coping style than boys. Individuals with higher scores for neuroticism tend to have lower mental resilience and more negative coping styles. Individuals with higher scores of agreeableness and conscientiousness have higher mental resilience and more positive coping styles. In addition, mental resilience plays a significant partially mediating role between personality traits and coping styles of medical students. In other words, different degrees of personality traits can directly affect the coping style tendency, and also indirectly affect the coping style tendency through mental resilience.

Keywords: Mental resilience, personality traits, coping style

我国女性孕早期至孕晚期抑郁的发展轨迹研究

闫盼盼¹ 刘晓宇¹ 徐继红² (通讯作者)

¹ 潍坊医学院心理学院, 山东 潍坊 261053

² 国家卫生健康委科学技术研究所, 北京, 100081, gracexjh@163.com

摘要 目的: 探讨我国女性从孕早期至孕晚期抑郁的发展轨迹。**方法:** 2019年8月至2020年6月, 采用连续纳入和方便取样的方法, 通过自编孕产妇心理健康在线调查系统在北京、江苏、湖南、四川、山东等多家三甲医院对2485名孕妇进行纵向追踪调查。SPSS24.0用于数据存储与描述性分析, Mplus8.3用于构建潜变量增长曲线模型与潜变量增长混合模型。**结果:** 共有531名孕妇完成了孕早、中、晚期三个时间点的调查, 其中孕期抑郁的检出率分别为孕早期31.6%、孕中期23.9%、孕晚期25.6%。潜变量增长曲线模型的结果显示, 孕妇初始抑郁水平存在显著的个体差异(截距因子(α)的均值为10.77, $p < 0.001$; 方差为5.95, $p < 0.001$)。抑郁在整个孕期呈现从孕早期到孕晚期逐渐降低的线性特征, 平均每次测量下降0.48, 但孕妇之间的变化速度不存在显著差异(斜率因子(β)均值为-0.48, $p < 0.001$; 方差为0.13, $p = 0.811$)。根据相关指标将孕期抑郁发展轨迹分为三个潜在类别组:C1 正常缓解组(67.3%)、C2 抑郁风险组(28.5%)与C3 抑郁高危组(4.1%)。

3 个组别的抑郁发展轨迹均存在显著的时间效应：C1 组呈现出从孕早期到孕晚期逐渐降低的趋势；C2 组呈现出从孕早期到孕晚期平稳升高的趋势；C3 组呈现出从孕早期到孕晚期显著升高的趋势。**结论：**孕期抑郁的发展变化具有显著的群体异质性，应针对孕期抑郁不同的发展轨迹开展有效的干预。

A study on the trajectory of depression in Chinese women from early to late pregnancy

YAN Panpan¹, LIU Xiaoyu¹, XU Jihong²

1 School of Psychology, Weifang Medical University, Weifang, China

2 National Research Institute for Family Planning, Beijing, China

Abstract: Objective: To explore the developmental trajectory of depressive symptoms in Chinese women from early to late pregnancy. **Methods:** A longitudinal follow-up survey of 2485 pregnant women was conducted in several tertiary hospitals in China from August 2019 to June 2020 using a continuous inclusion and convenience sampling method through a self-administered online maternal mental health survey system. SPSS24.0 was used for data storage and descriptive analysis, and Mplus8.3 was used to construct Latent Growth Curve Models and Latent Growth Mixture Models. **Results:** A total of 531 pregnant women completed the survey at three time points: early pregnancy, mid pregnancy and late pregnancy. The detection rates of depression were 31.6% in early pregnancy, 23.9% in mid-pregnancy and 25.6% in late pregnancy. The results of the latent variable growth curve model showed that there were significant individual differences in the initial depression levels of pregnant women (Means: Intercept (α) = 10.77, $p < 0.001$; Variance: Intercept (α) = 5.95, $p < 0.001$). Depression exhibited a linear pattern of gradual decrease from early to late pregnancy, with an average decrease of 0.48 per measurement, but the change rate did not differ significantly between pregnant women (Means: Slope (β) = -0.48, $p < 0.001$; Variance: Slope (β) = 0.13, $p = 0.811$). The trajectory of depression during pregnancy was divided into three potential groups based on relevant indicators: C1 normal remission group (67.3%), C2 depression risk group (28.5%) and C3 depression high risk group (4.1%). There was a significant temporal effect in all three groups: the C1 group showed a gradual decrease from early to late pregnancy; the C2 group showed a steady increase from early to late pregnancy; and the C3 group showed a significant increase from early to late pregnancy. **Conclusion:** The development of depressive symptoms during pregnancy is significantly group heterogeneous, and effective interventions should be carried out to address the different developmental trajectories of depressive symptoms during pregnancy.

同步 TMS-EEG 揭示背外侧前额叶 rTMS 调控疼痛和感觉皮层的神经可塑性

叶扬^{1,2} 车先伟^{1,2}

1 杭州师范大学心理科学研究院，杭州，311121

2 杭州师范大学认知与脑疾病研究中心，杭州，311121, xianwei.che@hznu.edu.cn

摘要 背外侧前额叶（DLPFC）是重复经颅磁刺激（rTMS）镇痛的一个重要刺激靶点。但现有证据表明 DLPFC-rTMS 难以产生持久地镇痛效应。优化 rTMS 镇痛作用的一个突破口是了解其镇痛机制。但现有研究中使用的神经探测手段（即同步 TMS-EMG）仅能观测到运动皮层的神经可塑性变化，这一点极大地制约了前额叶及其他高级皮层的神经可塑性研究。因此，本研究采用同步 TMS-EEG 这一新型的神经探测手段，探索 DLPFC-rTMS 镇痛效应的神经可塑性机制。

本研究为控制组交叉设计，如图一所示，34 名健康成人志愿者分别在两个时间点（间隔>72h，随机顺序）接受单试次 DLPFC-rTMS（10 Hz, 1500 脉冲）或控制组（Sham）干预（伦理编号：20201218）。在每一次干预前后志愿者分别接受冷痛刺激。研究者使用同步 TMS-EEG 对刺激前后前额叶神经的可塑性进行测量。

ANOVA 表明了疼痛的时间主效应, 即 rTMS 和 Sham 刺激均提升了疼痛阈限 ($P_{\text{Bonf}} = 0.037$)。但两者表现出不同的趋势, 经过配对样本 t 检验, 表明 rTMS 组疼痛阈限的提升具有显著性 ($P = 0.024$) 而在 Sham 组未发现显著变化 (图一)。分析 TMS-EEG 数据, 发现了 N45, P60, N120, P200 这些稳定的 TEP 峰值, 这与之前的研究保持一致 (图二)。TMS-EEG 数据也表明, DLPFC 干预增强了刺激部位对侧前额叶的神经活性 (N120), 以及抑制了疼痛诱发部位对侧脑区感觉运动皮层的活动 (N120) (图三)。相关分析表明 N120 时间窗内出现的神经活动具有高度负性相关 (图三), 存在同步活动的可能性。进一步的脑网络分析结果表明, 在 gamma 频段内, 前额叶与中央顶叶 (感觉皮层) 之间存在显著的连接 (图四)。值得注意的是, 这些神经可塑性改变是 DLPFC-rTMS 刺激独有的, 而并不能被 Sham 刺激调控。

本研究采用了新型的神经探测技术探索 DLPFC-rTMS 镇痛的神经可塑性机制。结果表明, DLPFC-rTMS 能够有效调节前额叶的神经可塑性, 并进而在 gamma 频段内调控前额叶与中央顶叶之间疼痛加工的脑网络连接, 从而调节对疼痛的感受性。这些结果将为优化 DLPFC-rTMS 的镇痛效应提供实证基础和指导方向。

Concurrent TMS-EEG to reveal prefrontal rTMS in the modulation of pain experience and somatosensory neuroplasticity

Yang Ye^{1,2}, Xianwei Che^{1,2}

1 Institute of psychological science, Hangzhou Normal University, Hangzhou

2 Cognitive and brain disease research center, Hangzhou Normal University, Hangzhou

Abstract: The dorsolateral prefrontal cortex (DLPFC) is an important target for repetitive transcranial magnetic stimulation (rTMS) to reduce pain. However, DLPFC-rTMS tends to be unable to induce long-lasting analgesia, in which understanding its mechanisms of action bears the significance to optimise DLPFC-rTMS analgesia in clinical settings. Concurrent TMS-EEG is able to reveal the neuroplastic changes beyond the motor cortex, such as the prefrontal cortex. This study was therefore designed to investigate prefrontal plastic changes associated with DLPFC-rTMS analgesia.

This study was a cross-over, sham-controlled design. A group of 34 healthy participants received a single trial of DLPFC-rTMS (10 Hz, 1500 pulses) or control group (sham) intervention at two time points (interval > 72h, two groups were randomly arranged, Ethics Code: 20201218). In each experiment, volunteers were required to experience 5 °C cold water before and after the intervention to induce pain. Synchronous transcranial magnetic stimulation and electroencephalogram (TMS-EEG) were used to measure the pain perception and neural plasticity of prefrontal cortex at baseline and after the intervention.

ANOVA showed the main time effect of pain threshold, which indicated DLPFC and sham stimulation both increased the pain threshold ($P_{\text{Bonf}} = 0.037$), however, they showed different trends. Paired sample t-test showed that the pain threshold in rTMS group was significantly increased ($P = 0.024$), but not in sham group (Fig. 1). By analysing TMS-EEG data, we found stable TEP peaks of N45, P60, N120 and P200, which was consistent with previous studies (Fig. 2). TMS-EEG data also showed that DLPFC intervention enhanced the neural activity (N120) of the contralateral prefrontal lobe, and inhibited the activity of the sensorimotor cortex on the opposite side of the pain evoked site (N120) (Fig. 3). Correlation analysis showed that different neural activities in N120 time window were highly negatively correlated (Fig. 3), and there might be synchronous activities. Further brain network analysis showed that there was a significant connection between the prefrontal lobe and the central parietal lobe (sensory cortex) in the gamma band (Fig. 4). It was worth noting that these changes in neural plasticity were unique to DLPFC-rTMS stimulation and cannot be modulated by sham stimulation.

In this study, a novel neural detection technique was used to explore the neural plasticity mechanism of DLPFC-rTMS analgesia. The results showed that DLPFC-rTMS can effectively modulated the neural plasticity of prefrontal lobe, and then regulated the brain network connectivity of pain processing between prefrontal lobe and central parietal lobe in gamma band, so as to regulate the perception of pain. These results will provide an empirical

basis and direction for optimizing the analgesic effect of DLPFC-rTMS.

父母心理控制与担忧的关系：核心自我评价与无法忍受不确定性的链式中介作用

叶媛媛¹ 徐华春¹（通讯作者）

¹ 四川师范大学心理学院，成都，610011，通讯作者邮箱：seanxu1981@163.com

摘要 随着社会竞争的日趋激烈，大学生来自多方面的压力，而这些压力会引发个体的担忧。担忧是种常见的心理过程，是个体对不确定性事件顾虑的一种认知方式，担忧本身是导致个体焦虑的关键因素，过度的和无法控制的担忧是 GAD（一般广泛性焦虑）的一个主要症状。家庭微系统是发展生态学模型中最基础的分析单位，家庭教养方式对子女的成长发展至关重要，过高的父母心理控制会影响个体的心理健康和问题行为的产生。本研究通过探讨父母心理控制与担忧的关系，以及核心自我评价与无法忍受不确定性在其中的作用，为学校和社会开展心理工作提供参考依据，促进青少年心理健康发展。采用父母心理控制、担忧，以及核心自我评价与无法忍受不确定性量表对 739 名大学生进行调查。结果表明：（1）父母心理控制与担忧在性别上存在显著差异，核心自我评价与担忧在独生子女上存在显著差异，核心自我评价在年级上存在显著差异。（2）父母心理控制与无法忍受不确定性、担忧呈显著正相关，父母心理控制与核心自我评价呈显著负相关，核心自我评价与无法忍受不确定性、担忧呈显著负相关，无法忍受不确定性与担忧呈显著正相关。（3）核心自我评价与无法忍受不确定性在父母心理控制与担忧之间起显著的中介作用。具体为三条中介路径：一是核心自我评价的单独中介作用；二是无法忍受不确定性的单独中介作用；三是核心自我评价与无法忍受不确定性的链式中介作用。

关键词 父母心理控制，担忧，核心自我评价，无法忍受不确定性

The Effect of Parental Psychological Control on Worry: The Chain Mediating Role of Core Self-evaluation and Intolerance of Uncertainty

YE Yuanyuan¹, Xu Hua-Chun¹

¹ School of Psychology, Sichuan Normal University, Chengdu, China

Abstract: With the increasingly fierce social competition, college students are under pressure from many aspects, and these pressures will cause individual worries. Worry is a common psychological process, it is a cognitive way for individuals to worry about uncertain events. Worry is a key factor leading to anxiety. Excessive and uncontrollable worry is a major symptom of GAD (Generalized anxiety disorder). The family microsystem is the most basic analysis unit in the ecological model of human development. The family parenting style is very important to the growth and development of children. Excessive parental psychological control will affect individual mental health and problem behavior. This present study aimed to explore the relationship among parental psychological control, core self-evaluation, intolerance of uncertainty and worry, so as to provide a reference for schools and society to carry out psychological work and promote the mental health of adolescents. 739 colleges completed Parental Psychological Control Scale, Worry Scale, and Core Self-Evaluation Scale and Intolerance of Uncertainty Scale-12. The results showed that: (1) There are significant differences in parental psychological control and worry on gender, significant differences in core self-evaluation and worry on the only child, and significant differences in core self-evaluation on grade. (2) Parental psychological control was significantly positively correlated with intolerance of uncertainty and worry, parental psychological control was significantly negatively correlated with core self-evaluation, core self-evaluation was significantly negatively correlated with intolerance of uncertainty and worry, and intolerance of uncertainty was significantly positively correlated with worry. (3) Core self-evaluation and intolerance of uncertainty played significant mediating roles between parental psychological control and worry. Specifically, there were three paths that parental psychological control to influence worry: one was the mediating role of core self-evaluation; the

second was the mediating role of intolerance of uncertainty; the third was the chain-mediated role of both core self-evaluation and intolerance of uncertainty.

Keywords: parental psychological control, worry, core self-evaluation, intolerance of uncertainty

互联网时代下的多元心理契约：背景、特点、测量方法与未来方向

殷恬静 刘世勇 边晓宁 武泰民 杨琴（通讯作者）

中国地质大学（武汉）心理科学与健康研究中心，武汉，430074，qinyang@cug.edu.cn

摘要 绝大部分关于工作组织中心理契约的研究都是从员工-雇主二元关系的视角探讨心理契约在工作组织中的作用，而忽视了工作关系中的其他主体在心理契约中扮演的角色。在移动网络和数字技术的推动下，数字零工经济下的应用程序工作快速发展。在应用程序工作中，由于工作需要多方协调共同完成，心理契约不再局限于员工与组织之间，工作关系中的其他主体，如顾客、供应商等也会形成相应的心理契约，由此呈现出多元心理契约的状态。将心理契约的概念从员工-组织关系的狭窄领域中解放出来，从多元视角对工作中的心理契约进行研究，对于心理契约概念在互联网时代背景下的工作情境中的适用性至关重要。鉴于其对理论和实践发展的重要性，近年来，部分研究开始从多元视角或以应用程序工作为背景来研究心理契约，也有少量研究将这两种视角相结合。然而，从整体来看，相关研究仍较少，对于应用程序工作中多元心理契约的认识还不够清晰。本文在系统的回顾和梳理相关研究的基础上，从应用程序工作中多元心理契约产生的背景、特点及测量方法三个角度出发，对多元心理契约进行探讨。最后，从影响多元心理契约的因素、多元心理契约的相互性，多元心理契约的动态变化以及多元心理契约的激励作用四个方面讨论了多元心理契约的未来研究方向。

Multi-party psychological contract in the Internet Age: background, characteristics, measurement approach and future direction

Yin Tianjing, Liu Shiyong, Bian Xiaoning, Wu Taimin, Yang Qin

Research Center for Psychological and Health Sciences, China University of Geosciences

Abstract: Most studies on psychological contract in work organization discuss the role of psychological contract from the perspective of employee-employer dual relationship, while ignoring the role of other subjects in work relationship in psychological contract. Driven by the mobile network and digital technology, the application work under the digital part-time economy is developing rapidly. In the application work, because the work needs to be coordinated by many parties, the psychological contract is no longer limited to the relationship between employees and organizations, and other subjects in the working relationship, such as customers and suppliers, will also form corresponding psychological contracts, thus showing the state of multi-party psychological contract. Emancipating the concept of psychological contract from the narrow field of employee-organization relationship and studying the psychological contract from multiple perspectives is very important for the applicability of the concept of psychological contract in the work situation under the background of the Internet age. In view of its importance to the development of theory and practice, in recent years, some studies began to study psychological contract from multiple perspectives or in the context of application work, and a few studies combined these two perspectives. However, on the whole, there are still few relevant studies, and the understanding of multi-party psychological contract in application work is not clear enough. Based on the systematic review and combing of relevant research, this paper discusses the multi-party psychological contract from three perspectives: the background, characteristics and measurement methods of multi-party psychological contract in application work. Finally, the future research direction of multi-party psychological contract is discussed from four aspects: the factors affecting multi-party psychological contract, the interaction of multi-party psychological contract, the dynamic changes of multi-party psychological contract and the incentive effect of multi-party psychological contract.

共情回避的现象、机制及影响因素

尹娜 张莹 朱旭（通讯作者）

华中师范大学心理学院，武汉，430079，xzhu@ccnu.edu.cn

摘要 共情回避指人们在可以选择共情与否时，倾向于选择不共情的现象。本研究通过 3 项实验对共情回避现象、心理机制及其影响因素进行了系统研究。实验 1 采用共情选择任务范式（被试在共情任务和描述任务中二选一）考察是否存在共情回避现象，以及共情回避是否受情绪效价影响。结果发现，共情选择比例显著低于 0.5，消极图片和积极图片的共情比例无显著差异，即确实存在共情回避现象，并且此现象与情绪效价无关。实验 2 基于自我损耗的理论框架，采用双任务范式（任务一为共情选择任务，任务二为 Stroop 任务）对共情回避现象进行机制探讨。结果发现，相较于对照组（描述任务组），共情任务组的努力分数更高，即需要被试投入更多努力，消耗更多心理资源。实验 3 考察反馈类型和专业认同对新手咨询师共情选择的影响。结果发现，积极反馈和高专业认同均能促进新手咨询师的共情选择，但对于低专业认同的新手咨询师而言，无论积极反馈还是消极反馈都不能促进其共情选择。本研究结果表明，存在共情回避现象，其原因可能是共情会消耗更多心理资源；对新手咨询师而言，积极反馈和高专业认同可以减少共情回避。

关键词 共情回避，自我损耗，专业认同，新手咨询师

Empathy Avoidance: Phenomenon, Mechanisms and Influencing Factors

YIN Na, ZHANG Ying, ZHU Xu

School of Psychology in Central China Normal University, Wuhan, 430079

Abstract: Empathy avoidance refers to a phenomenon that individuals are more reluctant to engage in empathy when there are alternatives. The current research investigated this phenomenon, further systematically examined its psychological mechanisms and influencing factors through three studies. Specifically, study 1 examined whether the phenomenon of empathic avoidance existed and whether it was affected by the valence of emotion using the paradigm of empathic choice task, in which participants were required to make choice between the task of empathy and description. The results showed that the ratio of empathic choice was significantly lower than 0.5, however, there was no significant difference of empathic choice between negative and positive pictures. That is, the phenomenon of empathy avoidance existed, but it was not influenced by the valence of emotion. Based on framework of ego-depletion, Study 2 explored the mechanisms of empathy avoidance with a dual-task paradigm, in which task 1 was also the empathic choice task, and task 2 was Stroop task. Then we found that empathic task required more mental resources in experimental group compared to control group, with higher scores in efforts of participants in experimental group. Study 3 examined the effects of feedback and professional identity on empathic choice of novice counselors, of which the results showed that both two variables could make influence on empathic choice, but feedbacks did not influence empathic choice of counselors with low professional identity. In conclusion, empathy avoidance does exist, which may result from the consumption of more mental resources for empathy, but positive feedback and robust higher professional identity could release this avoidance of novice counselors.

Keywords: empathy avoidance, ego-depletion, professional identity, novice counselor

短时正念训练对不确定性决策的影响

袁港轩¹ 郑书欣¹ 钟明天^{1,2} (通讯作者)

¹ 华南师范大学心理学院心理应用研究中心, 广州, 510631

² 华南师范大学脑认知与教育科学教育部重点实验室, 广州, 510631, ztomorrow@126.com

摘要 不确定性决策 (decision-making under uncertainty) 是日常生活中常见的决策类型, 可分为风险决策 (decision-making under risk) 和模糊决策 (decision-making under ambiguity)。以往的研究发现正念对决策存在一定影响, 但以往研究较少聚焦于正念对不确定性决策的影响, 且也未细分正念对风险决策与模糊决策的具体作用。因此, 本研究拟探究正念训练对不确定性决策亚型的具体影响。本研究共招募无正念经验的在校大学生 99 名 (男生 32 名, 女生 67 名, 平均年龄 20.01 ± 1.66 岁), 分别随机进入实验组和两个控制组, 三组在性别组成与平均年龄上无显著性差异。实验组使用短时正念呼吸训练, 两个控制组分别使用腹式呼吸训练和中性音频。采用五因素正念量表 (Five-facet Mindfulness Questionnaire, FFMQ) 测量干预前特质性正念水平、骰子任务 (Game of Dice Task, GDT) 测查风险决策、爱荷华博弈任务 (Iowa Gambling Task, IGT) 测查模糊决策。使用单因素方差分析比较三组被试人口学变量及量表得分差异; 使用 3 (组别: 正念呼吸组、腹式呼吸组、中性音频组) $\times$ 2 (干预: 前测、后测) 重复测量方差分析比较三组被试在决策任务中干预前后的表现差异; 以爱荷华博弈任务前后测净得分之差为因变量, 并将任务试次平均分为 5 段, 使用 3 (组别: 正念呼吸组、腹式呼吸组、中性音频组) $\times$ 5 (分段: block 1、block 2、block 3、block 4、block 5) 重复测量设计方差分析进行分段比较, 考察模糊决策中个体的表现变化差异。结果发现: (1) 三组被试在人口学变量及五因素正念量表得分上无显著差异, 排除被试本身特质影响; (2) 风险决策任务中, 组间差异、干预主效应以及交互作用不显著; (3) 模糊决策中, 组间差异、干预主效应以及交互作用均显著 ($p < 0.05$), 正念呼吸组在训练后的决策表现明显提升, 两个控制组的前后测差异则均不显著; (4) 模糊决策分段比较中, 组间差异显著 ($p < 0.05$), 正念呼吸组随着任务进行表现越来越好, 且各段得分均显著高于另外两组。本研究表明短时正念训练可以显著提升个体模糊决策的表现, 而对风险决策则不存在提升效应; 正念训练可能是通过提高个体从反馈中学习的能力进而改善个体的模糊决策表现。

关键词 正念训练, 风险决策, 模糊决策

Effects of Brief Mindfulness Training on Decision-making Under Uncertainty

YUAN Gangxuan¹, ZHENG Shuxin¹, ZHONG Mingtian^{1,2}

¹ Center for Studies of Psychological Application, South China Normal University, Guangzhou 510631, China

² Key Laboratory of Brain, Cognition and Education Sciences, South China Normal University, Ministry of Education, Guangzhou 510631, China

Abstract: As one of decision-making type, decision-making under uncertainty includes decision-making under risk and decision-making under ambiguity. Previous studies have found that mindfulness has certain effects on decision-making, while which seldom focused on the effect of mindfulness on decision-making under uncertainty and didn't separate the specific effects on decision-making under risk and ambiguity. Therefore, this study aimed to examine the specific effect of mindfulness training on different subtypes of decision-making under uncertainty. A total of 99 college students (32 males and 67 females, $M_{age} = 20.01 \pm 1.66$) without experience in mindfulness were recruited and divided into three groups randomly. There were no significant differences in gender and age among the three groups. A brief mindfulness breathing training was used in the experimental group, while abdominal breathing and neutral audio tape were used in the two control groups, respectively. The Five-facet Mindfulness Questionnaire (FFMQ) was used to examine trait mindfulness before intervention, Game of Dice Task (GDT) was performed to assess the decision-making under risk, and Iowa Gambling Task (IGT) was used to test the decision-making under ambiguity. The group differences in the demographic variables and scores of FFMQ were conducted with One-way

ANOVA. The 3 (groups: mindfulness breathing, abdominal breathing, neutral audio tape) $\times$ 2 (interventions: pretest, posttest) repeat measure ANOVA was conducted to examine task differences in performance (pre and after the intervention). The 3 (groups: mindfulness breathing, abdominal breathing, neutral audio tape) $\times$ 5 (blocks: block 1, block 2, block 3, block 4, block 5) repeat measure ANOVA was performed to further explore the task differences in performance changes in decision-making under ambiguity. Results showed that: (1) there were no significant group differences in demographic variables and FFMQ scores; (2) in decision-making under risk, none of the group difference, the main effect of intervention, and the interaction were significant; (3) in decision-making under ambiguity, the group difference, the main effect of intervention, and the interaction were significant ($p < 0.05$), mindfulness training did improve individual performance

摘要 寻路行为是一种对多个事物进行空间知觉整合的复杂空间认知过程, 且空间认知领域的研究发现, 视角会影响对客体的空间感知, 因此不同视角状态下的寻路行为会因个体对事物空间知觉变化进而产生差异。本研究旨在探讨多视角因素对寻路行为的影响。采用实验法研究在立体空间中的不同视角是否会对客体事物形成不同的认知, 进而影响寻路绩效。在此基础上进行问卷调查, 以探究个体在不同视角的室内寻路实验后, 寻路策略是否具有性别差异。结果表明: 在反应时分析中, 男性在地图程度控制组的反应时显著慢于时间控制组, 女性在时间控制组的反应时边缘显著的慢于程度控制组; 女性反应时边缘显著地慢于男性; 0°视角反应时显著慢于 15°, 30°视角反应时边缘显著的慢于 15°。在正确率分析中, 女性正确率显著高于男性; 时间控制组的正确率显著高于程度控制组; 30°视角正确率显著高于 15°与 0°; 男性在程度控制组的正确率高于时间控制组; 女性在时间控制组的正确率显著高于程度控制组; 女性在 30°视角下的正确率显著高于 15°与 0°; 在时间控制组中, 30°视角的正确率显著高于 0°与 15°; 在程度控制组中, 15°视角的正确率显著高于 0°, 边缘显著高于 30°; 30°视角下的正确率显著高于平视 0°。男性在室内寻路中的定向维度上优于女性。结论: 性别、地图学习程度、视角因素对寻路行为产生了影响。

The influence of multi-perspective factors on pathfinding behavior

Anmeng Zhang

Shaanxi Normal University, Xi'an

Abstract: Pathfinding behavior is a complex spatial cognitive process that integrates spatial perception of multiple objects, and studies in the field of spatial cognition have found that perspective can affect the spatial perception of objects, so the pathfinding behavior in different perspective states will be different due to the change of spatial perception of objects. The purpose of this study was to investigate the effects of multiple perspectives on pathfinding behavior. The experimental method is used to study whether different perspectives in the three-dimensional space will form different cognition of objects, and then affect the pathfinding performance. On this basis, a questionnaire survey was conducted to explore whether there were gender differences in wayfinding strategies after indoor wayfinding experiments from different perspectives. The results showed that: in response time analysis, the response time of men in map degree control group was significantly slower than that of time control group, and the response time of women in time control group was significantly slower than that of degree control group. The edge response of female was significantly slower than that of male. The reaction time of 0° Angle was significantly slower than that of 15°, and the reaction time of 30° Angle was significantly slower than that of 15°. In accuracy analysis, female accuracy was significantly higher than male accuracy. The accuracy of time control group was significantly higher than that of degree control group. The accuracy of 30° Angle was significantly higher than that of 15° and 0°. The correct rate of male in degree control group was higher than that in time control group. The accuracy of females in the time control

group was significantly higher than that in the degree control group. The correct rate of females under 30° was significantly higher than that under 15° and 0°. In the time control group, the accuracy of 30° viewing Angle was significantly higher than that of 0° and 15°. In the degree control group, the accuracy of 15° Angle was significantly higher than that of 0°, and the edge was significantly higher than that of 30°. The accuracy of 30° visual Angle was significantly higher than that of 0° visual Angle. Men are better than women in the directional dimension of indoor pathfinding. Conclusion: Gender, map learning level and perspective have an impact on pathfinding behavior.

Keywords: multiple perspectives, way-finding behavior Indoor, routing strategy

孤独症（自闭症）谱系障碍儿童父母教养行为量表修订及信效度检验

张畅¹ 周婷²

1 北京大学医学心理系, 北京, 100191

2 北京大学医学心理系, 北京, 100191, zhouting.92@bjmu.edu.cn

摘要 背景: 父母教养是影响孤独症（自闭症）谱系障碍（ASD）儿童社会功能发展和社会适应的重要因素。目前对 ASD 儿童的教养研究主要集中于教养压力, 对教养行为的关注相对较少。Van Leeuwen 等人编制的孤独症（自闭症）谱系障碍儿童父母教养行为量表（PBS-A, Parental Behavior Scale-ASD）是针对 ASD 儿童养育者群体开发的教养行为的有效评估工具。该量表对我国 ASD 儿童父母群体的适用性尚有待检验。**目的:** 本研究旨在对 PBS-A 进行本土化修订,使其适用于测量我国 ASD 儿童父母的教养行为, 并对修订后的量表进行信效度检验。**方法:** 采用方便抽样, 选取 416 名 2 岁-7 岁 ASD 儿童父母(样本 1)为被试, 使用中文版 PBS-A 施测, 采用探索性因素分析对量表结构进行探索。在间隔 1 月后选取其中 105 人(样本 2)进行重测, 检验重测信度。采用样本 3 (N=91), 施测父母养育方式量表(PBI, Parental Bonding Instrument)、Alabama 教养问卷父母版(APQ, Parental Global Report Form of the Alabama Parenting Questionnaire)和中文版 PBS-A, 分别以 PBI 和 APQ 中的积极养育维度和消极养育维度作为校标变量, 检验中文版 PBS-A 相关分量表的校标效度。**结果:** 根据探索性因素分析结果, 删除 11 个低载荷或多重载荷的条目。修订后的量表包括 41 个条目, 分为积极教养、纪律与惩罚、规则、物质奖励、工具辅助、促进问题解决思维和促进社会情绪识别七个因子。其中, 积极教养、规则和物质奖励三个维度与原量表基本一致, 原量表的纪律与严酷惩罚两个维度合并为一个维度, 命名为纪律与惩罚, 原量表的刺激发展维度被拆分为促进问题解决思维和促进社会情绪识别两个维度, 原量表的适应环境维度被保留了 3 个条目, 命名为工具辅助。其中, 后三个维度为针对 ASD 儿童的特有教养维度。七因子的累计方差解释率为 55.69%, 总量表的内部一致性系数为 0.88, 各分量表的内部一致性系数在 0.63-0.87 之间。总量表的重测信度系数为 0.76, 各分量表的重测信度系数在 0.52-0.82 之间。各分量表与 PBI 及 APQ 的相关维度的相关性在 0.41-0.77 之间。结论: 修订后的中文版孤独症（自闭症）谱系障碍儿童父母教养行为量表具有良好的信效度, 能够作为我国 ASD 儿童父母教养行为的有效测量工具。

Adaptation and Validation of the Parental Behavior Scale - ASD in Chinese Parents

Zhang Chang, Zhou Ting

Department of Medical Psychology, School of Health Humanities, Peking University

No. 38, Xueyuan Road, Haidian District, Beijing

Abstract: Background: Parenting is a key factor contributing to the social functioning of children with ASD. Previous research on parenting in families with children diagnosed as ASD focuses more on parenting stress and leaves parenting behaviors less examined. Parental Behavior Scale - ASD (PBS-A), developed by Van Leeuwen et al, is a valid measurement to assess parental behavior of ASD children's parents. The applicability of this scale to measure the parenting behaviors of ASD children's parents in China remains to be tested. Objective: The present study aims to revise the Parental Behaviour Scale - ASD in Chinese parents and test the reliability and validity on the

revised scale, Method: four hundred and sixteen parents (sample 1) of children with autism spectrum disorders aged between 2-7 years old completed the initial version of PBS-A. Exploratory factor analysis was applied to explore the structure of the scale in Chinese parents. A subsample of 105 parents (sample 2) filled out the questionnaire once again one month later to examine the test-retest reliability. The third sample comprised of 91 parents (sample 3) completed another two parenting measures, i.e, Parental Bonding Instrument (PBI) and Parental Global Report Form of the Alabama Parenting Questionnaire (APQ) in addition to PBS-A to examine the criterion-related validity. Results: Eleven items were removed because of low loading or multiple loading according to results of EFA. There were 41 items in Chinese version of Parental Behaviour Scale-ASD including seven factors, that is, positive parenting, harsh punishment and discipline, rules, material rewarding, tools-assisted parenting and promoting problem-solving thinking and promoting social emotions recognition. Positive parenting, rules and material rewarding sub-scale are basically consistent with the original scale. The two dimensions of discipline and harsh punishment merge into one dimension named discipline and punishment. Stimulating the development sub-scale is split into two sub-scales which are promoting problem-solving thinking and promoting social emotions recognition. One of the original PBS-A dimension, adapting the environment transforms into tools-assisted parenting sub-scale retaining 3 items of the adapting the environment sub-scale. The latter three dimensions were specific for children with ASD. The seven-factor structure explained 55.69% of the variance. The Cronbach's α of the total scale was 0.88 and the Cronbach's α s of the seven sub-scales ranged from 0.63 to 0.87. The test-retest reliability of the total scale was 0.76 and the coefficients were between 0.52 to 0.82 for the seven sub-scales. The correlations of dimensions in PBS-A and similar dimensions in PBI and APQ were between 0.41-0.76. Conclusion: The Chinese version of Parental Behaviour Scale - ASD for parents of children with ASD has good validity and reliability. It can be used to measure the parenting behaviors for ASD children's parents in future research.

Keywords: Autism spectrum disorders, parenting behaviors, reliability and validity

疫情背景下前瞻性应对和工作控制感对工作不安全感的影响

张蕊¹ 贾音¹ 侯志瑾¹ (通讯作者) 田青¹

¹ 北京师范大学心理学部, 北京, 100875

通讯作者 E-mail: zhijinhou@163.com

摘要 新冠疫情下, 员工承担许多压力, 其中定量的工作不安全感是最常经历的工作压力, 也是影响员工工作投入、心理健康的重要变量。但同在疫情下, 为什么有的员工压力应对的更好, 经历更少的工作不安全感, 有的员工则体验到更多的工作压力, 进而影响其身心健康? 根据压力的认知评价理论与前瞻性应对概念, 我们认为员工的前瞻性应对水平和工作控制感会影响员工在疫情下感知到的工作不安全感进而影响其心理健康(焦虑与抑郁)和工作投入。本研究通过对 455 名工作者进行问卷调查, 探讨在疫情下, 员工的前瞻性应对水平和工作控制感在评估工作不安全感中起到的调节作用。

目的: 调查工作者在疫情下感知到的定量的职业不安全感、心理健康水平(由抑郁和焦虑表示), 探讨前瞻性应对水平和工作控制感对疫情下员工感知到的工作不安全感的调节作用。**方法:** 本研究采用疫情因子量表、工作不安全感量表的定量工作不安全感维度、未来取向应对量表、认知评价量表的感知控制维度、工作投入量表、抑郁焦虑压力量表于 2021 年 5 月对 455 名工作者进行问卷调查, 并使用 SPSS 的 PROCESS 3.5 进行模型检验。**结果:** 前瞻性应对水平高且工作控制感高的员工在疫情下应对更好, 感知到更少的工作不安全感, 有更好的心理健康; 前瞻性应对水平高而工作控制感低的员工会感知到更多的工作不安全感。个体前瞻性应对水平和工作控制感的调节作用提醒我们可以通过提升工作者的前瞻性应对水平和工作控制感, 减少二者间的差距来减少工作者的工作不安全感。

The Influence of proactive Coping and Job Control on Job Insecurity in the COVID-19

Rui Zhang¹, Yin Jia¹, Zhijin Hou¹ (corresponding author), Qing Tian¹

¹ Department of Psychology, Beijing Normal University, Beijing, 100875,

E-mail: zhijinhou@163.com

Abstract: Under the COVID-19, employees in organizations often experience a lot of work pressure and job insecurity is one of them which affects mental health and work engagement. In the same situation, why do some employees cope with stress better and experience less job insecurity, while others experience more job stress? According to the cognitive appraisal theory of stress and the concept of proactive coping, we hypothesize that perceived control of job and proactive coping moderate employees' job insecurity under the COVID-19, and then affect their mental health (anxiety and depression) and work engagement. We tested this moderated mediation model with 482 employees. Using PROCESS macro 3.5 in SPSS to test the model.

Objective: To investigate the quantitative job insecurity, mental health (depression and anxiety) and work engagement perceived by workers under the COVID-19, and to explore the moderating effects of proactive coping level and job control on the quantitative job insecurity of workers under the COVID-19. **Methods:** This study is a part of "Mental Health Support Project against the COVID-19" (Project No.: 40061). In May 2021, 455 workers were investigated with COVID-19 factor scale, quantitative job insecurity dimension of job insecurity scale, perceived control dimension of future orientation coping scale, cognitive appraisal scale, work engagement scale, depression anxiety and stress scale, and tested with SPSS PROCESS 3.5. **Results:** Employees with higher proactive coping and higher job control cope better, feel less job insecurity and have better mental health. Employees with higher proactive coping and lower job control feel more job insecurity. This reminds us that we can reduce workers' job insecurity by improving workers' proactive coping and job control and reducing the gap between them.

基于微博大数据爬取的新冠疫情民众心理分析

张艺婷 常明（通讯作者）

陕西师范大学心理学院; 陕西省行为与认知神经科学重点实验室, 西安, 710062

通讯作者 E-mail: changming@snnu.edu.cn

摘要 自2019年12月31日国家卫健委专家抵达武汉正式介入调查起,“新型冠状病毒”一词逐渐进入民众视野,并长期占据民众心理资源。2020年1月20日,国家卫健委记者会上,钟南山首次证实新冠病毒存在“人传人”,民众心理开始恐慌。2020年1月23日上午10点,武汉“封城”,恐慌心理陡然上升。2月16日,国家卫健委称全国各地疫情防控效果已显现。至3月18日,武汉首次0新增确诊病例,给以武汉为焦点的疫情防控暂时画上句号。疫情期间,层出不穷的舆情事件一次又一次将民众情绪推向高潮。另外,疫情严峻化信息的心理传播使得大量民众出现焦虑,紧张,恐惧等情绪。了解疫情期间民众的心理走向对于社会舆情策略有着借鉴作用。而用户行为心理的全时程跟踪可以通过微博等社交应用来进行追踪,微博作为一个公开平台,有着丰富的用户数据可供研究。微博作为一个国民软件,活跃的使用者在微博留下当天的心情、行为等痕迹,可供研究者回溯。故爬取2019年12月31日到2020年3月18日微博关键字为“肺炎”和“新冠”等微博活跃独立用户相关微博全文。另对微博用户分为两类:武汉用户和全国用户。以比较武汉和全国用户的心理情绪和行为变化相似与不同。

收集来的微博全文文本数据均使用中国科学院心理研究所计算网络心理实验室开发的“文心”中文心理分析系统(TextMind)进行心理行为相关语言表达特征的提取。分析用户的心理特征。探究用户焦虑、紧张、恐惧、孤独等负性情绪何时因何增长或消弭。

探讨在新型冠状病毒造成的民众恐慌情绪肆虐的当时,民众的情绪情感有何规律。未来类似事件发生后,社交媒体应当以合适的方式引导民众了解疫情的严峻并听从官方指导并在合适的时间给民众吃定心丸,缓解紧张情绪,减少社会情绪骚动。

A Psychological analysis of the population of the neo-crown epidemic based on microblogging big data crawl

Zhang Yiting, ChangMing

School of Psychology, Shaanxi Normal University; Shaanxi Provincial Key Laboratory of Behavioral and Cognitive Neuroscience, Xi'an, 710062, China

Abstract: Since December 31, 2019, the National Health Commission experts arrived in Wuhan to formally intervene in the investigation, the term "new coronavirus" gradually entered the public's field of vision, and long-term occupation of the public psychological resources. 2020 January 20, the National Health Commission press conference, Zhong Nanshan first confirmed the existence of the new coronavirus "On January 23, 2020, at 10:00 a.m., Wuhan was "sealed off" and panic rose steeply. on February 16, the National Health Construction Commission said that the effect of prevention and control of the epidemic across the country had appeared. On March 18, for the first time, there were zero new confirmed cases in Wuhan, putting a temporary end to the epidemic control focusing on Wuhan. During the epidemic, the public sentiment was pushed to a climax again and again by the numerous public opinion events. In addition, the psychological dissemination of information about the severity of the epidemic caused a large number of people to become anxious, nervous, and fearful. Understanding the psychological trends of the public during the epidemic is useful for social opinion strategies. As a public platform, Weibo has a wealth of user data for research. As a national software, active users leave traces of their moods and behaviors on Weibo on that day, which can be retraced by the researcher. Therefore, we crawled the full text of microblogs from December 31, 2019 to March 18, 2020 with the keywords of "pneumonia" and "new crown" and other active independent users. The microblog users were divided into two categories: Wuhan users and national users. The data were used to compare the similarities and differences in the psychological and behavioral changes of Wuhan and national users.

The collected full text data were extracted using the "TextMind" Chinese psychological analysis system (TextMind) developed by the Laboratory of Computational Network Psychology, Institute of Psychology, Chinese Academy of Sciences. Analysis of users' psychological characteristics. To investigate when and why negative emotions such as anxiety, tension, fear, and loneliness grow or subside.

To explore what are the patterns of people's emotional feelings at the time of the rampant panic caused by the new coronavirus. After similar events in the future, social media should guide people in an appropriate way to understand the severity of the epidemic and follow official guidance and give them reassurance at the right time to ease tension and reduce social unrest.

童年期心理虐待和青少年非自杀性自伤： 非适应性认知情绪调节和心理困扰的中介作用

张瑜敏^{1,3} 林丽华¹(通讯作者) 张本钰² 廖美玲¹

1 福建医科大学健康学院, 福州, 350122, 通讯作者 E-mail: lihualin7778@163.com

2 福建师范大学心理学院, 福州, 350117

3 南京医科大学附属脑科院, 南京, 210029

摘 要 非自杀性自伤 (Non-suicidal Self-injury, NSSI, 以下简称自伤) 是指在没有明确自杀意图的情况下, 个体故意、直接、重复地伤害自己身体, 这种行为不被社会认同, 且不具致死性或致死性较低。自伤行为既

是一种心理病理行为，也是一个复杂的社会问题，常见于青少年群体。以往研究发现，个体早期不良经历（如童年期心理虐待）是引发自伤行为的早期不利处境诱因。相关理论和研究表明，消极的情绪调节及心理困扰直接或间接影响自伤行为的发生，在童年期心理虐待经历和自伤行为间扮演重要作用。因此，本研究希望通过考察青少年童年期心理虐待经历与自伤行为之间的关系，探讨非适应性认知情绪调节和心理困扰在两者间的作用机制。采用分层整群抽样方法，在福建省四所中学选取 2300 名中学生进行调查，回收有效问卷 1992 份，有效率为 86.61%。其中男生 955 名（47.94%），女生 1037 名（52.06%）；初中生 522 名（26.20%），高中生 1470（73.80%）。本次评估采用问卷调查的方法，通过 IBM SPSS Statistics 23.0 及 AMOS 24.0 进行数据分析，进行结构方程建模和中介效应检验。研究结果表明：①童年期心理虐待、非适应性认知情绪调节、心理困扰和自伤行为两两之间均呈显著正相关；②童年期心理虐待对青少年自伤行为具有直接预测作用；③心理困扰在童年期心理虐待和青少年自伤行为之间起部分中介作用；④非适应性认知情绪调节和心理困扰在童年期心理虐待和青少年自伤行为之间起链式中介作用。研究进一步揭示了非适应性认知情绪调节和心理困扰在童年期心理虐待和青少年自伤行为之间的作用机制，为今后相关话题探讨提供研究支持，也为青少年自伤行为干预和预防提供了理论依据。

Childhood Psychological Abuse and Non-suicidal Self-injury among Adolescents: the Mediating Effect of Negative Cognitive Emotion Regulation and Mental Problems

ZHANG Yu-min^{1,3}, LIN Li-hua¹(Correspondence), ZHANG Ben-yu², LIAO Mei-ling¹

1 School of Humanities, Fujian Medical University, Fuzhou 350122, China

2 School of Psychology, Fujian Normal University, Fuzhou 350117, China

3 Nanjing Brain Hospital Affiliated to Nanjing Medical University, Nanjing 210029, China

Abstract: Non-suicidal self-injury (NSSI) refers to a socially unacceptable behavior, that deliberately, directly, repeatedly destructs or alters body tissue in no or low lethality, without conscious suicidal intent. NSSI, being a psychopathological behavior, as well as a complex social problem, is common among adolescents. Previous studies have found that negative experiences in childhood, such as psychological abuse, are the early adverse circumstances that could induce to the occurrences of NSSI behaviors. Relevant theories and studies demonstrate that, negative cognitive emotion regulation and mental health problems had direct or indirect effects on NSSI behaviors in adolescents, and play an important role in the relationship between childhood psychological abuse and NSSI. Thus, this study aimed to investigate the relationship between childhood psychological abuse and NSSI in Chinese adolescents, and tried to explore the mechanism of negative cognitive emotion regulation and mental problem in the association between them. Using the stratified cluster sampling approach, a total of 2300 adolescents selected from four middle high schools in Fujian Province, China, and of 1992(86.61%) valid subjects collected. All of the 1992 participants were composed of 955 males(47.94%) and 1037 females(52.06%), 522 middle school students(26.20%), 1470 high school students(73.80%). Structural equation modeling and mediating effect testing were conducted using IBM SPSS Statistics 23.0 and AMOS 24.0 in this questionnaire survey. The results indicate that (1) positive correlations were conducted among all the variables; (2) childhood psychological abuse had a direct effect on NSSI behavior; (3) mental problem played a partial mediating role in childhood psychological abuse and NSSI behavior; (4) negative cognitive emotion regulation and mental problem act as a chain mediating effect between childhood psychological abuse and NSSI behavior. The study further revealed the mechanism of negative cognitive emotion regulation and mental problem in the association between childhood psychological abuse and NSSI behavior among adolescents, which provides research supports for future topic discussions, and also theoretical references for intervention and prevention of NSSI behaviors.

道德情绪唤起对大学生国家认同感的影响 ——以红色纪念馆为例

张月鸣¹ 王凌霄¹ 王博韬² 魏萍²

1 西安电子科技大学马克思主义学院, 西安, 710071

2 西安电子科技大学心理健康中心, 西安, 710071, 527516769@qq.com, pwei@xidian.edu.cn

摘 要 红色纪念馆是培养当代大学生国家认同感的重要载体与有效方式, 但各纪念馆在培养效果上却存在显著差异。为此, 本研究从红色纪念馆出发, 将道德情绪作为影响大学生国家认同感形成的核心变量, 以此探讨道德情绪对大学生国家认同感的提升作用。研究假设: 道德情绪唤起与大学生的国家认同感密切相关, 并在红色纪念馆对大学生的国家认同感培养中发挥出重要的作用。研究内容: 本研究由两个实验部分组成。实验一采用调查法, 对南京大屠杀等 15 个红色纪念馆的场馆信息陈设与来访者参观感受(道德情绪感受、国家认同感等)进行实地调研; 实验二采用实验室实验的方法, 以 120 名大学生为被试, 采用 3(道德情绪水平: 低、中、高)×2(时序: 前测、后测)的被试内实验设计, 对个体的国家认同感进行了测量。研究结果: (1) 不同红色纪念馆在对参观者的道德情绪和国家认同感唤起中存在显著差异; (2) 道德情绪强度与大学生的国家认同感存在显著正性相关; (3) 道德情绪在红色纪念馆对大学生国家认同感的培养过程中发挥着显著的中介作用。研究结论: 道德情绪是红色纪念馆对大学生国家认同感培养的重要影响因素, 加强红色纪念馆对大学生国家认同的培养作用, 应在内容设计与布展时, 更多的提升信息中所蕴含的道德情绪信息。

The Influence of Moral Emotional Arousal on College Students' Sense of National Identity

-- Take the Red Memorial Hall as an Example

ZHANG Yueming¹, WANG Lingxiao¹, WANG Botao², WEI Ping²

1 School of Marxism, Xidian University, Xi'an, 710071

2 Mental Health Center, Xidian University, Xi'an, 710071

Abstract: Red Memorial Hall is an important carrier and means to cultivate the sense of national identity of contemporary college students. However, they have significant differences in training effect. Therefore, the study starts from the Red Memorial Hall, taking moral emotions as the core variable to affect the formation of college students' national identity, so as to explore the effect of moral emotions on the enhancement of college students' sense of national identity. Research hypothesis: Moral emotional arousal is closely related to college students' sense of national identity, and plays an important role in the cultivation of college students' sense of national identity by Red Memorial Hall. Research Content: This study consists of two experimental parts. Experiment 1 adopts to survey method, conducting a field survey on the information and display of 15 Red Memorials Halls including the Nanjing Massacre and other Red Memorial Halls, and collecting visitors' experience (moral and emotional feelings, national identity, etc.). In Experiment 2, 120 college students are recruited to measure their sense of national identity with a 3 (moral emotional level: low, medium and high) × 2 (time sequence: front and back) internal experiment design. The results are as follows: (1) There are significant differences in moral emotions and national identity arousal among different Red Memorial Halls; (2) There is a significantly positive correlation between moral emotional intensity and college students' sense of national identity; (3) Moral emotions play a significant mediating role in the cultivation of college students' national identity by Red Memorial Hall. Research conclusion: Moral emotion is an important factor influencing the cultivation of college students' national identity by Red Memorial Hall. To strengthen the role of Red Memorial Hall in cultivating college students' national identity, designers should consider how to evoke moral emotions in the presentation of information when Red Memorial Halls are designed.

Keywords: moral emotion, red memorial hall, national identity of college students, moral education

家庭回避癌症沟通量表在乳腺癌患者中应用的信效度评价

张云雪¹ 解子惠¹ 李媛媛¹ 厉萍² (通讯作者)

1 山东大学齐鲁医学院护理与康复学院, 济南, 250012

2 山东大学齐鲁医学院护理与康复学院, 济南, 250012, pingli12@sdu.edu.cn

摘要 目的: 癌症背景下的家庭癌症相关沟通对于乳腺癌患者及家庭具有意义。然而目前国内鲜有研究来探讨乳腺癌患者家庭癌症相关沟通现状, 且缺乏特异性的测量工具。家庭回避癌症沟通量表(Family Avoidance of Communication about Cancer Scale, FACC) 条目简短, 易于理解, 在国外应用广泛, 具有较好的跨文化适用性。因此, 为了丰富家庭癌症相关沟通领域的研究, 给后续研究者提供可选择的评估工具, 本研究首次将 FACC 量表引入, 检验其在乳腺癌患者中的适用性, 以期家庭癌症相关沟通提供可靠、有效的测量工具。**方法:** 在征得原量表作者同意后, 对英文版 FACC 进行汉化。采用便利抽样的方法, 于 2020 年 4 月至 11 月选取山东省某三级甲等专科医院的乳腺癌患者进行问卷调查。本研究共回收有效问卷 824 份, 其中 784 份为初次测量数据, 40 份为研究对象二次填写的数据(且距离初次填写的时间间隔为 3 周), 用于重测信度检验。随机选取一半初次测量数据($n = 392$) 用来进行项目分析和探索性因子分析, 另一半($n = 392$) 用于验证性因子分析和信度检验。采用临界比值法和同质性检验来评价 FACC 中条目的鉴别度和同质性; 采用因子分析法检验 FACC 的结构效度; 采用 Cronbach α 系数和 Spearman-Brown 系数来评价 FACC 的内在信度; 采用 Pearson 相关系数计算出重测信度来评估 FACC 的外在信度。**结果:** 量表共 5 个条目, 其因子载荷均在 0.668~0.877 之间, 共提取了 1 个公因子, 累计方差贡献率为 64.164%; 单因子模型拟合良好(χ^2/df 、RMSEA、GFI、AGFI、CFI、IFI、TLI 分别为 2.301, 0.058, 0.988, 0.963, 0.992, 0.992, 0.983)。量表的 Cronbach α 系数为 0.843; Spearman-Brown 系数为 0.839; 重测信度为 0.682。**结论:** 中文版 FACC 的条目数量与原英文版相同, 且保留了原量表的单因素结构, 具有良好的信效度, 可用于测量乳腺癌患者家庭关于癌症沟通的状况。

Validity and Reliability of Chinese Version of Family Avoidance of Communication about Cancer Scale in Breast Cancer Patients

ZHANG Yunxue¹, XIE Zihui¹, LI Yuanyuan¹, LI Ping²(Corresponding author)

1 School of Nursing and Rehabilitation, Cheeloo College of Medicine, Shan Dong University, Jinan 250012, China

2. School of nursing, Cheeloo College of Medicine, Shan Dong University, Jinan, 250012, pingli12@sdu.edu.cn

Abstract: Objective: Cancer-related communication in the family has implications for breast cancer patients and their families. However, currently there are few domestic studies to explore the status of cancer-related communication in breast cancer patients, and a specific measurement tool is scarcely unavailable. Family Avoidance of Communication about Cancer Scale (FACC) with its brief and accessible entries is extensively applied abroad and shows good cross-cultural applicability. Therefore, in an effort to diversify the field of cancer-related communication and to provide an optional instrument for subsequent researches, our study introduces the FACC scale into China and to test its applicability in breast cancer patients, with a view to offering a reliable and valid tool for cancer-related communication. **Methods:** After translating the English version of FACC with the permission of the author of original English scale, a convenience sample were recruited in a tertiary A hospital in Shandong Province, from April 2020 to November 2020. A total of 824 valid completed questionnaires were collected in this survey, of which 784 were initial measurement data and 40 were retest data at 3-week intervals for the retest reliability test. Half of the initial measurement data ($n = 392$) were selected for item analysis and exploratory factor analysis, and the rest ($n = 392$) were used for confirmatory factor analysis and reliability test. The critical ratio and homogeneity test were used to verify the differentiation and homogeneity of the scale; construct validity was evaluated by factor analysis; and

Cronbach α coefficient, Spearman-Brown coefficient, and retest reliability were used to assess the reliability of the scale. **Results:** The scale consisted of 5 items with the factor loadings ranged from 0.668 to 0.877. A single-factor model was obtained with cumulative variance contribution of 64.164% and the model fitted well (χ^2/df , RMSEA, GFI, AGFI, CFI, IFI, TLI were 2.301, 0.058, 0.988, 0.963, 0.992, 0.992, 0.983, respectively). The Cronbach α coefficient of the scale was 0.843; the Spearman-Brown coefficient was 0.839; and the retest reliability was 0.682. **Conclusion:** The Chinese version of the FACC contains the same number of items as the original scale and retains the single-factor structure, which has good reliability and validity and could be used for measuring cancer-related communication in breast cancer patients.

大学生自尊与负性信息注意偏向的关系：负性自动思维的中介作用

张泽昆 张小敏 黄春花 郝晨雨 陈欣

河南大学教育科学学院，开封，455001，chenxinpsy@163.com

摘要 自尊是自我概念的核心，是个体对自我价值的评判、对自我能力的感知以及对整体自我的接纳。低自尊者对社会环境中的负性信息非常敏感，表现出负性注意偏向。此外，低自尊者通常具有较高的负性自动思维，对自身具有消极的认知评价。以往研究很少探讨自尊对自我概念有关负性信息（如：被拒绝、无能的等）注意偏向的影响及机制。因此，本研究探讨自尊对负性信息注意偏向的影响以及负性自动思维的中介作用。选取 167 名大学生（男=79）作为调查对象，采用二维自尊量表、自动思维问卷分别测量自尊、负性自动思维，空间线索任务测量注意偏向，实验程序为 2(线索条件：有效/无效) $\times$ 3(词语类型：低能力/低价值/中性) 的被试内设计。在控制性别条件下，以自尊总分为自变量、空间线索任务中的反应时为因变量，对负性自动思维的中介作用进行分析。结果发现：负性自动思维在自尊对有效线索条件下的低能力词注意偏向的影响中起完全中介作用，在自尊对无效线索条件下的低价值词注意偏向的影响中起完全中介作用。结果表明，自尊通过负性自动思维影响个体对低价值、低能力词汇的注意偏向。低自尊的个体负性自动思维越高，对低能力词越表现为注意回避，对低价值词越表现为注意脱离困难。结果揭示了自尊影响个体负性注意偏向的机制，有助于加深对低自尊个体心理健康的理解。

The relationship between self-esteem and negative information attention bias in college students: the mediating role of negative automatic thoughts

Zhang Zekun, Zhang Xiaomin, Huang Chunhua, Hao Chenyu, Chen xin

School of Education, Henan University, KaiFeng, 455001, chenxinpsy@163.com

Abstract: Self-esteem is the core of self-concept, which is the individual's judgment of self-worth, perception of self-ability, and acceptance of the entire self. People with low self-esteem are empathetic to negative information in the social environment and show negative attention bias. In addition, people with low self-esteem generally have higher negative automatic thoughts (NATs) and negative cognitive evaluations of themselves. Previous studies have seldom discussed the influence and mechanism of self-esteem on the attentional bias of self-concept-related negative information (such as rejection, incompetence, etc.). Therefore, this research explores the influence of self-esteem on the attention bias of negative information and the role of NATs. This study included 167 college students (male=79) as participants. Their self-esteem was measured using the Self-Liking/Self-Competence Scale (SLCS). The Automatic Thoughts Questionnaire (ATQ) was utilized to measure NATs. Attention bias was measured using the spatial clue task. The experimental procedure was 2 (cue conditions: valid/invalid) $\times$ 3 (word type: low ability/low value/neutral) in-subject design. Results showed that NATs mediated the relationship between self-esteem and the attention bias of

low-ability words under valid cues, and played a completely mediating role in the influence of self-esteem on the attention bias of low-value words under the invalid cues. These results provide evidence that self-esteem affects negative attentional bias through NATs. The higher the NATs of individuals with low self-esteem, the more they show attention avoidance to low-ability words, and the harder they show attention to escape from low-value words. The results reveal the mechanism between self-esteem and negative attentional bias, which helps to deepen the understanding of the mental health of individuals with low self-esteem.

² 陕西师范大学心理学院, 陕西西安, 710119, zhangyuan920@snnu.edu.cn

摘要 本研究基于 M-R 模型和 S-O-R 理论, 通过对现实休闲餐饮环境的深入分析, 探究餐饮环境中的社交属性对顾客消费意愿的影响及影响机制。通过在休闲餐饮环境中设置不同的桌椅布置形式来操纵环境的社交属性。使用自编问卷《社交属性评定问卷》来验证对社交属性操纵的有效性; 使用自编问卷《消费意愿问卷》来探究社交属性对群体消费意愿的影响及影响机制。结果发现, 所设置的 12 种环境的社交属性权重分数与预期基本一致; 建立了社交属性对消费意愿的影响的回归模型, 模型良好, 结果表明, 社交属性对消费意愿有显著正向影响, 即环境的社交属性值越高, 顾客的消费意愿越高。同时, 喜好度在社交属性对消费意愿的影响中起中介作用, 顾客对社交属性高的环境的喜好度越高, 其消费意愿越高。顾客对餐饮消费环境的情绪反应越积极, 越促进社交属性对消费意愿的影响; 相反, 若顾客对餐饮消费环境的情绪反应是消极的, 则减弱社交属性对消费意愿的影响; 顾客的情绪反应同时还调节喜好度对消费意愿的影响, 积极情绪起促进作用, 消极情绪则减弱影响。说明改变环境设置中的桌椅布置形式, 可有效操纵环境的社交属性; 环境的社交属性影响群体消费意愿, 群体对环境的喜好程度起中介作用, 同时, 群体对环境的情绪反应在其中起调节作用, 调节社交属性和喜好程度对消费意愿的影响。

在以往的研究中, 社交因素对消费意愿的影响中, 顾客对消费环境的喜好程度起中介作用。另外有研究表明, 顾客的情绪反应在环境因素对消费意愿的影响中起调节作用。基于以上分析, 本研究同时考虑社交因素、喜好程度、情绪反应对消费意愿的影响, 探究休闲餐饮环境中的社交属性对顾客消费意愿的影响, 能够进一步明确餐厅环境要素的作用, 在一定程度上帮助餐厅经营者更好地采取针对性措施进行环境设置。此外, 此前对餐厅环境要素的研究者大多来自设计行业, 本研究从心理学角度开展理论研究和实践分析, 研究角度新颖。

The Influence of Social Attributes in Environment on Consumption Intention

Bingbing Zhao¹, Yuan Zhang²

¹ College of Psychology, Shaanxi Normal University, Shaanxi Xi'an, 710119

² College of Psychology, Shaanxi Normal University, Shaanxi Xi'an, 710119,
zhangyuan920@snnu.edu.cn

Abstract: Based on the M-R model and S-O-R theory, through the in-depth analysis of the real leisure catering environment, this study explores the impact and influence mechanism of social attributes in the catering environment on customers' consumption intention. The social attributes of the environment are manipulated by setting different table and chair arrangements in the leisure catering environment. Using the self-made questionnaire "social attribute evaluation questionnaire" to verify the effectiveness of social attribute manipulation; The self-made questionnaire consumption intention questionnaire is used to explore the impact of social attributes on group consumption intention

and its mechanism. The results show that the social attribute weight scores of the 12 environments are basically consistent with the expectation; The regression model of the impact of social attributes on consumption intention is established. The model is good. The results show that social attributes have a significant positive impact on consumption intention, that is, the higher the social attribute value of the environment, the higher the customer's consumption intention. At the same time, preference plays an intermediary role in the impact of social attributes on consumption intention. The higher the customer's preference for the environment with high social attributes, the higher their consumption intention. The more positive customers' emotional response to the catering consumption environment, the more the impact of social attributes on consumption intention; On the contrary, if customers' emotional response to catering consumption environment is negative, the impact of social attributes on consumption intention will be weakened; At the same time, customers' emotional response also regulates the impact of preference on consumption intention. Positive emotions promote the impact, while negative emotions weaken the impact. Explain that changing the layout of tables and chairs in the environment setting can effectively manipulate the social attributes of the environment; The social attributes of the environment affect the group's consumption intention, and the group's preference for the environment plays an intermediary role. At the same time, the group's emotional response to the environment plays a regulatory role in regulating the impact of social attributes and preference on consumption intention.

In previous studies, in the influence of social factors on consumption intention, customers' preference for consumption environment plays an intermediary role. In addition, studies have shown that customers' emotional response plays a regulatory role in the impact of environmental factors on consumption intention. Based on the above analysis, this study also considers the impact of social factors, preference and emotional response on consumption intention, and explores the impact of social attributes in leisure catering environment on customers' consumption intention, which can further clarify the role of restaurant environmental elements and help restaurant operators better take targeted measures for environmental setting to a certain extent. In addition, most of the previous researchers on the environmental elements of restaurants came from the design industry. This study carried out theoretical research and practical analysis from the perspective of psychology.

正念对抑郁的影响：注意偏向和情绪调节的作用

赵方圆¹ 宫准¹（通讯作者）

¹ 青岛大学师范学院心理系，青岛，266000，通讯作者 E-mail: gongzhun2001@163.com

摘要 正念无论是在理论上还是经验上都与个体心理健康有关，被证实能够减轻压力、抑郁、焦虑等症状；负性信息注意偏向抑郁产生发展维持的重要因素之一，广泛存在于抑郁人群中。在情绪调节中，情绪调节策略使用越频繁的个体，其抑郁情绪出现的概率就越低。目前大量研究考察了正念与抑郁的关系，但少有研究探讨其背后的作用机制。本研究将注意偏向与情绪调节作为重要的中介变量和调节变量来探究正念对抑郁的影响。研究选取 600 名被试填写正念五因素量表（FFMQ）、贝克抑郁量表（BDI）、正性信息负性信息注意量表（APNI）、情绪调节量表（ERQ），结果表明：（1）正念水平、情绪调节、正性注意偏向与抑郁存在显著负相关，对抑郁具有负向预测作用。（2）负性注意偏向与抑郁呈显著正相关，对抑郁具有正向预测作用。（3）注意偏向在正念对抑郁的影响中具有中介作用。具体而言，正念可能会通过影响个体对于负性信息注意偏向来缓解抑郁。（4）情绪调节在正念、抑郁、注意偏向之间的中介模型中起到调节作用，即与情绪策略使用越频繁的个体相比，较少使用情绪调节策略的个体的注意偏向对抑郁的预测作用更加显著。本研究验证了正念、注意偏向、情绪调节与抑郁之间的关系及作用机制，对减少抑郁的发生具有一定的启示意义。

The Effect of Mindfulness on Depression: The Role of Attentional Bias and Emotional Regulation

Fangyuan Zhao¹, Zhun Gong¹(Corresponding author)

¹ Department of Psychology, Normal College, Qingdao University, Qingdao, 266000,

Corresponding author E-mail: gongzhun2001@163.com

Abstract: Mindfulness is related to individual mental health both theoretically and empirically. It has been proven to reduce symptoms such as stress, depression, and anxiety. Negative information attention bias is one of the important factors for the development and maintenance of depression, and it is widely present in depressed people. In emotion regulation, the more frequently uses emotion regulation strategies, the lower the probability of depression. At present, a large number of studies have investigated the relationship between mindfulness and depression, but few studies have explored the mechanism behind it. This study takes attentional bias and emotion regulation as important mediating and moderating variables to explore the impact of mindfulness on depression. The study selected 600 subjects to fill in the Five-factor Mindfulness Scale (FFMQ), Beck Depression Inventory (BDI), Attention Scale for Positive Information and Negative Information (APNI), and Emotion Regulation Scale (ERQ). The results showed that: (1) Mindfulness, emotion regulation, and positive attention bias are significantly negatively correlated with depression, and have a negative predictive effect on depression. (2) Negative attentional bias is significantly positively correlated with depression, and has a positive predictive effect on depression. (3) Attentional bias plays a mediating role in the influence of mindfulness on depression. Specifically, mindfulness may alleviate depression by influencing the individual's attention bias towards negative information. (4) Emotion regulation have a moderating effect in the mediating model between mindfulness, depression, and attention bias, that is, the attention bias of individuals who use emotion regulation strategies less predicts depression moderating effect is more significant. This study verifies the relationship and mechanism of mindfulness, attentional bias, emotion regulation and depression, and has certain enlightening significance for reducing the occurrence of depression.

海洛因戒断者的成瘾严重程度与其时间洞察力的关系

赵曼玉¹（通讯作者） 闫常虎

¹ 西北师范大学心理学院物质成瘾与康复研究所，兰州，730070，1120978579@qq.com

摘要 毒品成瘾者的持续吸毒行为给他们的生活和财产造成了巨大的损失，但是他们依然坚持这种吸毒行为。他们不顾吸毒行为给其未来造成的危害，而坚持立即满足自身的欲望，表现出目光短浅的行为，即他们的时间视角可能表现异常。海洛因戒断者的成瘾严重程度是否与其时间视角存在密切联系尚不清楚。本研究选自甘肃省某戒毒所机构的海洛因成瘾者 500 名，剔除无效问卷后，最终有效被试 352 名被纳入最后的统计分析，使用津巴多时间洞察力问卷和成瘾严重度量表探讨了海洛因成瘾者的时间洞察力与成瘾严重程度的关系，采用 spss22.0 对数据进行描述统计、相关分析和回归分析。结果发现：(1)海洛因戒断者的过去消极时间观得分最高，未来时间观得分最低；(2)海洛因戒断者的现在宿命观、现在享乐观、过去消极观均与海洛因戒断者的成瘾严重程度正相关，而未来时间观与海洛因戒断者成瘾严重程度呈负相关；进一步逐步多元线性回归显示，过去消极时间观显著正向预测海洛因戒断者的成瘾严重程度，未来时间观显著负向预测海洛因戒断者的成瘾严重程度。本研究提示海洛因戒断者对未来的时间视角较为短浅且其过去的时间视角较为消极，这可能预测了他们的成瘾严重程度，该结果可能为我国现阶段的戒毒工作提供一定的现实指导。

关键词 海洛因戒断者，时间洞察力，成瘾严重程度

Relationship between Addiction Severity and Time Insight of Heroin Abstiners

Zhao Manyu¹, Yan Changhu¹

¹ Institute of Substance Addiction and Rehabilitation, School of Psychology, Northwest Normal University, Lanzhou 730070, China. Corresponding author: Zhao Manyu, 1120978579@qq.com

Abstract: Drug addicts' continuous drug-taking behavior has caused great losses to their lives and property, but they still insist on this kind of drug-taking behavior. Despite the harm caused by drug abuse, they insist on satisfying their own desires immediately and show short-sighted behavior, that is, their time perspective may be abnormal. It is unclear whether the addiction severity of heroin abstiners is closely related to their time perspective. In this study, 500 heroin addicts from a drug rehabilitation center in Gansu province were selected, and 352 valid subjects were included in the final statistical analysis after the invalid questionnaires were eliminated. The relationship between heroin addicts' time insight and addiction severity was discussed by using zimbaro Time Insight Questionnaire and Addiction Severity Scale, and spss22.0 was used for descriptive statistics, correlation analysis and regression analysis. The results showed that: (1) heroin abstiners scored the highest in past negative time view and the lowest in future time view; (2) Heroin abstiners' present fatalism, present optimism and past negativity are positively correlated with heroin abstiners' addiction severity, while future time is negatively correlated with heroin abstiners' addiction severity. Further stepwise multiple linear regression showed that the past negative time view positively predicted the addiction severity of heroin abstiners, while the future time view negatively predicted the addiction severity of heroin abstiners. This study suggests that heroin abstiners have a short time perspective on the future and a negative time perspective on the past, which may predict the severity of their addiction, and the results may provide some practical guidance for the current drug rehabilitation work in China.

父亲协同教养与青少年攻击性行为的关系：父子依恋的中介作用

赵梦晗¹ 潘超¹ 朱长征² (通讯作者)

¹ 河南大学教育科学学院, 开封, 475004

² 河南大学教育科学学院心理与行为研究所, 开封, 475004, zcz0606@163.com

摘要 家庭系统理论认为, 家庭是由若干存在互动和相互依赖关系的子系统组成的, 其中夫妻系统、父母系统和亲子系统三大子系统之间相互影响。对于青少年群体来说, 家庭是教养的主要场所, 因此为了对青少年提供更好的教养环境, 需要将家庭各个系统整体纳入研究。作为父亲和丈夫, 需要处理好夫妻、父母和亲子关系, 一方面父亲对孩子的教养会影响孩子的成就感, 预测孩子的未来犯罪可能性, 另一方面父亲对于母亲抚育工作的协助可以减轻母亲教养的困难。因此协同教养观点认为父亲对于其他抚育者 (主要是母亲) 养育行为的支持或者破坏具有对于孩子和整个家庭具有重要作用。

本研究在家庭系统理论框架下, 为探讨父母系统中父亲协同教养行为和亲子系统中父子依恋水平对于青少年攻击性行为发展的影响, 构建了以父子依恋为中介的模型, 以期说明父子依恋在父亲协同教养行为对于青少年攻击性行为产生影响的过程中发挥的作用。使用问卷法抽取郑开地区五所中学共 2271 名中学生, 使用伍新春等人编制的父母协同教养问卷青少年评价版中的父亲卷、IPPA 和攻击性问卷, 根据父亲协同教养的四种不同行为 (一致、团结、冲突和贬低) 构建四个中介模型。

结果显示: (1) 不同年级的学生在攻击性、父子依恋和父亲协同教养上存在差异; (2) 父亲协同教养的一致行为和团结行为对于父子依恋有显著的正向预测作用, 对青少年攻击性有显著的负向预测作用; 冲突和贬低行为对于父子依恋有显著的负向预测作用, 对于青少年的攻击性有显著的正向预测作用; (3) 父子依恋在父亲的一致行为对于青少年攻击性产生影响的过程中起完全中介作用; (4) 父子依恋在父亲的冲突和贬低行为对青少年攻击性产生影响的过程中发挥部分中介的作用。

因此，随着年龄的增长，青少年对于父亲的疏离程度会逐渐增长，相比较初中生，高中生的父子依恋质量较低。在家庭中，父亲与母亲教养行为的一致性会通过影响父子依恋的水平最终反向预测青少年的攻击性水平。

关键词 家庭系统理论，父亲协同教养，攻击性，父子依恋

The relationship between Father Coparenting Behavior and Adolescent Aggressive Behaviors: the mediating effect of Father-Child Attachment

ZHAO Menghan, PAN Chao, ZHU Changzheng
Henan University, Kaifeng 475004

Abstract: According to family system theory, a family is composed of several subsystems that interact and depend on each other, among which the three subsystems, the husband and wife system, the parent system and the parent subsystem, influence each other. For teenagers, family is the main place of upbringing. Therefore, in order to provide a better upbringing environment for teenagers, it is necessary to integrate all family systems into the research. As fathers and husbands, they need to deal with the relationship between husband and wife, parents and parent-child. On the one hand, the father's upbringing will affect the child's sense of achievement and predict the possibility of the child's future crime; on the other hand, the father's assistance to the mother's upbringing can alleviate the difficulties of the mother's upbringing. Therefore, the collaborative parenting view holds that the father's support or destruction of the nurturing behaviors of other caregivers (mainly mothers) plays an important role for children and the whole family.

In the family system theory under the framework, this study to explore the father cooperative breeding behavior in the system and the subsystem of parent-child attachment level to the development of adolescent aggression, the influence of parent-child attachment to the mediation model is constructed, in order to illustrate parent-child attachment on father's cooperative breeding behavior influences for aggressive behavior of adolescents in the process of role. A total of 2,271 middle school students from five middle schools in Zhengkai area were selected by questionnaire method. The questionnaires of father, IPPA and aggression in the adolescent evaluation version of the questionnaire of parental cooperative parenting compiled by Wu Xinchun et al. were used to construct four mediation models according to four different behaviors of paternal cooperative parenting (conformity, solidarity, conflict and belligerence).

The results showed that : (1) there were differences in aggression, paternal attachment and paternal co-parenting among students of different grades; (2) The congruent behavior and solidarity behavior of paternal cooperative parenting had a significant positive predictive effect on paternal attachment, and a significant negative predictive effect on adolescent aggression; Conflict and belittling behavior had a significant negative predictive effect on parent-child attachment and a significant positive predictive effect on adolescent aggression. (3) Paternal attachment was a complete mediator in the relationship between paternal concordant behavior and adolescent aggression; (4) paternal attachment plays a partial mediating role in the influence of paternal conflict and belittling behavior on adolescent aggression.

Therefore, with the increase of age, the degree of alienation from their father will gradually increase. Compared with junior high school students, the quality of paternity attachment is lower in senior high school students. In the family, the congruence of parental and paternal rearing behaviors negatively predicted the level of adolescent aggression by affecting the level of paternal attachment.

目标出现率对自我面孔加工优势的影响

郑世秋 宁欣 康冠兰（通讯作者）

北京体育大学心理学院，北京，100084

通讯作者 email: kangguanlan_33@163.com

摘 要 自我面孔加工优势指的是，相比他人面孔，个体在识别自我面孔时表现更好。过往研究发现对自我面孔的加工会受到文化差异、社会威胁等诸多因素的影响。以往研究中目标面孔出现的概率通常是 50%，但实际生活中，目标出现的概率往往较低，比如安检时搜索危险物品、医学影像中搜索病灶等。本研究通过两个实验考察目标出现率和对目标出现的预期对自我面孔加工的影响。实验过程中，先呈现一张目标面孔（自我或陌生人面孔），随后呈现由 6 张不同面孔组成的圆形搜索集（可能包含目标面孔，也可能不包含目标面孔）。被试的任务是搜索目标面孔是否存在，并作相应的按键反应。搜索集中目标面孔出现的概率（低概率：10%，中概率：50%）在不同实验组中变化。实验 1 和实验 2 的区别在于：实验 1 中被试事先不知道目标面孔出现的概率；实验 2 中被试提前知道当前实验组的目标出现率。与已有的研究结果一致，本研究发现了经典的自我面孔加工优势效应，即在实验 1 和实验 2 中，相比陌生人面孔，目标为自我面孔时，漏报率更低、辨别力更强、报告标准更宽松、反应时更快；同时，发现了低目标出现率效应，即目标出现率低时，对目标的漏报率提高，虚惊率降低，报告标准更严格。更重要的是，对辨别力的分析发现，目标出现率和面孔的交互作用显著，主要表现为，低目标出现率相比中目标出现率条件下，自我面孔辨别力增强而陌生人面孔无差异，且该效应在实验 1 和实验 2 之间没有显著差异。综上，本研究结果表明，自我面孔的优势会受到目标出现率的影响，在低目标出现率下，自我面孔的辨别力增强，增强了自我面孔加工优势。

The Effect of Target Prevalence on Self-Face Advantage

Zheng shiqiu, Ning xin, Kang guanlan

School of Psychology, Beijing Sport University, Beijing 100084

kangguanlan_33@163.com

Abstract: People usually search self-face faster and better than others' faces, which is called "self-face advantage". Previous studies have shown that the self-face processing will be affected by many factors, such as cultural difference and social threat. The prevalence of the target face was always 50% in previous studies. However, people usually search for rare targets in daily life - for example, to detect dangerous goods in luggage or tumorous in radiographs. The current study was designed to investigate the effect of the target prevalence and prevalence expectation on the self-face processing through two experiments. In both experiments, a target face (self vs. other) was presented in advance. Then a search display consisted of six different faces along a circle was presented, which either included the target face or not. Participants were asked to search the target face (presence vs. absence), and pressed the corresponding key. The prevalence of target face (low: 10% vs. moderate: 50%) varied across different experimental blocks. The differences between two experiments were that participants were not told the prevalence in the current block in Experiment 1, while participants were told in advance in Experiment 2. In consistent with previous studies, the present study found a self-face advantage, i.e., there was a lower miss rate, a stronger sensitivity (d'), a lower report criterion and a shorter reaction time under the self-face condition than the other-face condition in both experiments. The results also showed a low-prevalence effect in both experiments, that is, when the prevalence was low, the miss rate increased, the false alarm rate decreased, and the report criterion became stricter. More importantly, a significant interaction effect on d' was observed between the face type and the target prevalence. Simple effect analysis showed that d' under the low prevalence condition was higher than under the moderate prevalence condition for the self-face, while no significant difference for the other-face. This effect was stable in the analysis combining Experiments 1 and 2, which was not influenced by the experiment groups. Overall, these results indicated that the self-face advantage was affected by the target prevalence. When the prevalence was low, the perceptual sensitivity of self-face was strengthened, and the self-face advantage was enhanced.

Keywords: self-face advantage, target prevalence, visual search paradigm, signal detection theory

边缘型人格障碍患者的身份紊乱与创伤后同一性重构

钟沁玥 黄满霞（通讯作者） 吴和鸣

中国地质大学（武汉）心理科学与健康研究中心

摘要 在临床诊断和理论研究中，身份紊乱都是边缘型人格障碍（BPD）的关键因素，并作为其他症状的基础。BPD 患者的身份紊乱总的来说包括三个部分：僵硬、消极的自我评价、不稳定、碎片化的自我感受以及不一致、不协调的自我体验，其特点表现在缺乏一致性和协调性而体验到空虚和痛苦的不连贯。BPD 患者的早期的不良经历包括：受虐、忽视、心理控制与父母的早期分离。这些早期经历是潜在创伤性的，与儿童的无组织依恋关系有关，变成儿童的内部工作模式，即僵化的早期不适应图式。当 BPD 患者遇到新的创伤事件时，僵化且不稳定的身份再次破碎。个体的同一性承诺的评价反馈出现问题，强迫个体重新进入到同一性探索的过程，面对和参与自我意义的重新构建，使同一性的形成过程变得更加复杂。有复杂型创伤的个体，其自我的功能就像一个有症状的自我，而症状来源于他的抵抗。这种控制和抵抗会让其陷入对创伤事件的反刍思维当中，在同一性探索的双循环模型中个体停留在探索承诺的阶段而无法认同承诺。在这种状态下，BPD 患者无法将创伤经历转化为连贯而有意义的叙述，由于自身的敏感性、对关系的不信任、面对创伤事件的战斗反应、对事件体验缺乏完整性等，BPD 患者的同一性整合和再次构建失败。在僵化的早期不适应图式背景下，BPD 患者只能采用自残自伤、破坏关系等方式来应对创伤事件。

Identity disturbance and post-traumatic identity destruction in patients with borderline personality disorder

Zhong Qinyue, Huang Manxia, Wu Heming

Research Center for Psychological and Health Sciences, China University of Geosciences

Abstract: In clinical diagnosis and theoretical research, identity disturbance is the key factor of borderline personality disorder (BPD) and the basis of other symptoms. The identity disturbance of BPD patients generally includes three parts: rigid and negative self-evaluation; unstable and fragmented self-feeling; inconsistent and uncoordinated self-experience, which is characterized by the lack of consistency and coherence and the experience of emptiness and painful incoherence. BPD patients have early adversities, including: abuse, neglect, psychological control and early separation of parents. These early adversities are potential traumatic, related to children's disorganized attachment, and become children's rigid early maladaptive schemas. When BPD patients encounter new traumatic events, their rigid and unstable identity is broken again. There are problems in the evaluation feedback of individual identity commitment, which forces individuals to re-enter the process of identity exploration, face the reconstruction of meaning-making, and disrupt the normative identity process. The identity construction of individuals with complex trauma is like a "symptomatic" self, and the symptoms come from his resistance. This kind of control and resistance will lead them to ruminate on traumatic events. In the dual-cycle model, individuals stay in the stage of exploring commitment and cannot identify with commitment. In this state, patients with BPD couldn't transform their traumatic experiences into coherent and meaningful narratives. Due to their own sensitivity, distrust of relationship, combat response to traumatic events, and lack of integrity of event experience, the identity integration and reconstruction of patients are defeated. In the context of rigid early maladaptive schemas, patients with BPD can only deal with trauma events by self-damaging self-abusing and relationship destruction.

自我效能视域下儿童游泳初学者恐水心理的研究

邹德卿¹

¹ 沈阳体育学院研究生部, 沈阳市, 110000, 1597262426@qq.com

摘 要 游泳运动是一项全身性运动, 对提高心肺功能, 缓解压力以及健身减肥有着显著效果, 因此受到了社会各界人士的热爱, 但是在初学者学习游泳的过程中常常出现对水恐惧、甚至是讨厌下水等的心理现象, 这严重影响了初学者学习游泳的效果与长期游泳锻炼爱好的养成, 基于此, 本文将在自我效能视域下探讨游泳初学者恐水心理的成因, 以期游泳初学者克服恐水心理及如何快速掌握游泳技术做出理论贡献。本文通过采用文献资料法、问卷调查法、教育实验法对嫩江县游泳馆培训班 100 名游泳初学者进行为期 2 周的调查研究并进行前测与后测, 分为自我效能教学组(实验组)与常规教学组(对照组), 每组各 50 人。研究结果表明:

(1) 通过对嫩江县游泳培训班 100 名游泳初学者的游泳初始水平、性格、兴趣爱好等的研究调查可知, 游泳初学者恐水心理的成因可分为内部因素与外部因素。内部因素如年龄、性格等问题, 由于年幼对外界环境的适应能力有限, 特别是惧怕水的浮力、害怕换气呛水以及心理易紧张等而造成的胆怯、惧怕心理; 对学习新鲜事物的能力有限, 由于儿童对游泳项目的学习多数是以家长为主导因素, 缺乏自主学习动机; 在学习过程中害怕失败, 缺乏自信心; 另外, 性格较为内向的儿童, 往往缺乏自信心, 表现出了较高的恐水心理。外部因素如教学方法、陌生的人际环境以及呼吸方式的改变等因素, 由于游泳培训班的教练没有经过良好的教师职业技能的培训, 虽然在游泳技术上较出色且取得了游泳社会指导员职业资格证书, 但是并不了解儿童的心理以及不能采用恰当的教学方式; 儿童在陌生的环境下, 要接触很多新的同学与教练, 难免会产生社交压力; 水中换气方式不同于我们在陆地上的换气方式, 难免会发生喝水、假呼吸甚至是呛水的现象。这些都是造成儿童恐水心理的重要成因。

(2) 前测结果表明, 实验组与对照组在游泳技术水平与恐水程度上差异不显著。后测结果表明, 与对照组相比, 实验组在游泳技术的提高与克服恐水心理的程度上明显优于对照组。

(3) 表扬教学法与熟悉水性教学法可快速建立儿童游泳初学者的自信心以克服恐水心理, 榜样教学法可有效提高儿童游泳初学者的游泳技术。

关键词 自我效能, 儿童游泳初学者, 恐水心理

A study on water phobia of children swimming beginners from the perspective of self efficacy

Zou Deqing¹

¹ Graduate Department of Shenyang Institute of physical education, Shenyang, 110000,
1597262426@qq.com

Abstract: Swimming is a whole-body exercise, which has a significant effect on improving cardiopulmonary function, relieving stress and weight loss. Therefore, it is loved by people from all walks of life. However, in the process of learning swimming for beginners, there are often psychological phenomena such as fear of water, even hate to go into the water, This has seriously affected the effect of beginners learning swimming and the cultivation of long-term swimming exercise hobby. Based on this, this paper will explore the causes of water phobia of beginners in the perspective of self-efficacy, in order to make a theoretical contribution for beginners to overcome water phobia and how to quickly master swimming skills. By using the methods of literature review, questionnaire survey and educational experiment, this paper investigates 100 swimming beginners in the training class of Nenjiang natatorium for two weeks, and carries out pre-test and post test. They are divided into self-efficacy teaching group (experimental group) and conventional teaching group (control group), with 50 students in each group. The results show that:

(1) The results are as follows: (1) through the investigation on the initial swimming level, personality and hobbies of 100 swimming beginners in the swimming training class of Nenjiang County, we can see that the causes of the water phobia of swimming beginners can be divided into internal factors and external factors. Internal factors such as age,

personality and so on, due to the limited adaptability of young people to the external environment, especially the fear of buoyancy of water, fear of choking the water by breathing, and psychological tension; The ability to learn new things is limited, because the majority of children's swimming learning is dominated by parents, lack of autonomous learning motivation; In the process of learning, they are afraid of failure and lack of self-confidence; In addition, introverted children often lack self-confidence and show high fear of water. External factors such as teaching methods, unfamiliar interpersonal environment and the change of breathing style, because the coaches of the swimming training class have not received good training of teachers' professional skills, although they are excellent in swimming technology and have obtained the professional certificate of swimming social instructor, they do not understand children's psychology and can not adopt appropriate teaching methods; In a strange environment, children have to contact many new classmates and coaches, which inevitably leads to social pressure; The way of breathing in water is different from our way of breathing on land. It is inevitable to drink water, fake breath or even choke water. These are the important causes of children's fear of water.

(2) The pre-test results showed that there was no significant difference between the experimental group and the control group in swimming skill level and water phobia degree. The results showed that, compared with the control group, the experimental group was significantly better than the control group in the improvement of swimming skills and the degree of overcoming the fear of water.

(3) Praise teaching method and familiar water-based teaching method can quickly establish the self-confidence of children swimming beginners to overcome the fear of water. The example teaching method can effectively improve the swimming technology of children swimming beginners.

Keywords: Self efficacy, children swimming beginners, water phobia

心理健康素养调节新冠疫情应激对心理健康的负面影响： 一项纵向研究

陈婧¹ 臧寅垠¹（通讯作者）

¹ 北京大学心理与认知科学学院和行为与心理健康北京市重点实验室，北京，100871

摘要 背景 心理健康素养是指有关心理障碍的知识、概念和观念，能够帮助人们识别、处理和预防心理疾病。作为提升国民心理健康的重要方面，心理健康素养在我国的研究却较为少见。然而，此次新型冠状病毒的爆发是研究心理健康素养在疫情相关应激源下如何影响民众心理健康的独特机会。

方法 本研究采用滚雪球式方便取样法，纵向调查了新型冠状病毒肺炎（COVID-19）下国内普通民众的心理健康状况，探究疫情相关应激源和心理健康素养对心理健康的预测作用。本研究采用自编新冠肺炎应激源调查表，自编新冠肺炎心理影响调查表，心理健康素养量表，PDS-5 创伤后诊断量表，以及中国短版健康焦虑量表，对 434 位国内普通民众进行了网络匿名问卷调查。新冠肺炎应激源测量时间为疫情爆发初期（2020 年 2 月），其他维度测量时间为国内疫情控制期（2020 年 5 月）。

结果 多元回归分析表明，疫情爆发初期的总应激源数量正向预测了疫情控制期被试的创伤后应激症状（PTSS）（ $\beta=.520, p<.001$ ），健康焦虑症状（ $\beta=.672, p<.05$ ）与被试感知的疫情带来的心理影响（ $\beta=.737, p<.005$ ）。而心理健康素养则负向预测 PTSD 症状（ $\beta=-.104, p<.001$ ），健康焦虑症状（ $\beta=-.148, p<.001$ ）与被试感知的疫情带来的心理影响（ $\beta=-.114, p<.001$ ）。此外，结果还表明心理健康素养在应激事件与 PTSD 症状（心理健康素养 $\times$ 应激事件 $=-.102, p<.001$ ）的关系中，以及应激事件对被试感知的疫情带来的心理影响（心理健康素养 $\times$ 应激事件 $=-.119, p<.001$ ）的关系中起到调节作用，即对于心理健康素养较高的个体，应激源的增加对于个体的创伤后应激症状与心理状况影响较小。

讨论 本研究表明，COVID-19 疫情下，中国普通民众的心理健康负担受到疫情相关应激事件与本身心理健康素养的影响，较高的心理健康素养可缓冲应激事件对民众心理健康的负面影响，提示提高心理健康素养

对于促进国民心理健康非常必要。

The Moderating Effect of Mental Health Literacy on the Relationship between COVID-19 Related Stressors and Psychological Health: A Longitudinal Study

Qiang Chen¹, Yinyin Zang^{1*}

¹ School of Psychological and Cognitive Sciences and Beijing Key Laboratory of Behavior and Mental Health, Peking University, Beijing, China, 100871

Abstract: Background: Mental health literacy refers to the knowledge, concepts, and beliefs about mental disorders which aid people to identify, manage and prevent mental illness. Although it is an important aspect of improving national mental health, mental health literacy has rarely been studied in China. Nevertheless, the COVID-19 outbreak is a unique opportunity to study how mental health literacy affects the mental health of people under epidemic related stressors. **Methods:** We assessed COVID-19 related stressors, mental health literacy, post-traumatic stress symptoms (PTSS), health anxiety, and perceived psychological impact during the COVID-19 pandemic, in 434 Chinese general public through an anonymous online survey. COVID-19 related stressors were measured during the initial period of the outbreak (February 2020), and other variables were assessed during the non-outbreak period in China (May 2020). **Results:** Multiple regression analysis showed that the number of total stressors in the early outbreak period positively predicted later PTSS ($\beta=.520, p<.001$), health anxiety ($\beta=.672, p<.05$) and perceived psychological impact ($B=.737, p<.005$), whereas mental health literacy was negatively associated PTSS ($\beta=-.104, p<.001$), health anxiety ($\beta=-.148, p<.001$) and perceived psychological impact ($\beta=-.114, p<.001$). Moreover, mental health literacy negatively moderated the association between the number of stressors and PTSS (mental health literacy $\times$ number of stressors $=-.102, p<.001$), as well as the association between the number of stressors and the perceived psychological impact (mental health literacy $\times$ number of stressors $=-.119, p<.001$), indicating that for participants with higher levels of mental health literacy, the increase of stressors has a relatively smaller effect on PTSS and psychological impact. **Discussion:** This study indicated that the experience of COVID-19 related stressors predicted the extent of mental health burden in the Chinese general public during this pandemic, and high levels of mental health literacy could alleviate this negative effect. These findings underline the necessity of improving mental health.

创造性问题解决中情绪性反馈对虚拟团队成员合作感知和行为投入的影响

程雪姣¹ 谢涵¹ 皮忠玲² 洪建中¹ (通讯作者)

¹ 华中师范大学心理学院, 武汉, 430000 通讯作者 jhong@mail.ccnu.edu.cn

摘要 虚拟团队顺应科技潮流产生, 因具有打破时空局限、克服产生式阻碍、增加成员适应性反应等优势, 在组织中创新情境中得到广泛应用。然而虚拟团队成员分散各地, 知识背景、价值观念以及行事风格各自独特, 团队信任难以建立, 成员在互动过程中的行为投入也难以控制, 因此如何提高虚拟团队创造性问题解决效果, 逐渐得到了研究者的关注。现有研究显示, 情绪性反馈作为促进任务表现的一种重要策略, 会对个体创造性任务体验和表现产生重要影响。然而, 在创造性问题解决过程中, 情绪性反馈与虚拟团队成员的合作感知(包括合作满意度、持续合作意愿和团队快速信任)和行为投入的关系及其作用机制仍不清晰。本研究采用电子头脑风暴技术, 通过在线聊天软件中的表情图像, 对情绪性反馈进行操纵, 创设积极、消极和中性三种情绪性反馈实验条件。招募不同专业背景大学生为研究对象, 随机组成以 5 人为单位的虚拟团队。每个团队需要在上述三种情绪性实验条件下通过在线交流工具, 协同完成一个创造性问题解决任务。研究结果表明:

(1) 相较于其他两组,接受积极情绪反馈的被试,体验到更强的积极情绪,以及报告出更高水平的合作满意度、继续合作意愿和团队快速信任。(2) 接受消极情绪反馈的被试,在合作任务中的行为投入水平显著高于其他两组。(3) 积极情绪仅在情绪性反馈和团队快速信任间发挥着部分中介作用。这些结果表明,情绪性反馈会对虚拟团队的成员合作感知和成员行为投入产生影响,其中,积极情绪反馈有助于促进虚拟团队成员间的合作感知,但消极情绪反馈更能促进虚拟团队成员在创造性问题解决任务中的行为投入。

1. School of Psychology, Central China Normal University, Wuhan, Hubei, China 430079;

2. Center for Teacher Professional Ability Development, Shaanxi Normal University, Xi'an, Shanxi, China 710062;

Abstract: Virtual teams are widely used in innovation for its unique advantages, like free from time and distance constraints, overcome production blocking and increase adaptive response. However, it's difficult to build team trust and control the interaction process, because the members of the virtual team are from different regions, background, and values. Therefore, how to improve the creative problem-solving effect of virtual team has gradually attracted researchers' attention. Current studies suggest that emotional feedback may be used to support individuals' task performance and process experience. It is worth noting, however, how emotional feedback affects the cooperation perceptions and behavior engagement of virtual team in creative problem-solving is unclear. Using electronic brainstorming, three emotional feedback conditions were created by manipulating different special emoticons. All the groups were asked to discuss an open-ended realistic problem using online software, during which the display of emotion in feedback varied (positive vs. negative vs. no emotion). As expected, the results showed that participants received positive emotion feedback reported that they have experienced higher levels of pleasantness, cooperation satisfaction and stronger willingness to continue cooperative during the task; however, in contrast to our expectations, those under negative emotion condition showed significantly higher level of behavioral engagement on the group task. Positive emotion mediated the relation between perceived level of feedback emotion and team swift trust. These results suggest that emotional feedback enhances cooperative perception and behavior engagement of virtual team in creative problem-solving from different perspectives.

融合中医药文化的“五位一体”心理健康教育工作站路径研究

方勇^{1,2} 胡慧² 林惠平² 范翠英¹ (通讯作者) 熊丽莎² 魏欣然²

1 华中师范大学心理学院, 武汉, 430079

2 湖北中医药大学护理学院, 武汉, 430065

摘要 心理健康教育是提高大学生心理素质、促进其身心健康和谐发展的教育,是高校人才培养体系的重要组成部分。有条件的高校,要建立相对独立的有特色的院(系)二级心理健康教育工作站。本研究首先分析了融合中医药文化的心理健康教育工作站建设的意义:学校层面,在弘扬优秀传统文化的同时,可以完善“学校-院系-班级-寝室”四级大学生心理健康网络体系;学院层面,可以推动心理健康教育工作重心由面向少数学生的危机干预转向面向全体学生的发展性辅导和健康教育;个人层面,可以提升师生文化素养,滋养师生心灵。本研究从文化心理学的视角梳理了中医药文化与心理健康教育工作的契合性,有“天人合一”整体观、“治未病”辨证思维、“五行藏象”学说等。本研究最后根据中医药五行文化提出了“五位一体”心理健康教育工作站的建设路径:融合“金”文化,注重专业队伍建设,使心理育人有力度;融合“木”文化,注重标准课堂教育,

使心理育人有高度；融合“水”文化，注重寝室文化建设，使心理育人有深度；融合“火”文化，注重开展品牌活动，使心理育人有温度；融合“土”文化，注重培养学生志趣，使心理育人有厚度。后续研究拟从实证的角度来考察这种心理健康教育工作站建设的意义。

Research on Construction Path of "Five-in-One" Mental Health Education Workstation Integrating Traditional Chinese Medicine Culture

Fang Yong^{1,2}, Hu Hui², LinHuiping², Fan Cuiying¹(Corresponding author),
Xiong Lisha², Wei Xinran²

1 School of Psychology, Central China Normal University, Wuhan 430079

2 School of Nursing, Hubei University of Chinese Medicine, Wuhan 430065

Abstract: The purpose of mental health education is to improve the psychological quality of college students and promote their physical and mental health and harmonious development. Mental health education is an important part of the university personnel training system. Universities with conditions should establish relatively independent and characteristic secondary mental health education workstations of colleges and departments. This study first analyzed the significance of the construction of mental health education workstation integrating Traditional Chinese Medicine (TCM) culture. At the school level, while carrying forward the excellent traditional culture, it can improve the "School-Academy-Class-Dormitory" four-level college students' mental health network system; At the academy level, the focus of mental health education can be shifted from crisis intervention for a few students to developmental guidance and health education for all students; At the personal level, it can improve the cultural quality of teachers and students and nourish their minds. From the perspective of cultural psychology, this study sorted out the compatibility between TCM culture and mental health education, including the holistic view of "The overall view that the unity of nature and human", the thinking of syndrome differentiation of "preventing diseases", and the theory of "elements and viscera doctrine". Finally, this study proposed the construction path of "five-in-one" mental health education workstation according to the five elements culture of Traditional Chinese Medicine: integrating "metal" culture, paying attention to the construction of professional team, so as to make psychological education strong; Integrate "wood" culture, pay attention to standard classroom education, make psychological education high; Integrate the "water" culture, pay attention to the construction of dormitory culture, so that psychological education depth; Integrating "fire" culture, focusing on brand activities, so that psychological education temperature; Integration of "earth" culture, pay attention to the cultivation of students' interests, so that psychological education thickness. The follow-up study intends to investigate the significance of the construction of mental health education workstation from an empirical perspective.

敌意偏向和反社会行为、攻击性的关系：来自不同测量范式的比较

赖丽足¹ 任志洪²

1 华中师范大学心理学院，武汉，430079

2 华中师范大学心理学院，武汉，430079, ren@ccnu.edu.cn

摘 要 敌意解释偏向是攻击行为的重要认知特点。尽管存在诸多范式测量敌意解释偏向，但少有研究比较不同范式所测的敌意解释偏向与攻击性、反社会行为的关系。本研究旨在探讨未成年罪犯和普通大学生对情境和面孔任务下的敌意解释偏向与自我报告的攻击性和反社会行为的关系。研究招募了 53 名男性未成年犯（平均年龄 17.56 岁）和 69 名男性大学生（平均年龄 18.58 岁）完成敌意词句联想范式（Word and Sentence Association Paradigm-hostile, WSAP）、模糊意图敌意问卷（The Ambiguous Intentions Hostility

Questionnaire, AIHQ)、敌意解释偏向面孔任务 (Hostility Interpretation Bias Task, HIBT)、自评的攻击性和反社会行为问卷。采用独立样本 t 检验未成年犯和普通大学生的敌意偏向差异。结果显示, 男性未成年犯具有较低的善意解释偏向 (WSAP 任务)、较高的敌意偏向和攻击偏向 (来自 AIHQ) 以及更高的对快乐、惊讶和恐惧面孔 (来自 HIBT) 的敌意偏向。进一步的网络分析结果揭示了对情境 (来自 WSAP 和 AIHQ) 和面孔 (HIBT) 的敌意偏向之间的弱相关关系。此外, 逐步回归和 Lasso 回归的结果表明, WSAP-敌意偏向、AIHQ-敌意偏向和 AIHQ-责备偏见构成了解释自我报告攻击性的最优预测变量子集, 而 AIHQ 攻击偏向则是预测自我报告的反社会行为的最重要特征。本研究揭示了不同测量范式下, 敌意偏向之间的差异, 以及不同类型的敌意偏向与攻击性, 反社会行为的独特关系。

关键词 敌意偏向, 攻击性, 反社会行为, 未成年

The relationship between hostility bias and antisocial behavior and aggression: differences in measurements

Lai Lizu, Ren Zhihong

Key Laboratory of Adolescent Cyberpsychology and Behavior (CCNU), Ministry of Education;
School of Psychology, Central China Normal University; Key Laboratory of Human Development
and Mental Health of Hubei Province, Wuhan 430079, China

Abstract: Hostility bias was considered an important cognitive characteristic for aggression. The present study aimed to explore the hostility bias towards vignettes and faces among juvenile offenders and non-offenders, and its association with self-reported aggression and antisocial behavior. 53 male juvenile offenders and 69 non-offenders were recruited to finish Word and Sentence Association Paradigm-hostile (WSAP), The Ambiguous Intentions Hostility Questionnaire (AIHQ), Hostility Interpretation Bias Task (HIBT), self-reported aggression, and antisocial behavior. Male juvenile offenders had lower benign bias (from WSAP), higher hostility bias and aggression bias (from AIHQ) as well as higher hostility bias towards happy, surprise, and fear faces (from HIBT) than non-offenders. However, correlational network results revealed a weak relationship between hostility bias towards vignettes (from WSAP and AIHQ) and faces (HIBT). Furthermore, the results from step-wise regression and Lasso regression suggested that WSAP-hostility bias, AIHQ-hostility bias, and AIHQ-blame bias constructed the best subset of hostility bias indices for predicting self-reported aggression; AIHQ-aggression bias was the most important feature to predict self-reported antisocial behavior.

Keywords: hostility bias, aggression, antisocial behavior, juveniles

发展性工作经历对员工竞争力的影响：心理授权与防御焦点的作用

黎淼思¹ 陈启山² (通讯作者)

¹ 北京师范大学心理学部, 北京, 100875

² 华南师范大学心理学系, 广州, 510631, 719390879@qq.com

摘要 发展性工作经历是指个体需要在动态环境中解决多个问题, 并在风险与不确定性条件下做出决策的经历。以往研究结果显示, 发展性工作经历对员工的管理技能、管理能力等员工自身内部能力有积极影响, 但少有研究探讨发展性工作经历对员工竞争力的影响及其作用机制。在当前的无边界职业生涯时代中, 竞争力这一与组织内外部、他人横向比较的能力对员工的职业发展十分重要。本研究旨在探讨发展性工作经历与员工竞争力之间的关系。基于自我决定理论, 本研究建构了一个有调节的中介模型, 假设发展性工作经历可通过提升员工的心理授权感, 进而影响员工竞争力, 员工自身的防御焦点会调节这一关系。本研究采用发展性工作经历量表、感知到的市场竞争力量表、心理授权量表和防御焦点量表对 316 名企业在职员工进行了间隔 1 个月的两波段时间滞后调查, 运用 SPSS25.0 和 MPLUS7.0 软件进行数据分析。各研究工具的信度良好, 经检验共同方法偏差不会对结果造成明显的影响。结果显示: (1) 发展性工作经历对员工竞争力有积极影响; (2) 心理授权在发展性工作经历与员工竞争力关系中的中介作用显著; (3) 发展性工作经历通过心理授权

对员工竞争力的影响受到防御焦点的调节,防御焦点越高,发展性工作经历通过心理授权对员工竞争力的影响越强。本研究的研究结论有助于深化研究者对发展性工作经历影响范围及内在过程的认识,也为研究者探索个体层面的认知和行为倾向在发展性工作经历影响中的作用奠定了基础。

The Impact of Developmental Job Experiences on Employees' Marketability: The Role of Psychological Empowerment and Prevention Focus

Li Miaosi¹, Chen Qishan²

¹ Faculty of Psychology, Beijing Normal University, Beijing, China

² School of Psychology, South China Normal University, Guangzhou, China

Abstract: Developmental job experiences are the experiences that need to solve multiple problems in dynamic situations and make decisions under conditions of risk and uncertainty. Previous studies have shown that developmental job experiences have a positive impact on employees' internal abilities such as management skills and management competencies, but few studies have explored its impact on employees' marketability and its mechanism. Marketability, the ability to remain value-added to their present employer and be viewed as marketable by other organizations, is very important for employees in the current era of boundaryless career. This study attempts to explore the relationship between developmental job experiences and marketability. Based on self-determination theory, the present study constructed a moderated mediation model, hypothesizing that developmental job experiences influence employees' marketability through improving psychological empowerment, and employees' prevention focus moderates this relationship. Data was collected from 316 employees through 2 network questionnaires with the interval of 1 month. Participants were invited to respond to the Developmental Job Experiences Scale, Perceived Marketability Scale, Psychological Empowerment Scale, and Prevention Focus Scale. SPSS25.0 and MPLUS7.0 were used to analyze data. The result showed that scales have adequate reliability, and there are not significant common method biases. The results showed that: (1) Developmental job experiences could positively affect marketability; (2) Psychological empowerment mediated the relation between developmental job experiences and marketability; (3) The mediating effect of psychological empowerment was moderated by prevention focus. The indirect effect was stronger for employees with high prevention focus than for those with low prevention focus. The results are helpful to deepen the understanding of developmental job experiences and its underlying mechanism, and lay a foundation for future research to explore the role of individual cognitive and behavioral orientations in the influence of developmental job experiences.

Keywords: developmental job experiences, psychological empowerment, marketability, prevention focus

中国心理咨询本土化问题初探——来访者与咨询师双视角分析

摘要 前言: 心理咨询本土化是我国心理咨询行业面临的重要挑战。本研究探讨两个问题: 1) 我国心理咨询中来访者是否体验到文化冲突, 以及体验到什么文化冲突; 2) 我国心理咨询师采用本土化方法的影响因素。

方法: 本研究采用演绎性主题分析了对 17 名心理咨询来访者进行的 15-30 分钟的半结构化访谈, 并通过网络发放, 98 名咨询师完成心理健康从业人员服务方法调查表和心理健康从业者本土化方法问卷。通过多元线性回归, 分析了咨询师的教育背景、咨询经验、专业资质、本土化意识对心理咨询本土化方法使用的影响。结

果: 本研究的受访者在心理咨询中体验到文化冲突, 包括中庸文化、心理分析的客观性、家庭模式、个人主义与集体主义、指导性、寻求权威、非商业化且柔性的咨询关系、表达方式含蓄、注重现实这 9 个方面。本研究中, 86.7% 的心理咨询师意识到心理咨询中存在文化冲突, 96% 的咨询师认为有必要对心理咨询进行本土化。进一步分析发现, 咨询师的受教育水平越高, 本土化方法的使用越少; 从业年限越长, 本土化方法的使用越少; 专业资质越高, 本土化方法使用越多; 认为本土化的重要性越高, 本土化方法的使用越多。**讨论:** 心理咨询在我国存在本土化的必要性, 咨询师应根据我国来访者的文化特点对心理咨询方法进行适应与改进。**关键词** 心理咨询, 本土化, 主题分析, 心理健康服务

The cultural adaptation of psychotherapy in China -- a dual perspective analysis of clients and psychological counselors

Muyang Li¹, Zuyu Guo¹, Xie Xie², Lei Ting¹, Yuntao Dong^{3*}, Yinyin Zang^{1*}

¹ School of Psychological and Cognitive Sciences and Beijing Key Laboratory of Behavior and Mental Health, Peking University, Beijing, China 100871

² Department of Psychology, School of Social Science, Tsinghua University, Beijing, 100084

³ Department of Organizational and Strategic Management, Guanghua School of Management, Peking University, Beijing, China 100871

Abstract: Introduction: Cultural adaptation is a challenge for Chinese psychological counseling industry. This study examined two questions: 1) Did Chinese clients experience cultural conflicts during treatment? If the answer is yes, what kinds of cultural conflicts did they experience? 2) What factors influenced the adoption of cultural adaptation methods by psychological counselors in China? **Methods:** In this study, a deductive thematic analysis approach was used for analyzing 15-30 min semi-structured interviews of 17 clients, and 98 counselors completed the Service Methods Questionnaire for Mental Health Practitioners and the Cultural Adaptation Methods Questionnaire online. Multiple linear regression was used to analyze the impact of the counselors' educational background, counseling experience, professional qualifications, and cultural adaptation awareness on the use of cultural adaptation methods. **Results:** Chinese clients experienced cultural conflicts during psychological treatment, which included 9 aspects: the doctrine of the mean culture, the objectivity of psychoanalysis, family pattern, individualism and collectivism, guidance, seeking authority, non-commercial and flexible counseling relationship, implicit expression, and focus on reality. In this study, 86.7% of psychological counselors were aware of cultural conflicts in psychotherapy, and 96% agreed that cultural adaptation was necessary. Education level and working years were negatively associated with cultural adaptation methods used, measured by the total score of the Cultural Adaptation Methods Questionnaire. Professional qualifications and cultural adaptation awareness were positively associated with cultural adaptation methods used. **Discussion:** Cultural adaptation of psychological treatment is necessary in China. Chinese counselors could adapt and improve counseling approaches according to the cultural characteristics of Chinese clients.

金钱会使人一视同仁么? 任务无关的他人能力与金钱启动对单次博弈中个体合作的影响

李晴蕾¹ 陈春雨¹ 刘永芳¹ (通讯作者)

¹ 华东师范大学心理与认知科学学院 上海 200062 通讯作者 E-mail: yfliu@psy.ecnu.edu.cn

摘要 在社会认知领域, 能力是知觉他人或自己拥有的一种智力性特质(即智力、技能、创造性和高效率等), 目前尚未有研究探讨在囚徒困境博弈中, 当博弈对象具有不同能力水平时个体将选择如何与其合作。同时, 以往研究发现金钱作为一种重要的资源, 能够改变他人对自己的影响, 让人们自由做出决策, 个体处于金钱启动情境下与不同能力他人的合作水平是否会发生改变, 以及这种改变是如何发生的尚不得而知。鉴于此, 本研究探讨了与任务无关的他人能力高低和金钱启动对个体合作水平的影响, 以及内部机制。通过 3

个实验，依次论证了当他人的能力与合作任务无关时，个体更偏爱与高能力他人（vs 低能力他人）合作（实验 1）；金钱概念启动（vs 控制条件下）弱化了这一效应，使个体和高能力与低能力他人合作水平差异不显著（实验 2）；金钱启动（大量金钱 vs 少量金钱 vs 控制组）对他人能力与个体合作水平之间的关系具有调节效应，这种调节效应是以信任水平为中介变量的（实验 3）。本研究创新性的探索了与合作任务无关的他人能力特质对个体的合作水平之间的关系及内部机制，并系统性的考察了金钱启动的调节作用，具有一定的理论价值与实践价值。为规范人们对高低能力他人的合作偏见提供了理论支持，能够使人们更加客观的看待自己由于晕轮效应而产生的合作偏差，从而更加能够理性的与不同能力的他人合作。同时，为人们提供了一种可以降低合作偏差的方法，也就是接触金钱。这些研究结果可以进一步帮助人们了解自己做出不同合作决策的深层原因。

关键词 他人能力，金钱启动，合作，信任，囚徒困境

Does money make different people be treated equally? The influence of task-irrelevant competence of others and money priming on cooperation in the One-shot Game

Qinglei Li¹, Chunyu Chen¹, Yongfang Liu^{1*}

School of Psychology and Cognitive Science, East China Normal University, Shanghai, 200062

Corresponding author's E-mail: yfliu@psy.ecnu.edu.cn

Abstract: In the field of social cognition, competence is an intellectual trait (i.e., intelligence, skill, creativity and efficiency, etc.) possessed by others or oneself. So far, no research has explored how individuals cooperate with others with different competence in prisoner's dilemma game. At the same time, previous studies have found that money, as an important resource, can change the influence of others on them and allow people to make decisions freely. Whether the level of cooperation between individuals and others with different competence will change in the money priming situation and how this change happens is still unknown. Therefore, this study explores the influence of task-irrelevant competence of others and money priming on the level of individual cooperation, and further discusses the internal mechanism. Through 3 experiments, it was demonstrated that individuals prefer to cooperate with others with high ability (vs others with low ability) (Experiment 1); The money concept priming (vs control group) weakened this effect, making the difference in the level of cooperation between individuals and others with high and low competence not significant (Experiment 2); Money priming (a lot of money vs. a small amount of money vs. control group) has a moderating effect on the relationship between the competence of others and individual's cooperative behavior. This moderating effect is based on the level of trust as a mediating variable (Experiment 3). In theoretical, this study innovatively explored the relationship and internal mechanism between the task-irrelevant competence of others and the individual cooperation level, and systematically investigated the moderating effect of money priming. In practice, this study provides theoretical support for standardizing people's cooperation bias against others with competence and incompetence, and enables people to view their own cooperation bias caused by the halo effect more objectively, so as to be more able to rationally cooperate with others. At the same time, it provides a way for people to reduce cooperation bias, namely access to money. These findings may help people understand the underlying reasons behind their different cooperative decisions.

Keywords: competence of others; money priming; cooperation; trust; prisoner's dilemma

Neuro-mediating basis of trait anxiety and cognitive flexibility: Evidence from Resting State EEG

Abstract: A large body of evidence indicates that high trait anxiety individuals exhibit cognitive flexibility impairment characterized by rigid and maladaptive behaviors, however, the brain basis that mediate their relationships remain unclear. Against this background, we collected trait anxiety scores, cognitive flexibility scores and resting EEG data of a large sample of young Chinese individuals, and used relatively new EEG microstate analysis technology to analyze resting EEG functional networks. Firstly, the results revealed that the EEG microstate of class A, class B, and class D are closely related to the trait anxiety levels of the individuals, and the brain EEG microstate of class A, class C, and class D may be the neural underpinning of the individual's cognitive flexibility. Further mediating effect analysis indicated that EEG microstate of class D, which is closely related to the dorsal attention network, mediates the relationship between trait anxiety and cognitive flexibility. This study supports the key role of the prefrontal cortex in generating behavioral biases in highly anxious individuals from the perspective of resting-state EEG modality, and further suggests that interventions aimed at improving executive function networks may promote the recovery of maladaptive behaviors in highly anxious individuals.

压力阻碍蔬果摄入？计划干预对蔬果摄入的促进作用及慢性压力的调节作用：一项线上随机对照实验

彭惠妮¹ 鞠芊芊¹ 甘怡群¹（通讯作者）

¹ 北京大学心理与认知科学学院，北京，100080，通讯作者 ygan@pku.edu.cn

摘要 本研究旨在探究中国群体中，蔬果计划对蔬果摄入的促进作用，及压力在其中是否会有阻碍作用。研究通过选取 98 名学生和工作人群，采用线上随机对照实验，验证了计划干预对蔬果摄入的促进作用，并通过有调节的中介模型，验证了压力在计划和蔬果摄入中的阻碍作用，即慢性压力低的情况下，蔬果计划中介干预组别和蔬果摄入的关系；而在慢性压力高的情况下，则没有此中介作用。未来研究可进一步在更多健康行为中，验证压力的阻碍作用，同时开展通过缓解压力促进个体健康行为的实验和干预研究，进一步促进个体的健康行为。

Does Stress Hinder Fruit and Vegetable Intake? Promotional Effects of Planning Intervention on Fruit and Vegetable Intake with the Regulation of Chronic Stress: An Online Randomized Controlled Trial

Peng Huini¹, Ju Qianqian¹, Gan Yiqun¹

School of Psychological and Cognitive Sciences, Peking University, Beijing

Abstract: The purpose of this study was to investigate the effect of a fruit and vegetable program on fruit and vegetable intake in a Chinese population, and whether stress has an inhibiting effect on this effect. Research by

choosing 98 students and working people, using online randomized controlled trials, to verify the planned intervention for the promotion of fruit and vegetable intake, and through a mediation model of regulation, to verify the pressure in the plan and the obstacles of the fruit and vegetable intake, or chronic under low pressure, intervention group and the relationship between the fruit and vegetable intake of fruits and vegetables planning intermediary; However, there was no mediating effect in the condition of high chronic stress. Future research can further verify the blocking effect of stress in more health behaviors, and meanwhile carry out experiments and intervention studies to promote individual health behaviors by alleviating stress to further promote individual health behaviors.

Keywords: fruit and vegetable intake, planning intervention, chronic stress

通讯压力对网络闲逛的影响——自我损耗与微休息的作用

苏靖璇¹ 陈壮¹ 马红宇² (通讯作者)

1 华中师范大学心理学院, 武汉, 430079

2 华中师范大学心理学院, 武汉, 430079, mahy@mail.ccnu.edu.cn

摘要 随着科技的发展, 电子通讯技术得到越来越广泛地使用, 工作中, 人们愈发习惯于使用微信、QQ、电子邮件等处理工作相关任务和与同事、客户沟通。在电子通讯技术为人们带来诸多便利的同时, 研究者们也越发关注其可能存在的一些负面影响。通讯压力是指员工急于查看和回复工作相关消息以防耽误工作进程而体验到的紧迫性, 以往研究多关注通讯压力对员工健康、恢复等的负性影响, 而忽视了对员工工作相关不良行为的影响。基于自我调节理论, 本研究采用随机抽样法, 收集和分析了 459 名正式组织员工的问卷数据, 探讨了通讯压力对工作相关不良行为之一——网络闲逛的作用机制及边界条件。研究结果发现: (1) 通讯压力正向预测网络闲逛行为; (2) 自我损耗在通讯压力与网络闲逛之间起中介作用; (3) 微休息在通讯压力与自我损耗间起调节作用。本研究结论对于丰富通讯压力的结果变量以及指导团队管理实践具有一定现实意义, 具体而言, 本研究的结论启示组织和管理者合理向员工传达回复信息速度的期望, 比如在消息后明确说明回复时间等, 避免让员工感受到“越快回复越好”的紧迫感, 反而适得其反, 造成压力引起网络闲逛等不良行为, 另外管理者需要为员工提供良好的微休息环境和支持; 对于员工本身而言, 可通过放松、摄入营养等微休息活动, 缓解通讯压力带来了不良影响, 另外注意合理定时监控通讯设备, 通过制定计划、自我监控等方式提升自我控制能力, 避免因急于回复电子消息而过多查看电子设备, 过度自我损耗, 引起网络闲逛最终反而降低了工作效率。

The Relationship Between Telepressure and Cyberloafing ——the Role of Ego Depletion and Microbreaks

Jingxuan Su, Zhuang Chen, Hongyu Ma

Department of psychology, Central China Normal University, Wuhan

Abstract: With the development of science and technology, information and communication technologies (ICTs) have become more and more widely used. During work, it becomes common to use WeChat, QQ, e-mail and other ICTs to deal with work-related tasks and communicate with colleagues and customers. While ICTs bring many conveniences to people, researchers are also paying more and more attention to its negative effects. Telepressure refers to the urgency experienced by employees who are eager to view and respond to work-related messages to prevent delays during work. Previous studies have focused on the negative effects of telepressure on employees' health and recovery, but its negative effects on employees' work-related outcomes are ignored. Based on self-regulation theories, this study collected data from 459 formal organization employees, and explored the mechanism and boundary conditions of telepressure on one of the negative work-related behaviors-cyberloafing. The results showed that: (1) telepressure positively predicts cyberloafing; (2) ego depletion plays a mediating role between telepressure and cyberloafing; (3) microbreaks plays a moderating role between telepressure and ego depletion. The results of this research contributed

to literatures theoretically and practically. Specifically, the results enlighten organizations and managers to reasonably convey the expectations of the response speed to employees. By stating the response time clearly, it can be avoided to make employees feel the urgency of responding ‘as soon as possible’, causing negative behaviors such as cyberloafing. And good environment of microbreaks should be supplied for employees. For employees themselves, they can take microbreaks to avoid too much pressure from respond expectation. And it is necessary to monitor ICTs reasonably. Through making plans and self-monitoring to improve self-control ability, employees can avoid excessive contact with ICTs due to the eagerness to reply messages, which may cause cyberloafing.

Keywords: telepressure, ego depletion, microbreaks, cyberloafing

妊娠并发症住院患者及其配偶 二元应对的潜在剖面分析及与焦虑症状的关系

王娟¹ 李佳欢² 曹枫林¹ (通讯作者)

1 山东大学齐鲁医学院护理与康复学院, 济南, 250012

2 镇江市高等专科学校卫生护理学院, 镇江, 212000

通讯作者 E-mail: caofenglin2008@126.com

摘要 背景: 因妊娠并发症住院作为妊娠期重大应激性事件, 会加剧妊娠期女性及其配偶的焦虑症状。系统交互模型认为, 二元应对在夫妻应对共同应激源的过程中发挥重要作用。且研究发现, 夫妻双方的二元应对水平与其自身及配偶的焦虑症状密切相关。因此, 从家庭视角探究妊娠并发症住院患者及其配偶的夫妻二元应对模式及与焦虑症状的关系对于早期筛选高风险家庭、针对性开展以夫妻为单位的二元干预具有重要意义。**目的:** 探究妊娠并发症住院患者及其配偶的二元应对模式及与夫妻双方焦虑症状的关系。**方法:** 于2019年3月至10月期间, 在济南市两所三级甲等医院产科门诊招募符合条件的妊娠并发症患者及其配偶共197对。使用一般资料问卷、二元应对量表 (Dyadic Coping Inventory, DCI) 和状态焦虑问卷 (State-Trait Anxiety Inventory-State, STAI-S) 分别评估患者及其配偶的社会人口学特征及临床信息、二元应对和焦虑症状。使用Mplus7.0和SPSS 26.0进行统计分析。**结果:** 妊娠并发症住院患者及其配偶的二元应对可被划分为4个潜在类别, 分别为: “夫妻低二元应对组” (47人, 占23.9%)、“夫妻一般二元应对组” (89人, 45.2%)、“患者高二元应对-配偶低二元应对组” (16人, 8.1%)及“夫妻高二元应对组” (45人, 占22.8%)。在控制了协变量后, 夫妻低二元应对组患者及其配偶焦虑症状得分均显著高于“夫妻一般二元应对组”、“夫妻高二元应对组” (p 均 <0.05); “夫妻低二元应对组”患者焦虑症状得分显著高于“患者高二元应对-配偶低二元应对组” ($p=0.002$), 而两组在配偶焦虑症状得分上无显著差异 ($p=0.203$)。**结论:** 采取低二元应对模式的妊娠并发症住院患者及其配偶是焦虑症状的高风险人群。临床实践开展针对夫妻双方的二元应对干预对于预防和改善夫妻焦虑症状具有重要意义。

Latent profile analysis of dyadic coping among hospitalized patients with pregnancy complications and their spouses and its relationship with anxiety symptoms

Juan Wang¹, Jiahuan Li², Fenglin Cao¹

1 School of Nursing and rehabilitation, Cheeloo College of Medicine, Shandong University, Jinan, 250012

2 School of Health and Nursing, Zhenjiang College, Zhenjiang, 212000

Abstract: Background: Hospitalization due to pregnancy complications, as a major stressful event during pregnancy, may exacerbate anxiety symptoms among pregnant women and their spouses. The system interaction model suggests that dyadic coping plays an important role in coping with couples' common stressors. Extant research found that dyadic coping was closely related to anxiety symptoms among patients and their spouses. Therefore, it is of great

significance to explore the dyadic coping profiles among hospitalized patients with pregnancy complications and their spouses from the perspective of family, as well as its relationship with anxiety symptoms for early screening high-risk families and developing targeted dyadic interventions for couples. **Objective:** To explore dyadic coping profiles among hospitalized patients with pregnancy complications and their spouses, as well as its relationship with anxiety symptoms. **Methods:** From March to October 2019, 197 pairs of eligible obstetric patients with pregnancy complications and their spouses were recruited in obstetrics clinics of two tertiary hospitals in Jinan. The general data questionnaire, Dyadic Coping Inventory (DCI) and State-Trait Anxiety Inventory-State (STAI-S) were used to assess the sociodemographic characteristics and clinical information, dyadic coping and anxiety symptoms of the patients and their spouses. Mplus7.0 and SPSS 26.0 were used for statistical analysis. **Results:** The dyadic coping of obstetric patients with pregnancy complications and their spouses can be classified into four profiles: "Couples with low dyadic coping group" (47, 23.9%), "couples with general dyadic coping group" (89, 45.2%), "patients with high dyadic coping - spouses with low dyadic coping group" (16, 8.1%) and "couples with high dyadic coping group" (45, 22.8%). After controlling for covariates, the scores of anxiety symptoms of obstetric patients and their spouses in the "Couples with low dyadic coping group" were significantly higher than those in the "couples with general dyadic coping group" and "couples with high dyadic coping group" (all $P < 0.05$). The scores of anxiety symptoms of obstetric patients in the "Couples with low dyadic coping group" were significantly higher than those in the "patients with high dyadic coping - spouses with low dyadic coping group" ($P = 0.002$), but there was no significant difference in the scores of anxiety symptoms of spouses between these two groups ($P = 0.203$). **Conclusion:** Obstetric patients with pregnancy complications and their spouses that identified as "low dyadic coping profile" are at high risk for experiencing anxiety symptoms. In clinical practice, it is of great significance to carry out dyadic coping intervention for couples to prevent and improve their anxiety symptoms.

抑郁症状大学生静息脑电、体力活动及睡眠质量特征研究

王相 王兴（通讯作者）

上海体育学院，上海，200438

摘要 目的：了解抑郁症状大学生静息脑电、体力活动及睡眠质量特征，为开展大学生抑郁干预工作提供理论与实证依据。方法：2020年10月至2021年6月，在某大学城高校下发问卷1000份，随机招募60名在校大学生为研究对象，抑郁症状组（30人）、正常对照组（30人）。采用上海诺诚16导NCERP-190012脑电检测仪、国际体力活动问卷-短卷（IPAQ）、匹兹堡睡眠指数量表（PSQI）、抑郁自评量表（SDS）分别对两组大学生的静息脑电、体力活动、睡眠质量以及抑郁症状得分进行数据采集；运用相关分析探讨各变量与抑郁症状得分的关系。结果：1）抑郁症状大学生C3、P3、P4、O1、O2的导联总功率，Fp1、Fp2、C3、C4、P3、P4的 α 频段绝对功率显著高于正常对照组。2）抑郁症状组与正常对照组间总体力活动水平与总睡眠质量得分间存在显著性差异（ $t=-4.98, p<0.01$ ； $t=7.47, p<0.01$ ）。抑郁症状组总平均体力活动水平为 1385.43 ± 749.03 （MET-min/W），正常对照组为 2193.43 ± 1111.69 （MET-min/W）。抑郁症状组总睡眠质量得分为 7.65 ± 3.53 分，正常对照组为 3.70 ± 2.47 分；睡眠质量量表下设七个维度中，除服用催眠药物项目外，其余6项两组间均存在显著性差异。3）相关分析表明，抑郁症状量表得分与总体力活动水平呈显著性负相关（ $r=-0.43, p<0.01$ ），与睡眠质量量表总得分呈显著性正相关（ $r=0.65, p<0.01$ ）。结论：抑郁症状组静息脑电与正常对照组间存在一定差异性，脑电功率值差异有望成为评估大学生抑郁风险的客观预测因子。保持规律体力活动与良好睡眠质量有助于大学生抑郁症状减轻。

Characteristics of resting eeg, physical activity and sleep quality in college students with depressive symptoms

Wang Xiang, Wang Xing (Corresponding Author)

Shanghai University of Sport, Shanghai, 200438

Abstract: Objective: To understand the characteristics of resting EEG, physical activity and sleep quality of college students with depression symptoms, and to provide theoretical and empirical evidence for the development of depression intervention work for college students. Methods: From October 2020 to June 2021, 1,000 questionnaires were issued in a university town of colleges and universities, and 60 college students were randomly recruited as research subjects, depressive symptom group (30 people) and normal control group (30 people). Using Shanghai Nuocheng 16-lead NCERP-190012 EEG tester, International Physical Activity Questionnaire-short paper (IPAQ), Pittsburgh Sleep Index (PSQI), and Depression Self-Rating Scale (SDS) to evaluate the resting of two groups of college students. EEG, physical activity, sleep quality, and scores of depressive symptoms were collected for data; correlation analysis was used to explore the relationship between various variables and scores of depressive symptoms. Results: 1) The total power of C3, P3, P4, O1, O2, and the absolute power of α band of Fp1, Fp2, C3, C4, P3, P4 of college students with depressive symptoms were significantly higher than the normal control group. 2) There is a significant difference between the depressive symptom group and the normal control group in the total physical activity level and the total sleep quality score ($t=-4.98, p<0.01$; $t=7.47, p<0.01$). The total average physical activity level of the depressive symptom group was 1385.43 ± 749.03 (MET-min/W), and the normal control group was 2193.43 ± 1111.69 (MET-min/W). The total sleep quality score of the depressive symptom group was 7.65 ± 3.53 points, and the normal control group was 3.70 ± 2.47 points. There are seven dimensions under the sleep quality scale. Except for taking hypnotic drugs, the other 6 items are significant between the two groups. difference. 3) Correlation analysis showed that the score of Depressive Symptoms Scale was significantly negatively correlated with overall physical activity level ($r=-0.43, p<0.01$), and was significantly positively correlated with the total score of Sleep Quality Scale ($r=0.65, p<0.01$). Conclusion: There is a certain difference between the resting EEG of the depression symptom group and the normal control group. The difference of EEG power value is expected to be an objective predictor of the risk of depression in college students. Maintaining regular physical activity and a good quality of sleep can help alleviate the depression symptoms of college students.

Abstract: Introduction: Recently studies have examined mediating psychological constructs accounting for relations between stress and excessive smartphone use severity. The aim of the current study was to analyze anxiety and the frequency of smartphone use as possible mediators between stress and excessive smartphone use. Method: We recruited 7681 Chinese adolescents by cluster sampling via a web-based survey that measured stress, anxiety, the frequency of smartphone use and excessive use. Results: Stress was significantly associated with excessive smartphone use severity. Anxiety and the frequency of smartphone use mediated relations between stress and excessive smartphone use levels. Anxiety and the frequency of smartphone use played a serial mediating role between stress and excessive smartphone use severity. Conclusion: Adolescent stress is positively related to excessive smartphone use severity. Anxiety and the frequency of smartphone use play a serial mediating role between adolescent stress and excessive use.

高校心理咨询中师生-咨访双重关系的存在形态及伦理特征

游琳玉¹ 贾晓明¹ (通讯作者)

1 北京理工大学人文与社会科学学院, 北京, 100081

通讯作者 E-mail: jiaxiaoming@bit.edu.cn

摘 要 咨询关系是心理咨询与心理治疗产生效果的重要影响因素, 而咨询关系中涉及到的双重关系是专业伦理所规范的重要内容。我国高校心理咨询中的师生-咨访双重关系常常不可避免, 而对其利弊影响的分析也多有分歧, 对其伦理特征的研究势在必行。本研究以拟剧论、身份认同理论为理论基础, 采用质性研究方法, 通过目的性抽样深度访谈了 13 位从业五年以上的高校专职心理咨询师, 其中男性 2 人, 女性 11 人, 平均年龄 36.07±6.36 岁。运用扎根理论对访谈资料进行分析和建构。研究发现, 在咨询过程中师生-咨访双重关系有显性与隐性两种存在形态。显性双重关系是指, 心理咨询师在咨询过程中明显按照教师的行为模式、职业态度或社会期待与来访者工作; 隐性双重关系是指在心理咨询过程中, 心理咨询师以咨询师的角色工作, 但教师角色仍然以背景性方式存在着, 师生关系仍隐性存在。由此带来的伦理特征体现为: (1) 当咨询关系处于显性双重关系时, 意味着咨询师离开了“咨询师位置”以教师角色进行工作, 可能会阻碍来访者的获益, 甚至造成伤害; (2) 当处于隐性双重关系时, 意味着咨询师守在“咨询师位置”, 即使存在双重关系, 并不会对来访者带来伤害; (3) 在咨询过程中, 由于咨询师或来访者有教师或者学生角色定位发生的变化, 会带来显性与隐性双重关系的相互转化。这种转化具有耗时短、单次咨询中可多次转化以及可预测性等特点。特别是隐性双重关系很容易转化为显性双重关系。因此双重关系体现的伦理特征具有复杂性, 在双重关系不可避免的

情况下, 需要咨询师对隐性与显性双重关系的伦理特征有深入的理解和实务中的敏锐觉察, 以保证咨询师更恰当、更有效地进行伦理决策, 使来访者的利益得以保护。

The existing forms and ethical characteristics of teacher-student dual relationship in college counseling

YOU Linyu¹, JIA Xiaoming¹ (corresponding author)

¹ School of Humanities and Social Sciences, Beijing Institute of Technology, Beijing, 100081

E-mail: jiaxiaoming@bit.edu.cn

Abstract: The counseling relationship is one of the most important factors related to the effectiveness of psychological counseling and therapy. Besides, the dual relationship occurred in the counseling relationship is heavily emphasized in the ethic codes. Generally speaking, the teacher-student dual relationship was unavoidable in the college counseling practice in China, and the analysis of pros and cons are controversial in the previous researches. It is essential to investigate the ethical characteristics of the teacher-student dual relationship in order to better understand the benefits and potential harms. This study integrated the dramaturgical theory and identity theory as the theoretical grounding, and 13 experienced counselors from colleges and universities were interviewed. There are 11 females and 2 males, and the average age is 36.07 ± 6.36 . The data were analyzed based on the grounded theory. The results showed that there are implicit dual relationship and explicit dual relationship as the existing forms of the teacher-student dual relationship. The explicit dual relationship is defined as that the counselors worked according to the behavioral models, attitudes or social expectations of the teacher role. In contrast to that, the implicit dual relationship refers to the implicit teacher-student relationship, which means that the counselor behaves as the counselor role while the teacher role existed as background. Thus, the ethical characteristics of teacher-student dual relationship include: (1) The explicit dual relationship means the counselor abandoned the "counselor position" and entered the teacher role, which might hinder the benefit of the client, and results potential harms; (2) The implicit dual relationship means that the counselor held onto the "counselor position"; (3) The bilateral transformation of explicit and implicit will occur when the role of the counselor/client changed into the teacher/student. Such transformation shall occur multiple times in a short time in one session, and is predictable. Specifically, the implicit dual relationship can be easily transformed into explicit compared to the reverse direction. Consequently, the ethical characteristics embodied by dual relationship were quite complicated. When the dual relationships were unavoidable, the counselors were encouraged to gain in-depth understanding of the ethical characteristics of both implicit and explicit dual relationships and be more sensitive in the practice. As a result, the counselors can make more appropriate and effective ethical decisions and the welfare of the clients can be better protected.
